Transformational Mixed-Use Development Program

Ohio Department of Development

Ohio Transformational Mixed-Use Development Program

Construction Progress Report

A construction progress report must be submitted annually after the start of the construction report until the project is complete or as may be requested by the director. **Reports are due no later than December 31 in subsequent calendar years following submission of the start of construction report, or as identified in a request by the director.**

Reports must be submitted via email to transformational@development.ohio.gov and identified in the subject line as "(Project Name) Annual Construction Progress Report". Please note, if a "Project" is a phase or phases of a larger Development, only the information associated with the "Project" should be included in this report.

Construction Completion Report w/ CPA Report Submission	Not Started	9/2/2027

Notes/Comments Regarding Progress on Project

We have started demolition and have completed the demo on the 4th floor. We've started demo on the 3rd floor. We've worked with and engineer to create drawings and a plan to replace the roof and began planning for the construction of the new roof. Our financing partners that we counted on were not able to move forward and we've been seeking other financing since last year. We plan to have new financing in place by 7/31/2026.

Attach one or any combination of the following support documentation to demonstrate progress:

The support documentation must demonstrate progress annually. Identify/name document as using naming conventions below. If documents are combined, use a cover page to list each document included in a single pdf (preferred). Do not resubmit documents submitted in the Start of Construction or in a previously submitted Annual Progress Report. Additional documentation may be requested at any time by the Ohio Department of Development.

- **A. Payroll Report**: Payroll reports for site workers at the Project site.
- **B. Pay Request**: Pay request from the contractor evidencing construction work done at the Project site.
- **C. Photos**: Send no more than five dated photos as JPEG files to evidence construction progress at the Project site.
- **D. Contracts**: Contracts confirming the start date of work or completion of work at the Project site.
- **E. Approvals**: Permits/approvals completed for the Project as indicated in the Project Schedule above.
- **F. Financing**: Project financing completed for the Project as indicated in the Project Schedule above.

Notes/Comments Regarding Progress on Project

The project has commenced construction and is expected to be completed by July 2028. The brownfield remediation process was completed in 2025 and the closeout with Ohio EPA has taken longer than expected.

Notes/Comments Regarding Progress on Project

Current work in progress includes facade improvements, elevator modernization, interior demolition/abatement, HVAC and electric upgrades, and other activities. After completion of these items, work will focus on build out of apartment units. Estimated final completion updated to Dec 2027 due to additional time coordinating state and local incentive programs ahead of start of construction and increased allowance for timeline of apartment unit buildout.

$27.4M of work completed to date. Additional work ongoing.

Phase I (work-to-date highlights)
- Facade improvements: [redacted] performed to date
  - [redacted] of other facade related investment (A&E, construction management, etc.)
- Elevator modernization: [redacted] performed to date
- Interior demolition/abatement: [redacted] performed to date
- HVAC procurement: [redacted] performed to date

Notes/Comments Regarding Progress on Project

Progress is continuing on the Cincinnati Convention Hotel from its construction start in January 2025. The focus of the work this year has been site preparation, coordination with existing and surrounding structures to prepare for future structural tie-ins associated with the skybridge system, Ohio Voluntary Action Plan ("Ohio VAP") environmental process progression, and the removal of existing orphaned underground storage tanks in accordance with the Bureau of Underground Storage Tank Regulations program ("BUSTR"). Additional project activities have included permitting, value engineering and design progression, coordination with utility providers, and other necessary steps to deliver the project. The work that occurred during this year remained consistent with the information communicated in the Start of Construction Report in that the primary focus of the work ongoing in 2025 was to address existing conditions at the site and remediate areas in advance of foundation installations to support the ultimate vertical construction.

Permitting, Planning, and Municipal Approvals: A key milestone reached during the year was the approval of the foundation permit on 12/22/25 for the project that can allow major sitework and construction to commence. The project is utilizing a phased approach to permitting and the process is progressing as intended to secure necessary permits based

Notes/Comments Regarding Progress on Project

The electronically updated submission reflects Phase 1. Phase 2, which includes the apartment components, has been scanned and uploaded as an attachment. The project is beyond 50% completion. The factory is approximately 95% complete, Alvis's space is finished, and the second-floor office space is complete. We have 186 people employed at the factory.

Apartment Building Update:

The project plans for the apartment units have been updated to align with current market conditions and meet partner needs. The Westerville Rd Apartments is a 52-unit development intended to expand housing opportunities for lower income individuals. This project is in for review with Franklin County, with final OLIHTC sign off planned for Q1 2026. The Innis project is a 72-unit apartment development planned to support the needs identified by the Community Shelter Board. The site plan and project concept have been submitted to the area commission for review.

Department of Development

Ohio Transformational Mixed-Use Development Program

Start of Construction Report

This Start of Construction Report must be submitted to the Ohio Department of Development ("Development") evidencing that construction of the approved Transformational Mixed-Use Development ("TMUD") Project has commenced. **This report is due within twelve (12) months of the date a project is certified by the Tax Credit Authority (TCA). Failure to provide this Start of Construction Report by the deadline, or failure of the Project to commence construction by the deadline, will result in the recission of the tax credit by the TCA per Ohio Revised Code Section 122.09(D).**

For purposes of this report "construction commencement" is defined to include events undertaken by the general contractor or company contracted for project construction. For purposes of determining the actions that evidence construction commencement, the TCA will consider the following actions:

- Demolition of existing structures on the project site;
- Excavation of the project site;
- Construction of new structures; and/or
- Development of private roadways within the project site.

Public utility work or work implemented by the local jurisdiction and/or county will not meet the commencement of construction requirement.

Reports must be submitted via email to transformational@development.ohio.gov and identified in the subject line as "(Project Name) Start of Construction Report". Please note, if a "Project" is a phase or phases of a larger Development, only the information associated with the "Project" should be included in this report.

Notes/Comments Regarding Progress on Project

Property owners own the property. The TMUD Project is made up of 3 buildings. The new Cleveland Cavaliers, Cleveland Clinic Global Peak Performance Center (GPPC) was under construction as of January 2025 and the shell was completed in December 2025. Construction has moved to interior of the building. It is anticipated to open in Q1.2027. The GPPC is approved and entitled, and site work began in October 2024 and was completed in 2025. The third mixed-use building will be entitled with site work beginning in Q4.2026. The mixed use venue is anticipated to be completed by Q2.2029. We are happy to answer questions regarding our progress made.

Notes/Comments Regarding Progress on Project

The Arcade District Development is comprised of four separate Projects all with varying timelines. The North Arcade was completed in June of 2025. The South Arcade Phase II was completed in Fall 2025 multiple COs). Their completions are documented in the attached exhibits and corresponding dates are not reflected in the table above. The Centre City Building and Air City Garage Projects are underway with a full financial closing expected in March 2026. Their schedules are simultaneous. The dates associated with those projects are reflected in the table above.

Notes/Comments Regarding Progress on Project

We are including a recent construction progress report prepared for the senior lender of the project which contains pictures, pay requests and other commentary as well as the senior lenders draw cover sheet that outlines the majority of project costs.

As previously shared with ODOD, the project commenced several years ago; however, during interior demolition additional structural defects/issues were discovered which caused the project to go through a redesign and updated HTC approvals from a design perspective. The project also had to manage a prevailing wage dispute and the very unexpected death of its CFO.

Despite the challenges, the project continued to invest and complete exterior structural improvements and site work until a full financial closing occurred in August of 2025.

The project reported on represents a smaller investment and scope of work that originally contemplated in the TMUD

Notes/Comments Regarding Progress on Project

The Victoria Place portion of the Project is 95% complete with demolition, a new roof has been installed, and they have a framed model unit.

The Grand River Walk portion of the Project has completed all off-site utilities and grading. Full vertical construction has commenced on the framed structure. Grand River Walk LLC is under contract with a restaurant operator to occupy the 4,700 square feet of ground floor restaurant space.

The 36,422 square foot CLE Group portion of this TMUD Project is now complete. Last year the Applicant uploaded the documentation evidencing completion of that portion of the TMUD Project.

Notes/Comments Regarding Progress on Project

Demolition is complete on Residential and 60% complete on the Hotel.

See attached schedules for Residential Construction and Hotel Construction.

Attach one or any combination of the following support documentation to demonstrate progress:

The support documentation must demonstrate progress annually. Identify/name document as using naming conventions below. If documents are combined, use a cover page to list each document included in a single pdf (preferred). Do not resubmit documents submitted in the Start of Construction or in a previously submitted Annual Progress Report. Additional documentation may be requested at any time by the Ohio Department of Development.

- **A. Payroll Report**: Payroll reports for site workers at the Project site.
- **B. Pay Request**: Pay request from the contractor evidencing construction work done at the Project site.
- **C. Photos**: Send no more than five dated photos as JPEG files to evidence construction progress at the Project site.
- **D. Contracts**: Contracts confirming the start date of work or completion of work at the Project site.
- **E. Approvals**: Permits/approvals completed for the Project as indicated in the Project Schedule above.
- **F. Financing**: Project financing completed for the Project as indicated in the Project Schedule above.

Department of Development

Ohio Transformational Mixed-Use Development Program

Start of Construction Report

This Start of Construction Report must be submitted to the Ohio Department of Development ("Development") evidencing that construction of the approved Transformational Mixed-Use Development ("TMUD") Project has commenced. **This report is due within twelve (12) months of the date a project is certified by the Tax Credit Authority (TCA). Failure to provide this Start of Construction Report by the deadline, or failure of the Project to commence construction by the deadline, will result in the recission of the tax credit by the TCA per Ohio Revised Code Section 122.09(D).**

For purposes of this report "construction commencement" is defined to include events undertaken by the general contractor or company contracted for project construction. For purposes of determining the actions that evidence construction commencement, the TCA will consider the following actions:

- Demolition of existing structures on the project site;
- Excavation of the project site;
- Construction of new structures; and/or
- Development of private roadways within the project site.

Public utility work or work implemented by the local jurisdiction and/or county will not meet the commencement of construction requirement.

Reports must be submitted via email to transformational@development.ohio.gov and identified in the subject line as "(Project Name) Start of Construction Report". Please note, if a "Project" is a phase or phases of a larger Development, only the information associated with the "Project" should be included in this report.

Notes/Comments Regarding Progress on Project

The Heath Central Park Phase II is composed of three separate projects: an assisted living facility developed by Wallick Communities, an active adult ranch-style development by Wilcox Communities, and public improvements developed by Ciminello Land Company.

The Assisted Living Facility developed by Wallick is under final engineering approval by the City of Heath and financial closing, which comprises of Low Income Housing Tax Credits and OHFA issued tax exempt bonds. The draft inducement resolution is attached and is to be approved at the February 19th OHFA Board Meeting. The LIHTC Equity for the project has been secured as evidenced in the LIHTC Purchase Letter. The project site began construction due diligence activity consisting of survey, geo-technical investigations, and environmental testing.

The active adult ranch-style community developed by Wilcox is also under final stages of design and engineering approval via the City of Heath. This project component has already gone through City planning and has been approved. This site has also began construction activity consisting of survey, staking, geo-technical investigations, and environmental testing.

The public infrastructure improvements performed by Ciminello Land Company have been fully reviewed and approved by the City of Heath, which commences construction in conjunction with financial closing of the Assisted Living Facility

Attach one or any combination of the following support documentation to demonstrate progress:

Notes/Comments Regarding Progress on Project

The Hocking Hills Complex project has commenced construction. The company is acting as the general contractor for this part of the project and has engaged with a vendor to install the driveway entrance and a retention pond at the project site. Additionally, trees and stumps have been removed from the driveway entrance in preparation for the driveway work.

The project has been using existing capital to fund the improvements to date. The project is less than 25% complete, however, the "Project Completion Progress Status" on page 1 only includes 25% completion as the lowest level of project completion after commencement.

Attach one or any combination of the following support documentation to demonstrate progress:

The support documentation must demonstrate construction has started. Identify/name document as using naming conventions below. Combined documents under the same attachment categories below. Additional documentation may be requested at any time by the Ohio Department of Development.

Notes/Comments Regarding Progress on Project

Liberty Center LLC has commenced construction on the Liberty Center Apartment Project. The building permit for the out parcel building (Building 18 in the TMUD Application) was received on November 13, 2024. Permits for the multi-family section are anticipated to be received by August 31, 2026.

Construction on the Project began in November 2024 and out parcel building #18 is substantially complete with [redacted] open and operating and [redacted] scheduled to open in December 2025. The total Project is approximately 4% complete, however, the "Project Completion Project Status" section on page 1 of this report only offers a choice of 25% as the lowest percentage complete after the project has commenced.

Attach one or any combination of the following support documentation to demonstrate progress:

Notes/Comments Regarding Progress on Project

Construction of the Project has commenced. The lower commercial floors have substantially completed construction. Demolition of existing office improvements on the upper nine floors has been completed in preparation for residential conversion. Interior demolition work is evidenced by on-site contractor activity, dated construction photographs, and approved Mahoning County permits. Vertical residential construction is forthcoming. Based on the current phase of work completed to date, the Project is approximately 25% complete, with approximately $3.2 million in tax credit eligible expenditures incurred to date. Project financing is being completed in phases. Approximately [redacted] of project financing has been closed and secured to date. Additional project financing, [redacted] is anticipated to close in mid-January 2026. The Project remains fully capitalized and construction is proceeding consistent with the approved development schedule.

Attach one or any combination of the following support documentation to demonstrate progress:

The support documentation must demonstrate construction has started. Identify/name document as using naming conventions below. Combined documents under the same attachment categories below. Additional documentation may be requested at any time by the Ohio Department of Development.

Notes/Comments Regarding Progress on Project

As detailed in our original application and subsequent updates, the Mercantile + Traction Block Project includes rehabilitation of three historic buildings in Downtown Cincinnati: 414 Walnut Street (Mercantile Library Building), 115 E. 5th Street (Mercantile Center "MCA" Building), and 432 Walnut Street (Traction Building). This initiative represents a unique development partnership between MCA Center, LLC, a Model Group-owned entity, and Traction Partners, LLC, and continues the tradition of historic preservation and positive community transformation in Cincinnati's urban core.

The Mercantile reached major close-out milestones in 2025. Following temporary certificates of occupancy in late 2024, full Certificates of Occupancy were achieved in May 2025, marking the completion of construction across all residential, commercial, and shared amenity spaces. The Walnut Street skywalk was successfully demolished, and associated façade restoration and streetscape improvements were completed, enhancing pedestrian visibility and connectivity. Both the Mercantile Library and Formica buildings received NPS Part 3 historic approvals this fall. Lease-up has progressed steadily, and the property is now [redacted] with occupancy continuing to climb.

Certificate of Occupancy	Not Started	12/31/2027
Construction Completion Report w/ CPA Report Submission	Not Started	2/29/2028

Notes/Comments Regarding Progress on Project

The Renkert Building team has been working with the design and construction team to refine the scope of work and reduce cost where possible, in an effort to counter widespread and significant construction cost increases and higher interest rates on financing. As previously described in the approved TMUD scope amendment approved by the Tax Credit Authority on February 24, 2025, the adjacent new addition was removed from the scope of work to focus on redevelopment of the existing building. The design for the existing building was also revised to accommodate additional hotel rooms and increase revenues. As you know, the project's OHPTC award was rescinded in June 2025, a major setback that has further delayed the financial closing. House Bill 184 will allow the owner to request restoration of the previous OHPTC award to complete the entirety of the capital stack. The owner was awarded a new OHPTC award in Round 35, and is preparing to restart the construction closing process once the remainder of the lost funds are replaced. The owner will be proceeding with exterior repairs and improvements while approaching the final closing, which together with the substantial investment already made in hazardous materials abatement and interior demolition, is preparing the project to move quickly through the remaining construction once that financing is closed.

Notes/Comments Regarding Progress on Project

Sub-area A and Sub-area B are advancing substantially. We have secured financing for both components. Sub-area B is going vertical and expecting partial occupancy and move-ins in early 2026 and Sub-Area A will start to bring occupancy online in the few months thereafter with construction steadily progressing and advancing. Final completion of all buildings is set to be complete 2027. The project experienced a force-majeure delay due to a utility crossing under the Norfolk Southern railroad line, whereby Norfolk Southern had to provide "flagging" for the utility crossing and Norfolk Southern could not provide this flagging for an extended period of time- causing an extreme delay out of our control. This has now been resolved and we remain making substantial progress, and do not foresee any other delays.

I have attached updated General Contractor pay applications AIA forms [redacted] I have also attached updated photos of Sub-area B and Sub-area A, additional financing for Sub-Area A, which shows vertical and horizontal construction progress. Payroll report is not applicable to this project. Building permit approvals are also attached. Any other info necessary can be provided upon request and please let us know if you have any questions.

Notes/Comments Regarding Progress on Project

Construction activities in 2025 were primarily focused on high-priority repairs and maintenance to preserve the property in preparation for full-scale construction, as well as limited selective demolition for exploratory purposes.

Progress was stalled as the property was being considered as a location for a new Cuyahoga County Courthouse, with discussions continuing throughout 2025 in hopes of securing a commitment. However, the County has since decided (in April 2026) to retain and improve their existing courthouse facilities, so that is no longer being considered for Centennial.

Meanwhile, we have continued to pursue a mixed-use development, and a new opportunity has recently emerged that builds on and significantly enhances our plans for the property. The proposed program is changing accordingly and proceeding rapidly, as detailed in the TMUD Modified Scope of Work Request Form submitted in April 2026. Documentation of the existing Design Review (2021) and Building Permit (2022) approvals are attached. Please refer to the April 2026 Modified Scope of Work Request for the latest financing documentation and additional support.

Department of Development

Ohio Transformational Mixed-Use Development Program

Start of Construction Report

This Start of Construction Report must be submitted to the Ohio Department of Development ("Development") evidencing that construction of the approved Transformational Mixed-Use Development ("TMUD") Project has commenced. **This report is due within twelve (12) months of the date a project is certified by the Tax Credit Authority (TCA). Failure to provide this Start of Construction Report by the deadline, or failure of the Project to commence construction by the deadline, will result in the recission of the tax credit by the TCA per Ohio Revised Code Section 122.09(D).**

For purposes of this report "construction commencement" is defined to include events undertaken by the general contractor or company contracted for project construction. For purposes of determining the actions that evidence construction commencement, the TCA will consider the following actions:

- Demolition of existing structures on the project site;
- Excavation of the project site;
- Construction of new structures; and/or
- Development of private roadways within the project site.

Public utility work or work implemented by the local jurisdiction and/or county will not meet the commencement of construction requirement.

Reports must be submitted via email to transformational@development.ohio.gov and identified in the subject line as "(Project Name) Start of Construction Report". Please note, if a "Project" is a phase or phases of a larger Development, only the information associated with the "Project" should be included in this report.

Notes/Comments Regarding Progress on Project

Since the last Construction Progress Report was submitted, the building celebrated its topping out, with concrete superstructure complete through all 32 floors. Partial window wall installations have been achieved up to floor 27, and MEP rough-in and blocking on floors 15 through 18 have been completed as well. In addition, structural steel is being erected for the North Market expansion.

Ohio Transformational Mixed-Use Development Program

Construction Progress Report

A construction progress report must be submitted annually after the start of the construction report until the project is complete or as may be requested by the director. **Reports are due no later than December 31 in subsequent calendar years following submission of the start of construction report, or as identified in a request by the director.**

Reports must be submitted via email to transformational@development.ohio.gov and identified in the subject line as "(Project Name) Annual Construction Progress Report". Please note, if a "Project" is a phase or phases of a larger Development, only the information associated with the "Project" should be included in this report.

Certificate of Occupancy	In-Progress	12/30/2028
Construction Completion Report w/ CPA Report Submission	In-Progress	2/28/2029

Notes/Comments Regarding Progress on Project

I am writing to provide an update on the status of the There's Something about Marysville (The Silo's) project in Marysville, Union County, Ohio. The project continues to advance with significant milestones being tackled.

We have continued to make significant progress on the project over the past several months. To date, we have already secured our Ohio Historic Tax Credits ($3,000,000) and been awarded our Brownfield Grant from the Union County Land bank (approximately $1,300,000-this occurred on December 18th, 2025.)

Our design team has been navigating multiple parallel permit processes at the City of Marysville – for all on-site construction – and the State of Ohio – for the factory-built industrialized units being incorporated into the project. Industrialized unit designs for the project are also under review at the State of Ohio. On December 10th, 2025 the City of Marysville Design Review Board approved our phase 1 development plan. This has allowed us to proceed with the southside development of the project. We will begin site work in February of 2026.

Attach one or any combination of the following support documentation to demonstrate progress:

The support documentation must demonstrate progress annually. Identify/name document as using naming conventions below. If documents are combined, use a cover page to list each document included in a single pdf (preferred). Do not resubmit documents submitted in the Start of Construction or in a previously submitted Annual Progress Report. Additional documentation may be requested at any time by the Ohio Department of Development.

- **A. Payroll Report**: Payroll reports for site workers at the Project site.
- **B. Pay Request**: Pay request from the contractor evidencing construction work done at the Project site.
- **C. Photos**: Send no more than five dated photos as JPEG files to evidence construction progress at the Project site.
- **D. Contracts**: Contracts confirming the start date of work or completion of work at the Project site.
- **E. Approvals**: Permits/approvals completed for the Project as indicated in the Project Schedule above.
- **F. Financing**: Project financing completed for the Project as indicated in the Project Schedule above.

Notes/Comments Regarding Progress on Project

Since the most recent Construction Progress Report, the site has been re-zoned to accommodate the uses that were approved by the Tax Credit Authority on April 28, 2025 in the TMUD Modified Scope Request. Additionally, both the Mentor City Planning Commission and the Mentor City Council have since approved the modified site plan that corresponds to the uses set forth in the TMUD Modified Scope Request. Moreover, the Mentor City Planning Commission and Mentor City Council have approve the planned infill development zoning designation specifically for the Project. Furthermore, Uptown Mentor LLC has authorized the completion of all construction drawings for the new mixed-use building portion of the Project, and those construction drawings have been completed. Finally, all aspects of work associated with the existing building located at 8715 Mentor Avenue have been completed, including renovation of the interior of that building, Brownfield remediation work, and landscaping and other site improvements. That parcel will form the eastern gateway to the newly established Uptown Mentor District.

Department of Development

Ohio Transformational Mixed-Use Development Program

Start of Construction Report

This Start of Construction Report must be submitted to the Ohio Department of Development ("Development") evidencing that construction of the approved Transformational Mixed-Use Development ("TMUD") Project has commenced. **This report is due within twelve (12) months of the date a project is certified by the Tax Credit Authority (TCA). Failure to provide this Start of Construction Report by the deadline, or failure of the Project to commence construction by the deadline, will result in the recission of the tax credit by the TCA per Ohio Revised Code Section 122.09(D).**

For purposes of this report "construction commencement" is defined to include events undertaken by the general contractor or company contracted for project construction. For purposes of determining the actions that evidence construction commencement, the TCA will consider the following actions:

- Demolition of existing structures on the project site;
- Excavation of the project site;
- Construction of new structures; and/or
- Development of private roadways within the project site.

Public utility work or work implemented by the local jurisdiction and/or county will not meet the commencement of construction requirement.

Reports must be submitted via email to transformational@development.ohio.gov and identified in the subject line as "(Project Name) Start of Construction Report". Please note, if a "Project" is a phase or phases of a larger Development, only the information associated with the "Project" should be included in this report.

Notes/Comments Regarding Progress on Project

The project has started demolition and excavation of the site and has commenced construction of the retaining walls required to support the project site improvements. The project is approximately 7% complete, however, the "Project Completion Progress Status" section only allows a selection of 25% as the lowest percentage complete after construction has commenced.

Attach one or any combination of the following support documentation to demonstrate progress:

The support documentation must demonstrate construction has started. Identify/name document as using naming conventions below. Combined documents under the same attachment categories below. Additional documentation may be requested at any time by the Ohio Department of Development.

A. Payroll Report: Payroll reports for site workers at the Project site.
B. Pay Request: Pay request from the contractor evidencing construction work done at the Project site.

Certificate of Occupancy	In-Progress	6/5/2026
Construction Completion Report w/ CPA Report Submission	In-Progress	7/31/2026

Notes/Comments Regarding Progress on Project

We have begun stacking units on site. All modular units, including roof units, have been fully produced at the factory. On-site stacking is underway, and interior work within the historic building is currently in progress. Overall, the project is significantly past 50% completion but has not yet reached 75%.

Attach one or any combination of the following support documentation to demonstrate progress:

The support documentation must demonstrate progress annually. Identify/name document as using naming conventions below. If documents are combined, use a cover page to list each document included in a single pdf (preferred). Do not resubmit documents submitted in the Start of Construction or in a previously submitted Annual Progress Report. Additional documentation may be requested at any time by the Ohio Department of Development.

- **A. Payroll Report**: Payroll reports for site workers at the Project site.
- **B. Pay Request**: Pay request from the contractor evidencing construction work done at the Project site.
- **C. Photos**: Send no more than five dated photos as JPEG files to evidence construction progress at the Project site.
- **D. Contracts**: Contracts confirming the start date of work or completion of work at the Project site.
- **E. Approvals**: Permits/approvals completed for the Project as indicated in the Project Schedule above.
- **F. Financing**: Project financing completed for the Project as indicated in the Project Schedule above.

Introduction

Silverlode Consulting ("Silverlode") was engaged by the applicant ("Developer") to estimate the economic impact and increase in state and local tax collections associated with the proposed mixed-use development (the "Project"). This Economic Impact Statement Narrative Report (EIS) was prepared to support the Developer's application to the Ohio Department of Development ("ODOD") for consideration for an award of Ohio Transformational Mixed-Use Development ("TMUD") tax credits.

This EIS demonstrates the Project's eligibility for the TMUD program as described in Section 122.09(B)(6 and 7) of the Ohio Revised Code ("ORC"). As set forth in this report, the estimated increase in tax collections at the Project site, during the Project's construction period and through the fifth anniversary of the day the project is completed ("Completion Period") is estimated to exceed 10% of TMUD eligible expenditures. This EIS provides the economic impact data and supporting information requested by ODOD for considering TMUD eligibility, based upon ODOD's guidance as of the date of this report.

Portions of this report are considered trade secrets and are denoted as such.

Project Overview

Project Overview	
Project Square Feet	90,824
Development costs	$20,382,655
10% of development costs	$2,038,266
TMUD tax credit request	$2,000,000
Construction commencement	7/1/2026
Construction completion	10/1/2027

Project Uses		
Use	Gross Square Feet	Units
Residential	65,932	70
Office	12,250	
Retail	4,953	
Other (common areas, building services)	7,689	
Total building square feet	**90,824**	

EIS Workbook

ODOD provided the standardized EIS Workbook, a required file to be submitted with the TMUD application as a component of the EIS. The EIS Workbook utilizes ODOD-provided standard parameters, default wage benchmarks, locked formulas and calculation procedures along with applicant inputs (highlighted in green) to produce the construction period impacts, completion period impacts, and total direct impacts of the Project per the TMUD FY26 EIS Framework. Key portions of the EIS Workbook are included in this report. Supporting documentation, data sources and citations for applicant inputs can be found in Appendix A of this report.

Applicant & Project Information

Project Name	FNB Youngstown
Project Site Address (Street, City, County, ZIP)	1 West Federal Steet, Youngstown, Ohio 44503
Applicant Legal Name / Property Owner	FNB Youngstown LLC
TMUD Application ID (if assigned)	0035370
Economic Impact Consultant (Name / Firm)	Silverlode Consulting
Construction Start Date	7/1/2026
Project Completion Date	10/1/2027
Project Geography Type	General TMUD
Project MSA	Youngstown-Warren, OH

Parameters (Department-Provided + Applicant-Provided)

Table 1 — Department-Provided Standardized Parameters (Do Not Edit)		
Parameter	**Value**	**Notes**
Annual Construction Inflation Rate (PPI 10-year average)	3.28%	Department-provided. Applicants may not change.
Annual Revenue Inflation Rate (CPI 10-year average)	2.94%	Department-provided. Applicants may not change.
Annual Wage Growth Rate (ECI 10-year average)	3.21%	Department-provided. Applicants may not change.
FTE Hours per Year	2080	Department-provided fixed standard (2,080 hours/year). Applicants may not change.
Table 2 — Applicant-Provided Parameters (ENTER CURRENT TAX RATES FOR PROJECT LOCATION)		
Effective State Income Tax Rate (decimal)	2.25%	Applicant must enter current applicable rate for the project location; varies by geography and time.
Effective Local Income Tax Rate (decimal)	2.75%	Applicant must enter current applicable rate for the project location; varies by geography and time.
State Sales Tax Rate (decimal)	5.75%	Applicant must enter current applicable rate for the project location; varies by geography and time.
Local Sales Tax Rate (decimal)	1.75%	Applicant must enter current applicable rate for the project location; varies by geography and time.
Lodging Tax Rate (decimal)		Applicant must enter current applicable rate for the project location; varies by geography and time.
State + Local Effective Mill Rate per $1,000	$65.25	Applicant must enter current applicable rate for the project location; varies by geography and time.

Table 3 — Department-Provided Measurements (Can be modified with valid justification)			Override	Applicant Provided Value	Justification
General Office Use Average Annual Wage	$64,410	SOC 13-0000 Median Wage for MSA/State of Ohio	☐		
Medical Office Use Average Annual Wage	$74,310	SOC 29-0000 Median Wage for MSA/State of Ohio	☐		
Retail Use Average Annual Wage	$30,870	SOC 41-0000 Median Wage for MSA/State of Ohio	☐		
Food & Beverage Use Average Annual Wage	$28,010	SOC 35-0000 Median Wage for MSA/State of Ohio	☐		
Hospitality & Lodging Use Average Annual Wage	$28,450	SOC 39-0000 Median Wage for MSA/State of Ohio	☐		
Entertainment Use Average Annual Wage	$43,860	SOC 27-0000 Median Wage for MSA/State of Ohio	☐		
Property Management & Building Operations Use Average Annual Wage	$31,750	SOC 37-0000 Median Wage for MSA/State of Ohio	☐		
Plaza Operations Average Annual Wage	$31,750	SOC 37-0000 Median Wage for MSA/State of Ohio	☐		
Institutional Use Average Annual Wage	$64,410	SOC 13-0000 Median Wage for MSA/State of Ohio	☐		
Industrial Use Average Annual Wage	$45,170	SOC 51-0000 Median Wage for MSA/State of Ohio	☐		
Parking Use Average Annual Wage	$37,740	SOC 53-0000 Median Wage for MSA/State of Ohio	☐		
Construction Average Annual Wage	$57,730	SOC 47-0000 Median Wage for MSA/State of Ohio	☐		
Regional Purchase Coefficient	50%	Percent of construction materials purchased within the state of ohio	☐		

Construction Period Inputs (Applicant Inputs)

Eligible expenditures (post-certification only)

Item	Amount
Land acquisition costs (eligible if post-certification)	[redacted]
Hard construction costs	
Soft construction costs	
Professional services and eligible fees	
Taxable business fixtures cost (if applicable)	
Other eligible costs (describe in Notes tab)	

Total Eligible Expenditures	**$20,382,655**

Construction employment & payroll assumptions

Assumption	Value	Units
Estimated share of eligible construction costs attributable to labor (%)	55%	%
Primary construction average annual wage ($/yr)	$57,730	$
Construction period length (months)	15	months

Construction Expenditures Timeline

Year From Project Start Date	Percent of Expenditures
Year 1	80%
Year 2	20%
Year 3	0%
Year 4	0%
Year 5+	0%
Total	**100%**

Property Value

Item	Value
Property value prior to development	$1,298,120
Estimated property value post development	$11,409,782

Completion Period Inputs (5-Year Completion Period)

Enter ANNUAL stabilized, project-site-only operating assumptions for a typical stabilized year during the 5-year Completion Period (NOT five-year totals and NOT year-by-year projections). Use Baseline columns to report pre-project on-site activity; the workbook will subtract baseline to compute net new impacts.

Use Type / Component (On-Site)	Total Operating Square Footage	Stabilized Occupancy / Utilization (%)	Staffing Ratio (FTE per Sq Foot), Stabilized	Avg Annual Wage ($ per FTE, Stabilized)	Annual Stabilized Taxable Sales/Revenue per Sq Foot ($)	Baseline On-Site Payroll ($/year)	Baseline On-Site Taxable Sales/Revenue ($/year)
Office							
General Office	12250	[redacted]	0.003	$64,410			
Medical Office				$74,310			
Retail	4053	[redacted]	0.001	$30,870			
Restaurant				$28,010			
Hotel, Hospitality							
Hotel				$28,450			
Hospitality				$28,450			
Entertainment				$43,890			
Industrial				$45,170			
Institutional				$64,410			
Residential	65832	[redacted]	0.000	$31,750			
Plaza				$31,750			
Parking				$37,740			
Recreation				$28,450			

Construction Period Calculations (Locked)

Derived results from Construction Period Inputs.

Metric	Value
Inflation Adjusted Eligible Expenditures	$20,516,365
Construction labor share	55.00%
Avg annual wage (construction)	$57,730
Implied hourly wage	$28
Total labor cost (proxy for payroll)	$11,284,001
Implied labor hours	406360.23
Construction FTE (labor hours / 2,080)	195.46
State income tax on construction payroll	$253,890
Hard construction costs + business fixtures	[redacted]
Sales tax on hard construction costs + business fixtures	$610,717
Total construction-period tax impacts	$864,607

Completion Period Calculations (Locked)

Calculates annual stabilized direct impacts and removes baseline (project-site only).

Use Type	Annual FTE (stabilized)	Annual Payroll	Annual Taxable Sales/Revenue	Baseline Payroll	Baseline Sales	Net Payroll	Net Sales
General Office	40.83	$2,630,075	$0	$0	$0	$2,630,075	$0
Medical Office	0.00	$0	$0	$0	$0	$0	$0
Retail	6.50	$200,655	$0	$0	$0	$200,655	$0
Restaurant	0.00	$0	$0	$0	$0	$0	$0
Hotel	0.00	$0	$0	$0	$0	$0	$0

TOTAL	**55.54**	**$3,091,172**	**$0**	**$0**	**$0**	**$3,091,172**	**$0**

Tax Calculations (Locked)

Calculates annual and 5-year completion-period tax impacts (net of baseline) using Department parameters.

Tax Category	Annual Net Base	Rate	Annual Tax	5-Year Total (escalated)
Revenue Escalation factor (5 years)	5.3028			
Wage Escalation factor (5 years)	5.3315			
State income tax (payroll)	$3,091,172	0.0225	$69,551	$370,811
Local income tax (payroll)	$3,091,172	0.0275	$85,007	$453,214
State + local sales tax (taxable sales)	$0	0.0750	$0	$0
Lodging tax (hotel revenue)	$0	0.0000	$0	$0
Property tax (annual)	$3,539,082	65.2484	$230,919	$1,224,513
Total completion-period tax increase (5-year)				**$2,048,537**

Statutory 10% Test (Locked)

Completion-period tax increase must be ≥ 10% of eligible expenditures.

Item	Amount
Eligible Expenditures	$20,382,655
10% Threshold	$2,038,266
Construction + Completion-Period Tax Increase (5-year)	$2,913,145
PASS/FAIL	**PASS**

Summary Outputs

These outputs should be used to populate the EIS

Metric	Value
Total Eligible Construction Expenditures	$20,382,655
Total Construction-Period Tax Impacts	$864,607
Total Completion-Period Tax Increase (5-Year)	$2,048,537
Total Tax Increase	$2,913,145
Fifth Year Payroll	$3,507,602
Total Sales Subject to Sales Tax	$16,285,799
10% Test Result (PASS/FAIL)	PASS
Application Type	General TMUD

Data Sources

Data Sources and Key Inputs

The Developer's Project budget and stabilized annual operating proforma, which we understand are being provided to other third parties such as potential lenders, and thus are assumed to be reliable, were the source of most project information.

ODOD provided the EIS Workbook Excel file ("Workbook") submitted with this EIS Narrative Report. The Workbook contains ODOD required parameters and calculations of economic impact. The results presented in this EIS narrative report were generated using the Workbook.

The IMPLAN model, which is described in the About IMPLAN section, was a source of key inputs. IMPLAN data from 2024, the most recent year for which data is currently available, was used for this analysis.

Where necessary, we also relied on independent third-party data and established real estate industry data sources.

Throughout the modeling, Silverlode also employed professional conservatism to ensure that the inputs and assumptions were reasonable. Silverlode reviewed information provided by the Developer for reasonableness but did not validate such information.

Portions of this report are considered trade secrets and are denoted as such.

EIS Workbook, Documentation and Notes Table

EXAMPLE ENTRIES — FOR ILLUSTRATION ONLY (DO NOT DELETE IN TEMPLATE VERSION)				
Workbook Section / Tab	**Input or Assumption**	**Value Used**	**Data Source**	**Notes / Justification (Why this is reasonable)**
Completion Period Inputs – Retail	Retail sales per square foot	$375 per SF (annual, stabilized)	ICSC 2024 Midwest Retail Benchmark Report	Consistent with Class A neighborhood retail in comparable Midwest
Completion Period Inputs – Office	Average annual wage	$78,000 (median)	BLS OEWS, Cincinnati MSA, Major SOC Group 13-0000 (2024)	Median wage used per EIS guidance to avoid overstating payroll
Completion Period Inputs – Hotel	ADR and occupancy	$155 ADR; 70% stabilized occupancy	Project operating pro forma; STR Midwest regional averages	Reflects stabilized operations after ramp-up period
Parameters – Applicant-Provided	Local sales tax rate	1.25%	Ohio Department of Taxation, county sales tax rate table (2025)	Rate applicable to project address as of submission date
Completion Period Inputs – Baseline	Existing on-site retail sales	$1,500,000 annually	Current tenant rent roll and sales disclosures	Represents pre-project activity removed to calculate net new impacts
Parameters – Applicant-Provided	Effective State Income Tax Rate	2.25%	https://tax.ohio.gov/individual/resources/annual-tax-rates	For taxable years beginning in 2025, tax of $342 + plus 2.75% tax on the portion of income from $26,051-$100,000, and 3.125% tax on the portion of income over $100,000. Given the range in income levels for the Project, an effective rate of 2.25% was assumed.
Parameters – Applicant-Provided	Effective Local Income Tax Rate	2.75%	https://youngstownohio.gov/finance	Local income tax rate is published by the City
Parameters – Applicant-Provided	State Sales Tax Rate	5.75%	https://tax.ohio.gov/business/sales-and-use-tax	State sales tax rate is published by the state.
Parameters – Applicant-Provided	Local Sales Tax Rate	1.75%	https://dam.assets.ohio.gov/image/upload/tax.ohio.gov/tax_analysis/tax_data_series/sales_and_use/Salestaxmap.pdf	1.5% Mahoning County sales tax + 0.25% transit tax rate.
Parameters – Applicant-Provided	State + Local Effective Mille Rate per $1,000	65.248394	Mahoning County Auditor	2025 effective millage for Project parcels

Construction Period Inputs - Eligible	Land Acquisition Costs	0	Project budget	No land acquisition after Project certification date

Project FTE Analysis								
Residential SF of Project	65,932		Included in the Residential line; utilize residential SF to calculate total operations jobs per residential SF					
Occupancy	90.00%							
Total Project Operations FTEs per residential SF	**0.00014**							

Additional Sources/Notes:

* National Apartment Association (https://naahq.org/news/changing-paradigm-staffing-ratios) assumption: 1 FTE per 61 units

**Facilities.net (https://www.facilitiesnet.com/facilitiesmanagement/article/Facility-Staffing-Levels-Maintenance-Custodial-and-Grounds-Care--17471)

***Square footage per security FTE includes commercial building square feet (except parking) to avoid overstating)

About IMPLAN

IMPLAN (IMpact analysis for PLANning), one of the most well-respected and widely used methodologies for assessing regional economic impacts, was used for parts of this study. IMPLAN is a general input-output model initially developed by the U.S. Forest Service in the 1970s and is used by more than 1,000 universities, government agencies, and consultants to estimate the economic and fiscal impacts of investments and/or changes in one or more industries. 2024 IMPLAN data, the most current data available at the time, was used for this study. Data underlying the IMPLAN model is updated annually using thousands of data points from over 90 sources. The main sources of this data include:

- U.S. Bureau of Labor Statistics (BLS) Quarterly Census of Employment and Wages (QCEW)
- U.S. Bureau of Economic Analysis (BEA) Regional Economic Accounts (REA)
- U.S. Census Bureau County Business Patterns (CBP)
- U.S. Bureau of Economic Analysis National Income and Product Accounts (NIPA)

About Silverlode Consulting

Silverlode Consulting was founded in 2002 by two former leaders from EY and PwC's consulting practices. As a national leader in economic impact analysis, Silverlode has supported hundreds of organizations, from nonprofit arts groups to multinational corporations, in quantifying their contributions to their communities and effectively communicating those impacts to key stakeholders. Through rigorous analysis and clear communication of findings, our work has helped clients secure funding, obtain regulatory approvals, and positively influence public perception. To learn more about our firm and our expertise in economic impact analysis, please visit http://www.silverlodeconsulting.com

Executive Summary

The 4th and Walnut Center Project is a 519,815-square foot proposed mixed-use development in downtown Cincinnati that will drive substantial economic activity. The 4th and Walnut Center Project is anticipated to start construction in 2027 and complete construction in 2029. The 4th and Walnut Center Project will encompass a mix of general office, restaurant, hotel, residential, and parking uses.

Eligible expenditures for the 4th and Walnut Center Project total $170,897,409, which means a minimum of $17,089,741 in taxes must be generated to meet the 10.00 percent threshold. Construction period taxes total $5,928,513, while completion period taxes over the five-year period total $29,215,056. This means that the 4th and Walnut Center Project will increase taxes by a total of $35,143,569. Additionally, net payroll in the fifth year of the completion period totals $6,730,806, while net taxable sales during the construction and completion periods total $142,584,885. The taxes generated for the 4th and Walnut Center Project exceed the 10.00 percent threshold, as detailed in Table 1.

Table 1: Summary Output

Metric	Value
Total Eligible Expenditures	$170,897,409
Total Construction Period Taxes	$5,928,513
Total Completion Period Taxes (5-Year)	$29,215,056
Total Tax Increase	$35,143,569
Fifth Year Completion Period Payroll	$6,730,806
Total Taxable Sales	$142,584,885
10% Threshold	$17,089,741
Pass/Fail	**Pass**

Introduction

The 4th and Walnut Center Project is a proposed mixed-use development in downtown Cincinnati that will drive substantial economic activity. The 4th and Walnut Center Project is anticipated to start construction in 2027 and complete construction in 2029. With a mix of general office, restaurant, hotel, residential, and parking uses, the 4th and Walnut Center Project will encompass a total of 519,815 square feet.

This report details the impact of the 4th and Walnut Center Project on sales, full-time equivalent (FTE) employment, payroll, and taxes during the construction period as well as during the completion period. The construction period refers to the period after project certification until project completion, whereas the completion period refers to the five-year period after project completion.

Construction Period Impacts

Inputs

Table 2 details the eligible project expenditures for the 4th and Walnut Center Project. Based on the Project Budget detailed in Appendix C, the total eligible expenditures for the 4th and Walnut Center Project total $170,897,409. This is comprised of $[redacted] in land acquisition costs (post-certification), $[redacted] in hard construction costs, $[redacted] in soft construction costs, and $[redacted] in professional services and eligible fees. Additionally, construction labor is assumed to account for [redacted] percent of hard construction costs, which equates to [redacted] percent of the total eligible construction costs for the 4th and Walnut Center Project.

Table 2: Eligible Project Expenditures

Item	Total
Land Acquisition Costs (post-certification)	$[redacted]
Hard Construction Costs	$[redacted]
Soft Construction Costs	$[redacted]
Professional Services and Eligible Fees	$[redacted]
Taxable Business Fixtures Costs	$[redacted]
Other Eligible Costs	$[redacted]
Total Eligible Expenditures	**$170,897,409**

Source: Project Budget (Appendix C).

Table 3 details the construction expenditures timeline for 4th and Walnut Center Project. According to the Project Timeline detailed in Appendix B, construction will begin on February 5, 2027, and is expected to be completed by February 2, 2029. Approximately 31.19 percent of eligible construction expenditures will occur in year 1 (2027), 34.10 percent will occur in year 2 (2028), and 34.72 percent will occur in year 3 (2029).

Table 3: Construction Expenditures Timeline

Year	Percent of Eligible Expenditures
Year 1 – 2027	31.19%
Year 2 – 2028	34.10%
Year 3 – 2029	34.72%
Total Eligible Expenditures	**100.00%**

Source: Project Budget (Appendix C).

According to the Hamilton County Auditor, the current total market value for the 4th and Walnut Center Project (parcel ID 083-0001-0197-00) is $10,266,700. It is estimated that the property value post development will equal [redacted] Therefore, the estimated property value post development for the 4th and Walnut Center Project will be $121,200,941.

Employment and Payroll

Given the Ohio Department of Development's standardized assumptions for inflation, the inflation-adjusted eligible construction expenditures for the 4th and Walnut Center Project total $176,764,702. To estimate construction payroll, the estimated share of eligible construction costs attributable to labor was applied to the total inflation-adjusted eligible construction expenditures. It was assumed that labor costs represent 38.95 percent of the total eligible construction expenditures for the 4th and Walnut Center Project. This results in total labor costs of $68,845,718, which serves as a proxy for total construction payroll.

The total labor costs were divided by the average annual wage of construction workers to estimate the total construction FTE. According to average annual wage data provided by the Ohio Department of Development, the average annual wage for construction jobs in the Cincinnati Metropolitan Statistical Area (MSA) is $60,900. This indicates that 4th and Walnut Center will support 1,130.47 construction FTE, as detailed in Table 4.

Table 4: Construction Employment and Payroll

Metric	Value
Inflation-Adjusted Eligible Expenditures	$176,764,702
Construction Labor Share	38.95%
Total Construction Labor Cost (Payroll)	**$68,845,718**
Construction Average Annual Wage	$60,900
Total Construction FTE	**1,130.47**

Source: Output from the Economic Impact Statement Workbook.

Taxes

The total labor costs of the 4th and Walnut Center Project are $68,845,718, which serves as a proxy for total construction payroll. The effective state income tax rate for the 4th and Walnut Center Project is 2.11 percent, which will result in total state income tax revenue of $1,453,541.

Given the Ohio Department of Development's standardized assumptions for inflation, the inflation-adjusted hard construction costs and taxable business fixtures total $114,742,863 for the 4th and Walnut Center Project. The standardized regional purchase coefficient represents the share of construction materials purchased with the State of Ohio. The Ohio Department of Development's standardized regional purchase coefficient is 50.00 percent. This means that $57,371,432 of inflation-

adjusted hard construction costs and taxable business fixtures are subject to sales tax. The state sales tax rate is 5.75 percent, and the local sales tax rate for Hamilton County is 2.05 percent. Therefore, taxable construction expenditures will result in $4,474,972 in sales tax revenue. As detailed in Table 5, the 4th and Walnut Center Project will generate a total of $5,928,513 in tax revenue during the construction period.

Table 5: Construction Taxes

Tax Category	Annual Net Base	Tax Rate	Total Tax
State Income Tax	$68,845,718	2.11%	$1,453,541
State and Local Sales Tax	$57,371,432	7.80%	$4,474,972
Total Completion Period Tax Impact	**N/A**	**N/A**	**$5,928,513**

Source: Output from the Economic Impact Statement Workbook.

Completion Period Impacts

Inputs

The 4th and Walnut Center Project will include 18,810 square feet of general office space, 18,830 square feet of restaurant space, 201,735 square feet of hotel space with [redacted] rooms, 160,770 square feet of residential space with [redacted] units, and 119,670 square feet of parking space. As detailed in Table 6, the 4th and Walnut Center Project encompasses a total of 519,815 square feet.

Table 6: Mixed-Use Breakdown

Use Type	Square Footage	Units/Rooms
General Office	18,810 square feet	
Restaurant	18,830 square feet	
Hotel	201,735 square feet	[redacted] rooms
Residential	160,770 square feet	[redacted] units
Parking	119,670 square feet	
Total	**519,815 square feet**	

Source: Project Matrix (Appendix D).

Table 7 details the stabilized occupancy by use type of the 4th and Walnut Center Project during the completion period. The stabilized occupancy level for the hotel occurs in year 3 and is detailed in the operating pro forma. The general office space is currently occupied, reflecting full occupancy. The restaurant space reflects one tenant space, which will be occupied upon project completion. Stabilized occupancy levels for the residential and parking spaces were provided by the applicant and detailed in Appendix F.

Table 7: Completion Period Stabilized Occupancy by Use Type

Use Type	Stabilized Occupancy
General Office	[redacted]
Restaurant	[redacted]
Hotel	[redacted]
Residential	[redacted]
Parking	[redacted]

Source: Occupancy Assumptions (Appendix F)

Table 8 details the stabilized staffing ratio by use type for the 4th and Walnut Center Project. The stabilized staffing ratio for the general office and restaurant uses were estimated using the U.S. Energy Information Administration's Commercial Buildings Energy Consumption Survey.[1] Total stabilized FTE for the hotel use is based on assumptions provided by the applicant and detailed in Appendix E. The total stabilized FTE was converted to a stabilized staffing ratio based on the square footage and stabilized occupancy. The stabilized staffing ratio for the residential use reflects an average of estimates from two sources, which detail a similar range of residential units per FTE.[2] The stabilized staffing ratio for the parking use reflects an average of the staffing ratios for five different facilities.[3]

Table 8: Completion Period Stabilized Staffing Ratio by Use Type

Use Type	Stabilized Staffing Ratio (FTE per SQFT)
General Office	$1\ FTE\ per\ 3{,}237\ SQFT = \frac{1\ FTE}{3{,}237\ SQFT} = 0.000309$
Restaurant	$1\ FTE\ per\ 480\ SQFT = \frac{1\ FTE}{480\ SQFT} = 0.002083$
Hotel	$101.5\ FTE = [redacted] = 0.000671$
Residential	$1\ FTE\ per\ [redacted]\ units = [redacted] = 0.000010$
Parking	$1\ FTE\ per\ 35{,}657\ SQFT = \frac{1\ FTE}{35{,}657\ SQFT} = 0.000028$

Source: U.S. Energy Information Administration (2022), Operating Pro Forma (Appendix E), National Apartment Association (2022), Urban Settlements (n.d.), and International Facility Management Association (2010).

Table 9 details the stabilized average annual wage per FTE for the 4th and Walnut Center Project. The general office space for the project is currently occupied by a tenant for their office and chilled water loop plant. The stabilized average annual wage per FTE for the general office was updated to reflect the median wage for office and administrative support occupations (SOC 43-0000) to better reflect the current tenant. The stabilized average annual wage per FTE for the hotel use is based on assumptions provided by the applicant and detailed in Appendix E. For the restaurant, residential, and parking uses, the stabilized average annual wage per FTE reflects the standardized values provided by the Ohio Department of Development for the Cincinnati MSA.

[1] (U.S. Energy Information Administration 2022)
[2] (National Apartment Association 2022); (Urban Settlements n.d.)
[3] (International Facility Management Association 2010)

Table 9: Completion Period Stabilized Average Annual Wage per FTE by Use Type

Use Type	Stabilized Average Annual Wage per FTE
General Office	$45,820
Restaurant	$30,320
Hotel	$44,911
Residential	$36,000
Parking	$42,920

Source: Ohio Department of Development average annual wages for the Cincinnati MSA, U.S. Bureau of Labor Statistics, Operating Pro Forma (Appendix E).

Table 10 details the stabilized taxable sales/revenue per square foot by use type for the 4th and Walnut Center Project. Based on the operating pro forma, the stabilized taxable sales/revenue in year 3 are $[redacted] for the restaurant space and $[redacted] for the hotel space.[4] Given that the operating pro forma accounts for occupancy levels, the total taxable sales/revenue were divided by the square footage multiplied by the occupancy for each use type to determine the taxable sales/revenue per square foot. The general office, residential, and parking uses will not generate taxable sales/revenue.

Table 10: Completion Period Stabilized Taxable Sales/Revenue per SQFT by Use Type

Use Type	Stabilized Taxable Sales/Revenue per SQFT
General Office	$0
Restaurant	[redacted] les [redacted] = $371.75
Hotel	[redacted] les [redacted] = $117.61
Residential	$0
Parking	$0

Source: Operating Pro Forma (Appendix E).

The 4th and Walnut Center Project currently has one tenant occupying the 18,810 square feet of general office space for their office and chilled water loop plant, reflecting full occupancy of the general office space. Based on the U.S. Energy Information Administration's Commercial Buildings Energy Consumption Survey, the median square feet per worker for refrigerated warehouse and storage buildings is 3,237.[5] This equates to a staffing ratio of 0.000309 FTE per square foot, or 5.81 FTE. The stabilized average annual wage per FTE for the general office is $45,820, which reflects the median wage for office and administrative support occupations (SOC 43-0000). Therefore, baseline payroll for the general office space totals $266,257. Additionally, it was assumed that the current tenant does not generate taxable sales/revenue.

[4] The taxable sales/revenue for the restaurant also include the food and beverage revenue for the banquet and room service of the hotel.
[5] (U.S. Energy Information Administration 2022)

Employment and Payroll

Table 11 details the stabilized annual FTE and payroll by use type for the 4th and Walnut Center Project during the completion period. The 4th and Walnut Center Project will have stabilized annual FTE of 151.07 with associated annual payroll totaling $6,197,968. However, baseline annual payroll totals $266,257, which results in total net annual payroll of $5,931,711.

Table 11: Completion Period Stabilized Annual FTE and Payroll by Use Type

Use Type	Stabilized FTE	Stabilized Annual Payroll	Baseline Annual Payroll	Net Annual Payroll
General Office	[redacted]	$266,257	$266,257	$0
Restaurant	[redacted]	$1,189,428	$0	$1,189,428
Hotel	[redacted]	$4,558,480	$0	$4,558,480
Residential	[redacted]	$54,162	$0	$54,162
Parking	[redacted]	$129,641	$0	$129,641
Total	**151.07**	**$6,197,968**	**$266,257**	**$5,931,711**

Source: Output from the Economic Impact Statement Workbook.

Taxable Sales/Revenue

Table 12 details the stabilized annual taxable sales/revenue by use type for the 4th and Walnut Center Project during the completion period. The 4th and Walnut Center Project will have stabilized annual taxable sales/revenue totaling $24,795,000. There are no baseline taxable sales/revenue to account for with the 4th and Walnut Center Project.

Table 12: Completion Period Stabilized Annual Taxable Sales/Revenue by Use Type

Use Type	Net Stabilized Annual Taxable Sales/Revenue
General Office	$0
Restaurant	$7,000,000
Hotel	$17,795,000
Residential	$0
Parking	$0
Total	**$24,795,000**

Source: Output from the Economic Impact Statement Workbook.

Taxes

Table 13 details the annual and 5-year total tax impact for the completion period of the 4th and Walnut Center Project. The tax types included in this analysis include state and local income tax, state and local sales tax, lodging tax, and property tax. Payroll is the base for income tax calculations, taxable sales are the base for the sales tax calculations, hotel sales are the base for the lodging tax calculations, and the property value pre- and post-development are the base for the property tax calculations.

Net annual payroll totals $5,931,711, which results in annual state income tax revenue of $125,236 and annual local income tax revenue of $106,771. Annual net taxable sales total $24,795,000, which results in annual state and local sales tax revenue of $1,934,010. Annual hotel sales total $17,795,000, which

results in lodging tax revenue of $2,046,425. The difference in the post- and pre-development assessed value of the property is $38,826,984. The 4th and Walnut Center Project will have a property tax abatement agreement that results in an estimated property tax payment of $1,295,696. Therefore, the adjusted property tax millage rate equates to 33.3710 per $1,000. Given the Ohio Department of Development's standardized assumptions for inflation, the 4th and Walnut Center Project will generate $29,215,056 in inflation-adjusted tax revenue during the completion period.

Table 13: Completion Period Taxes

Tax Category	Annual Net Base	Tax Rate	Annual Tax	5-Year Total (Escalated)
State Income Tax	$5,931,711	2.11%	$125,236	$667,694
Local Income Tax	$5,931,711	1.80%	$106,771	$569,245
State and Local Sales Tax	$24,795,000	7.80%	$1,934,010	$10,255,613
Lodging Tax	$17,795,000	11.50%	$2,046,425	$10,851,724
Property Tax	$38,826,984	33.3710	$1,295,696	$6,870,780
Total Completion Period Tax Impact	**N/A**	**N/A**	**$5,508,138**	**$29,215,056**

Source: Output from the Economic Impact Statement Workbook.

Summary

With a mix of general office, restaurant, hotel, residential, and parking space, the 4th and Walnut Center Project is a proposed mixed-use development in downtown Cincinnati that will drive substantial economic activity. Eligible expenditures for the 4th and Walnut Center Project total $170,897,409, which means a minimum of $17,089,741 in taxes must be generated to meet the 10.00 percent threshold. Construction period taxes total $5,928,513, while completion period taxes over the five-year period total $29,215,056. This means that the 4th and Walnut Center Project will increase taxes by a total of $35,143,569. Additionally, net payroll in the fifth year of the completion period totals $6,730,806, while net taxable sales during the construction and completion periods total $142,584,885. The taxes generated for the 4th and Walnut Center Project exceed the 10.00 percent threshold, as detailed in Table 14.

Table 14: Summary Output

Metric	Value
Total Eligible Expenditures	$170,897,409
Total Construction Period Taxes	$5,928,513
Total Completion Period Taxes (5-Year)	$29,215,056
Total Tax Increase	$35,143,569
Fifth Year Completion Period Payroll	$6,730,806
Total Taxable Sales	$142,584,885
10% Threshold	$17,089,741
Pass/Fail	**Pass**

Appendix A: Data Sources and Assumptions

Table 15: Data Sources and Assumptions

Workbook Section	Input or Assumption	Value Used	Data Source	Justification
Applicant & Project Information	Construction Start Date	2/5/2027	Project Timeline (Appendix B)	Current construction start date.
Applicant & Project Information	Project Completion Date	2/2/2029	Project Timeline (Appendix B)	Current construction completion date.
Parameters – Table 2	Effective State Income Tax Rate	2.11%	Ohio Department of Taxation See Table 17	Ohio has a graduated state income tax rate. The estimated taxes for each use type were calculated and then weighted based on net new FTE to arrive at the effective rate for the project.
Parameters – Table 2	Effective Local Income Tax Rate	1.8%	City of Cincinnati, Income Taxes (https://www.cincinnati-oh.gov/finance/income-taxes/)	Current rate applicable to project address as of submission date.
Parameters – Table 2	State Sales Tax Rate	5.75%	Ohio Department of Taxation	Current rate applicable to project address as of submission date.
Parameters – Table 2	Local Sales Tax Rate	2.05%	Hamilton County, Sales Tax (https://www.hamiltoncountyohio.gov/government/departments/budget_and_strategic_initiatives/sales_tax.php)	Current rates applicable to project address as of submission date, comprised of: • 0.5% - riverfront sales tax • 0.75% - general operations • 0.8% - regional transit authority

Parameters – Table 2	Lodging Tax Rate	11.5%	Hamilton County, Hotel Lodging Tax (https://www.hamiltoncountyohio.gov/government/departments/budget_and_strategic_initiatives/hotel_lodging_tax/index.php) City of Cincinnati, Transient Occupancy Tax (https://www.cincinnati-oh.gov/finance/transient-occupancy-tax-hotel-tax/tax-return/)	Current rates applicable to project address as of submission date, comprised of: • 3.0% - Cincinnati USA Convention and Visitors Bureau • 3.5% - Renovation and expansion of Duke Energy Convention Center and Sharonville Convention Center • 1.0% - Convention-related facilities • 4.0% - City of Cincinnati
Parameters – Table 2	State + Local Effective Mill Rate per $1,000	33.371018	Hamilton County Auditor, 2026 Rate of Taxation by Tax District Summary, Tax District 001 (https://www.hamiltoncountyauditor.org/pdf/retax/RateOfTaxation/Tax_Year_2025_Tax_Rate_Sheet.pdf)	The current effective commercial/industrial rate applicable to the project as of submission date is 82.840948. A property tax abatement agreement is anticipated that will result in an annual tax liability of $1,295,696. This represents an abatement of approximately 59.72 percent. The effective rate has been reduced by 59.72 percent to reflect the anticipated abatement.
Parameters – Table 3	General Office Use Average Annual Wage	$45,820	U.S. Bureau of Labor Statistics, Occupational Employment and Wage Statistics (OEWS), Cincinnati MSA, Major SOC Group 43-0000, May 2024	Current tenant of the general office space is a chilled water loop plant with offices. Major SOC Group 43-0000 includes office and administrative support occupations.
Parameters – Table 3	Hospitality and Lodging Use Average Annual Wage	$44,911	Operating Pro Forma – Hotel (Appendix E)	Reflects average annual wage of hotel staff per the hotel staffing plan included with the operating pro forma for the hotel.

Construction Period Inputs	Eligible Expenditures	Land acquisition = [redacted] Hard construction = [redacted]1 Soft construction = [redacted] Professional services = [redacted] Total eligible expenditures = $170,897,409	Project Budget – Sources and Uses (Appendix C)	Current eligible expenditures by item for the project as of submission date.
Construction Period Inputs	Share of Eligible Expenditures Attributable to Labor	38.95%	Bridgit, Labor vs Material Cost in Construction: What Contractors Actually Control (https://gobridgit.com/blog/labor-vs-material-cost-in-construction-6-things-to-keep-in-mind/)	The project assumes that construction labor accounts for 60% of hard costs, which equates to 38.95% of total costs. This assumption is consistent with labor share representing between 20% and 40% of total project costs.
Construction Period Inputs	Construction Expenditures Timeline	Year 1=31.19% Year 2=34.10% Year 3=34.72%	Project Budget – Costs by Year (Appendix C)	Current timeline of expenditures for the project as of submission date.

Completion Period Inputs	General Office Baseline On-Site Payroll	$266,257	U.S. Energy Information Administration, 2018 Commercial Buildings Energy Consumption Survey Table B16 (https://www.eia.gov/consumption/commercial/data/2018/#b11-b14) U.S. Bureau of Labor Statistics, Occupational Employment and Wage Statistics (OEWS), Cincinnati MSA, Major SOC Group 43-0000, May 2024	[redacted] 18,810 square feet. Median square feet per worker for refrigerated warehouse and storage buildings is 3,237. Current tenant of the general office space is a [redacted] with offices. Major SOC Group 43-0000 includes office and administrative support occupations.
Completion Period Inputs	General Office Baseline On-Site Taxable Sales/Revenue	$0	Ohio Department of Taxation, Services Not Taxable (https://tax.ohio.gov/business/sales-and-use-tax/taxability)	Professional, personal, and insurance services are not taxable when any tangible item transferred is incidental and not separately charged.

Ohio has a graduated state income tax rate, as detailed in Table 16. Tax rates for 2025 reflect the most recently published as of submission date.

Table 16: Ohio Individual Income Tax Rates, 2025

Ohio Taxable Income	Tax Calculation
$0 - $26,050	$0
$26,050 - $100,000	$342 + 2.75% of excess over $26,050
$100,000 and up	$2,394.32 + 3.125% of excess over $100,000

The state income tax revenue per FTE was calculated based on the average annual wage for each use type using the 2025 state income tax rates. The state income tax revenue per FTE was multiplied by the net new FTE by use type to estimate the total state income tax revenue generated by the 4th and Walnut Center Project. The total state income tax revenue was divided by the total net new payroll to arrive at the effective state income tax rate, as detailed in Table 17.

Table 17: Effective State Income Tax Rate Calculation

Use Type	Average Annual Wage	State Income Tax Revenue per FTE	Net New FTE	Net New Payroll	Total State Income Tax Revenue
Construction	$60,900	$1,300	1,130.47	$68,845,718	$1,470,035
General Office	$45,820	$886	0.00	$0	$0
Restaurant	$30,320	$459	39.23	$1,189,428	$18,023
Hotel	$44,911	$861	101.50	$4,558,480	$87,359
Residential	$36,000	$616	1.50	$54,162	$926

RE: 4th and Walnut Center – Hotel Occupancy Memo

Dear Mr. Demmon,

NewcrestImage, the parent company of Supreme Bright Cincinnati II, LLC, is a premier hotel investment firm headquartered in Grapevine, Texas, with a robust background in hotel development, acquisitions, and management. While the firm's origins trace back to 1977, NewcrestImage was established in its current form in 2013 through the merger of two, family companies. Still privately owned and family led, the company has amassed an impressive track record of over 270 hospitality transactions valued at more than $2.7 billion. Notably, NewcrestImage excels in adaptive reuse projects for historic buildings, having successfully revitalized six such structures. With a recent surge in growth, the company has acquired over 75 hotels in the last year alone, reinforcing its industry leadership and forward-looking approach in hospitality.

In our professional experience a product of this brand standard operates at a [redacted] occupancy in markets similar to size, population, attractions and amenities as Cincinnati.

Sincerely,

Mital Patel
Managing Partner

RE: Fourth and Walnut Center – Residential and Parking Occupancy

Ms. Heare:

The Model Group is an experienced developer and mixed-use property manager throughout Ohio, Kentucky, and Indiana with a heavy focus in the Central Business District and Over-the-Rhine neighborhoods of Cincinnati.

Throughout our urban portfolio, we are experiencing a [redacted] stabilized occupancy and feel strongly the residential units in the 4th and Walnut Center will perform at a similar level.

We are also experiencing a sharp demand for parking in our urban portfolio. The residential parking component of our recently constructed Mercantile Library project was [redacted] leased within [redacted]. We feel strongly that both qualitative and quantitative data suggests the need for more residential and transient parking options in Downtown Cincinnati.

We are proud to be a part of this development. If you have any questions, please contact me at 513.559.5854 or bmaly@modelgroup.net.

Executive Summary

The Atrium I Mixed Use Project is a 769,009-square foot proposed mixed-use development in downtown Cincinnati that will drive substantial economic activity. The Atrium I Mixed Use Project is anticipated to start construction in 2027 and complete construction in 2028. The Atrium I Mixed Use Project will encompass a mix of general office, retail, restaurant, institutional, residential, plaza, and parking uses.

Eligible expenditures for the Atrium I Mixed Use Project total $76,017,763, which means a minimum of $7,601,776 in taxes must be generated to meet the 10.00 percent threshold. Construction period taxes total $2,883,984, while completion period taxes over the five-year period total $12,424,995. This means that the Atrium I Mixed Use Project will increase taxes by a total of $15,308,979. Additionally, net payroll in the fifth year of the completion period totals $19,964,545, while net taxable sales during the construction and completion periods total $56,742,635. The taxes generated for the Atrium I Mixed Use Project exceed the 10.00 percent threshold, as detailed in Table 1.

Table 1: Summary Output

Introduction

The Atrium I Mixed Use Project is a proposed mixed-use development in downtown Cincinnati that will drive substantial economic activity. The Atrium I Mixed Use Project is anticipated to start construction in 2027 and complete construction in 2028. With a mix of general office, retail, restaurant, institutional, residential, plaza, and parking uses, the Atrium I Mixed Use Project will encompass a total of 769,009 square feet.

This report details the impact of the Atrium I Mixed Use Project on sales, full-time equivalent (FTE) employment, payroll, and taxes during the construction period as well as during the completion period. The construction period refers to the period after project certification until project completion, whereas the completion period refers to the five-year period after project completion.

Construction Period Impacts

Inputs

Table 2 details the eligible project expenditures for the Atrium I Mixed Use Project. Based on the Project Budget detailed in Appendix C, the total eligible expenditures for the Atrium I Mixed Use Project total $76,017,763. This is comprised of $[redacted] in hard construction costs, $[redacted] in soft construction costs, $[redacted] in professional services and eligible fees, and $[redacted] in taxable business fixtures costs. Additionally, construction labor is assumed to account for 60.00 percent of hard construction costs, which equates to 42.73 percent of the total eligible construction costs for the Atrium I Mixed Use Project.

Table 2: Eligible Project Expenditures

Item	Total
Land Acquisition Costs (post-certification)	$[redacted]
Hard Construction Costs	$[redacted]
Soft Construction Costs	$[redacted]
Professional Services and Eligible Fees	$[redacted]
Taxable Business Fixtures Costs	$[redacted]
Other Eligible Costs	$[redacted]
Total Eligible Expenditures	**$76,017,763**

Source: Project Budget (Appendix C).

Table 3 details the construction expenditures timeline for Atrium I Mixed Use Project. According to the Project Schedule detailed in Appendix B, construction will begin on January 1, 2027, and is expected to be completed by December 31, 2028. Approximately 50.00 percent of eligible construction expenditures will occur in year 1 (2027), and 50.00 percent will occur in year 2 (2028).

Table 3: Construction Expenditures Timeline

Year	Percent of Eligible Expenditures
Year 1 – 2027	50.00%
Year 2 – 2028	50.00%
Total Eligible Expenditures	**100.00%**

Source: Project Schedule (Appendix B).

In December 2025, the underlying parcel (083-0003-0010-00) of the Property was administratively reconfigured by the Hamilton County Auditor as part of a ground lease-related conveyance, resulting in the creation of three new parcel identification numbers (083-0003-0133-00, 083-0003-0134-00, and 083-0003-0135-00). All three parcels are considered part of the Property and are under Atrium Tower One LP's control, via deed and the perpetual ground lease.

According to the Hamilton County Auditor, the current total market value for parcel 083-0003-0010-00 is $29,450,270. It is estimated that the property value post development will equal [redacted]. Therefore, the estimated property value post development for the Atrium I Mixed Use Project will be $83,587,596.

Employment and Payroll

Given the Ohio Department of Development's standardized assumptions for inflation, the inflation-adjusted eligible construction expenditures for the Atrium I Mixed Use Project total $77,264,454. To estimate construction payroll, the estimated share of eligible construction costs attributable to labor was applied to the total inflation-adjusted eligible construction expenditures. It was assumed that labor costs represent 42.73 percent of the total eligible construction expenditures for the Atrium I Mixed Use Project. This results in total labor costs of $33,015,107, which serves as a proxy for total construction payroll.

The total labor costs were divided by the average annual wage of construction workers to estimate the total construction FTE. According to average annual wage data provided by the Ohio Department of Development, the average annual wage for construction jobs in the Cincinnati Metropolitan Statistical Area (MSA) is $60,900. This indicates that the Atrium I Mixed Use Project will support 542.12 construction FTE, as detailed in Table 4.

Table 4: Construction Employment and Payroll

Metric	Value
Inflation-Adjusted Eligible Expenditures	$77,264,454
Construction Labor Share	42.73%
Total Construction Labor Cost (Payroll)	**$33,015,107**
Construction Average Annual Wage	$60,900
Total Construction FTE	**542.12**

Source: Output from the Economic Impact Statement Workbook.

Construction Taxes

The total labor costs of the Atrium I Mixed Use Project are $33,015,107, which serves as a proxy for total construction payroll. The effective state income tax rate for the Atrium I Mixed Use Project is 2.16 percent, which will result in total state income tax revenue of $712,237.

Given the Ohio Department of Development's standardized assumptions for inflation, the inflation-adjusted hard construction costs and taxable business fixtures total $[redacted] for the Atrium I Mixed Use Project. The standardized regional purchase coefficient represents the share of construction materials purchased within the State of Ohio. The Ohio Department of Development's standardized regional purchase coefficient is 50.00 percent. This means that $[redacted] of inflation-adjusted hard construction costs and taxable business fixtures are subject to sales tax. The state sales tax rate is 5.75 percent, and the local sales tax rate for Hamilton County is 2.05 percent. Therefore, taxable construction expenditures will result in $2,171,748 in sales tax revenue. As detailed in Table 5, the Atrium I Mixed Use Project will generate a total of $2,883,984 in tax revenue during the construction period.

Table 5: Construction Taxes

Tax Category	Annual Net Base	Tax Rate	Total Tax
State Income Tax	$[redacted]	2.16%	$712,237
State and Local Sales Tax	$[redacted]	7.80%	$2,171,748
Total Completion Period Tax Impact	**N/A**	**N/A**	**$2,883,984**

Source: Output from the Economic Impact Statement Workbook.

Completion Period Impacts

Inputs

The Atrium I Mixed Use Project will include 264,141 square feet of general office space, 735 square feet of retail space, 4,218 square feet of restaurant space, 17,804 square feet of institutional space for an early learning center, 252,867 square feet of residential space encompassing [redacted] units, 87,797 square feet of public outdoor plaza space and common areas throughout the property, and 141,447 square feet of parking space encompassing 286 parking spaces. As detailed in Table 6, the Atrium I Mixed Use Project encompasses a total of 769,009 square feet.

Table 6: Mixed-Use Breakdown

Use Type	Square Footage	Units/Rooms
General Office	264,141 square feet	
Retail	735 square feet	
Restaurant	4,218 square feet	
Institutional	17,804 square feet	
Residential	252,867 square feet	[redacted] units
Plaza	87,797 square feet	
Parking	141,447 square feet	286 spaces
Total	**769,009 square feet**	

Source: Project Scope (Appendix D).

Table 7 details the stabilized occupancy by use type for the Atrium I Mixed Use Project during the completion period. The retail and restaurant spaces are currently occupied by one tenant each, reflecting full occupancy. The institutional space reflects one leasable space, which will be occupied at project completion. The stabilized occupancy level for the plaza is assumed to be [redacted] percent since it reflects public outdoor space and common areas throughout the property. Stabilized occupancy levels for the

general office, residential, and parking spaces were provided by the applicant and detailed in the operating pro forma.

Table 7: Completion Period Stabilized Occupancy by Use Type

Use Type	Stabilized Occupancy
General Office	[redacted]
Retail	[redacted]
Restaurant	[redacted]
Institutional	[redacted]
Residential	[redacted]
Plaza	[redacted]
Parking	[redacted]

Source: Operating Pro Forma (Appendix E).

Table 8 details the stabilized staffing ratio by use type for the Atrium I Mixed Use Project. The stabilized staffing ratio for the general office, retail, restaurant, and institutional uses were estimated using the U.S. Energy Information Administration's Commercial Buildings Energy Consumption Survey.[1] Total stabilized FTE for the residential use is based on assumptions provided by the applicant. The total stabilized FTE was converted to a stabilized staffing ratio based on the square footage and stabilized occupancy. The stabilized staffing ratio for the plaza and parking use reflects an average of the staffing ratios for five different facilities.[2]

Table 8: Completion Period Stabilized Staffing Ratio by Use Type

Use Type	Stabilized Staffing Ratio (FTE per SQFT)
General Office	$1\ FTE\ per\ 609\ SQFT = \frac{1\ FTE}{609\ SQFT} = 0.001642$
Retail	$1\ FTE\ per\ 1{,}000\ SQFT = \frac{1\ FTE}{1{,}000\ SQFT} = 0.001000$
Restaurant	$1\ FTE\ per\ 480\ SQFT = \frac{1\ FTE}{480\ SQFT} = 0.002083$
Institutional	$1\ FTE\ per\ 444\ SQFT = \frac{1\ FTE}{444\ SQFT} = 0.002252$
Residential	$\left([redacted]\right) = 0.000021$
Plaza	$1\ FTE\ per\ 35{,}657\ SQFT = \frac{1\ FTE}{35{,}657\ SQFT} = 0.000028$
Parking	$1\ FTE\ per\ 35{,}657\ SQFT = \frac{1\ FTE}{35{,}657\ SQFT} = 0.000028$

Source: U.S. Energy Information Administration (2022), and International Facility Management Association (2010).

Table 9 details the stabilized average annual wage per FTE for the Atrium I Mixed Use Project. The retail space for the project is currently occupied by a [redacted] while the institutional space will be occupied by an [redacted]. The stabilized average annual wage per FTE for the retail and institutional

[1] (U.S. Energy Information Administration 2022)
[2] (International Facility Management Association 2010)

spaces was updated to reflect the median wage for personal care and service occupations (SOC 39-0000) to better reflect the current/anticipated tenants. For the general office, restaurant, residential, plaza, and parking uses, the stabilized average annual wage per FTE reflects the standardized values provided by the Ohio Department of Development for the Cincinnati MSA.

Table 9: Completion Period Stabilized Average Annual Wage per FTE by Use Type

Use Type	Stabilized Average Annual Wage per FTE
General Office	$77,640
Retail	$31,200
Restaurant	$30,320
Institutional	$31,200
Residential	$36,000
Plaza	$36,000
Parking	$42,920

Source: Ohio Department of Development average annual wages for the Cincinnati MSA, and U.S. Bureau of Labor Statistics.

Table 10 details the stabilized taxable sales/revenue per square foot by use type for the Atrium I Mixed Use Project. According to Bloom Intelligence, the sales per square range from $250 to $325 for full-service restaurants and $300 to $400 for limited-service restaurants, assuming a marginal profit.[3] The midpoints for the two ranges were averaged to determine the overall sales per square foot for the restaurant space. The general office, retail, institutional, residential, plaza, and parking uses will not generate taxable sales/revenue.

Table 10: Completion Period Stabilized Taxable Sales/Revenue per SQFT by Use Type

Use Type	Stabilized Taxable Sales/Revenue per SQFT
General Office	$0
Retail	$0
Restaurant	$318.75
Institutional	$0
Residential	$0
Plaza	$0
Parking	$0

Source: Bloom Intelligence (n.d.).

Table 11 details the baseline activity by use type for the Atrium I Mixed Use Project. Currently, approximately 43.07 percent of the office space is occupied, or 113,762 square feet. The retail and restaurant spaces reflect one leasable space each, which are both currently occupied. The overall property's occupancy is approximately [redacted] percent. Therefore, [redacted] percent of the plaza and parking spaces were assumed to be occupied for the baseline activity. The staffing ratios detailed in Table 8, the average annual wages detailed in Table 9, and the taxable sales/revenue per square foot detailed in

[3] (Bloom Intelligence n.d.)

Table 10 were utilized to determine the baseline FTE, annual payroll, and taxable sales/revenue. Although the restaurant space is fully occupied, it was assumed that baseline staffing levels and taxable sales/revenue more accurately reflect [redacted] percent of the industry standards, given the overall occupancy for the property is approximately [redacted] percent. In total, baseline activity at the Atrium I Mixed Use accounts for 187,488 square feet, 192.03 FTE, $14,681,221 in annual payroll, and $403,346 in annual taxable sales/revenue.

Table 11: Baseline Activity by Use Type

Source: Staffing ratios detailed in Table 8, average annual wages detailed in Table 9, and taxable sales/revenue per square foot detailed in Table 10.

Employment and Payroll

Table 12 details the stabilized annual FTE and payroll by use type for the Atrium I Mixed Use Project during the completion period. The Atrium I Mixed Use Project will have stabilized annual FTE of 451.21 with associated annual payroll totaling $32,278,100. However, baseline annual payroll totals $14,683,787, which results in total net annual payroll of $17,594,313.

Table 12: Completion Period Stabilized Annual FTE and Payroll by Use Type

Taxable Sales/Revenue

Table 13 details the stabilized annual taxable sales/revenue by use type for the Atrium I Mixed Use Project during the completion period. The Atrium I Mixed Use Project will have stabilized annual taxable

sales/revenue totaling $1,344,488. However, baseline annual taxable sales/revenue total $403,346, which results in total net annual taxable sales/revenue of $941,141.

Table 13: Completion Period Stabilized Annual Taxable Sales/Revenue by Use Type

Taxes

Table 14 details the annual and 5-year total tax impact for the completion period of the Atrium I Mixed Use Project. The tax types included in this analysis include state and local income tax, state and local sales tax, lodging tax, and property tax. Payroll is the base for income tax calculations, taxable sales are the base for the sales tax calculations, hotel sales are the base for the lodging tax calculations, and the property value pre- and post-development are the base for the property tax calculations.

Net annual payroll totals $17,594,313, which results in annual state income tax revenue of $379,563 and annual local income tax revenue of $316,698. Annual net taxable sales total $941,141, which results in annual state and local sales tax revenue of $73,409. The difference in the post- and pre-development assessed value of the property is $18,948,064, which will result in an annual property tax payment of $1,569,676. Given the Ohio Department of Development's standardized assumptions for inflation, the Atrium I Mixed Use Project will generate $12,424,995 in inflation-adjusted tax revenue during the completion period.

Table 14: Completion Period Taxes

Tax Category	Annual Net Base	Tax Rate	Annual Tax	5-Year Total (Escalated)
State Income Tax	$17,594,313	2.16%	$379,563	$2,023,629
Local Income Tax	$17,594,313	1.80%	$316,698	$1,688,464
State and Local Sales Tax	$941,141	7.80%	$73,409	$389,271
Lodging Tax	$0	11.50%	$0	$0
Property Tax	$18,948,064	82.8409	$1,569,676	$8,323,631
Total Completion Period Tax Impact	**N/A**	**N/A**	**$2,339,346**	**$12,424,995**

Summary

With a mix of general office, retail, restaurant, institutional, residential, plaza, and parking space, the Atrium I Mixed Use Project is a proposed mixed-use development in downtown Cincinnati that will drive substantial economic activity. Eligible expenditures for the Atrium I Mixed Use Project total $76,017,763, which means a minimum of $7,601,776 in taxes must be generated to meet the 10.00 percent threshold. Construction period taxes total $2,883,984, while completion period taxes over the five-year period total $12,424,995. This means that the Atrium I Mixed Use Project will increase taxes by a total of $15,308,979. Additionally, net payroll in the fifth year of the completion period totals $19,964,545, while net taxable sales during the construction and completion periods total $56,742,635. The taxes generated for the Atrium I Mixed Use Project exceed the 10.00 percent threshold, as detailed in Table 15.

Table 15: Summary Output

Metric	Value
Total Eligible Expenditures	$76,017,763
Total Construction Period Taxes	$2,883,984
Total Completion Period Taxes (5-Year)	$12,424,995
Total Tax Increase	$15,308,979
Fifth Year Completion Period Payroll	$19,964,545
Total Taxable Sales	$56,742,635
10% Threshold	$7,601,776
Pass/Fail	**Pass**

Table 16: Data Sources and Assumptions

Workbook Section	Input or Assumption	Value Used	Data Source	Justification
Applicant & Project Information	Construction Start Date	1/1/2027	Project Schedule (Appendix B)	Current construction start date.
Applicant & Project Information	Project Completion Date	12/31/2028	Project Schedule (Appendix B)	Current construction completion date.
Parameters – Table 2	Effective State Income Tax Rate	2.16%	Ohio Department of Taxation See Table 18	Ohio has a graduated state income tax rate. The estimated taxes for each use type were calculated and then weighted based on net new FTE to arrive at the effective rate for the project.
Parameters – Table 2	Effective Local Income Tax Rate	1.8%	City of Cincinnati, Income Taxes (https://www.cincinnati-oh.gov/finance/income-taxes/)	Current rate applicable to project address as of submission date.
Parameters – Table 2	State Sales Tax Rate	5.75%	Ohio Department of Taxation	Current rate applicable to project address as of submission date.
Parameters – Table 2	Local Sales Tax Rate	2.05%	Hamilton County, Sales Tax (https://www.hamiltoncountyohio.gov/government/departments/budget_and_strategic_initiatives/sales_tax.php)	Current rates applicable to project address as of submission date, comprised of: • 0.5% - riverfront sales tax • 0.75% - general operations • 0.8% - regional transit authority
Parameters – Table 2	Lodging Tax Rate	11.5%	Hamilton County, Hotel Lodging Tax (https://www.hamiltoncountyohio.gov/government/departme	Current rates applicable to project address as of submission date, comprised of:

			nts/budget_and_strategic_initiatives/hotel_lodging_tax/index.php) City of Cincinnati, Transient Occupancy Tax (https://www.cincinnati-oh.gov/finance/transient-occupancy-tax-hotel-tax/tax-return/)	• 3.0% - Cincinnati USA Convention and Visitors Bureau • 3.5% - Renovation and expansion of Duke Energy Convention Center and Sharonville Convention Center • 1.0% - Convention-related facilities • 4.0% - City of Cincinnati
Parameters – Table 2	State + Local Effective Mill Rate per $1,000	82.840948	Hamilton County Auditor, 2026 Rate of Taxation by Tax District Summary, Tax District 001 (https://www.hamiltoncountyauditor.org/pdf/retax/RateOfTaxation/Tax_Year_2025_Tax_Rate_Sheet.pdf)	Current effective commercial/industrial rate applicable to project address as of submission date. No property tax abatement agreement is in place.
Parameters – Table 3	Retail Use Average Annual Wage	$31,200	U.S. Bureau of Labor Statistics, Occupational Employment and Wage Statistics (OEWS), Cincinnati MSA, Major SOC Group 39-0000, May 2024	Current tenant of the retail space is a barbershop. Major SOC Group 39-0000 includes barbers.
Parameters – Table 3	Institutional Use Average Annual Wage	$31,200	U.S. Bureau of Labor Statistics, Occupational Employment and Wage Statistics (OEWS), Cincinnati MSA, Major SOC Group 39-0000, May 2024	Tenant of the institutional space will be an early learning center/childcare center. Major SOC Group 39-0000 includes child care workers.
Construction Period Inputs	Eligible Expenditures	Hard construction = $[redacted] Soft construction = $[redacted]	Project Budget – Sources and Uses (Appendix C)	Current eligible expenditures by item for the project as of submission date.

		Professional services = $[redacted] Taxable business fixtures = $[redacted] Total eligible expenditures = $76,017,763		
Construction Period Inputs	Share of Eligible Expenditures Attributable to Labor	42.73%	Bridgit, Labor vs Material Cost in Construction: What Contractors Actually Control (https://gobridgit.com/blog/labor-vs-material-cost-in-construction-6-things-to-keep-in-mind/)	The project assumes that construction labor accounts for 60% of hard costs, which equates to 42.73% of total costs. This assumption is consistent with labor share representing between 40% and 50% of total project costs for renovation/tenant improvement projects.
Construction Period Inputs	Construction Expenditures Timeline	Year 1=50.00% Year 2=50.00%	Project Schedule (Appendix B)	Current timeline of expenditures for the project as of submission date.
Construction Period Inputs	Property Value Prior to Development	$29,450,270	Hamilton County Auditor, Property Search (https://wedge3.hcauditor.org/)	In December 2025, the underlying parcel (083-0003-0010-00) of the Property was administratively reconfigured by the Hamilton County Auditor as part of a ground lease-related conveyance, resulting in the creation of three new parcel identification numbers (083-0003-0133-00, 083-0003-0134-00, and 083-0003-0135-00). All three parcels are considered part of the Property and are

				under Atrium Tower One LP's control, via deed and the perpetual ground lease. According to the Hamilton County Auditor, the current total market value for parcel 083-0003-0010-00 is $29,450,270.
Construction Period Inputs	Estimated Property Value Post Development	$83,587,596	N/A	[redacted]
Construction Period Inputs	Total Operating Square Footage	General Office = 264,141 Retail = 735 Restaurant = 4,218 Institutional = 17,804 Residential = 252,867 Plaza = 87,797 Parking = 141,447 Total = 769,009	Project Scope (Appendix D)	Reflects the current square footage by use for the project as of submission date.
Completion Period Inputs	General Office Stabilized Occupancy	[redacted]	Operating Pro Forma (Appendix E)	Current occupancy assumption.
Completion Period Inputs	Retail Stabilized Occupancy	[redacted]	Operating Pro Forma (Appendix E)	Reflects one tenant space that is currently occupied.
Completion Period Inputs	Restaurant Stabilized Occupancy	[redacted]	Operating Pro Forma (Appendix E)	Reflects one tenant space that is currently occupied.
Completion Period Inputs	Institutional Stabilized Occupancy	[redacted]	Operating Pro Forma (Appendix E)	Reflects one tenant space with a tenant already committed.
Completion Period Inputs	Residential Stabilized Occupancy	[redacted]	Operating Pro Forma (Appendix E)	Current occupancy assumption.
Completion Period Inputs	Plaza Stabilized Occupancy	[redacted]	Operating Pro Forma (Appendix E)	Reflects public outdoor space and common space of the building (e.g. public

				lobby, mechanical, shafts, etc.).
Completion Period Inputs	Parking Stabilized Occupancy	[redacted]	Operating Pro Forma (Appendix E)	Current occupancy assumption.
Completion Period Inputs	General Office Stabilized Staffing Ratio	0.001642 SQFT per FTE	U.S. Energy Information Administration, 2018 Commercial Buildings Energy Consumption Survey Table B16 (https://www.eia.gov/consumption/commercial/data/2018/#b11-b14)	Median square feet per worker for all office buildings is 609.
Completion Period Inputs	Retail Stabilized Staffing Ratio	0.001000 SQFT per FTE	U.S. Energy Information Administration, 2018 Commercial Buildings Energy Consumption Survey Table B16 (https://www.eia.gov/consumption/commercial/data/2018/#b11-b14)	Median square feet per worker for other service buildings is 1,000.
Completion Period Inputs	Restaurant Stabilized Staffing Ratio	0.002083 SQFT per FTE	U.S. Energy Information Administration, 2018 Commercial Buildings Energy Consumption Survey Table B16 (https://www.eia.gov/consumption/commercial/data/2018/#b11-b14)	Median square feet per worker for restaurant or cafeteria buildings is 480.
Completion Period Inputs	Institutional Stabilized Staffing Ratio	0.002252 SQFT per FTE	U.S. Energy Information Administration, 2018 Commercial Buildings Energy Consumption Survey Table B16 (https://www.eia.gov/consumption/commercial/data/2018/#b11-b14)	Median square feet per worker for preschool or daycare buildings is 444.

Completion Period Inputs	Residential Stabilized Staffing Ratio	5 FTE	N/A	Applicant anticipates 5 FTE comprised of: 
Completion Period Inputs	Plaza Stabilized Staffing Ratio	0.000028 FTE per SQFT	International Facility Management Association, Facility Management Staffing Report #33, Staffing by Facility (https://knowledgelibrary.ifma.org/download-file/?file=0&record_id=rec9IE7C7KZMWGWAz)	The square feet per facility management work for five different facilities was averaged, and then the inverse was taken to arrive at the FTE per SQFT. • Facility #1: 1 FTE per 42,439 SQFT • Facility #2: 1 FTE per 30,441 SQFT • Facility #3: 1 FTE per 32,666 SQFT • Facility #4: 1 FTE per 31,388 SQFT • Facility #5: 1 FTE per 41,351 SQFT • Average = 1 FTE per 35,657 SQFT
Completion Period Inputs	Parking Stabilized Staffing Ratio	0.000028 FTE per SQFT	International Facility Management Association, Facility Management Staffing Report #33, Staffing by Facility (https://knowledgelibrary.ifma.org/download-file/?file=0&record_id=rec9IE7C7KZMWGWAz)	The square feet per facility management work for five different facilities was averaged, and then the inverse was taken to arrive at the FTE per SQFT. • Facility #1: 1 FTE per 42,439 SQFT • Facility #2: 1 FTE per 30,441 SQFT • Facility #3: 1 FTE per 32,666 SQFT • Facility #4: 1 FTE per 31,388 SQFT • Facility #5: 1 FTE per 41,351 SQFT • Average = 1 FTE per 35,657 SQFT

Completion Period Inputs	General Office Stabilized Annual Taxable Sales per SQFT	$0 per SQFT	Ohio Department of Taxation, Services Not Taxable (https://tax.ohio.gov/business/sales-and-use-tax/taxability)	Professional, personal, and insurance services are not subject to sales tax when any tangible item transferred is incidental and not separately charged.

			taxes/sales-and-use/information-releases/st200311-archive#:~:text=Transactions%20where%20the%20tangible%20personal,which%20no%20fee%20is%20charged.)	

Ohio has a graduated state income tax rate, as detailed in Table 17.

Table 17: Ohio Individuals Income Tax Rates, 2025

Ohio Taxable Income	Tax Calculation
$0 - $26,050	$0
$26,050 - $100,000	$342 + 2.75% of excess over $26,050
$100,000 and up	$2,394.32 + 3.125% of excess over $100,000

The state income tax revenue per FTE was calculated based on the average annual wage for each use type using the 2025 state income tax rates. The state income tax revenue per FTE was multiplied by the net new FTE by use type to estimate the total state income tax revenue generated by the Atrium I Mixed Use Project. The total state income tax revenue was divided by the total net new payroll to arrive at the effective state income tax rate, as detailed in Table 18.

Table 18: Effective State Income Tax Rate Calculations

Use Type	Average Annual Wage	State Income Tax Revenue per FTE	Net New FTE	Net New Payroll	Total State Income Tax Revenue
Construction	$60,900	$1,300	542.12	$33,015,107	$704,959
General Office	$77,640	$1,761	203.55	$15,803,998	$358,404
Retail	$31,200	$484	0.00	$0	$0
Restaurant	$30,320	$459	6.15	$186,506	$2,826
Institutional	$31,200	$484	40.10	$1,251,092	$19,393

Introduction

Silverlode Consulting ("Silverlode") was engaged by the applicant ("Developer") to estimate the economic impact and increase in state and local tax collections associated with the proposed mixed-use development (the "Project"). This Economic Impact Statement Narrative Report (EIS) was prepared to support the Developer's application to the Ohio Department of Development ("ODOD") for consideration for an award of Ohio Transformational Mixed-Use Development ("TMUD") tax credits.

This EIS demonstrates the Project's eligibility for the TMUD program as described in Section 122.09(B)(6 and 7) of the Ohio Revised Code ("ORC"). As set forth in this report, the estimated increase in tax collections at the Project site, during the Project's construction period and through the fifth anniversary of the day the project is completed ("Completion Period") is estimated to exceed 10% of TMUD eligible expenditures. This EIS provides the economic impact data and supporting information requested by ODOD for considering TMUD eligibility, based upon ODOD's guidance as of the date of this report.

Portions of this report are considered trade secrets and are denoted as such.

Project Overview

Project Overview	
Project square feet	781,376
TMUD eligible expenditures	$220,555,583
10% of TMUD eligible expenditures	$22,056,000
Construction commencement	8/1/2026
Construction completion	10/2/2030

EIS Workbook

ODOD provided the standardized EIS Workbook, a required file to be submitted with the TMUD application as a component of the EIS. The EIS Workbook utilizes ODOD-provided standard parameters, default wage benchmarks, locked formulas and calculation procedures along with applicant inputs (highlighted in green) to produce the construction period impacts, completion period impacts, and total direct impacts of the Project per the TMUD FY26 EIS Framework. Key portions of the EIS Workbook are included in this report. Supporting documentation, data sources and citations for applicant inputs can be found in Appendix A of this report.

Applicant & Project Information

Project Name	Battery Park Sandusky
Project Site Address (Street, City, County, ZIP)	701 East Water Street, Sandusky, Erie County, Ohio 44870
Applicant Legal Name / Property Owner	Battery Park Sandusky, LLC
TMUD Application ID (if assigned)	0035334
Economic Impact Consultant (Name / Firm)	Dennis McAndrew, Silverlode Consulting
Construction Start Date	8/1/2026
Project Completion Date	10/2/2030
Project Geography Type	General TMUD
Project MSA	Sandusky, OH

Parameters (Department-Provided + Applicant-Provided)

Table 1 — Department-Provided Standardized Parameters (Do Not Edit)		
Parameter	**Value**	**Notes**
Annual Construction Inflation Rate (PPI 10-year average)	3.28%	Department-provided. Applicants may not change.
Annual Revenue Inflation Rate (CPI 10-year average)	2.94%	Department-provided. Applicants may not change.
Annual Wage Growth Rate (ECI 10-year average)	3.21%	Department-provided. Applicants may not change.
FTE Hours per Year	2080	Department-provided fixed standard (2,080 hours/year). Applicants may not change.
Table 2 — Applicant-Provided Parameters (ENTER CURRENT TAX RATES FOR PROJECT LOCATION)		
Effective State Income Tax Rate (decimal)	2.25%	Applicant must enter current applicable rate for the project location; varies by geography and time.
Effective Local Income Tax Rate (decimal)	1.25%	Applicant must enter current applicable rate for the project location; varies by geography and time.
State Sales Tax Rate (decimal)	5.75%	Applicant must enter current applicable rate for the project location; varies by geography and time.
Local Sales Tax Rate (decimal)	1.50%	Applicant must enter current applicable rate for the project location; varies by geography and time.
Lodging Tax Rate (decimal)	8.00%	Applicant must enter current applicable rate for the project location; varies by geography and time.
State + Local Effective Mill Rate per $1,000	$57.65	Applicant must enter current applicable rate for the project location; varies by geography and time.

Table 3 — Department-Provided Measurements (Can be modified with valid justification)			Override	Applicant Provided Value	Justification
General Office Use Average Annual Wage	$69,240	SOC 13-0000 Median Wage for MSA/State of Ohio	☐		
Medical Office Use Average Annual Wage	$69,570	SOC 29-0000 Median Wage for MSA/State of Ohio	☐		
Retail Use Average Annual Wage	$31,890	SOC 41-0000 Median Wage for MSA/State of Ohio	☐		
Food & Beverage Use Average Annual Wage	$28,920	SOC 35-0000 Median Wage for MSA/State of Ohio	☐		
Hospitality & Lodging Use Average Annual Wage	$31,100	SOC 39-0000 Median Wage for MSA/State of Ohio	☐		
Entertainment Use Average Annual Wage	$36,780	SOC 27-0000 Median Wage for MSA/State of Ohio	☐		
Property Management & Building Operations Use Average Annual Wage	$34,460	SOC 37-0000 Median Wage for MSA/State of Ohio	☐		
Plaza Operations Average Annual Wage	$34,460	SOC 37-0000 Median Wage for MSA/State of Ohio	☐		
Institutional Use Average Annual Wage	$69,240	SOC 13-0000 Median Wage for MSA/State of Ohio	☐		
Industrial Use Average Annual Wage	$47,580	SOC 51-0000 Median Wage for MSA/State of Ohio	☐		
Parking Use Average Annual Wage	$40,790	SOC 53-0000 Median Wage for MSA/State of Ohio	☐		
Construction Average Annual Wage	$58,540	SOC 47-0000 Median Wage for MSA/State of Ohio	☐		
Regional Purchase Coefficient	50%	Percent of construction materials purchased within the state of ohio	☐		

Construction Period Inputs (Applicant Inputs)

Eligible expenditures (post-certification only)

Item	Amount
Land acquisition costs (eligible if post-certification)	[redacted]
Hard construction costs	
Soft construction costs	
Professional services and eligible fees	
Taxable business fixtures cost (if applicable)	
Other eligible costs (describe in Notes tab)	

Total Eligible Expenditures	**$220,555,583**

Construction employment & payroll assumptions

Assumption	Value	Units
Estimated share of eligible construction costs attributable to labor (%)	55%	%
Primary construction average annual wage ($/yr)	$58,540	$
Construction period length (months)	50	months

Construction Expenditures Timeline

Year From Project Start Date	Percent of Expenditures
Year 1	8%
Year 2	17%
Year 3	35%
Year 4	16%
Year 5+	23%
Total	**100%**

Property Value

Item	Value
Property value prior to development	$2,229,430
Estimated property value post development	$186,519,108

Completion Period Inputs (5-Year Completion Period)

Enter ANNUAL stabilized, project-site-only operating assumptions for a typical stabilized year during the 5-year Completion Period (NOT five-year totals and NOT year-by-year projections). Use Baseline columns to report pre-project on-site activity; the workbook will subtract baseline to compute net new impacts.

Use Type / Component (On-Site)	Total Operating Square Footage	Stabilized Occupancy / Utilization (%)	Staffing Ratio (FTE per Sq Foot), Stabilized	Avg Annual Wage ($ per FTE, Stabilized)	Annual Stabilized Taxable Sales/Revenue per Sq Foot ($)	Baseline On-Site Payroll ($/year)	Baseline On-Site Taxable Sales/Revenue ($/year)
Office							
General Office				$69,240			
Medical Office				$69,570			
Retail	19892	85.00%	0.005	$31,690	$1,223.00

Tax Calculations (Locked)

Calculates annual and 5-year completion-period tax impacts (net of baseline) using Department parameters.

Tax Category	Annual Net Base	Rate	Annual Tax	5-Year Total (escalated)
Revenue Escalation factor (5 years)	5.3028			
Wage Escalation factor (5 years)	5.3315			
State income tax (payroll)	$20,128,166	0.0225	$452,884	$2,414,536
Local income tax (payroll)	$20,128,166	0.0125	$251,602	$1,341,409
State + local sales tax (taxable sales)	$96,864,729	0.0725	$6,950,193	$36,855,284
Lodging tax (hotel revenue)	$7,241,196	0.0800	$579,296	$3,071,873
Property tax (annual)	$64,501,387	57.6494	$3,718,469	$19,718,192
Total completion-period tax increase (5-year)				**$63,401,294**

Statutory 10% Test (Locked)

Completion-period tax increase must be ≥ 10% of eligible expenditures.

Item	Amount
Eligible Expenditures	$220,555,583
10% Threshold	$22,055,558
Construction + Completion-Period Tax Increase (5-year)	$73,087,723
PASS/FAIL	**PASS**

Summary Outputs

These outputs should be used to populate the EIS

Metric	Value
Total Eligible Construction Expenditures	$220,555,583
Total Construction-Period Tax Impacts	$9,686,430
Total Completion-Period Tax Increase (5-Year)	$63,401,294
Total Tax Increase	$73,087,723
Fifth Year Payroll	$22,839,748
Total Sales Subject to Sales Tax	$293,709,940
10% Test Result (PASS/FAIL)	PASS
Application Type	General TMUD

Anticipated Completion Period Sales – Online Application Portal

The below table provides the answer to the following question in the online TMUD application: "From the Economic Impact Statement, provide the anticipated total sales from Retail, Entertainment, and Dining operations generated at the Project site during the completion period," as this number does not appear in the EIS Workbook.

	Sales Taxable Sales Base	Construction Inflation Rate (Annual)/5-Year Revenue Escalation Factor	Sales Taxable Sales	Source
Construction Period	$ 172,641,283	3.28%	$ 186,064,533	EIS Workbook - Construction Period Calculation
Completion Period	$ 95,864,729	5.3028	$ 508,351,485	EIS Workbook - Tax Calculations
Total			**$ 694,416,018**	

Appendix A: Supporting Documentation, Data Sources and Citations

Project Budget & Stabilized Annual Operating Proforma (TRADE SECRET)

Data Sources

Data Sources and Key Inputs

The Developer's Project budget and stabilized annual operating proforma, which we understand are being provided to other third parties such as potential lenders, and thus are assumed to be reliable, were the source of most project information.

ODOD provided the EIS Workbook Excel file ("Workbook") submitted with this EIS Narrative Report. The Workbook contains ODOD required parameters and calculations of economic impact. The results presented in this EIS narrative report were generated using the Workbook.

The IMPLAN model, which is described in the About IMPLAN section, was a source of key inputs. IMPLAN data from 2024, the most recent year for which data is currently available, was used for this analysis.

Where necessary, we also relied on independent third-party data and established real estate industry data sources.

Throughout the modeling, Silverlode also employed professional conservatism to ensure that the inputs and assumptions were reasonable. Silverlode reviewed information provided by the Developer for reasonableness but did not validate such information.

Portions of this report are considered trade secrets and are denoted as such.

EIS Workbook, Documentation and Notes Table

EXAMPLE ENTRIES — FOR ILLUSTRATION ONLY (DO NOT DELETE IN TEMPLATE VERSION)				
Workbook Section / Tab	**Input or Assumption**	**Value Used**	**Data Source**	**Notes / Justification (Why this is reasonable)**
Completion Period Inputs – Retail	Retail sales per square foot	$375 per SF (annual, stabilized)	ICSC 2024 Midwest Retail Benchmark Report	Consistent with Class A neighborhood retail in comparable Midwest
Completion Period Inputs – Office	Average annual wage	$78,000 (median)	BLS OEWS, Cincinnati MSA, Major SOC Group 13-0000 (2024)	Median wage used per EIS guidance to avoid overstating payroll
Completion Period Inputs – Hotel	ADR and occupancy	[redacted]	Project operating pro forma; STR Midwest regional averages	Reflects stabilized operations after ramp-up period
Parameters – Applicant-Provided	Local sales tax rate	1.25%	Ohio Department of Taxation, county sales tax rate table (2025)	Rate applicable to project address as of submission date
Completion Period Inputs – Baseline	Existing on-site retail sales	[redacted]	Current tenant rent roll and sales disclosures	Represents pre-project activity removed to calculate net new impacts
Parameters – Applicant-Provided	Effective State Income Tax Rate	2.25%	https://tax.ohio.gov/individual/resources/annual-tax-rates	For taxable years beginning in 2025, tax of $342 + plus 2.75% tax on the portion of income from $26,051-$100,000, and 3.125% tax on the portion of income over $100,000. Given the range in income levels for the Project, an effective rate of 2.25% was assumed.
Parameters – Applicant-Provided	Effective Local Income Tax Rate	1.25%	https://cityofsandusky.com/government/department/finance/taxes.php	Local income tax rate is published by the City
Parameters – Applicant-Provided	State Sales Tax Rate	5.75%	https://tax.ohio.gov/business/sales-and-use-tax	State sales tax rate is published by the state.

Parameters – Applicant-Provided	Local Sales Tax Rate	1.50%	https://dam.assets.ohio.gov/image/upload/tax.ohio.gov/tax_analysis/tax_data_series/sales_and_use/Salestaxmap.pdf	1% Erie County sales tax + 0.5% additional sales tax expected from the city of Sandusky through an NCA agreement as noted in the Development Agreement included in the application.
Parameters – Applicant-Provided	Lodging Tax Rate	8.00%	auditor.eriecounty.gov, City of Sandusky Codified Ordinance Chapter 193 Transient Occupancy Tax	Erie County lodging tax rate=4%, City of Sandusky lodging tax rate =3%, 1% City of Sandusky lodging tax through an NCA agreement as noted in the Development Agreement included in the application.
Parameters – Applicant-Provided	State + Local Effective Millie Rate per $1,000	57.649444	Erie County Auditor	2025 effective millage for Project parcels
Construction Period Inputs - Eligible	Land Acquisition Costs	[redacted]	Project budget	No land acquisition after Project certification date
Construction Period Inputs - Eligible	Hard Construction Costs	[redacted]	Project budget	Construction contractor estimate
Construction Period Inputs - Eligible	Soft Construction Costs	[redacted]	Project budget	
Construction Period Inputs - Eligible	Professional Services and Eligible Fees	[redacted]	Project budget	
Construction Period Inputs - Eligible	Taxable Business Fixtures Cost	[redacted]	Project budget	
Construction Period Inputs - Eligible	Other Eligible Costs	[redacted]	Project budget	
Construction Period Inputs - Construction Employment & Payroll Assumptions	Estimated Share of Eligible Construction Costs Attributable to Labor	55%	Construction contractor estimate	
Construction Period Inputs - Construction Expenditures Timeline	Percent of Expenditures	Various	Construction contractor estimate	
Construction Period Inputs - Property Value	Property Value Prior to Development	2229430	Erie County Auditor	2025 values for parcels

Construction Period Inputs - Property Value	Estimated Property Value Post Development	186519108	Developer Project Budget & Developer Project Stabilized Annual Operating Proforma , Sandusky CRA Guidelines, Developer	[redacted]
Completion Period Inputs	Total Operating Scuare Footage	All values in column	Architect letter with architectural and engineering documents	
Completion Period Inputs	Staoilized year by use	All uses	Developer Proforma	
Completion Period Inputs	Stabilized Occupancy / Utilization	All values in column	Developer Proforma	Hotel room occupancy is estimated to be [redacted] but hospitality and recreation uses have committed tenants for 100% of space
Completion Period Inputs	Staffing Ratio Stabilized	Various uses	IMPLAN 2024 data for the MSA	See the Staffing Ratio Chart in the EIS Narrative Appendix
Completion Period Inputs	Staffing Ratio Stabilized	Project Operations and Parking FTEs/SF	National Apartment Association, FMLink, International Parking Institute	Operations and Parking FTE table in EIS Narrative Appendix
Completion Period Inputs	Staffing Ratio Stabilized - Restaurant	0.009329277	Public company 10Ks, 10Qs and other public sources	See Restaurant and Retail Sales Per Square Foot and Staffing Ratios table in the EIS narrative Appendix
Completion Period Inputs	Staffing Ratio Stabilized - Retail	0.004998967	Public company 10Ks, 10Qs and other public sources	See Restaurant and Retail Sales Per Square Foot and Staffing Ratios table in the EIS narrative Appendix
Completion Period Inputs	Annual Stabilized Taxable Sales/Revenue Per Sq Foot - Retail	1223	Public company 10Ks, 10Qs and other public sources	See Restaurant and Retail Sales Per Square Foot and Staffing Ratios table in the EIS narrative Appendix

Completion Period Inputs	Annual Stabilized Taxable Sales/Revenue Per Sq Foot - Restaurant	991	Public company 10Ks, 10Qs and other public sources	See Restaurant and Retail Sales Per Square Foot and Staffing Ratios table in the EIS narrative Appendix. Average sales per square foot were increased by 5% to account for outdoor patio space (10% of constructed space) being open half of the year (10% x 50%=5%)
Completion Period Inputs	Annual Stabilized Taxable Sales/Revenue Per Sq Foot - Hotel	[redacted]	Developer Proforma	[redacted]
Completion Period Inputs	Annual Stabilized Taxable Sales/Revenue Per Sq Foot - Hospitality	[redacted]	Developer Proforma	Total food, beverage, event, and other non-room revenue divided by the event center square feet
Completion Period Inputs	Annual Stabilized Taxable Sales/Revenue Per Sq Foot - Public plaza	[redacted]	Developer detailed event schedule for public plaza space with attendance estimates and on-site spending estimates.	Detailed annual calendar of recurring, seasonal and special events for public plaza space was used to calculate expected attendees per event and estimated on-site spending outside of Project buildings for retail, food and beverage and entertainment.
Completion Period Inputs	Annual Stabilized Taxable Sales/Revenue Per Sq Foot - Parking	[redacted]	Developer proforma revenue for daily parking fees, subject to the City of Sandusky parking tax (8%)	[redacted] https://cityofsandusky.com/government/department/finance/taxes.php

Completion Period Inputs	Annual Stabilized Taxable Sales/Revenue Per Sq Foot - Recreation	[redacted]	Developer Proforma	Marina SF shown on Recreation line in the EIS Workbook, but is part of retail SF in the application, and separated out for purposes of the EIS due to it's unique occupancy, sales and staffing rates compared to other retail uses. The Marina operator's revenue per the proforma of [redacted] marina includes the marina services retail sales and net slip rental revenue [redacted] Additional sales taxable sales include [redacted] in annual boat sales estimated by a committed on-site boat brokerage tenant. Total sales of [redacted] vided by marina services retail building square feet yields taxable sales per square foot. Marina retail sales and boat sales are subject to sales tax. The City of
Completion Period Inputs	Baseline On-Site Payroll	[redacted]	Marina 2025 income statement	
Completion Period Inputs	Baseline On-Site Taxable Sales/Revenue	[redacted]	Marina 2025 income statement	Marina revenue divided by marina services retail building square feet yields taxable sales per square foot. Marina retail sales are subject to sales tax. The City of Sandusky levies a dock tax, as well (https://cityofsandusky.com/government/department/finance/taxes.php.

About IMPLAN

IMPLAN (IMpact analysis for PLANning), one of the most well-respected and widely used methodologies for assessing regional economic impacts, was used for parts of this study. IMPLAN is a general input-output model initially developed by the U.S. Forest Service in the 1970s and is used by more than 1,000 universities, government agencies, and consultants to estimate the economic and fiscal impacts of investments and/or changes in one or more industries. 2024 IMPLAN data, the most current data available at the time, was used for this study. Data underlying the IMPLAN model is updated annually using thousands of data points from over 90 sources. The main sources of this data include:

- U.S. Bureau of Labor Statistics (BLS) Quarterly Census of Employment and Wages (QCEW)
- U.S. Bureau of Economic Analysis (BEA) Regional Economic Accounts (REA)
- U.S. Census Bureau County Business Patterns (CBP)
- U.S. Bureau of Economic Analysis National Income and Product Accounts (NIPA)

About Silverlode Consulting

Silverlode Consulting was founded in 2002 by two former leaders from EY and PwC's consulting practices. As a national leader in economic impact analysis, Silverlode has supported hundreds of organizations, from nonprofit arts groups to multinational corporations, in quantifying their contributions to their communities and effectively communicating those impacts to key stakeholders. Through rigorous analysis and clear communication of findings, our work has helped clients secure funding, obtain regulatory approvals, and positively influence public perception. To learn more about our firm and our expertise in economic impact analysis, please visit http://www.silverlodeconsulting.com

Introduction

Silverlode Consulting ("Silverlode") was engaged by the applicant ("Developer") to estimate the economic impact and increase in state and local tax collections associated with the proposed mixed-use development (the "Project"). This Economic Impact Statement Narrative Report (EIS) was prepared to support the Developer's application to the Ohio Department of Development ("ODOD") for consideration for an award of Ohio Transformational Mixed-Use Development ("TMUD") tax credits.

This EIS demonstrates the Project's eligibility for the TMUD program as described in Section 122.09(B)(6 and 7) of the Ohio Revised Code ("ORC"). As set forth in this report, the estimated increase in tax collections at the Project site, during the Project's construction period and through the fifth anniversary of the day the project is completed ("Completion Period") is estimated to exceed 10% of TMUD eligible expenditures. This EIS provides the economic impact data and supporting information requested by ODOD for considering TMUD eligibility, based upon ODOD's guidance as of the date of this report.

Portions of this report are considered trade secrets and are denoted as such.

Project Overview

Project Overview	
Project Square Feet	826,067
TMUD eligible expenditures	$247,071,900
10% of TMUD eligible expenditures	$24,707,000
TMUD tax credit request	$15,000,000
Construction commencement	3/1/2027
Construction completion	7/31/2030

Project Uses			
Use	Building Square Feet	Units	Outdoor Plaza - Public
Residential	320,021	[redacted]	
Office	71,585		
Hotel	92,321	[redacted]	
Retail	64,458		
Restaurant	24,480		
Parking	221,066	[redacted]	
Plaza - Public	32,136		77,000
Total building square feet	**826,067**		**77,000**

EIS Workbook

ODOD provided the standardized EIS Workbook, a required file to be submitted with the TMUD application as a component of the EIS. The EIS Workbook utilizes ODOD-provided standard parameters, default wage benchmarks, locked formulas and calculation procedures along with applicant inputs (highlighted in green) to produce the construction period impacts, completion period impacts, and total direct impacts of the Project per the TMUD FY26 EIS Framework. Key portions of the EIS Workbook are included in this report. Supporting documentation, data sources and citations for applicant inputs can be found in Appendix A of this report.

Applicant & Project Information

Project Name	Bridge North
Project Site Address (Street, City, County, ZIP)	Bridge North Landco LLC
Applicant Legal Name / Property Owner	6720 Riverside Drive and 4500 John Shields Parkway, Dublin, Franklin County, Ohio 43017
TMUD Application ID (if assigned)	0035338
Economic Impact Consultant (Name / Firm)	Dennis McAndrew, Silverlode Consulting
Construction Start Date	3/1/2027
Project Completion Date	7/31/2030
Project Geography Type	Major City TMUD
Project MSA	Columbus, OH

Parameters (Department-Provided + Applicant-Provided)

Table 1 — Department-Provided Standardized Parameters (Do Not Edit)		
Parameter	**Value**	**Notes**
Annual Construction Inflation Rate (PPI 10-year average)	3.28%	Department provided. Applicants may not change.
Annual Revenue Inflation Rate (CPI 10 year average)	2.94%	Department provided. Applicants may not change.
Annual Wage Growth Rate (ECI 10 year average)	3.21%	Department provided. Applicants may not change.
FTE Hours per Year	2080	Department provided fixed standard (2,080 hours/year). Applicants may not change.

Table 2 — Applicant-Provided Parameters (ENTER CURRENT TAX RATES FOR PROJECT LOCATION)		
Effective State Income Tax Rate (decimal)	2.25%	Applicant must enter current applicable rate for the project location; varies by geography and time.
Effective Local Income Tax Rate (decimal)	2.00%	Applicant must enter current applicable rate for the project location; varies by geography and time.
State Sales Tax Rate (decimal)	5.75%	Applicant must enter current applicable rate for the project location; varies by geography and time.
Local Sales Tax Rate (decimal)	2.75%	Applicant must enter current applicable rate for the project location; varies by geography and time.
Lodging Tax Rate (decimal)	11.00%	Applicant must enter current applicable rate for the project location; varies by geography and time.
State + Local Effective Mill Rate per $1,000	$91.30	Applicant must enter current applicable rate for the project location; varies by geography and time.

Table 3 — Department-Provided Measurements (Can be modified with valid justification)			Override	Applicant Provided Value	Justification
General Office Use Average Annual Wage	$78,500	SOC 13-0000 Median Wage for MSA/State of Ohio	■	[redacted]	Committed office tenant provided stabilized staffing and payroll
Medical Office Use Average Annual Wage	$81,500	SOC 29-0000 Median Wage for MSA/State of Ohio	□		
Retail Use Average Annual Wage	$36,550	SOC 41-0000 Median Wage for MSA/State of Ohio	□		
Food & Beverage Use Average Annual Wage	$31,030	SOC 35-0000 Median Wage for MSA/State of Ohio	□		
Hospitality & Lodging Use Average Annual Wage	$31,200	SOC 39-0000 Median Wage for MSA/State of Ohio	□		
Entertainment Use Average Annual Wage	$60,980	SOC 27-0000 Median Wage for MSA/State of Ohio	□		
Property Management & Building Operations Use Average Annual Wage	$36,510	SOC 37-0000 Median Wage for MSA/State of Ohio	□		
Plaza Operations Average Annual Wage	$36,510	SOC 37-0000 Median Wage for MSA/State of Ohio	□		
Institutional Use Average Annual Wage	$78,500	SOC 13-0000 Median Wage for MSA/State of Ohio	□		
Industrial Use Average Annual Wage	$46,640	SOC 51-0000 Median Wage for MSA/State of Ohio	□		
Parking Use Average Annual Wage	$43,880	SOC 53-0000 Median Wage for MSA/State of Ohio	□		
Construction Average Annual Wage	$63,350	SOC 47-0000 Median Wage for MSA/State of Ohio	□		
Regional Purchase Coefficient	50%	Percent of construction materials purchased within the state of ohio	□		

Construction Period Inputs (Applicant Inputs)

Eligible expenditures (post-certification only)

Item	Amount
Land acquisition costs (eligible if post-certification)	[redacted]
Hard construction costs	
Soft construction costs	
Professional services and eligible fees	
Taxable business fixtures cost (if applicable)	
Other eligible costs (describe in Notes tab)	
Total Eligible Expenditures	**$247,071,900**

Construction employment & payroll assumptions

Assumption	Value	Units
Estimated share of eligible construction costs attributable to labor (%)	55%	%
Primary construction average annual wage ($/yr)	$63,350	$
Construction period length (months)	41	months

Construction Expenditures Timeline

Year From Project Start Date	Percent of Expenditures
Year 1	17%
Year 2	60%
Year 3	22%
Year 4	1%
Year 5+	
Total	**100%**

Property Value

Item	Value
Property value prior to development	$3,058,200
Estimated property value post development	$244,012,000

Completion Period Inputs (5-Year Completion Period)

Enter ANNUAL stabilized, project-site-only operating assumptions for a typical stabilized year during the 5-year Completion Period (NOT five-year totals and NOT year-by-year projections). Use Baseline columns to report pre-project on-site activity; the workbook will subtract baseline to compute net new impacts.

Use Type / Component (On-Site)	Total Operating Square Footage	Stabilized Occupancy / Utilization (%)	Staffing Ratio (FTE per Sq Foot), Stabilized	Avg Annual Wage ($ per FTE, Stabilized)	Annual Stabilized Taxable Sales/Revenue per Sq Foot ($)	Baseline On-Site Payroll ($/year)	Baseline On-Site Taxable Sales/Revenue ($/year)
Office							
General Office	71585		0.004	$130,266			
Medical Office				$81,590			
Retail	45981		0.005	$36,550			
Restaurant	24480		0.009	$31,030			
Hotel, Hospitality							
Hotel	92321		0.001	$31,200			
Hospitality				$31,200			
Entertainment				$50,980			
Industrial				$46,840			
Institutional				$78,500			
Residential	320021		0.000	$36,510			
Plaza	77000		0.001	$36,510			
Parking	221066		0.000	$43,880			
Recreation				$31,200			

Construction Period Calculations (Locked)

Derived results from Construction Period Inputs.

Metric	Value
Inflation Adjusted Eligible Expenditures	$255,809,675
Construction labor share	55.00%
Avg annual wage (construction)	$63,350
Implied hourly wage	$30
Total labor cost (proxy for payroll)	$140,695,321
Implied labor hours	4619514.89
Construction FTE (labor hours / 2,080)	2220.92
State income tax on construction payroll	$3,165,645
Hard construction costs + business fixtures	[redacted]
Sales tax on hard construction costs + business fixtures	$8,158,350
Total construction-period tax impacts	$11,323,994

Completion Period Calculations (Locked)

Calculates annual stabilized direct impacts and removes baseline (project-site only).

Use Type	Annual FTE (stabilized)	Annual Payroll	Annual Taxable Sales/Revenue	Baseline Payroll	Baseline Sales	Net Payroll	Net Sales
General Office	292.00	$38,037,665	$0	$0	$0	$38,037,665	[redacted]
Medical Office	0.00	$0	$0	$0	$0	$0	
Retail	206.79	$7,558,138	$50,611,287	$0	$0	$7,558,138

Tax Calculations (Locked)

Calculates annual and 5-year completion-period tax impacts (net of baseline) using Department parameters.

Tax Category	Annual Net Base	Rate	Annual Tax	5-Year Total (escalated)
Revenue Escalation factor (5 years)	5.3028			
Wage Escalation factor (5 years)	5.3315			
State income tax (payroll)	$58,449,072	0.0225	$1,315,104	$7,011,439
Local income tax (payroll)	$58,449,072	0.0200	$1,168,981	$6,232,390
State + local sales tax (taxable sales)	$87,155,742	0.0850	$7,408,238	$39,284,193
Lodging tax (hotel revenue)	[redacted]	0.1100	$1,194,682	$6,335,124
Property tax (annual)	$84,333,830	91.3040	$7,700,014	$40,831,413
Total completion-period tax increase (5-year)				**$99,694,559**

Statutory 10% Test (Locked)

Completion-period tax increase must be ≥ 10% of eligible expenditures.

Item	Amount
Eligible Expenditures	$247,071,900
10% Threshold	$24,707,190
Construction + Completion-Period Tax Increase (5-year)	$111,018,553
PASS/FAIL	**PASS**

Summary Outputs

These outputs should be used to populate the EIS

Metric	Value
Total Eligible Construction Expenditures	$247,071,900
Total Construction-Period Tax Impacts	$11,323,994
Total Completion-Period Tax Increase (5-Year)	$99,694,559
Total Tax Increase	$111,018,553
Fifth Year Payroll	$66,323,087
Total Sales Subject to Sales Tax	$289,827,350
10% Test Result (PASS/FAIL)	PASS
Application Type	Major City TMUD

Anticipated Completion Period Sales – Online Application Portal

The below table provides the answer to the following question in the online TMUD application: "From the Economic Impact Statement, provide the anticipated total sales from Retail, Entertainment, and Dining operations generated at the Project site during the completion period," as this number does not appear in the EIS Workbook.

	Sales Taxable Sales Base	Construction Inflation Rate (Annual)/5-Year Revenue Escalation Factor	Sales Taxable Sales	Source
Construction Period	$ 185,404,285	3.28%	$ 191,961,166	EIS Workbook - Construction Period Calculation
Completion Period	$ 87,155,742	5.3028	$ 462,169,469	EIS Workbook - Tax Calculations
Total			**$ 654,130,635**

Project Budget & Stabilized Annual Operating Proforma (TRADE SECRET)

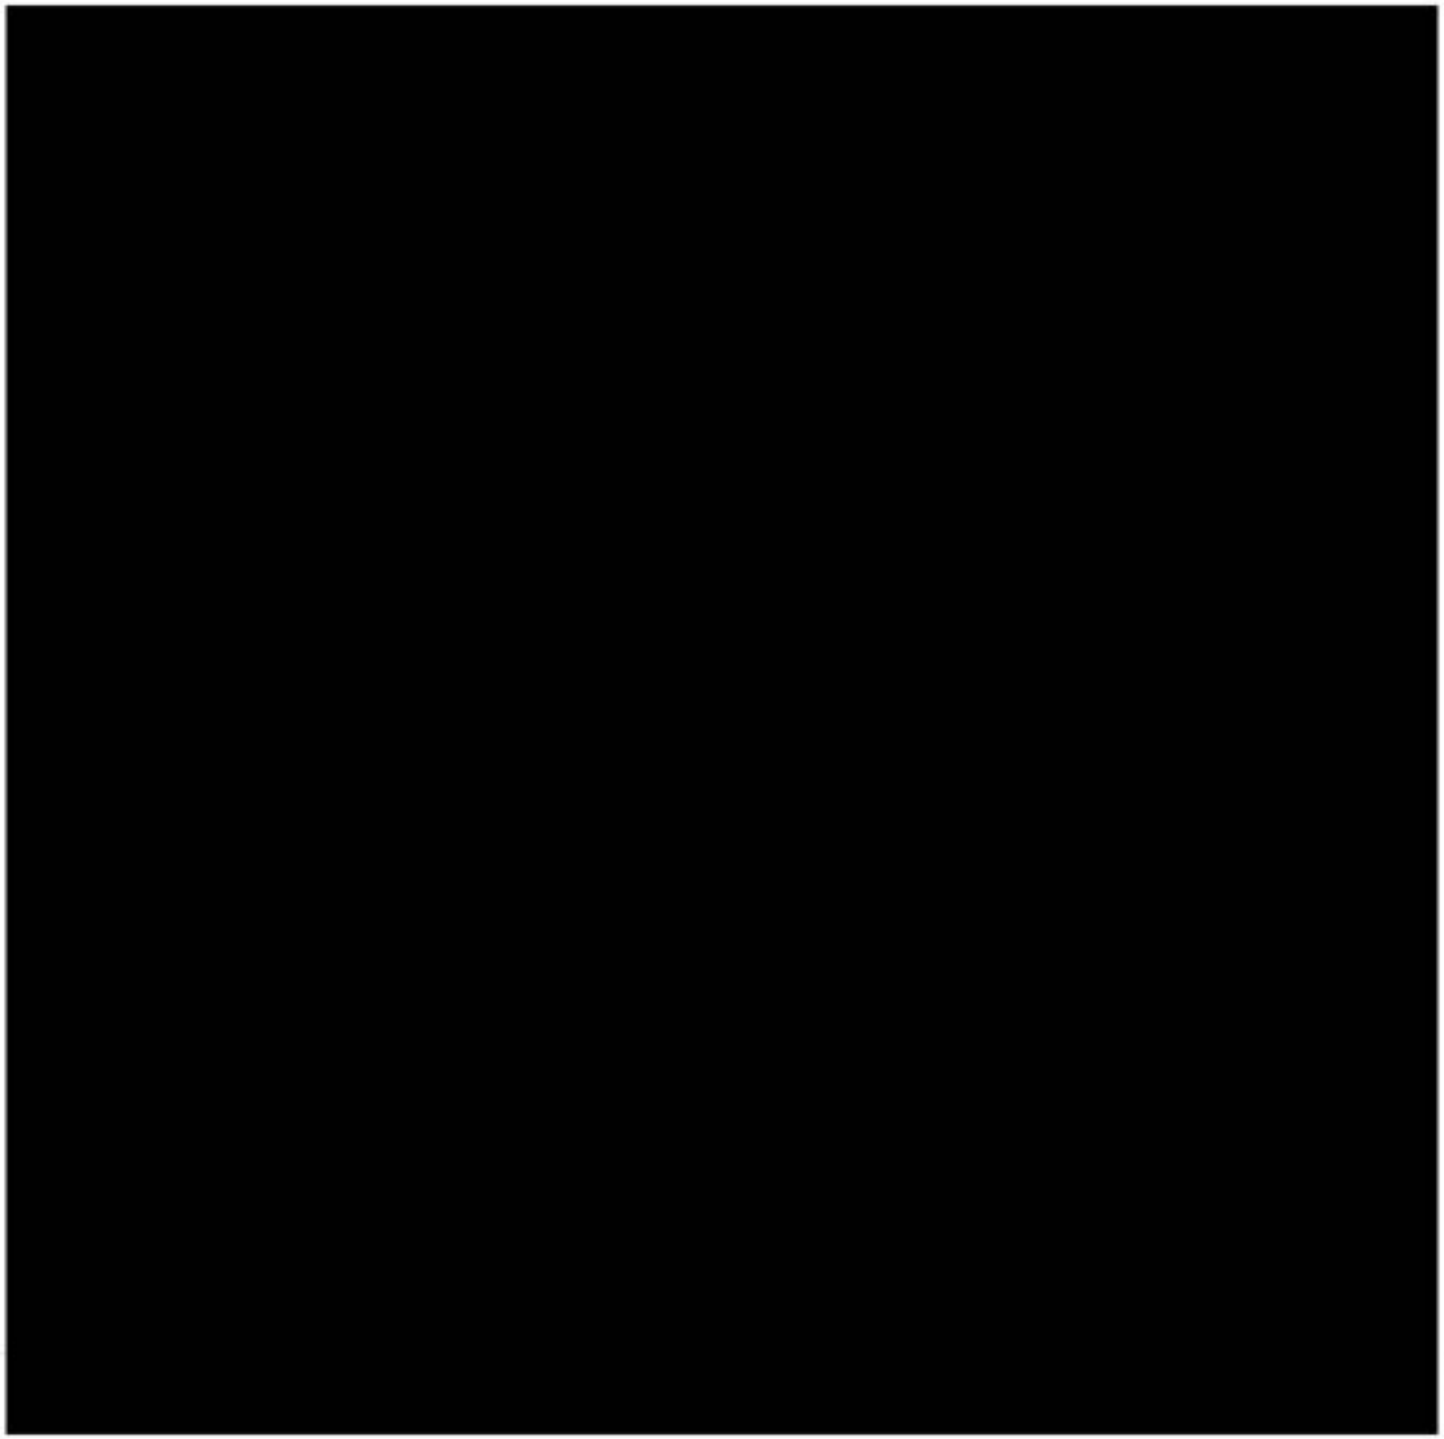
Bridge North Proforma Analysis

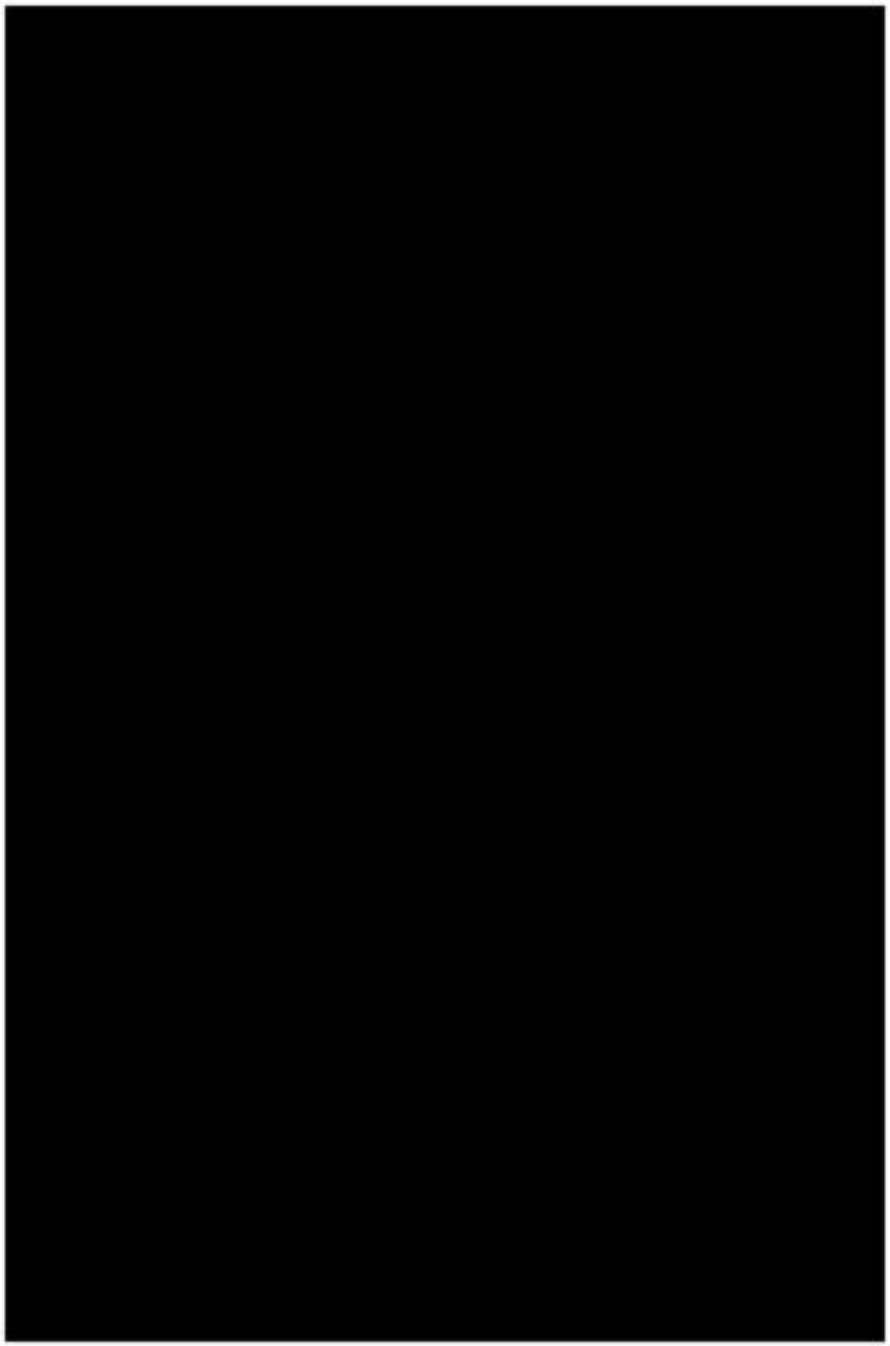
[redacted]

SOURCES AND USES

[redacted]

*sources and uses of funds for only tax credit eligible expenditures





Data Sources

Data Sources and Key Inputs

The Developer's Project budget and stabilized annual operating proforma, which we understand are being provided to other third parties such as potential lenders, and thus are assumed to be reliable, were the source of most project information.

ODOD provided the EIS Workbook Excel file ("Workbook") submitted with this EIS Narrative Report. The Workbook contains ODOD required parameters and calculations of economic impact. The results presented in this EIS narrative report were generated using the Workbook.

The IMPLAN model, which is described in the About IMPLAN section, was a source of key inputs. IMPLAN data from 2024, the most recent year for which data is currently available, was used for this analysis.

Where necessary, we also relied on independent third-party data and established real estate industry data sources.

Throughout the modeling, Silverlode also employed professional conservatism to ensure that the inputs and assumptions were reasonable. Silverlode reviewed information provided by the Developer for reasonableness but did not validate such information.

Portions of this report are considered trade secrets and are denoted as such.

EIS Workbook, Documentation and Notes Table

EXAMPLE ENTRIES — FOR ILLUSTRATION ONLY (DO NOT DELETE IN TEMPLATE VERSION)				
Workbook Section / Tab	**Input or Assumption**	**Value Used**	**Data Source**	**Notes / Justification (Why this is reasonable)**
Completion Period Inputs - Retail	Retail sales per square foot	$375 per SF (annual, stabilized)	ICSC 2024 Midwest Retail Benchmark Report	Consistent with Class A neighborhood retail in comparable Midwest
Completion Period Inputs - Office	Average annual wage	$78,000 (median)	BLS OEWS, Cincinnati MSA, Major SOC Group 13-0000 (2024)	Median wage used per EIS guidance to avoid overstating payroll
Completion Period Inputs - Hotel	ADR and occupancy	[redacted]	Project operating pro forma; STR Midwest regional averages	Reflects stabilized operations after ramp-up period
Parameters - Applicant-Provided	Local sales tax rate	1.25%	Ohio Department of Taxation, county sales tax rate table (2025)	Rate applicable to project address as of submission date
Completion Period Inputs - Baseline	Existing on-site retail sales	[redacted]	Current tenant rent roll and sales disclosures	Represents pre-project activity removed to calculate net new impacts
Parameters - Applicant-Provided	Effective State Income Tax Rate	2.25%	https://tax.ohio.gov/individual/resources/annual-tax-rates	For taxable years beginning in 2025, tax of $342 + plus 2.75% tax on the portion of income from $26,051-$100,000, and 3.125% tax on the portion of income over $100,000. Given the range in income levels for the Project, an effective rate of 2.25% was assumed.
Parameters - Applicant-Provided	Effective Local Income Tax Rate	2.00%	https://dublinohiousa.gov/taxation/	Local income tax rate is published by the City.
Parameters - Applicant-Provided	State Sales Tax Rate	5.75%	https://tax.ohio.gov/business/sales-and-use-tax	State sales tax rate is published by the state.
Parameters - Applicant-Provided	Local Sales Tax Rate	2.75%	https://dam.assets.ohio.gov/image/upload/tax.ohio.gov/tax_analysis/tax_data_series/sales_and_use/Salestaxmap.pdf	Franklin County 1.25%, Transit Tax 1.0% and Bridge Park NCA 0.5%

Parameters – Applicant-Provided	Lodging Tax Rate	11.00%	https://columbusconventions.com/about/about-the-fccfa/, https://dublinohiousa.gov/taxation/hotel-motel-tax/, City of Dublin ordinance 39-25	4% Franklin County, 6% City of Dublin, and 1% Bridge Park NCA lodging tax
Parameters – Applicant-Provided	State + Local Effective Mille Rate per $1,000	91.303974	Franklin County Auditor	2025 effective millage for Project parcels
Parameters - Department Provided Measures	SOC code MSA median wages for various uses and RPC value	Various	Utilized department provided values with the exception of office use, override described below.	Utilized department provided values with the exception of office use, override described below.
Parameters - Department Provided Measures	General office use average annual wage	[redacted]	Override of office use wages per LOI from single committed tenant that will occupy entire office space for [redacted]	[redacted]
Construction Period Inputs - Eligible Expenditures	Land Acquisition Costs	[redacted]	Project budget	
Construction Period Inputs - Eligible Expenditures	Hard Construction Costs	[redacted]	Project budget	Construction contractor estimate
Construction Period Inputs - Eligible Expenditures	Soft Construction Costs	[redacted]	Project budget	
Construction Period Inputs - Eligible Expenditures	Professional Services and Eligible Fees	[redacted]	Project budget	
Construction Period Inputs - Eligible Expenditures	Taxable Business Fixtures Cost	[redacted]	Project budget	
Construction Period Inputs - Eligible Expenditures	Other Eligible Costs	[redacted]	Project budget	
Construction Period Inputs - Construction Employment & Payroll Assumptions	Estimated Share of Eligible Construction Costs Attributable to Labor	0.55	Construction contractor estimate	
Construction Period Inputs - Construction Expenditures Timeline	Percent of Expenditures	Various	Developer construction draw schedule	

Construction Period Inputs - Property Value	Property Value Prior to Development	3058200	Franklin County Auditor	2025 values for currently taxable parcels
Construction Period Inputs - Property Value	Estimated Property Value Post Development	244012000	Developer budget and proforma	[redacted]
Completion Period Inputs	Total Operating Square Footage	All values in column	Architect letter	Retail GSF of 64,456 per the architect letter was reduced to tenant rentable SF of 45,981, which excludes common/mechanical areas for purposes of estimating tenant retail revenue.
Completion Period Inputs	Stabilized year by use	All uses	Developer Proforma	
Completion Period Inputs	Stabilized Occupancy / Utilization	All values in column	Developer Proforma	Hotel restaurant space has a committed tenant so 100% occupancy is assumed. 90% occupancy is assumed for other retail/restaurant space.
Completion Period Inputs	Staffing Ratio Stabilized - General office	[redacted]	LOI from identified tenant for entire office space	[redacted]
Completion Period Inputs	Staffing Ratio Stabilized - Retail	0.004996967	Public company 10Ks, 10Qs and other public sources	See Restaurant and Retail Sales Per Square Foot and Staffing Ratios table in the EIS narrative Appendix
Completion Period Inputs	Staffing Ratio Stabilized - Restaurant	0.009209277	Public company 10Ks, 10Qs and other public sources	See Restaurant and Retail Sales Per Square Foot and Staffing Ratios table in the EIS Narrative Report Appendix
Completion Period Inputs	Staffing Ratio Stabilized	Various uses	IMPLAN 2024 data for the MSA	See the Staffing Ratio Chart in the EIS Narrative Appendix

Completion Period inputs	Staffing Ratio Stabilized	Project Operations and Parking FTEs/SF	National Apartment Association, FMLink, International Parking Institute	See the Operations and Parking FTE table in EIS Narrative Appendix
Completion Period inputs	Annual Stabilized Taxable Sales/Revenue Per Sq Foot - Retail	1273	Public company 10Ks, 10Qs and other public sources	See the Restaurant and Retail Sales Per Square Foot and Staffing Ratios table in the EIS Narrative Appendix. This revenue per SF was applied to the net rentable retail SF of 45,891, rather than the gross SF per the architect letter of 64,458.
Completion Period inputs	Annual Stabilized Taxable Sales/Revenue Per Sq Foot - Restaurant	991	Public company 10Ks, 10Qs and other public sources	See the Restaurant and Retail Sales Per Square Foot and Staffing Ratios table in the EIS Narrative Report Appendix
Completion Period inputs	Annual Stabilized Taxable Sales/Revenue Per Sq Foot - Hotel	[redacted]	Developer Proforma, Costar Report, revenue of a existing comparable hotel in Bridge North development	[redacted]
Completion Period inputs	Annual Stabilized Taxable Sales/Revenue Per Sq Foot - Public plaza	50	Outdoor plaza retail sales are estimated at 4% of building retail sales per square foot.	Outdoor public plaza space will be the site of recurring, seasonal and special events that produce on-site sales taxable retail, food and beverage and entertainment revenue over and above permanent tenant sales. Regular planned street closure and designation by the City of Columbus as a Designated Outdoor Refreshment Area (DORA) support the use of this outdoor space to produce

Residential (Operations) and Parking Staffing Per Square Foot

***Square footage per security FTE includes commercial building square feet (except parking) to avoid overstating)

Retail Sales and Staffing Per Square Foot (TRADE SECRET)

The Project is expected to attract high-performing, upscale restaurants and retail stores that have sales per square foot well above broad industry sales per square foot averages. To develop the per square foot sales and staffing estimates used in this analysis, the below information was compiled from publicly traded restaurant and retail companies that represent the types of commercial tenants that would be appropriate for the Project. The information below was primarily obtained from SEC filings and was supplemented where necessary with other industry sources. The sources for the individual pieces of information in the table below are identified in the section that follows.

Because activated/programmed outdoor spaces are a significant component of the Project, most of the Project's restaurant spaces will have outdoor patios. While these patios increase the revenue-generating space of these restaurants, their square footage is not included in this analysis. Accordingly, the average restaurant sales in the below table ($[redacted] has been increased by 5% to $[redacted] This adjustment reflects the fact that patios are expected to increase the revenue-generating space of the restaurants by approximately 10% for approximately half of the year (10% x 50% = 5%).

Category	Company Name	Ticker Symbol	Company-Owned Locations (Sources Below)	Annual Revenue From Company-Owned Locations* (Sources Below)	Annual Revenue Per Company-owned Location (Calculated)	Square Feet Per Location-Low (Sources Below)	Square Feet Per Location-High (Sources Below)	Square Feet Per Location-Midpoint (Calculated)	Annual Revenue Per SF (Calculated)	Average Employees Per Location (Sources Below)	FTE Per Job (IMPLAN)	FTE Per Location (Calculated)	SF Per FTE (Calculated)	FTE Per SF (Calculated)

About IMPLAN

IMPLAN (IMpact analysis for PLANning), one of the most well-respected and widely used methodologies for assessing regional economic impacts, was used for parts of this study. IMPLAN is a general input-output model initially developed by the U.S. Forest Service in the 1970s and is used by more than 1,000 universities, government agencies, and consultants to estimate the economic and fiscal impacts of investments and/or changes in one or more industries. 2024 IMPLAN data, the most current data available at the time, was used for this study. Data underlying the IMPLAN model is updated annually using thousands of data points from over 90 sources. The main sources of this data include:

- U.S. Bureau of Labor Statistics (BLS) Quarterly Census of Employment and Wages (QCEW)
- U.S. Bureau of Economic Analysis (BEA) Regional Economic Accounts (REA)
- U.S. Census Bureau County Business Patterns (CBP)
- U.S. Bureau of Economic Analysis National Income and Product Accounts (NIPA)

About Silverlode Consulting

Silverlode Consulting was founded in 2002 by two former leaders from EY and PwC's consulting practices. As a national leader in economic impact analysis, Silverlode has supported hundreds of organizations, from nonprofit arts groups to multinational corporations, in quantifying their contributions to their communities and effectively communicating those impacts to key stakeholders. Through rigorous analysis and clear communication of findings, our work has helped clients secure funding, obtain regulatory approvals, and positively influence public perception. To learn more about our firm and our expertise in economic impact analysis, please visit http://www.silverlodeconsulting.com

Summary Outputs

Table 1 describes the summary outputs of the Project. These results are constructed using the Ohio Department of Development ("ODOD") EIS Workbook which also documents the applicant's inputs used to create the figures below. It is worth noting that all impacts and calculation in this EIS Narrative are direct, occurring at the Project Site.

In summary, this project includes **$203 million** in total eligible construction expenditures supporting **$5 million** in Construction Period taxes. The resulting Completion Period, which is the five years following the completion of construction, generates an additional **$93 million** in taxes based on **$141 million** in total taxable sales and **$57 million** in annual payroll by the Completion Period's fifth year. This results in a total of **$98 million** in new taxes.

Based on these results, this project **passes** the 10% test result for a General TMUD application. In subsequent tables, the applicant describes these results in detail.

Table 1: Summary Outputs

Metric	Value
Total Eligible Construction Expenditures	**$203,826,713**
Total Construction-Period Tax Impacts	**$5,048,698**
Total Completion-Period tax increase (5-year)	**$93,049,376**
Total Tax Increase	**$98,098,075**
Fifth Year Payroll	**$57,341,314**
Total Sales Subject to Sales Tax	**$141,208,385**
10% Test Result (Pass/Fail)	**Pass**
Application Type	**Major City TMUD**

Construction Period Impact Analysis

In this section, the applicant's capital investment generates new full-time equivalent (FTE) jobs, new payroll and taxable sales during the Construction Period.

Table 2 summarizes Construction Period calculations for this project based on the Department's EIS workbook which also documents the applicant's inputs for these figures.

Direct impacts of construction for this project total **$207.1 million** with roughly half (50%, or **$103.5 million**) of this figure slated for construction labor. There, labor impacts support a living wage of **$30 per hour** and **1,635 FTE** jobs (**3.4 million hours**). Hard construction costs and business fixtures for this project are estimated at **$**[redacted]

The Construction Period contributes valuable tax impacts. In sum, total construction-period tax impacts for this project are **$5.3 million.** This includes **$**[redacted] in hard construction/fixture sales taxes.

Table 2: Construction Period Impact Analysis

Metric	Amount
Inflation adjusted eligible expenditures	**$211,030,717**
Construction labor share	**42.34%**
Average annual wage (construction)	**$63,350**
Implied hourly wage	**$30**
Total labor cost (proxy for payroll)	**$89,350,405**
Implied labor hours	**2,933,683**
Construction FTE (labor hours/2,080)	**1,410.42**
State income tax on construction payroll	**$1,911,857**
Hard construction costs + business fixtures	**$**[redacted]
Sales tax on hard construction costs + business fixtures	**$3,136,841**
Total construction-period impacts	**$5,048,698**

Input Assumptions

The **Appendix includes the file *1 – Project Budget and Construction Hard Costs*,** prepared by a licensed professional that overviews the costs associated with the Project and the Tax-credit Eligible Expenditures associated with it. Below is the methodology for removing ineligible expenditures from the overall Project Budget:

Table 3: Construction Cost Estimates		
Item	**Amount**	**Source:**
Project Budget	$[redacted]	Developer Construction Estimates – Provided by Licensed Contractor
Remaining Investment	$[redacted]	Reflects the Project budget removing land categories ($[redacted]
Tax Credit Eligible Investment	**$203,826,713**	Reflects the Remaining Investment with the removal of the publicly-funded garage.

Schedule of Key Construction Milestones and Cost Timing:

The **Appendix includes the file *2 - Milestone Schedule*** that details all of the Project's planning and construction milestones. Below is a summary of the Construction Milestones:

Table 4: Construction Milestones	
Site Enablement Work:	**10/2026**
Garage, Condo Building and Hotel Construction Start	**3/2027**
Office Construction Start	**3/2028**
Garage, Condo Building and Hotel Construction Finish	**3/2030**
Office Construction Finish	**3/2030**
Office Occupancy	**3/2030**
Condo/Garage Occupancy	**3/2030**
Hotel Occupancy	**4/2030**

The estimated percent of costs per year is based on the various timeframes of each asset:

- 2027/2028 (Hotel, Condo and Garage Under Constriction) – 28.94%
- 2028/2029 (Hotel, Condo, Garage and Office Under Construction) – 35.53%
- 2029/2030 (Hotel, Condo, Garage and Office Under Construction) – 35.53%

Construction Labor, Wage and Employment Estimates

The steps below overview the methodology in estimating construction employment and wages. For estimations of FTEs and wages, the project hard cost budget was modeled in IMPLAN to understand the estimated percentage of labor and materials. This helped us understand the total wage amount for the construction period. Further, IMPLAN was able to estimate labor hours worked for a given construction cost. This model used the State of Ohio direct construction impacts as geography and event.

For an example construction project in Ohio, a construction cost of $30,529,788 results in 348,024 labor hours which, when divided by 2,080 hours, results in 167.32 FTEs. While this Project includes a different total cost from the example, this methodology allows construction employment and FTE metrics to be applied on a per square foot basis.

1. ***Employment Estimations:*** Vista converted the 167.32 FTEs into a per square foot basis resulting in 1 FTE per 1,095 sf. The resulting total FTEs for the project's 523,371 sf is 477 FTEs. *For tax calculations, however, Vista defers to the method employed by the Ohio Department if Development's EIS Workbook in estimating Construction FTE Labor hours, which utilizes a different method.*

2. ***Eligible Construction Costs Attributable to Labor:*** The percentage of cost dedicated to labor income in IMPLAN is 42.34%. This was used as a basis for estimated share of eligible construction costs attributable to labor.

Completion Period Impact Analysis

In this section, the applicant establishes new full-time equivalent (FTE) jobs and new payroll generated during the Completion Period. Additionally, this section establishes new taxable sales and output across applicable categories.

Table 3 summarizes completion period calculations for this project based on the Department's EIS workbook which also documents the applicant's inputs for these figures.

There is no current economic activity occurring on the Project site and as such, the economic activity and tax revenues generated from the Project will all be net new (a baseline figure is not deducted from totals).

Annual FTE figures in this table range from 1-36 across five categories (general office, retail, restaurant, hotel, hospitality and entertainment), totaling the creation of **795 FTEs** supporting **$50.5 million** in annual payroll. Project completion creates **$55.9 million** in annual taxable sales/revenue.

Property Valuation

Property value estimates were conducted by utilizing the Franklin County Auditor current market value to reflect the property value prior to development ($2,858,100) and the following method was utilized from the pro forma to estimate the property value post-development. The Appendix includes file ***3 – Bridge Park YBlock Proformas*.** Capitalization rates provided by Crawford Hoying Development Partners:

Wage and Payroll Assumptions

Table 5: Wage and Payroll Measure and Sources by Use		
Use	**Measure**	**Source**
Office Building	**$78,500; Median Salary – Columbus MSA**	SOC 13-0000 Median Wage for MSA/State of Ohio – from EIS Workbook
*Retail	**$54,462; Median Salary – Columbus MSA** **$3,535,596 Tenant-provided Payroll**	Lightcast Occupational Report for "Spa Massage Therapists" Columbus MSA; Q1 – 2026; Sourced from Federal Data Set "Class of Worker" QCEW Employees, Non-QCEW Employees, and Self-Employed. *See Appendix file **4 – Columbus MSA Spa Massage Therapists Wages; 3 – Bridge Park YBlock Proforma (tenant payroll page)***
Restaurant (in Office)	**$39,319; Median Salary – Dublin Zip Code 43017**	Lightcast Occupational Report for "Wait Staff ("Waiters and Waitresses") Dublin Zip Code 43017; Q1 – 2026; Sourced from Federal Data Set "Class of Worker" QCEW Employees, Non-QCEW Employees, and Self-Employed. *See Appendix file* **5 – Dublin Ohio Wait Staff Wage Report**
Restaurants (in Hotel)	[redacted]	Provided by [redacted] – Hotel Operator, Restaurant Tenant; Project Operating Pro Forma. *See Appendix file **3 – Bridge Park YBlock Expense Proformas.*** Expense percentages of payroll confirmed by [redacted].
Hotel	**$31,200; Median Salary – Columbus MSA**	SOC 39-0000 Median Wage for MSA/State of Ohio – from EIS Workbook
Entertainment	[redacted]	Provided by [redacted]; Project Operating Pro Forma. **See Appendix 3 – Bridge Park YBlock Expense Proformas.** Expense percentages of payroll confirmed by C[redacted]
Residential	**N/A**	**N/A**
Parking	**$43,880; Median Wage – Columbus MSA**	SOC 53-0000 Median Wage for MSA/State of Ohio – from EIS Workbook

**Wage Deviation from Standard EIS Workbook Assumption*

1. ***Retail –*** the non-restaurant retail is specific to a singular industry and particular operation, which is a luxury spa. Spa massage therapists are specialized and it would be an underrepresentation of the wage rate to use an average wage of all retail uses ($36,550).
2. ***Restaurant –*** the Columbus region has a significant depth and variety of restaurants while Bridge Park has a history of a higher-end product. Further, Food & Beverage at the 2-digit SOC Level includes a variety of food service types such as Fast Food Cooks (35-2011), Fast Food Counter Workers (35-3041), Cafeteria Cooks (35-2012), Short Order Cooks (35-2015) and Non-restaurant Food Servers (35-3041), which are not indicative of a higher-end restaurant (revenue estimates over $5 million) synonymous with the brands provided. Secondly, using the same Lightcast Data Source referenced above, the median salary at the Columbus Region for SOC 35-000 ($31,828) are not representative of wage rates in Dublin ($33,470). As such the following methodology deviations were made:
    i. *Reduce Geography to Dublin Zip Code*
    ii. *Specify the Occupation as 35-3031 "Waiters and Waitresses"*
3. ***Hotel, Hospitality and Entertainment –*** the Project consists of a reputable, experienced Hotel (and Restaurant/Event/Food & Beverage Operator (, who provided payroll data for the Developer's Pro forma. The Pro forma cites the data as coming directly from the tenants and tenants have confirmed figures in the Pro forma via attached letters in the **Appendix files: *3 –***

Occupancy/Stabilization Assumptions

Occupancy and stabilization rates are reflected in the pro forma for each land use component. The uses all expect to be at expected occupancy levels by 2030 (upon project completion), except the hotel rooms, which will be roughly occupancy the first year and fully stabilized at its expected occupancy by The **Appendix file *3 – Bridge Park YBlock Proformas*** includes pro formas for the Hotel, which includes the non-office Restaurants, Hospitality ( ) and Entertainment (event space). Due to the public nature of the parking garage, it is expected to be fully stabilized with parkers upon completion.

Table 6: Stabilized Occupancy		
Use Type	Stabilized Occupancy	Stabilized Period (Years)
Office Building		
*Retail		
Restaurant (in Office Building)		
Restaurants (in Hotel)		
Hotel		
Hospitality		
Entertainment		
Residential		
Parking		

Sales, Revenue and Output Assumptions

Below is a summary of estimated sales and sales per square foot by use type:

Use Component	SF	Sales	Taxable Sales/SF
Office	87,705	$	$
Retail	17,578	$	$
Restaurant	27,354	$	$
Hotel	110,597	$	$
Hospitality	9,068	$	$
Entertainment	10,829	$	$
Residential	114,748	$	$
Parking	145,492	$	$
Totals	**523,371**	**$55,915,934**	**$106.84**

The table below details the metrics utilized to calculate taxable sales for each use. Taxable sales for purposes of this section are specific to estimated taxable revenues. Annual expenses/purchases by each use are not quantified in this EIS.

Table 7: Sales, Revenue and Output Assumptions		
Use Type	**Metric**	**Value**
Office Building	**N/A**	N/A
*Retail	Annual sales provided by Panacea (Spa Tenant); ***Appendix file 3 – Bridge Park YBlock Proformas***	$[redacted]/sf
Restaurant (in Office Building)	Sales per square foot based on Leverage Buying Group's 2024 Restauranteur Benchmarking Guide; assumes high end of sales/sf for casual dining ($250/sf-$350/sf range) given upper scale-upscale brands at Bridge Park; **See Appendix: 9 - Restaurant Sales: 2024-Restaurateur-Benchmark-Guide-FINAL-10-21**	$[redacted]/sf
Restaurants (in Hotel)	Annual restaurant sales provided by [redacted] (Signature Restaurant Operator) **Appendix file *3 – Bridge Park YBlock Proformas***	$[redacted]/sf.
Hotel	Annual sales provided by [redacted] (Hotel Operator). **Appendix file *3 – Bridge Park YBlock Proformas***	$[redacted]/sf. The projected room revenue assumes $[redacted] ADR and $[redacted] RevPAR at [redacted] occupancy. The resulting figure of $14,918,272 is divided into the square footage allocated to the guest rooms and guest services space of 110,597 sf.
Hospitality	Annual sales provided by [redacted] Restaurants of the Rooftop Pool Deck Area, which includes food and beverage sales and pool membership options. **Appendix file *3 – Bridge Park YBlock Proformas***	$[redacted]/sf
Entertainment	Annual sales provided by [redacted] based on event space programming and food and beverage sales **Appendix file *3 – Bridge Park YBlock Proformas***	$[redacted]/sf
Residential/Parking	**N/A**	N/A

Estimated Retail, Dining and Entertainment Sales

The proposed hotel at Bridge Park, together with the [redacted] a [redacted] signature restaurant, and an integrated hotel conference and event facility, operates as a coordinated economic driver that generates on-site dining, retail, and entertainment sales through discretionary, experience-based consumer activity. The hotel's primary demand is derived from leisure guests, wellness travelers, corporate meetings, weddings, and regional events—visitation segments that are inherently entertainment-oriented and that exhibit high per-capita spending on food and beverage, personal services, and experiential offerings. Unlike stand-alone lodging, the co-location of spa, restaurant, bar, and event uses converts overnight stays into multi-channel spending events, capturing expenditures that would otherwise disperse outside the district or not occur at all.

This integrated programmatic mix increases visitor dwell time, concentrates consumer spending within Bridge Park, and elevates the district's overall economic productivity. Conferences, social events, and destination dining activity hosted within the hotel generate direct food-and-beverage and service revenue on site, while simultaneously reinforcing demand for adjacent retail, entertainment venues, and public spaces throughout Bridge Park. In aggregate, the hotel, spa, restaurant, and event facilities function as a self-reinforcing economic ecosystem that monetizes Bridge Park's role as a regional entertainment destination within Dublin and Central Ohio. Accordingly, sales generated by these uses represent entertainment-driven economic activity rather than basic lodging transactions and are appropriately classified as dining, retail, and entertainment sales.

The sales estimates from the methodology detailed above produce $296 million in direct retail, dining and entertainment sales during the completion period. The annual estimates are as follows:

Inflation	2.94%	*Inflation Rate from Department-provided Workbook*				
Completion Period Year	1	2	3	4	5	Total
Retail	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Dining	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Entertainment	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Total	$[redacted]	$[redacted]	$[redacted]	$[redacted]	$[redacted]	$296,509,416

Employment Density and Staffing Assumptions

Employment density was calculated based on data inputs from two sources:

1) Tenant-provided employment and square footage and
2) CoStar calculations, which include:
    a. **Office Uses:** from CoStar properties within a half-mile radius from the Project Site. CoStar reports are attached in the Appendix file ***10 - CoStar Office Density - Dublin .5 Mile Radius Office Uses CoStar.***
    b. **Restaurant Uses:** from CoStar comparables within Bridge Park, based on the assumption that the next restaurant tenant will follow similar patterns of the existing Bridge Park tenant base. In this instance, three restaurants were used that fell between 5,000 and 10,000 sf (Kitchen Social – 6,000 square feet, Local Cantina – 6,000 square feet and Fado Pub & Kitchen – 5,000 square feet). The total square footage of 17,000 divided by employment of 160, results in 106 square feet per employee. However, when adjusting for full-time equivalency, the 160 employees were reduced by a factor of 60% to arrive at 96 total FTEs. The 60% FTE adjustment was based on a figure comes from BLS CES Table B-7a, which reports average weekly hours of production and nonsupervisory employees on private nonfarm payrolls by industry sector. In the Food Services and Drinking Places industry, the average hours worked is 24 hours per week (24/40 = 60%). The final result is 17,000 square feet divided by 96 employees, resulting in 177.08 square feet per employee. See Appendix file ***11 - CoStar Bridge Park Restaurant Comps.***

Staffing Ratio Summary

Use	Project Component	SF	FTEs	Staffing Ratio
Office	Office Building	87,705	498.32	0.0056818182
Retail	Spa	17,578	64.92	0.0036931725
Restaurant	Sig Restaurant, Speakeasy, Lobby/Bar/Cafe	27,354	211.68	0.0077386776
Hotel	Hotel Rooms	119,665	30.00	0.0002506999
Hospitality	Pool Deck Rooftop Bar	-	-	0.0000000000
Entertainment	Event/Conference Space	10,829	28.04	0.0025897933
Residential	Condos	114,748	-	0.0000000000
Parking	Parking Garage	145,492	-	0.0000000000
Totals		**523,371**	**833**	**0.0015915500**

Calculation details contributing to the Staffing Ratio Summary above can be found on Table 8 on the following page.

Table 8: Employment Density and Staffing Assumptions		
Use Type	**Metric**	**Value**
Office Building	**Square Feet per Employee and Employees per Square Foot**	175/sf per employee; based on the average of CoStar Office Tenant spaces within a .5 mile radius of the Project Site. Properties with Null values in employment or square footage were removed. The resulting 93 properties represented 663,132 square feet of occupied space and 3,777 employees. 663,132/3,777 = 175/sf per employee. This translates to .0056818 employees per square foot for entry into the EIS Workboo. **See Appendix: *10 - CoStar Office Density - Dublin .5 Mile Radius Office Uses CoStar.***
Hotel	[redacted]	Tenant-provided estimate (Shaner Hotels); See: ***3 - Bridge Park YBlock Proformas***
Restaurant (in Office Building)	**Square Feet per Employee and Employees per Square Foot** **FTE conversion of 60%**	177/sf per employee; based on three comparable Bridge Park restaurants The resulting 3 properties represented 17,000 square feet of occupied space and 96 FTEs. 17,000/96 = 177/sf per employee. This translates to .0056472 employees per square foot for entry into the EIS Workbook. *See Appendix:* ***11 - CoStar Bridge Park Restaurant Comps*** The 60% FTE adjustment was based on a figure comes from BLS CES Table B-7a, which reports average weekly hours of production and nonsupervisory employees on private nonfarm payrolls by industry sector. In the Food Services and Drinking Places industry, the average hours worked is 24 hours per week (24/40 = 60%).

Tax Impacts

In this section, the applicant establishes new state and local tax collections (including income, sales, lodging, and property) as a result of this project. Additionally, this section documents the total increase in tax collections during the five-year completion period to support evaluation of the statutory 10% Test.

Table 4 summarizes tax impact calculations for this project based on the Department's EIS workbook which also documents the applicant's inputs for these figures. In summary, this project supports **$93 million** in taxation over a five-year post-completion period.

Table 10: Tax Impact Analysis

Tax Category	Annual Net Base	Rate	Annual Tax	5-year Total
Revenue Escalation Factor (5 years)	**5.3028**	-	-	-
Wage Escalation factor (5 years)	**5.3315**	-	-	-
State income tax (payroll)	**$50,533,634**	**0.0214**	**$1,081,283**	**$5,764,830**
Local income tax (payroll)	**$50,533,634**	**0.0200**	**$1,010,673**	**$5,388,372**
State + local sales tax (taxable sales)	**$[redacted]**	**0.0800**	**$4,473,275**	**$23,720,754**
Lodging tax (hotel revenue)	**$[redacted]**	**0.1090**	**$1,626,092**	**$8,622,794**
Property tax (annual)	**$102,351,214**	**91.30**	**$9,344,666**	**$49,552,627**
Total completion-period tax increase (5-year)	-	-	-	**$93,049,376**

Rates of Taxation

Table 11: Tax Rate Methodology		
Tax Type	**Rate**	**Source**
Effective State Income Tax Rate	**2.22%**	Based on 2025 Ohio Income Tax Withholdings Tables through the Ohio Department of Taxation's Website and referenced in Ohio Department of Development TMUD 2026 FAQs. Calculated from blended salary of entire project, where resulting figure was divided back into salary to obtain effective rate.
Effective Local Income Tax Rate	**2.00%**	Ohio Department of Taxation "The Finder" *Tax District Summary* – Project Address.
State Sales Tax Rate	**5.75%**	Ohio Department of Taxation "The Finder" Tax District Summary – Project Address.
Local Sales Tax Rate	**2.00%**	Ohio Department of Taxation "The Finder" Tax District Summary – Project Address.
Lodging Tax Rate	**10.90%**	From the Ohio Department of Taxation's Tax Data Series website page – Sales & Use Tax - *S-4: Lodging Tax - Amounts Collected by Local Governments* – 2024 File
State + Local Effective Mill Rate per $1,000	**$91.30**	The current millage rate on the Project parcels as state in the Franklin County Auditor's website and in the Franklin County Auditor's "Tax Rates for 2025" rate sheet: City of Dublin – Wash Twp – Dublin (District 273)

Ohio Withholding Tax Calculation

Treatment of Abatements, Exemptions and Special Revenues

The Project includes a series of property based, municipal finance tools, including a New Community Authority (Special Charge), Community Reinvestment Area (Abatement) and Tax Increment Financing PILOT Payments (Payments in Lieu of Taxes).

All properties are subject to a 100% CRA Tax Abatement and subject to a .41 TIF, that generates revenue when the CRA expires, but in the interim, properties will require minimum service payments annually.

In addition to the service payments, all properties are in a New Community Authority that is levying community development charges on the following:

- A charge on the valuation of real property, which also provides for a valuation floor based on certain values per square foot by use.
- Sales of retailers and the hotel.

While the Community Reinvestment Area abates property taxes, the New Community Authority and PILOT Payments pays the equivalent 91.3 mills that otherwise would have been received through property taxes.

As a result, no adjustments were made to the effective millage rate for estimating property tax collections, as TMUD Program Guidelines provide that tax collections may include an *"alternative method, such as through tax increment financing agreements, payments in lieu of taxes, and new community authority development charges."*

Summary Outputs

Table 1 describes the summary outputs of the Project. These results are constructed using the Ohio Department of Development ("ODOD") EIS Workbook which also documents the applicant's inputs used to create the figures below.

In summary, this project includes **$6.1 million** in total eligible construction expenditures supporting **$228,140** in Construction Period taxes. The resulting Completion Period, which is the five years following the completion of construction, generates an additional **$849,276** in taxes based on **$6.5 million** in total taxable sales and **$1.0 million** in annual payroll by the Completion Period's fifth year. This results in a total of **$1.0 million** in new taxes.

Based on these results, this project **passes** the 10% test result for a General TMUD application. In subsequent tables, the applicant describes these results in detail.

Table 1: Summary Outputs

Metric	Value
Total Eligible Construction Expenditures	**$6,105,957**
Total Construction-Period Tax Impacts	**$228,140**
Total Completion-Period tax increase (5-year)	**$849,276**
Total Tax Increase	**$1,077,416**
Fifth Year Payroll	**$1,043,089**
Total Sales Subject to Sales Tax	**$6,579,314**
10% Test Result (Pass/Fail)	**Pass**
Application Type	**General TMUD**

Construction Period Impact Analysis

In this section, the applicant's capital investment generates new full-time equivalent (FTE) jobs, new payroll and taxable sales during the Construction Period.

Table 2 summarizes Construction Period calculations for this project based on the ODOD's EIS workbook which also documents the applicant's inputs for these figures.

Direct impacts of construction for this project total **$6.2 million** with roughly half (42.34%, or **$2.6 million**) of this figure slated for construction labor. There, labor impacts support a living wage of **$27 per hour** and **46 FTE** jobs (**97,616 hours**). Hard construction costs and business fixtures for this project are estimated at **$[redacted]**

The Construction Period contributes valuable tax impacts. In sum, total construction-period tax impacts for this project are **$228,140,** which includes **$176,885** in hard construction/fixture sales taxes and **$51,255** in state income tax on construction payroll.

Table 2: Construction Period Impact Analysis

Metric	Amount
Inflation adjusted eligible expenditures	**$6,206,095**
Construction labor share	**42.34%**
Average annual wage (construction)	**$55,990**
Implied hourly wage	**$27**
Total labor cost (proxy for payroll)	**$2,627,660**
Implied labor hours	**97,616.25**
Construction FTE (labor hours/2,080)	**46.93**
State income tax on construction payroll	**$51,255**
Hard construction costs + business fixtures	**$[redacted]**
Sales tax on hard construction costs + business fixtures	**$176,885**
Total construction-period tax impacts	**$228,140**

Input Assumptions

The **Appendix includes a Project Budget** prepared by a licensed professional that overviews the costs associated with the Project and the Tax-credit Eligible Expenditures associated with it. Table 3 notes the methodology for removing ineligible expenditures from the overall Project Budget.

Table 3: Construction Cost Estimates		
Item	**Amount**	**Source:**
Project Budget	**$6,105,957**	Developer Construction Estimates – Provided by Licensed Contractor
Remaining Investment	**$[redacted]**	Reflects the Project budget removing land acquisition costs paid to date ($0)
Tax Credit Eligible Investment	**$6,105,957**	Reflects the Remaining Investment

Schedule of Key Construction Milestones:

The **Appendix includes a Milestone Schedule** that details all of the Project's planning and construction milestones. Below in Table 4 is a summary of the Construction Milestones.

Table 4: Construction Milestones	
Milestone	Anticipated Date
Construction starts	August 2026
Construction completion	August 2028

Stabilization of residential components	August 2029

Construction Labor, Wage and Employment Estimates

The steps below overview the methodology in estimating construction employment and wages. For estimations of FTEs and wages, the project hard cost budget was modeled in IMPLAN to understand the estimated percentage of labor and materials. This helped us understand the total wage amount for the construction period. Further, IMPLAN was able to estimate labor hours worked for a given construction cost. This model used the State of Ohio direct construction impacts as geography and event. For an example construction project in Ohio, a construction cost of $30,529,788 results in 348,024 labor hours which, when divided by 2,080 hours, results in 167.32 FTEs.

1. Employment Estimations: Vista converted the 167.32 FTEs into a per square foot basis resulting in 1 FTE per 1,095sf. The resulting total FTEs for the project's 28,660 sf are 26.17 FTEs.
2. Eligible Construction Costs Attributable to Labor: The percentage of cost dedicated to labor income in IMPLAN is 42.34%. This was used as a basis for estimated share of eligible construction costs attributable to labor.

Completion Period Impact Analysis

In this section, the applicant establishes new full-time equivalent (FTE) jobs and new payroll generated during the Completion Period. Additionally, this section establishes new taxable sales and output across applicable categories.

Table 5 summarizes completion period calculations for this project based on the ODOD's EIS workbook which also documents the applicant's inputs for these figures.

Annual FTE figures in this table include activity across two categories (general office, retail,), totaling **19 FTEs** and **$919,257** in annual payroll. This includes **19 new FTEs**, **$919,257 in new payroll**, and **$1.3 million in new sales**. Project completion supports **$1.3 million** in total annual taxable sales/revenue.

Table 5: Completion Period Impact Analysis

Use Type	Annual FTE	Annual Payroll	Annual Taxable Sales/ Revenue	Baseline Payroll	Baseline Sales	Net Payroll	Net Sales
General Office	9.00	$581,667	[redacted]	$0	$0	$581,667	[redacted]
Medical Office	0.00	$0		$0	$0	$0	
Retail	10.00	$337,584		$0	$0	$337,584	
Restaurant	0.00	$0		$0	$0	$0	
Hotel	0.00	$0		$0	$0	$0	
Hospitality	0.00	$0		$0	$0	$0

TOTAL	19.00	$919,251	$1,358,500	$0	$0	$919,251	$1,358,500

Wage and Payroll Assumptions

Table 6: Wage and Payroll Measure and Sources by Use		
Use	**Measure**	**Source**
Office Building	**Median Wage –MSA/ State of Ohio**	SOC 13-0000 Median Wage for MSA/State of Ohio – from EIS Workbook
***Retail**	**Market: Provided by Retail Operators and Developer**	Completion phase tenant survey data; Project Operating Pro Forma
Residential	**N/A**	N/A

**Wage Deviation from Standard EIS Workbook Assumption*

1. ***Retail –*** Retail payroll is based on survey of future retailers with an LOI for this location. The tenant features investment services which, per tenant survey, includes a higher average retail salary ($33,758.40) than the generalized retail salary ($30,550) provided by the ODOD tables.

Occupancy/Stabilization Assumptions

Occupancy and stabilization rates are reflected in the pro forma for each land use component. All use types expect to be at expected occupancy levels by [redacted] ([redacted]), supported by existing businesses remaining in place. The Appendix includes pro formas for the project.

Table 7: Stabilized Occupancy		
Use Type	**Stabilized Occupancy**	**Stabilized Period (Years)**
Office Building	[redacted]	[redacted]
Retail	[redacted]	[redacted]
Residential	[redacted]	[redacted]

Sales, Revenue and Output Assumptions

The table below details the metrics utilized to calculate taxable sales for each use. Taxable sales for purposes of this section are specific to estimated taxable revenues. Annual expenses/purchases by each use are not quantified in this EIS.

Table 8: Sales, Revenue and Output Assumptions		
Use Type	**Metric**	**Value**
Office Building	**N/A**	N/A
Retail	**Annual sales provided by tenant survey**	$[redacted]/sf
Residential	**N/A**	N/A

Dining, Entertainment and Retail Sales

Further, the sales estimates from the methodology detailed above produce $**7.2 million** in direct retail, dining and entertainment sales during the completion period.

Inflation	2.94%	*Inflation Rate from ODOD-provided Workbook*				
Completion Period Year	1	2	3	4	5	Total
Retail	$[redacted]	$[redacted]	$[redacted]	$[redacted]	$[redacted]	$7,203,814
Dining	$0	$0	$0	$0	$0	$0
Entertainment	$0	$0	$0	$0	$0	$0
Total	$[redacted]	$[redacted]	$[redacted]	$[redacted]	$[redacted]	$7,203,814

Employment Density and Staffing Assumptions

Employment density was calculated based on data inputs from tenant-provided employment and square footage.

Table 9: Employment Density and Staffing Assumptions

Use Type	Metric	Value
Office Building	**Square Feet per Employee and Employees per Square Foot**	773.66sf per employee based on 9 employees and 6,603sf office space. This translates to 0.001363017 employees per square foot for entry into the EIS Workbook
Retail	**Square Feet per Employee and Employees per Square Foot**	583.10sf per employee based on 10 employees and 5,831sf across five tenants. This translates to 0.001714972 employees per square foot for entry into the EIS Workbook
Residential	**N/A**	**N/A**

Property values

Pre and post-completion property values for this study are established using the following sources.

A. Pre-completion - $18,090

The (current) property values are determined by appraisal report, Richland County.

B. Post-completion - $4,226,740

The Developer's preferred method for estimating future property value is [redacted]

[redacted]

Tax Impacts

In this section, the applicant establishes new state and local tax collections (including income, sales, and property) as a result of this project. Additionally, this section documents the total increase in tax collections during the five-year completion period to support evaluation of the statutory 10% Test.

Table 10 summarizes tax impact calculations for this project based on the ODOD 's EIS workbook which also documents the applicant's inputs for these figures. In summary, this project supports **$849,276** in taxation over a five-year post-completion period. This includes **$205,870** in state and local payroll taxes, **$504,267** in sales taxes, and **$139,140** in property taxes over five years.

The future appraised value of the property was calculated by dividing the year five net operating income of the project by the five percent fully stabilized cap rate as reflected in the pro forma.

Table 10: Tax Impact Analysis

Tax Category	Annual Net Base	Rate	Annual Tax	5-year Total
Revenue Escalation Factor (5 years)	5.3028	-	-	-
Wage Escalation factor (5 years)	5.3315	-	-	-
State income tax (payroll)	$919,251	0.0195	$17,931	$95,598
Local income tax (payroll)	$919,251	0.0225	$20,683	$110,272
State + local sales tax (taxable sales)	[redacted]	0.0700	$95,095	$504,267
Lodging tax (hotel revenue)	$0	0.0875	$0	$0
Property tax (annual)	$1,473,028	17.8130	$26,239	$139,140
Total completion-period tax increase (5-year)	-	-	-	$849,276

Rates of Taxation

Table 11: Tax Rate Methodology		
Tax Type	**Rate**	**Source**
Effective State Income Tax Rate	**1.95%**	Based on 2025 Ohio Income Tax Withholdings Tables through the Ohio Department of Taxation's Website and referenced in Ohio Department of Development TMUD 2026 FAQs. Calculated from blended salary of entire project, where resulting figure was divided back into salary to obtain effective rate.
Effective Local Income Tax Rate	**2.25%**	Ohio Department of Taxation "The Finder" *Tax District Summary* – Project Address.
State Sales Tax Rate	**5.75%**	Ohio Department of Taxation "The Finder" Tax District Summary – Project Address.
Local Sales Tax Rate	**1.25%**	Ohio Department of Taxation "The Finder" Tax District Summary – Project Address.
Lodging Tax Rate	**8.75%**	From the Ohio Department of Taxation's Tax Data Series website page – Sales & Use Tax - *S-4: Lodging Tax - Amounts Collected by Local Governments* – 2024 File
State + Local Effective Mill Rate per $1,000	**$17.81**	The current millage rate on the Project parcels as stated in the Richland County Auditor's website and in the Richland County Auditor's "Tax Rates for 2025" rate sheet. The City of Mansfield Executed Development Agreement includes support for adjusting this figure. (Section 3 Addressing community reinvestment area abatement)

Ohio Withholding Tax Calculation

2025 Brackets

$0-$26,050 0.000% of Ohio taxable nonbusiness income

$26,050 - $100,000 $342.00 + 2.75% of excess over $26,050

>$100,000 $2,394.32 + 3.125% of excess over $100,000

Project Blended Wage

$48,379.70

Summary Outputs

Table 1 describes the summary outputs of the Project. These results are constructed using the Ohio Department of Development ("ODOD") EIS Workbook which also documents the applicant's inputs used to create the figures below. It is worth noting that all outputs in this EIS are direct and occurring at the Project site.

In summary, this project includes **$44.2 million** in total eligible construction expenditures supporting **$1.6 million** in Construction Period taxes. The resulting Completion Period, which is the five years following the completion of construction, generates an additional **$17.2 million** in taxes based on **$43.8 million** in total taxable sales and **$22.5 million** in annual payroll by the Completion Period's fifth year. This results in a total of **$18.9 million** in new taxes.

Based on these results, this project **passes** the 10% test result for a General TMUD application. In subsequent tables, the applicant describes these results in detail.

Table 1: Summary Outputs

Metric	Value
Total Eligible Construction Expenditures	**$44,261,946**
Total Construction-Period Tax Impacts	**$1,652,087**
Total Completion-Period tax increase (5-year)	**$17,273,287**
Total Tax Increase	**$18,925,374**
Fifth Year Payroll	**$22,523,716**
Total Sales Subject to Sales Tax	**$43,849,990**
10% Test Result (Pass/Fail)	**Pass**
Application Type	**General TMUD**

Construction Period Impact Analysis

In this section, the applicant's capital investment generates new full-time equivalent (FTE) jobs, new payroll and taxable sales during the Construction Period.

Table 2 summarizes Construction Period calculations for this project based on the ODOD's EIS workbook which also documents the applicant's inputs for these figures.

Direct impacts of construction for this project total **$45.7 million** with roughly half (42.34%, or **$19.3 million**) of this figure slated for construction labor. There, labor impacts support a living wage of **$30 per hour** and **305 FTE** jobs (**635,696 hours**). Hard construction costs and business fixtures for this project are estimated at **$33.4 million**.

The Construction Period contributes valuable tax impacts. In sum, total construction-period tax impacts for this project are **$1.6 million,** which includes **$1.2 million** in hard construction/fixture sales taxes and **$438,505** in state income tax on construction payroll.

Table 2: Construction Period Impact Analysis

Metric	Amount
Inflation adjusted eligible expenditures	**$45,728,023**
Construction labor share	**42.34%**
Average annual wage (construction)	**$63,350**
Implied hourly wage	**$30**
Total labor cost (proxy for payroll)	**$19,361,245**
Implied labor hours	**635,696.76**
Construction FTE (labor hours/2,080)	**305.62**
State income tax on construction payroll	**$438,505**
Hard construction costs + business fixtures	**$**
Sales tax on hard construction costs + business fixtures	**$1,213,582**
Total construction-period tax impacts	**$1,652,087**

Input Assumptions

The **Appendix includes a Project Budget** prepared by a licensed professional that overviews the costs associated with the Project and the Tax-credit Eligible Expenditures

associated with it. Table 3 notes the methodology for removing ineligible expenditures from the overall Project Budget.

Table 3: Construction Cost Estimates		
Item	**Amount**	**Source:**
Project Budget	**$56,000,000**	Developer Construction Estimates – Provided by Licensed Contractor
Remaining Investment	**$[redacted]**	Reflects the Project budget removing land acquisition costs paid to date ($0)
Tax Credit Eligible Investment	**$56,000,000**	Reflects the Remaining Investment

Schedule of Key Construction Milestones:

The **Appendix includes a Milestone Schedule** that details all of the Project's planning and construction milestones. Below is a summary of the Construction Milestones:

Table 4: Construction Milestones	
Milestone	Anticipated Date
Planning (Preconstruction) Elements End	July 2026
Construction on medical center begins	July 2026
Construction on medical center ends	December 2027
Restaurant construction begins	March 2027
Restaurant construction ends	May 2028
Hotel construction begins	March 2027
Hotel construction ends	August 2028

Construction Labor, Wage and Employment Estimates

The steps below overview the methodology in estimating construction employment and wages. For estimations of FTEs and wages, the project hard cost budget was modeled in IMPLAN to understand the estimated percentage of labor and materials. This helped us understand the total wage amount for the construction period. Further, IMPLAN was able to estimate labor hours worked for a given construction cost. This model used the State of Ohio direct construction impacts as geography and event. For an example construction project in Ohio, a construction cost of $30,529,788 results in 348,024 labor hours which,

when divided by 2,080 hours, results in 167.32 FTEs. While this Project includes a different total cost from the example, this methodology allows construction employment and FTE metrics to be applied on a per square foot basis.

1. Employment Estimations: Vista converted the 167.32 FTEs into a per square foot basis resulting in 1 FTE per 1,095 sf. The resulting total FTEs for the project's 142,500 sf is 130.13 FTEs. *For tax calculations, however, Vista defers to the method employed by the Ohio Department if Development's EIS Workbook in estimating Construction FTE Labor hours, which utilizes a different method.*
2. Eligible Construction Costs Attributable to Labor: The percentage of cost dedicated to labor income in IMPLAN is 42.34%. This was used as a basis for estimated share of eligible construction costs attributable to labor.

Completion Period Impact Analysis

In this section, the applicant establishes new full-time equivalent (FTE) jobs and new payroll generated during the Completion Period. Additionally, this section establishes new taxable sales and output across applicable categories.

Table 5 summarizes completion period calculations for this project based on the ODOD's EIS workbook which also documents the applicant's inputs for these figures.

Annual FTE figures in this table include activity across two categories (general office, retail,), totaling **249 FTEs** and **$19.8 million** in annual payroll. Project completion also supports **$9.2 million** in total annual taxable sales/revenue.

The table on the following page overviews the Completion Period Impacts.

Table 5: Completion Period Impact Analysis

Use Type	Annual FTE	Annual Payroll	Annual Taxable Sales/ Revenue	Baseline Payroll	Baseline Sales	Net Payroll	Net Sales
General Office	0	$0.00	[redacted]	$0.00	$0.00	$0.00	[redacted]
Medical Office	194	$17,699,998		$0.00	$0.00	$17,699,998	
Retail	0	$0.00		$0.00	$0.00	$0.00	
Restaurant	35	$1,499,651		$0.00	$0.00	$1,499,651	
Hotel	20	$650,005		$0.00	$0.00	$650,005	
Hospitality	0	$0.00		$0.00	$0.00	$0.00

Plaza	0	$0.00		$0.00	$0.00	$0.00	
Parking	0	$0.00		$0.00	$0.00	$0.00	
Recreation	0	$0.00		$0.00	$0.00	$0.00	
TOTAL	249	$19,849,654	$9,236,777	$0.00	$0.00	$19,849,654	$9,236,777

Wage and Payroll Assumptions

Table 6: Wage and Payroll Measure and Sources by Use		
Use	**Measure**	**Source**
***Medical Office**	**Market: Provided by Developer using data from future tenants**	**Payroll and FTE figures from future tenant**
***Restaurant**	**Market: Provided by Developer using data from future tenants**	**Payroll and FTE figures from future tenant**
***Hotel**	**Market: Provided by Developer using data from future tenants**	**Payroll and FTE figures from future tenant**

**Wage Deviation from Standard EIS Workbook Assumption*

1. ***Medical Office*** **–** Medical office payroll is based on developer data from future medical practitioner tenants with an LOI or other agreement for this location. This includes a high number of clinicians and administrators beyond what might be found in a typical medical format and includes a higher average salary ($91,237) than the generalized medical office salary ($81,590) provided by the ODOD tables.

2. ***Restaurant:*** Restaurant payroll is based on developer data for an upscale restaurant onsite. This includes a higher average salary ($42,847) than the more generalized restaurant salary ($31,030) provided by the ODOD tables.

3. ***Hotel:*** Hotel payroll is based on developer data from the tenant for a major chain hotel onsite. This includes a somewhat higher average salary ($32,500) than the more generalized restaurant salary ($31,200) provided by the ODOD tables.

Occupancy/Stabilization Assumptions

Occupancy and stabilization rates are reflected in the pro forma for each land use component. All uses expect to be at expected occupancy levels by [redacted] ([redacted]), supported by existing businesses remaining in place. The Appendix includes pro formas for the medical project, while the restaurant and hotel have future tenants under contract.

Table 7: Stabilized Occupancy		
Use Type	**Stabilized Occupancy**	**Stabilized Period (Years)**
Medical Facility	[redacted]	[redacted]
Restaurant	[redacted]	[redacted]
Hotel	[redacted]	[redacted]

Sales, Revenue and Output Assumptions

The table below details the metrics utilized to calculate taxable sales for each use. Taxable sales for purposes of this section are specific to estimated taxable revenues. Annual expenses/purchases by each use are not quantified in this EIS.

Table 8: Sales, Revenue and Output Assumptions		
Use Type	**Metric**	**Value**
Medical Facility	**NA**	N/A
Restaurant	**Annual sales provided by developer data on future tenant**	$[redacted]/sf
Hotel	**Annual sales provided by developer data on future tenant**	$[redacted]/sf

Employment Density and Staffing Assumptions

Employment density was calculated based on data inputs from tenant-provided employment and square footage.

Table 9: Employment Density and Staffing Assumptions		
Use Type	**Metric**	**Value**
Medical Facility	**Square Feet per Employee and Employees per Square Foot**	335.05sf per employee based on 194 employees and 65,000 sf medical office space. This translates to 0.00058462 employees per square foot for entry into the EIS Workbook
Restaurant	**Square Feet per Employee and Employees per Square Foot**	157.14sf per employee based on 35 employees and 5,500sf restaurant space. This translates to 0.00636364 employees per square foot for entry into the EIS Workbook
Hotel	**Square Feet per Employee and Employees per Square Foot**	3,600.00sf per employee based on 20 employees and 72,000sf hotel space. This translates to

		0.00027778 employees per square foot for entry into the EIS Workbook

Dining, Entertainment and Retail Sales

Further, the sales estimates from the methodology detailed above produce **$22.6 million** in direct retail, dining, and entertainment sales during the completion period.

Inflation	2.94%	*Inflation Rate from ODOD-provided Workbook*				
Completion Period Year	1	2	3	4	5	Total
Dining	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	$22,679,598
Total	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	$22,679,598

Baseline

There are no baseline figures included in this study as no businesses currently operate on the project property.

Property Value

Current property value: $194,380

The developer is using the current Ross County appraisal for the current property value.

Post-completion property value: $87,120,000

The developer is using the following valuations to establish the post-completion property value, and these files are included in the appendix.

- [redacted]
- [redacted]
- [redacted]

Tax Impacts

In this section, the applicant establishes new state and local tax collections (including income, sales, and property) as a result of this project. Additionally, this section documents the total increase in tax collections during the five-year completion period to support evaluation of the statutory 10% Test.

Table 10 summarizes tax impact calculations for this project based on the ODOD's EIS workbook which also documents the applicant's inputs for these figures. In summary, this project supports **$17.2 million** in taxation over a five-year post-completion period. This includes **$2.3 million** in state payroll taxes, **$2.1 million** in local payroll taxes, **$3.5 million** in sales taxes, **$2.6 million** in lodging taxes, and **$6.5 million** in property taxes over five years.

Table 10: Tax Impact Analysis

Tax Category	Annual Net Base	Rate	Annual Tax	5-year Total
Revenue Escalation Factor (5 years)	**5.3028**	-	-	-
Wage Escalation factor (5 years)	**5.3315**	-	-	-
State income tax (payroll)	**$19,849,654**	**0.0226**	**$449,567**	**$2,396,853**
Local income tax (payroll)	**$19,849,654**	**0.0200**	**$396,993**	**$2,116,554**
State + local sales tax (taxable sales)	[redacted]	**0.0725**	**$669,666**	**$3,551,087**
Lodging tax (hotel revenue)	[redacted]	**0.1025**	**$508,384**	**$2,695,844**
Property tax (annual)	**$30,423,967**	**40.3700**	**$1,228,216**	**$6,512,946**

Total completion-period tax increase (5-year)	-	-	-	**$17,273,946**

Rates of Taxation

Table 11: Tax Rate Methodology

Tax Type	Rate	Source
Effective State Income Tax Rate	**2.26%**	Based on 2025 Ohio Income Tax Withholdings Tables through the Ohio Department of Taxation's Website and referenced in Ohio Department of Development TMUD 2026 FAQs. Calculated from blended salary of entire project, where resulting figure was divided back into salary to obtain effective rate.
Effective Local Income Tax Rate	**2.00%**	Page 17 of the Joint Economic Development District between Chillicothe and Green Township.
State Sales Tax Rate	**5.75%**	Ohio Department of Taxation "The Finder" Tax District Summary – Project Address.
Local Sales Tax Rate	**1.50%**	Ohio Department of Taxation "The Finder" Tax District Summary – Project Address.
Lodging Tax Rate	**10.25%**	From the Ohio Department of Taxation's Tax Data Series website page – Sales & Use Tax - *S-4: Lodging Tax - Amounts Collected by Local Governments* – 2024 File
State + Local Effective Mill Rate per $1,000	**$40.37**	The current millage rate on the Project parcels as stated in the County Auditor's website and in the Auditor's "Tax Rates for 2025" rate sheet.

$79,719	**$342.00**	**2.75%**	**$26,500**	**$1,464**	**$1,806**	**2.26486%**

Treatment of Abatements, Exemptions and Special Revenues

The Project is subject to a Joint Economic Development District between the City of Chillicothe and Green Township, which have levied a 2% income tax, which serves as the local income tax rate.

The property is also subject to a Tax Increment Financing incentive, however due to the structure, property taxes will in effect be fully collected, therefore millage rates were not adjusted. Green Township approved a Township-level Tax Increment Financing (TIF) under Ohio Revised Code §§ 5709.73–5709.75 to support development of the Great Seal Medical Campus (parcel no. 140110120000, approx. 46.47 acres). The TIF exempts 100% of the

increase in assessed value attributable to new improvements and captures that value through service payments in lieu of taxes (PILOTs) to fund public infrastructure and reimburse the developer. School districts (Zane Trace LSD and Pickaway-Ross JVSD) are held harmless through compensation agreements. The owner(s) must make service payments equal to the full amount of real property taxes that would otherwise be due on the exempted improvement value. In effect, this is a 100% TIF capture of the incremental property tax value generated by new construction. The term will start the first tax year in which new improvements appear on the tax list, or year 2040 and will last for 30 years.

TIF revenues are used as follows:

- Service payments are deposited into the Green Township Public Improvement Tax Increment Equivalent Fund.
- After required school compensation:
    - 100% of the net service payments are paid to the Developer to reimburse eligible public infrastructure improvements (roads, utilities, sewer, stormwater, interchange access, site prep, etc.).
- Payments to school districts and the JVSD take priority over developer reimbursement.

Summary Outputs

Table 1 describes the summary outputs of the Project. These results are constructed using the Ohio Department of Development ("ODOD") EIS Workbook which also documents the applicant's inputs used to create the figures below. It is worth noting that all impacts and calculation in this EIS Narrative are direct, occurring at the Project Site.

In summary, this project includes **$60.6 million** in total eligible construction expenditures supporting **$2.1 million** in Construction Period taxes. The resulting Completion Period, which is the five years following the completion of construction, generates an additional **$22.9 million** in taxes based on **$96.7 million** in total taxable sales and **$6.7 million** in annual payroll by the Completion Period's fifth year. This results in a total of **$25 million** in new taxes.

Based on these results, this project **passes** the 10% test result for a General TMUD application. In subsequent tables, the applicant describes these results in detail.

Table 1: Summary Outputs

Metric	Value
Total Eligible Construction Expenditures	**$60,682,881**
Total Construction-Period Tax Impacts	**$2,125,501**
Total Completion-Period tax increase (5-year)	**$22,905,967**
Total Tax Increase	**$25,031,468**
Fifth Year Payroll	**$6,702,001**
Total Sales Subject to Sales Tax	**$96,711,257**
10% Test Result (Pass/Fail)	**Pass**
Application Type	**General TMUD**

Construction Period Impact Analysis

In this section, the applicant's capital investment generates new full-time equivalent (FTE) jobs, new payroll and taxable sales during the Construction Period.

Table 2 summarizes Construction Period calculations for this project based on the ODOD's EIS workbook which also documents the applicant's inputs for these figures.

Direct impacts of construction for this project total **$60.6 million** with roughly half (42.34%, or **$25.6 million**) of this figure slated for construction labor. There, labor impacts support a living wage of **$30 per hour** and **405 FTE** jobs (**843,594 hours**). Hard construction costs and business fixtures for this project are estimated at **$**[redacted]

The Construction Period contributes valuable tax impacts. In sum, total construction-period tax impacts for this project are **$2.1 million.** This includes **$1.7 million** in hard construction/fixture sales taxes.

Table 2: Construction Period Impact Analysis	
Metric	**Amount**
Inflation adjusted eligible expenditures	**$60,682,881**
Construction labor share	**42.34%**
Average annual wage (construction)	**$63,350**
Implied hourly wage	**$30**
Total labor cost (proxy for payroll)	**$25,693,132**
Implied labor hours	**843,594**
Construction FTE (labor hours/2,080)	**405.57**
State income tax on construction payroll	**$406,972**
Hard construction costs + business fixtures	**$**[redacted]
Sales tax on hard construction costs + business fixtures	**$1,718,530**
Total construction-period tax impacts	**$2,125,501**

Input Assumptions

The **Appendix includes a Project Budget** prepared by a licensed professional that overviews the costs associated with the Project and the Tax-credit Eligible Expenditures associated with it. Table 3 describes the methodology for removing ineligible expenditures from the overall Project Budget.

Table 3: Construction Cost Estimates		
Item	**Amount**	**Source:**

Tax Credit Eligible Investment	**$60,682,881**	[redacted]

Schedule of Key Construction Milestones:

The **Appendix includes a Milestone Schedule** that details all of the Project's planning and construction milestones. Below is a summary of the Construction Milestones:

Table 4: Construction/Project Milestones	
Project Approvals: Building Design, Planning, Zoning and Design Review Board	**10/2025**
Permitting: Engineering and Permitting Complete	**6/2026**
Site Development: Utilities, infrastructure, building pads, and earth moving.	**7/2027**
Vertical Building Construction Retail	**8/2026**
Vertical Building Construction Residential	**12/2026**
Retail Construction Completion	**7/2027**
Retail Building Occupancy	**10/2027**
Residential Building Deliveries	**11/2027**
Residential Occupancy	**1/2028**

Construction Labor, Wage and Employment Estimates

The steps below overview the methodology in estimating construction employment and wages. For estimations of FTEs and wages, the project hard cost budget was modeled in IMPLAN to understand the estimated percentage of labor and materials. This helped us understand the total wage amount for the construction period. Further, IMPLAN was able to estimate labor hours worked for a given construction cost. This model used the State of Ohio direct construction impacts as geography and event.

For an example construction project in Ohio, a construction cost of $30,529,788 results in 348,024 labor hours which, when divided by 2,080 hours, results in 167.32 FTEs. While this

Project includes a different total cost from the example, this methodology allows construction employment and FTE metrics to be applied on a per square foot basis.

1. ***Employment Estimations:*** Vista converted the 167.32 FTEs into a per square foot basis resulting in 1 FTE per 1,095 sf. The resulting total FTEs for the project's 340,463 sf is 310.9 FTEs.
2. ***Eligible Construction Costs Attributable to Labor:*** The percentage of cost dedicated to labor income in IMPLAN is 42.34%. This was used as a basis for estimated share of eligible construction costs attributable to labor.

Completion Period Impact Analysis

In this section, the applicant establishes new full-time equivalent (FTE) jobs and new payroll generated during the Completion Period. Additionally, this section establishes new taxable sales and output across applicable categories.

Table 5 summarizes completion period calculations for this project based on the ODOD's EIS workbook which also documents the applicant's inputs for these figures.

There is no current economic activity occurring on the Project site and as such, the economic activity and tax revenues generated from the Project will all be net new (a baseline figure is not deducted from totals).

Annual FTE figures in this table range from 1-36 across five categories (general office, retail, restaurant, hotel, hospitality and entertainment), totaling the creation of **178 FTEs** supporting **$5.9 million** in annual payroll. Project completion creates **$42.3 million** in annual taxable sales/revenue.

Table 5: Completion Period Impact Analysis							
Use Type	**Annual FTE**	**Annual Payroll**	**Annual Taxable Sales/ Revenue**	**Baseline Payroll**	**Baseline Sales**	**Net Payroll**	**Net Sales**
General Office	0	$0	[redacted]	$0	$0	$0	[redacted]
Medical Office	0	$0		$0	$0	$0	
Retail	68.99	$2,521,681		$0	$0	$2,521,681	
Restaurant	109.08	$3,384,644		$0	$0	$3,384,644

Institutional	0	$0		$0	$0	$0	
Residential	0	$0		$0	$0	$0	
Plaza	0	$0		$0	$0	$0	
Parking	0	$0		$0	$0	$0	
Recreation	0	$0		$0	$0	$0	
TOTAL	**178.07**	**5,906,625**		**$0**	**$0**	**$5,906,325**	**$42,399,937**

Property Valuation

Property value estimates were conducted by utilizing data from the Union County Auditor. The current market value of the property is **$804,320** based on the current appraised values from the Union County Auditor for each of the four subject parcels.

Future market value of the project was obtained by [redacted]. In order to accomplish this, [redacted].

In conclusion, the estimated value of the property post development of **$46,000,000** is used for the Project.

Wage and Payroll Assumptions

The national brands that will be occupying the site are protective over the utilization of their employee wages in public documents. As such, the ODOD-Provided Measurements in the EIS Workbook are sufficient in estimating the wages of Restaurant and Retail uses. Further, more detailed SOC codes were analyzed for the Marysville market and the wages provided by ODOD are consistent with such wages.

Table 10: Wage and Payroll Measure and Sources by Use

Use	Measure	Source
Restaurant Uses	**$31,030**	SOC 41-0000 Median Wage for MSA/State of Ohio – from EIS Workbook
Retail Uses	**$36,550**	SOC 41-0000 Median Wage for MSA/State of Ohio – from EIS Workbook
Residential Uses	**Not measured**	The Developer is based in close proximity to the site, and as such, the number of residential employees projected to operate the residential portion of the project on site would be insignificant for this analysis.

Occupancy/Stabilization Assumptions

Occupancy and stabilization rates are reflected in the pro forma for each land use component. The uses all expect to be at expected occupancy levels by the end of 2027 (upon project completion), as the uses are national retail brands that are operating at full capacity upon opening (retail stores, restaurant chains). The Appendix includes detailed pro formas for both the multifamily portion and the retail portion which reflect occupancy levels below. The multifamily portion is expected to realize [redacted] occupancy in the first full operating year [redacted] which represents the stabilized amount.

Table 11: Stabilized Occupancy

Use Type	Stabilized Occupancy	Stabilized Period (Years)

Residential Building	[redacted]	[redacted]
*Retail	[redacted]	[redacted]
Restaurant (in Office Building)	[redacted]	[redacted]

Sales, Revenue and Output Assumptions

The national brands that have committed to occupy the project uses are protective in providing estimated sales figures in a public document, as such, the median store sales for each brand within Central Ohio (MSA) locations were obtained from *placer.ai's* retail sales database, for the period of Calendar Year 2025, to estimate sales for each store. Given the sample size varied from 1 store ([redacted] to 10 stores ([redacted] using the median is appropriate for smaller samples sizes.

The **appendix** includes a report titled "Supplemental Jobs, Sales and Payroll Analysis Support" which details the sales pulled from each location, including the summary calculation. Summary calculations are also provided here:

Table 12: Placer.ai Figures

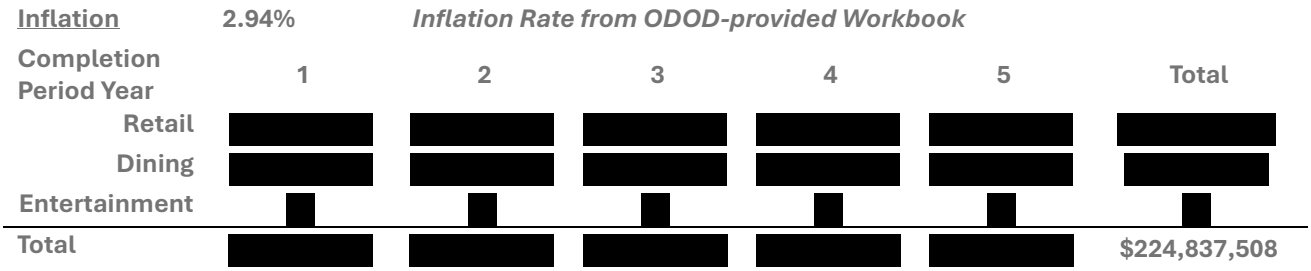
Tenant	Planned Project SF	Average Sales/Sf	Median Sales per Store
[redacted]	[redacted]	[redacted]	[redacted]
Summary			
Tenant	Planned Project SF	Average	Median Sales per Store
Blended	**79,850**	$531	**$42,400,000**
Retail	***62,550***	*$509.99*	*$31,900,000*
Restaurant	***17,300***	*$606.94*	*$10,500,000*

Table 13: Sales, Revenue and Output Assumptions

Use Type	Metric	Value
Restaurant	**Placer.ai Median Store Sales for Project Brands – Columbus MSA – CY 2025**	$606.94
*Retail	**Placer.ai Median Store Sales for Project Brands – Columbus MSA – CY 2025**	$509.99
Residential	**N/A**	N/A

Dining, Entertainment and Retail Sales

Further, the sales estimates from the methodology detailed above produce $224.8 million in direct retail, dining and entertainment sales during the completion period.



Employment Density and Staffing Assumptions

Employment density was calculated by obtaining the average employees per square foot for each retail store brand utilizing CoStar data for both the Columbus MSA, or when the sample size was not sufficient for tenant employment, the State of Ohio (this was the case for [redacted] and [redacted]. In circumstances where the CoStar tenant property result had a null value in square footage or employment, both fields were deleted to ensure not to skew the data. A SF/Job figure was obtained by dividing the total square footage for each property (after removing those with null values) by the total employment, to obtain a weighted average SF/job figure). Because CoStar's employment is based on headcount and not FTEs, information in how employment was converted to FTEs is detailed below.

The **appendix** includes a report titled "Supplemental Jobs, Sales and Payroll Analysis Support" which details the employment and square footage pulled from each location, including the summary calculation. Summary calculations are also provided here (this summary also includes wage rates and payroll estimates:

Table 14: Density and Staffing Assumptions

Tenant	Market Comps Jobs	SF/Job	Jobs/SF	Market Comps SF	Estimated FTEs	Wage Rate	Payroll
Olive [redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Restaurant	*1,556*	*158.6*	*0.006305*	*147,790*	*109*	*31,030*	*$3,384,562*

Table 15: Employment Density and Staffing Assumptions

Use Type	Metric	Value
Retail	**Square Feet per Employee and Employees per Square Foot – from CoStar Comparable Locations of Project Tenants in the Columbus MSA or State of Ohio (in the case of [redacted] and [redacted]**	SF/Job: 906.9 Jobs/SF: 0.001103
Restaurant	**Square Feet per Employee and Employees per Square Foot – from CoStar Comparable Locations of Project Tenants in the Columbus MSA or State of Ohio (in the case of [redacted] and [redacted])**	SF/Job: 158.6 Jobs/SF: 0.006305
Recreational Space	**No jobs will be housed at the Site in maintaining this space.**	N/A

FTE Conversions

FTEs were converted by using the average weekly hours worked for the industry compared to a full-time 40 hour work week (which annualizes to 2,080 hours), then multiplying the percentage by the number of headcount positions obtained from the CoStar analysis above:

Average Weekly Hours — Restaurants / Food Services

(Restaurants fall under Leisure and Hospitality, NAICS 72 / 722)

The same federal CES dataset reports: Average weekly hours, Leisure and Hospitality (March 2026): ~25.3 hours

Source: Bureau of Labor Statistics via FRED – Average Weekly Hours of All Employees, Leisure and Hospitality

FTE conversion (restaurants): 25 ÷ 40.0 = **0.60 FTE per job**

Average Weekly Hours — Retail Trade (NAICS 44–45)

The BLS Current Employment Statistics (CES) survey reports the following: Average weekly hours, Retail Trade (March 2026): ~30.0 hours

Source: Bureau of Labor Statistics via FRED – Average Weekly Hours of All Employees, Retail Trade

FTE conversion (restaurants): 30.0÷40.0 = **0.75 FTE per job**

The FTE per job ratios were multiplied by the jobs calculated by CoStar.

Example: 7,900 *Tenant SF* ÷ *70.37*[redacted] sf/job *(from CoStar)* = 112 jobs

112 jobs * .60 FTE per Job = 67.4 FTEs.

Tax Impacts

In this section, the applicant establishes new state and local tax collections (including income, sales, lodging, and property) as a result of this project. Additionally, this section documents the total increase in tax collections during the five-year completion period to support evaluation of the statutory 10% Test.

Table 16 summarizes tax impact calculations for this project based on the ODOD's EIS workbook which also documents the applicant's inputs for these figures. In summary, this project supports **$22.9 million** in taxation over a five-year post-completion period.

Table 16: Tax Impact Analysis

Summary Outputs

Table 1 describes the summary outputs of the Project. These results are constructed using the Ohio Department of Development ("ODOD") EIS Workbook which also documents the applicant's inputs used to create the figures below.

In summary, this project includes **$54.2 million** in total eligible construction expenditures supporting **$2.3 million** in Construction Period taxes. The resulting Completion Period, which is the five years following the completion of construction, generates an additional **$17.8 million** in taxes based on **$43.3** million in total taxable sales and **$49.7** million in annual payroll by the Completion Period's fifth year. In all, this results in a total of **$20.1 million** in taxes.

Based on these results, this project **passes** the 10% test result for a Major City TMUD application. In subsequent tables, the applicant describes these results in detail.

Table 1: Summary Outputs

Metric	Value
Total Eligible Construction Expenditures	**$54,214,648**
Total Construction-Period Tax Impacts	**$2,342,333**
Total Completion-Period tax increase (5-year)	**$17,805,513**
Total Tax Increase	**$20,147,846**

Application Type	**Major City TMUD**

Construction Period Impact Analysis

In this section, the applicant's capital investment generates new full-time equivalent (FTE) jobs, new payroll and taxable sales during the Construction Period.

Table 2 summarizes Construction Period calculations for this project based on the ODOD's EIS workbook which also documents the applicant's inputs for these figures.

Direct impacts of construction for this project total **$56.0 million** with roughly half (42.34%, or **$23.7 million**) of this figure slated for construction labor. There, labor impacts support a living wage of **$30 per hour** and **374 FTE** jobs (**778,655 hours**). Hard construction costs and business fixtures for this project are estimated at [redacted].

The Construction Period contributes valuable tax impacts. In sum, total construction-period tax impacts for this project are **$2.3 million.** This includes **$1.7 million** in hard construction/fixture sales taxes and **$606,836** in income tax on construction payroll.

Table 2: Construction Period Impact Analysis

Metric	Amount
Inflation adjusted eligible expenditures	**$56,011,553**
Construction labor share	**42.34**
Average annual wage (construction)	**$63,350**
Implied hourly wage	**$30**
Total labor cost (proxy for payroll)	**$23,715,291**
Implied labor hours	**778,655.19**
Construction FTE (labor hours/2,080)	**374.35**
State income tax on construction payroll	**$606,836**
Hard construction costs + business fixtures	**$[redacted]**
Sales tax on hard construction costs + business fixtures	**$1,735,497**
Total construction-period impacts	**$2,342,333**

Input Assumptions

The **Appendix includes a Project Budget** prepared by a licensed professional that overviews the costs associated with the Project and the Tax-credit Eligible Expenditures associated with it. Below, Table 3 describes the methodology for removing ineligible expenditures from the overall Project Budget.

Schedule of Key Construction Milestones:

The Appendix includes a schedule which details the Project's planning and construction milestones. Below is a summary of the Construction Milestones:

Table 4: Construction Milestones	
Office Construction Start	**Nov 2027**
Office Construction Complete	**May 2028**
Residential Construction Start	**March 2028**
Residential Construction Complete	**June 2029**
Office Occupancy	**May 2029**
Resident Occupancy	**Oct 2030**

Construction Labor, Wage and Employment Estimates

The steps below overview the methodology in estimating construction employment and wages. For estimations of FTEs and wages, the project hard cost budget was modeled in IMPLAN to understand the estimated percentage of labor and materials. This helped us understand the total wage amount for the construction period. Further, IMPLAN was able to estimate labor hours worked for a given construction cost. This model used the State of Ohio direct construction impacts as geography and event. For an example construction project in Ohio, a construction cost of $30,529,788 results in 348,024 labor hours which, when divided by 2,080 hours, results in 167.32 FTEs.

1. Employment Estimations: Vista converted the 167.32 FTEs into a per square foot basis resulting in 1 FTE per 1,095sf. The resulting total FTEs for the project's 153,218 sf is 139.92 FTEs.
2. Eligible Construction Costs Attributable to Labor: The percentage of cost dedicated to labor income in IMPLAN is 42.34%. This was used as a basis for estimated share of eligible construction costs attributable to labor.

Completion Period Impact Analysis

In this section, the applicant establishes new full-time equivalent (FTE) jobs and new payroll generated during the Completion Period. Additionally, this section establishes new taxable sales and output across applicable categories.

Table 5 summarizes completion period calculations for this project based on the ODOD's EIS workbook which also documents the applicant's inputs for these figures.

There is no current economic activity occurring on the Project site and as such, the economic activity and tax revenues generated from the Project will all be net new (a baseline figure is not deducted from totals).

Annual FTE figures in this table include **340 FTEs** supporting **$43.8 million** in annual payroll.

Table 5: Completion Period Impact Analysis							
Use Type	**Annual FTE**	**Annual Payroll**	**Annual Taxable Sales/ Revenue**	**Baseline Payroll**	**Baseline Sales**	**Net Payroll**	**Net Sales**
General Office	340	$43,881,220	$0	$0	$0	$43,881,220	$0
Medical Office	0	$0	$0	$0	$0	$0	$0
Retail	0	$0	$0	$0	$0	$0	$0
Restaurant	0	$0	$0	$0	$0	$0	$0
Hotel	0	$0	$0	$0	$0	$0	$0
Hospitality	0	$0	$0	$0	$0	$0	$0
Entertainment	0	$0	$0	$0	$0	$0	$0
Industrial	0	$0	$0	$0	$0	$0	$0
Institutional	0	$0	$0	$0	$0	$0	$0
Residential	0	$0	$0	$0	$0	$0	$0
Plaza	0	$0	$0	$0	$0	$0	$0
Parking	0	$0	$0	$0	$0	$0	$0
Recreation	0	$0	$0	$0	$0	$0	$0
TOTAL	**340**	**$43,881,220**	**$0**	**$0**	**$0**	**$43,881,220**	**$0**

Wage and Payroll Assumptions

Table 6: Wage and Payroll Measure and Sources by Use		
Use	**Measure**	**Source**
*Office Building	**Median office wage with scheduled bonuses**	General office payroll uses planned average salary figures for tenant in stabilized year [redacted] These include specialized services beyond a general office job which justify the adjustment. This also includes adjustments for annual planned bonuses.
Residential	**N/A**	**N/A**

**Wage Deviation from Standard EIS Workbook Assumption*

1. *General Office*: For this figure, the applicant has provided their expected office annual salary including scheduled annual bonuses ($129,059). This figure is higher than the general office salary provided by the ODOD ($78,500) as the applicant offers a specialized service with a higher wage than this generalized figure.

Occupancy/Stabilization Assumptions

Occupancy and stabilization rates are reflected in the pro forma for each land use component. The uses all expect to be at expected occupancy levels by [redacted] ([redacted]). Residences include a [redacted] vacancy rate while offices will be [redacted] occupied. The Appendix includes pro formas for the relevant land uses.

Table 7: Stabilized Occupancy		
Use Type	**Stabilized Occupancy**	**Stabilized Period (Years)**
Office Building	[redacted]	[redacted]
Residence	[redacted]	[redacted]

Sales, Revenue and Output Assumptions

The table below details the metrics utilized to calculate taxable sales for each use. Taxable sales for purposes of this section are specific to estimated taxable revenues. Annual expenses/purchases by each use are not quantified in this EIS.

Table 8: Sales, Revenue and Output Assumptions		
Use Type	**Metric**	**Value**
Office Building	N/A	N/A
Residential	N/A	N/A

Employment Density and Staffing Assumptions

Employment density was calculated based on data inputs from one source:

1) Tenant-provided employment and square footage

Table 9: Employment Density and Staffing Assumptions		
Use Type	**Metric**	**Value**
Office Building	**Square Feet per Employee and Employees per Square Foot**	162/sf per employee based on 340 employees and 55,304 square feet. This translates to .006148 employees per square foot for entry into the EIS Workbook
Residential	**N/A**	**N/A**

Pre and post-completion property values

Pre and post-completion property values for this study are established using the following sources.

A. Pre-completion (current) property values: $3,070,000
Professional appraisal report included in Appendix.

B. Post-completion (future) property values: $41,995,512

[redacted]

[redacted]

Dining, Entertainment and Retail Sales

This study estimates there are no retail, dining and entertainment sales during the completion period.

Baseline Assumptions

There are no baseline activities occurring in this project, including baseline payroll and baseline sales.

Tax Impacts

In this section, the applicant establishes new state and local tax collections (including income, sales, lodging, and property) as a result of this project. Additionally, this section documents the total increase in tax collections during the five-year completion period to support evaluation of the statutory 10% Test.

Table 10 summarizes tax impact calculations for this project based on the ODOD's EIS workbook which also documents the applicant's inputs for these figures. In summary, this project supports **$17.8 million** in taxation over a five-year post-completion period. Taxes include **$5.9 million** in state income taxes, **$5.8 million** in local income tax, and **$5.9 million** in property taxes.

Table 10: Tax Impact Analysis

Tax Category	Annual Net Base	Rate	Annual Tax	5-year Total
Revenue Escalation Factor (5 years)	**5.3028**	-	-	-
Wage Escalation factor (5 years)	**5.3315**	-	-	-
State income tax (payroll)	**$43,881,220**	**0.0256**	**$1,122,850**	**$5,986,444**
Local income tax (payroll)	**$43,881,220**	**0.0250**	**$1,097,031**	**$5,848,786**
State + local sales tax (taxable sales)	**$0**	**0.0800**	**$0**	**$0**
Lodging tax (hotel revenue)	**$0**	**0.1090**	**$0**	**$0**
Property tax (annual)	**$13,623,929**	**82.6399**	**$1,125,880**	**$5,970,284**
Total completion-period tax increase (5-year)	-	-	-	**$17,805,513**

Rates of Taxation

Table 11: Tax Rate Methodology		
Tax Type	**Rate**	**Source**
Effective State Income Tax Rate	**2.56%**	Based on 2025 Ohio Income Tax Withholdings Tables through the Ohio Department of Taxation's Website and referenced in Ohio Department of Development TMUD 2026 FAQs. Calculated from blended salary of entire project, where resulting figure was divided back into salary to obtain effective rate. Adjusted to address different taxation rate for scheduled bonuses.
Effective Local Income Tax Rate	**2.50**	Ohio Department of Taxation "The Finder" *Tax District Summary* – Project Address.
State Sales Tax Rate	**5.75**	Ohio Department of Taxation "The Finder" Tax District Summary – Project Address.
Local Sales Tax Rate	**2.25**	Ohio Department of Taxation "The Finder" Tax District Summary – Project Address.
Lodging Tax Rate	**10.90%**	From the Ohio Department of Taxation's Tax Data Series website page – Sales & Use Tax - *S-4: Lodging Tax - Amounts Collected by Local Governments* – 2024 File
State + Local Effective Mill Rate per $1,000	**$82.64**	The current millage rate on the Project parcels as state in the County Auditor's website and in the County Auditor's "Tax Rates for 2025" rate sheet.

Ohio Withholding Tax Calculation

Table 12: Tax Rate Calculations						
Salary Bracket	Fixed Tax	Excess Rate	Fixed Base	Excess Tax	Total Tax	Effective Rate
0	$0.00	0.00%				
$26,050.01	$342.00	2.750%	$26,500			
$100,000.01	$2,394.32	3.125%	$100,000			
$119,946	$2,394.32	3.13%	$100,000	$623	$3,018	2.51583%
Bonus Amount per Person	Tax Rate	Total Tax				
$9,113	3.13%	$284.78				
Effective Rate Calculation						
Salary plus Bonus	Salary plus Bonus Taxes					Effective Rate
$129,059	**$3,302.41**					**2.55884%**

Treatment of Abatements, Exemptions and Special Revenues

The Project includes Tax Increment Financing ("TIF") as detailed in the executed Development Agreement with the City of Upper Arlington. TIF revenues are generated based on the current millage rate and require no adjustment to the millage rate utilized in the EIS Workbook for property tax calculations, as TMUD Program Guidelines provide that tax collections may include an "alternative method, such as through tax increment financing agreements, payments in lieu of taxes, and new community authority development charges."

The TIF is structured as follows:

- 100% rate, 30-year term
- Revenues from the TIF are paid in the following priority:
    1. A "Base Compensation" amount to the School District in the amount of 20% of the effective millage rate.
    2. TIF Bond payments known as "Annual Amounts" due in each tax year for principal and interest of the TIF bonds and other TIF expenses

3. 50% of the remaining service payments (after Base Compensation and Annual Amounts payments) to a Turbo Payment for that year, which is applied to the redemption if TIF Bonds.
4. Remaining Service Payments (after Items #1-#3) paid to the School District (70%) and the City (30%).

Re: Project Scarlet - Transformational Mixed-Use Development – Economic Impact Statement

Dear Mr. Patel:

At your request, Project Management Consultants, LLC has performed an Economic Impact Statement for Project Scarlet, located at 2060 E. 9th Street in Cleveland, Ohio, utilizing inputs provided by your team, direct calculations, conservative assumptions, and State-provided assumptions. We have not examined the Client-provided data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact statement. Further, this analysis is subject to the Assumptions and Limiting Conditions found in Appendix D of this report.

This report contains, to the fullest extent possible and practical, explanations of the data, reasoning, and analyses that were used to develop the opinions contained herein. The depth of discussion contained in the report is specific to the needs of the client.

EAST9TH SCARLET, LLC is the Client in this engagement and intended user of this report. As our client, EAST9TH SCARLET, LLC owns this report and permission must be granted from them before another third party can use this document. We assume that by reading this report another third party has accepted the terms of the original engagement letter including scope of work and limitations of liability. We are prepared to modify this document to meet any specific needs of the potential user under a separate agreement.

The Stated Purpose of this assignment is to assist with projections of job, tax, and wage information for application to the State of Ohio Transformational Mixed-Use Development Program. You agree not to use this report other than for the Stated Purpose, and you agree to indemnify us for any claims, damages, or losses that we may incur as the result of your use of the Report for other than the Stated Purpose. Without limiting the general applicability of this paragraph, under no circumstances may the Report be used in advertisements, solicitations and/or any form of securities offering.

The authors of this report certify that, while we represent the project in other capacities, we are not part of the development team, nor are we affiliated with any member of the development team. Please do not hesitate to contact us if there are any questions regarding the report or if Project Management Consultants, LLC can be of further assistance. It has been our pleasure to assist you with this project.

Sincerely,

Ryan P. Sommers, CPA
Managing Director of Financial Services
Project Management Consultants, LLC

PROJECT MANAGEMENT CONSULTANTS (PMC) EXPERIENCE

	Name	TMUD Experience & Background
	**Ryan P. Sommers, CPA** Managing Director of Financial Services	Ryan Sommers has an extensive background working with various tax credit programs and complex private and public finance structuring. Ryan's experience with tax credits includes Historic Tax Credits, New Markets Tax Credits, and Opportunity Zone Tax Credits. Ryan recognizes the critical value-add of the Transformational Mixed-Use Development ("TMUD") tax credit program. Since the program's inception he has become an expert on the program. He advises clients on project eligibility, economic impacts, tax credit monetization, and chances of application success. As managing director of financial services, Ryan identifies, secures and manages private and public financing opportunities for business expansion projects and real estate development. Ryan is currently managing a team responsible for 50+ projects throughout the country with $3 billion in development value including $600 million in public financing for public-private partnerships. He has helped his clients obtain over $200 million in state and federal Historic Tax Credits and over $100 million in New Markets Tax Credits. Ryan also created PMC's direct tax impact analysis models which help demonstrate exact tax estimates for a Project or Development site on the surrounding area, including income taxes, sales taxes, bed taxes and property taxes. Ryan has worked on this modeling for a decade. These outputs help demonstrate the ROI of a project to various government entities and provide him with experience needed to complete economic impact statements as complicated as those required for TMUD applications.
	**Kenneth S. Kalynchuk** Director and Principal	Ken Kalynchuk leads PMC's financial analyst and economic impact analysis team. Ken has conducted twenty economic impact statements (EIS reports) for Rounds 1 through 4 of the TMUD program, with emphasis on conservative estimates and common sense for whether projects can be considered catalyzed or not. Ken helps clients navigate the predevelopment stage of their projects through incentive, land use, and market research; pro forma development; feasibility analyses; economic impact analyses; and property tax analyses. Prior to joining the firm, Ken was a graduate research assistant with the Center for Economic Development at Cleveland State University, where he evaluated economic development programs and best practices in economic development policy, performed studies on Historic Preservation Tax Credit funding and rental markets, and wrote case studies and employment/demographic impact analyses. During his time at Cleveland State Ken learned IMPLAN software and economic impact techniques. These skills have helped clients at PMC, where Ken has helped generate economic impact reports and tax estimates for more than 9 years.

	Name	TMUD Experience & Background
	**Alexander Previts, MAcc, CPA, DFCP** Development Finance Manager	As Development Finance Manager, Alex provides strategic insights and innovative solutions that continue to drive success for clients across diverse industries. For over 7 years at PMC, Alex has honed his technical skills by developing new and building on existing financial modeling to enhance the quality and readability of PMC's products, primarily focusing on economic impact analyses for public partners and integrating tax-related incentives into clients' financial models. Alex works with clients through the finance structuring process by first identifying the needs and gap of the project and assessing the tools available for the project's financing at the local, regional and state level. Alex directs clients through the nuances of the predevelopment stage of their projects through incentive, land use, and market research; pro forma development; feasibility analyses; economic impact analyses; and property tax analyses. He focuses on structuring tax incentives, including tax increment financing (TIF), and monetizing TIF structures through bank and bond financing. Alex's complex financing modeling skills are instrumental in the preparation of these EIS reports.
	**Cassie Slansky** Project Director	In her role as Project Director, Cassie overseas project management from intake through closing and compliance for PMC's projects. Cassie's decade of public and private experience in economic development and with complex public financing tools provides unique insight into structuring complex capital stacks for projects. Cassie works as PMC's Project Director for the Project Scarlet TMUD application and assisted Alex with the EIS.
	**Maximus Morgan** Financial Analyst	In his role as Financial Analyst, Maximus supports the research, modeling, and organization of applications for financing for complex mixed—use real estate projects.

A. Executive Summary

Purpose

This Economic Impact Statement ("EIS") has been prepared for the Transformational Mixed-Use Development (TMUD) program as required under Ohio Revised Code ("ORC") Section 122.09. This narrative report, together with the accompanying standardized EIS Workbook (Excel), constitutes the complete impact analysis for the proposed project.

The purpose of this EIS is to provide a standardized, transparent assessment of the direct economic and fiscal impacts attributable solely to the Project. Indirect and induced impacts are not permitted under this methodology and have not been included in this analysis. Specifically, this EIS is intended to:

1. Quantify the direct economic impact generated by the Project during construction and during the statutory five-year completion period;
2. Estimate the increase in state and local tax collections attributable to the Project within the project site;
3. Provide a standardized basis for determining whether the Project satisfies the statutory 10% Test, which requires that new tax revenues during the completion period equal or exceed 10% of eligible expenditures; and
4. Support a consistent, transparent review process for all TMUD applications.

This EIS Narrative Report is prepared in accordance with the EIS Framework and Methodology (the "Framework") issued by the Ohio Department of Development (the "Department"). All impacts presented in this narrative are limited to direct economic activity occurring within the project site. Indirect and induced impacts are excluded in accordance with the EIS Framework. All calculations have been performed within the standardized EIS Workbook using the Department-provided formulas, locked calculation logic, and standardized parameters. No formulas, protected cells, worksheets, or Workbook structure have been modified.

Economic impacts ("Impacts") measured in terms of output, employment, labor income, and taxes were estimated using Department-provided standardized parameters, except as identified under Appendix B in this report. Supporting Documentation is submitted for all Applicant-provided inputs used in this report.

This EIS considers the one-time direct Impacts resulting from the construction of the Project ("Construction Period Impacts"), as well as the direct permanent Impacts resulting from the ongoing activities associated with the Project ("Completion Period Impacts").

The impacts of the two components that are analyzed – Construction Period Impacts and Completion Period Impacts – are presented individually and as a whole in the Total Direct Impact Summary. Construction Period and Completion Period Impacts are presented in annual terms.

Project Management Consultants collaborated with EAST9TH SCARLET, LLC to gather necessary data for the Project and to establish assumptions where needed. All assumptions were verified by the developer to the highest degree of reasonableness.

Project Overview

Project Management Consultants LLC (PMC) was engaged by EAST9TH SCARLET, LLC (the "Company") to analyze the economic impacts of the Company's proposed Project Scarlet (the "Project") which is located at 2060 E. 9th Street in Cleveland, Ohio.

The Project consists of [redacted] proposed residential units, a [redacted] hotel, approximately 7,265 square feet ("SF") of ground floor restaurant, and 15,554 SF of office space. The development costs for the Project total [redacted] of anticipated investment. Construction is expected to commence in August 2026 with Project Completion expected by December 31st, 2027. The Project scope is described fully within the TMUD application, and the definition of the Project Site is provided in the following section.

Project Site Parcels and Current Property Value

The Project is located within the Cleveland, OH Metropolitan Statistical Area ("MSA"), as determined by the most recent Metropolitan and Micropolitan Statistical Area Delineation Files published by the U.S. Census Bureau. All impacts included in this EIS are strictly limited to economic activity occurring within the Project Site.

The Project Site consists of approximately 1.122 acres on one parcel with a total tax market value of $12,727,500 per the Cuyahoga County Fiscal Office. The following table summarizes the size and tax market value of parcel included in the Project Site:

Table A-1

Parcel Number	Size	Land Value	Improvement Value	Total Market Value
PPN: 101-27-012	1.122 Acres	$5,867,400	$6,860,100	**$12,727,500**

Tax Treatments and Exemptions

This section provides clarification on treatment of certain tax incentives that are not directly identified or addressed in the EIS Workbook - Sales Tax Exemption, Tax Abatement, and Tax Increment Financing.

Sales Tax Exemption (Entire Project Site)

The Applicant is pursuing a capital lease structure through the Cleveland Port Authority that will allow for sales tax exemption on construction material purchases. The FAQs (released 3/23/2026) indicate "the Workbook should reflect actual expected tax generation" and exempted sales taxes should be excluded from the 10% Test calculation.

The EIS Workbook uses the same applicant-provided inputs for "Hard Cost Construction" and "Taxable Business Fixtures Cost" (See Construction Period Inputs) to calculate construction period sales tax impacts that it uses to calculate completion period sales tax impacts. The EIS Workbook does not have a separate input for sales tax exemption.

Therefore, to omit exempted sales tax from construction period impacts and reflect actual expected sales tax generation at the site, all hard construction costs and taxable business fixtures that are expected to be eligible for sales tax exemption are excluded from their specified categories in the EIS Workbook and re-allocated to "Other Eligible Costs." This re-allocation allows for accurate construction and completion period sales tax impacts without omitting eligible expenditures from the 10% Test calculation.

CRA Tax Abatement (Multifamily Residential Only)

The Project is pursuing 15-Year, 100% property tax abatement on the residential multifamily portion ("Residential Project") of the project through the City of Cleveland's (the "City") Community Reinvestment Area ("CRA") Tax Abatement Program. The FAQs indicate "applicants must reflect the abatement in their estimates" and "property tax revenues should be reduced accordingly during the abatement period." The EIS uses the difference between the applicant-provided inputs for "Property Value Prior to Development" and "Estimated Property Value Post Development" (See Construction Period Inputs) as the basis to calculate completion period property tax impacts. The EIS Workbook does not provide separate input for abated real estate taxes ("abated taxes").

Therefore, to omit abated taxes from completion period property tax impacts, the increase in market value from the Residential Project ("Residential Incremental Value") is excluded from the applicant-provided

inputs for "Estimated Property Value Post Development" and from the estimated Incremental Market Value detailed later in this report.

TAX INCREMENT FINANCING (ENTIRE PROJECT SITE)

The Project is also pursuing a 30-Year, Non-School Tax Increment Financing (TIF) District encompassing the entire Project Site. Over the course of the 30-Year TIF term, all non-abated improvement value[1] at the Project Site will be exempted from taxation and payments are made at the same time and in an amount equal to the non-abated real estate taxes that would have been due if not for the TIF exemption ("Payments-In-Lieu-of-Taxes" or "PILOTs"). In other words, 100% of the non-abated revenue generated by the increase in property tax value will be PILOTs. The FAQs state "PILOT payments do not flow through to the 10% Test calculation for this application cycle." The EIS Workbook does not have a separate input for PILOTs.

Therefore, to omit PILOTs from completion period property tax impacts, the applicant-provided input for "State + Local Effective Mill Rate" ("Property Tax Rate") equals zero in the EIS. This input for Property Tax Rate omits the PILOTs generated by the non-abated increase in market value from the 10% Test calculation in accordance with the FAQs. However, omitting 100% of PILOTs understates the fiscal public benefit generated by the PILOTs. A Non-School TIF re-distributes to the School District their full levied share of real estate taxes in the form of PILOTs. The remaining "Non-School" PILOTs are allocated to the Developer or the Project.

As of Tax Year 2025, the Cleveland Municipal School District (the "School District") collects 63.686 (rounded) mills, equal to approximately 6.369% of commercial assessed property value, or 2.229% of commercial *market* value[2]. Based on Tax Year 2025 millage rates, the Schools would collect 2.229% of the non-abated increase in commercial market property value at the Project Site in the form of PILOTs. During the abatement period, the non-abated portion of the Project is estimated to increase the commercial market property value at the Project Site by $18,625,094 (See "Property Value" under section B. Construction Period Analysis), which would generate approximately $415,155 in annual PILOTs to the School District that are not counted towards the 10% Test Calculation and should be considered when evaluating the ROI for application scoring purposes.

[1] Excludes 100% of the Residential Project improvement value during the 15-year tax abatement period
[2] In Ohio, Assessed Value is estimated as 35% of the property's Market Value as appraised by the County auditor or fiscal office.

Occupancy and Stabilization Assumptions

All leasable Project SF is committed and will either be occupied by tenants or the property owner. Project Impacts assume [redacted] occupancy for the general office, restaurant, hospitality, and residential spaces. The hotel assumes [redacted] average occupancy. The occupancy and stabilization assumptions reflect the Applicant's internal underwriting.

The following table summarizes the project's Use Type as reflected in the Department-provided EIS Workbook:

Table A-2

Use Type	SF/ Units	Occupancy Assumption	Stabilization Period
General Office	15,554 SF	[redacted]	[redacted]
Restaurant	7,265 SF	[redacted]	[redacted]
Hotel	58,407 SF 121 Rooms	[redacted]	[redacted]
Hospitality	59,056 SF	[redacted]	[redacted]
Residential	265,007 SF 156 Units	[redacted]	[redacted]
Total	405,289 SF [redacted] Rooms [redacted] Units		[redacted]

B. Construction Period Impact Analysis

Construction Period Inputs

Eligible Construction Expenditures

Eligible expenditures include only post-certification construction-related expenditures directly attributable to the TMUD project, including land acquisition costs as defined by ORC § 122.09. The following categories have been excluded:

- Ineligible pre-certification expenditures (except architectural or engineering fees and due diligence costs paid or incurred in connection with the Project); and
- Costs not directly attributable to the TMUD project.

Total Eligible expenditures constitute the denominator for the statutory 10% Test and are consistent with ORC § 122.09. The following table summarizes the Project's projected Eligible expenditures as reflected in the Department-provided EIS Workbook:

Table B-1

Eligible expenditures (post-certification)	Amount
Land Acquisition Costs (eligible if post-certification)	$[redacted]
Hard Construction Costs[1]	$[redacted]
Soft Construction Costs[2]	$[redacted]
Professional Services and Eligible Fees	$[redacted]
Taxable Business Fixtures Cost[3]	$[redacted]
Other Eligible Costs[4]	$[redacted]
Total Eligible Expenditures	**$78,154,106**

[1] Input is $0 to reflect sales tax exemption; Hard Cost Construction amount re-allocated to Other Eligible Costs. See Appendix B for more detail on Hard Cost Construction.
[2] Includes costs related to demolition, sitework, and other soft costs related to the construction contract. Costs not yet incurred as of 4/22/2026.
[3] Input is $0 to reflect sales tax exemption, Taxable Business Fixtures Cost amount re-allocated to Other Eligible Costs. See Appendix B for more detail on Taxable Business Fixtures Cost.
[4] Includes all budgeted architectural or engineering fees and due diligence costs in connection with the Project. Hard Cost Construction and Taxable Business Fixtures Cost also included to reflect sales tax exemption in the EIS Workbook.

The following table summarizes the project's expenditures that were NOT eligible and therefore are not reflected in the Department-provided EIS Workbook:

Table B-2	
Ineligible expenditures	**Amount**
Land Acquisition Costs (prior to 4/22/2026)	[redacted]
Hard Construction Costs (prior to 4/22/2026)	[redacted]
Soft Construction Costs (prior to 4/22/2026)	[redacted]
Professional Services and Eligible Fees (prior to 4/22/2026)	[redacted]
Taxable Business Fixtures Cost (prior to 4/22/2026)	[redacted]
Other Ineligible Costs[1]	[redacted]
Total Ineligible Expenditures	[redacted]

Construction Employment and Payroll

The following table summarizes the Project's projected construction employment and payroll estimated over the duration of the construction period as reflected in the Department-provided EIS Workbook.

Table B-3	
Metric	**Value**
Eligible Expenditures	$78,154,106
Est. Share of Eligible Construction Costs Attributable to Labor	**37.0317%**
Labor Cost[2]	$28,941,796
Primary construction average annual wage[3]	$62,520
Construction period length	17 Months

Construction Expenditures Timeline

The following table summarizes the % of construction completion by construction year as reflected in the Department-provided EIS Workbook.

Table B-4	
Construction Expenditures Timeline	**% of Expenditures**
Year 1 – Beginning 8/3/2026 (5 Months)	29.412%
Year 2 – Ending 12/31/2027 (12 Months)	70.588%
Year 3	0%
Year 4	0%
Year 5	0%
Total	**100.000%**

[1] Includes all incurred and projected other finance and other softs costs that are not directly attributable to the TMUD project, including costs incurred before 4/22/2026

[2] Estimated as 55% of Hard Cost Construction. See Appendix B for more detail.

[3] Based on SOC codes and median wages for the Project's MSA as reflected in the department-provided measurements in the standardized EIS Workbook.

PROPERTY VALUE

Upon Stabilization, the total Project is estimated to generate approximately $42,097,158 in new market value (Incremental Market Value). The Incremental Market Value reflects the increase in sale price of the property if it were to be sold on the market. [redacted] Please see Appendix B for detailed calculation[2].

However, as referenced in prior section (A), there is an anticipated 15-Year, 100% CRA Tax Abatement on Residential Incremental Value, and an anticipated 30-Year Non-School TIF on the entire Project Site. The FAQs dictate that tax abatement should be reflected and "PILOT payments do not flow through to the 10% Test calculation for this application cycle." Since the EIS Workbook does not include separate inputs to exclude abatement or PILOTs from the 10% Test calculation, the Project's EIS workbook reflects a $0.00 State + Local Effective Mill Rate to prevent any Incremental Market Value from generating revenues that would flow to the 10% Test calculation and other outputs.

This report estimated the amount of the non-abated Incremental Market Value as $18,625,094 for purposes of documenting non-abated PILOTs as project-generating revenues. The non-abated Incremental Market Value would generate approximately $674,297 in total PILOTs, $415,156 of which would be disbursed to the School District to make them whole. The non-abated Incremental Market Value is calculated by subtracting the Residential Project's Incremental Market Value ($23,472,064) from the total Project's Incremental Market Value ($42,097,158).

The following table and corresponding footnotes include the assumptions and steps to calculate the values reflected in the Department-provided EIS Workbook:

TABLE B-5

Metric	Value
Property Value Prior to Development	**$12,727,500**
Incremental Market Value – Total Project[3]	$42,097,158
(100% Tax Abatement – Residential Incremental Market Value)[4]	($23,472,064)
Non-abated Incremental Market Value	$18,625,094
Estimated Property Value Post Development[5]	**$31,352,594**

[1] Based on PMC's experience with new construction projects in strong suburban markets within Cuyahoga County.
[2] For purposes of calculating Incremental Market Value, Hard Construction Costs includes hard construction costs that were re-allocated to Other Eligible Costs under Eligible Expenditures.
[3] Incremental Market Value is estimated as 80% of total Hard Construction Costs (Net of Sales Tax). Estimated Incremental Market Value of Total Project = (80% * $52,621,448) = $42,097,158
[4] Assumes Incremental Market Value on Residential Hard Construction Cost Only. Estimated Incremental Market Value of Residential Project = (80% * $29,340,080) = $23,472,064
[5] In accordance with the guidance in the recently released FAQ's, property tax rates are input as $0.00 to avoid any abated taxes or PILOT revenues to flow to the 10% Test.

Construction Period Impacts

This section quantifies the direct economic activity generated during the project's construction period, defined as the period after project certification through project completion, based on the assumptions provided in the prior section.

In accordance with section 2.2.3 of the Framework, this analysis applies the Department's standardized Regional Purchase Coefficient (RPC) of 50% to taxable construction-related purchases. This assumes that 50% of taxable construction-period purchases are sourced within the Study Area and therefore subject to applicable state and local sales tax.

The following table summarizes the Construction-period tax impacts as reflected in the Department-provided EIS Workbook:

Table B-6

Metric	Amount
Inflation Adjusted Eligible Expenditures[1]	$79,963,603
Construction Labor Share	37.03%
Average annual wage (construction)	$62,520
Implied hourly wage	$30
Total labor Cost (proxy for payroll)	$29,611,884
Implied labor hours	985,168.25
Construction FTE (labor hours / 2080)	473.64
State income tax on construction payroll	**$629,568**
Hard construction costs + business fixtures	$0
Sales Tax on hard construction costs + business fixtures	**$0**
Total Construction-Period Tax Impacts	**$629,568**

[1] Estimated based on the Department-Provided Standardized Parameters for Annual Construction Inflation Rate, which is embedded and locked within the EIS Workbook. See Appendix A for Department-Provided Standardized Parameters.

C. Completion Period Impact Analysis

Completion Period Inputs

This section describes the assumptions used in the EIS Workbook for required Applicant-Provided Inputs and provides justification for any over-ridden Department-Provided Measurements related to Completion Period Impacts.

Stabilized On-Site Employment and Payroll by Use Type / Component:

At stabilization, ongoing activities at the Project Site are anticipated to generate approximately 93 total new on-site FTE jobs and generate approximately $4.4 million in new on-site annual labor income.

The following table summarizes the Project's gross projected permanent operational employment and payroll by Use Type.

Table C-1

Use Type	Operating SF/ Rooms/ Units	Staffing Ratio (FTE Jobs PSF), Stabilized[1]	SOC Code/ Other Wage Source[2]	Average Annual Wage	Stabilized Annual Payroll
General Office	15,554 SF	0.001285843	Provided by Tenant	$107,500	$2,150,000
Restaurant	7,265 SF	0.002083333	41-0000	$29,980	$453,760
Hotel	58,407 SF [redacted] Rooms	0.000596164	39-0000	$30,330	$728,706
Hospitality	59,056 SF	0.000411353	39-0000	$30,330	$738,803
Residential	265,007 SF [redacted] Units	0.000035848	37-0000	$36,070	$342,665
Total	405,289 SF [redacted] Rooms [redacted] Units				**$4,411,934**

[1] The EIS Workbook calculates Staffing Ratio as FTE Jobs per SF by default; Staffing Ratio inputs in the EIS Workbook reflect the job density assumptions further detailed in Appendix B.

[2] SOC Code and corresponding Median Wage reflect the Department-provided measurements for the Project MSA except for the Tenant-Provided Annual Average Wage for the General Office Space.

Net Operational employment summary – Baseline Adjustments:

All EIS calculations must reflect only the net new economic activity attributable to the TMUD project. There is no pre-existing payroll at the project site. Therefore, Stabilized Annual Payroll is equal to Net Payroll as reflected in the Department-provided EIS Workbook.

Table C-2

Use Type	Stabilized FTE Jobs	Baseline FTE Jobs	Net Jobs	Stabilized Annual Payroll	Baseline Payroll	Net Payroll
Gen. Office	20.00 Jobs	N/A	20.00 Jobs	$2,150,000	N/A	$2,150,000
Restaurant	15.14 Jobs	N/A	15.14 Jobs	$453,760	N/A	$453,760
Hotel	24.03 Jobs	N/A	24.03 Jobs	$728,706	N/A	$728,706
Hospitality	24.29 Jobs	N/A	24.29 Jobs	$736,803	N/A	$736,803
Residential	9.50 Jobs	N/A	9.50 Jobs	$342,665	N/A	$342,665
Total	**92.95 Jobs**	**0.00 Jobs**	**92.95 Jobs**	**$4,411,934**	**$0**	**$4,411,934**

Annual Stabilized Taxable Sales/Revenue summary by use Type:

The following table summarizes the Project's projected gross annual stabilized taxable sales/revenue by Use Type.

Table C-3

Use Type	Occupancy (%)	Metric[1]	Gross Annual Revenue
General Office	[redacted]	N/A	[redacted]
Restaurant	[redacted]	$[redacted] PSF	[redacted]
Hotel	[redacted]	$[redacted] PSF	[redacted]
Hospitality	[redacted]	$[redacted] PSF	[redacted]
Residential	[redacted]	N/A	[redacted]
Total Annual Taxable Sales/Output			**$12,364,449**

[1] See Appendix B for data sources and details on Use Type revenue assumptions.

NET ANNUAL STABILIZED TAXABLE SALES/REVENUE SUMMARY – BASELINE ADJUSTMENTS:

All EIS calculations must reflect only the net new economic activity attributable to the TMUD project. There are no pre-existing taxable sales/revenues at the project site. Therefore, Gross Annual Revenue will be equal to Net Sales as reflected in the Department-provided EIS Workbook.

Table C-4

Use Type	Gross Annual Sales/Revenue	Baseline Sales	Net Sales (Gross LESS Baseline)
General Office	$[redacted]	$0	$[redacted]
Retail	$[redacted]	$0	$[redacted]
Hotel	$[redacted]	$0	$[redacted]
Hospitality	$[redacted]	$0	$[redacted]
Residential	$[redacted]	$0	$[redacted]
Total	**$12,364,449**	**$0**	**$12,364,449**

Completion Period Impacts

This section quantifies the direct operational impacts occurring within the project site during the statutory five-year completion period, which begins the day after project completion as defined in ORC 122.09. The Project is estimated to generate approximately $10.36 million in new sales and income taxes over the five-year completion period as reflected in the following table.

Table C-5

Tax Category	Annual Net Base	Rate	Annual Tax	5-Year Total
State Income Tax	$4,411,934	2.13%	$93,877	$500,095
Local Income Tax	$4,411,934	2.50%	$110,298	$558,052
State & Local Sales Tax	$[redacted]	8.00%	$989,156	$5,245,268
Lodging Tax	$[redacted]	9.50%	$758,494	$4,022,121
Property Tax	$6,518,783	0.00	$0	**$0**
			Total Annual Tax Impact	**$10,355,536**

D. Total Direct Impact Summary

This section presents the combined direct economic impacts for both the construction period and the five-year completion period.

The EIS Workbook captures $10,985,104 of the combined new tax revenues the Project is anticipated to generate for the State of Ohio and the local entities over the construction and 5-year completion period.

The following table reflects the Project's Summary Outputs generated by the Department-provided EIS Workbook.

Table D-1

Metric	Value
Total Eligible Construction Expenditures	$78,154,106
Total Construction Period Tax Impacts	$629,568
Total Completion Period Tax Increase (5-Year)	$10,355,536
Total Tax Increase	**$10,985,104**
Fifth Year Payroll	$5,006,291
Total Sales Subject to Sales Tax	$13,883,898
10% Test Result (PASS/FAIL)	**PASS**
Application Type	Major City TMUD

Statutory 10% Test Calculation

Under ORC 122.09(B)(7) and (A)(6), the increase in tax collections generated during the construction and completion periods must equal or exceed 10% of the project's total eligible construction expenditures. The Project is anticipated to generate $10,985,104 in combined new tax revenues for the State of Ohio and the local entities over the construction and 5-year completion period. The standardized EIS Workbook automatically performs this calculation reflected in the table below.

Table D-2

Item	Amount
Total Eligible Construction Expenditures (A)	$78,154,106
Total Increase in Tax Collections — Construction Period (B)	$629,568
Total Increase in Tax Collections — Completion Period (C)	$10,355,536
Total Increase in Tax Collections (B + C)	**$10,985,104**
10% of Eligible Expenditures (A x 10%)	**$7,815,411**
Result: PASS / FAIL	**PASS**

APPENDIX A – DEPARTMENT-PROVIDED STANDARDIZED PARAMETERS

The following standardized parameters are provided by the Department, embedded in the EIS Workbook, and have not been modified:

1. **Annual Construction-Period Inflation Rate ("ACPIR") (PPI 10-year average): 3.28%** - Applied automatically to the eligible expenditures identified in the EIS Workbook to estimate Inflation Adjusted Eligible Expenditures in the Construction Period Calculation tab.
2. **Completion-Period Inflation (CPI 10-Year Average): 2.94%** - Automatically applied annually to the completion period taxable sales and revenues identified in the EIS Workbook to estimate the 5-year total completion period tax generation from taxable sales and revenues.
3. **Annual Wage Growth Rate (ECI 10-Year Average): 3.21%** - Automatically applied annually to the completion period payroll estimates identified in the EIS Workbook to estimate the 5-year total completion period tax generation from payroll.
4. **FTE Conversion Standard: 2,080 hours per year**, applied to all employment calculations.

APPENDIX B
DOCUMENTATION & NOTES TAB

Appendix B – Documentation & Notes tab

Workbook Section/Tab	Input or Assumption	Value Used	Data Source (Appendix C)	Notes / Justification (Why this is reasonable)
1. Parameters – Applicant-Provided	Effective State Income Tax Rate (decimal)	2.1260648817094%	**1.** Ohio Revised Code Section 5747.02 | Tax Rates	The EIS Workbook does not properly account for progressive tax brackets and applies the same Effective State Income Tax Rate to construction and completion period payroll, so a blended rate was estimated to generate approximately the same state income tax as if the 2025 Ohio annual income tax rates were used. The blended rate was calculated by estimating the blended Ohio income tax on the average base annual wage across both construction and completion periods (Combined Average Wage), then dividing the estimated blended Ohio income tax by the Combined Average Wage. Combined Average Wage was calculated as total construction and completion period payroll divided by total construction and completion period FTE jobs.
2. Parameters – Applicant-Provided	Effective Local Income Tax Rate (decimal)	0.025	**2.** Central Collection Agency Municipal Income Tax	Rate applicable to project address as of submission date
3. Parameters – Applicant-Provided	State Sales Tax Rate	0.0575	**3.** Ohio Department of Taxation, Sales & Use Tax Rate Map (3/31/2026)	Rate applicable to project address as of submission date
4. Parameters – Applicant-Provided	Local sales tax rate	0.0225	**4.** Ohio Department of Taxation, Sales & Use Tax Rate Map (3/31/2026)	Rate applicable to project address as of submission date
5. Parameters – Applicant-Provided	Lodging Tax Rate (decimal	0.095	**5.** Cuyahoga County Fiscal Office; City of Cleveland, Code of Ordinances	State & Local rates applicable to project address as of submission date
6. Parameters – Applicant-Provided	State + Local Effective Mill Rate pet $1,000	0	**6.** Cuyahoga County Fiscal Office – Property Record PPN 101-27-012; Email from ODOD	Effective Mill Rate for the Project site is 103.439132. However, Input is $0 to ensure that the non-abated property value that is subject to TIF does not generate revenues that would flow to the 10% Test calculation per FAQ's and guidance from ODOD.

7. Construction Period Inputs - Applicant Inputs	Hard Construction Costs	0	**7.** Contractor Line-Item budget – Hard Construction Costs	Input is $0 to reflect the expected Sales Tax Exemption on Construction Materials. Estimated Hard Construction Costs of $[redacted] (Net of Sales Tax Exemption) are reflected in the Other Eligible Costs category to allow for the eligible expenditure amount to flow to the 10% Test but avoid flowing to the construction period sales tax calculation. Sales Tax Exemption assumes 40% of Hard Construction Costs are eligible/taxable materials and applies the combined 8% state and local sales tax rate. See calculation in identified source.
8. Construction Period Inputs - Applicant Inputs	Soft Construction Costs	[redacted]	**8.** Contractor Line-Item budget – Soft Construction Costs	Includes all demolition, sitework, and soft construction costs from the contractor.
9. Construction Period Inputs - Applicant Inputs	Taxable business fixtures cost	0	**9.** Franchise Agreement	Input is $0 to reflect the expected Sales Tax Exemption on Construction Materials. Taxable Business Fixtures cost (Estimated Hotel F, F, & E spend to satisfy needs outlined in the Franchise Agreement) in the amount of $[redacted] (Net of Sales Tax Exemption) are reflected in the Other Eligible Costs category to allow for the eligible expenditure amount to flow to 10% Test but avoid flowing to the construction period sales tax calculation. Sales Tax Exemption assumes 40% of Applicant's anticipated $[redacted] in total F, F, & E costs are eligible/taxable materials and applies the combined 8% state and local sales tax rate. 40% of $6,937,565 = $[redacted] (Est. Eligible Construction Materials). 8.00% of $[redacted] = $[redacted] (Est. Sales Tax Exemption). Taxable business fixtures cost (Net of Sales Tax Exemption) = $[redacted] LESS $[redacted] = $[redacted]
10. Construction Period Inputs - Applicant Inputs	Other Eligible Costs	$[redacted]	**10.** Contractor Line-Item budget – Other Eligible Costs – A&E + Pre-development Costs	Includes all Architectural & Engineering (A&E) and Predevelopment (Due Diligence) costs, incurred before and after application submittal. Also includes costs that would have been allocated to Hard Construction Costs and Taxable Business Fixtures Cost if not for the Port sales tax exemption. See source and justification for Applicant Inputs for Hard Construction Costs and Taxable Business Fixtures Cost above.
11. Construction Period Inputs - Applicant Inputs	Estimated share of eligible construction costs attributable to labor (%)	37.0317031403415%	**11.** Provided by Project's Owner's Representative via email	In the EIS Workbook, the estimated share of eligible construction costs attributable to labor (%) is calculated as construction labor cost divided by the total TMUD eligible expenditures input into the EIS Workbook by the Applicant. Applicant's Owner's Representative indicated that labor cost is estimated to be 55% of hard construction cost. Therefore, labor cost is estimated to be 55% of Hard Cost Construction (Actual amount reflected in the Notes/Justification for Hard Construction Costs), or $[redacted] $[redacted] divided by $[redacted] equals 37.0317031403415%.
12. Construction Period Inputs - Applicant Inputs	Construction Expenditures Timeline	100% over construction period	**12.** Project Schedule	Assumes 5 months (out of 17-month period) of expenditures completed in Year 1, remaining 12 months of expenditures completed in Year 2.

13. Construction Period Inputs - Applicant Inputs	Property value prior to development	12727500	**13.** Cuyahoga County Fiscal Office – Property Record PPN 101-27-012	Existing tax market value
Construction Period Inputs - Applicant Inputs	Estimated property value post development	31352594	N/A	[redacted]
14. Completion Period Inputs - General Office	1) Stabilized Occupancy / Utilization (%); 2) Staffing Ratio, stabilized; 3) Avg Annual Wage ($ per FTE, Stabilized)	1) [redacted] 2) 0.00128584287000129: 3) $[redacted] (Override)	**14.** 1) Per signed Lease; 2+3) Provided by Tenant, see email correspondence in Appendix C;	[redacted]
15. Completion Period Inputs - Restaurant	1) Stabilized Occupancy / Utilization (%);2) Staffing Ratio, stabilized;3) Annual Stabilized Taxable Sales/Revenue PSF ($)	1) [redacted] 2) 0.00208333333333333; 3) $[redacted]	**15.** Development Commitment Letter; 2) CEBC Estimates (2018) – Mean square feet per worker – Food Service; 3) Project Operating pro forma	1) [redacted] will occupy [redacted] of the restaurant SF; 2) Calculated as 1 food service job per 480 SF based on CBECS Estimates 3) Reflects Food and Beverage revenues at stabilization
16. Completion Period Inputs - Hotel	1) Stabilized Occupancy / Utilization (%); 2) Staffing Ratio, stabilized; 3) Annual Stabilized Taxable Sales/Revenue PSF ($)	1) [redacted] 2) 0.00059616427902872 9; 3) $[redacted]	**16.** 1) Ramp Up Project Operating pro forma; 2) CEBC Estimates (2018) – Mean square feet per worker – Lodging; 3) Stabilized Hotel, Hospitality, and Restaurant Project	1) Reflects stabilized operations after [redacted] ramp-up period; 2) Calculated as 1 lodging job per 2,431 SF based on CBECS Estimates, then divided by the stabilized occupancy to counteract the reduction in jobs due to the EIS' Workbooks application of utilization (%) in the Completion Period Calculations. In effect, the number of jobs equals 1 job per 2,431 SF. 3) Calculated as: A. Projected $[redacted] Average Daily Rate (ADR) per room multiplied by 365 days equals Annual Gross Potential Revenue per room, B. Annual Gross Potential Revenue per room multiplied by [redacted] rooms equals Estimated Total Annual Gross Room Revenue, C. Estimated Total Annual Gross Room Revenue divided by Total Hotel Operating Square Footage equals Annual Stabilized Taxable Revenue PSF before the Occupancy rate is applied.

			Operating pro forma;	
17. Completion Period Inputs - Hospitality	Stabilized Occupancy / Utilization (%); Staffing Ratio, stabilized; 3) Annual Stabilized Taxable Sales/Revenue PSF ($)	1) [redacted] 2) 0.00041135335252982 3; 3) [redacted]	**17.** 1) Ramp Up Project Operating pro forma; 2) CEBC Estimates (2018) – Mean square feet per worker – Lodging; 3) Stabilized Hotel, Hospitality, and Restaurant Project Operating pro forma;	1) Reflects stabilized operations after 6 Month ramp-up period; 2) Calculated as 1 lodging job per 2,431 SF based on CBECS Estimates; 3) Calculated as (Other Operated + Miscellaneous revenues in Stab. Project Pro Forma) / Hospitality SF.
18. Completion Period Inputs - Residential	Stabilized Occupancy / Utilization (%); Staffing Ratio, stabilized;	1) [redacted] 2) 0.00003584810967257 47	**18.** 1) Self-Operating Letter; 2) Project Operating pro forma	1) [redacted] of residential SF will be operated by Applicant; 2) Residential Pro Forma reflects $343,200 for Annual Payroll/Salaries, which translates to roughly 9.5 FTE jobs using Department-provided annual wage.
19. Completion Period Inputs - General Office	Avg Annual Wage ($ per FTE, Stabilized)	$107,500 (Override)	**19.** Tenant-Provided via email	Tenant indicated that 20 FTE hotel management company employees would utilize the leased office space with an estimated $2,150,000 in annual payroll ($107,500 per FTE).

APPENDIX C
DATA SOURCES & SUPPORTING DOCUMENTATION

AUTHENTICATED,
OHIO LEGISLATIVE SERVICE
COMMISSION
DOCUMENT #467288

Ohio Revised Code

Section 5747.02 Tax rates.

Effective: September 30, 2025

Legislation: House Bill 96 - 136th General Assembly

(A) For the purpose of providing revenue for the support of schools and local government functions, to provide relief to property taxpayers, to provide revenue for the general revenue fund, and to meet the expenses of administering the tax levied by this chapter, there is hereby levied on every individual, trust, and estate residing in or earning or receiving income in this state, on every individual, trust, and estate earning or receiving lottery winnings, prizes, or awards pursuant to Chapter 3770. of the Revised Code, on every individual, trust, and estate earning or receiving winnings on casino or sports gaming, and on every individual, trust, and estate otherwise having nexus with or in this state under the Constitution of the United States, an annual tax measured as prescribed in divisions (A)(1) to (4) of this section.

(1) In the case of trusts, the tax imposed by this section shall be measured by modified Ohio taxable income under division (C) of this section and levied in the same amount as the tax is imposed on estates as prescribed in division (A)(2) of this section.

(2) In the case of estates, the tax imposed by this section shall be measured by Ohio taxable income. If the estate has not more than twenty-six thousand fifty dollars of such income, the tax shall be levied on such income at the rate of 1.38462% for taxable years beginning in 2024, 1.31287% for taxable years beginning in 2025, and 1.27448% for taxable years beginning in 2026 and thereafter. If the estate has income in excess of that amount, the tax shall be levied at the same rates prescribed in division (A)(3) of this section for individuals.

(3) In the case of individuals, the tax imposed by this section on income other than taxable business income shall be measured by Ohio adjusted gross income, less taxable business income and less an exemption for the taxpayer, the taxpayer's spouse, and each dependent as provided in section 5747.025 of the Revised Code. If the balance thus obtained is equal to or less than twenty-six thousand fifty dollars, no tax shall be imposed on that balance. If the balance thus obtained is greater than twenty-six thousand fifty dollars, the tax is hereby levied as follows:

AUTHENTICATED,
OHIO LEGISLATIVE SERVICE
COMMISSION
DOCUMENT #467288

(a) For taxable years beginning in 2024:

OHIO ADJUSTED GROSS INCOME LESS TAXABLE BUSINESS INCOME AND EXEMPTIONS (INDIVIDUALS) OR MODIFIED OHIO TAXABLE INCOME (TRUSTS) OR OHIO TAXABLE INCOME (ESTATES)	TAX
More than $26,050 but not more than $100,000	$360.69 plus 2.75% of the amount in excess of $26,050
More than $100,000	$2,394.32 plus 3.5% of the amount in excess of $100,000

(b) For taxable years beginning in 2025:

OHIO ADJUSTED GROSS INCOME LESS TAXABLE BUSINESS INCOME AND EXEMPTIONS (INDIVIDUALS) OR MODIFIED OHIO TAXABLE INCOME (TRUSTS) OR OHIO TAXABLE INCOME (ESTATES)	TAX
More than $26,050 but not more than $100,000	$342.00 plus 2.75% of the amount in excess of $26,050
More than $100,000	$2,394.32 plus 3.125% of the amount in excess of $100,000

(c) For taxable years beginning in 2026 and thereafter, $332.00 plus 2.75% of the amount in excess of $26,050.

(4)(a) In the case of individuals, the tax imposed by this section on taxable business income shall equal three per cent of the result obtained by subtracting any amount allowed under division (A)(4)(b) of this section from the individual's taxable business income.

(b) If the exemptions allowed to an individual under division (A)(3) of this section exceed the taxpayer's Ohio adjusted gross income less taxable business income, the excess shall be deducted from taxable business income before computing the tax under division (A)(4)(a) of this section.

(5) Except as otherwise provided in this division, in August of each year, the tax commissioner shall make a new adjustment to the income amounts prescribed in divisions (A)(2) and (3) of this section by multiplying the percentage increase in the gross domestic product deflator computed that year

AUTHENTICATED,
OHIO LEGISLATIVE SERVICE
COMMISSION
DOCUMENT #467288

under section 5747.025 of the Revised Code by each of the income amounts resulting from the adjustment under this division in the preceding year, adding the resulting product to the corresponding income amount resulting from the adjustment in the preceding year, and rounding the resulting sum to the nearest multiple of fifty dollars. The tax commissioner also shall recompute each of the tax dollar amounts to the extent necessary to reflect the new adjustment of the income amounts. To recompute the tax dollar amount corresponding to the lowest tax rate in division (A)(3) of this section, the commissioner shall multiply the tax rate prescribed in division (A)(2) of this section by the income amount specified in that division and as adjusted according to this paragraph. The rates of taxation shall not be adjusted.

The adjusted amounts apply to taxable years beginning in the calendar year in which the adjustments are made and to taxable years beginning in each ensuing calendar year until a calendar year in which a new adjustment is made pursuant to this division. The tax commissioner shall not make a new adjustment in any year in which the amount resulting from the adjustment would be less than the amount resulting from the adjustment in the preceding year.

(B)(1) The tax imposed by this section on a trust shall be computed by multiplying the Ohio modified taxable income of the trust by the rates prescribed by division (A) of this section.

(2) A resident trust may claim a credit against the tax computed under division (B) of this section equal to the lesser of (a) the tax paid to another state or the District of Columbia on the resident trust's modified nonbusiness income, other than the portion of the resident trust's nonbusiness income that is qualifying investment income as defined in section 5747.012 of the Revised Code, or (b) the effective tax rate, based on modified Ohio taxable income, multiplied by the resident trust's modified nonbusiness income other than the portion of the resident trust's nonbusiness income that is qualifying investment income. The credit applies before any other applicable credits.

(3) Any credit authorized against the tax imposed by this section applies to a trust subject to division (B) of this section only if the trust otherwise qualifies for the credit. To the extent that the trust distributes income for the taxable year for which a credit is available to the trust, the credit shall be shared by the trust and its beneficiaries. The tax commissioner and the trust shall be guided by applicable regulations of the United States treasury regarding the sharing of credits.

AUTHENTICATED,
OHIO LEGISLATIVE SERVICE
COMMISSION
DOCUMENT #467288

(C) For the purposes of this section, "trust" means any trust described in Subchapter J of Chapter 1 of the Internal Revenue Code, excluding trusts that are not irrevocable as defined in division (I)(3)(b) of section 5747.01 of the Revised Code and that have no modified Ohio taxable income for the taxable year, charitable remainder trusts, qualified funeral trusts and preneed funeral contract trusts established pursuant to sections 4717.31 to 4717.38 of the Revised Code that are not qualified funeral trusts, endowment and perpetual care trusts, qualified settlement trusts and funds, designated settlement trusts and funds, and trusts exempted from taxation under section 501(a) of the Internal Revenue Code.

(D) Nothing in division (A)(3) of this section shall prohibit an individual with an Ohio adjusted gross income, less taxable business income and exemptions, of twenty-six thousand fifty dollars or less from filing a return under this chapter to receive a refund of taxes withheld or to claim any refundable credit allowed under this chapter.

Tax Rates

Sales and Use Tax Rate Map

March 31, 2026

State and Permissive (Local) Sales and Use Tax Rates in Effect as of October 2025 by County

This map displays all Ohio counties and the sales tax rate in that county. The map is followed by a table which lists the rates in each county.

As of October 2025, the total sales tax rate in each county ranged from 6.50 percent to 8.0 percent. Counties with the highest sales tax rates (7.30 percent or higher) are colored black. Counties with tax rates in the middle (between 7.05 percent and 7.25 percent) are colored grey. Counties with the lowest tax rates (7.0 percent or lower) are colored white.

There are seven counties with rates of 7.30 percent or higher. The highest tax rate of 8.0 percent is found in Cuyahoga and Franklin Counties. Other counties with rates above 7.30 percent include Hamilton County (7.80 percent), Lucas County (7.75 percent), Coshocton County (7.75 percent), Montgomery County (7.50 percent), and Mahoning County (7.50 percent).

There are 31 lower rate counties, with rates between 6.50 percent and 7.0 percent. These counties are mostly located in the northeastern and southwestern parts of the state, as well as around the Columbus and Toledo metro areas (Franklin and Lucas Counties). The lowest rate of 6.50 percent is found in Butler, Lorain, Stark, and Wayne Counties.

The other 50 counties in the state all have a tax rate of 7.25 percent.

Portions of Delaware, Fairfield, Licking, & Union counties assess a transit authority sales tax levy of 1.00 percent and portions of Wood County assess a transit authority sales tax levy of 0.50 percent, which are not reflected on the map.

Percentages shown in this publication are from internal records of the Ohio Department of Taxation.

Total State and Local Sales Tax Rates, by County, Effective October 2025

Newest Rate Change:
Brown County tax rate 1.25% (previously 1.50%)

* Portions of Delaware, Fairfield, Licking & Union counties assess a transit authority sales tax levy of 1.00% (not reflected on this map.)
** The City of Rossford in Wood County assesses a 0.50% transit tax effective April 1, 2022; the total sales and use tax rate for that municipality is 7.25% (not reflected on this map).

[note 1] Municipalities whose boundaries extend both within and beyond Franklin County assess a COTA rate of 1.00% in addition to the posted state and county sales tax rate. Delaware's COTA rate covers the portions of the Cities of Columbus and Westerville located in Delaware County; Fairfield's COTA rate covers the portions of the Cities of Columbus and Reynoldsburg in Fairfield County; Licking County's COTA rate covers the portion of the City of Reynoldsburg located in Licking County, and Union's COTA rate covers the portion of the City of Dublin located in Union County.
[note 2] The City of Rossford in Wood County enacted a 0.50% transit tax effective April 1, 2022; the total sales and use tax rate for that municipality is 7.25%.
[note 3] The current state rate is 5.75%.

Lodging Occupancy Tax

Online Bed Tax System

MUNIREVS Powered by GovOS

Cuyahoga County property owners can register their short-term rental via an easy-to-use online portal. The GovOS / MuniRevs online portal provides the county with a detailed account of the short-term rental landscape and simplifies the application and renewal process for registration. The portal also facilitates the lodging tax collection process for the county's 6.5% bed tax.

Register your lodging establishments and complete your registration (https://cuyahogacounty.munirevs.com/)

Registration forms must be completed before you can file.
After registration and approval, you can file your Bed Tax Returns using the online portal.

Lodging Tax Office -
Cuyahoga County Fiscal Office
2079 East Ninth St., 3rd Floor 121-E
Cleveland, OH 44115(https://goo.gl/maps/Ma6LTQNEnSdsSXP98)

Phone: 216-443-7140

Fax: 216-443-2094

The County Fiscal Officer acts as an agent for Cuyahoga County with respect to the collection and disposition of the Cuyahoga County excise tax on lodging of transient guests. The department that handles these varied duties and responsibilities is the Lodging Occupancy Tax Office.

The powers and duties of this department are defined by the Cuyahoga County Code of Regulations. A copy of this Code of Regulations is attached to this Home Page. The Lodging Occupancy Tax Office is located on the third floor of the Cuyahoga County Fiscal Office. All general questions or concerns can easily be directed and/or handled by calling 216-698-2540.

The main purpose of this department is to collect the 6.5% County bed tax which will then be disbursed to Medical Mart, Municipalities, and Destination Cleveland.

In order to regulate the checks and balances for the above-mentioned County bed tax, the Lodging Occupancy Tax Office conducts countywide audits to approximately 186 current establishments. Our services are often called upon to answer questions regarding the most accurate ways to monitor the tax responsibilities at these establishments.

§ 193.01 Intent of Tax

It is the intent of the City to levy the excise tax of three percent (3%) on transactions by which lodging is or is to be furnished by a hotel to transient guests as referred to and authorized by RC 5739.02(C). Accordingly, this chapter shall be construed to effectuate that purpose and so as to be consistent with any requirement of law, compliance with which is a prerequisite to the validity of the tax intended to be levied hereby.

(Ord. No. 252-A-83. Passed 6-15-83, eff. 6-16-83)

§ 193.02 Definitions

As used in this chapter:

(a) "Administrator" means the Commissioner of Assessments and Licenses or his or her authorized representative.

(b) "Booking agent" means any person or entity that facilitates reservations or collects payment for hotel accommodations on behalf of or for a vendor. Merely publishing an advertisement for accommodations does not make the publisher a booking agent.

(c) "Hotel" means every establishment kept, used, maintained, advertised, or held out to the public to be a place where lodging is offered to guests in one (1) or more rooms, regardless of use of keyed entry, whether such rooms are in one (1) or several structures, and whether the rooms are located in different structures or on different parcels of land if the structures are not identified in advertisements of the accommodations as distinct establishments.

(d) "Transaction price" means the total amount of consideration, including money or any other value, paid, or to be paid, or given by, or on behalf of, a transient guest to a hotel or booking agent in exchange for lodging. The transaction price is the amount advertised or published to the public inclusive of any fees built into the advertised or published price; however, service fees or booking fees, if separately stated, shall not be included in the transaction price.

(e) "Transient guest" or "transient guests" means a person or persons occupying a room or rooms for lodging for less than thirty (30) consecutive days.

(f) "Vendor" means the person who is the owner or operator of the hotel and who furnishes the lodging.

(Ord. No. 30-16. Passed 6-6-16, eff. 7-1-16)

§ 193.03 Purpose, Rate and Application of Tax

(a) There is hereby levied an excise tax of three percent (3%) on transactions by which lodging by a hotel is, or is to be, furnished to transient guests.

(b) The excise tax levied under this chapter shall provide revenue for the purposes of general municipal operations, procurement of fixed assets or permanent improvements, payment of debt charges, the elimination of deficits in City funds and for all other lawful purposes. To carry out such purposes, the receipts of the tax levied under this chapter shall be deposited to the credit of the General Fund.

(c) The tax, which shall be known as the transient occupancy tax, applies and is collectible at the time the lodging is furnished, regardless of the time when the price is paid. The tax shall not apply to transactions by which lodging is furnished to:

(1) the Federal government, the State or any of its political subdivisions; or

(2) a person maintaining occupancy for a period of thirty (30) or more consecutive days; provided, however, that except in the case of employees of the same employer, no occupancy may be used in combination with the occupancy of another, regardless of the source of payment, to exempt a transaction under this division.

(d) For the purpose of the proper administration of this chapter and to prevent the evasion of the tax, it shall be presumed that all lodging furnished by hotels in the City to transient guests is subject to the tax until the contrary is established.

(Ord. No. 597-13. Passed 5-20-13, eff. 7-1-13)

CUYAHOGA COUNTY, Ohio
MyPlace

Please be advised that the Fiscal Office identified a clerical error that was submitted to the State of Ohio. This error resulted in an incorrect tax rate calculation for Class II properties only (Commercial/Industrial) for Tax Year 2024/Collection Year 2025. The Fiscal Office worked with the State of Ohio to correct the error. The correction will appear on tax bills due in February 2026 as an omitted tax.

THIS DOES NOT AFFECT RESIDENTIAL PROPERTY

CAUTION EXTERNAL EMAIL

From my understanding, the third-party reviewer wants to see the full property value post development with adjustments to tax revenues made via the tax rate inputs. I believe the workbook is designed to only capture the increase in tax revenues, so if there will be no increase in property tax revenues, this could be reflected by having a zero property tax rate.

We will review each application and EIS along with the third-party to ensure that TIF/PILOT/Abatement procedures are applied consistently for all projects.

Thanks,

Ohio Department of Development

APPENDIX D
ASSUMPTIONS AND LIMITING CONDITIONS

APPENDIX D - ASSUMPTIONS AND LIMITING CONDITIONS

1. The economic impact analysis contained herein relies on data, analysis, and formulas provided by Ohio Department of Development and its consultants. As a result, we believe the information provided is a reliable basis to use in developing the economic impacts for the Project. However, we have not examined the formulas or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact analysis.
2. All information contained in the report which was furnished by others was assumed to be true, correct, and reliable. A reasonable effort was made to verify such information, but the author assumes no responsibility for its accuracy.
3. The report was made assuming responsible ownership and capable management of the project and no unusual macroeconomic or microeconomic conditions impacting the outcomes.
4. Possession of the report, or a copy thereof, does not carry with it the right of publication, nor may it be reproduced in whole or in part, in any manner, by any person, without the prior written consent of Project Management Consultants LLC. Neither all nor any part of the report or copy thereof shall be disseminated to the general public by the use of advertising, public relations, news, sales, or other media for public communication without the prior written consent and approval of Project Management Consultants LLC.
5. The author of this report is not required to give testimony or attendance in legal or other proceedings relative to this report or to the Subject unless satisfactory additional arrangements are made prior to the need for such services.
6. The opinions contained in this report are those of the author and no responsibility is accepted by the author for the results of actions taken by others based on information contained herein.
7. Acceptance of and/or use of this report constitutes acceptance of all assumptions and the above conditions.

Project Overview

This project will rehabilitate a landmark hotel in downtown Mansfield, Richland County, Ohio. The hotel opened in 1984 as a full-service Holiday Inn with 160 guest rooms, restaurant, lounge, and more than 5,000 square feet of meeting and banquet space. Those spaces were the site of many memorable events in the hotel's early years. The restaurant and lounge have closed, and an entire floor has been gutted, reducing the room count to 102. Meeting space is still being leased, but meeting revenue is minimal.

Construction is expected to begin in August 2026 and conclude after nine months, in May 2027. The developer expects to construct [redacted] guest suites on the gutted fourth floor after about one year, bringing the room count to [redacted] These costs are not included in the application, but the higher room count is used to model stabilized revenues during the five-year operating period.

Results of the 10% test are in Table 1. This development earns a passing grade.

Table 1: 10% Test for the Hearth and Forge Hotel Development

Item	Amount
Eligible expenditures	$3,962,220
10% threshold	$396,222
Construction & completion period tax increase (5-year)	$3,462,657
PASS/FAIL	**PASS**

Parameters

Effective state income tax rate. Calculating an average state tax rate must reflect income-dependent deductions and exemptions and the lower rate for income less than $26,050 (in 2025). To address this problem, tax liability is calculated for employee headcount of construction and each of the projected uses through the Ohio personal income tax form. In practice, taxable income is reduced by deductions based on specific conditions or activities, while an array of specific credits impacts tax liability. These are irrelevant for the taxes arising from construction and operating activities, though, so they are ignored.

The workbook gives full-time equivalent construction employment of 23.58, which must be converted to headcount. This is accomplished by dividing FTEs by the percentage of full-time worked by these employees. Average weekly hours in construction in 2025 are obtained from the Bureau of Employment Statistics' Current Employment Statistics (CES) survey. National data are used to improve reliability and maximize data availability here and elsewhere. This weekly average is 39.1 hours per week, or 97.75% of full time. This yields an average headcount over the construction period of 24.

Total employment for each activity is weighted by the length of the total 69 months (construction period plus the five-year completion period) that each group of workers will

be employed. The construction worker headcount is multiplied by 9 divided by 69, or 0.1304, while the headcounts of completion period workers are multiplied by 60 divided by 69, or 0.8696.

The personal dependent exemption is subtracted from total income to yield the tax base. This is $2,400 for incomes less than or equal to $40,000, $2,150 for incomes greater than $40,000 up to and including $80,000, and $1,900 for incomes greater than $80,000. The Census Bureau's American Community Survey (Table S1101) reports an average household size of 2.35 for Richland County/the Mansfield MSA. This is multiplied by the relevant exemption amount to determine the average exemption total.

Tax liability before credits for an Ohio tax base less than $26,050 (in 2025) is zero. For tax bases greater than $26,050, tax liability is $342 plus 2.75% of income greater than $26,050. This gives an effective tax rate of 1.31% for the lower income of taxpayers subject to tax. The one relevant credit is the exemption credit. This is $20 per exemption for those with tax base less than $30,000 and zero for higher tax bases. Tax liability before credits less the exemption credit equals the state tax. This is divided by average income to give an effective tax rate for workers in each activity. The overall average is derived by weighting the individual tax rates by the time-adjusted headcounts to give the overall average tax rate, 0.32%. The results of these calculations are in Table 2.

Table 2: State Tax Rate Calculation

	Construction	Office	Hotel & hospitality	Restaurant & bar
Occupation code	47-0000	13-0000	39-0000	35-0000
Headcount	24	4	27	14
Time-adjusted headcount	3.13	3.48	23.48	11.94
Average wage/Ohio AGI	63,350	78,500	31,200	31,030
Personal/dependent exemptions	5,053	5,053	5,640	5,640
Ohio tax base	58,298	73,448	25,560	25,390
Tax liability before credits	1,229	1,645	0	0
Exemption credit	0	0	49	49
Tax less exemption credit	1,229	1,645	0	0
Average tax rate	1.94%	2.10%	0.00%	0.00%
Overall average tax rate				**0.32%**

Effective local income tax rate. The Mansfield income tax rate is 2.25%, obtained from the Mansfield municipal website.[1]

[1] Regional Income Tax Agency. (2026). Tax rates table. https://www.ritaohio.com/TaxRatesTable

State and local sales tax rates. The state tax rate of 5.75% and Richland County's 1.25% are obtained from the Department of Taxation's Sales Tax Rate Map.[2]

Lodging tax rate. The total lodging tax rate is 6%, including 3% for Richland County and 3% for the city of Mansfield. This is from the Ohio Department of Taxation's Table S-4[3].

Effective property tax millage. The Richland County Auditor reported a 2025 rate payable in 2026 of 18.2943 mills for class 2 property in Mansfield. However, given the applicant's application for a 15-year, 75% abatement, a rate of 25% of 18.2943, or 4.573575 is used in the calculation.

Annual median wages. Occupational group median wages were verified equal to the May 2024 estimates for the Mansfield MSA reported by the Bureau of Labor Statistics. Thus, no overrides are necessary.

Construction Period Inputs

Expenditures. Property closing is expected to occur in May, so the acquisition cost is not eligible for inclusion. The allocation of construction costs among hard costs, soft costs, professional fees, fixtures, and ineligible/not included costs is in Appendix Table A-1. Note that labor costs and sales taxes are eligible expenditures, but these are calculated internally. To include them as eligible costs would thus result in double-counting.

Estimated share of eligible construction costs attributable to labor. This is 33.3147%, obtained directly from the developer's proforma.

Construction expenditures timeline. The construction period is less than a year, so all construction costs (other than the planned construction to reopen the fourth floor) will occur in the first year.

Property values before and after development. Pre-development property value is the total being paid by the developer to acquire the property, $2.5 million. (This value is included among the ineligible costs in Table A-1.)

Three approaches are available to estimate a property value post-development.[4] The first is the sales comparison approach, which relies on sales of comparable properties. Sales of

[4] This discussion is derived from Commons Capital. (2025, October 4). How to value commercial real estate: A comprehensive guide [Weblog post]. https://www.commonsllc.com/insights/how-to-value-commercial-

hotel properties in the Mansfield area are not common, and it can be argued that this property's downtown location and potential to become a high-end hotel make it unique. The cost approach values a building based on the cost to reproduce it. This is a more than 40-year-old property featuring attributes that would be difficult to reproduce today, so this approach, too, is inappropriate.

The third approach, the income capitalization approach, discounts annual net operating income (NOI) by a capitalization rate (cap rate) based on market conditions and (when available) comparable properties. The developer's proforma includes NOI from only the hotel. As will be discussed, the property when fully developed will also include a restaurant, event center, leased offices, and a bar. The revenues from these activities are discussed later, while the NOI percentages are market averages from a variety of sources. The hotel NOI is derived from the proforma for the hotel developed by Hotel R&D LLC.[5] [redacted] This results in a projected post-development property value of approximately $19.6 million. These calculations are displayed in Table 3.

Table 3: Estimate of Post-Development Property Value for Hearth & Forge Hotel

Activity	Revenue	NOI percentage	NOI
[redacted]	[redacted]	[redacted]	[redacted]

Results of the construction period calculation are in Table 4.

Table 4: Construction Period Calculations

Item	Amount
Inflation-adjusted eligible expenditures	$3,962,220
Construction labor share	33.31%
Average annual wage (construction)	$55,990
Implied hourly wage	$27
Total labor cost (proxy for payroll)	$1,320,002
Implied labor hours	49,037.39
Construction FTE (labor hours/2,080)	23.58
State income tax on construction payroll	$3,696
Hard construction costs and business fixtures	$[redacted]
Sales tax on hard construction costs and business fixtures	$107,979
Total construction period tax impacts	$111,675

Completion Period Inputs

General office. The developer has a lease commitment for 650 square feet of office space for [redacted]. At 150 square feet per person,[11] this space would accommodate four employees, translating to 0.005615385 per square foot. Because these services are not taxable, taxable sales are zero. Baseline payroll and sales are zero, given the lack of office space currently.

Data sources for remaining uses. The remaining activities' staffing ratios and sales rely primarily on Data Axle Reference Solutions. Data Axle provides a wide array of information, including location headcount and modeled sales, on more than 18 million U.S. businesses. Data are verified regularly via phone. Recently verified comparable businesses in Richland and other north central Ohio counties are used to develop average total employment and sales, with square feet of the benchmark establishments obtained from County Auditor websites.

[11] LoopNet. (2025). Office space calculator. https://www.loopnet.com/cre-explained/tools/office-space-calculator/

Restaurant. A full-service restaurant is planned for 4,000 square feet and a bar for 2,200 square feet. Staffing information for 24 full-service restaurants in Richland County was collected from Data Axle. The median headcount per 1,000 square feet of these restaurants was 2.43, implying a headcount of 10. CES reports 2025 U.S. average working hours of 25.1, or 62.75% of full-time, for employees of full-service restaurants. This results in full-time employment of 6.106.

Data Axle models full-service restaurant sales per employee as constant county-specific averages. For Richland County this is $[redacted] Multiplying this by the headcount of 10 gives total sales of $[redacted] However, only meals eaten on the premises are taxable. Statista reported that these account for 70% to 80% of total sales at full-service restaurants.[12] Taking the midpoint of 75%, estimated taxable sales are $[redacted] or $[redacted] per square foot.

The bar is 2,200 square feet. Data Axle's employment in north central Ohio bars averages 1.93 per 1,000 square feet, implying a headcount of four here. Given a weekly average of 20.9 hours, or 52.25% of full time, for workers in drinking places (alcoholic beverages), FTE employment is 2.09, or 0.00095 per square foot.

Combined restaurant and bar figures are in Table 5.

Table 5: Combined Restaurant Estimates

	Restaurant	Bar	Restaurant total
Square footage	4,000	2,200	6,200
Headcount	10	4	14
Total sales per headcount	[redacted]	[redacted]	[redacted]
Total sales	[redacted]	[redacted]	[redacted]
Taxable sales	[redacted]	[redacted]	[redacted]
Taxable sales per square foot	[redacted]	[redacted]	[redacted]
FTE	6.11	2.09	8.20
FTE per square foot	0.001526448	0.00095	0.001321902

Because no restaurant or bar is currently operating in the property, baseline totals are zero.

Hotel. As previously discussed, the hotel currently has 102 guest rooms, with [redacted] suites to be added on the abandoned fourth floor, giving a total of [redacted] A 10-year cash flow projection was produced for the developer by Hotel R&D LLC.[13] This proforma is based on only the current [redacted] rooms, so the totals in the proforma are grossed up by multiplying them by [redacted]. (This is conservative because it is likely that the suites will command higher rates than the other rooms.)

---

[12] Statista. (2026). Food service industry in the U.S. - statistics & facts. https://www.statista.com/topics/4476/restaurant-and-foodservice-industry-in-the-us/

[13] Hotel R&D LLC. (n.d.). *Ibid.*

The Hotel R&D analysis identified six Richland County hotels at the same upper midscale level as the Hearth & Forge hotel after redevelopment. These hotels average 0.63 employees per 1,000 square feet, based on Data Axle employment totals. The 26,485 square-foot Hearth & Forge hotel is thus expected to employ 17, not including those staffing other activities. At average hours of 30.3 per week, or 75.75% of full-time, FTE employment is 12.88, or 0.000486219 per square foot. The 2025 payroll of the current facility was $213,584.09. The current operator also received meeting room revenue in 2025. The related payroll could not be separated from the overall total, however.

The proforma assumes a gradual increase from [redacted]. To present stabilized non-inflated revenue, this [redacted] occupancy for [redacted] rooms is applied to the projected 2027 ADR of $[redacted] The result is total revenue of [redacted], or [redacted] per occupied square foot. This total is reduced by the 2025 room revenue of the current facility, $[redacted]

Hospitality. The Hearth & Forge plan envisions rehabilitating the meeting and banquet areas to create 11,050 square feet of event space. No occupancy rate is available, so the same [redacted] that is projected for the hotel is assumed.

To estimate the revenue, the necessary support staff, and wages, data on 11 event centers in north central Ohio were collected from Data Axle, with square footages from county auditor data. The result is a median employment of 1.44 per square foot. This implies event headcount of 16. The CES reports average weekly hours not for event centers but only for the broader industry group – arts and sports promoters and agents and managers for public figures. This is an average of 24.3 hours per week, yielding FTE of 9.72, or 0.000879638 per square foot. As stated above, the current facility rents meeting space but the related staff hours and payroll cannot be separated from the hotel total.

Each of the benchmarked hotels includes a conference center, so their employment is comparable to both the hotel and conference center of the Hearth & Forge property.

Event center services are fully taxable. Revenue per employee in the Data Axle sample averages $[redacted] implying $[redacted] million annual revenue for the 11,050 square feet of event space. This translates to taxable revenue per square foot of $[redacted] This is reduced by 2025 meeting room revenue of $[redacted]

Completion period calculations. The estimates above yield 26.53 total FTEs for the development. Annual payroll totals $885,920, and taxable sales are $[redacted]

Completion period tax revenues are in Table 6.

Table 6: Completion Period Tax Revenues

Tax category	Annual net base	Rate	Annual tax	5-year total (escalated)
State income tax (payroll)	$672,336	0.0028	$1,883	$10,037
Local income tax (payroll)	$672,336	0.0225	$15,128	$80,652
State & local sales tax (taxable sales)	$[redacted]	0.0700	$378,603	$2,007,643
Lodging tax (hotel revenue)	$[redacted]	0.0600	$208,425	$1,105,230
Property tax (annual)	$5,997,623	4.5736	$27,431	$145,458
Total completion-period tax increase (5-year)				**$3,349,020**

Re: Valor Acres Phase 2 - Transformational Mixed-Use Development – Economic Impact Statement

Dear Ms. Makepeace:

At your request, Project Management Consultants LLC has performed an Economic Impact Statement for Valor Acres Phase 2, located at Miller Road & Brecksville Road, Brecksville, Ohio, utilizing inputs provided by your team, direct calculations, conservative assumptions, and State-provided assumptions. We have not examined the Client-provided data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact statement. Further, this analysis is subject to the Assumptions and Limiting Conditions found in Appendix D of this report.

This report contains, to the fullest extent possible and practical, explanations of the data, reasoning, and analyses that were used to develop the opinions contained herein. The depth of discussion contained in the report is specific to the needs of the client.

VA Land LLC and VA Current LLC are collectively the Client in this engagement and intended user of this report. As our client, VA Land LLC and VA Current LLC own this report and permission must be granted from them before another third party can use this document. We assume that by reading this report another third party has accepted the terms of the original engagement letter including scope of work and limitations of liability. We are prepared to modify this document to meet any specific needs of the potential user under a separate agreement.

The Stated Purpose of this assignment is to assist with projections of job, tax, and wage information for application to the State of Ohio Transformational Mixed-Use Development Program. You agree not to use this report other than for the Stated Purpose, and you agree to indemnify us for any claims, damages, or losses that we may incur as the result of your use of the Report for other than the Stated Purpose. Without limiting the general applicability of this paragraph, under no circumstances may the Report be used in advertisements, solicitations and/or any form of securities offering.

The authors of this report certify that, while we represent the project in other capacities, we are not part of the development team, nor are we affiliated with any member of the development team. Please do not

hesitate to contact us if there are any questions regarding the report or if Project Management Consultants, LLC can be of further assistance. It has been our pleasure to assist you with this project.

Sincerely,

Ryan P. Sommers, CPA
Managing Director of Financial Services
Project Management Consultants, LLC

PROJECT MANAGEMENT CONSULTANTS (PMC) EXPERIENCE

	Name	TMUD Experience & Background
	**Ryan P. Sommers, CPA** Managing Director of Financial Services	Ryan Sommers has an extensive background working with various tax credit programs and complex private and public finance structuring. Ryan's experience with tax credits includes Historic Tax Credits, New Markets Tax Credits, and Opportunity Zone Tax Credits. Ryan recognizes the critical value-add of the Transformational Mixed-Use Development ("TMUD") tax credit program. Since the program's inception he has become an expert on the program. He advises clients on project eligibility, economic impacts, tax credit monetization, and chances of application success. As managing director of financial services, Ryan identifies, secures and manages private and public financing opportunities for business expansion projects and real estate development. Ryan is currently managing a team responsible for 50+ projects throughout the country with $3 billion in development value including $600 million in public financing for public-private partnerships. He has helped his clients obtain over $200 million in state and federal Historic Tax Credits and over $100 million in New Markets Tax Credits. Ryan also created PMC's direct tax impact analysis models which help demonstrate exact tax estimates for a Project or Development site on the surrounding area, including income taxes, sales taxes, bed taxes and property taxes. Ryan has worked on this modeling for a decade. These outputs help demonstrate the ROI of a project to various government entities and provide him with experience needed to complete economic impact statements as complicated as those required for TMUD applications.
	**Kenneth S. Kalynchuk** Director and Principal	Ken Kalynchuk leads PMC's financial analyst and economic impact analysis team. Ken has conducted twenty economic impact statements (EIS reports) for Rounds 1 through 4 of the TMUD program, with emphasis on conservative estimates and common sense for whether projects can be considered catalyzed or not. Ken helps clients navigate the predevelopment stage of their projects through incentive, land use, and market research; pro forma development; feasibility analyses; economic impact analyses; and property tax analyses. Prior to joining the firm, Ken was a graduate research assistant with the Center for Economic Development at Cleveland State University, where he evaluated economic development programs and best practices in economic development policy, performed studies on Historic Preservation Tax Credit funding and rental markets, and wrote case studies and employment/demographic impact analyses. During his time at Cleveland State Ken learned IMPLAN software and economic impact techniques. These skills have helped clients at PMC, where Ken has helped generate economic impact reports and tax estimates for more than 9 years.

	Name	TMUD Experience & Background
	**Alexander Previts, MAcc, CPA, DFCP** Development Finance Manager	As Development Finance Manager, Alex provides strategic insights and innovative solutions that continue to drive success for clients across diverse industries. For over 7 years at PMC, Alex has honed his technical skills by developing new and building on existing financial modeling to enhance the quality and readability of PMC's products, primarily focusing on economic impact analyses for public partners and integrating tax-related incentives into clients' financial models. Alex works with clients through the finance structuring process by first identifying the needs and gap of the project and assessing the tools available for the project's financing at the local, regional and state level. Alex directs clients through the nuances of the predevelopment stage of their projects through incentive, land use, and market research; pro forma development; feasibility analyses; economic impact analyses; and property tax analyses. He focuses on structuring tax incentives, including tax increment financing (TIF), and monetizing TIF structures through bank and bond financing. Alex's complex financing modeling skills are instrumental in the preparation of these EIS reports.
	**Cassie Slansky** Project Director	In her role as Project Director, Cassie overseas project management from intake through closing and compliance for PMC's projects. Cassie's decade of public and private experience in economic development and with complex public financing tools provides unique insight into structuring complex capital stacks for projects. Cassie works as PMC's Project Director for the Project Scarlet TMUD application and assisted Alex with the EIS.
	**Maximus Morgan** Financial Analyst	In his role as Financial Analyst, Maximus supports the research, modeling, and organization of applications for financing for complex mixed—use real estate projects.

A. Executive Summary

Purpose

This Economic Impact Statement ("EIS") has been prepared for the Transformational Mixed-Use Development (TMUD) program as required under Ohio Revised Code (“ORC”) Section 122.09. This narrative report, together with the accompanying standardized EIS Workbook (Excel), constitutes the complete impact analysis for the proposed project, Valor Acres Phase 2.

The purpose of this EIS is to provide a standardized, transparent assessment of the direct economic and fiscal impacts attributable solely to the Project. Indirect and induced impacts are not permitted under this methodology and have not been included in this analysis. Specifically, this EIS is intended to:

1. Quantify the direct economic impact generated by the Project during construction and during the statutory five-year completion period;
2. Estimate the increase in state and local tax collections attributable to the Project within the project site;
3. Provide a standardized basis for determining whether the Project satisfies the statutory 10% Test, which requires that new tax revenues during the completion period equal or exceed 10% of eligible expenditures; and
4. Support a consistent, transparent review process for all TMUD applications.

This EIS Narrative Report is prepared in accordance with the EIS Framework and Methodology (the “Framework”) issued by the Ohio Department of Development (the "Department"). All impacts presented in this narrative are limited to direct economic activity occurring within the project site. Indirect and induced impacts are excluded in accordance with the EIS Framework. All calculations have been performed within the standardized EIS Workbook using the Department-provided formulas, locked calculation logic, and standardized parameters. No formulas, protected cells, worksheets, or Workbook structure have been modified.

Economic impacts (“Impacts”) measured in terms of output, employment, labor income, and taxes were estimated using Department-provided standardized parameters, except as identified under Appendix B in this report. Appendix B contains all data sources and justifications identified in the EIS Workbook and narrative. Appendix C contains supporting documentation submitted for all Applicant-provided inputs used in this report.

This EIS considers the one-time direct Impacts resulting from the construction of the Project ("Construction Period Impacts"), as well as the direct permanent Impacts resulting from the ongoing activities associated with the Project ("Completion Period Impacts").

The impacts of the two components that are analyzed – Construction Period Impacts and Completion Period Impacts – are presented individually and as a whole in the Total Direct Impact Summary. Construction Period and Completion Period Impacts are presented in annual terms.

Project Management Consultants collaborated with the Applicant to gather necessary data for the Project and to establish assumptions where needed. All assumptions were verified by the developer to the highest degree of reasonableness.

Project Overview

Project Management Consultants LLC (PMC) was engaged by VA Land LLC and VA Current LLC (the "Company") to analyze the economic impacts of the Company's proposed Valor Acres Phase 2 (the "Project") which is located at Miller Road & Brecksville Road, Brecksville, Ohio.

The Project proposes the new construction of three large single-tenant buildings, including 1) a 292,021 total square foot ("SF") lab testing facility with 76,646 SF of general office space and 192,745 SF of industrial (lab) space ("Building 1"); 2) a 62,000 total SF private recreation fitness center with 59,000 SF of recreation space and 3,000 SF square feet of retail space ("Building 2"); and 3) a 65,830 SF medical office building ("Building 3"). The development costs for the Project total [redacted] of anticipated investment. Construction is expected to commence on approximately June 2nd, 2026 with Project Completion expected by approximately June 30, 2028. The Project scope is described fully within the TMUD application, and the definition of the Project Site is provided in the following section.

Project Site Parcels and Current Property Value

The Project is located within the Cleveland, OH Metropolitan Statistical Area ("MSA"), as determined by the most recent Metropolitan and Micropolitan Statistical Area Delineation Files published by the U.S. Census Bureau. All impacts included in this EIS are strictly limited to economic activity occurring within the Project Site.

The Project Site consists of approximately 28.3 acres of land spanning over portions of two contiguous land parcels, PPN 604-09-017 and 604-09-026 (the "Project Parcels"). 12.229 acres of land of the total 40.529 acres that make up the Project Parcels are excluded from the TMUD Project scope and are therefore excluded from the Project Site for purposes of this EIS. For simplicity, the "Property Value Prior to Development" (as identified under Construction Period Inputs) is equal to the total taxable market value of the full size of the Project Parcels. According to the Cuyahoga County Fiscal Office,

the Project Parcels have an market land value of $1,691,550 in Tax Year 2025. The Property Value Prior to Development does not generate any Impact in the EIS Workbook.

The following table reflects the actual size of the parcels, the size of the Project Site by parcel, and the Total Market Value of the Project Parcels and Project Site.:

TABLE A-1			
Parcel Number	**Total Parcel Size (In Acres)[1]**	**Project Site Size (In Acres)**	**Total Market Value**
PPN: 604-09-017	21.139	~20.300	$897,050
PPN: 604-09-026[2]	19.390	~8.000	$794,500
Total Project Parcels	**40.529**	**28.300**	**$1,691,550**

TAX TREATMENTS AND EXEMPTIONS

This section provides clarification on treatment of certain tax incentives that are not directly identified or addressed in the EIS Workbook - Sales Tax Exemption and Tax Increment Financing.

SALES TAX EXEMPTION (BUILDING #1 ONLY)

Building #1 has an approved capital lease structure agreement with the Cleveland Port Authority that will allow for sales tax exemption on construction material purchases for the scope of Building #1's Project. The FAQs indicate "the Workbook should reflect actual expected tax generation" and exempted sales taxes should be excluded from the 10% Test calculation.

The EIS Workbook uses the same applicant-provided inputs for "Hard Cost Construction" and "Taxable Business Fixtures Cost" (See Construction Period Inputs) to calculate construction period sales tax impacts that it uses to calculate completion period sales tax impacts. The EIS Workbook does not have a separate input for sales tax exemption.

Therefore, to omit exempted sales tax from construction period impacts and reflect actual expected sales tax generation at the site, all hard construction costs and taxable business fixtures that are expected to be eligible for sales tax exemption are excluded from their specified categories in the EIS Workbook and re-allocated to "Other Eligible Costs." This re-allocation allows for accurate construction and completion period sales tax impacts without omitting eligible expenditures from the 10% Test calculation.

[1] Acreage reflects the total size of the Project Parcels
[2] Parcel is retired; new parcel information can be provided when available upon request.

TAX INCREMENT FINANCING (ENTIRE PROJECT SITE)

The City of Brecksville (the "City") City Council passed Ordinance No. 5346 on October 6, 2020, creating a Tax Increment Financing (TIF) District encompassing the entire Project Site. Over the course of the 30-Year TIF term, all improvement value at the Project Site will be exempted from taxation payments are made at the same time and in an amount equal to the real estate taxes that would have been due if not for the TIF exemption ("Payments-In-Lieu-of-Taxes" or "PILOTs"). In other words, 100% of the revenue generated by the increase in property tax value will be PILOTs. The FAQs state "PILOT payments do not flow through to the 10% Test calculation for this application cycle."

The EIS uses the difference between the applicant-provided inputs for "Property Value Prior to Development" and "Estimated Property Value Post Development" (See Construction Period Inputs) as the basis to calculate completion period property tax impacts. The EIS Workbook does not have a separate input for PILOTs.

Therefore, to omit PILOTs from completion period property tax impacts, the applicant-provided input for "State + Local Effective Mill Rate" ("Property Tax Rate") equals zero in the EIS. This input for Property Tax Rate omits PILOTs from the 10% Test calculation in accordance with the FAQs. However, omitting 100% of PILOTs understates the fiscal public benefit generated by the PILOTs.

The Brecksville-Broadview Heights City School District (the "School District") entered into a compensation agreement with the City that provided for priority disbursements out of the PILOTs to the School District and Cuyahoga Valley Joint Vocational School District (Collectively, "the Schools") in the amount of 25% of the Schools' levied share (if not for TIF). The remainder of PILOTs are allocated to the Developer or the Project.

As of Tax Year 2025, the Schools collect 46.863 (rounded) mills, equal to approximately 4.686% of commercial assessed property value, or 1.640% of commercial *market* value[1]. Assuming Tax Year 2025 millage rates, the Schools would collect 0.410% of the increase in commercial market property value at the Project Site as PILOTs. The Project is estimated to increase the commercial market property value at the Project Site by $67,406,061 (See "Property Value" under section B. Construction Period Analysis), which would generate approximately $276,402 in annual PILOTs to the School District that are not counted towards the 10% Test Calculation and should be considered when evaluating the ROI for application scoring purposes.

Occupancy and Stabilization Assumptions

All leasable Project square footage is committed as evidenced by the submitted tenant LOI's. Therefore, all Project Impacts assume [redacted] occupancy for all uses and a [redacted] Stabilization Period.

The following table summarizes the Project's square footage and stabilization period by Use Type as reflected in the Department-provided EIS Workbook for built square footage which has economic impacts (it excludes the 180,774 square feet of public plaza/recreation space which has no direct tax or economic impacts at the project site):

Table A-3

Use Type	Square Footage / Units	Occupancy Assumption	Stabilization Period
General Office	76,646 SF	[redacted]	[redacted]
Medical Office	65,830 SF	[redacted]	[redacted]
Retail	3,000 SF	[redacted]	[redacted]
Industrial	192,745 SF	[redacted]	[redacted]
Recreation	59,000 SF	[redacted]	[redacted]
Total	**419,851 SF**	[redacted]	[redacted]

[1] In Ohio, Assessed Value is estimated as 35% of the property's Market Value as appraised by the County auditor or fiscal office.

B. Construction Period Impact Analysis

Construction Period Inputs

This section provides describes the assumptions used in the "Construction Period Inputs" section of the standardized EIS Workbook.

Eligible Construction Expenditures

Eligible expenditures include only post-certification construction-related expenditures directly attributable to the TMUD project, including land acquisition costs as defined by ORC § 122.09. The following categories have been excluded:

- Ineligible pre-certification expenditures (except architectural or engineering fees and due diligence costs paid or incurred in connection with the Project); and
- Costs not directly attributable to the TMUD project.

Total Eligible expenditures constitute the denominator for the statutory 10% Test and are consistent with ORC § 122.09. The following table summarizes the Project's projected Eligible expenditures as reflected in the Department-provided EIS Workbook:

Table B-1

Eligible expenditures (post-certification)	Amount
Land Acquisition Costs (eligible if post-certification)	[redacted]
Hard Construction Costs[1]	
Soft Construction Costs[2]	
Professional Services and Eligible Fees	
Taxable Business Fixtures Cost[3]	
Other Eligible Costs[4]	
Total Eligible Expenditures	**$126,293,359**

[1] Includes contractor-estimated hard construction costs related to Building #2 and Building #3. Excludes Building #1 to reflect sales tax exemption. Does not include sitework, demolition, or other soft construction costs. Costs not yet incurred as of 4/22/2026.

[2] Includes costs related to sitework, impact fees, quality control testing, builder's risk, leasing commissions, real estate taxes during construction, and other soft construction costs included in the construction budget. Costs not yet incurred as of 4/22/2026.

[3] Includes furniture, fixtures, and equipment. Costs not yet incurred as of 4/22/2026).

[4] Includes all budgeted architectural or engineering fees and due diligence costs in connection with the Project, plus estimated hard construction costs related to Building #1 expected to be eligible for sales tax exemption.

The following table summarizes the project's expenditures that were NOT eligible and therefore are not reflected in the Department-provided EIS Workbook:

Table B-2	
Ineligible expenditures	**Amount**
Land Acquisition Costs (prior to 4/22/2026)	[redacted]
Hard Construction Costs (prior to 4/22/2026)	
Soft Construction Costs (prior to 4/22/2026)	
Professional Services and Eligible Fees (prior to 4/22/2026)	
Taxable Business Fixtures Cost (prior to 4/22/2026)	
Other Ineligible Costs[1]	
Total Ineligible Expenditures	

Construction Employment and Payroll

The following table summarizes the Project's projected construction employment and payroll estimated over the duration of the construction period as reflected in the Department-provided EIS Workbook.

Table B-3					
Metric	**Building #1**	**Building #2**	**Building #3**	**Building #4 (Public Space)**	**Total**
Eligible Expenditures	$84,945,086	$10,910,334	$28,353,554	$2,084,385	**$126,293,359**
Est. Share of Eligible Costs Attributable to Labor	32.2561%	30.8892%	33.9496%	0.0000%	**31.9859%**
Labor Cost	27,400,000	$3,370,118	$9,625,914	$0	**$40,396,032**
Primary construction average annual wage[2]	$62,520	$62,520	$62,520	$62,520	**$62,520**
Construction period length	24 Months	9 Months	17 Months	3 Months	**24 Months**

[1] Includes all incurred and projected other finance and softs costs that are not directly attributable to the TMUD project
[2] Based on SOC codes and median wages for the Project's MSA as reflected in the department-provided measurements in the standardized EIS Workbook (see Appendix A).

CONSTRUCTION EXPENDITURES TIMELINE

Eligible expenditures are expected to be spent in line with the submitted construction schedules of each of the three proposed new buildings. The following table summarizes the % of construction completion by construction year as reflected in the Department-provided EIS Workbook.

TABLE B-4

Construction Expenditures Timeline	% of Expenditures
Year 1 – Construction Start est. 6/2/2026	25%
Year 2	55%
Year 3 – Project Completion est. 6/30/2028	20%
Year 4	%
Year 5	%
Total	**100%**

PROPERTY VALUE

Upon Stabilization, the Project is estimated to generate approximately $67,406,061 in new market value (Incremental Market Value), which would generate approximately $1,848,696 in new annual real estate taxes before TIF is considered. The Incremental Market Value reflects the increase in sale price of the property if it were to be sold on the market. Incremental Market Value, for purposes of this application, is estimated conservatively to be equal to 80% of Hard Construction Costs[1]. Please see Appendix B for detailed Hard Cost Construction calculation[2].

However, as referenced in the prior section (A), there is an approved 30-Year TIF on the entire Project Site and the FAQ's (released 3/23/2026) dictate "PILOT payments do not flow through to the 10% Test calculation for this application cycle." Since the EIS Workbook does not include a separate input to exclude TIF PILOTs from the 10% Test calculation, the Property Tax Rate is set to $0.00 to prevent any revenues generated by the increase in market value from flowing to the 10% Test calculation.

[1] Based on PMC's experience with new construction projects in strong suburban markets within Cuyahoga County.
[2] For purposes of calculating Incremental Market Value, Hard Construction Costs includes Building #1 hard construction costs that were re-allocated to Other Eligible Costs under Eligible Expenditures.

The following table and corresponding footnotes include the assumptions and steps to calculate the values reflected in the Department-provided EIS Workbook:

TABLE B-5	
Metric	**Value**
Property Value Prior to Development	**$4,833,000**
Incremental Market Value[1]	$67,406,061
Estimated Property Value Post Development[2]	**$72,239,062**

[1] [redacted]

[2] In accordance with the guidance in the recently released FAQ's, property tax rates are input as $0.00 to prevent any PILOT revenues from flowing to the 10% Test.

CONSTRUCTION PERIOD IMPACTS

This section quantifies the direct economic activity generated during the project's construction period, defined as the period after project certification through project completion, based on the assumptions provided in the prior section.

In accordance with section 2.2.3 of the Framework, this analysis applies the Department's standardized Regional Purchase Coefficient (RPC) of 50% to taxable construction-related purchases. This assumes that 50% of taxable construction-period purchases are sourced within the Study Area and therefore subject to applicable state and local sales tax.

The following table summarizes the Construction-period tax impacts as reflected in the Department-provided EIS Workbook:

TABLE B-6

Metric	Amount
Inflation Adjusted Eligible Expenditures[1]	$130,255,834
Construction Labor Share	31.99%
Average annual wage (construction)	$62,520
Implied hourly wage	$30
Total labor Cost (proxy for payroll)	$41,663,464
Implied labor hours	1,386,116.53
Construction FTE (labor hours / 2,080)	666.40
State income tax on construction payroll	**$948,273**
Hard construction costs + business fixtures	[redacted]
Sales Tax on hard construction costs + business fixtures	**$982,017**
Total Construction-Period Tax Impacts	**$1,930,290**

[1] Estimated based on the Department-Provided Standardized Parameters for Annual Construction Inflation Rate, which is embedded and locked within the EIS Workbook. See Appendix A for Department-Provided Standardized Parameters.

C. Completion Period Impact Analysis

Completion Period Inputs

This section describes the assumptions used in the EIS Workbook for required Applicant-Provided Inputs and provides justification for any over-ridden Department-Provided Measurements related to Completion Period Impacts.

Stabilized On-Site Employment and Payroll by Use Type / Component:

Since each new building will be leased to a single entity, assumptions for Jobs and Payroll were provided for each building/tenant, not for each use as the standardized EIS is formatted. To provide the best possible estimate while maintaining the integrity of the EIS Workbook, the Input assumptions related to each tenant were allocated to each Use in the EIS as follows:

Table C-1

Building	Use Type (Actual)	Operating SF	Use Type in EIS Workbook	FTE Jobs Assumption Source	Payroll/Wage Assumption Source
Building #1	General Office	76,646 SF	Industrial Only	Included in Industrial	
	Industrial	192,745 SF		Based on new jobs & payroll and retained jobs reflected in JobsOhio Publicly Reported Metrics for the Project as Agreed to Between Tenant and JobsOhio. Retained jobs average annual wage is assumed to be $96,000 based on tenant-provided project scope. All new and retained jobs and payroll will be new to the Project Site.	
Building #2	Retail	3,000 SF	Recreation Only	Included in Recreation	
	Recreation	59,000 SF		FTE jobs calculated based on payroll provided by tenant divided by the Default Average Annual Wage in EIS Workbook for Recreation jobs	Total annual payroll provided by Tenant
Building #3	Medical Office	65,830 SF	Medical Office	Total employment and wages provided by Tenant to Applicant.	
Total	**Total**	**419,851 SF**			

At stabilization, ongoing activities at the Project Site are anticipated to generate approximately 495 total new on-site FTE jobs and generate approximately $49.7 million in new on-site annual labor income.

The following table summarizes the Project's gross projected permanent on-site employment and payroll by Use Type.

TABLE C-2

Use Type	Operating SF	Staffing Ratio, Stabilized[1]	SOC Code[2]	Average Wage[3]	Stabilized Annual Payroll
General Office[4]	76,646 SF	Included in Industrial			
Medical Office	65,830 SF	0.00259304268570561	Applicant-Provided	$117,165	$20,000,000
Retail[5]	3,000 SF	Included in Recreation			
Industrial	192,745 SF	0.00140622824523135	Applicant-Provided	$95,899	$29,057,306
Recreation	59,000 SF	0.000348706600278295	37-0000	$30,330	$624,000
Total	**419,851 SF**				**$49,681,306**

NET OPERATIONAL EMPLOYMENT SUMMARY – BASELINE ADJUSTMENTS:

All EIS calculations reflect only the net new economic activity attributable to the TMUD project. The Project consists solely of new construction and there is no pre-existing payroll at the project site. Therefore, Stabilized Annual Payroll is equal to Net Payroll as reflected in the Department-provided EIS Workbook.

Table C-3

Use Type	Stabilized FTE Jobs	Baseline FTE Jobs	Net Jobs	Stabilized Annual Payroll	Baseline Payroll	Net Payroll
General Office	-	N/A	-	-	N/A	-
Medical Office	170.70 Jobs	N/A	170.70 Jobs	$20,000,000	N/A	$20,000,000
Retail	-	N/A	-	-	N/A	-
Industrial	303.00 Jobs	N/A	303.00 Jobs	$29,057,306	N/A	$29,057,306
Recreation	20.57 Jobs	N/A	20.57 Jobs	$624,000	N/A	$624,000
Total	**494.27 Jobs**	**0.00 Jobs**	**494.27 Jobs**	**$49,681,306**	**N/A**	**$49,681,306**

[1] The EIS Workbook calculates Staffing Ratio as FTE Jobs per SF by default; Staffing Ratio inputs in the EIS Workbook reflect the Applicant-provided inputs needed to generate the FTE Jobs that are estimated using other methodologies. See Appendix B for additional details.
[2] Median Wage reflects the Department-provided SOC Codes for the Project MSA unless indicated otherwise.
[3] See Appendix B for data sources and additional details on average wage override assumptions for Medical Office and Industrial jobs.
[4] 100% of the General Office and Industrial SF will be occupied by the same tenant.
[5] 100% of the Retail and Recreation SF will be occupied by the same tenant.

ANNUAL STABILIZED TAXABLE SALES/REVENUE SUMMARY BY USE TYPE:

The following table summarizes the Project's projected gross annual stabilized taxable sales/revenue by Use Type.

Table C-4

Use Type	Occupancy (%)	Metric	Gross Annual Sales/Revenue
General Office	[redacted]	N/A	-
Medical Office	[redacted]	N/A	-
Retail	[redacted]	[redacted]	[redacted]
Industrial	[redacted]	N/A	-
Recreation	[redacted]	N/A	-
Total Annual Taxable Sales/Output			[redacted]

NET ANNUAL STABILIZED TAXABLE SALES/REVENUE SUMMARY – BASELINE ADJUSTMENTS:

All EIS calculations must reflect only the net new economic activity attributable to the TMUD project. The Project consists solely of new construction and there are no pre-existing taxable sales/revenues at the project site. Therefore, Gross Annual Revenue will be equal to Net Sales as reflected in the Department-provided EIS Workbook.

Table C-5

Use Type	Gross Annual Sales/Revenue	Baseline Sales	Net Sales (Gross LESS Baseline)
General Office	-	N/A	-
Medical Office	-	N/A	-
Retail	[redacted]	[redacted]	[redacted]
Industrial	-	N/A	-
Recreation	-	N/A	-
Total	[redacted]	[redacted]	[redacted]

[1] See Appendix B for data sources and assumptions for retail sales PSF

Completion Period Impacts

This section quantifies the direct operational impacts occurring within the project site during the statutory five-year completion period, which begins the day after project completion as defined in ORC 122.09. The Project is estimated to generate $11.74 million in new sales and income taxes over the five-year completion period as reflected in the following table.

Table C-6

Tax Category	Annual Net Base	Rate	Annual Tax	5-Year Total
State Income Tax	$49,681,306	2.28%	$1,130,762	$6,028,624
Local Income Tax	$49,681,306	2.00%	$993,626	$5,297,488
State & Local Sales Tax	[redacted]	8.00%	$78,000	$413,616
Lodging Tax	N/A	9.50%	N/A	N/A
Property Tax	$0	78.3608	$0	$0
			Total Annual Tax Impact	**$11,739,729**

D. Total Direct Impact Summary

This section presents the combined direct economic impacts for both the construction period and the five-year completion period.

The EIS Workbook captures $13,670,019 of the combined new tax revenues the Project is anticipated to generate for the State of Ohio and the local entities over the construction and 5-year completion period.

The following table reflects the Project's Summary Outputs generated by the Department-provided EIS Workbook.

Table D-1

Metric	Value
Total Eligible Construction Expenditures	$126,293,359
Total Construction Period Tax Impacts	$1,930,290
Total Completion Period Tax Increase (5-Year)	$11,739,729
Total Tax Increase	**$13,670,019**
Fifth Year Payroll	$56,374,164
Total Sales Subject to Sales Tax	$25,645,238
10% Test Result (PASS/FAIL)	**PASS**
Application Type	Major City TMUD

Statutory 10% Test Calculation

Under ORC 122.09(B)(7) and (A)(6), the increase in tax collections generated during the construction and completion periods must equal or exceed 10% of the project's total eligible construction expenditures. The standardized EIS Workbook automatically performs this calculation reflected in the table below.

Table D-2

Item	Amount
Total Eligible Construction Expenditures (A)	$126,293,359
Total Increase in Tax Collections — Construction Period (B)	$1,930,290
Total Increase in Tax Collections — Completion Period (C)	$11,739,729
Total Increase in Tax Collections (B + C)	**$13,670,019**
10% of Eligible Expenditures (A x 10%)	**$12,629,336**
Result: PASS / FAIL	**PASS**

APPENDIX A – DEPARTMENT-PROVIDED STANDARDIZED PARAMETERS

The following standardized parameters are provided by the Department, embedded in the EIS Workbook, and have not been modified:

1. **Annual Construction-Period Inflation Rate ("ACPIR") (PPI 10-year average): 3.28%** - Applied automatically to the eligible expenditures identified in the EIS Workbook to estimate Inflation Adjusted Eligible Expenditures in the Construction Period Calculation tab
2. **Completion-Period Inflation (CPI 10-Year Average): 2.94%** - Automatically applied annually to the completion period taxable sales and revenues identified in the EIS Workbook to estimate the 5-year total completion period tax generation from taxable sales and revenues.
3. **Annual Wage Growth Rate (ECI 10-Year Average): 3.21%** - Automatically applied annually to the completion period payroll estimates identified in the EIS Workbook to estimate the 5-year total completion period tax generation from payroll.
4. **FTE Conversion Standard: 2,080 hours per year,** applied to all employment calculations.

APPENDIX B
DOCUMENTATION & NOTES TAB

Appendix B – Documentation & Notes tab

Workbook Section/Tab	Input or Assumption	Value Used	Data Source (Appendix C)	Notes / Justification (Why this is reasonable)
Parameters – Applicant-Provided	Effective State Income Tax Rate (decimal)	2.27603113358971%	**1.** Ohio Revised Code Section 5747.02 | Tax Rates	The EIS Workbook does not properly account for progressive tax brackets and applies the same Effective State Income Tax Rate to construction and completion period payroll, so a blended rate was estimated to generate the same state income tax as if the 2025 Ohio annual income tax rates were used. The blended rate was calculated by estimating the blended Ohio income tax on the average base annual wage across both construction and completion periods (Combined Average Wage), then dividing the estimated blended Ohio income tax by the Combined Average Wage. Combined Average Wage was calculated as total construction and completion period payroll divided by total construction and completion period FTE jobs.
Parameters – Applicant-Provided	Effective Local Income Tax Rate (decimal)	2.00%	**2.** Regional Income Tax Authority (RITA) Summary for Brecksville, OH	Rate applicable to project address as of submission date
Parameters – Applicant-Provided	State Sales Tax Rate	0.0575	**3.** Ohio Department of Taxation, Sales & Use Tax Rate Map (3/31/2026)	Rate applicable to project address as of submission date
Parameters – Applicant-Provided	Local sales tax rate	0.0225	**4.** Ohio Department of Taxation, Sales & Use Tax Rate Map (3/31/2026)	Rate applicable to project address as of submission date
Parameters – Applicant-Provided	State + Local Effective Mill Rate per $1,000	0	**5.** Email from ODOD	Effective Mill Rate for the Project site is 78.360754. However, Input is $0 to reflect ensure that the non-abated property value that is subject to TIF does not generate revenues that would flow to the 10% Test calculation per FAQ's and guidance from ODOD.

Construction Period Inputs - Applicant Inputs	Land Acquisition Costs	[redacted]	N/A	[redacted]
Construction Period Inputs - Applicant Inputs	Hard Construction Costs	[redacted]	**6.** Line-Item budgets provided by Contractor	[redacted]
Construction Period Inputs - Applicant Inputs	Soft Construction Costs	[redacted]	**7.** Line-Item budgets provided by Contractor; Internal Estimates	[redacted]
Construction Period Inputs - Applicant Inputs	Taxable business fixtures cost	[redacted]	Conservative Internal Estimate	Includes estimated Furniture, Fixtures, & Equipment to be incurred after application submittal
Construction Period Inputs - Applicant Inputs	Other eligible costs	[redacted]	**8.** Line-Item Budget provided by Contractor; Internal Estimates	[redacted] Cost calculation.
Construction Period Inputs - Applicant Inputs	Estimated share of eligible construction costs attributable to labor (%)	31.9858718130351%	**9.** Contractor Wage Letters	Wage letters reflect estimated labor cost for each new building ($40,396,032 total). Blended rate is estimated at the total provided labor cost divided by estimated total eligible expenditures.

Construction Period Inputs - Applicant Inputs	Construction Expenditures Timeline	100% over construction period	**10.** Project Schedules for each Building;	See Table in EIS Narrative
Construction Period Inputs - Applicant Inputs	Property value prior to development	4833000	**11.** Cuyahoga County Fiscal Office Property Records	Existing tax market value of Project parcels updated as explained in the EIS narrative to reflect proportionate value of acreage beneath project site today.
Construction Period Inputs - Applicant Inputs	Estimated property value post development	72239061.5	Internal Estimate	[redacted]
Completion Period Inputs - General Office	Stabilized Occupancy / Utilization (%); Staffing Ratio, stabilized;	[redacted]	N/A	Per LOI, Stabilized Occupancy/Utilization is [redacted] For purposes of the EIS all Building 1 (CSA) jobs were manually added under Industrial jobs, although 76,646 SF of the building is classified as office space. The impacts are not double counted. Assumptions
Completion Period Inputs - Medical Office	Stabilized Occupancy / Utilization (%); Staffing Ratio, stabilized; Average Annual Wage; Baseline Payroll	[redacted] $20,000,000 payroll; 170.7 FTE jobs; 0.00259304268570561 Jobs per SF; [redacted].	**12.** Attachment: Completion Period Input – Medical Office	[redacted]

Completion Period Inputs - Retail	Stabilized Occupancy / Utilization (%); Sales per Square Foot;	[redacted] $[redacted]/SF	**13.** Attachment: Completion Period Input – Retail	[redacted]
Completion Period Inputs - Industrial	Stabilized Occupancy / Utilization (%); Staffing Ratio, stabilized; Average Annual Wage (overridden);	[redacted] 0.00140622824523135; $[redacted]	**14.** Single tenant leasing the full building upon construction completion; Attachment: Industrial Retained & relocated jobs - Average Salary Estimate; Attachment: JobsOhio Metric Report (Feb 2026)	[redacted]
Completion Period Inputs - Recreational	Stabilized Occupancy / Utilization (%); Staffing Ratio, stabilized;	[redacted] 0.000348706600278295	**15.** Total estimated payroll emailed from tenant provided by Applicant	The square footage of this space is included in plans submitted with the application. The retail jobs for Building #3 are included in this section as noted in the EIS Narrative. Total payroll was provided by tenant, the number of jobs was calculated using the department-provided SOC code for recreation jobs.
Pro Forma	Pro Forma Assumptions	N/A	**16.** Developer Pro Forma By Building	The EIS Framework indicates developer pro forma is required. Please find in this attachment the highly confidential and trade secret pro formas of estimated expenses and revenues for the 3 buildings in the Project.

APPENDIX C
DATA SOURCES & SUPPORTING DOCUMENTATION

AUTHENTICATED,
OHIO LEGISLATIVE SERVICE
COMMISSION
DOCUMENT #467288

Ohio Revised Code

Section 5747.02 Tax rates.

Effective: September 30, 2025

Legislation: House Bill 96 - 136th General Assembly

(A) For the purpose of providing revenue for the support of schools and local government functions, to provide relief to property taxpayers, to provide revenue for the general revenue fund, and to meet the expenses of administering the tax levied by this chapter, there is hereby levied on every individual, trust, and estate residing in or earning or receiving income in this state, on every individual, trust, and estate earning or receiving lottery winnings, prizes, or awards pursuant to Chapter 3770. of the Revised Code, on every individual, trust, and estate earning or receiving winnings on casino or sports gaming, and on every individual, trust, and estate otherwise having nexus with or in this state under the Constitution of the United States, an annual tax measured as prescribed in divisions (A)(1) to (4) of this section.

(1) In the case of trusts, the tax imposed by this section shall be measured by modified Ohio taxable income under division (C) of this section and levied in the same amount as the tax is imposed on estates as prescribed in division (A)(2) of this section.

(2) In the case of estates, the tax imposed by this section shall be measured by Ohio taxable income. If the estate has not more than twenty-six thousand fifty dollars of such income, the tax shall be levied on such income at the rate of 1.38462% for taxable years beginning in 2024, 1.31287% for taxable years beginning in 2025, and 1.27448% for taxable years beginning in 2026 and thereafter. If the estate has income in excess of that amount, the tax shall be levied at the same rates prescribed in division (A)(3) of this section for individuals.

(3) In the case of individuals, the tax imposed by this section on income other than taxable business income shall be measured by Ohio adjusted gross income, less taxable business income and less an exemption for the taxpayer, the taxpayer's spouse, and each dependent as provided in section 5747.025 of the Revised Code. If the balance thus obtained is equal to or less than twenty-six thousand fifty dollars, no tax shall be imposed on that balance. If the balance thus obtained is greater than twenty-six thousand fifty dollars, the tax is hereby levied as follows:

AUTHENTICATED,
OHIO LEGISLATIVE SERVICE
COMMISSION
DOCUMENT #467288

(a) For taxable years beginning in 2024:

OHIO ADJUSTED GROSS INCOME LESS TAXABLE BUSINESS INCOME AND EXEMPTIONS (INDIVIDUALS) OR MODIFIED OHIO TAXABLE INCOME (TRUSTS) OR OHIO TAXABLE INCOME (ESTATES)	TAX
More than $26,050 but not more than $100,000	$360.69 plus 2.75% of the amount in excess of $26,050
More than $100,000	$2,394.32 plus 3.5% of the amount in excess of $100,000

(b) For taxable years beginning in 2025:

OHIO ADJUSTED GROSS INCOME LESS TAXABLE BUSINESS INCOME AND EXEMPTIONS (INDIVIDUALS) OR MODIFIED OHIO TAXABLE INCOME (TRUSTS) OR OHIO TAXABLE INCOME (ESTATES)	TAX
More than $26,050 but not more than $100,000	$342.00 plus 2.75% of the amount in excess of $26,050
More than $100,000	$2,394.32 plus 3.125% of the amount in excess of $100,000

(c) For taxable years beginning in 2026 and thereafter, $332.00 plus 2.75% of the amount in excess of $26,050.

(4)(a) In the case of individuals, the tax imposed by this section on taxable business income shall equal three per cent of the result obtained by subtracting any amount allowed under division (A)(4)(b) of this section from the individual's taxable business income.

(b) If the exemptions allowed to an individual under division (A)(3) of this section exceed the taxpayer's Ohio adjusted gross income less taxable business income, the excess shall be deducted from taxable business income before computing the tax under division (A)(4)(a) of this section.

(5) Except as otherwise provided in this division, in August of each year, the tax commissioner shall make a new adjustment to the income amounts prescribed in divisions (A)(2) and (3) of this section by multiplying the percentage increase in the gross domestic product deflator computed that year

AUTHENTICATED,
OHIO LEGISLATIVE SERVICE
COMMISSION
DOCUMENT #467288

under section 5747.025 of the Revised Code by each of the income amounts resulting from the adjustment under this division in the preceding year, adding the resulting product to the corresponding income amount resulting from the adjustment in the preceding year, and rounding the resulting sum to the nearest multiple of fifty dollars. The tax commissioner also shall recompute each of the tax dollar amounts to the extent necessary to reflect the new adjustment of the income amounts. To recompute the tax dollar amount corresponding to the lowest tax rate in division (A)(3) of this section, the commissioner shall multiply the tax rate prescribed in division (A)(2) of this section by the income amount specified in that division and as adjusted according to this paragraph. The rates of taxation shall not be adjusted.

The adjusted amounts apply to taxable years beginning in the calendar year in which the adjustments are made and to taxable years beginning in each ensuing calendar year until a calendar year in which a new adjustment is made pursuant to this division. The tax commissioner shall not make a new adjustment in any year in which the amount resulting from the adjustment would be less than the amount resulting from the adjustment in the preceding year.

(B)(1) The tax imposed by this section on a trust shall be computed by multiplying the Ohio modified taxable income of the trust by the rates prescribed by division (A) of this section.

(2) A resident trust may claim a credit against the tax computed under division (B) of this section equal to the lesser of (a) the tax paid to another state or the District of Columbia on the resident trust's modified nonbusiness income, other than the portion of the resident trust's nonbusiness income that is qualifying investment income as defined in section 5747.012 of the Revised Code, or (b) the effective tax rate, based on modified Ohio taxable income, multiplied by the resident trust's modified nonbusiness income other than the portion of the resident trust's nonbusiness income that is qualifying investment income. The credit applies before any other applicable credits.

(3) Any credit authorized against the tax imposed by this section applies to a trust subject to division (B) of this section only if the trust otherwise qualifies for the credit. To the extent that the trust distributes income for the taxable year for which a credit is available to the trust, the credit shall be shared by the trust and its beneficiaries. The tax commissioner and the trust shall be guided by applicable regulations of the United States treasury regarding the sharing of credits.

AUTHENTICATED,
OHIO LEGISLATIVE SERVICE
COMMISSION
DOCUMENT #467288

(C) For the purposes of this section, "trust" means any trust described in Subchapter J of Chapter 1 of the Internal Revenue Code, excluding trusts that are not irrevocable as defined in division (I)(3)(b) of section 5747.01 of the Revised Code and that have no modified Ohio taxable income for the taxable year, charitable remainder trusts, qualified funeral trusts and preneed funeral contract trusts established pursuant to sections 4717.31 to 4717.38 of the Revised Code that are not qualified funeral trusts, endowment and perpetual care trusts, qualified settlement trusts and funds, designated settlement trusts and funds, and trusts exempted from taxation under section 501(a) of the Internal Revenue Code.

(D) Nothing in division (A)(3) of this section shall prohibit an individual with an Ohio adjusted gross income, less taxable business income and exemptions, of twenty-six thousand fifty dollars or less from filing a return under this chapter to receive a refund of taxes withheld or to claim any refundable credit allowed under this chapter.

Special Notes and Tax Documents

RULES & REGULATIONS View Document

TAX ORDINANCE View Document

2106 BUSINESS EXPENSES
The unreimbursed employee expense (2106) deduction is eliminated for federal income tax purposes for most employees.

AGE EXEMPTION Individuals under 18 years of age are exempt from paying municipal income tax.

BALANCE DUE/OVERPAYMENT INFORMATION
Amounts under $10.01 will not be collected or refunded. The $10.01 de minimis threshold does not apply to amounts required to be withheld by employers.

ESTIMATED PAYMENT REQUIREMENTS
Quarterly payments of estimated tax are required if the anticipated amount due is $200 or more.

LOTTERY/GAMBLING WINNINGS
Lottery and gambling winnings are taxable - no minimum. Gambling losses may not offset gambling winnings unless the taxpayer is a professional gambler per IRS regulations.

NET OPERATING LOSS
Beginning with losses incurred in 2017 and thereafter, a net operating loss may be carried forward for 5 years. For taxable years beginning in 2018, 2019, 2020, 2021 and 2022, losses are subject to a 50% phase-in limitation. The amount of net operating loss carry forward that may be utilized in tax years 2018 through 2022 is limited to the lesser of 50% of the carried forward loss or 50% of that year's income. For taxable years beginning in 2023 and thereafter, a net operating loss is no longer limited to a 50% phase-in limitation and the full loss may be used.

S-CORPS S-Corp distributive shares that do not represent wages are generally not taxable and should not be reported on Form 37.

WITHHOLDING FILING FREQUENCY
If withholding amount is $2,400 or more in the immediately preceding calendar year or more than $200 in any one month of the preceding calendar quarter, file monthly - due date is the 15th day of the following month. All employers not required to file monthly, file quarterly - due date is the last day of the month following the end of the quarter.

Sales and Use Tax Rate Map

March 31, 2026

State and Permissive (Local) Sales and Use Tax Rates in Effect as of October 2025 by County

This map displays all Ohio counties and the sales tax rate in that county. The map is followed by a table which lists the rates in each county.

As of October 2025, the total sales tax rate in each county ranged from 6.50 percent to 8.0 percent. Counties with the highest sales tax rates (7.30 percent or higher) are colored black. Counties with tax rates in the middle (between 7.05 percent and 7.25 percent) are colored grey. Counties with the lowest tax rates (7.0 percent or lower) are colored white.

There are seven counties with rates of 7.30 percent or higher. The highest tax rate of 8.0 percent is found in Cuyahoga and Franklin Counties. Other counties with rates above 7.30 percent include Hamilton County (7.80 percent), Lucas County (7.75 percent), Coshocton County (7.75 percent), Montgomery County (7.50 percent), and Mahoning County (7.50 percent).

There are 31 lower rate counties, with rates between 6.50 percent and 7.0 percent. These counties are mostly located in the northeastern and southwestern parts of the state, as well as around the Columbus and Toledo metro areas (Franklin and Lucas Counties). The lowest rate of 6.50 percent is found in Butler, Lorain, Stark, and Wayne Counties.

The other 50 counties in the state all have a tax rate of 7.25 percent.

Portions of Delaware, Fairfield, Licking, & Union counties assess a transit authority sales tax levy of 1.00 percent and portions of Wood County assess a transit authority sales tax levy of 0.50 percent, which are not reflected on the map.

Percentages shown in this publication are from internal records of the Ohio Department of Taxation.

Data Source #3 + 4. Parameters - State & Local Sales Tax Rate - Ohio Sales Tax Map - Rates by County

Total State and Local Sales Tax Rates, by County, Effective October 2025

Newest Rate Change:
Brown County tax rate 1.25% (previously 1.50%)

* Portions of Delaware, Fairfield, Licking & Union counties assess a transit authority sales tax levy of 1.00% (not reflected on this map.)
** The City of Rossford in Wood County assesses a 0.50% transit tax effective April 1, 2022; the total sales and use tax rate for that municipality is 7.25% (not reflected on this map).

Please be advised that the Fiscal Office identified a clerical error that was submitted to the State of Ohio. This error resulted in an incorrect tax rate calculation for Class II properties only (Commercial/ Industrial) for Tax Year 2024/Collection Year 2025. The Fiscal Office worked with the State of Ohio to correct the error. The correction will appear on tax bills due in February 2026 as an omitted tax.

THIS DOES NOT AFFECT RESIDENTIAL PROPERTY

Subject: RE: PILOTs - TMUD EIS Round 5

CAUTION EXTERNAL EMAIL

From my understanding, the third-party reviewer wants to see the full property value post development with adjustments to tax revenues made via the tax rate inputs. I believe the workbook is designed to only capture the increase in tax revenues, so if there will be no increase in property tax revenues, this could be reflected by having a zero property tax rate.

We will review each application and EIS along with the third-party to ensure that TIF/PILOT/Abatement procedures are applied consistently for all projects.

Thanks,

Ohio Department of Development

Hi Amy!

I just spoke wit Brendan, and he advised that the high level payroll assumption would be $20M. Does this help?

PROCEED WITH CAUTION: Slow down and pay close attention to emails sent from outside the organization. If you receive an unsolicited email from an unknown sender or are suspicious of the tone, style, vocabulary or urgency of the email message, never click links or open attachments within it. When in doubt, you should either delete the email, verify its authenticity by contacting the sender using an alternative method not listed in the email, or submit it via the Report button in Outlook for investigation. If you don't have the Report button or are using a mobile device, forward the email as an attachment to phishtanktriage@ccf.org

Lindsey, this is great! Is there any way to share payroll information as well?

How to Measure and Boost Average Retail Sales Per Square Foot

How do you know how well your retail space is performing? One key metric that helps retailers assess this efficiency is Retail Store Sales Per Square Foot. This post will help you understand what this metric means, why it's vital, how to calculate sales per square foot, and strategies to improve it.

The Importance of Sales Per Square Foot

Retail Store Sales Per Square Foot is a critical key performance indicator (KPI) that measures how effectively a retail space generates revenue. By understanding, tracking, and optimizing this metric, you can make more informed, data-driven decisions about your store layout, inventory management, and overall business strategy.

What Is Average Retail Sales Per Square Foot?

Definition: This metric calculates the average revenue generated for every square foot of retail space.

Significance: It provides insights into space utilization, helps identify underperforming areas, and

- **Big Box Stores**: Costco reports about $1,638/sq. ft., Walmart around $574/sq. ft., and Target approximately $300/sq. ft.
- **Convenience Stores**: Average around $330/sq. ft.
- **National Average**: Approximately $325/sq. ft. across all retail segments.

How to Calculate Sales Per Square Foot

Formula:

Sales Per Square Foot = (Total Sales) / (Total Square Footage of Retail Space)

Example:

If a store generates $1,000,000 in annual sales and has 2,000 square feet of selling space:

$1,000,000 / 2,000 sq. ft. = $500/sq. ft.

Considerations:

- Exclude non-selling areas like stockrooms or offices.
- Use consistent time frames (monthly, quarterly, annually) for comparison.
- Use tools such as Calculator Academy's Sales Per Square Foot Calculator to check for accuracy.

Why Sales Per Square Foot Is a Crucial Retail KPI

Knowing your sales per square foot can benefit your retail operations in multiple ways.

- **Inventory Efficiency**: Helps you identify and prioritize the products with high sales density that generate the most revenue relative to the space they occupy.
- **Space Utilization**: Highlights underperforming areas to guide layout decisions and adjustments.
- **Performance Benchmarking**: Allows comparison with industry standards and your competitors.
- **Profitability Insight**: Reveals relationships between space usage and profit margins.
- **Operational Adjustments**: Inform your strategic marketing, merchandising, and staffing

improve your overall performance. Leading contributors include the following.

- **Product Assortment**: Offering high-demand, high-margin products can boost sales density.
- **Store Layout**: Efficient, engaging, and attractive layouts improve customer flow and product visibility.
- **Pricing Strategies**: Competitive and strategic pricing and well-priced promotions can increase average transaction values.
- **Staffing and Customer Service**: Knowledgeable, personable, well-trained staff enhance customer experience and drive sales.
- **Technology**: Modern point-of-sale (POS) systems, self-service options, and analytics tools can streamline operations and provide valuable insights.

Strategies to Boost Sales Per Square Foot

Just as multiple factors contribute to your sales per square foot, there are numerous things you can do to boost your performance of this critical KPI.

- **Optimize Your Store Layout**. Design intuitive pathways and strategically place high-margin items and promotional displays to encourage purchases.
- **Improve Your Inventory Management**. Regularly assess product performance and adjust your stock levels accordingly.
- **Enhance Your Customers' Experiences**. Offer personalized services, loyalty programs, and interactive displays.
- **Incorporate Upselling and Cross-Selling**. Train your staff to suggest complementary products to your customers and ensure your self-service options make similar offers.
- **Leverage Digital Tools**. Utilize data analytics to understand customer behavior and preferences.
- **Make Seasonal Adjustments**. Tailor your product offerings and promotions to seasonal trends and events.

Tools and Technologies to Track Sales Per Square Foot

The more accurate, comprehensive, and timely your sales per square foot information, the more

- **Foot Traffic Analytics**: Use sensors and AI to monitor customer movement and optimize store layout.
- **Inventory Management Tools**: Ensure optimal stock levels and reduce carrying costs.

Case Study: Improving Sales Per Square Foot

- **Initial Challenge**: A retail store had a sales per square foot of $250, below the industry average. The store decided to implement strategic changes to enhance its performance of this critical KPI.
- **Actions Taken**:
  - Redesigned store layout to improve customer flow.
  - Introduced high-margin products and removed underperforming items.
  - Trained staff on upselling techniques.
  - Implemented a modern POS system for real-time data analysis.
- **Results**: Within 12 months, sales per square foot increased to $342, marking a 40% growth.

Common Pitfalls to Avoid When Measuring Sales Per Square Foot

As you pursue your journey to improved sales per square foot, there are three potential impediments you must make every effort to avoid.

Don’t overlook seasonal variations. Failing to account for seasonal sales fluctuations can skew your sales data and lead to inaccurate analysis.

Don’t ignore your customers’ experiences. Focusing solely on metrics without considering and enhancing customer satisfaction can cause you to make sub-optimal, inadequately informed decisions.

Don’t rely on inaccurate data. Incorrect measurements of sales levels or square footage can result in misleading conclusions.

Conclusion: Take Charge of Your Retail Store Sales

growth, and sustainability. By proactively managing and enhancing your Retail Store Sales Per Square Foot, you're investing in your retail business's long-term success and resilience. DTiQ's 360iQ platform gives you the insights you need into customer behavior and store performance. To learn more, visit our website.

Re: Cuyahoga Riverfront Development Transformational Mixed-Use Development – Economic Impact Statement

Dear Ms. Janik:

At your company's request, Project Management Consultants, LLC has performed an Economic Impact Statement for the Cuyahoga Riverfront Development Transformational Mixed-Use Development (TMUD) project, which is located at the 351 Canal Road, West 3rd Street and Huron Road in Cleveland, OH, utilizing inputs provided by your team, direct calculations, conservative assumptions, and the "IMPLAN" software and data produced by IMPLAN Group, LLC. We have not examined the Client-provided data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact statement. Further, this analysis is subject to the Assumptions and Limiting Conditions found in Appendix E of this report.

This report contains, to the fullest extent possible and practical, explanations of the data, reasoning, and analyses that were used to develop the opinions contained herein. The depth of discussion contained in the report is specific to the needs of the client.

Bedrock Cleveland is the Client in this engagement and intended user of this report. As our client, Bedrock Cleveland owns this report and permission must be granted from them before another third party can use this document. We assume that by reading this report another third party has accepted the terms of the original engagement letter including scope of work and limitations of liability. We are prepared to modify this document to meet any specific needs of the potential user under a separate agreement.

The Stated Purpose of this assignment is to assist with projections of job, tax, and wage information for application to the State of Ohio Transformational Mixed-Use Development Program. You agree not to use this report other than for the Stated Purpose, and you agree to indemnify us for any claims, damages, or losses that we may incur as the result of your use of the Report for other than the Stated Purpose. Without limiting the general applicability of this

paragraph, under no circumstances may the Report be used in advertisements, solicitations and/or any form of securities offering.

The authors of this report certify that, while we represent the project in other capacities, we are not part of the development team, nor are we affiliated with any member of the development team. Please do not hesitate to contact us if there are any questions regarding the report or if Project Management Consultants, LLC can be of further assistance. It has been our pleasure to assist you with this project.

Sincerely,

Ryan P. Sommers, CPA
Managing Director of Financial Services
Project Management Consultants, LLC

PROJECT MANAGEMENT CONSULTANTS (PMC) EXPERIENCE

	Name	TMUD Experience & Background
	**Nora Walsh** Senior Analyst	In her almost four years with Project Management Consultants, Nora has worked with the PMC team to complete TMUD applications and economic impact analyses and has supported over a dozen clients on submitting comprehensive applications in Rounds 1,2 and 3 of the program. Nora leads the Economic Impact Statement (EIS) analysis process in collaboration with the team and has thus far conducted thirteen EIS reports for the TMUD program. Nora brought her economic impact analysis and report writing skills from her experience with the Center for Economic Development at Cleveland State University where she analyzed economic impacts and compiled narratives around those impacts. Since joining PMC, Nora has become an expert in the IMPLAN analysis software and led the economic impact report analysis and writing processes in Rounds 1, 2 and 3 for PMC clients, including PMC's three Round 2 winners and three Round 3 winners.
	**Ryan P. Sommers, CPA** Managing Director of Financial Services	Ryan Sommers has an extensive background working with various tax credit programs and complex private and public finance structuring. Ryan's experience with tax credits includes Historic Tax Credits, New Markets Tax Credits, and Opportunity Zone Tax Credits. Ryan recognizes the critical value-add of the Transformational Mixed-Use Development ("TMUD") tax credit program. Since the program's inception he has become an expert on the program. He advises clients on project eligibility, economic impacts, tax credit monetization, and chances of application success. As managing director of financial services, Ryan identifies, secures and manages private and public financing opportunities for business expansion projects and real estate development. Ryan is currently managing a team responsible for 50+ projects throughout the country with $3 billion in development value including $600 million in public financing for public-private partnerships. He has helped his clients obtain over $200 million in state and federal Historic Tax Credits and over $100 million in New Markets Tax Credits. Ryan also created PMC's direct tax impact analysis models which help demonstrate exact tax estimates for a Project or Development site on the surrounding area, including income taxes, sales taxes, bed taxes and property taxes. Ryan has worked on this modeling for a decade. These outputs help demonstrate the ROI of a project to various government entities and provide him with experience needed to complete economic impact statements as complicated as those required for TMUD applications.

	Name	TMUD Experience & Background
	**Kenneth S. Kalynchuk** Director and Principal	Ken Kalynchuk leads PMC's financial analyst and economic impact analysis team. Ken has conducted thirteen economic impact statements (EIS reports) for Rounds 1, 2 and 3 of the TMUD program, with emphasis on conservative estimates and common sense for whether projects can be considered catalyzed or not. Ken helps clients navigate the predevelopment stage of their projects through incentive, land use, and market research; pro forma development; feasibility analyses; economic impact analyses; and property tax analyses. Prior to joining the firm, Ken was a graduate research assistant with the Center for Economic Development at Cleveland State University, where he evaluated economic development programs and best practices in economic development policy, performed studies on Historic Preservation Tax Credit funding and rental markets, and wrote case studies and employment/demographic impact analyses. During his time at Cleveland State Ken learned IMPLAN software and economic impact techniques. These skills have helped clients at PMC, where Ken has helped generate economic impact reports and tax estimates for more than 7 years.
	**Alexander Previts, CPA** Development Finance Manager	In his role as development finance manager, Alex assists in identifying, securing and managing public and private financing opportunities for development and construction projects. Alex specializes in helping corporate clients with headquarters relocation projects. In addition, he works with developers to repurpose vacant facilities and develop greenfield sites into productive reuse by utilizing property tax, local and state incentives. Alex has also worked with clients to pair their projects with Qualified Opportunity Zone investments and incentives. Alex works with clients through the finance structuring process by first identifying the needs and gap of the project and assessing the tools available for the project's financing at the local, regional and state level. Alex directs clients through the nuances of the predevelopment stage of their projects through incentive, land use, and market research; pro forma development; feasibility analyses; economic impact analyses; and property tax analyses. He focuses on structuring tax incentives, including tax increment financing (TIF), and monetizing TIF structures through bank and bond financing. His significant knowledge on TIF structures, property tax valuations, and property tax modeling are utilized in the TMUD EIS analyses.

EXECUTIVE SUMMARY

Project Management Consultants LLC (PMC) was engaged by Bedrock Cleveland (the "Company") to analyze the economic and fiscal impacts of the Company's proposed Cuyahoga Riverfront Development transformational mixed-use development project located at 351 Canal Road, West 3rd Street and Huron Road in Cleveland, OH. The Cuyahoga Riverfront Development is a transformational development planned along Cleveland's eastern Cuyahoga River riverfront. This catalytic development will publicly connect Downtown Cleveland on its bluff to the Flats and the banks of the Cuyahoga River in this stretch for the first time in in over a century. The Development will simultaneously provide public access to 3,000 linear feet of the Cuyahoga River to the public for the first time in this section's history, connect Tower City, Public Square, and the Gateway Districts of Downtown Cleveland together, and improve the lives of thousands of Clevelanders in the process through the private development activities planned.

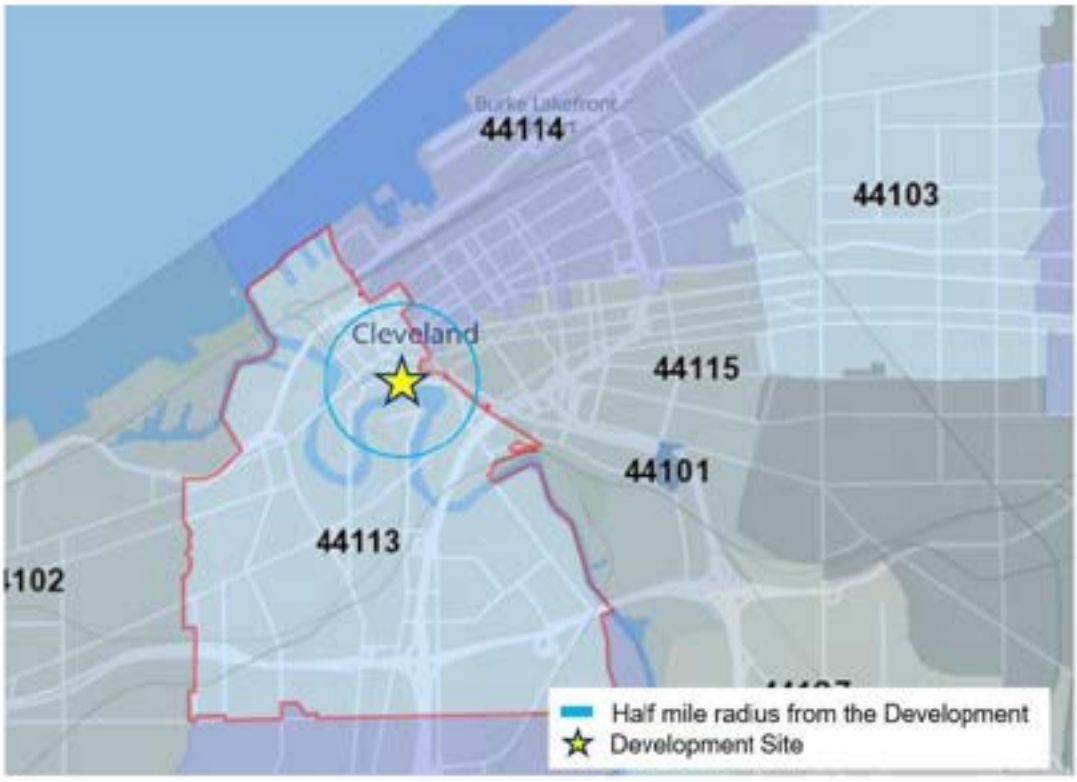
This 3,000-foot stretch of Cuyahoga riverfront has long been an industrial and shipping node for the City of Cleveland, inaccessible to Cleveland residents. For the last several decades the development site has been used as private parking lots for office workers, Tower City shoppers, and Gateway District visitors. Through the vision of Bedrock Cleveland and its partners the project is taking a bold step to transform this area into a neighborhood connecting Cleveland's core to its river shore. This analysis was developed to support the Company's application for Ohio Transformational Mixed-Use Development ("TMUD") tax credits from the fourth round of the program in fiscal year 2025.

Within the TMUD application and this Economic Impact Statement, the Development plan is defined as being completed in multiple phases. Therefore, this report will consider impacts of the "Project" ("Phase I"), and the "Development" ("Phase II") separately. The Construction period for purposes of the report runs from the TMUD application date (October 4, 2024) through the completion of the Project and expected certification of potential TMUD tax credits by the Ohio Tax Credit Authority (December 31, 2028).

The Project (Phase I) consists of a 190 key hotel, a 6,100-seat entertainment venue, a 98,208 square foot sports training facility and 55,120 square foot sports medicine facility and 384 structured parking spaces across three buildings. To date, the Project has incurred approximately $[redacted] in development costs. The remaining investment to complete the Project represents an estimated $470,408,473 of the total $488,708,473 anticipated Project investment.

The Development (Cuyahoga Riverfront Development - Phase II) consists of 729 proposed residential units, 80,219 square feet of restaurant space, 80,219 square feet of new retail space, the redevelopment of Tower City which will create 198,737 square feet of new retail space, approximately 1.5 million square feet of office space and 1,620 structured parking spaces. The total estimated Development costs of Phase II are approximately $1,419,793,266. The estimated timeline of construction commencement and completion begins January 2026 through December 2031, depending on the structure.

Economic and fiscal impacts ("Impacts") measured in terms of output, employment, labor income, and taxes were estimated primarily using the IMPLAN input-output model based on 2022 data, which is the most accurate data available and adjusted to reflect 2029 dollars, the first year of the 5-year completion period. Per requirements of the TMUD program defining the project's surrounding area, the impacts are presented at the local ZIP code level for the project ZIP codes in Ohio, 44113 (the Project) and 44114 and 44115 within a half mile radius of the site.



This report considers the one-time direct economic and fiscal impacts resulting from the construction of the Project, Development and Surrounding Area (indirect) ("Construction

Period Impacts"), as well as the permanent economic and fiscal impacts, direct and indirect, resulting from the ongoing activities associated with the Project, Development and Surrounding Area ("Completion Period Impacts").

The impacts of the two components that are analyzed -- Construction Period Impacts and Completion Period Impacts are presented individually and as a whole in the Total Impacts section. Construction Period and Completion Period Impacts are presented in annual terms.

Project Management Consultants collaborated with Huron Holdings LLC to gather necessary data for both the Project and Development and to establish assumptions where needed. For detailed assumptions please find the Construction Period Impact Assumptions in Appendix A, Completion Period Impact Assumptions of the Project in Appendix B, Completion Period Impact Assumptions of the Development in Appendix C and Completion Period Impact Assumptions of the Surrounding Area in Appendix D. Assumptions and Limiting Conditions can be found in Appendix E. Project Management Consultants used zip-code level data to collect employment, wage, and tax information. All tax impacts include State, County and local level tax estimates via IMPLAN analysis as well as direct analysis completed by PMC. All assumptions were verified by the Company to the highest degree of reasonableness.

The table below provides a quick reference of definitions for the items included in the economic impact statement summary tables that follow (pages 10-30). Additional information about terms and the methodology used in this study can be found in the Glossary and Methodology on page 31 through 32.

	Direct	Indirect
Jobs	Individuals directly involved in the redevelopment Project or working at the building upon completion of the redevelopment.	Multiplier-effect jobs at the industry level, such as suppliers, service providers, etc. (indirect).
Earnings or Labor Income	Wages and benefits paid to direct jobs.	Total wages and benefits associated with the indirect jobs.
Taxes	An estimate of all taxes and fees collected by state, county, municipal or other government entities, including, but not limited to property taxes, income taxes, sales taxes, and lodging taxes.	

Construction Period Impacts

Construction Project Impacts

The Project is anticipated to involve a direct investment of more than $488 million to be completed over a four-year Construction Period from 2024 through December 31, 2028. During the Construction Period, the Project is anticipated to create a total of 2,944 direct construction jobs with $192.1 million in labor income. The Project is also estimated to generate $9.03 million in new income taxes during the Construction Period. Please note that the estimates in the tables below represent annual impacts over the Construction Period.

Estimated Construction Impacts of the Project

- **2,944 Direct Jobs with $192.1 million in Direct Payroll total over the Construction Period**
- **$9.03 million in new income taxes over the Construction Period**

Construction Jobs and Payroll Impacts of the Project

During the Construction Period, the Project is expected to create 2,944 total direct construction jobs and $192,111,205 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix A due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). The average hourly wage for construction jobs in year 2028 is estimated at $31.37. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Construction Project Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2024	145	$31.37	$9,487,959
2025	588	$31.37	$38,374,168
2026	914	$31.37	$59,611,836
2027	645	$31.37	$42,084,461
2028	652	$31.37	$42,552,778

Construction Tax Impacts Of The Project

The Construction Period of the Project is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated over the Construction Period, as calculated by IMPLAN software and PMC utilizing the hard construction cost impacts outlined in Appendix A. This input data was provided by the client based on their construction cost budget for the Project.

The table below illustrates the direct income tax estimates analyzed by PMC using local tax rates to calculate direct taxes for the Construction Period. Income taxes were estimated using the appropriate local and state income tax rates (2.5% for Cleveland and state income tax varied based on income bracket). Over the Construction Period, the Project is estimated to generate a total of $9,038,527 in direct local and state income taxes. It is assumed that the Project will utilize sales tax exemption on construction materials through the Cleveland-Cuyahoga County Port Authority and so sales taxes were not included in this analysis.

Construction Project Impacts: Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
2024	$-	$446,393	$-	$-	$446,393
2025	$-	$1,805,443	$-	$-	$1,805,443
2026	$-	$2,804,642	$-	$-	$2,804,642
2027	$-	$1,980,007	$-	$-	$1,980,007
2028	$-	$2,002,040	$-	$-	$2,002,040

Construction Development Impacts

The Development is anticipated to involve a direct investment of over $1.4 billion to be completed over a six-year Construction Period from 2026 through 2031. Years 2029-2031 of the Construction Impacts for the Development were included in the Completion Period Impacts section because these impacts will occur during the five-year Completion Period. During the Construction Period, the Development is anticipated to create a total of 3,973 in direct construction jobs with $249.2 million in labor income. The Development is also estimated to generate $11.7 million in new income taxes during the Construction Period. Please note that the estimates in the tables below represent annual impacts over the Construction Period.

Estimated Construction Impacts of the Development

- **3,973 Direct Jobs with 249.2 million in Direct Payroll total over the Construction Period**
- **$11.7 million in new income taxes over the Construction Period**

Construction Jobs and Payroll Impacts of the Development

During the Construction Period, the Development is expected to create 3,973 total direct construction jobs and $249,177,765 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix A due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). The average hourly wage for construction jobs in year 2028 is estimated at $30.02. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Construction Development Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2024	0	$-	$-
2025	0	$-	$-
2026	360	$30.72	$23,006,321
2027	728	$30.38	$46,012,642
2028	2,885	$30.02	$180,158,801

Construction Tax Impacts Of The Development

The Construction Period of the Development is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated over the Construction Period, as calculated by IMPLAN software and PMC utilizing the hard construction cost impacts outlined in Appendix A. This input data was provided by the client based on their construction cost budget for the Development.

The table below illustrates the direct income tax estimates analyzed by PMC using local tax rates to calculate direct taxes for the Construction Period. Income taxes were estimated using the appropriate local and state income tax rates (2.5% for Cleveland and state income tax varied based on income bracket). Over the Construction Period, the Development is estimated to generate a total of $11,654,083 in direct local and state income taxes. It is assumed that the Project will utilize sales tax exemption on construction materials through the Cleveland-Cuyahoga County Port Authority and so sales taxes were not included in this analysis. Additionally, since the Development will have construction through 2031, the remaining construction impacts were included in the Completion Period impacts.

Construction Development Impacts: Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
2024	$-	$-	$-	$-	$-
2025	$-	$-	$-	$-	$-
2026	$-	$1,076,009	$-	$-	$1,076,009
2027	$-	$2,152,018	$-	$-	$2,152,018
2028	$-	$8,426,055	$-	$-	$8,426,055

Construction Surrounding Area Impacts

During the Construction Period, the Project is anticipated to create a total of approximately 80 indirect construction jobs with $7,911,428 in indirect labor income in the surrounding area. The surrounding area is also estimated to generate $1,610,069 in new indirect property, sales and income taxes over the Construction Period (2024-2028). Surrounding area impacts were estimated using indirect impacts of the Project in IMPLAN. It is possible that the impacts are much greater in the surrounding area due to the catalytic nature of this development.

Construction Jobs and Payroll Impacts of the Surrounding Area

During the Construction Period, it is expected that 80 total indirect jobs will be created in the surrounding area due to construction activities on the site. The average hourly wage for these jobs in year 2028 is estimated at $47.91. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Construction Surrounding Area Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2024	2	$47.44	$167,746
2025	7	$47.48	$678,452
2026	15	$47.48	$1,447,939
2027	16	$47.57	$1,543,439
2028	41	$47.91	$4,073,851

Construction Tax Impacts Of The Surrounding Area

During the Construction Period, the development is anticipated to generate significant new tax revenues within the surrounding area.

This surrounding area impacts identify the indirect taxes generated by the project over the Construction Period, as calculated by IMPLAN software utilizing the hard construction costs outlined in Appendix A. This input data was provided by the client based on their construction cost budget for the Project and Development.

The table below illustrates the indirect and sales, income, lodging and property tax estimates generated in IMPLAN. Over the Construction Period, the Project is estimated to generate

$1,610,069 in new taxes within the surrounding area. Of these taxes, it is expected that $1,251,521 new indirect sales taxes will be generated in the surrounding area as a result of this development project.

Construction Surrounding Area Impacts: Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
2024	$26,359	$606	$-	$6,984	$33,950
2025	$106,687	$2,459	$-	$28,317	$137,464
2026	$230,267	$5,261	$-	$60,588	$296,117
2027	$247,525	$5,612	$-	$64,637	$317,775
2028	$640,680	$14,708	$-	$169,371	$824,759

Indirect income taxes were estimated using IMPLAN. The table above shows the indirect income tax estimated impacts. Over the Construction Period, it is estimated that within the surrounding area a total of $28,648 in indirect local and state income taxes will be generated.

Property taxes were estimated based on client-provided data that was then input into IMPLAN. The table above shows the indirect property tax estimated impacts. Over the Construction Period, the surrounding area is expected to generate a total of $329,899 in indirect property taxes.

Construction Surrounding Area Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
2024	$-	$-	$[redacted]	$[redacted]
2025	$-	$-	$[redacted]	$[redacted]
2026	$-	$-	$[redacted]	$[redacted]
2027	$-	$-	$[redacted]	$[redacted]
2028	$-	$-	$[redacted]	$[redacted]

The Project is expected to generate $11,331,390 in new sales revenues in the surrounding area over the construction period, as shown in the table above. It was assumed that a portion of construction workers purchased a lunch in the surrounding area at an average price of $14, 3 times a week each year.

Construction Catalyzed Project Impacts

The Cuyahoga Riverfront Development Transformational Mixed-Use Development will have a catalytic impact on economic growth in Downtown Cleveland. Specific catalyzed projects of scale were not identified as of the writing of this Economic Impact Statement for inclusion in this report.

Completion Period Impacts

Project Impacts

Upon Project construction completion, the Project will have a significant ongoing annual impact on the State and local economy. This impact will come in the form of activities to support the maintenance and operation of the buildings, as well as from businesses that will locate operations at the development site as tenants. Once the buildings reach full occupancy, these ongoing activities are anticipated to support approximately 548 total direct jobs and generate $225.7 million of direct annual labor income in 2033.

The Project is also estimated to generate $150.7 million in new property, sales, lodging and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2029 through 2033. In addition, the Project is expected to generate approximately $1.1 billion in retail, dining, and entertainment sales over the completion period.

Estimated Completion Period Impacts of the Project

- **548 Direct Jobs with $225.7 million in Direct Payroll in 2033**
- **$150.7 million in new property, sales and income taxes over the 5-year completion period**
- **$1.1 billion in retail, dining, and entertainment sales over completion period**

Permanent (Annual) Jobs and Payroll Impacts of the Project

Upon completion of construction, the Project is expected to create 548 total jobs, 15 of which will be jobs to support maintenance and operations of the buildings and commercial parking, 533 of which will be commercial tenant jobs. In year 2033, the 15 Operations jobs are expected to generate $893,248 in direct labor income with an average hourly wage of $28.63. (Operations job estimates are shown in the table below).

Project Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2029	15	$25.44	$793,640
2030	15	$26.20	$817,449
2031	15	$26.99	$841,972
2032	15	$27.80	$867,231
2033	15	$28.63	$893,248

In year 2033, the Project Tenant jobs are expected to generate a total of $224,827,411 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix B

due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). In 2033, Tenant jobs are expected to have an average hourly wage of $202.84. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Project Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2029	533	$180.22	$199,756,243
2030	533	$185.63	$205,748,930
2031	533	$191.20	$211,921,398
2032	533	$196.93	$218,279,040
2033	533	$202.84	$224,827,411

Permanent (Annual) Tax and Sales Impacts Of The Project

The Project is expected to be completed prior to calendar year 2029 following construction years 2024 through 2028. Based on TMUD application requirements, a completion period was set for calendar years 2029 through 2033, when the Project will experience its first five years of operations. During this period, the Project is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated by the project starting in 2029, as calculated by IMPLAN software and PMC utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix B. This input data was provided by the client based on planned tenants, operations wages and staffing, and resident income requirements for the apartment units.

The table below illustrates the permanent direct sales, income, lodging and property tax estimates analyzed by PMC using local tax rates to calculate direct taxes. Over the 5-year impact period, the Project is estimated to generate a total of $55,154,417 in direct local, county and state sales taxes within the Project site and surrounding area. Sales taxes were calculated using an 8% total tax rate for Cuyahoga County.

Project Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
2029	$10,388,586	$2,897,072	$1,719,306	$11,675,766	$26,680,731
2030	$10,700,244	$2,983,984	$1,770,885	$13,791,946	$29,247,061
2031	$11,021,251	$3,073,504	$1,824,011	$15,188,557	$31,107,325
2032	$11,351,889	$3,165,709	$1,878,732	$15,188,557	$31,584,888
2033	$11,692,445	$3,260,680	$1,935,094	$15,188,557	$32,076,778

Income taxes were estimated using the appropriate local and state income tax rates (2.5% for Cleveland and state income tax varied based on income bracket). The table above shows the direct permanent income tax estimated impacts. Over the 5-year completion period, the Project is estimated to generate a total of $15,380,953 in direct local and state income taxes.

Lodging taxes were estimated using a combined tax rate of 9.5% (6.5% for Cuyahoga County and 3% for Cleveland). The table above shows the direct permanent lodging tax estimated impacts that will be generated by the hotel on site. Over the 5-year completion period, the Project is estimated to generate a total of $9,128,029 in direct lodging taxes.

Property taxes were estimated based on client-provided value estimates of the completed project. The table above shows the permanent incremental property tax estimated impacts. Over the 5-year impact period, the Project is expected to generate a total of $71,033,386 in direct incremental property taxes.

Project Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
2029	$-	[redacted]	$-	[redacted]
2030	$-	[redacted]	$-	[redacted]
2031	$-	[redacted]	$-	[redacted]
2032	$-	[redacted]	$-	[redacted]
2033	$-	[redacted]	$-	[redacted]

The Project is expected to generate $1,110,239,844 in new sales revenues in the area over the 5-year completion period, as shown in the table above. These estimates were pulled from the direct sales calculated at the project site found in Appendix B.

Development Impacts

Upon construction completion of the overall development, the Development will have a significant ongoing annual impact on the State and local economy. This impact will come in the form of activities to support the maintenance and operation of the buildings, as well as from businesses that will locate operations at the development site as tenants. Once the buildings reach full occupancy, these ongoing activities are anticipated to support approximately 3,121 total direct jobs and generate $224.3 million of direct annual labor income in 2033.

The Development is also estimated to generate $220.1 million in new property, sales, lodging and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2029 through 2033. In addition, the Project is expected to generate approximately $516.9 million in retail, dining, and entertainment sales over the completion period.

Estimated Completion Period Impacts of the Development

- **3,121 Direct Jobs with $224.3 million in Direct Payroll in 2033**
- **$220.1 million in new property, sales and income taxes over the 5-year completion period**
- **$516.9 million in retail, dining, and entertainment sales over completion period**

Permanent (Annual) Jobs and Payroll Impacts of the Development

Upon completion of construction, the Development is expected to create 3,121 total jobs, 40 of which will be jobs to support maintenance and operations of the buildings and commercial parking, 3,081 of which will be commercial tenant jobs. In year 2033, the 40 Operations jobs are expected to generate $2,289,999 in direct labor income with an average hourly wage of $27.52. (Operations job estimates are shown in the table below).

Development Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2029	0	$-	$-
2030	40	$25.19	$2,095,673
2031	40	$25.94	$2,158,543
2032	40	$26.72	$2,223,300
2033	40	$27.52	$2,289,999

In year 2033, the Development Tenant jobs are expected to generate a total of $222,011,319 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix C due to the averaging of the hourly wage and the multiple decimal points that are

not shown in the tables). In 2033, Tenant jobs are expected to have an average hourly wage of $34.64. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Development Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2029	0	$-	$-
2030	2,776	$33.45	$193,173,692
2031	2,776	$34.46	$198,968,903
2032	3,081	$33.63	$215,544,970
2033	3,081	$34.64	$222,011,319

Because construction of the Development will continue into 2031, construction jobs and payroll for years 2029 through 2031 should be considered in this section. In construction years 2029 through 2031 5,535 construction jobs with $341,084,902 in payroll are expected to be created.

Permanent (Annual) Tax and Sales Impacts Of The Development

The Development is expected to be completed prior to calendar year 2032 following construction years 2026 through 2031. Based on TMUD application requirements, a completion period was set for calendar years 2029 through 2033, when the Project will experience its first five years of operations. Because construction of the Development will continue into 2031, which happens during the Completion Period, construction sales and income taxes for Years 2029-2031 were included in this section's estimates.

This report focuses on the direct and indirect taxes generated by the project starting in 2029, as calculated by IMPLAN software and PMC utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix C. This input data was provided by the client based on planned tenants, operations wages and staffing, and resident income requirements for the apartment units.

The table below illustrates the permanent direct sales, income, lodging and property tax estimates analyzed by PMC using local tax rates to calculate direct taxes. Over the 5-year impact period, the Development is estimated to generate a total of $41,240,113 in direct local, county and state sales taxes within the Project site and surrounding area. Sales taxes were calculated using an 8% total tax rate for Cuyahoga County.

Development Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
2029	$-	$9,931,363	$-	$-	$9,931,363
2030	$8,956,436	$12,562,187	$-	$16,395,501	$37,914,125
2031	$9,225,129	$12,848,734	$-	$32,654,294	$54,728,158
2032	$11,415,122	$10,518,278	$-	$35,268,787	$57,202,187
2033	$11,643,424	$10,833,826	$-	$37,883,280	$60,360,531

Income taxes were estimated using the appropriate local and state income tax rates (2.5% for Cleveland and state income tax varied based on income bracket). The table above shows the direct permanent income tax estimated impacts. Over the 5-year completion period, the Development is estimated to generate a total of $56,694,390 in direct local and state income taxes.

Property taxes were estimated based on client-provided value estimates of the completed project. The table above shows the permanent incremental property tax estimated impacts. Over the 5-year impact period, the Development is expected to generate a total of $122,201,863 in direct incremental property taxes.

Development Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
2029	$-	$-	$-	$-
2030	$[redacted]	$-	$[redacted]	$[redacted]
2031	$[redacted]	$-	$[redacted]	$[redacted]
2032	$[redacted]	$-	$[redacted]	$[redacted]
2033	$[redacted]	$-	$[redacted]	$[redacted]

In total the Development is expected to generate $516,928,304 in new retail, entertainment and dining sales revenues in the area over the 5-year completion period, as shown in the table above. These estimates were pulled from the direct sales calculated at the project site found in Appendix C.

Surrounding Area Impacts

Upon construction completion of the entire development, the project will have a significant ongoing annual impact on the State and local economy. This impact will be an indirect result of activities to support the maintenance and operation of buildings and potential tenants that will come to the surrounding area. Once the Project reaches full occupancy, the surrounding area is anticipated to support approximately 286 total indirect jobs and generate approximately $24.9 million of indirect labor income annually.

The surrounding area is also estimated to generate $7,018,050 in new indirect property, sales, and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2029 through 2033. Surrounding area impacts were estimated using indirect impacts of the Project in IMPLAN. It is possible that the impacts are much greater in the surrounding area due to the catalytic nature of this development.

Permanent (Annual) Jobs and Payroll Impacts of the Surrounding Area

Upon completion of construction of the overall development, it is expected that approximately 286 indirect jobs will be created in the surrounding area, 4.37 of which will be jobs to support maintenance and operations of buildings and commercial parking, and 281.34 of which will be commercial tenant jobs. Upon full occupancy of the development, in 2033 the 4.37 Operations jobs are expected to generate $344,067 in indirect labor income with an average hourly wage of $37.85 (Operations job estimates are shown in the table below)

Surrounding Area Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2029	1.19	$34.40	$85,159
2030	4.37	$34.64	$314,870
2031	4.37	$35.68	$324,317
2032	4.37	$36.75	$334,046
2033	4.37	$37.85	$344,067

In 2033, the surrounding area Tenant jobs are expected to generate a total of $24,632,719 in indirect labor income. Tenant jobs are expected to have an average hourly wage of $42.09. Average hourly wages were calculated using the labor income per year divided by the number

of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Surrounding Area Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2029	18	$37.76	$1,428,529
2030	279	$39.65	$23,008,151
2031	279	$40.84	$23,698,395
2032	281	$40.87	$23,915,261
2033	281	$42.09	$24,632,719

Permanent (Annual) Tax and Sales Impacts Of The Surrounding Area

During the five-year completion period, the overall development is anticipated to generate significant new tax revenues within the surrounding area.

The surrounding area impacts identify the indirect taxes generated by the project starting in 2029, as calculated by IMPLAN software utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix D. This input data was provided by the client based on planned tenants, operations wages and staffing, and resident income requirements for the apartment units.

The table below illustrates the permanent indirect sales, income, lodging and property tax estimates generated in IMPLAN. Over the five-year completion period, it is expected that $4,743,754 in new indirect sales taxes will be generated in the surrounding area as a result of this development project.

Surrounding Area Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
2029	$697,933	$19,149	$-	$186,949	$904,031
2030	$997,075	$86,916	$-	$385,400	$1,469,391
2031	$1,023,849	$89,478	$-	$396,434	$1,509,762
2032	$997,485	$85,970	$-	$460,811	$1,544,268
2033	$1,027,410	$88,549	$-	$474,636	$1,590,596

Indirect income taxes were estimated using IMPLAN. The table above shows the indirect income tax estimated impacts. Over the 5-year completion period, it is estimated that within

the surrounding area a total of $370,064 in indirect local and state income taxes will be generated.

Property taxes were estimated based on client-provided data that was then input into IMPLAN. The table above shows the indirect property tax estimated impacts. Over the 5-year impact period, the overall development will generate a total of $1,904,232 in indirect property taxes.

Surrounding Area Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
2029	$-	$-	[redacted]	[redacted]
2030	[redacted]	[redacted]	[redacted]	[redacted]
2031	[redacted]	[redacted]	[redacted]	[redacted]
2032	[redacted]	[redacted]	[redacted]	[redacted]
2033	[redacted]	[redacted]	[redacted]	[redacted]

The surrounding area is expected to generate significant new sales revenues in the area which will include $34,218,783 in total retail, dining and entertainment sales over the 5-year completion period, as shown in the table above. These estimates were generated in IMPLAN using a Household Spending analysis which shows only induced impacts.

Catalyzed Project Impacts

The Cuyahoga Riverfront Development Transformational Mixed-Use Development will have a catalytic impact on economic growth in Downtown Cleveland. Specific catalyzed projects of scale were not identified as of the writing of this Economic Impact Statement for inclusion in this report.

TOTAL IMPACTS

TOTAL ECONOMIC IMPACTS

Total Economic Impacts – Construction Period Impacts + Completion Period Impacts				
	TOTAL Projected FTEs	TOTAL Projected Payroll	Total Projected Sales	TOTAL Projected Taxes
Construction Period Impacts	6,997.53	$449,200,399	$11,331,389	$22,302,679
Completion Period Impacts	3,954.59	$2,001,298,491	$1,661,386,932	$377,851,202

PROJECTS CATALYZED – NARRATIVE

The Cuyahoga Riverfront Development Transformational Mixed-Use Development will have a catalytic impact on economic growth in Downtown Cleveland. Specific catalyzed projects of scale were not identified as of the writing of this Economic Impact Statement for inclusion in this report.

PROJECT RETURN ON INVESTMENT

In Year 5 (2033), the total Operations and Tenant jobs for the Project are expected to generate $225,720,659 in new direct payroll. It is possible that upon completion of the Project that significantly more payroll will be generated due to local factors within the Project site's surrounding area.

The Project, Development and Surrounding Area are anticipated to generate $400,153,881 in combined new tax revenues for the State of Ohio and the local entities over the construction and 5-year completion period. Over the construction and 5-year completion period, the Project, Development and Surrounding Area are estimated to generate $1,672,718,321 in retail, dining and entertainment sales revenues. It is possible that upon completion of the Project that significantly more tax and sales revenues will be generated due to local factors and tax rates within the Project site's surrounding area. This Project will generate significant benefits for the City of Cleveland and the State of Ohio and will catalyze additional development in Cleveland and the surrounding area.

Year 5 Operational Payroll of the Project:	**$893,248**
Year 5 Tenant Payroll of the Project:	**$224,827,411**
Total Year 5 Payroll of the Project:	**$225,720,659**

Total New Taxes Generated (Over Construction and 5-Year Completion Period):	**$400,153,881**
Total New Retail, Dining and Entertainment Sales Generated (Over Construction and 5-Year Completion Period):	**$1,672,718,321**

Tax Credit Requested	**$40,000,000**

GLOSSARY

Direct Jobs – Direct jobs comprise those individuals employed in the redevelopment of the building, its future operation, or involved in the operation of a business located at the Project (tenant) site upon redevelopment.

Direct Earnings/Labor Income – The labor income (wages and benefits) associated with the direct jobs.

Hard Construction Costs for IMPLAN Impact Analysis - Only Hard Construction Costs (including Architecture and Engineering costs, as prescribed by IMPLAN software modeling instructions for construction projects) were entered into IMPLAN. Costs such as acquisition, site work, soft costs, financing costs, and FF&E were excluded from this Direct Development Cost number.

Indirect Jobs – Jobs supported by industries purchasing from industries. For example, purchases of construction materials and other supplies from vendors within the study area. Those vendors employ workers to meet the demand of the Project (and other customers). This cycle may have many iterations between different industry sectors, and the coefficients associated with each industry are calculated within the IMPLAN model. See below for more information about IMPLAN.

Indirect Earnings/Labor Income – The earnings associated with the indirect jobs. This amount can include both wages and benefits paid to workers as well as income earned by business owners. Indirect earnings are calculated using the IMPLAN model.

Retail, Entertainment and Dining Sales – Sales were analyzed using a Household Income impact analysis in IMPLAN using the industry codes listed in Appendix D. This analysis uses only induced impacts to show how new households will impact sales and spending in the area using IMPLAN's estimates. These estimates were then combined with direct dining, entertainment and retail sales generated within the overall development site.

Taxes – This includes all taxes and fees collected by federal, state, county, municipal, or other government entities, including, but not limited to property taxes, income taxes, sales, taxes, license and registration fees, etc.

METHODOLOGY

This analysis was completed using the IMPLAN economic impact model, adjusted for 2027 dollars as well as for actual tax rates. IMPLAN is an input-output model that is used by many universities and government agencies to estimate economic and fiscal impacts. Input-output modeling describes commodity flows from producers to consumers. The value of commodities produced is equal to total industry purchases of commodities, services, employment compensation, value added, and imports.

An IMPLAN impact analysis involves specifying a series of expenditures or other changes and applying them to the region's economic multipliers. The expenditures are identified in terms of the sectoring scheme for the model, in producer prices, and in historical and current dollars with the year the analysis is conducted in as the base year. Only the dollars spent within the region are applied to the model.

The notion of a multiplier rests upon the difference between the initial effect of a change in final demand and the total effects of that change. Total effects can be calculated either as direct and indirect effects, or as direct, indirect, and induced effects. Direct effects are production changes associated with the immediate effects or final demand changes. Indirect effects are production changes in backward-linked industries caused by the changing input needs of directly affected industries (for example, additional purchases to produce additional output). Induced effects are the changes in regional household spending patterns caused by changes in household income generated from the direct and indirect effects.

Purchases for final use (final demand) drive the model. Industries producing goods and services for final demand purchase goods and services from other producers. These other producers, in turn, purchase goods and services. This buying of goods and services (indirect purchases) continues until leakage from the region (imports and value added) stops the cycle.

Creating a regional input-output model requires a tremendous amount of data. The costs of surveying industries within each region to derive a list of commodity purchases (production functions) are prohibitive. IMPLAN was developed as a cost-effective means to develop regional input-output models. The IMPLAN accounts closely follow the accounting conventions used in the "Input-Output Study of the U.S. Economy" by the Bureau of Economic Analysis (1980) and the rectangular format recommended by the United Nations.

APPENDIX D – SURROUNDING AREA ASSUMPTIONS

Induced Spending - Dining, Retail and Entertainment Sales	
Dining	
509	Full-service restaurants
510	Limited-service restaurants
Entertainment	
106	Breweries
107	Wineries
108	Distiller
420	Scenic and sightseeing transportation and support activities for transportation
421	Couriers and messengers
430	Sound recording industries
431	Radio and television broadcasting
432	Cable and other subscription programming
447	Other real estate
474	Travel arrangement and reservation services
496	Performing arts companies
497	Commercial Sports Except Racing
499	Independent artists, writers, and performers
500	Promoters of performing arts and sports and agents for public figures
501	Museums, historical sites, zoos, and parks
502	Amusement parks and arcades
504	Other amusement and recreation industries
511	All other food and drinking places
Retail	
152	Printing
392	Wholesale - Motor vehicle and motor vehicle parts and supplies
393	Wholesale - Professional and commercial equipment and supplies
394	Wholesale - Household appliances and electrical and electronic goods
395	Wholesale - Machinery, equipment, and supplies
396	Wholesale - Other durable goods merchant wholesalers
397	Wholesale - Drugs and druggists' sundries

pmc
project management consultants

398	Wholesale - Grocery and related product wholesalers
399	Wholesale - Petroleum and petroleum products
400	Wholesale - Other nondurable goods merchant wholesalers
401	Wholesale - Wholesale electronic markets and agents and brokers
402	Retail - Motor vehicle and parts dealers
403	Retail - Furniture and home furnishings stores
404	Retail - Electronics and appliance stores
405	Retail - Building material and garden equipment and supplies stores
406	Retail - Food and beverage stores
407	Retail - Health and personal care stores
408	Retail - Gasoline stores
409	Retail - Clothing and clothing accessories stores
410	Retail - Sporting goods, hobby, musical instrument and book stores
411	Retail - General merchandise stores
412	Retail - Miscellaneous store retailers
413	Retail - Nonstore retailers
423	Newspaper publishers
429	Motion picture and video industries
437	News syndicates, libraries, archives and all other information services
451	General and consumer goods rental except video tapes and discs
466	Photographic services
467	Veterinary services
477	Landscape and horticultural services
493	Individual and family services
505	Fitness and recreational sports centers
512	Automotive repair and maintenance, except car washes
513	Car washes
514	Electronic and precision equipment repair and maintenance
516	Personal and household goods repair and maintenance
517	Personal care services
518	Death care services
519	Dry-cleaning and laundry services
520	Other personal services
Sales from the Sales Tax Estimates table were included in Induced Spending in they fell within these categories based on the Job Assumptions table.

APPENDIX E

ASSUMPTIONS AND LIMITING CONDITIONS

1. The economic impact analysis contained herein relies on databases and software developed by IMPLAN Group LLC. MIG Inc. has been developing complex localized databases since 1993 and is an industry recognized leader in input-output databases and data modeling. As a result, we believe the information provided is a reliable basis to use in developing the economic impacts for the Project (s). However, we have not examined the data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact analysis.
2. All information contained in the report which was furnished by others was assumed to be true, correct, and reliable. A reasonable effort was made to verify such information, but the author assumes no responsibility for its accuracy.
3. The report was made assuming responsible ownership and capable management of the Project.
4. Possession of the report, or a copy thereof, does not carry with it the right of publication, nor may it be reproduced in whole or in part, in any manner, by any person, without the prior written consent of Project Management Consultants, LLC. Neither all nor any part of the report or copy thereof shall be disseminated to the general public by the use of advertising, public relations, news, sales, or other media for public communication without the prior written consent and approval of Project Management Consultants, LLC.
5. The author of this report is not required to give testimony or attendance in legal or other proceedings relative to this report or to the Subject unless satisfactory additional arrangements are made prior to the need for such services.
6. The opinions contained in this report are those of the author and no responsibility is accepted by the author for the results of actions taken by others based on information contained herein.
7. Acceptance of and/or use of this report constitutes acceptance of all assumptions and the above conditions.

Heath Central Park Phase II

Transformational Mixed-Use Tax Credit

Economic Impact Statement

Authored by:

VISTA SITE SELECTION

Introduction

This study is prepared by Vista Site Selection, LLC ("Vista"), a third-party entity, on behalf of an application for the Ohio Transformational Mixed-Use Tax Development Credit Program ("TMUD"). This study accomplishes two primary objectives:

1) To verify that increased tax collections resulting from the project will exceed 10% of the estimated eligible project costs and,

2) To articulate the economic impacts of the Project and/or larger Development to the Project Site and Surrounding Area during both the Construction Period, which is the time period in which the Project is being constructed and the Completion Period, which is the 5 years after Project construction is completed.

In accomplishing these objectives, this document will assess the following categories:

- ***Employment*** **-** The projected number of construction, operational, and tenant jobs created as a result of the Project and the average hourly wages for each job type.
- ***Revenue*** **-** Annual revenue projections generated from retail, entertainment, and dining sales.
- ***Tax Revenues*** **-** Annual revenue projections generated from sales tax, income tax, lodging tax, and property tax.

Economic impacts will be calculated utilizing IMPLAN software and the following methodology:

INPUTS

1. Provided by Developer
2. Calculated by Vista using market assumptions and data support

ECONOMIC OUTPUTS

1. Calculated utilizing IMPLAN software
2. Calculated by Vista utilizing IMPLAN and complementary data sources either publicly available, indexed/created by Vista or subscribed to by Vista.

TAX CALCULATIONS

1. Direct taxes calculated by Vista using state and local tax rates.
2. Indirect taxes calculated by Vista from indirect outputs, with some categories calculated using IMPLAN tax estimates and rates.

EIS Framework Categories and Sections

This study illustrates the transformational mixed use development's impact on the development site and surrounding area in terms of retail, entertainment and dining sales, job creation, property values, connectivity, and revenue from sales, income, lodging, and property taxes, as referenced in Ohio Revised Code 122.09(C)(1). The framework in this study will cover this in three major sections: 1) Construction Impacts, 2) Completion Period Impacts and 3) Total Impacts.

	1. Construction Impacts	2. Project Completion Period Impacts
Project	The direct economic impacts of the new construction and/or renovation and rehabilitation of structures included in the Project on the Project site during the construction period.	The direct and indirect economic impacts of the Project as defined in the application in the five years after completion of construction of the Project.
Development (if applicable)	The direct economic impacts of the construction and/or renovation and rehabilitation of structures included in the Development as defined in the application during the construction period. Does not include the Construction Project Impacts described above. If the Project is not part of a larger planned Development, this section is not applicable.	The direct and indirect economic impacts of the Development as defined in the application in the five years after completion of construction of the Project, exclusive of the impacts of the Project as identified above. If the Project is not part of a larger planned Development, this section is not applicable.
Surrounding Area Impacts	The indirect economic impacts caused by the new construction and/or renovation and rehabilitation of structures included in the Project in the surrounding area during the completion period of the Project, excluding any impacts specifically identified below in the Construction Catalyzed Project Impacts section.	The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below in the Catalyzed Project Impacts section.
Catalyzed Projects (if applicable)	The direct and indirect economic impacts from construction of the defined projects in the surrounding area that are directly caused or accelerated by the Project/Development during the completion period of the Project.	The direct and indirect economic impacts of other proposed, defined projects in the surrounding area that are directly caused or accelerated by the Project/Development in the five years after completion of construction of the Project.
	3. Total Impacts (1. Construction Impacts + 2. Project Completion Impacts)	

Project Geography

The Economic Impact geography is referred to as the Surrounding Area, which includes any zip code covered in whole or in part encompassed within a perimeter starting from the transformational mixed used development boundary and extending one-half miles out from that boundary.

The 2-mile radius from the Project boundary, which is located outside of 10 miles of a City with population of at least 100,000 residents includes the following zip codes:

1. **43056**
2. **43025**
3. **43023**
4. **43055**

Taxes & Rate Methodology

For simplicity, the Project, Development, Surrounding Area and Catalyzed Projects follow the same tax rates which are based on the **City of Heath, Licking County**, **Heath City School District** and State of Ohio rates. It is worth noting that there may be small variations in the actual tax amounts, compared to these estimated amounts, based on per-parcel levies, other school districts and numerous factors particularly when factoring in the Surrounding Area and Catalyzed Project impacts.

Sales Taxes – sales taxes are calculated using sales and purchases of building tenants, purchases from residents and tourists within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional **20%** reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of Development resident expenditures and estimates of economic output provided by IMPLAN. The combined State and Local rate is **7.25%** in the **project address** (with **5.75%** to the State of Ohio and **1.50%** to **Licking County**). Sales tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool for the project address. **It is worth noting that the subject project includes New Community Authority Sales Charges on sales of tenants (NCA Sales Charges) that are treated as sales tax collections for purposes of this study.**

Income Taxes – income taxes are calculated as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax). Ohio Withholding Taxes utilize a bracketed rate structure based on salary (for this project it is assumed to be **2.35%,** based on the Ohio Department of Taxation's bracketed calculation method) and the **City of Heath** at **2.00% on the taxable income of every person residing in and/or earing wages in the City.**

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. Lodging taxes collected by **Licking County** at a rate of **3% and the City of Heath at 3%, for a total rate of 6%.** Lodging rates can be found utilizing the Ohio Department of Taxation's tax analysis data series.

Property Taxes – property taxes are collected by various units of government and published by the County Auditor. Property taxes are assessed at 35% of the market value of the property, then an effective tax rate is applied and distributed to the local government taxing units. The effective tax rate of the property's assessed value is **5.38%. The subject project does include a series of New Community Authority charges (NCA Charges) and Payments in Lieu of Taxes (PILOTS) that for purposes of this study are calculated as property tax collections.**

Application of Growth Rates and Inflation – annual growth is assumed for revenue streams calculated within this document which includes property value, sales growth and wage growth. An examination of the Consumer Price Index for all Urban Consumers for calendar years 2021, 2022 and 2023 was utilized in which each half-year rate was averaged, arriving at a total rate of **5.5%.** This figure was reduced to **5%** under anticipation that the CPI and inflation will drop.

Construction Period Impacts

Input Methodology

Project/Development Impacts

The value entered in Industry Output for construction represents full cost of the structure as provided by the Developer, and only the structure. Construction cost data was provided by the Developer in all circumstances (each building). This includes hard costs and soft costs. IMPLAN calculates employment based on the number of employees it would take to support the dollar value and type of a given economic event, using a combination of data sources including Census County Business Patterns (CBP), Bureau of Labor Statistics Covered Employment and Wages (CEW) and Bureau of Economic Analysis Regional Economic Accounts (REA) as the basis for its calculation. Further, IMPLAN uses additional data sources to classify its employment estimates into hours worked, headcount and compensation by specific occupation. Occupational source data used by IMPLAN includes Bureau of Labor Statistics (BLS) Occupational Employment Survey (OES), BLS Employment Projections national industry by occupation matrix, Census Bureau American Community Survey (ACS) Public Use Microdata Sample (PUMS) and O*NET™ which is a trademark of the U.S. Department of Labor, Employment and Training Administration. Employees are converted to Full-time equivalent employees (FTEs) by dividing the estimated number of hours of compensation for the job, as calculated by IMPLAN, by 2,080. There are no direct impacts to retail, entertainment and dining as these are not direct construction expenditures, but rather Surrounding Area effects. **It is important to note that Central Park Heath Phase 1 was awarded for a Transformational Mixed-Use Development Tax Credit and as a result, the impacts from the awarded Project are not included in this study, which only applies to Phase 2.**

Surrounding Area Impacts

Surrounding Area impacts during the Construction Period were calculating utilizing IMPLAN. In IMPLAN, the project was modeled as **$60 million** in Output under the industry 55 - Construction of New Commercial Structures, Including Farm Structures. Construction cost calculations were provided using costs provided by the Developer. Outputs resulting from the construction inputs in IMPLAN were filtered in IMPLAN only to show indirect effects of Project Construction. These impacts were categorized by use, to understand specific impacts to Retail, Entertainment and Dining. In this circumstance, the Surrounding Area's presence of significant entertainment, retail and dining establishments (professional sports stadiums, full-service restaurants, limited services restaurants, bars and shopping) create a higher degree of construction worker spending. Additional categories were created and aggregated if they were sales-taxable transactions. Lodging taxes follow a similar rate, as many construction workers travel to larger areas given the overall labor shortage of construction workers. Those who travel and stay overnight are typically provided lodging and meal per diems. Given IMPLAN captures dining expenditures, the lodging per diem method is utilized to get a more accurate picture of construction spending. A typical per-day per diem is $138 for lower cost areas and $222 for higher cost areas. Given the lack of nearby construction labor however, a higher Per Diem of $222 figure is utilized (per diem rates provided by *PBMares CPAs and Consultants Guidance for Contractors Who Use Per Diem, 2022)*. Further it is assumed 15% of workers will travel as part of this arrangement during 30% of the annual weekdays per year. Lodging taxes are calculated off of estimated lodging expenditures.

Catalyzed Project Impacts

Catalyzed Project construction was calculated differently than Project Construction, as detailed information for Catalyzed Projects is not typically available, as such, costs were provided by the catalyzed project developers or estimated based off of square footage data gathered from available project information. In calculating construction impacts, costs were calculated on a per-square foot basis by analyzing comparable building sizes on the **Ohio** County Auditor's website, costs of recent developments in the area and the size/scale of the project. In all cases, construction costs assumed 60% labor and 40% materials costs, and for purposes of estimating employment, a cost-per-worker of $136,000 was used, the rate provided by IMPLAN for the **Project Surrounding Area** zip codes referenced in Page 4. Lastly, average salaries for the area were calculated using IMPLAN employee compensation figures for **the Project Surrounding Area** zip codes, estimated at **$54,000**. There is further detail on Catalyzed Project methodology later on in this document.

Construction Project Impacts

CONSTRUCTION	Project Construction		
	Year 1	Year 2	Totals
Property Value	$33,000,000	$33,000,000	**$66,000,000**
Labor	288	288	**575**
Materials	$13,200,000	$13,200,000	**$26,400,000**

Completion Period Impacts

Methodology

Project and Development Impacts

In calculating the Project, the Developer provided data related to project costs, square footage, residential units, residential rents, building and tenant information to serve as inputs. Vista calculated employment, wages, sales and office purchases from these figures. In circumstances where tenant sales were not provided by the Developer, they were calculate by Vista utilizing Lightcast 2023 area sales per square foot data and estimates provided from CoStar estimates for specific tenants. Office and retail supplies purchases are estimated using a percentage of payroll based (5%-25% of payroll, **25%** being used for supplies needed for theatre operations). Other metrics, such as household incomes of the residents and resident spending in the Surrounding Area were calculated by Vista. Resident expenditures were calculated using averages from the *2022 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income*. Household income assumptions were calculated by assuming renters will spend **25%** of their income toward rent, there for the monthly rent price was divided by **25%,** then multiplied x 12 (months) to arrive at the household income rate for that particular unit grouping. Each consumer expenditure category was assigned an "absorption rate" to account for any expenditures that cannot be made within the Surrounding Area. Estimated wages and jobs use CoStar jobs per square foot metrics and wages utilize average wage for the specific tenant use staffing pattern provided by Lightcast, sourced by the Bureau of Labor Statistics. For hotels that include conference space, it is assumed that space is programmed **226** days of the year with a mix of weddings, weekday conference, weekend conventions and 1-day ticketed events. Metrics for these events was based on comparable events which include the Ohio Tax Conference, Monroe Pop Fest, NAIOP Commercial Breakfast and typical wedding pricing. Lastly, once the building renovation is complete the Project will expect to generates significant visitor spending activity which will directly benefit the Surrounding Area. Vista calculated visitor activity using *Placer.ai* foot-traffic data to calculate expected visitors, which estimates annual visits, annual visitors and visitor locations both before and after arriving at the Project facility, providing a basis for Surrounding Area spending. The effects of visitors generated from the Project are reflected in Surrounding Area impacts.

Surrounding Area Impacts

Surrounding Area impacts were calculated utilizing three primary methods: 1) Indirect Impacts calculated by IMPLAN from Project inputs, including spending in Dining, Entertainment and Retail in the Surrounding Area, 2) Indirect effects to business from tourist spending, through increased sales and indirect jobs created and 3) Indirect property value impacts from the project. IMPLAN calculates indirect impacts from Project activity, by industry, which is then aggregated into Retail, Entertainment and Dining sales. Tourist spending utilizes *US Travel and Tourism Satellite Accounts* and Average Spending Rates for overnight visitors produced by the *Regional Tourism and Visitors Bureau*, which assume overnight visitors spend **$276** per day and non-overnight visitors spend **$110** per day. The Project includes a major pedestrian plaza pavilion will generate considerable foot traffic and programming into the retail and commercial uses in the Surrounding Area. This plaza was modeled after the Lancaster Boulevard in Lancaster California, and will replicate qualities of this boulevard through frequent public programming, vendor activity, festivals, gathering space and connection points to the existing retail and commercial uses. In order to estimate the economic activity of this asset, Vista examined cell phone activity through placer.ai to better understand the plaza's impact on retail and commercial visitation, examining the visitation of the plaza and the tenants along the plaza (over 2,834,266 visitors consume locations on and along the boulevard annually) and CoStar was used to gather the Boulevard's surrounding use square footage. The resulting figure was approximately 12.1 visits per square foot of retail and commercial development. This figure was multiplied by the existing retail and commercial footprint that would surround the Plaza to arrive at a figure of 373,000 visits annually. The Resident sales and visitation sales from tourists were deducted from Project and Development sales to prevent double-counting, given the volume of uses in the Development. Lastly, property value impacts were calculated based on home values within the Surrounding Area, and extracting the Development's share of projected growth based on historical Surrounding Area growth and the Project's projected economic GDP impact relative to the Surrounding Area's total GDP after the Project is complete.

Catalyzed Project Impacts

Catalytic projects follow a different method, given the prospective nature of the developments and lack of detail beyond planned square footage and uses. Projects were identified by the Developer with assistance from Vista, as either caused or accelerated by the project, including what year during the Project's Completion period each project would come online. Square footage was applied to a standard rate table be use and resulting figures were calculated into a series of tables for each project. In instances where these effects include the construction of certain public buildings, a separate set of factors to account for tax-exempt status in certain circumstances related to property and sales. This document elaborates on the methods and rates in later sections.

Project Inputs

INPUTS	Sales	FTEs	Hourly	Payroll	Residents	Resident Incomes	Resident Spending
Residential Units	$0	13	$21.63	$606,420	199	$23,880,000	$4,238,650
Office (Nursing Staff and Medical)	$[redacted]	50	$48.08	$5,000,000	0	$0	$0
Entertainment	$[redacted]	158	$21.63	$7,110,000	0	$0	$0
Event Space (from Public Plaza)	$[redacted]	150	$21.63	$6,750,000	0	$0	$0

Entertainment and Event Space employment was calculated by IMPLAN as the number of anticipated employment needed to support the estimated sales of both uses. Entertainment uses include the Project's significant open space that will house athletic fields that include soccer fields and an ice rink, among other recreational facility and event uses. This includes but is not limited to operations, tournaments and other typical recreational activities. The Event Space (from Public Plaza) represents the anticipated programmed events that will be housed at the public plaza from events, throughout the year, which is expected to fill significant unmet demand for event space in the Surrounding Area (*according to IMPLAN Commodity Data, the Surrounding Area represents approximately $45 million in unmet demand for event and entertainment uses*).

Development Inputs

INPUTS	Sales	FTEs	Hrly	Payroll	Residents	Resident Incomes	Resident Spending
Residential Units	n/a	13	$21.63	$573,750	2,170	$260,400,000	$46,220,454

Surrounding Area Visitor Spending from Project

The section below overviews anticipated visitations based on the utilization of Placer.ai on the building complex for current performances. Placer.ai. tracks cellular phone activity to create an accurate and recent picture of foot traffic. Below is a calculation of the indirect spending impact of visitors once the Project is fully complete. In order to estimate overnight visitors, Placer tracks both 1) the origin of the visitor to understand distance traveled and 2) if the visitor visited a hotel before and after the event. This provided a basis of estimation that 8.3% of visitors stayed overnight.

Project Visits		**373,882**	***Placer.ai estimate from comparable locations***	
Rates			**PROJECT**	**DEVELOPMENT**
Stay Visitor per Day	$204.30	$ per	**37,145**	
Lodging	42%	$150.00	$5,571,820	
F&B	29%	$58.38	$2,168,609	
Retail	15%	$29.63	$1,100,488	
Entertainment	6%	$20.00	$742,909	
Transportation	9%	$18.22	$676,800	
Drive Visitor per Day	$75.00	$ per	**336,736**	
Lodging	0%	$0.00	$0	
F&B	64%	$47.87	$16,118,402	
Retail	18%	$13.68	$4,605,258	
Entertainment	9%	$6.84	$2,302,629	
Transportation	9%	$6.62	$2,228,945	

Development (Phase 1) Visitation was omitted from estimates and calculations for purposes of this Economic Impact Statement

Per-visitor rates based on US Travel and Tourism Satellite Accounts, tracking typical visitor spending, however increased to account for estimated ticket prices.

Surrounding Area Property Value Analysis

The section overviews the Project's effect on property value increases to the Surrounding Area. This analysis utilizes Census 2023 data and PolicyMap software as the source for 5-year change in Single Family Median Home Value and Median Single Family Home Values and number of Single Family Homes (2018-2023) by Zip Code. Median value was multiplied by the number of current Single Family homes to establish a baseline home value. The 5-year Single Family Home Value growth rate was annualized and projected moving forward. A "Development and Project Share" was then calculated which uses the Development's total economic impact GDP impact as a percentage of total Surrounding Area GDP, both provided by IMPLAN, resulting in a share of **1.7%.** The GDP share was used as a barometer for projecting forward the Development's share of home value growth going forward.

Property taxes were applied to the increment of Single-Family home values to estimate tax impacts as home value impacts were added to the "Property Value" basis on the prior Surrounding Area impacts summary on page 18.

PROPERTY VALUE IMPACT CALCULATION

Zips	Households	Population	Median Real Estate Tax	Property Value Per	Total Property Value	Project Share of Incremental Residential Value
43056	7,154	18,276	$2,739	$111,796	$799,788,000	**$13,836,332**
43025	2,631	6,404	$3,149	$128,531	$338,164,041	**$5,850,238**
43023	4,686	14,558	$6,205	$253,265	$1,186,801,224	**$20,531,661**
43055	25,439	61,873	$1,948	$79,510	$2,022,660,082	**$34,992,019**

Catalyzed Project Impacts

The Catalytic Effect the Project is quantified in this section. The projects catalyzed in this section all fall within Project's half-mile radius and are planned to be placed into series after this Project is complete. Each project was identified as being caused or accelerated by the Project as noted in Appendix A. Further, project impacts are captured during the five-year completion period in each project's corresponding table. The assumptions below were used to calculate impacts from development square footage programs of each catalyzed project. The following page overviews how these were calculated into FTES, Payroll, Sales and Taxes.

Catalyzed Project Rates	SF/Jobs	Salary	Sales/SF	Room Sales/SF	Rent/SF	Methodology
Apartment	15,000	$35,000	$31	$0	$15	Uses comparable market data within the County, Ohio Region, data provided by Developer and Rent.com rent estimates.
Hotel	700	$30,000	$100	$100	$0	Uses comparable hotel sales data for large cities.
Industrial	750	$55,000	$0	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Office	350	$75,000	$25	$0	$0	Lightcast & BLS Data for Surrounding Area for Business Occupations
Restaurant	600	$25,000	$350	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Retail	450	$30,000	$300	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Arena/Events	750	$55,000	$95	$0	$0	Based on comparable arena construction data
	Operations Rate	**Construction Rate**				
% Jobs Dedicated to Operations	15%					Uses typical mix or type and area supported by IMPLAN
Indirect Retail Sales Rate	5%	2%				Uses typical mix or type and area supported by IMPLAN
Indirect Entertainment Sales Rate	7%	3%				Uses typical mix or type and area supported by IMPLAN
Indirect Dining Sales	10%	4%				Uses typical mix or type and area supported by IMPLAN
Construction Output/Worker		$136,000				Uses typical mix or type and area supported by IMPLAN
EC/Worker		$62,000				Uses typical mix or type and area supported by IMPLAN
% Cost Related to Construction Materials		40%				Typical method utilzied by RSMeans Construction Data
Sales Taxable Purchases	95%	100%				Analyzed exempt uses in relation to project from OTAX
Lodging Impact	2%	2%				Uses US Tourism Sattelite Accounts to estimate lodging impact of activity
Property Impact	12.5%	0.5%				Assumes typical indirect property value impact based on IMPLAN data
Value at Cost	85%	85%				Assumes market value based on hard costs from analysis of Auditor data
Renter HH Income	$65,100					Utilizes Census/ACS and HUD Data to Assume Area Family Incomes
Renters per SF	600					Calculated based on typical SF needed per renter from sample projects
Lodging Per-Diem		$227				PBMares CPAs and Consultant's Guidance for Contractors Who Use Per Diems
Worker Travel %		15%				Based on analysis of Lightcast inbound commuter data to the Surrounding Area
Worker Annual Weekdays		78.3				Assumes 30% of the weekdays "travel workers" commute to work and use a Per-Di

Catalyzed Project List

Catalyzed Projects within a half-mile Radius of the Playhouse Square Project, City of Cleveland										
Project	Address	Placed Into Service	SF	Apartment	Hotel	Industrial	Office	Restaurant	Retail	Cost
Data Centers		2027	500,000			500,000				$225,000,000
Wilcox Residential		2027	162,796	122,421						$30,524,250
Wallick Residential		2027	581,863	581,863						$146,034,320
Ciminello Mixed-Use		2028	650,000	500,000			50,000	50,000	50,000	$163,135,150
Totals			1,894,659	1,204,284	-	500,000	50,000	50,000	50,000	$564,693,720

Catalyzed Project Impacts

Each Catalytic Project is calculated utilizing the following methodology in correspondence with the rates from the previous page:

Category	Methodology
FTEs/Payroll	Calculates FTEs per SF by use and payroll using BLS wage data for each overarching use.
Operations FTEs/Payroll	Assumes the 15% of FTES are dedicated to operations, based on IMPLAN's typical mix of operations occupation categories, which includes two-level SIC code categories 37, 43 and 49.
Tenant FTEs/Payroll	Assumes the 75% of FTES are tenants, which is based off of a typical IMPLAN mix for the area, removing two-level SIC code categories 37, 43 and 49.
Retail	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Retail category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate retail spending for residents.
Entertainment	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Entertainment category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate entertainment spending for residents.
Dining	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Dining category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate dining spending for residents.

Catalyzed Project List

Catalyzed Project: Data Centers

Location: 75 Thornwood Dr., Heath, Ohio

Summary: Microsoft will be panning a series of data centers that will begin completion in early 2028. For purposes of scaling, it is assumed that 100,000 in data centers will be completed each year.

The Project is expected to provide desirable housing with an in an urban-suburban mixed use feel with significant recreation and public space that employees of the data centers can consume. The workforce housing options will be priced at rents affordable to those making data center wages, providing a critical amenity that expedites the desirability of the work location to attract talent, accelerating the delivery of the project.

Catalyzed Project List

Catalyzed Project: Wilcox Residential

Location: Parcel #030-088344-00

Summary: Wilcox Communities, the development partner on the Heath Central Park Phase II Project, is planning to develop 122,421 square feet of residential units adjacent to the Project property. The Developer has attested that without the Project being built, this Residential project will not occur, as the Project's planned leasing success and significant gathering and recreational space will create demand for Wilcox to move forward with additional units.

Catalyzed Project List

Catalyzed Project: Wallick Residential

Location: Parcel # 030-088338
Summary: Wallick Communities, the development partner on the Heath Central Park Phase II Project, is planning to develop 581,863 square feet of residential units adjacent to the Project property. The Developer has attested that without the Project being built, this Residential project will not occur, as the Project's planned leasing success and significant gathering and recreational space will create demand for Wallick to move forward with additional units.

Catalyzed Project List

Catalyzed Project: Ciminello Mixed Use

Location: Parcel # 030-088338

Summary: Ciminello Land Co., the development partner and applicant on the Heath Central Park Phase II Project, is planning a significant mixed-use development that will include 150,000 square feet of retail, office and restaurant space (split evenly) and 500,000 of residential units adjacent to the Project property. The Developer has attested that without the Project being built, this Residential project will not occur, as the Project's planned leasing success and significant gathering and recreational space will create demand for Ciminello to move forward with additional units.

Total Impacts

Total Impacts

Construction Activity

The Project will create, cause and accelerate a total one-time infusion of 4,793 construction jobs and $301 million in payroll from construction activity from the Project, Development and Catalytic projects.

Employment

Additionally, the Project will create, cause and accelerate a total of 1,084 jobs, of which 376 will be employed by the project and another 707 indirectly created, caused or accelerated to the Surrounding Area as a result of the Project.

Retail, Entertainment and Dining Sales

The Project will additionally generate, cause and accelerate over $655 million in retail, dining and entertainment sales over a five-year period, including an immediate infusion of $26 million in sales from construction activity. Of these sales figures, $150 million will come directly from the Project, driving an additional $477 million to the Surrounding Area and from Catalyzed Projects.

Taxes

The Project will result in approximately $222 million in State and Local Taxes, of which $181 million will be generated during the Completion Period from Project operations, Surrounding Area impacts and Catalyzed Project impacts. The additional $40 million comes in the form of Construction Period Taxes.

II. TOTAL CONSTRUCTION PERIOD IMPACTS

A. Total Construction Period Impacts: Construction Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll

4	[redacted]	[redacted]	[redacted]	[redacted]
5	[redacted]	[redacted]	[redacted]	[redacted]
	[redacted]	[redacted]	[redacted]	[redacted]

D. Total Completion Period Impacts: Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax	TOTAL Projected Taxes
1	$11,098,764	$1,947,192	$408,780	$7,252,433	$20,707,168
2	$18,034,237	$3,989,617	$549,395	$14,311,192	$36,884,442
3	$18,935,949	$4,123,765	$587,104	$15,381,382	$39,028,200
4	$19,882,747	$4,264,621	$627,748	$16,593,739	$41,368,854
5	$20,876,884	$4,412,519	$671,581	$17,977,535	$43,938,520
	$88,828,581	**$18,737,714**	**$2,844,608**	**$71,516,281**	**$181,927,183**

Total Impacts

I. TOTAL ECONOMIC IMPACTS *(Construction Period Impacts + Completion Period Impacts)*

A. Summary: Total Project Impacts

	TOTAL Projected FTEs	TOTAL Projected Payroll	TOTAL Projected Sales	TOTAL Projected Taxes
Construction Period Impacts	4,793	$301,165,106	$26,786,511	$40,162,164
Completion Period Impacts	1,084	$250,179,250	$628,507,505	$181,927,183
	5,877	**$551,344,355**	**$655,294,016**	**$222,089,348**

Total Impacts

The table to the right illustrates that projected taxes ($222 million) meet at least 10% of the total development costs ($6.6 million).

Further, when combining the Construction Period and the first year after construction, the project significantly exceeds the 10% development cost threshold by $54,269,332 dollars.

TMUD Credit Objectives	
TMUD Project Cost	$66,000,000
10% of Development Cost Threshold	**$6,600,000**
Construction Taxes	$40,162,164
First Year Post-Construction Taxes	$20,707,168
Construction + Year 1	**$60,869,332**
Total Taxes	$222,089,348
Achieved 10% Taxes Threshold	**YES**
Achieve Alternative Method Potential	**YES**

VISTA SITE SELECTION

Vista Site Selection LLC is a newly formed company, founded in September of 2022 by the law firm Vorys, Sater, Seymour and Pease LLP, focused on economic development, economic analysis, economic incentives and site location consulting. Vista's management team has over 75 years of collective experience in Economic Development and Site Selection in 49 US States and includes certified data analysts, economic consultants and GIS specialists, among others.

Vista's services included:

- ✓ Economic Insights, including Economic Footprint and Economic Impact Analysis
- ✓ Labor Analytics
- ✓ Development of Advanced, Customized Data Analytics Platforms and Mapping
- ✓ Retail Performance and Growth Analytics
- ✓ Return on Investment Insights for Companies and Communities
- ✓ Corporate Site Selection Advisory
- ✓ Tax Credit and Incentives Advisory
- ✓ Economic and Market Analysis

EIS Preparer Qualifications

This analysis will be performed by **Chris Magill**. Chris is a Certified Economist and Managing Director for Vista Site Selection. Chris has significant experience consulting on capital investment projects and has strategically negotiated and analyzed tax credit, grant and loan-financing solutions for capital investment projects in over 20 different states. Further, Chris utilizes data analytics to help better inform business leaders and site administrators on project ROI, economic impacts, site decisions and market conditions. Prior to joining Vista Site Selection, Chris served as the Economic Development Director at the Ice Miller law firm for 11 years, consulting on various matters related to economic development, economic incentives, public-private partnerships, community advisory and economic impact analysis. Prior to his time at Ice Miller, Chris worked at the Ohio Department of Development ("ODOD"), serving as the Executive Director of the Ohio Tax Credit Authority. During his time at ODOD, Chris managed and structured various tax credit programs and co-developed various economic incentive calculation tools.

Chris carries various economic certifications and has nearly 15 years of experience in authoring economic impact statements and analysis tools. Chris has experience instructing economic impact, fiscal return-on-investment and economic development courses for the International Economic Development and the Ohio Economic Development Association. Further, has volunteered his time instructing pro forma development courses for the Knowlton School of Architecture and Fisher College of Business at The Ohio State University in relation to the annual Urban Land Institute Student Heinz Competition and has served as a Planning Committee member and annual speaker for the Ohio Tax Conference. Chris also serves as the Vice President of the Board of Directors of the Ohio Statewide Development Corporation. Chris' credentials include:

- Certified Economist, *IMPLAN*
- Certification in Economic Measurement, *National Association of Business Economics*
- Certification of Business Applications of Statistics and Data Analytics, *National Association of Business Economics*
- Certification of Economic Strategy and Managerial Decision Making, *National Association of Business Economics*
- Master's in Business Administration, *Ohio University*

EIS Preparer Qualifications

The list depicted includes a sample of Chris Magill's economic impact study experience. Chris has authored economic impact studies for projects in more than 25 US States. This includes manufacturing megaprojects, corporate headquarter office projects, mixed-use projects, non-profit projects, policy changes and cultural/sports facility projects, among others.

Transformational Mixed-Use Tax Credit

Economic Impact Statement

Authored by:

VISTA SITE SELECTION

Introduction

This study is prepared by Vista Site Selection, LLC ("Vista"), a third-party entity, on behalf of an application for the Ohio Transformational Mixed-Use Tax Development Credit Program ("TMUD"). This study accomplishes two primary objectives:

1) To verify that increased tax collections resulting from the project will exceed 10% of the estimated eligible project costs and,

2) To articulate the economic impacts of the Project and/or larger Development to the Project Site and Surrounding Area during both the Construction Period, which is the time period in which the Project is being constructed and the Completion Period, which is the 5 years after Project construction is completed.

In accomplishing these objectives, this document will assess the following categories:

- ***Employment*** **-** The projected number of construction, operational, and tenant jobs created as a result of the Project and the average hourly wages for each job type.
- ***Revenue*** **-** Annual revenue projections generated from retail, entertainment, and dining sales.
- ***Tax Revenues*** **-** Annual revenue projections generated from sales tax, income tax, lodging tax, and property tax.

Economic impacts will be calculated utilizing IMPLAN software and the following methodology:

INPUTS

1. Provided by Developer
2. Calculated by Vista using market assumptions and data support

ECONOMIC OUTPUTS

1. Calculated utilizing IMPLAN software
2. Calculated by Vista utilizing IMPLAN and complementary data sources either publicly available, indexed/created by Vista or subscribed to by Vista.

TAX CALCULATIONS

1. Direct taxes calculated by Vista using state and local tax rates.
2. Indirect taxes calculated by Vista from indirect outputs, with some categories calculated using IMPLAN tax estimates and rates.

EIS Framework Categories and Sections

This study illustrates the transformational mixed use development's impact on the development site and surrounding area in terms of retail, entertainment and dining sales, job creation, property values, connectivity, and revenue from sales, income, lodging, and property taxes, as referenced in Ohio Revised Code 122.09(C)(1). The framework in this study will cover this in three major sections: 1) Construction Impacts, 2) Completion Period Impacts and 3) Total Impacts.

	1. Construction Impacts	2. Project Completion Period Impacts
Project	The direct economic impacts of the new construction and/or renovation and rehabilitation of structures included in the Project on the Project site during the construction period.	The direct and indirect economic impacts of the Project as defined in the application in the five years after completion of construction of the Project.
Development (if applicable)	The direct economic impacts of the construction and/or renovation and rehabilitation of structures included in the Development as defined in the application during the construction period. Does not include the Construction Project Impacts described above. If the Project is not part of a larger planned Development, this section is not applicable.	The direct and indirect economic impacts of the Development as defined in the application in the five years after completion of construction of the Project, exclusive of the impacts of the Project as identified above. If the Project is not part of a larger planned Development, this section is not applicable.
Surrounding Area Impacts	The indirect economic impacts caused by the new construction and/or renovation and rehabilitation of structures included in the Project in the surrounding area during the completion period of the Project, excluding any impacts specifically identified below in the Construction Catalyzed Project Impacts section.	The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below in the Catalyzed Project Impacts section.
Catalyzed Projects (if applicable)	The direct and indirect economic impacts from construction of the defined projects in the surrounding area that are directly caused or accelerated by the Project/Development during the completion period of the Project.	The direct and indirect economic impacts of other proposed, defined projects in the surrounding area that are directly caused or accelerated by the Project/Development in the five years after completion of construction of the Project.
	3. Total Impacts (1. Construction Impacts + 2. Project Completion Impacts)	

Project Geography

The Economic Impact geography is referred to as the Surrounding Area, which includes any zip code covered in whole or in part encompassed within a perimeter starting from the transformational mixed used development boundary and extending one-half miles out from that boundary.

The 2-mile radius from the Project boundary, which is located outside of 10 miles of a City with population of at least 100,000 residents includes the following zip codes:

1. **43138**

Taxes & Rate Methodology

For simplicity, the Project, Development, Surrounding Area and Catalyzed Projects follow the same tax rates which are based on the **Falls Township, Hocking County**, the **Logan-Hocking School District** and the State of Ohio rates. It is worth noting that there may be small variations in the actual tax amounts, compared to these estimated amounts, based on per-parcel levies, other school districts and numerous factors particularly when factoring in the Surrounding Area and Catalyzed Project impacts.

Sales Taxes – sales taxes are calculated using sales and purchases of building tenants, purchases from residents and tourists within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional **20%** reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of Development resident expenditures and estimates of economic output provided by IMPLAN. The combined State and Local rate is **7.25%** in the **project address** (with **5.75%** to the State of Ohio and **1.50%** to **Hocking County**). Sales tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool for the project address.

Income Taxes – income taxes are calculate as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax). Ohio Withholding Taxes utilize a bracketed rate structure based on salary (for this project it is assumed to be **2.35%,** based on the Ohio Department of Taxation's bracketed calculation method). **Falls Township** does not levy an income tax on people living and working within its political subdivision and does not possess a School District Local Income Tax or Joint Economic Development District Income Tax.

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. Lodging taxes collected by **Hocking County** at a rate of **3%** and the **Falls Township (Hocking County)** at a rate of **3%,** resulting in a total lodging tax rate of **6%.** Lodging rates can be found utilizing the Ohio Department of Taxation's tax analysis data series.

Property Taxes – property taxes are collected by various units of government and published by the County Auditor. Property taxes are assessed at 35% of the market value of the property, then an effective tax rate is applied and distributed to the local government taxing units. The effective tax rate of the property's assessed value is **4.26%.**

Application of Growth Rates and Inflation – annual growth is assumed for revenue streams calculated within this document which includes property value, sales growth and wage growth. An examination of the Consumer Price Index for all Urban Consumers for calendar years 2021, 2022 and 2023 was utilized in which each half-year rate was averaged, arriving at a total rate of **5.5%.** This figure was reduced to **5%** under anticipation that the CPI and inflation will drop.

Construction Period Impacts

Input Methodology

Project Impacts

The value entered in Industry Output for construction represents full cost of the structure as provided by the Developer, and only the structure. Construction cost data was provided by the Developer in all circumstances (each building). This includes hard costs and soft costs. IMPLAN calculates employment based on the number of employees it would take to support the dollar value and type of a given economic event, using a combination of data sources including Census County Business Patterns (CBP), Bureau of Labor Statistics Covered Employment and Wages (CEW) and Bureau of Economic Analysis Regional Economic Accounts (REA) as the basis for its calculation. Further, IMPLAN uses additional data sources to classify its employment estimates into hours worked, headcount and compensation by specific occupation. Occupational source data used by IMPLAN includes Bureau of Labor Statistics (BLS) Occupational Employment Survey (OES), BLS Employment Projections national industry by occupation matrix, Census Bureau American Community Survey (ACS) Public Use Microdata Sample (PUMS) and O*NET™ which is a trademark of the U.S. Department of Labor, Employment and Training Administration. Employees are converted to Full-time equivalent employees (FTEs) by dividing the estimated number of hours of compensation for the job, as calculated by IMPLAN, by 2,080. There are no direct impacts to retail, entertainment and dining as these are not direct construction expenditures, but rather Surrounding Area effects.

Surrounding Area Impacts

Surrounding Area impacts during the Construction Period were calculating utilizing IMPLAN. In IMPLAN, the project was modeled as **$60.5 million** in Output under the industry 55 - Construction of New Commercial Structures, Including Farm Structures. Construction cost calculations were provided using costs provided by the Developer. Outputs resulting from the construction inputs in IMPLAN were filtered in IMPLAN only to show indirect effects of Project Construction. These impacts were categorized by use, to understand specific impacts to Retail, Entertainment and Dining. In this circumstance, the Surrounding Area's presence of significant entertainment, retail and dining establishments (professional sports stadiums, full-service restaurants, limited services restaurants, bars and shopping) create a higher degree of construction worker spending. Additional categories were created and aggregated if they were sales-taxable transactions. Lodging taxes follow a similar rate, as many construction workers travel to larger areas given the overall labor shortage of construction workers. Those who travel and stay overnight are typically provided lodging and meal per diems. Given IMPLAN captures dining expenditures, the lodging per diem method is utilized to get a more accurate picture of construction spending. A typical per-day per diem is $222, which is utilized for this Project (per diem rates provided by *PBMares CPAs and Consultants Guidance for Contractors Who Use Per Diem, 2022)*. Further it is assumed 15% of workers will travel as part of this arrangement during 30% of the annual weekdays per year. Lodging taxes are calculated off of estimated lodging expenditures.

Catalyzed Project Impacts

Catalyzed Project construction was calculated differently than Project Construction, as detailed information for Catalyzed Projects is not typically available, as such, costs were provided by the catalyzed project developers or estimated based off of square footage data gathered from available project information. In calculating construction impacts, costs were calculated on a per-square foot basis by analyzing comparable building sizes on the **Ohio** County Auditor's website, costs of recent developments in the area and the size/scale of the project. In all cases, construction costs assumed 60% labor and 40% materials costs, and for purposes of estimating employment, a cost-per-worker of $136,000 was used, the rate provided by IMPLAN for the **43138** zip code. Lastly, average salaries for the area were calculated using IMPLAN employee compensation figures for **the 43138** zip code, estimated at **$52,000**. There is further detail on Catalyzed Project methodology later on in this document.

Construction Project Impacts

CONSTRUCTION	Project Construction		
	Year 1	Year 2	Totals
Property Value	$30,280,000	$30,280,000	**$60,560,000**
Labor	299	299	**597**
Materials	$12,112,000	$12,112,000	**$24,224,000**
Wages	$18,168,000	$18,168,000	**$36,336,000**
DIRECT	**Const. 1**	**Const. 2**	**Total**
Sales Tax	$878,120	$878,120	**$1,756,240**
Income Tax	$427,801	$427,801	**$855,602**
Lodging Tax	$0	$0	**$0**
Property Tax	$0	$0	**$0**
Total	**$1,305,921**	**$1,305,921**	**$2,611,842**

Any construction occurring prior to the Completion Period is not included in this calculation.

Completion Period Impacts

Methodology

Project and Development Impacts

In calculating the Project, the Developer provided data related to project costs, square footage, residential units, residential rents, building and tenant information to serve as inputs. Vista calculated employment, wages, sales and office purchases from these figures. In circumstances where tenant sales were not provided by the Developer, they were calculate by Vista utilizing CoStar area sales per square foot data and estimates provided from CoStar estimates for specific tenants. Office and retail supplies purchases are estimated using a percentage of payroll based (5%-25% of payroll, **25%** being used for supplies needed for theatre operations). Other metrics, such as household incomes of the residents and resident spending in the Surrounding Area were calculated by Vista. Resident expenditures were calculated using averages from the *2022 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income*. Household income assumptions were calculated by assuming renters will spend **25%** of their income toward rent, there for the monthly rent price was divided by **25%,** then multiplied x 12 (months) to arrive at the household income rate for that particular unit grouping. Each consumer expenditure category was assigned an "absorption rate" to account for any expenditures that cannot be made within the Surrounding Area. Estimated wages and jobs use CoStar jobs per square foot metrics and wages utilize average wage for the specific tenant use staffing pattern provided by Lightcast, sourced by the Bureau of Labor Statistics. For hotels that include conference space, it is assumed that space is programmed **226** days of the year with a mix of weddings, weekday conference, weekend conventions and 1-day ticketed events. Metrics for these events was based on comparable events which include the Ohio Tax Conference, Monroe Pop Fest, NAIOP Commercial Breakfast and typical wedding pricing. Lastly, once the building renovation is complete the Project will expect to generates significant visitor spending activity which will directly benefit the Surrounding Area. Vista calculated visitor activity using *Placer.ai* foot-traffic data to calculate expected visitors, which estimates annual visits, annual visitors and visitor locations both before and after arriving at the Project facility, providing a basis for Surrounding Area spending. The effects of visitors generated from the Project are reflected in Surrounding Area impacts.

Surrounding Area Impacts

Surrounding Area impacts were calculated utilizing three primary methods: 1) Indirect Impacts calculated by IMPLAN from Project inputs, including spending in Dining, Entertainment and Retail in the Surrounding Area, 2) Indirect effects to business from tourist spending, through increased sales and indirect jobs created and 3) Indirect property value impacts from the project. IMPLAN calculates indirect impacts from Project activity, by industry, which is then aggregated into Retail, Entertainment and Dining sales. Tourist spending utilizes *US Travel and Tourism Satellite Accounts* and Average Spending Rates for overnight visitors produced by the *Regional Tourism and Visitors Bureau*, which assume overnight visitors spend **$276** per day and non-overnight visitors spend **$110** per day. *Placer.ai* estimated **100.000** annual visitors for the Project. This figure was based on comparable wooded mixed-use complexes, which included Mammoth Cave in Kentucky and Shenandoah National Park in Virginia. Overnight visitors were calculated from *Placer.ai*'s **visitation estimates for the Project, which includes visitor journeys of uses visited by consumers to the Surrounding Area before and after consuming the Project. Given the Project's tourism focus, a 40% overnight rate was used for visitors, resulting in 40,000** overnight visitors attributable to the Project. Property value impacts were calculated based on home values within the Surrounding Area, and extracting the Development's share of projected growth based on historical growth and the Development's projected economic impacts to the Surrounding Area after the Project is complete.

Catalyzed Project Impacts

Catalytic projects follow a different method, given the prospective nature of the developments and lack of detail beyond planned square footage and uses. Projects were identified by the Developer with assistance from Vista, as either caused or accelerated by the project, including what year during the Project's Completion period each project would come online. Square footage was applied to a standard rate table be use and resulting figures were calculated into a series of tables for each project. In instances where these effects include the construction of certain public buildings, a separate set of factors to account for tax-exempt status in certain circumstances related to property and sales. This document elaborates on the methods and rates in later sections.

Project Inputs

INPUTS	Sales	FTEs	Hrly	Payroll	Residents	Resident Incomes	Resident Spending
Residential Units	$0	2	$21.63	$69,750	100	$12,000,000	$2,129,975

Surrounding Area Visitor Spending from Project

The section below overviews anticipated visitations based on the utilization of Placer.ai on the building complex for current performances. Placer.ai. tracks cellular phone activity to create an accurate and recent picture of foot traffic. Below is a calculation of the indirect spending impact of visitors once the Project is fully complete. In order to estimate overnight visitors, Placer tracks both 1) the origin of the visitor to understand distance traveled and 2) if the visitor visited a hotel before and after the event. This provided a basis of estimation that 40% of visitors stayed overnight.

Project Visits		**100,000**	***Placer.ai estimate from comparable locations***

Rates			**PROJECT**
Stay Visitor per Day	$204.30	$ per	**40,000**
Lodging	42%	$150.00	$6,000,000
F&B	29%	$58.38	$2,335,261
Retail	15%	$29.63	$1,185,058
Entertainment	6%	$20.00	$800,000
Transportation	9%	$18.22	$728,811
			$11,049,130
Drive Visitor per Day	$75.00	$ per	**60,000**
Lodging	0%	$0.00	$0
F&B	64%	$47.87	$2,871,991
Retail	18%	$13.68	$820,569
Entertainment	9%	$6.84	$410,284
Transportation	9%	$6.62	$397,155
			$4,500,000

Per-visitor rates based on US Travel and Tourism Satellite Accounts, tracking typical visitor spending, however increased to account for estimated ticket prices.

Surrounding Area Property Value Analysis

The section overviews the Project's effect on property value increases to the Surrounding Area. This analysis utilizes Census 2023 data and PolicyMap software as the source for 5-year change in Single Family Median Home Value and Median Single Family Home Values and number of Single Family Homes (2018-2023) by Zip Code. median value was multiplied by the number of current Single Family homes to establish a baseline home value. The 5-year Single Family Home Value growth rate was annualized and projected moving forward. A "Development and Project Share" was then calculated which uses the Development's total economic impact GDP impact as a percentage of total Surrounding Area GDP, both provided by IMPLAN, resulting in a share of **19.1%.** The GDP share was used as a barometer for projecting forward the Development's share of home value growth going forward.

Property taxes were applied to the increment of Single-Family home values to estimate tax impacts as home value impacts were added to the "Property Value" basis on the prior Surrounding Area impacts summary on page 18.

PROPERTY VALUE IMPACT CALCULATION

Zips	Households	Population	Median Real Estate Tax	Property Value Per	Total Property Value	Project Share of Incremental Residential Value
43138	43,138	7,315	$1,745	$71,224	$521,007,143	$99,512,364

Total Impacts

Total Impacts

Construction Activity

The Project will create, cause and accelerate a total one-time infusion of 802 construction jobs and $48 million in payroll from construction activity from the Project, Development and Catalytic projects.

Jobs and Payroll

Additionally, the Project will create, cause and accelerate a total of 847 jobs, of which the 426 will be employed by the project and another 421 indirectly created, caused or accelerated to the Surrounding Area as a result of the Project.

Retail, Entertainment and Dining Sales

The Project will additionally generate, cause and accelerate over $689 million in retail, dining and entertainment sales over a five-year period, including an immediate infusion of $4 million in sales from construction activity. Of these sales figures, $408 million will come directly from the Project driving an additional $281 million to the Surrounding Area and from Catalyzed Projects.

Taxes

The Project will result in approximately $121 million in State and Local Taxes, of which $117 million will be generated during the Completion Period from Project operations, Surrounding Area impacts and Catalyzed Project impacts. The additional $4.8 million comes in the form of Construction Period Taxes.

II. TOTAL CONSTRUCTION PERIOD IMPACTS

A. Total Construction Period Impacts: Construction Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	322	$19,147,569
2	322	$19,147,569
3	-	$0
4	-	$0
5	-	$0
	643	$38,295,138

B. Total Construction Period Impacts: Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales	TOTAL Projected Sales/Year
1	[redacted]	[redacted]	[redacted]	[redacted]
2	[redacted]	[redacted]	[redacted]	[redacted]
3	$0	$0	$0	$0
4	$0	$0	$0	$0
5	$0	$0	$0	$0

C. Total Construction Period Impacts: Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax	TOTAL Projected Taxes
1	$996,666	$450,867	$46,698	$345,593	$1,839,824
2	$1,000,223	$450,867	$46,698	$345,593	$1,843,381
3	$0	$0	$0	$0	$0
4	$0	$0	$0	$0	$0
5	$0	$0	$0	$0	$0
	$1,996,889	$901,733	$93,397	$691,186	$3,683,205

III. TOTAL COMPLETION PERIOD IMPACTS *(totals inputs from Completion Period Impacts worksheet)*

A. Total Completion Period Impacts: Operational Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	72	$5,036,761
2	76	$5,402,899
3	80	$5,815,919
4	86	$6,285,309
5	93	$6,822,816
	407	$29,363,704

B. Total Completion Period Impacts: Tenant Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	459	$34,622,775
2	481	$37,139,613
3	510	$39,978,719
4	545	$43,206,311
5	590	$46,900,147
	2,585	$201,846,566

C. Total Completion Period Impacts: Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales	TOTAL Projected Sales/Year
1	[redacted]	[redacted]	[redacted]	[redacted]
2	[redacted]	[redacted]	[redacted]	[redacted]
3	[redacted]	[redacted]	[redacted]	[redacted]
4	[redacted]	[redacted]	[redacted]	[redacted]
5	[redacted]	[redacted]	[redacted]	[redacted]
	[redacted]	[redacted]	[redacted]	[redacted]

D. Total Completion Period Impacts: Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax	TOTAL Projected Taxes
1	$10,967,270	$932,218	$406,170	$2,389,738	$14,696,397
2	$11,515,634	$978,829	$426,479	$2,806,351	$15,727,293
3	$12,091,416	$1,027,771	$447,802	$3,318,076	$16,886,065
4	$12,695,986	$1,079,159	$470,193	$3,948,240	$18,193,578
5	$13,330,786	$1,133,117	$493,702	$4,725,976	$19,683,582
	$60,601,092	$5,151,096	$2,244,346	$17,188,382	$85,184,915

Total Impacts

I. TOTAL ECONOMIC IMPACTS *(Construction Period Impacts + Completion Period Impacts)*

A. Summary: Total Project Impacts

	TOTAL Projected FTEs	TOTAL Projected Payroll	TOTAL Projected Sales	TOTAL Projected Taxes
Construction Period Impacts	643	$38,295,138	$3,319,294	$3,683,205
Completion Period Impacts	682	$231,210,270	$648,183,158	$85,184,915
	1,325	**$269,505,408**	**$651,502,452**	**$88,868,120**

Total Impacts

The table to the right illustrates that projected taxes ($88 million) meet at least 10% of the total development costs ($6,500,000).

Further, when combining the Construction Period and the first year after construction, the project significantly exceeds the 10% development cost threshold by $15.5 million dollars.

TMUD Credit Objectives	
TMUD Project Cost	$65,000,000
10% of Development Cost Threshold	**$6,500,000**
Construction Taxes	$3,683,205
First Year Post-Construction Taxes	$18,378,602
Construction + Year 1	**$22,061,807**
Total Taxes	$88,868,120
Achieved 10% Taxes Threshold	**YES**
Achieve Alternative Method Potential	**YES**

EIS Preparer Qualifications

VISTA SITE SELECTION

Vista Site Selection LLC is a newly formed company, founded in September of 2022 by the law firm Vorys, Sater, Seymour and Pease LLP, focused on economic development, economic analysis, economic incentives and site location consulting. Vista's management team has over 75 years of collective experience in Economic Development and Site Selection in 49 US States and includes certified data analysts, economic consultants and GIS specialists, among others.

Vista's services included:

- ✓ Economic Insights, including Economic Footprint and Economic Impact Analysis
- ✓ Labor Analytics
- ✓ Development of Advanced, Customized Data Analytics Platforms and Mapping
- ✓ Retail Performance and Growth Analytics
- ✓ Return on Investment Insights for Companies and Communities
- ✓ Corporate Site Selection Advisory
- ✓ Tax Credit and Incentives Advisory
- ✓ Economic and Market Analysis

EIS Preparer Qualifications

This analysis will be performed by **Chris Magill**. Chris is a Certified Economist and Managing Director for Vista Site Selection. Chris has significant experience consulting on capital investment projects and has strategically negotiated and analyzed tax credit, grant and loan-financing solutions for capital investment projects in over 20 different states. Further, Chris utilizes data analytics to help better inform business leaders and site administrators on project ROI, economic impacts, site decisions and market conditions. Prior to joining Vista Site Selection, Chris served as the Economic Development Director at the Ice Miller law firm for 11 years, consulting on various matters related to economic development, economic incentives, public-private partnerships, community advisory and economic impact analysis. Prior to his time at Ice Miller, Chris worked at the Ohio Department of Development ("ODOD"), serving as the Executive Director of the Ohio Tax Credit Authority. During his time at ODOD, Chris managed and structured various tax credit programs and co-developed various economic incentive calculation tools.

Chris carries various economic certifications and has nearly 15 years of experience in authoring economic impact statements and analysis tools. Chris has experience instructing economic impact, fiscal return-on-investment and economic development courses for the International Economic Development and the Ohio Economic Development Association. Further, has volunteered his time instructing pro forma development courses for the Knowlton School of Architecture and Fisher College of Business at The Ohio State University in relation to the annual Urban Land Institute Student Heinz Competition and has served as a Planning Committee member and annual speaker for the Ohio Tax Conference. Chris also serves as the Vice President of the Board of Directors of the Ohio Statewide Development Corporation. Chris' credentials include:

- Certified Economist, *IMPLAN*
- Certification in Economic Measurement, *National Association of Business Economics*
- Certification of Business Applications of Statistics and Data Analytics, *National Association of Business Economics*
- Certification of Economic Strategy and Managerial Decision Making, *National Association of Business Economics*
- Master's in Business Administration, *Ohio University*

EIS Preparer Qualifications

The list depicted includes a sample of Chris Magill's economic impact study experience. Chris has authored economic impact studies for projects in more than 25 US States. This includes manufacturing megaprojects, corporate headquarter office projects, mixed-use projects, non-profit projects, policy changes and cultural/sports facility projects, among others.

Transformational Mixed-Use Tax Credit

Economic Impact Statement

Authored by:

VISTA SITE SELECTION

Introduction

This study is prepared by Vista Site Selection, LLC ("Vista"), a third-party entity, on behalf of an application for the Ohio Transformational Mixed-Use Tax Development Credit Program ("TMUD"). This study accomplishes two primary objectives:

1) To verify that increased tax collections resulting from the project will exceed 10% of the estimated eligible project costs and,

2) To articulate the economic impacts of the Project and/or larger Development to the Project Site and Surrounding Area during both the Construction Period, which is the time period in which the Project is being constructed and the Completion Period, which is the 5 years after Project construction is completed.

In accomplishing these objectives, this document will assess the following categories:

- ***Employment*** **-** The projected number of construction, operational, and tenant jobs created as a result of the Project and the average hourly wages for each job type.
- ***Revenue*** **-** Annual revenue projections generated from retail, entertainment, and dining sales.
- ***Tax Revenues*** **-** Annual revenue projections generated from sales tax, income tax, lodging tax, and property tax.

Economic impacts will be calculated utilizing IMPLAN software and the following methodology:

INPUTS

1. Provided by Developer
2. Calculated by Vista using market assumptions and data support

ECONOMIC OUTPUTS

1. Calculated utilizing IMPLAN software
2. Calculated by Vista utilizing IMPLAN and complementary data sources either publicly available, indexed/created by Vista or subscribed to by Vista.

TAX CALCULATIONS

1. Direct taxes calculated by Vista using state and local tax rates.
2. Indirect taxes calculated by Vista from indirect outputs, with some categories calculated using IMPLAN tax estimates and rates.

EIS Framework Categories and Sections

This study illustrates the transformational mixed use development's impact on the development site and surrounding area in terms of retail, entertainment and dining sales, job creation, property values, connectivity, and revenue from sales, income, lodging, and property taxes, as referenced in Ohio Revised Code 122.09(C)(1). The framework in this study will cover this in three major sections: 1) Construction Impacts, 2) Completion Period Impacts and 3) Total Impacts.

	1. Construction Impacts	2. Project Completion Period Impacts
Project	The direct economic impacts of the new construction and/or renovation and rehabilitation of structures included in the Project on the Project site during the construction period.	The direct and indirect economic impacts of the Project as defined in the application in the five years after completion of construction of the Project.
Development (if applicable)	The direct economic impacts of the construction and/or renovation and rehabilitation of structures included in the Development as defined in the application during the construction period. Does not include the Construction Project Impacts described above. If the Project is not part of a larger planned Development, this section is not applicable.	The direct and indirect economic impacts of the Development as defined in the application in the five years after completion of construction of the Project, exclusive of the impacts of the Project as identified above. If the Project is not part of a larger planned Development, this section is not applicable.
Surrounding Area Impacts	The indirect economic impacts caused by the new construction and/or renovation and rehabilitation of structures included in the Project in the surrounding area during the completion period of the Project, excluding any impacts specifically identified below in the Construction Catalyzed Project Impacts section.	The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below in the Catalyzed Project Impacts section.
Catalyzed Projects (if applicable)	The direct and indirect economic impacts from construction of the defined projects in the surrounding area that are directly caused or accelerated by the Project/Development during the completion period of the Project.	The direct and indirect economic impacts of other proposed, defined projects in the surrounding area that are directly caused or accelerated by the Project/Development in the five years after completion of construction of the Project.
	3. Total Impacts (1. Construction Impacts + 2. Project Completion Impacts)	

Project Geography

The Economic Impact geography is referred to as the Surrounding Area, which includes any zip code covered in whole or in part encompassed within a perimeter starting from the transformational mixed used development boundary and extending one-half miles out from that boundary.

The 2-mile radius from the Project boundary, which is located outside of 10 miles of a City with population of at least 100,000 residents includes the following zip codes:

1. **45069**
2. **45011**
3. **45040**
4. **45044**

Taxes & Rate Methodology

For simplicity, the Project, Development, Surrounding Area and Catalyzed Projects follow the same tax rates which are based on the **Liberty Township, Butler County**, the **Liberty Township-Lakota Local School District** and the State of Ohio rates. It is worth noting that there may be small variations in the actual tax amounts, compared to these estimated amounts, based on per-parcel levies, other school districts and numerous factors particularly when factoring in the Surrounding Area and Catalyzed Project impacts.

Sales Taxes – sales taxes are calculated using sales and purchases of building tenants, purchases from residents and tourists within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional **20%** reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of Development resident expenditures and estimates of economic output provided by IMPLAN. The combined State and Local rate is **6.5%** in the **project address** (with **5.75%** to the State of Ohio and **.75%** to **Butler County**). Sales tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool for the project address. **In addition, all retail sales on the Project and Development property are subject to a New Community Authority Community Development Charge ("NCA Sales Charge") of .5%. The NCA Sales Charges from are reflected in sales taxes for purposes of this analysis.**

Income Taxes – income taxes are calculated as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax). Ohio Withholding Taxes utilize a bracketed rate structure based on salary (for this project it is assumed to be **2.35%,** based on the Ohio Department of Taxation's bracketed calculation method). **Liberty Township does not have a municipal income tax, however through the utilization of a Joint Economic Development District, the Project and Development property is subject to a 1.5% tax on wages and net profits.**

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. Lodging taxes collected by **Butler County** at a rate of **3%** and the **Liberty Township (Butler County)** at a rate of **3%,** resulting in a total lodging tax rate of **6%.** Lodging rates can be found utilizing the Ohio Department of Taxation's tax analysis data series.

Property Taxes – property taxes are collected by various units of government and published by the County Auditor. Property taxes are assessed at 35% of the market value of the property, then an effective tax rate is applied and distributed to the local government taxing units. The effective tax rate of the property's assessed value is **5.43%. In addition, all parcels on the Project and Development property are subject to a New Community Authority Community Development Charge ("NCA Property Charge") of 10 mills, or 1%. The NCA Property Charges from are reflected in property taxes for purposes of this analysis.**

Application of Growth Rates and Inflation – annual growth is assumed for revenue streams calculated within this document which includes property value, sales growth and wage growth. An examination of the Consumer Price Index for all Urban Consumers for calendar years 2021, 2022 and 2023 was utilized in which each half-year rate was averaged, arriving at a total rate of **5.5%.** This figure was reduced to **5%** under anticipation that the CPI and inflation will drop.

Construction Period Impacts

Input Methodology

Project Impacts

The value entered in Industry Output for construction represents full cost of the structure as provided by the Developer, and only the structure. Construction cost data was provided by the Developer in all circumstances (each building). This includes hard costs and soft costs. IMPLAN calculates employment based on the number of employees it would take to support the dollar value and type of a given economic event, using a combination of data sources including Census County Business Patterns (CBP), Bureau of Labor Statistics Covered Employment and Wages (CEW) and Bureau of Economic Analysis Regional Economic Accounts (REA) as the basis for its calculation. Further, IMPLAN uses additional data sources to classify its employment estimates into hours worked, headcount and compensation by specific occupation. Occupational source data used by IMPLAN includes Bureau of Labor Statistics (BLS) Occupational Employment Survey (OES), BLS Employment Projections national industry by occupation matrix, Census Bureau American Community Survey (ACS) Public Use Microdata Sample (PUMS) and O*NET™ which is a trademark of the U.S. Department of Labor, Employment and Training Administration. Employees are converted to Full-time equivalent employees (FTEs) by dividing the estimated number of hours of compensation for the job, as calculated by IMPLAN, by 2,080. There are no direct impacts to retail, entertainment and dining as these are not direct construction expenditures, but rather Surrounding Area effects.

Surrounding Area Impacts

Surrounding Area impacts during the Construction Period were calculating utilizing IMPLAN. In IMPLAN, the project was modeled as **$72 million** in Output under the industry 55 - Construction of New Commercial Structures, Including Farm Structures. Construction cost calculations were provided using costs provided by the Developer. Outputs resulting from the construction inputs in IMPLAN were filtered in IMPLAN only to show indirect effects of Project Construction. These impacts were categorized by use, to understand specific impacts to Retail, Entertainment and Dining. In this circumstance, the Surrounding Area's presence of significant entertainment, retail and dining establishments (professional sports stadiums, full-service restaurants, limited services restaurants, bars and shopping) create a higher degree of construction worker spending. Additional categories were created and aggregated if they were sales-taxable transactions. Lodging taxes follow a similar rate, as many construction workers travel to larger areas given the overall labor shortage of construction workers. Those who travel and stay overnight are typically provided lodging and meal per diems. Given IMPLAN captures dining expenditures, the lodging per diem method is utilized to get a more accurate picture of construction spending. A typical per-day per diem is $138 for lower cost areas and $222 for higher cost areas. Given the lack of nearby construction labor however, a higher Per Diem of $222 figure is utilized (per diem rates provided by *PBMares CPAs and Consultants Guidance for Contractors Who Use Per Diem, 2022)*. Further it is assumed 15% of workers will travel as part of this arrangement during 30% of the annual weekdays per year. Lodging taxes are calculated off of estimated lodging expenditures.

Catalyzed Project Impacts

Catalyzed Project construction was calculated differently than Project Construction, as detailed information for Catalyzed Projects is not typically available, as such, costs were provided by the catalyzed project developers or estimated based off of square footage data gathered from available project information. In calculating construction impacts, costs were calculated on a per-square foot basis by analyzing comparable building sizes on the **Ohio** County Auditor's website, costs of recent developments in the area and the size/scale of the project. In all cases, construction costs assumed 60% labor and 40% materials costs, and for purposes of estimating employment, a cost-per-worker of $136,000 was used, the rate provided by IMPLAN for the **45069, 45011, 45040, 45044** zip codes. Lastly, average salaries for the area were calculated using IMPLAN employee compensation figures for **the 45069, 45011, 45040, 45044** zip codes, estimated at **$54,000**. There is further detail on Catalyzed Project methodology later on in this document.

Construction Project Impacts

CONSTRUCTION	Project Construction		
	Year 1	Year 2	Totals
Property Value	$38,961,700	$38,961,700	**$77,923,400**
Labor	292	292	**584**
Materials	$15,584,680	$15,584,680	**$31,169,360**
Wages	$23,377,020	$23,377,020	**$46,754,040**
DIRECT	**Const. 1**	**Const. 2**	**Total**
Sales Tax	$1,090,928	$1,090,928	**$2,181,855**
Income Tax	$901,113	$901,113	**$1,802,225**
Lodging Tax	$0	$0	**$0**
Property Tax	$0	$0	**$0**
Total	**$1,992,040**	**$1,992,040**	**$3,984,081**

Any construction occurring prior to the Completion Period is not included in this calculation.

Construction Development Impacts

This section is intentionally left blank as Development construction occurred prior to the Project Completion period..

Construction Surrounding Area Impacts

SURROUNDING AREA	Surrounding Area Construction Impacts		
	Year 1	Year 2	Const. Total
FTEs	15	15	**29.00**
Payroll	$1,109,012	$1,109,012	**$2,218,024**

Timeline for Phases

	Start	End
Development (Phase 1)	2013	2021
Project Planning (Phase 2)	2020	2024
Project (Phase 2)	2024	2026

Completion Period Impacts

Methodology

Project and Development Impacts

In calculating the Project, the Developer provided data related to project costs, square footage, residential units, residential rents, building and tenant information to serve as inputs. Vista calculated employment, wages, sales and office purchases from these figures. In circumstances where tenant sales were not provided by the Developer, they were calculate by Vista utilizing CoStar area sales per square foot data and estimates provided from CoStar estimates for specific tenants. Office and retail supplies purchases are estimated using a percentage of payroll based (5%-25% of payroll, **25%** being used for supplies needed for theatre operations). Other metrics, such as household incomes of the residents and resident spending in the Surrounding Area were calculated by Vista. Resident expenditures were calculated using averages from the *2022 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income*. Household income assumptions were calculated by assuming renters will spend **25%** of their income toward rent, there for the monthly rent price was divided by **25%,** then multiplied x 12 (months) to arrive at the household income rate for that particular unit grouping. Each consumer expenditure category was assigned an "absorption rate" to account for any expenditures that cannot be made within the Surrounding Area. Estimated wages and jobs use CoStar jobs per square foot metrics and wages utilize average wage for the specific tenant use staffing pattern provided by Lightcast, sourced by the Bureau of Labor Statistics. For hotels that include conference space, it is assumed that space is programmed **226** days of the year with a mix of weddings, weekday conference, weekend conventions and 1-day ticketed events. Metrics for these events was based on comparable events which include the Ohio Tax Conference, Monroe Pop Fest, NAIOP Commercial Breakfast and typical wedding pricing. Lastly, once the building renovation is complete the Project will expect to generates significant visitor spending activity which will directly benefit the Surrounding Area. Vista calculated visitor activity using *Placer.ai* foot-traffic data to calculate expected visitors, which estimates annual visits, annual visitors and visitor locations both before and after arriving at the Project facility, providing a basis for Surrounding Area spending. The effects of visitors generated from the Project are reflected in Surrounding Area impacts.

Surrounding Area Impacts

Surrounding Area impacts were calculated utilizing three primary methods: 1) Indirect Impacts calculated by IMPLAN from Project inputs, including spending in Dining, Entertainment and Retail in the Surrounding Area, 2) Indirect effects to business from tourist spending, through increased sales and indirect jobs created and 3) Indirect property value impacts from the project. IMPLAN calculates indirect impacts from Project activity, by industry, which is then aggregated into Retail, Entertainment and Dining sales. Tourist spending utilizes *US Travel and Tourism Satellite Accounts* and Average Spending Rates for overnight visitors produced by the *Regional Tourism and Visitors Bureau*, which assume overnight visitors spend **$276** per day and non-overnight visitors spend **$110** per day. *Placer.ai* estimates **5,738,436** annual visitors for the Development. Overnight visitors were calculated from *Placer.ai*'s **visitation estimates for the Development, which includes visitor journeys of uses visited by consumers to the Surrounding Area before and after consuming the Development** (those who visited a hotel before and after consuming the Development were calculated as overnight visitors). Resident sales and visitation sales from tourists were deducted from Project and Development sales to prevent double-counting, given the volume of uses in the Development. Property value impacts were calculated based on home values within the Surrounding Area, and extracting the Development's share of projected growth based on historical growth and the Development's projected economic GDP impact relative to the Surrounding Area's GDP after the Project is complete.

Catalyzed Project Impacts

Catalytic projects follow a different method, given the prospective nature of the developments and lack of detail beyond planned square footage and uses. Projects were identified by the Developer with assistance from Vista, as either caused or accelerated by the project, including what year during the Project's Completion period each project would come online. Square footage was applied to a standard rate table be use and resulting figures were calculated into a series of tables for each project. In instances where these effects include the construction of certain public buildings, a separate set of factors to account for tax-exempt status in certain circumstances related to property and sales. This document elaborates on the methods and rates in later sections.

Project Inputs

INPUTS	Sales	FTEs	Hourly	Payroll	Residents	Resident Incomes	Resident Spending
Residential Units	$0	13	$21.63	$594,000	528	$63,360,000	$11,246,267
Retail	$[redacted]	65	$21.63	$2,934,000	0	$0	$0

Development Inputs

INPUTS	Sales	FTEs	Hourly	Payroll	Residents	Resident Incomes	Resident Spending
Residential Units	n/a	0	$0.00	$0	480	$57,600,000	$10,223,879

Surrounding Area Visitor Spending from Development

The section below overviews anticipated visitations based on the utilization of Placer.ai on the building complex for current performances. Placer.ai. tracks cellular phone activity to create an accurate and recent picture of foot traffic. Below is a calculation of the indirect spending impact of visitors once the Project is fully complete. In order to estimate overnight visitors, Placer tracks both 1) the origin of the visitor to understand distance traveled and 2) if the visitor visited a hotel before and after the event. This provided a basis of estimation that 8.3% of visitors stayed overnight.

Visits	**5,738,436**	***Estimates baed on visitation to Liberty Center***		
Rates				
Stay Visitor per Day	$276.23	$ per	**570,118**	
Lodging	42%	$150.00	$85,517,727	
F&B	29%	$58.38	$33,284,375	
Retail	15%	$29.63	$16,890,578	
Entertainment	6%	$20.00	$11,402,364	
Transportation	9%	$18.22	$10,387,706	Per-visitor rates based on US Travel and Tourism Satellite Accounts, tracking typical visitor spending, however increased to account for estimated ticket prices.
			$157,482,750	
Drive Visitor per Day	$110.49	$ per	**5,168,318**	
Lodging	0%	$0.00	$0	
F&B	64%	$47.87	$247,389,392	
Retail	18%	$20.00	$103,366,356	
Entertainment	9%	$36.00	$186,059,442	
Transportation	9%	$6.62	$34,210,419	
			$571,025,609	

Surrounding Area Property Value Analysis

The section overviews the Project's effect on property value increases to the Surrounding Area. This analysis utilizes Census 2023 data and PolicyMap software as the source for 5-year change in Single Family Median Home Value and Median Single Family Home Values and number of Single Family Homes (2018-2023) by Zip Code. Median value was multiplied by the number of current Single Family homes to establish a baseline home value. The 5-year Single Family Home Value growth rate was annualized and projected moving forward. A "Development and Project Share" was then calculated which uses the Development's total economic impact GDP impact as a percentage of total Surrounding Area GDP, both provided by IMPLAN, resulting in a share of **2.92%.** The GDP share was used as a barometer for projecting forward the Development's share of home value growth going forward.

Property taxes were applied to the increment of Single-Family home values to estimate tax impacts as home value impacts were added to the "Property Value" basis on the prior Surrounding Area impacts summary on page 18.

PROPERTY VALUE IMPACT CALCULATION

Zips	Households	Population	Median Real Estate Tax	Property Value Per	Total Property Value	Project Share of Incremental Residential Value	Development Share of Incremental Residential Value
45069	19,460	52,473	$4,301	$175,551	$3,416,222,857	$11,273,535	$99,753,707
45011	26,262	76,151	$3,522	$143,755	$3,775,296,490	$12,458,478	$110,238,658
45040	20,357	57,063	$5,398	$220,327	$4,485,187,184	$14,801,118	$130,967,466
45044	20,529	54,925	$3,037	$123,959	$2,544,758,082	$8,397,702	$74,306,936

Total Impacts

Total Impacts

Construction Activity

The Project will create, cause and accelerate a total one-time infusion of 613 construction jobs and $48 million in payroll from construction activity from the Project, Development and Catalytic projects.

Jobs and Payroll

Additionally, the Project will create, cause and accelerate a total of 4,955 jobs, of which the 83 will be employed by the project, 3,924 from the Development and another 947 indirectly created, caused or accelerated to the Surrounding Area as a result of the Project.

Retail, Entertainment and Dining Sales

The Project will additionally generate, cause and accelerate over $3.7 billion in retail, dining and entertainment sales over a five-year period, including an immediate infusion of $4.2 million in sales from construction activity. Of these sales figures, $67 million will come directly from the Project, $1.8 billion from the Development, driving an additional $1.8 billion to the Surrounding Area and from Catalyzed Projects.

Taxes

The Project will result in approximately $368 million in State and Local Taxes, of which $363 million will be generated during the Completion Period from Project operations, Surrounding Area impacts and Catalyzed Project impacts. The additional $4.9 million comes in the form of Construction Period Taxes.

II. TOTAL CONSTRUCTION PERIOD IMPACTS

A. Total Construction Period Impacts: Construction Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	307	$24,486,032
2	307	$24,486,032
3	-	$0
4	-	$0
5	-	$0
	613	$48,972,064

B. Total Construction Period Impacts: Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales	TOTAL Projected Sales/Year
1	[redacted]	[redacted]	[redacted]	[redacted]
2	[redacted]	[redacted]	[redacted]	[redacted]
3	$0	$0	$0	$0
4	$0	$0	$0	$0
5	$0	$0	$0	$0
	[redacted]	[redacted]	[redacted]	[redacted]

C. Total Construction Period Impacts: Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax	TOTAL Projected Taxes
1	$1,238,203	$943,862	$45,681	$119,518	$2,347,264
2	$1,242,621	$943,862	$45,681	$119,518	$2,351,682
3	$0	$0	$0	$0	$0
4	$0	$0	$0	$0	$0
5	$0	$0	$0	$0	$0
	$2,480,824	$1,887,723	$91,363	$239,036	$4,698,946

III. TOTAL COMPLETION PERIOD IMPACTS *(totals inputs from Completion Period Impacts worksheet)*

A. Total Completion Period Impacts: Operational Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	598	$63,219,499
2	611	$66,391,216
3	627	$69,724,205
4	648	$73,227,199
5	674	$76,909,540
	3,158	$349,471,659

B. Total Completion Period Impacts: Tenant Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	3,798	$243,331,085
2	3,881	$260,435,599
3	3,986	$279,629,828
4	4,117	$301,326,882
5	4,281	$326,037,679
	20,063	$1,410,761,073

C. Total Completion Period Impacts: Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales	TOTAL Projected Sales/Year
1	[redacted]	[redacted]	[redacted]	[redacted]
2	[redacted]	[redacted]	[redacted]	[redacted]
3	[redacted]	[redacted]	[redacted]	[redacted]
4	[redacted]	[redacted]	[redacted]	[redacted]
5	[redacted]	[redacted]	[redacted]	[redacted]
	[redacted]	[redacted]	[redacted]	[redacted]

D. Total Completion Period Impacts: Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax	TOTAL Projected Taxes
1	$29,817,103	$10,721,284	$5,647,401	$13,918,588	$60,104,375
2	$31,307,958	$11,257,348	$5,929,772	$14,853,680	$63,348,758
3	$32,873,356	$11,820,215	$6,226,260	$21,922,413	$72,842,245
4	$34,517,024	$12,411,226	$6,537,573	$26,271,302	$79,737,125
5	$36,242,875	$13,031,788	$6,864,452	$31,650,828	$87,789,942
	$164,758,317	$59,241,861	$31,205,458	$108,616,809	$363,822,445

Total Impacts

I. TOTAL ECONOMIC IMPACTS *(Construction Period Impacts + Completion Period Impacts)*

A. Summary: Total Project Impacts

	TOTAL Projected FTEs	TOTAL Projected Payroll	TOTAL Projected Sales	TOTAL Projected Taxes
Construction Period Impacts	613	$48,972,064	$4,270,982	$4,698,946
Completion Period Impacts	4,955	$1,760,232,732	$3,703,682,004	$363,822,445
	5,568	**$1,809,204,796**	**$3,707,952,986**	**$368,521,392**

Total Impacts

The table to the right illustrates that projected taxes ($368,521,392) meet at least 10% of the total development costs ($7,200,000).

Further, when combining the Construction Period and the first year after construction, the project significantly exceeds the 10% development cost threshold by $62.3 million dollars.

TMUD Credit Objectives	
TMUD Project Cost	$72,000,000
10% of Development Cost Threshold	**$7,200,000**
Construction Taxes	$4,698,946
First Year Post-Construction Taxes	$64,803,321
Construction + Year 1	**$69,502,267**
Total Taxes	$368,521,392
Achieved 10% Taxes Threshold	**YES**
Achieve Alternative Method Potential	**YES**

VISTA SITE SELECTION

Vista Site Selection LLC is a newly formed company, founded in September of 2022 by the law firm Vorys, Sater, Seymour and Pease LLP, focused on economic development, economic analysis, economic incentives and site location consulting. Vista's management team has over 75 years of collective experience in Economic Development and Site Selection in 49 US States and includes certified data analysts, economic consultants and GIS specialists, among others.

Vista's services included:

- ✓ Economic Insights, including Economic Footprint and Economic Impact Analysis
- ✓ Labor Analytics
- ✓ Development of Advanced, Customized Data Analytics Platforms and Mapping
- ✓ Retail Performance and Growth Analytics
- ✓ Return on Investment Insights for Companies and Communities
- ✓ Corporate Site Selection Advisory
- ✓ Tax Credit and Incentives Advisory
- ✓ Economic and Market Analysis

EIS Preparer Qualifications

This analysis will be performed by **Chris Magill**. Chris is a Certified Economist and Managing Director for Vista Site Selection. Chris has significant experience consulting on capital investment projects and has strategically negotiated and analyzed tax credit, grant and loan-financing solutions for capital investment projects in over 20 different states. Further, Chris utilizes data analytics to help better inform business leaders and site administrators on project ROI, economic impacts, site decisions and market conditions. Prior to joining Vista Site Selection, Chris served as the Economic Development Director at the Ice Miller law firm for 11 years, consulting on various matters related to economic development, economic incentives, public-private partnerships, community advisory and economic impact analysis. Prior to his time at Ice Miller, Chris worked at the Ohio Department of Development ("ODOD"), serving as the Executive Director of the Ohio Tax Credit Authority. During his time at ODOD, Chris managed and structured various tax credit programs and co-developed various economic incentive calculation tools.

Chris carries various economic certifications and has nearly 15 years of experience in authoring economic impact statements and analysis tools. Chris has experience instructing economic impact, fiscal return-on-investment and economic development courses for the International Economic Development and the Ohio Economic Development Association. Further, has volunteered his time instructing pro forma development courses for the Knowlton School of Architecture and Fisher College of Business at The Ohio State University in relation to the annual Urban Land Institute Student Heinz Competition and has served as a Planning Committee member and annual speaker for the Ohio Tax Conference. Chris also serves as the Vice President of the Board of Directors of the Ohio Statewide Development Corporation. Chris' credentials include:

- Certified Economist, *IMPLAN*
- Certification in Economic Measurement, *National Association of Business Economics*
- Certification of Business Applications of Statistics and Data Analytics, *National Association of Business Economics*
- Certification of Economic Strategy and Managerial Decision Making, *National Association of Business Economics*
- Master's in Business Administration, *Ohio University*

EIS Preparer Qualifications

The list depicted includes a sample of Chris Magill's economic impact study experience. Chris has authored economic impact studies for projects in more than 25 US States. This includes manufacturing megaprojects, corporate headquarter office projects, mixed-use projects, non-profit projects, policy changes and cultural/sports facility projects, among others.

Transformational Mixed-Use Tax Credit

Economic Impact Statement

Authored by:

VISTA SITE SELECTION

Introduction

This study is prepared by Vista Site Selection, LLC ("Vista"), a third-party entity, on behalf of an application for the Ohio Transformational Mixed-Use Tax Development Credit Program ("TMUD"). This study accomplishes two primary objectives:

1) To verify that increased tax collections resulting from the project will exceed 10% of the estimated eligible project costs and,

2) To articulate the economic impacts of the Project and/or larger Development to the Project Site and Surrounding Area during both the Construction Period, which is the time period in which the Project is being constructed and the Completion Period, which is the 5 years after Project construction is completed.

In accomplishing these objectives, this document will assess the following categories:

- ***Employment*** **-** The projected number of construction, operational, and tenant jobs created as a result of the Project and the average hourly wages for each job type.
- ***Revenue*** **-** Annual revenue projections generated from retail, entertainment, and dining sales.
- ***Tax Revenues*** **-** Annual revenue projections generated from sales tax, income tax, lodging tax, and property tax.

Economic impacts will be calculated utilizing IMPLAN software and the following methodology:

INPUTS

1. Provided by Developer
2. Calculated by Vista using market assumptions and data support

ECONOMIC OUTPUTS

1. Calculated utilizing IMPLAN software
2. Calculated by Vista utilizing IMPLAN and complementary data sources either publicly available, indexed/created by Vista or subscribed to by Vista.

TAX CALCULATIONS

1. Direct taxes calculated by Vista using state and local tax rates.
2. Indirect taxes calculated by Vista from indirect outputs, with some categories calculated using IMPLAN tax estimates and rates.

EIS Framework Categories and Sections

This study illustrates the transformational mixed use development's impact on the development site and surrounding area in terms of retail, entertainment and dining sales, job creation, property values, connectivity, and revenue from sales, income, lodging, and property taxes, as referenced in Ohio Revised Code 122.09(C)(1). The framework in this study will cover this in three major sections: 1) Construction Impacts, 2) Completion Period Impacts and 3) Total Impacts.

	1. Construction Impacts	2. Project Completion Period Impacts
Project	The direct economic impacts of the new construction and/or renovation and rehabilitation of structures included in the Project on the Project site during the construction period.	The direct and indirect economic impacts of the Project as defined in the application in the five years after completion of construction of the Project.
Development (if applicable)	The direct economic impacts of the construction and/or renovation and rehabilitation of structures included in the Development as defined in the application during the construction period. Does not include the Construction Project Impacts described above. If the Project is not part of a larger planned Development, this section is not applicable.	The direct and indirect economic impacts of the Development as defined in the application in the five years after completion of construction of the Project, exclusive of the impacts of the Project as identified above. If the Project is not part of a larger planned Development, this section is not applicable.
Surrounding Area Impacts	The indirect economic impacts caused by the new construction and/or renovation and rehabilitation of structures included in the Project in the surrounding area during the completion period of the Project, excluding any impacts specifically identified below in the Construction Catalyzed Project Impacts section.	The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below in the Catalyzed Project Impacts section.
Catalyzed Projects (if applicable)	The direct and indirect economic impacts from construction of the defined projects in the surrounding area that are directly caused or accelerated by the Project/Development during the completion period of the Project.	The direct and indirect economic impacts of other proposed, defined projects in the surrounding area that are directly caused or accelerated by the Project/Development in the five years after completion of construction of the Project.
	3. Total Impacts (1. Construction Impacts + 2. Project Completion Impacts)	

Project Geography

The Economic Impact geography is referred to as the Surrounding Area, which includes any zip code covered in whole or in part encompassed within a perimeter starting from the transformational mixed used development boundary and extending one-half miles out from that boundary.

The 2-mile radius from the Project boundary, which is located outside of 10 miles of a City with population of at least 100,000 residents includes the following zip codes:

1. **44502**
2. **44503**
3. **44504**
4. **44505**
5. **44506**
6. **44507**
7. **44509**
8. **44510**
9. **44511**
10. **44555**

Taxes & Rate Methodology

For simplicity, the Project, Development, Surrounding Area and Catalyzed Projects follow the same tax rates which are based on the **Youngstown, Mahoning County**, the **Youngstown City School District** and the State of Ohio rates. It is worth noting that there may be small variations in the actual tax amounts, compared to these estimated amounts, based on per-parcel levies, other school districts and numerous factors particularly when factoring in the Surrounding Area and Catalyzed Project impacts.

Sales Taxes – sales taxes are calculated using sales and purchases of building tenants, purchases from residents and tourists within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional **20%** reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of Development resident expenditures and estimates of economic output provided by IMPLAN. The combined State and Local rate is **7.5%** in the **project address** (with **5.75%** to the State of Ohio and **1.50%** to **Mahoning County** and .**25%** to the **Western Reserve Transit Authority**). Sales tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool for the project address.

Income Taxes – income taxes are calculated as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax). Ohio Withholding Taxes utilize a bracketed rate structure based on salary (for this project it is assumed to be **2.35%,** based on the Ohio Department of Taxation's bracketed calculation method) and the **City of Youngstown** at **2.75% on the taxable income of every person residing in and/or earing wages in the City.**

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. Lodging taxes collected by **Mahoning County** at a rate of **5%.** Lodging rates can be found utilizing the Ohio Department of Taxation's tax analysis data series.

Property Taxes – property taxes are collected by various units of government and published by the County Auditor. Property taxes are assessed at 35% of the market value of the property, then an effective tax rate is applied and distributed to the local government taxing units. The effective tax rate of the property's assessed value is **7.186%.**

Application of Growth Rates and Inflation – annual growth is assumed for revenue streams calculated within this document which includes property value, sales growth and wage growth. An examination of the Consumer Price Index for all Urban Consumers for calendar years 2021, 2022 and 2023 was utilized in which each half-year rate was averaged, arriving at a total rate of **5.5%.** This figure was reduced to **5%** under anticipation that the CPI and inflation will drop.

Construction Period Impacts

Input Methodology

Project Impacts

The value entered in Industry Output for construction represents full cost of the structure as provided by the Developer, and only the structure. Construction cost data was provided by the Developer in all circumstances (each building). This includes hard costs and soft costs. IMPLAN calculates employment based on the number of employees it would take to support the dollar value and type of a given economic event, using a combination of data sources including Census County Business Patterns (CBP), Bureau of Labor Statistics Covered Employment and Wages (CEW) and Bureau of Economic Analysis Regional Economic Accounts (REA) as the basis for its calculation. Further, IMPLAN uses additional data sources to classify its employment estimates into hours worked, headcount and compensation by specific occupation. Occupational source data used by IMPLAN includes Bureau of Labor Statistics (BLS) Occupational Employment Survey (OES), BLS Employment Projections national industry by occupation matrix, Census Bureau American Community Survey (ACS) Public Use Microdata Sample (PUMS) and O*NET™ which is a trademark of the U.S. Department of Labor, Employment and Training Administration. Employees are converted to Full-time equivalent employees (FTEs) by dividing the estimated number of hours of compensation for the job, as calculated by IMPLAN, by 2,080. There are no direct impacts to retail, entertainment and dining as these are not direct construction expenditures, but rather Surrounding Area effects.

Surrounding Area Impacts

Surrounding Area impacts during the Construction Period were calculating utilizing IMPLAN. In IMPLAN, the project was modeled as **$20 million** in Output under the industry 55 - Construction of New Commercial Structures, Including Farm Structures. Construction cost calculations were provided using costs provided by the Developer. Outputs resulting from the construction inputs in IMPLAN were filtered in IMPLAN only to show indirect effects of Project Construction. These impacts were categorized by use, to understand specific impacts to Retail, Entertainment and Dining. In this circumstance, the Surrounding Area's presence of significant entertainment, retail and dining establishments (professional sports stadiums, full-service restaurants, limited services restaurants, bars and shopping) create a higher degree of construction worker spending. Additional categories were created and aggregated if they were sales-taxable transactions. Lodging taxes follow a similar rate, as many construction workers travel to larger areas given the overall labor shortage of construction workers. Those who travel and stay overnight are typically provided lodging and meal per diems. Given IMPLAN captures dining expenditures, the lodging per diem method is utilized to get a more accurate picture of construction spending. A typical per-day per diem is $138 for lower cost areas and $222 for higher cost areas. Given the lack of nearby construction labor however, a higher Per Diem of $222 figure is utilized (per diem rates provided by *PBMares CPAs and Consultants Guidance for Contractors Who Use Per Diem, 2022)*. Further it is assumed 15% of workers will travel as part of this arrangement during 30% of the annual weekdays per year. Lodging taxes are calculated off of estimated lodging expenditures.

Catalyzed Project Impacts

Catalyzed Project construction was calculated differently than Project Construction, as detailed information for Catalyzed Projects is not typically available, as such, costs were provided by the catalyzed project developers or estimated based off of square footage data gathered from available project information. In calculating construction impacts, costs were calculated on a per-square foot basis by analyzing comparable building sizes on the **Ohio** County Auditor's website, costs of recent developments in the area and the size/scale of the project. In all cases, construction costs assumed 60% labor and 40% materials costs, and for purposes of estimating employment, a cost-per-worker of $136,000 was used, the rate provided by IMPLAN for the **Project Surrounding Area** zip codes referenced in Page 4. Lastly, average salaries for the area were calculated using IMPLAN employee compensation figures for **the Project Surrounding Area** zip codes, estimated at **$54,000**. There is further detail on Catalyzed Project methodology later on in this document.

Construction Project Impacts

CONSTRUCTION	Project Construction		
	Year 1	Year 2	Totals
Property Value	$10,000,000	$10,000,000	**$20,000,000**
Labor	90	90	**180**
Materials	$4,000,000	$4,000,000	**$8,000,000**
Wages	$6,000,000	$6,000,000	**$12,000,000**
DIRECT	**Const. 1**	**Const. 2**	**Total**
Sales Tax	$300,000	$300,000	**$600,000**
Income Tax	$165,000	$165,000	**$330,000**
Lodging Tax	$0	$0	**$0**
Property Tax	$0	$0	**$0**
Total	**$465,000**	**$465,000**	**$930,000**

Any construction occurring prior to the Completion Period is not included in this calculation.

Construction Development Impacts

Completion Period Impacts

Methodology

Project and Development Impacts

In calculating the Project, the Developer provided data related to project costs, square footage, residential units, residential rents, building and tenant information to serve as inputs. Vista calculated employment, wages, sales and office purchases from these figures. In circumstances where tenant sales were not provided by the Developer, they were calculate by Vista utilizing Lightcast 2023 area sales per square foot data and estimates provided from CoStar estimates for specific tenants. Office and retail supplies purchases are estimated using a percentage of payroll based (5%-25% of payroll, **25%** being used for supplies needed for theatre operations). Other metrics, such as household incomes of the residents and resident spending in the Surrounding Area were calculated by Vista. Resident expenditures were calculated using averages from the *2022 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income*. Household income assumptions were calculated by assuming renters will spend **25%** of their income toward rent, there for the monthly rent price was divided by **25%,** then multiplied x 12 (months) to arrive at the household income rate for that particular unit grouping. Each consumer expenditure category was assigned an "absorption rate" to account for any expenditures that cannot be made within the Surrounding Area. Estimated wages and jobs use CoStar jobs per square foot metrics and wages utilize average wage for the specific tenant use staffing pattern provided by Lightcast, sourced by the Bureau of Labor Statistics. For hotels that include conference space, it is assumed that space is programmed **226** days of the year with a mix of weddings, weekday conference, weekend conventions and 1-day ticketed events. Metrics for these events was based on comparable events which include the Ohio Tax Conference, Monroe Pop Fest, NAIOP Commercial Breakfast and typical wedding pricing. Lastly, once the building renovation is complete the Project will expect to generates significant visitor spending activity which will directly benefit the Surrounding Area. Vista calculated visitor activity using *Placer.ai* foot-traffic data to calculate expected visitors, which estimates annual visits, annual visitors and visitor locations both before and after arriving at the Project facility, providing a basis for Surrounding Area spending. The effects of visitors generated from the Project are reflected in Surrounding Area impacts.

Surrounding Area Impacts

Surrounding Area impacts were calculated utilizing three primary methods: 1) Indirect Impacts calculated by IMPLAN from Project inputs, including spending in Dining, Entertainment and Retail in the Surrounding Area, 2) Indirect effects to business from tourist spending, through increased sales and indirect jobs created and 3) Indirect property value impacts from the project. IMPLAN calculates indirect impacts from Project activity, by industry, which is then aggregated into Retail, Entertainment and Dining sales. Property value impacts were calculated based on home values within the Surrounding Area, and extracting the Development's share of projected growth based on historical growth and the Development's projected economic GDP impact relative to the Surrounding Area's GDP after the Project is complete.

Catalyzed Project Impacts

Catalytic projects follow a different method, given the prospective nature of the developments and lack of detail beyond planned square footage and uses. Projects were identified by the Developer with assistance from Vista, as either caused or accelerated by the project, including what year during the Project's Completion period each project would come online. Square footage was applied to a standard rate table be use and resulting figures were calculated into a series of tables for each project. In instances where these effects include the construction of certain public buildings, a separate set of factors to account for tax-exempt status in certain circumstances related to property and sales. This document elaborates on the methods and rates in later sections.

Project Inputs

INPUTS	Sales	FTEs	Hourly	Payroll	Residents	Resident Incomes	Resident Spending
Residential Units	$0	3	$21.63	$126,952	142	0	$17,040,000
Restaurant	$[redacted]	12	$21.63	$530,600	0	0	$0
Retail	$[redacted]	17	$21.63	$763,920	0	0	$0
Office	$[redacted]	155	$48.08	$15,509,615	0	0	$0
Entertainment	$0	0	$0.00	$0	0	0	$0
Event Space (Vaults)	$[redacted]	4	$21.63	$180,000	0	0	$0

Development Inputs

Surrounding Area Property Value Analysis

The section overviews the Project's effect on property value increases to the Surrounding Area. This analysis utilizes Census 2023 data and PolicyMap software as the source for 5-year change in Single Family Median Home Value and Median Single Family Home Values and number of Single Family Homes (2018-2023) by Zip Code and the more immediate Census Tract. Median value was multiplied by the number of current Single Family homes to establish a baseline home value. The 5-year Single Family Home Value growth rate was annualized and projected moving forward. A "Development and Project Share" was then calculated which uses the Development's total economic impact GDP impact as a percentage of total Surrounding Area GDP, both provided by IMPLAN, resulting in a share of **1.9%.** The GDP share was used as a barometer for projecting forward the Development's share of home value growth going forward.

Property taxes were applied to the increment of Single-Family home values to estimate tax impacts as home value impacts were added to the "Property Value" basis on the prior Surrounding Area impacts summary on page 18.

PROPERTY VALUE IMPACT CALCULATION

Zips	Households	Population	Median Real Estate Tax	Property Value Per	Total Property Value	Project Share of Incremental Residential Value
44502	3,724	9,944	$550	$22,449	$83,600,000	**$1,554,960**
44503	381	944	$2,211	$90,245	$34,383,306	**$639,529**
44504	1,672	3,892	$950	$38,776	$64,832,653	**$1,205,887**
44505	7,158	18,960	$1,238	$50,531	$361,698,122	**$6,727,585**
44506	943	2,399	$2,211	$90,245	$85,100,939	**$1,582,877**

44555	-	176	$2,211	$90,245	$0	**$0**
44502	3,724	9,944	$550	$22,449	$83,600,000	**$1,554,960**
44503	381	944	$2,211	$90,245	$34,383,306	**$639,529**

Catalyzed Project Impacts

The Catalytic Effect the Project is quantified in this section. The projects catalyzed in this section all fall within Project's half-mile radius and are planned to be placed into series after this Project is complete. Each project was identified as being caused or accelerated by the Project as noted in Appendix A. Further, project impacts are captured during the five-year completion period in each project's corresponding table. The assumptions below were used to calculate impacts from development square footage programs of each catalyzed project. The following page overviews how these were calculated into FTES, Payroll, Sales and Taxes.

Catalyzed Project Rates	SF/Jobs	Salary	Sales/SF	Room Sales/SF	Rent/SF	Methodology
Apartment	15,000	$35,000	$31	$0	$15	Uses comparable market data within the County, Ohio Region, data provided by Developer and Rent.com rent estimates.
Hotel	700	$30,000	$100	$100	$0	Uses comparable hotel sales data for large cities.
Industrial	750	$55,000	$0	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Office	350	$75,000	$25	$0	$0	Lightcast & BLS Data for Surrounding Area for Business Occupations
Restaurant	600	$25,000	$350	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Retail	450	$30,000	$300	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Arena/Events	750	$55,000	$95	$0	$0	Based on comparable arena construction data
	Operations Rate	**Construction Rate**				
% Jobs Dedicated to Operations	15%					Uses typical mix or type and area supported by IMPLAN
Indirect Retail Sales Rate	5%	2%				Uses typical mix or type and area supported by IMPLAN
Indirect Entertainment Sales Rate	7%	3%				Uses typical mix or type and area supported by IMPLAN
Indirect Dining Sales	10%	4%				Uses typical mix or type and area supported by IMPLAN
Construction Output/Worker		$136,000				Uses typical mix or type and area supported by IMPLAN
EC/Worker		$62,000				Uses typical mix or type and area supported by IMPLAN
% Cost Related to Construction Materials		40%				Typical method utilzied by RSMeans Construction Data
Sales Taxable Purchases	95%	100%				Analyzed exempt uses in relation to project from OTAX
Lodging Impact	2%	2%				Uses US Tourism Sattelite Accounts to estimate lodging impact of activity
Property Impact	12.5%	0.5%				Assumes typical indirect property value impact based on IMPLAN data
Value at Cost	85%	85%				Assumes market value based on hard costs from analysis of Auditor data
Renter HH Income	$65,100					Utilizes Census/ACS and HUD Data to Assume Area Family Incomes
Renters per SF	600					Calculated based on typical SF needed per renter from sample projects
Lodging Per-Diem		$227				PBMares CPAs and Consultant's Guidance for Contractors Who Use Per Diems
Worker Travel %		15%				Based on analysis of Lightcast inbound commuter data to the Surrounding Area
Worker Annual Weekdays		78.3				Assumes 30% of the weekdays "travel workers" commute to work and use a Per-Di

CITY OF YOUNGSTOWN
MAYOR JAMAEL TITO BROWN

OFFICE OF THE MAYOR
CITY HALL • 26 S. PHELPS STREET • YOUNGSTOWN, OHIO 44503
PHONE: (330) 742-8701 • FAX: (330) 743-1335

October 4, 2024

Ohio Department of Development
77 South High Street
Columbus, Ohio 43215

To Whom It May Concern:

It is with great excitement that the City of Youngstown expresses its full support in the redevelopment of the Mahoning National Bank Building (the "Project"). This Project will have a transformational impact to our Downtown and the Project's immediate two-mile radius on residents, employers, institutions and visitors. The Project will have a catalytic effect that enhances the lives of residents and positively impacts surrounding area land-use for years to come. The purpose of this letter is to attest to the catalytic effect this Project will have in causing or accelerating other key developments in the City of Youngstown, specifically within the surrounding two-mile radius of the Project.

In addition to the immense impacts this Project will have to the City, County and Region, improvements, renovations and preservation of this key historical asset to our Downtown will accelerate a number of proposed, defined development projects that will be placed into service after the Project is complete. This full list of such developments can be found in the attached Exhibit A to this document.

Thank you for your consideration of this request. If you have any questions, please me at (330) 742-8701 or mayor@youngstownohio.gov.

Sincerely,

Jamael Tito Brown
Mayor, City of Youngstown

Note:

Estimates on project costs made by Vista Site Selection. Assumptions on certain uses and square footage made by Vista Site Selection based on publicly available information and those provided by Developers and Developer partners.

Catalyzed Projects above represent those within the half-mile radius of the Development boundary that are estimated to be placed into service after the Project is placed into service.

Catalyzed Project Impacts

Each Catalytic Project is calculated utilizing the following methodology in correspondence with the rates from the previous page:

Category	Methodology
FTEs/Payroll	Calculates FTEs per SF by use and payroll using BLS wage data for each overarching use.
Operations FTEs/Payroll	Assumes the 15% of FTES are dedicated to operations, based on IMPLAN's typical mix of operations occupation categories, which includes two-level SIC code categories 37, 43 and 49.
Tenant FTEs/Payroll	Assumes the 75% of FTES are tenants, which is based off of a typical IMPLAN mix for the area, removing two-level SIC code categories 37, 43 and 49.
Retail	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Retail category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate retail spending for residents.
Entertainment	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Entertainment category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate entertainment spending for residents.
Dining	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Dining category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate dining spending for residents.

Catalyzed Project List

Catalyzed Project: 1 W. Federal Street

Location: 1 W. Federal Street, Youngstown, Ohio

Summary: This property within a block from the Project was purchased by a developer with the intention of redeveloping the building for mixed use. The project's retail space and event space will serve as a key amenity to the tenants of this proposed renovation.

Catalyzed Project List

Catalyzed Project: Youngstown State Kilcawley Center

Location: 1 University Plaza, Youngstown, Ohio

Summary: This project's renovation includes the Chestnut Room, an event space on first floor that can fit 600 people, will have improved sight lines, upgraded lighting and feature support space. The first-floor blueprint envisions larger convenience store space, a spirit shop and flexible space that Young said will give the university the ability to add more retail options in the future. The Cove, a student lounge, will be available for late-night food and activities. The second-floor blueprint features a community kitchen, three long spaces, a TV lounge, meeting rooms, social stairs and a makerspace.

The employees and residents of the project will create demand for Kilcawley's retail space, while the office tenants will create a market for Chestnut Room event space demand.

Catalyzed Project List

Catalyzed Project: WRTA Station Update

Location: 340 W Federal St Ste A, Youngstown, Ohio

Summary: WRTA has been examining Grand River Station, a downtown transit hub facility operated by Municipal Transit (MTU) in Lacrosse, Wisconsin, as a possible example and template for redevelopment of Federal Station. Opened in 2012, the $30 million facility covers 1.1 acres with at least two levels of development, and up to six levels in some parts of the building. The MTU transit hub at ground level is wrapped on all four sides by 13,000 square feet of commercial and retail space, including the MTU customer service center, as well as building entrances and other activated frontage. Parking for building residents, tenants, and MTU employees occupies the second level. Three-to-four stories of residential space comprising 92 apartments, including market-rate, low-to-moderate income and disabled units, wrap around three sides of the building beginning on the third level.

The Project's significant employment and infusion of new residents will create additional commuter demand for WRTA ridership.

Catalyzed Project List

Catalyzed Project: Pyatt Street Mixed Use

Location: 1019 Market Street, Youngstown, Ohio (various parcels around this address location)

Summary: The WRTA Market Street Corridor Transit Oriented Development Plan is proposing a mixed use development that features the development of numerous parcels surrounding the intersection of Market Street and Pyatt Street. These renderings call for numerous mixed-use buildings, apartments, townhomes, stand-alone retail and commercial buildings to be developed along this transit corridor.

The Project's significant employment and infusion of new residents will create additional commuter demand for WRTA ridership to these key locations, creating additional market demand to accelerate the development of these projects.

Catalyzed Project List

Catalyzed Project: Uptown Indianola Mixed Use

Location: 2801 Market St # 202, Youngstown, Ohio (various parcels around this address location)

Summary: Summary: The WRTA Market Street Corridor Transit Oriented Development Plan is proposing a mixed-use development that features the development of numerous parcels surrounding the intersection of Market Street and Indianola. These renderings call for numerous mixed-use buildings, apartments, an industrial incubator, stand-alone retail and commercial buildings to be developed along this transit corridor.

The Project's significant employment and infusion of new residents will create additional commuter demand for WRTA ridership to these key locations, creating additional market demand to accelerate the development of these projects.

Catalyzed Project List

Catalyzed Project: Former IBM Site

Location: 250 E. Federal Street, Youngstown, Ohio

Summary: This property within a block from the Project will be renovated to house the Youngstown Historical Society. The 45,000 square foot facility will have ample room for event space and exhibit space.

The Project's status as a historic preservation project will serve as an additional project of interest to the historical society as a potential exhibit. The office tenants will create a market for event space housed by this site and the residents and employees of the Project will serve as customers and participants in the historical society.

Total Impacts

Total Impacts

Construction Activity

The Project will create, cause and accelerate a total one-time infusion of 2,540 construction jobs and $158 million in payroll from construction activity from the Project, Development and Catalytic projects.

Jobs and Payroll

Additionally, the Project will create, cause and accelerate a total of 847 jobs, of which 196 will be employed by the project and 651 indirectly created, caused or accelerated to the Surrounding Area as a result of the Project.

Retail, Entertainment and Dining Sales

The Project will additionally generate, cause and accelerate over $259 million in retail, dining and entertainment sales over a five-year period, including an immediate infusion of $14 million in sales from construction activity. Of these sales figures, $81 million will come directly from the Project, driving an additional $177 million to the Surrounding Area and from Catalyzed Projects.

Taxes

The Project will result in approximately $111 million in State and Local Taxes, of which $92 million will be generated during the Completion Period from Project operations, Surrounding Area impacts and Catalyzed Project impacts. The additional $19 million comes in the form of Construction Period Taxes.

II. TOTAL CONSTRUCTION PERIOD IMPACTS

A. Total Construction Period Impacts: Construction Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	1,270	$79,196,058
2	1,270	$79,196,058
3	-	$0
4	-	$0
5	-	$0
	2,540	$158,392,116

B. Total Construction Period Impacts: Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales	TOTAL Projected Sales/Year
1	[redacted]	[redacted]	[redacted]	[redacted]
2	[redacted]	[redacted]	[redacted]	[redacted]
3	$0	$0	$0	$0
4	$0	$0	$0	$0
5	$0	$0	$0	$0
	[redacted]	[redacted]	[redacted]	[redacted]

C. Total Construction Period Impacts: Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax	TOTAL Projected Taxes
1	$5,625,688	$2,177,892	$168,351	$1,634,608	$9,606,538
2	$5,626,903	$2,177,892	$168,351	$1,634,608	$9,607,753
3	$0	$0	$0	$0	$0
4	$0	$0	$0	$0	$0
5	$0	$0	$0	$0	$0
	$11,252,590	$4,355,783	$336,702	$3,269,215	$19,214,291

III. TOTAL COMPLETION PERIOD IMPACTS *(totals inputs from Completion Period Impacts worksheet)*

A. Total Completion Period Impacts: Operational Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	62	$4,029,943
2	69	$4,677,157
3	120	$7,140,222
4	121	$7,334,762
5	123	$7,553,979
	494	$30,736,063

B. Total Completion Period Impacts: Tenant Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	370	$25,691,075
2	410	$29,547,564
3	701	$43,714,873
4	711	$45,052,147
5	724	$46,559,048
	2,916	$190,564,706

C. Total Completion Period Impacts: Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales	TOTAL Projected Sales/Year
1	[redacted]	[redacted]	[redacted]	[redacted]
2	[redacted]	[redacted]	[redacted]	[redacted]
3	[redacted]	[redacted]	[redacted]	[redacted]
4	[redacted]	[redacted]	[redacted]	[redacted]
5	[redacted]	[redacted]	[redacted]	[redacted]
	[redacted]	[redacted]	[redacted]	[redacted]

D. Total Completion Period Impacts: Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax	TOTAL Projected Taxes
1	$4,700,781	$814,920	$16,811	$3,058,564	$8,591,076
2	$5,679,091	$946,625	$29,382	$3,502,509	$10,157,606
3	$12,608,717	$1,433,681	$130,153	$9,045,733	$23,218,284
4	$13,126,546	$1,485,121	$140,328	$9,563,736	$24,315,731
5	$13,670,267	$1,539,132	$151,543	$10,159,919	$25,520,861
	$49,785,402	$6,219,478	$468,217	$35,330,462	$91,803,558

Total Impacts

I. TOTAL ECONOMIC IMPACTS *(Construction Period Impacts + Completion Period Impacts)*

A. Summary: Total Project Impacts

	TOTAL Projected FTEs	TOTAL Projected Payroll	TOTAL Projected Sales	TOTAL Projected Taxes
Construction Period Impacts	2,540	$158,392,116	$14,207,836	$19,214,291
Completion Period Impacts	847	$221,300,769	$259,310,241	$91,803,558
	3,387	**$379,692,885**	**$273,518,077**	**$111,017,850**

Total Impacts

The table to the right illustrates that projected taxes ($111,017,850) meet at least 10% of the total development costs ($1,600,000).

Further, when combining the Construction Period and the first year after construction, the project significantly exceeds the 10% development cost threshold by $45,419,659 dollars.

TMUD Credit Objectives	
TMUD Project Cost	$16,000,000
10% of Development Cost Threshold	**$1,600,000**
Construction Taxes	$19,214,291
First Year Post-Construction Taxes	$27,805,367
Construction + Year 1	**$47,019,659**
Total Taxes	$111,017,850
Achieved 10% Taxes Threshold	**YES**
Achieve Alternative Method Potential	**YES**

VISTA SITE SELECTION

Vista Site Selection LLC is a newly formed company, founded in September of 2022 by the law firm Vorys, Sater, Seymour and Pease LLP, focused on economic development, economic analysis, economic incentives and site location consulting. Vista's management team has over 75 years of collective experience in Economic Development and Site Selection in 49 US States and includes certified data analysts, economic consultants and GIS specialists, among others.

Vista's services included:

- ✓ Economic Insights, including Economic Footprint and Economic Impact Analysis
- ✓ Labor Analytics
- ✓ Development of Advanced, Customized Data Analytics Platforms and Mapping
- ✓ Retail Performance and Growth Analytics
- ✓ Return on Investment Insights for Companies and Communities
- ✓ Corporate Site Selection Advisory
- ✓ Tax Credit and Incentives Advisory
- ✓ Economic and Market Analysis

EIS Preparer Qualifications

This analysis will be performed by **Chris Magill**. Chris is a Certified Economist and Managing Director for Vista Site Selection. Chris has significant experience consulting on capital investment projects and has strategically negotiated and analyzed tax credit, grant and loan-financing solutions for capital investment projects in over 20 different states. Further, Chris utilizes data analytics to help better inform business leaders and site administrators on project ROI, economic impacts, site decisions and market conditions. Prior to joining Vista Site Selection, Chris served as the Economic Development Director at the Ice Miller law firm for 11 years, consulting on various matters related to economic development, economic incentives, public-private partnerships, community advisory and economic impact analysis. Prior to his time at Ice Miller, Chris worked at the Ohio Department of Development ("ODOD"), serving as the Executive Director of the Ohio Tax Credit Authority. During his time at ODOD, Chris managed and structured various tax credit programs and co-developed various economic incentive calculation tools.

Chris carries various economic certifications and has nearly 15 years of experience in authoring economic impact statements and analysis tools. Chris has experience instructing economic impact, fiscal return-on-investment and economic development courses for the International Economic Development and the Ohio Economic Development Association. Further, has volunteered his time instructing pro forma development courses for the Knowlton School of Architecture and Fisher College of Business at The Ohio State University in relation to the annual Urban Land Institute Student Heinz Competition and has served as a Planning Committee member and annual speaker for the Ohio Tax Conference. Chris also serves as the Vice President of the Board of Directors of the Ohio Statewide Development Corporation. Chris' credentials include:

- Certified Economist, *IMPLAN*
- Certification in Economic Measurement, *National Association of Business Economics*
- Certification of Business Applications of Statistics and Data Analytics, *National Association of Business Economics*
- Certification of Economic Strategy and Managerial Decision Making, *National Association of Business Economics*
- Master's in Business Administration, *Ohio University*

EIS Preparer Qualifications

The list depicted includes a sample of Chris Magill's economic impact study experience. Chris has authored economic impact studies for projects in more than 25 US States. This includes manufacturing megaprojects, corporate headquarter office projects, mixed-use projects, non-profit projects, policy changes and cultural/sports facility projects, among others.

Transformational Mixed-Use Tax Credit

Economic Impact Statement

Authored by:

VISTA SITE SELECTION

Introduction

This study is prepared by Vista Site Selection, LLC ("Vista"), a third-party entity, on behalf of an application for the Ohio Transformational Mixed-Use Tax Development Credit Program ("TMUD"). This study accomplishes two primary objectives:

1) To verify that increased tax collections resulting from the project will exceed 10% of the estimated eligible project costs and,

2) To articulate the economic impacts of the Project and/or larger Development to the Project Site and Surrounding Area during both the Construction Period, which is the time period in which the Project is being constructed and the Completion Period, which is the 5 years after Project construction is completed.

In accomplishing these objectives, this document will assess the following categories:

- ***Employment*** **-** The projected number of construction, operational, and tenant jobs created as a result of the Project and the average hourly wages for each job type.
- ***Revenue*** **-** Annual revenue projections generated from retail, entertainment, and dining sales.
- ***Tax Revenues*** **-** Annual revenue projections generated from sales tax, income tax, lodging tax, and property tax.

Economic impacts will be calculated utilizing IMPLAN software and the following methodology:

INPUTS

1. Provided by Developer
2. Calculated by Vista using market assumptions and data support

ECONOMIC OUTPUTS

1. Calculated utilizing IMPLAN software
2. Calculated by Vista utilizing IMPLAN rates.

TAX CALCULATIONS

1. Direct taxes calculated by Vista using state and local tax rates.
2. Indirect taxes calculated by Vista from indirect outputs, with some categories calculated using IMPLAN tax estimates and rates.

EIS Framework Categories and Sections

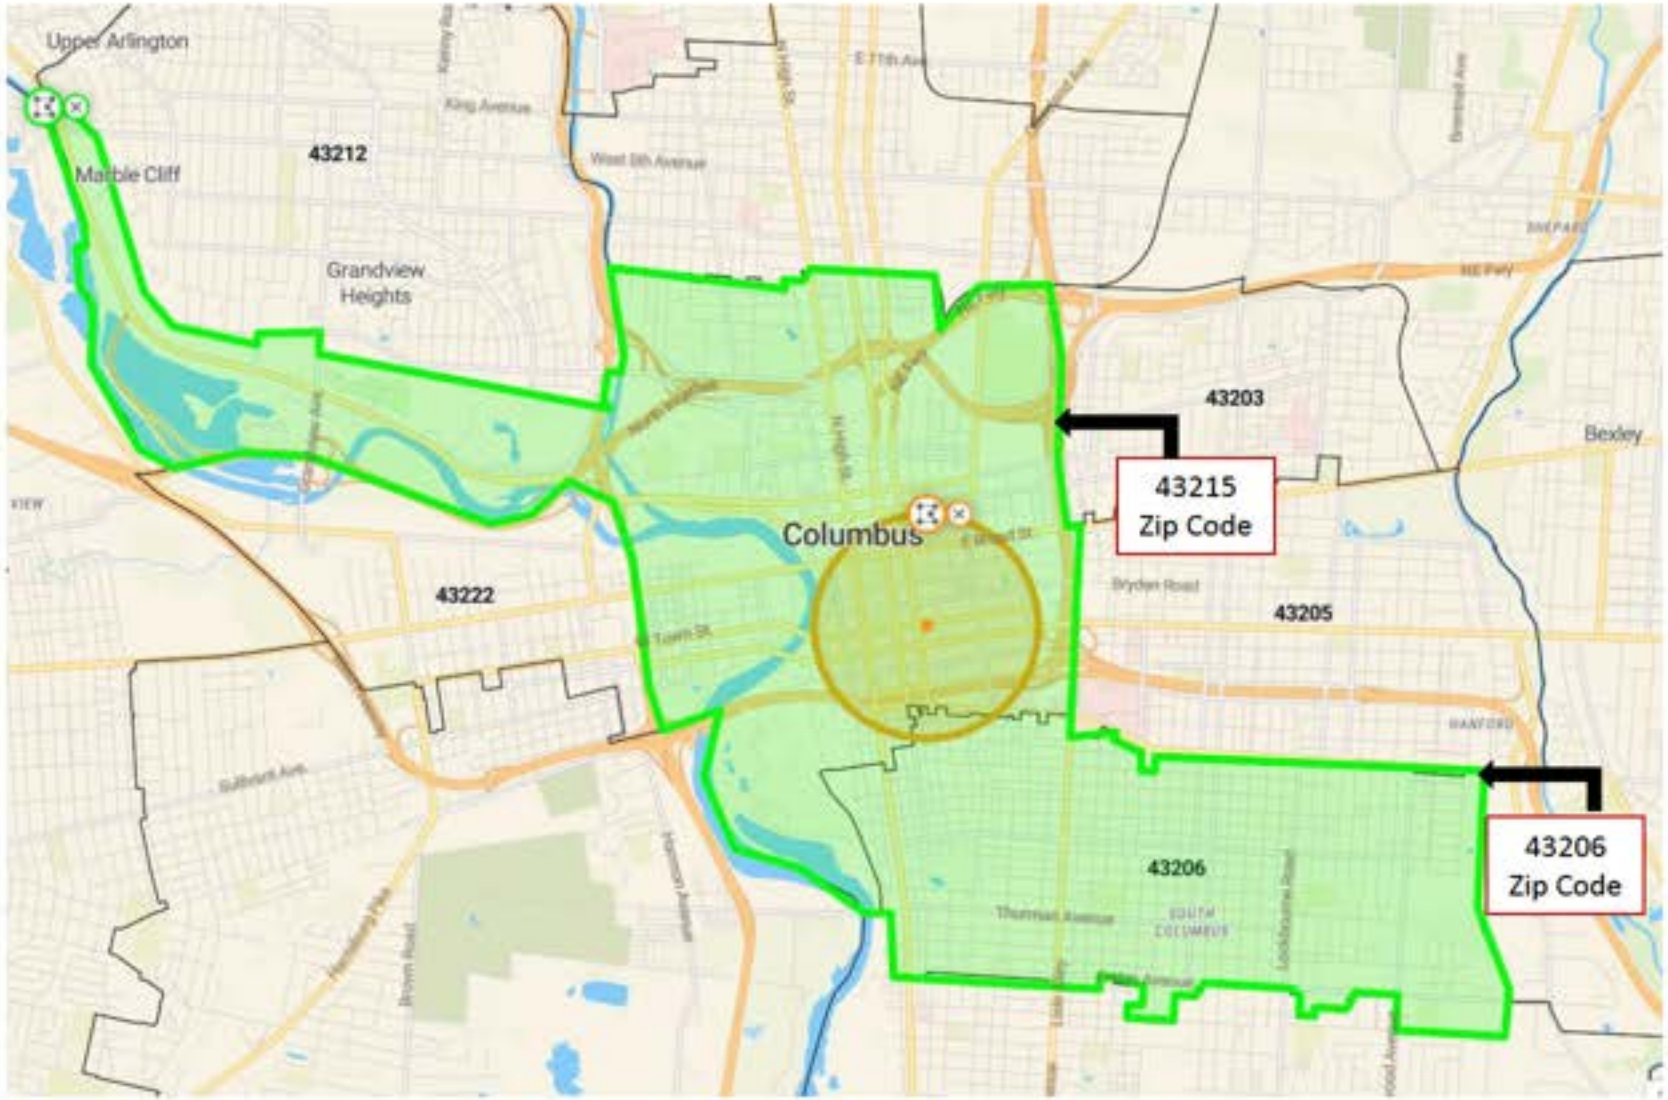
This study illustrates the transformational mixed use development's impact on the development site and surrounding area in terms of retail, entertainment and dining sales, job creation, property values, connectivity, and revenue from sales, income, lodging, and property taxes, as referenced in Ohio Revised Code 122.09(C)(1). The framework in this study will cover this in three major sections: 1) Construction Impacts, 2) Completion Period Impacts and 3) Total Impacts.

	1. Construction Impacts	2. Project Completion Period Impacts
Project	The direct economic impacts of the new construction and/or renovation and rehabilitation of structures included in the Project on the Project site during the construction period.	The direct and indirect economic impacts of the Project as defined in the application in the five years after completion of construction of the Project.
Development (if applicable)	The direct economic impacts of the construction and/or renovation and rehabilitation of structures included in the Development as defined in the application during the construction period. Does not include the Construction Project Impacts described above. If the Project is not part of a larger planned Development, this section is not applicable.	The direct and indirect economic impacts of the Development as defined in the application in the five years after completion of construction of the Project, exclusive of the impacts of the Project as identified above. If the Project is not part of a larger planned Development, this section is not applicable.
Surrounding Area Impacts	The indirect economic impacts caused by the new construction and/or renovation and rehabilitation of structures included in the Project in the surrounding area during the completion period of the Project, excluding any impacts specifically identified below in the Construction Catalyzed Project Impacts section.	The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below in the Catalyzed Project Impacts section.
Catalyzed Projects (if applicable)	The direct and indirect economic impacts from construction of the defined projects in the surrounding area that are directly caused or accelerated by the Project/Development during the completion period of the Project.	The direct and indirect economic impacts of other proposed, defined projects in the surrounding area that are directly caused or accelerated by the Project/Development in the five years after completion of construction of the Project.
	3. Total Impacts (1. Construction Impacts + 2. Project Completion Impacts)	

Project Geography

The Economic Impact geography is referred to as the Surrounding Area, which includes any zip code covered in whole or in part encompassed within a perimeter starting from the transformational mixed used development boundary (**in green**) and extending one-half miles out from that boundary.

The illustration to the right is a .5-mile radius from the Project boundary, illustrating that the radius includes both the 43215 and 43206 zip code.



Taxes & Rate Methodology

For simplicity, the Project, Development, Surrounding Area and Catalyzed Projects follow the same tax rates which are based on the City of Columbus, Franklin County, the Columbus City School District and the State of Ohio. It is worth noting that there may be small variations in the actual tax amounts, compared to these estimated amounts, based on per-parcel levies, other school districts and numerous factors.

Sales Taxes - are calculated using sales and purchases of building tenants, purchases from residents within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional 20% reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of resident expenditures and estimates of economic output provided by IMPLAN. The combined State and Local rate is 7.5% in Columbus (with 5.75% to the State of Ohio, 1.25% to Franklin County and .50% to the Central Ohio Transit Authority). Sales tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool for the project address.

Income Taxes – income taxes are calculate as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax) and the City (Municipal Income Tax). Ohio Withholding Taxes utilize a bracketed rate structure based on salary (which for this project is assumed to be 2.6%), while Municipal Income Taxes are fixed and applied to wages and net profits, which is a rate of 2.5%. Lastly, all residents pay a minimum of 2.5% tax on taxable income which may or may not be subject to credits due to resident circumstances. Income tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool.

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. Lodging taxes collected by both the City (4.9%) and County (5.1%) for a blended rate of 10%. Lodging rates can be found utilizing the Ohio Department of Taxation's tax analysis data series.

Property Taxes – property taxes are collected by various units of government and published by the County Auditor. Property taxes are assessed at 35% of the market value of the property, then an effective tax rate is applied and distributed to the local government taxing units. The effective tax rate of the property's assessed value is 7.49%

Construction Period Impacts

Methodology

Project Impacts

The value entered in Industry Output for construction represents full cost of the structure as provided by the Developer, and only the structure. Construction cost data was provided by the Developer in all circumstances (each building). This includes hard costs and soft costs. IMPLAN calculates employment based on the number of employees it would take to support the dollar value and type of a given economic event, using a combination of data sources including Census County Business Patterns (CBP), Bureau of Labor Statistics Covered Employment and Wages (CEW) and Bureau of Economic Analysis Regional Economic Accounts (REA) as the basis for its calculation. Further, IMPLAN uses additional data sources to classify its employment estimates into hours worked, headcount and compensation by specific occupation. Occupational source data used by IMPLAN includes Bureau of Labor Statistics (BLS) Occupational Employment Survey (OES), BLS Employment Projections national industry by occupation matrix, Census Bureau American Community Survey (ACS) Public Use Microdata Sample (PUMS) and O*NET™ which is a trademark of the U.S. Department of Labor, Employment and Training Administration. Employees are converted to Full-time equivalent employees (FTEs) by dividing the estimated number of hours of compensation for the job, as calculated by IMPLAN, by 2,080. There are no direct impacts to retail, entertainment and dining as these are not direct construction expenditures.

Surrounding Area Impacts

Surrounding Area impacts during the Construction Period were calculating utilizing IMPLAN. In IMPLAN, the project was modeled as $69,376,403 in Output under the industry 55 - Construction of New Commercial Structures, Including Farm Structures. Construction cost calculations were provided using costs provided by the Developer. Outputs resulting from the construction inputs in IMPLAN were filtered in IMPLAN only to show indirect effects of Project Construction. These impacts were categorized by use, to understand specific impacts to Retail, Entertainment and Dining. Additional categories were created and aggregated if the were sales-taxable transactions.

Catalyzed Project Impacts

Catalyzed Project construction was calculated differently than Project Construction, as detailed information for Catalyzed Projects is not typically available, as such, costs were provided by the catalyzed project developers or estimated based off of square footage data gathered from available project information. In calculating construction impacts, costs were calculated on a per-square foot basis by analyzing comparable building sizes on the Franklin County Auditor's website, costs of recent developments in the area and the size/scale of the project. In all cases, construction costs assumed 60% labor and 40% materials costs, and for purposes of estimating employment, a cost-per-worker of $136,000 was used, the rate provided by IMPLAN for the 43215 zip code. Lastly, average salaries for the area were calculated using IMPLAN employee compensation figures for the 43215 zip code, estimated at $62,100.

Construction Project Impacts

CONSTRUCTION	Project Construction		
	Year 1	Year 2	Totals
Property Value	$58,866,370	$58,866,370	**$117,732,739**
Labor	548.98	548.98	**1098**

Timeline for Phases

This section is intentionally left blank as the Development will not be multi-phased.

Completion Period Impacts

Methodology

Project Impacts

In calculating the project, the Developer provided data related to project costs, commercial and residential rents, residential unit data and tenant names and uses. Vista calculated wage rates, estimated sales and purchases. These inputs are detailed on the following page. The project includes a rooftop restaurant and event space, which assume higher-end sales per square footage rates given its blend of uses and lack of roof-top dining within a walkable distance in the area. The office is expected to house two smaller headquarters or regional corporate operations, which will carry a project wage of $52.88, which is the rate for the Surrounding Area in this specific category of use (assumptions are from *Lightcast and BLS occupational data for Surrounding Area zip codes, 2023*). The grocery spaces will be a first-of-its kind use, which combines a healthy foods grocery with a food-market concept. In order to accurately project sales per square foot of this unique use, two brands were utilized 1) Trader Joes and 2) Eataly (a food market brand in Chicago, Dallas and other markets). The collective sales per square foot rates of these brands were $2,130 (*Leaders.com - Trader Joe's Secret To Success*) and $1,710 respectively (*New York Times - At Eataly, the Ovens and the Cash Registers Are Hot)*.

Other metrics, such as household incomes of the residents and resident spending in the Surrounding Area were calculated by Vista. Resident expenditures were calculated using averages from the *2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income*. Household income assumptions were calculated using Census and HUD average family income estimates for 1-person, 2-person and 3-person families at 100% and 120% Area Median Income averages. Each consumer expenditure category was assigned an "absorption rate" to account for any expenditures that cannot be made within the Surrounding Area.

Surrounding Area Impacts

Surrounding Area impacts were calculated primarily utilizing IMPLAN data. Metrics including FTEs, payroll, retail, dining and entertainment sales came directly from IMPLAN's indirect effects of Project impacts. Property taxes were calculated directly from IMPLAN, while sales taxes were calculated by aggregating resulting IMPLAN industry transactions into use categories, including Retail, Entertainment, Dining and other sales-taxable use categories. The indirect impact the Project will have on property values is largely based on two primary metrics: 1) the majority of the Surrounding Area's land area's census tracts or "low access" tracts, more than 33% of population are more than a half-mile from access to a nearby supermarket, supercenter or grocery store and 2) based on an analysis by ATTOM a leading real estate data provider for land and property data, home prices increase by 43% within the presence of a grocery store. The significance of food options to the area can provide healthy food choice and options to be low-income household and higher income households, which both surround the property within a half-mile. In order to quantify this impact, Surrounding Area home values were calculated using census data, and a 43% value appreciation was applied to these values, annualized to a property value impact of 9.8% growth annually. The 9.8% was reduced by a 13% discount to adjust what is a national growth rate rate to Columbus Region price points (based off of the 87.36 Columbus price parity rate - *Columbus, Ohio Regional Price Parities: Housing, St. Louis Federal Reserve, 2023*). The Surrounding Area's blended median home value is $242,027, aggregated to $2.4 billion based on the 10,227 single family homes in the area. This growth rate is acceptable as it the Project's half-mile radius growth rate is already extremely high (property values increased by 43% in the Surrounding Area over the last year, from an analysis of data using Franklin County's GIS Parcel Viewer tool), providing a strong degree of certainty the Project's indirect growth impact at 9.8% annually to single family home values is acceptable.

Catalyzed Project Impacts

Catalytic projects follow a different method, given the prospective nature of the developments and lack of detail beyond planned square footage and uses. Projects were identified as either caused or accelerated by the Project based on a thorough analysis of the Project's impacts and the timing of planned projects within the area, including what year during the Project's Completion period each project would come online. Square footage was applied to a standard rate table be use and resulting figures were calculated into a series of tables for each project. This document elaborates on the methods and rates in later sections.

Project Inputs

INPUTS	Sales/Purchases	FTEs	Hourly Rate	Payroll	Units	Residents	Tourists	Resident Incomes	Resident Spending
Residential Units	$[redacted]	19.32	$21.63	$869,486	290	553	0	$27,078,290	$8,963,858

An annual growth factor of 5% was applied to payroll, sales and property growth based on an examination of the last three years of the 12-month percentage change in the Consumer Price Index (BLS – 12 Month Change- All items in U.S. city average, all urban consumers, not seasonally adjusted). Each half-year 12-month ending percent change was averaged to arrive at 5.50%.

Development Impacts

Catalyzed Project Impacts

The Catalytic Effect of the Project is quantified in this section. The projects catalyzed in this section all fall within Project's half-mile radius and are planned to be placed into series after this Project is complete. Each project was analyzed as being caused or accelerated by the Project, with attestations from selected Developers noted in Appendix A. Further, project impacts are captured during the five-year completion period in each project's corresponding table. The assumptions below were used to calculate impacts from development square footage programs of each catalyzed project. The following page overviews how these were calculated into FTES, Payroll, Sales and Taxes.

Catalyzed Project Rates	SF/Jobs	Salary	Sales/SF	Room Sales/SF	Rent/SF	Methodology
Apartment	15,000	$35,000	$31	$0	$25	Uses comparable market data within the Franklin County, Ohio Region, data provided by Developer and Rent.com rent estimates.
Hotel	700	$35,000	$100	$100	$0	Uses comparable hotel sales data for large cities.
Industrial	750	$55,000	$0	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Office	350	$90,000	$25	$0	$0	Lightcast & BLS Data for Surrounding Area for Business Occupations
Restaurant	600	$25,000	$350	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Retail	450	$30,000	$300	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast

	Operations Rate	*Construction Rate*	
% Jobs Dedicated to Operations	15%		Uses typical mix or type and area supported by IMPLAN
Indirect Retail Sales Rate	5%	2%	Uses typical mix or type and area supported by IMPLAN
Indirect Entertainment Sales Rate	7%	3%	Uses typical mix or type and area supported by IMPLAN
Indirect Dining Sales	10%	4%	Uses typical mix or type and area supported by IMPLAN
Construction Output/Worker		$136,000	Uses typical mix or type and area supported by IMPLAN
EC/Worker		$62,100	Uses typical mix or type and area supported by IMPLAN
% Cost Related to Construction Materials		40%	Typical method utilzied by RSMeans Construction Data
Sales Taxable Purchases	95%	100%	Analyzed exempt uses in relation to project from OTAX
Lodging Impact	2%	2%	Uses US Tourism Sattelite Accounts to estimate lodging impact of activity
Property Impact	12.5%	0.5%	Assumes typical indirect property value impact based on IMPLAN data
Value at Cost	85%	85%	Assumes market value based on hard costs from analysis of Auditor data
Renter HH Income	$65,100		Utilizes Census/ACS and HUD Data to Assume Area Family Incomes
Renters per SF	600		Calculated based on typical SF needed per renter from sample projects
Lodging Per-Diem		$227	PBMares CPAs and Consultant's Guidance for Contractors Who Use Per Diems
Worker Travel %		15%	Based on analysis of Lightcast inbound commuter data to the Surrounding Area
Worker Annual Weekdays		78.3	Assumes 30% of the weekdays "travel workers" commute to work and use a Per-Diem

Catalyzed Project Impacts

Each Catalytic Project is calculated utilizing the following methodology in correspondence with the rates from the previous page:

Category	Methodology
FTEs/Payroll	Calculates FTEs per SF by use and payroll using BLS wage data for each overarching use.
Operations FTEs/Payroll	Assumes the 15% of FTES are dedicated to operations, based on IMPLAN's typical mix of operations occupation categories, which includes two-level SIC code categories 37, 43 and 49.
Tenant FTEs/Payroll	Assumes the 75% of FTES are tenants, which is based off of a typical IMPLAN mix for the area, removing two-level SIC code categories 37, 43 and 49.
Retail	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Retail category.
Entertainment	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Entertainment category.
Dining	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Dining category.

Catalyzed Project Summary

Catalyzed Projects within a half-mile Radius of the The Estrella in Columbus, Ohio

Project	Address		Placed Into Service	SF	Residential	Hotel	Office	Restaurant	Retail	Projected Cost

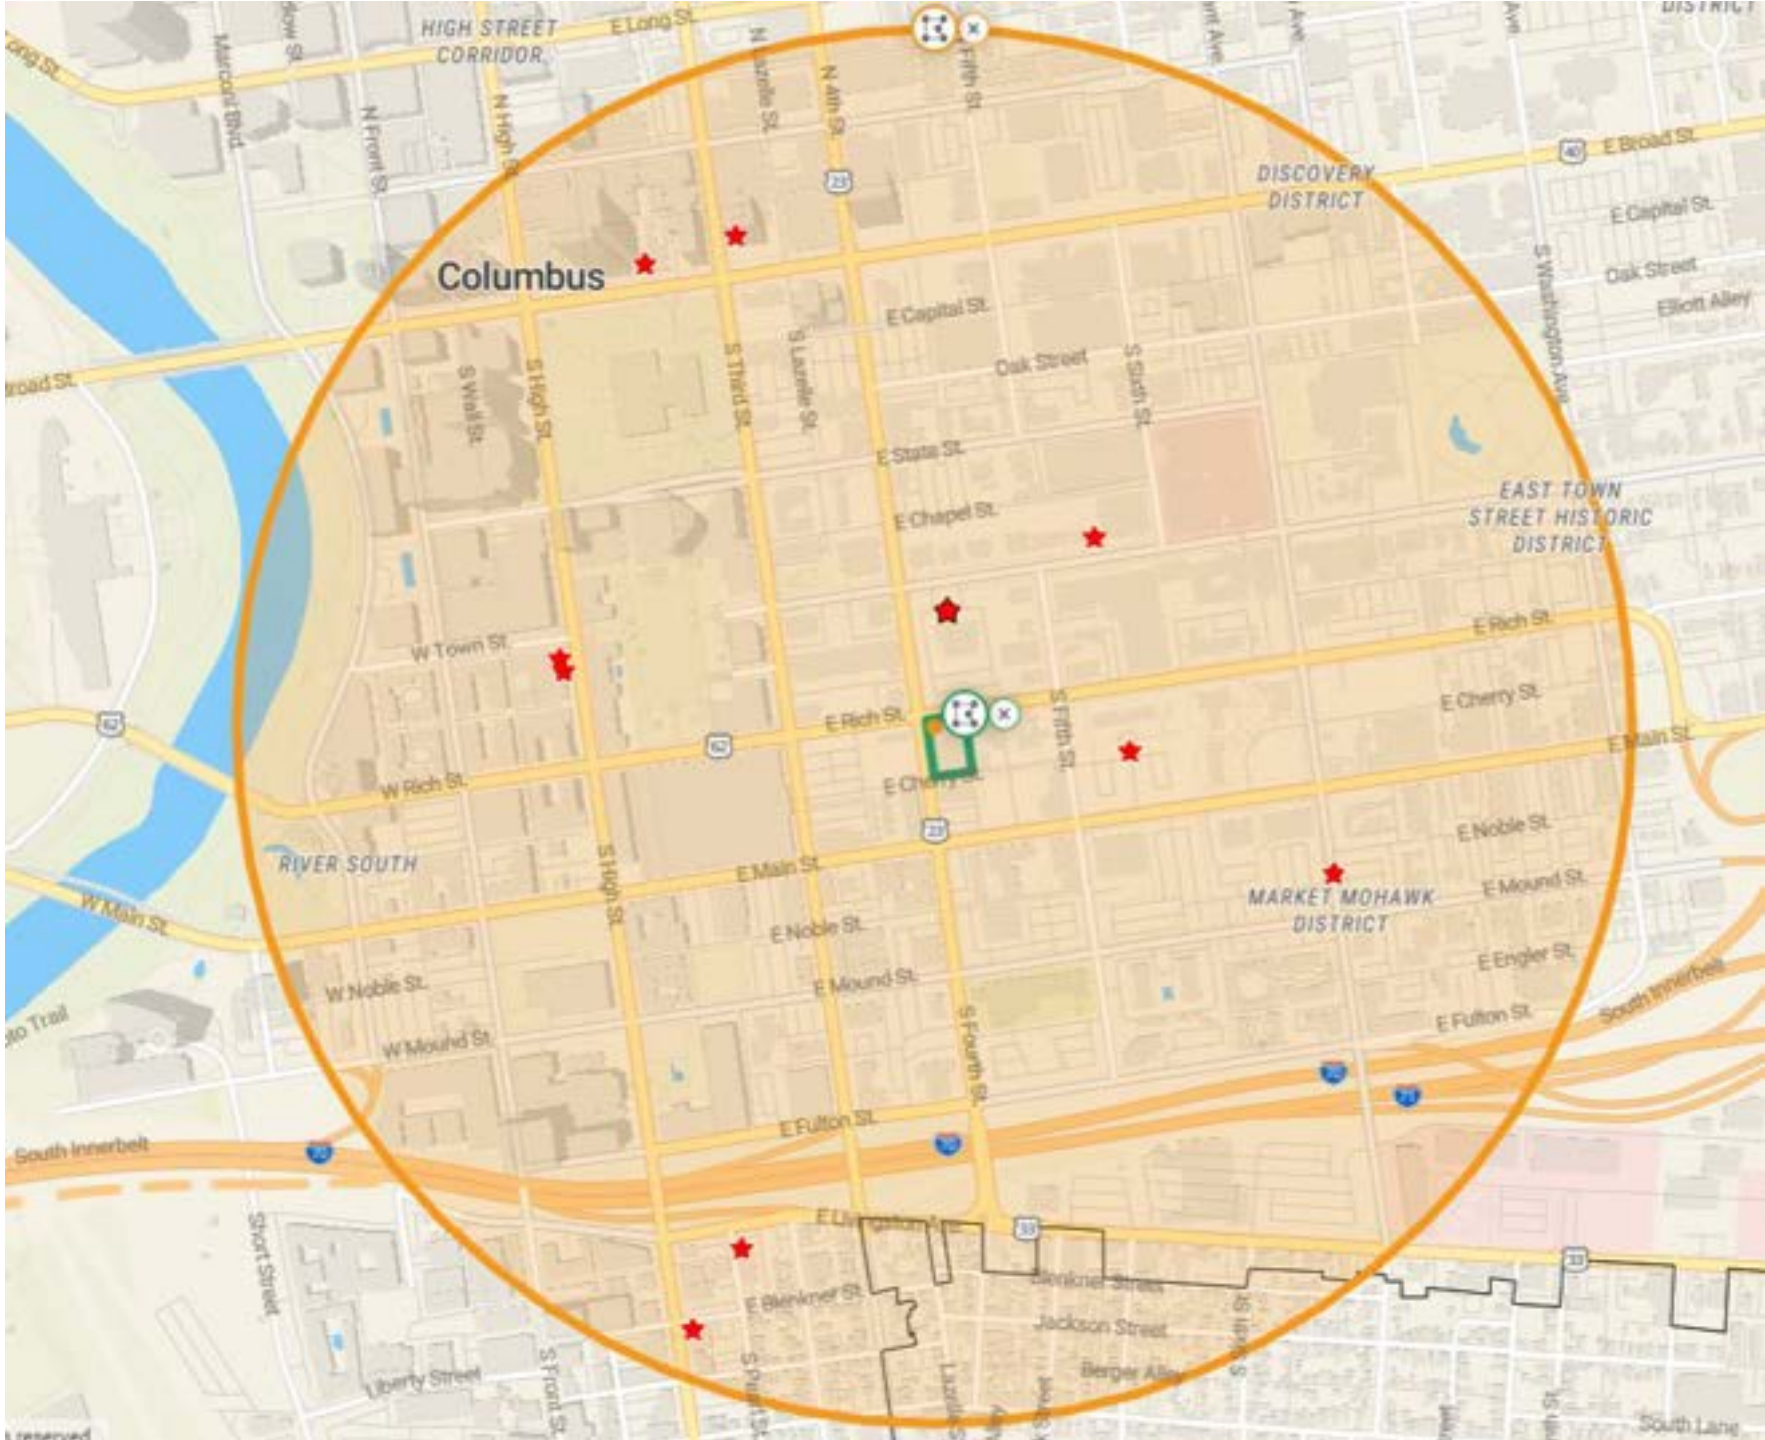
Totals				**1,245,900**	**1,029,352**	**85,377**	**58,000**	**42,104**	**31,067**	**$295,856,500**

Catalyzed Project Locations



Catalyzed Project List

Catalyzed Project: Chase Tower Historic Rehab

Location: 100 E. Broad St., Columbus, Ohio 43215

Summary: the Chase Tower Historic Rehab project includes a renovation of the Chase Tower office building into 291.200 square feet of residential space. The Estrella will provide premium entertainment and food and beverage options for the Tower's residents within a walkable distance from the building, serving as an optimal amenity for building tenants and accelerating the development by creating higher demand for unit occupancy.

Catalyzed Project List

Catalyzed Project: Jaycee Arms Addition

Location: 266 E. Main Street, Columbus, Ohio 43215

Summary: Affordable housing developer NCJC Housing and Development Foundation is proposing to build two, five-story apartment buildings with ground floor retail and a space for a culinary training program. The culinary training space is estimated at 40,000 square feet. The developer has stated in its letter that "The Estrella will serve as a catalyst in the development of our project and others in the area, offering employment and services opportunities for our residents, upon its planned completion…" and will "benefit our NCJC Downtown Campus LIHTC Development and our residents by not only offering immediate access for groceries, but offering potential employment opportunities through its planning of local sustainably focused urban market and rooftop restaurant within walking distance." The letter is attached to Appendix A of this document.

Catalyzed Project List

Catalyzed Project: 171 S. High

Location: 171 S. High Street, Columbus, Ohio 43215.

Summary: The two buildings on South High Street tin Downtown Columbus will demolished under the plan. In their place would rise a 15-story building with ground-floor retail topped by three levels of parking, 10 levels of apartments and a top floor with mechanicals. The 200 apartments in the complex would include studios and one- and two-bedroom units. Not only will the residents have a walkable fresh foods grocery within the Estrella to utilize, the Estrella's own residents are estimated to spend $1.4 million annually on retail that supports the retail portion of this development.

Columbus Underground rendering via Cleveland-based Harsax Management Company designed by NBBJ

Catalyzed Project List

Catalyzed Project: Food Hall

Location: 167 S. High Street, Columbus, Ohio 43215

Summary: proposed by Cleveland-based Harsax Management Company, the same developer of 171 S. High Street, this would neighbor and complement the 171 S. High Development as a Food Hall concept that would bring a food court style dining experience that would be Supplemented by The Estrella. Further, The Estrella would accelerate the Food Hall as a proof of concept for a market-like food operation with vendors in the Downtown Columbus area.

Catalyzed Project List

Catalyzed Project: The Pierre

Location: 514 S. High Street, Columbus, Ohio 43215

Summary: the Pierre project includes 116,279 square feet of residential space. The Estrella will provide premium entertainment and food and beverage options for the Tower's residents within a walkable distance from the building, serving as an optimal amenity for building tenants and accelerating the development by creating higher demand for unit occupancy. Not only will the residents have a walkable fresh foods grocery within the Estrella to utilize, the Estrella's own residents are estimated to spend $1.4 million annually on retail that supports the retail portion of this development.

Catalyzed Project List

Catalyzed Project: McGown Hotel

Location: 31 E. Livingston Ave., Columbus, Ohio 43015

Summary: the McGown is a five-story, 135-room hotel that would replace a smaller office building on the northern edge of the German Village neighborhood, across the street from the I-70 and I-71 interchange. The Estrella would accelerate this project considerably, given its rooftop bar and fresh foods market concept, serving as an entertainment stop and healthy eating option for visitors. The residents provided by The Estrella will provide additional customer foot-traffic to the ground-floor restaurant planned as part of the development.

Catalyzed Project List

Catalyzed Project: Market Mohawk

Location: 250 E. Town St., Columbus, Ohio 43215

Summary: The Market Mohawk Center, at 250 E. Town St. in the old Mohawk neighborhood near downtown's Red Brick District, was awarded $842,000 in tax credits with an $8.5 million plan to convert the languishing 23,000-square-foot building to ground-floor residences with offices above. The nearby grocery and rooftop bar created by The Estrella' will accelerate demand for units within the Market Mohawk development.

Catalyzed Project List

Catalyzed Project: 60 on Broad

Location: 60 E. Broad St., Columbus, Ohio 43215

Summary: The Briton Group, a Dublin development team that primarily focuses on residential real estate, has acquired the five-story, 15,660-square-foot building at 60 E. Broad St. to convert it to a new mixed-use project, which would include high-market condos. The Estrella's grocery will create significant increased demand for condo purchases and The Estrella's residents would serve as a market to consume the Project's planned retail.

Catalyzed Project List

Catalyzed Project: Holiday Inn Site

Location: 175 E. Town St., Columbus, Ohio 43215

Summary: the redevelopment of the Holiday Innb site includes 132,000 square feet of residential space. The Estrella will provide premium entertainment and food and beverage options for the development's residents within a walkable distance from the building, serving as an optimal amenity for building tenants and accelerating the development by creating higher demand for unit occupancy.

Total Impacts

Total Impacts

Construction Activity

The Project's will create, cause and accelerate a total one-time infusion of 3,300 construction jobs and $186.1 million in payroll from construction activity from both the Project and Catalytic projects.

Jobs and Payroll

Additionally, the Project will create, cause and accelerate a total of 1,087 tenant jobs and 132 operations jobs, of which the 295 will be employed by the project and another 902 caused or accelerated as a result of the Project.

Retail, Entertainment and Dining Sales

The Project will additionally generate, cause and accelerate over $648 million in retail, dining and entertainment sales over a five-year period, including an immediate infusion of $25.9 million in sales from construction activity. Of these sales figures, $169 million will come directly from the Project, driving an additional $181 million to the Surrounding Area and causing/accelerating another $271 million from Catalyzed Projects.

Taxes

The Project will result in approximately $310 million in State and Local Taxes, of which $269 million will be generated during the Completion Period from Project operations, Surrounding Area impacts and Catalyzed Project impacts. The additional $41 million comes in the form of Construction Period Taxes.

	$75,384,276	**$43,676,034**	**$21,281,036**	**$129,000,859**	**$269,342,206**

Total Impacts

I. TOTAL ECONOMIC IMPACTS *(Construction Period Impacts + Completion Period Impacts)*

A. Summary: Total Project Impacts

	TOTAL Projected FTEs	TOTAL Projected Payroll	TOTAL Projected Sales	TOTAL Projected Taxes
Construction Period Impacts	3,300	$186,312,601	$25,930,973	$41,508,181
Completion Period Impacts	1,221	$501,056,878	$622,174,353	$269,342,206
	4,521	**$687,369,479**	**$648,105,326**	**$310,850,387**

Total Impacts

The table to the right illustrates that projected taxes ($310 million) meet at least 10% of the total development costs ($11.7 million).

Further, when combining the Construction Period and the first year after construction, the project significantly exceeds the 10% development cost threshold by $71 million dollars.

TMUD Credit Objectives	
TMUD Project Cost	$117,000,000
10% of Development Cost Threshold	$11,700,000
Construction Taxes	$41,508,181
First Year Post-Construction Taxes	$41,229,116
Construction + Year 1	$82,737,297
Total Taxes	$310,850,387
Achieved 10% Taxes Threshold	YES
Achieve Alternative Method Potential	YES

VISTA SITE SELECTION

Vista Site Selection LLC is a newly formed company, founded in September of 2022 by the law firm Vorys, Sater, Seymour and Pease LLP, focused on economic development, economic analysis, economic incentives and site location consulting. Vista's management team has over 75 years of collective experience in Economic Development and Site Selection in 49 US States and includes certified data analysts, economic consultants and GIS specialists, among others.

Vista's services included:

- ✓ Economic Insights, including Economic Footprint and Economic Impact Analysis
- ✓ Labor Analytics
- ✓ Development of Advanced, Customized Data Analytics Platforms and Mapping
- ✓ Retail Performance and Growth Analytics
- ✓ Return on Investment Insights for Companies and Communities
- ✓ Corporate Site Selection Advisory
- ✓ Tax Credit and Incentives Advisory
- ✓ Economic and Market Analysis

EIS Preparer Qualifications

This analysis will be performed by **Chris Magill**. Chris is a Certified Economist and Managing Director for Vista Site Selection. Chris has significant experience consulting on capital investment projects and has strategically negotiated and analyzed tax credit, grant and loan-financing solutions for capital investment projects in over 20 different states. Further, Chris utilizes data analytics to help better inform business leaders and site administrators on project ROI, economic impacts, site decisions and market conditions. Prior to joining Vista Site Selection, Chris served as the Economic Development Director at the Ice Miller law firm for 11 years, consulting on various matters related to economic development, economic incentives, public-private partnerships, community advisory and economic impact analysis. Prior to his time at Ice Miller, Chris worked at the Ohio Department of Development ("ODOD"), serving as the Executive Director of the Ohio Tax Credit Authority. During his time at ODOD, Chris managed and structured various tax credit programs and co-developed various economic incentive calculation tools.

Chris carries various economic certifications and has nearly 15 years of experience in authoring economic impact statements and analysis tools. Chris has experience instructing economic impact, fiscal return-on-investment and economic development courses for the International Economic Development and the Ohio Economic Development Association. Further, has volunteered his time instructing pro forma development courses for the Knowlton School of Architecture and Fisher College of Business at The Ohio State University in relation to the annual Urban Land Institute Student Heinz Competition and has served as a Planning Committee member and annual speaker for the Ohio Tax Conference. Chris also serves as the Vice President of the Board of Directors of the Ohio Statewide Development Corporation. Chris' credentials include:

- Certified Economist, *IMPLAN*
- Certification in Economic Measurement, *National Association of Business Economics*
- Certification of Business Applications of Statistics and Data Analytics, *National Association of Business Economics*
- Certification of Economic Strategy and Managerial Decision Making, *National Association of Business Economics*
- Master's in Business Administration, *Ohio University*

EIS Preparer Qualifications

The list depicted includes a sample of Chris Magill's economic impact study experience. Chris has authored economic impact studies for projects in more than 25 US States. This includes manufacturing megaprojects, corporate headquarter office projects, mixed-use projects, non-profit projects, policy changes and cultural/sports facility projects, among others.

Transformational Mixed-Use Tax Credit

Economic Impact Statement

Authored by:

VISTA SITE SELECTION

Introduction

This study is prepared by Vista Site Selection, LLC ("Vista"), a third-party entity, on behalf of an application for the Ohio Transformational Mixed-Use Tax Development Credit Program ("TMUD"). This study accomplishes two primary objectives:

1) To verify that increased tax collections resulting from the project will exceed 10% of the estimated eligible project costs and,

2) To articulate the economic impacts of the Project and/or larger Development to the Project Site and Surrounding Area during both the Construction Period, which is the time period in which the Project is being constructed and the Completion Period, which is the 5 years after Project construction is completed.

In accomplishing these objectives, this document will assess the following categories:

- ***Employment*** **-** The projected number of construction, operational, and tenant jobs created as a result of the Project and the average hourly wages for each job type.
- ***Revenue*** **-** Annual revenue projections generated from retail, entertainment, and dining sales.
- ***Tax Revenues*** **-** Annual revenue projections generated from sales tax, income tax, lodging tax, and property tax.

Economic impacts will be calculated utilizing IMPLAN software and the following methodology:

INPUTS

1. Provided by Developer
2. Calculated by Vista using market assumptions and data support

ECONOMIC OUTPUTS

1. Calculated utilizing IMPLAN software
2. Calculated by Vista utilizing IMPLAN and complementary data sources either publicly available, indexed/created by Vista or subscribed to by Vista.

TAX CALCULATIONS

1. Direct taxes calculated by Vista using state and local tax rates.
2. Indirect taxes calculated by Vista from indirect outputs, with some categories calculated using IMPLAN tax estimates and rates.

EIS Framework Categories and Sections

This study illustrates the transformational mixed use development's impact on the development site and surrounding area in terms of retail, entertainment and dining sales, job creation, property values, connectivity, and revenue from sales, income, lodging, and property taxes, as referenced in Ohio Revised Code 122.09(C)(1). The framework in this study will cover this in three major sections: 1) Construction Impacts, 2) Completion Period Impacts and 3) Total Impacts.

	1. Construction Impacts	2. Project Completion Period Impacts
Project	The direct economic impacts of the new construction and/or renovation and rehabilitation of structures included in the Project on the Project site during the construction period.	The direct and indirect economic impacts of the Project as defined in the application in the five years after completion of construction of the Project.
Development (if applicable)	The direct economic impacts of the construction and/or renovation and rehabilitation of structures included in the Development as defined in the application during the construction period. Does not include the Construction Project Impacts described above. If the Project is not part of a larger planned Development, this section is not applicable.	The direct and indirect economic impacts of the Development as defined in the application in the five years after completion of construction of the Project, exclusive of the impacts of the Project as identified above. If the Project is not part of a larger planned Development, this section is not applicable.
Surrounding Area Impacts	The indirect economic impacts caused by the new construction and/or renovation and rehabilitation of structures included in the Project in the surrounding area during the completion period of the Project, excluding any impacts specifically identified below in the Construction Catalyzed Project Impacts section.	The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below in the Catalyzed Project Impacts section.
Catalyzed Projects (if applicable)	The direct and indirect economic impacts from construction of the defined projects in the surrounding area that are directly caused or accelerated by the Project/Development during the completion period of the Project.	The direct and indirect economic impacts of other proposed, defined projects in the surrounding area that are directly caused or accelerated by the Project/Development in the five years after completion of construction of the Project.
	3. Total Impacts (1. Construction Impacts + 2. Project Completion Impacts)	

Project Geography

The Economic Impact geography is referred to as the Surrounding Area, which includes any zip code covered in whole or in part encompassed within a perimeter starting from the transformational mixed used development boundary and extending one-half miles out from that boundary.

The .5-mile radius from the Project boundary, which is located within 10 miles of a City with population of at least 100,000 residents includes the following zip codes:

1. **43021**
2. **43035**
3. **43240**
4. **43082**

Taxes & Rate Methodology

For simplicity, the Project, Development, Surrounding Area and Catalyzed Projects follow the same tax rates which are based on the **City of Columbus, Delaware County**, the **Olentangy City School District** and the State of Ohio. It is worth noting that there may be small variations in the actual tax amounts, compared to these estimated amounts, based on per-parcel levies, other school districts and numerous factors particularly when factoring in the Surrounding Area and Catalyzed Project impacts.

Sales Taxes – sales taxes are calculated using sales and purchases of building tenants, purchases from residents and tourists within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional **20%** reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of resident expenditures and estimates of economic output provided by IMPLAN. The combined State and Local rate is **7.5%** in the project address (with **5.75%** to the State of Ohio, **1.25%** to **Delaware County** and **.50%** to the **Central Ohio Transit Authority**). Sales tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool for the project address. In circumstances where ticket sales for events occur, the **City of Columbus** admissions tax is applied to sales, which is **5%,** the same rate of the total sales tax rate. Admissions taxes are municipal taxes allowed as an exception under 715.013(C) of the Ohio Revised Code, serving as an alternative method of collecting taxes by a municipal administrator to Sales, Property, Income and Lodging taxes.

Income Taxes – income taxes are calculate as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax). Ohio Withholding Taxes utilize a bracketed rate structure based on salary (for this project is assumed to be **2.35%,** which is calculated on the Project average salary of **$90,000**, assuming a fixed tax of **$361** + an excess tax of **2.75%** for a salary over **$26,050**). The **City of Columbus** levies a **2.5%** income tax on people living and working in the **City of Columbus** (see **City of Columbus** – IR-25 City Tax Return for Individuals). Residents in the **City of Columbus** that may work elsewhere can receive a credit against the income tax.

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. Lodging taxes collected by **Delaware County** at a rate of **6%** and the **City of Columbus (Delaware County)** at a rate of **3%,** resulting in a total lodging tax rate of **9%.** Lodging rates can be found utilizing the Ohio Department of Taxation's tax analysis data series.

Property Taxes – property taxes are collected by various units of government and published by the County Auditor. Property taxes are assessed at 35% of the market value of the property, then an effective tax rate is applied and distributed to the local government taxing units. The effective tax rate of the property's assessed value is **7.58%.**

Application of Growth Rates and Inflation – annual growth is assumed for revenue streams calculated within this document which includes property value, sales growth and wage growth. An examination of the Consumer Price Index for all Urban Consumers for calendar years 2021, 2022 and 2023 was utilized in which each half-year rate was averaged, arriving at a total rate of **5.5%.** This figure was reduced to **5%** under anticipation that the CPI and inflation will drop.

Construction Period Impacts

Input Methodology

Project Impacts

The value entered in Industry Output for construction represents full cost of the structure as provided by the Developer, and only the structure. Construction cost data was provided by the Developer in all circumstances (each building). This includes hard costs and soft costs. IMPLAN calculates employment based on the number of employees it would take to support the dollar value and type of a given economic event, using a combination of data sources including Census County Business Patterns (CBP), Bureau of Labor Statistics Covered Employment and Wages (CEW) and Bureau of Economic Analysis Regional Economic Accounts (REA) as the basis for its calculation. Further, IMPLAN uses additional data sources to classify its employment estimates into hours worked, headcount and compensation by specific occupation. Occupational source data used by IMPLAN includes Bureau of Labor Statistics (BLS) Occupational Employment Survey (OES), BLS Employment Projections national industry by occupation matrix, Census Bureau American Community Survey (ACS) Public Use Microdata Sample (PUMS) and O*NET™ which is a trademark of the U.S. Department of Labor, Employment and Training Administration. Employees are converted to Full-time equivalent employees (FTEs) by dividing the estimated number of hours of compensation for the job, as calculated by IMPLAN, by 2,080. There are no direct impacts to retail, entertainment and dining as these are not direct construction expenditures, but rather Surrounding Area effects.

Surrounding Area Impacts

Surrounding Area impacts during the Construction Period were calculating utilizing IMPLAN. In IMPLAN, the project was modeled as **$298,436,600** in Output under the industry 55 - Construction of New Commercial Structures, Including Farm Structures. Construction cost calculations were provided using costs provided by the Developer. Outputs resulting from the construction inputs in IMPLAN were filtered in IMPLAN only to show indirect effects of Project Construction. These impacts were categorized by use, to understand specific impacts to Retail, Entertainment and Dining. In this circumstance, the Surrounding Area's presence of significant entertainment, retail and dining establishments (professional sports stadiums, full-service restaurants, limited services restaurants, bars and shopping) create a higher degree of construction worker spending. Additional categories were created and aggregated if they were sales-taxable transactions. Lodging taxes follow a similar rate, as many construction workers travel to larger areas given the overall labor shortage of construction workers. Those who travel and stay overnight are typically provided lodging and meal per diems. Given IMPLAN captures dining expenditures, the lodging per diem method is utilized to get a more accurate picture of construction spending. A typical per-day per diem is $138 for lower cost areas and $222 for higher cost areas. Given the location within a major urban center (**Columbus**) the $222 figure is utilized (per diem rates provided by *PBMares CPAs and Consultants Guidance for Contractors Who Use Per Diem, 2022)*. Further it is assumed 15% of workers will travel as part of this arrangement during 30% of the annual weekdays per year. Lodging taxes are calculated off of estimated lodging expenditures.

Catalyzed Project Impacts

Catalyzed Project construction was calculated differently than Project Construction, as detailed information for Catalyzed Projects is not typically available, as such, costs were provided by the catalyzed project developers or estimated based off of square footage data gathered from available project information. In calculating construction impacts, costs were calculated on a per-square foot basis by analyzing comparable building sizes on the **Delaware** County Auditor's website, costs of recent developments in the area and the size/scale of the project. In all cases, construction costs assumed 60% labor and 40% materials costs, and for purposes of estimating employment, a cost-per-worker of $136,000 was used, the rate provided by IMPLAN for the **43021, 43035, 43240 and 43082** zip codes. Lastly, average salaries for the area were calculated using IMPLAN employee compensation figures for **43021, 43035, 43240 and 43082** zip codes, estimated at **$56,000**. There is further detail on Catalyzed Project methodology later on in this document.

Construction Project Impacts

CONSTRUCTION	Project Construction		
	Year 1	Year 2	Totals
Property Value	$50,000,000	$50,000,000	**$100,000,000**
Labor	392	392	**784**
Materials	$22,500,000	$22,500,000	**$45,000,000**
Wages	$27,500,000	$27,500,000	**$55,000,000**
DIRECT	**Const. 1**	**Const. 2**	**Total**
Sales Tax	$1,687,500	$1,687,500	**$3,375,000**
Income Tax	$1,335,041	$1,335,041	**$2,670,082**
Lodging Tax	$0	$0	**$0**
Property Tax	$0	$0	**$0**
Total	**$3,022,541**	**$3,022,541**	**$6,045,082**

Any construction occurring prior to the Completion Period is not included in this calculation.

Construction Development Impacts

CONSTRUCTION	Development Construction		
	Year 1	Year 2	Totals
Property Value	$291,509,199	$291,509,199	**$583,018,398**
Labor	1,895	1,895	**3,791**
Materials	$131,179,139	$131,179,139	**$262,358,279**
Wages	$160,330,059	$160,330,059	**$320,660,119**
DIRECT	**Const. 1**	**Const. 2**	**Total**
Sales Tax	$9,838,435	$9,838,435	**$19,676,871**
Income Tax	$7,783,534	$7,783,534	**$15,567,069**
Lodging Tax	$0	$0	**$0**
Property Tax	$0	$0	**$0**
Total	**$17,621,970**	**$17,621,970**	**$35,243,940**

Any construction occurring prior to the Completion Period (prior Development Phases) is not included in this calculation.

Construction Surrounding Area Impacts

SURROUNDING AREA	Surrounding Area Construction Impacts		
	Year 1	Year 2	Const. Total

Timeline for Phases

	Construction Start	Phase Completed
Phase 1	2014	2018
Phase 2 (Project)	2018	2026
Phase 3 (Development)	2026	2028

Completion Period Impacts

Methodology

Project and Development Impacts

In calculating the Project, the Developer provided data related to project costs, square footage, residential units, residential rents, building and tenant information to serve as inputs. Vista calculated employment, wages, sales and office purchases from these figures. In circumstances where tenant sales were not provided by the Developer, they were calculated by Vista utilizing CoStar sales per square foot data and estimates provided from CoStar estimates for specific tenants or typical regional tenants. Office and retail supplies purchases are estimated using a percentage of payroll based (5%-25% of payroll, **25%** being used for supplies needed for theatre operations). Other metrics, such as household incomes of the residents and resident spending in the Surrounding Area were calculated by Vista. Resident expenditures were calculated using averages from the *2022 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income*. Household income assumptions were calculated by assuming renters will spend **25%** of their income toward rent, there for the monthly rent price was divided by **25%,** then multiplied x 12 (months) to arrive at the household income rate for that particular unit grouping. Each consumer expenditure category was assigned an "absorption rate" to account for any expenditures that cannot be made within the Surrounding Area. Estimated wages and jobs use CoStar jobs per square foot metrics and wages utilize average wage for the specific tenant use staffing pattern provided by Lightcast, sourced by the Bureau of Labor Statistics. For hotels that include conference space, it is assumed that space is programmed **226** days of the year with a mix of weddings, weekday conference, weekend conventions and 1-day ticketed events. Metrics for these events was based on comparable events which include the Ohio Tax Conference, Monroe Pop Fest, NAIOP Commercial Breakfast and typical wedding pricing. Lastly, once the building renovation is complete the Project will expect to generates significant visitor spending activity which will directly benefit the Surrounding Area. Vista calculated visitor activity using *Placer.ai* foot-traffic data to calculate expected visitors, which estimates annual visits, annual visitors and visitor locations both before and after arriving at the Project facility, providing a basis for Surrounding Area spending. The effects of visitors generated from the Project are reflected in Surrounding Area impacts.

Surrounding Area Impacts

The Surrounding Area is unique in which it possesses nearly $3.1 billion in spending demand on Retail, Entertainment and Dining, which is anticipated to grow annually at a rate of 7.3% based on its 5-year history. Surrounding Area impacts were calculated utilizing three primary methods: 1) Indirect Impacts calculated by IMPLAN from Project inputs, including increased spending in Dining, Entertainment and Retail in the Surrounding Area, 2) Indirect effects to business from tourist spending, through increased sales and indirect jobs created and 3) Indirect property value impacts from the project. IMPLAN calculates indirect impacts from Project activity, by industry, which is then aggregated into Retail, Entertainment and Dining sales. Tourist spending utilizes *US Travel and Tourism Satellite Accounts* and Average Spending Rates for overnight visitors produced by the *Regional Tourism and Visitors Bureau*, which assume overnight visitors spend **$204** per day and non-overnight visitors spend **$75** per day. *Placer.ai*'s estimated of **697,210** annual visitors for the Project and **1..9 million** visitors from the Development was reduced to **522,908 and 1.4 estimated** visiting customers, then overnight visitors were calculated from *Placer.ai*'s **visitation estimates for the Development, which includes visitor journeys of uses visited by consumers to the Surrounding Area before and after consuming the Development** (those who visited a hotel before and after the show were calculated as overnight visitors). The resulting figure was **33,997 (Project)** and **94,000 (Development)** overnight visitors. To create context around this relative to the area, the **neighboring Polaris Fashion Place Mall experiences 9.8 million visits annually**. Property value impacts were calculated based on home values within the Surrounding Area, and extracting the Development's share of projected growth based on historical growth and the Development's projected economic impacts to the Surrounding Area after the Project is complete. **Lastly, given the likelihood residents and tourists spend a portion of spending directly on Project and Development uses (as opposed to other Surrounding Area uses, like Polaris Mall for instance), Retail, Dining and Entertainment sales were deflated using a 40% sales deflator on both the Project and Development sales projections to avoid double-counting.**

Catalyzed Project Impacts

Catalytic projects follow a different method, given the prospective nature of the developments and lack of detail beyond planned square footage and uses. Projects were identified by the Developer with assistance from Vista, as either caused or accelerated by the project, including what year during the Project's Completion period each project would come online. Square footage was applied to a standard rate table be use and resulting figures were calculated into a series of tables for each project. In instances where these effects include the construction of certain public buildings, a separate set of factors to account for tax-exempt status in certain circumstances related to property and sales. This document elaborates on the methods and rates in later sections.

Project Inputs

INPUTS	Sales	FTEs	Hourly	Payroll	Residents	Resident Incomes	Resident Spending
Residential Units	$0	37	$21.63	$1,643,119	1,528	$183,360,000	$32,546,016
Restaurant	$[redacted]	146	$14.42	$4,370,250	0	$0	$0
Retail	$[redacted]	142	$16.83	$4,970,980	0	$0	$0
Hotel	$0	0	$0.00	$0	0	$0	$0
Office	$[redacted]	1,491	$45.67	$141,658,933	0	$0	$0
Entertainment	$[redacted]	134	$21.63	$6,026,786	0	$0	$0

Development Inputs

INPUTS	Sales	FTEs	Hrly	Payroll	Residents	Resident Incomes	Resident Spending
Residential Units	n/a	68	$21.63	$3,053,059	3,926	$471,120,000	$83,622,813
Restaurant	$[redacted]	150	$14.42	$4,491,150	0	$0	$0
Retail	$[redacted]	1,790	$16.83	$62,639,949	0	$0	$0
Hotel	$[redacted]	925	$16.83	$32,381,370	0	$0	$0
Office	$[redacted]	3,880	$45.67	$368,600,000	0	$0	$0
Entertainment	[redacted]	68	$21.63	$3,071,195	0	$0	$0
Event Space (from Hotel)	$[redacted]	50	$21.63	$2,250,000	0	$0	$0

The amounts above reflect fully stabilized estimates for the Development. The following tables represent the Development's ramp-up schedule, as future Development impacts are not expected to occur until Year 3 of the Completion Period. The Development Impacts table reflects this ramp-up activity.

Project Impacts

	Post-Construction Completion Period					
PROJECT	**Year 1**	**Year 2**	**Year 3**	**Year 4**	**Year 5**	**Total**
FTEs	1,949	1,949	1,949	1,949	1,949	**1,949**
Operations FTEs (37, 43, 49)	265	265	265	265	265	**265**
Tenant FTEs	1,684	1,684	1,684	1,684	1,684	**1,684**
Payroll	$158,670,068	$166,603,571	$174,933,750	$183,680,437	$192,864,459	**$192,864,459**
Operations Payroll	$20,151,099	$21,158,654	$22,216,586	$23,327,416	$24,493,786	**$24,493,786**
Tenant Payroll	$138,518,969	$145,444,918	$152,717,164	$160,353,022	$168,370,673	**$168,370,673**
Retail	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Entertainment	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Dining	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
DIRECT	**Year 1**	**Year 2**	**Year 3**	**Year 4**	**Year 5**	**Total**
Sales Basis	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Income Basis	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Lodging Basis	$0	$0	$0	$0	$0	**$0**
Property Basis	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Sales Tax	$10,965,957	$11,514,255	$12,089,967	$12,694,466	$13,329,189	**$60,593,833**
Income Tax	$9,823,499	$10,314,674	$10,830,407	$11,371,928	$11,940,524	**$54,281,031**
Lodging Tax	$0	$0	$0	$0	$0	**$0**
Property Tax	$15,837,912	$8,314,904	$8,730,649	$9,167,181	$9,625,540	**$51,676,185**
Total	**$36,627,367**	**$30,143,832**	**$31,651,023**	**$33,233,574**	**$34,895,253**	**$166,551,049**

An annual growth factor of 5% was applied to payroll, sales and property growth based on an examination of the last three years of the 12-month percentage change in the Consumer Price Index (*BLS – 12 Month Change- All items in U.S. city average, all urban consumers, not seasonally adjusted).* Each half-year 12-month ending percent change was averaged to arrive at 5.50%.

Development Impacts

	Post-Construction Completion Period					
DEVELOPMENT	**Year 1**	**Year 2**	**Year 3**	**Year 4**	**Year 5**	**Total**
FTEs	2,079	2,079	6,931	6,931	6,931	**6,931**

Surrounding Area Visitor Spending

The section below overviews anticipated visitations based on the utilization of Placer.ai on the building complex for current performances. Placer.ai. tracks cellular phone activity to create an accurate and recent picture of foot traffic. Below is a calculation of the indirect spending impact of visitors once the Project is fully complete. In order to estimate overnight visitors, Placer tracks both 1) the origin of the visitor to understand distance traveled and 2) if the visitor visited a hotel before and after the event. This provided a basis of estimation that 6.5% of visitors stayed overnight.

	Project	Development	
Total Visits	**697,210**	**1,945,790**	**Annual building visits from Placer.ai**
Visits	**522,908**	**1,459,342**	**Assumes 75% of visits are related to Development/Project**

Rates

				Project	Development	
Stay Visitor per Day	$204.30	$ per		**33,997**	**94,879**

Transportation	9%	$6.62		$3,236,226	$9,031,731	

Surrounding Area Property Value Analysis

The section overviews the Project's effect on property value increases to the Surrounding Area. This analysis utilizes Census 2023 data and PolicyMap software as the source for 5-year change in Single Family Median Home Value and Median Single Family Home Values and number of Single Family Homes (2018-2023) by Zip Code. Median Real Estate Tax Value was multiplied by the number of current Single Family homes to establish a baseline home value. The 5-year Single Family Home Value growth rate for the Surrounding Area was annualized and projected moving forward. A "Development and Project Share" was then calculated which uses the Development's total economic impact GDP impact as a percentage of total Surrounding Area GDP, both provided by IMPLAN, resulting in a share of **4% (2% for both the Development and Project).** The GDP share was used as a barometer for projecting forward the Development's share of home value growth going forward.

Property taxes were applied to the increment of Single-Family home values to estimate tax impacts as home value impacts were added to the "Property Value" basis on the prior Surrounding Area impacts summary on page 18.

PROPERTY VALUE IMPACT CALCULATION

Zips	Households	Population	Median Real Estate Tax	Property Value Per	Total Property Value	Project Share of Incremental Residential Value	Development Share of Incremental Residential Value
43035	11,032	32,317	$7,389	$301,592	$3,327,161,143	$133,086,446	$133,086,446
43240	3,034	6,321	$4,265	$174,082	$528,163,673	$21,126,547	$21,126,547
43082	11,741	33,273	$7,896	$322,286	$3,783,956,571	$151,358,263	$151,358,263
43021	4,813	14,084	$8,059	$328,939	$1,583,182,327	$63,327,293	$63,327,293

Catalyzed Project Impacts

The Catalytic Effect the Project is quantified in this section. The projects catalyzed in this section all fall within Project's half-mile radius and are planned to be placed into series after this Project is complete. Each project was identified as being caused or accelerated by the Project as noted in Appendix A. Further, project impacts are captured during the five-year completion period in each project's corresponding table. The assumptions below were used to calculate impacts from development square footage programs of each catalyzed project. The following page overviews how these were calculated into FTES, Payroll, Sales and Taxes.

Catalyzed Project Rates	SF/Jobs	Salary	Sales/SF	Room Sales/SF	Rent/SF	Methodology
Apartment	15,000	$35,000	$31	$0	$15	Uses comparable market data within the County, Ohio Region, data provided by Developer and Rent.com rent estimates.
Hotel	700	$30,000	$100	$100	$0	Uses comparable hotel sales data for large cities.
Industrial	750	$55,000	$0	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Office	350	$75,000	$25	$0	$0	Lightcast & BLS Data for Surrounding Area for Business Occupations
Restaurant	600	$25,000	$350	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Retail	450	$30,000	$300	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Arena/Events	750	$55,000	$95	$0	$0	Based on comparable arena construction data
	Operations Rate	**Construction Rate**				
% Jobs Dedicated to Operations	15%					Uses typical mix or type and area supported by IMPLAN
Indirect Retail Sales Rate	5%	2%				Uses typical mix or type and area supported by IMPLAN
Indirect Entertainment Sales Rate	7%	3%				Uses typical mix or type and area supported by IMPLAN
Indirect Dining Sales	10%	4%				Uses typical mix or type and area supported by IMPLAN
Construction Output/Worker		$136,000				Uses typical mix or type and area supported by IMPLAN
EC/Worker		$62,000				Uses typical mix or type and area supported by IMPLAN
% Cost Related to Construction Materials		40%				Typical method utilzied by RSMeans Construction Data
Sales Taxable Purchases	95%	100%				Analyzed exempt uses in relation to project from OTAX
Lodging Impact	2%	2%				Uses US Tourism Sattelite Accounts to estimate lodging impact of activity
Property Impact	12.5%	0.5%				Assumes typical indirect property value impact based on IMPLAN data
Value at Cost	85%	85%				Assumes market value based on hard costs from analysis of Auditor data
Renter HH Income	$65,100					Utilizes Census/ACS and HUD Data to Assume Area Family Incomes
Renters per SF	600					Calculated based on typical SF needed per renter from sample projects
Lodging Per-Diem		$227				PBMares CPAs and Consultant's Guidance for Contractors Who Use Per Diems
Worker Travel %		15%				Based on analysis of Lightcast inbound commuter data to the Surrounding Area
Worker Annual Weekdays		78.3				Assumes 30% of the weekdays "travel workers" commute to work and use a Per-Di

Catalyzed Project List

Catalyzed Projects within a half-mile Radius of the Project										
Project	**Address**	**Placed Into Service**	**SF**	**Apartment**	**Hotel**	**Industrial**	**Office**	**Restaurant**	**Retail**	**Cost**
Catalyzed Project #1		2028	14,000						14,000	$6,300,000
Catalyzed Project #2		2028	307,200	307,200						$57,600,000
Catalyzed Project #3		2028	1,816,500	1,168,000	65,000	-	361,000	76,000	146,500	$455,900,000
Totals			**2,137,700**	**1,475,200**	**65,000**	**-**	**361,000**	**76,000**	**160,500**	**$519,800,000**

Catalyzed Project Impacts

Each Catalytic Project is calculated utilizing the following methodology in correspondence with the rates from the previous page:

Category	Methodology
FTEs/Payroll	Calculates FTEs per SF by use and payroll using BLS wage data for each overarching use.
Operations FTEs/Payroll	Assumes the 15% of FTES are dedicated to operations, based on IMPLAN's typical mix of operations occupation categories, which includes two-level SIC code categories 37, 43 and 49.
Tenant FTEs/Payroll	Assumes the 75% of FTES are tenants, which is based off of a typical IMPLAN mix for the area, removing two-level SIC code categories 37, 43 and 49.
Retail	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Retail category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate retail spending for residents.
Entertainment	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Entertainment category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate entertainment spending for residents.
Dining	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Dining category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate dining spending for residents.

Catalyzed Project List

Catalyzed Project: Catalyzed Project #1

Location: Parcel # 31844202025005

Summary: Catalyzed Project 1, which is located immediately west of the Galaxy and just south of the Top Golf at Polaris, will likely be a 14,000 square foot retail space. This property is owned by a single landowner and will be catalyzed by the increase in property values and market opportunity from the Project.

value of the land will continue to increase as a result of the Galaxy development. All other large tracts of undeveloped land in the area have developed in this manner. The construction of Ikea Way opened access to over 150 acres of land and development opportunity. Improvements to Worthington Road and Bale Kenyon Road further increase the likelihood of development.

Catalyzed Project List

Catalyzed Project: Catalyzed Project #3

Location: Parcel #s 31844101002000, 31844102001000 and 31841403015000

Summary: Catalyzed Project 3, located east of the Galaxy, will likely be 1.82 million square foot, mixed use development. The project is likely to include 1,460 residential units, 200 hotel rooms, and 583,500 square feet of office, retail, and restaurant space. This property is owned by a single landowner and will likely be catalyzed by the increase in property values and market opportunity from the Project.

The value of the land will continue to increase as a result of the Galaxy development. All other large tracts of undeveloped land in the area have developed in this manner. The construction of Ikea Way opened access to over 150 acres of land and development opportunity. Improvements to Worthington Road and Bale Kenyon Road further increase the likelihood of development.

Total Impacts

Total Impacts

Construction Activity

The Project will create, cause and accelerate a total one-time infusion of 8,744 construction jobs and $626million in payroll from construction activity from the Project, Development and Catalytic projects.

Jobs and Payroll

Additionally, the Project will create, cause and accelerate a total of 15,747 jobs, of which the 1,949 will be employed by the project, 6,931 from the Development and another 6,867 indirectly created, caused or accelerated to the Surrounding Area as a result of the Project.

Retail, Entertainment and Dining Sales

The Project will additionally generate, cause and accelerate over $7.2 billion in retail, dining and entertainment sales over a five-year period, including an immediate infusion of $31 million in sales from construction activity. Of these sales figures, $364 million will come directly from the Project, $3 billion from the Development, driving an additional $3.8 billion to the Surrounding Area and Catalyzed Projects.

Taxes

The Project will result in approximately $1.3 billion in State and Local Taxes, of which $1.25 billion will be generated during the Completion Period from Project operations, Surrounding Area impacts and Catalyzed Project impacts. The additional $81 million comes in the form of Construction Period Taxes.

II. TOTAL CONSTRUCTION PERIOD IMPACTS

A. Total Construction Period Impacts: Construction Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	4,372	$313,436,703
2	4,372	$313,436,703
3	-	$0
4	-	$0
5	-	$0
	8,744	**$626,873,405**

B. Total Construction Period Impacts: Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales	TOTAL Projected Sales/Year
1	[redacted]	[redacted]	[redacted]	[redacted]
2	[redacted]	[redacted]	[redacted]	[redacted]
3	$0	$0	$0	$0
4	$0	$0	$0	$0
5	$0	$0	$0	$0
	[redacted]	[redacted]	[redacted]	[redacted]

C. Total Construction Period Impacts: Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax	TOTAL Projected Taxes
1	$20,493,951	$15,216,394	$995,319	$3,835,296	$40,540,961
2	$20,505,089	$15,216,394	$995,319	$3,872,385	$40,589,187
3	$0	$0	$0	$0	$0
4	$0	$0	$0	$0	$0
5	$0	$0	$0	$0	$0
	$40,999,040	**$30,432,788**	**$1,990,639**	**$7,707,681**	**$81,130,148**

III. TOTAL COMPLETION PERIOD IMPACTS *(totals inputs from Completion Period Impacts worksheet)*

A. Total Completion Period Impacts: Operational Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	835	$61,267,889
2	1,160	$77,747,152
3	1,913	$164,611,833
4	2,025	$173,494,477
5	2,165	$183,141,840
	8,099	**$660,263,191**

B. Total Completion Period Impacts: Tenant Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	5,307	$384,860,297
2	7,196	$499,301,199
3	11,976	$834,335,451
4	12,690	$909,707,548
5	13,582	$998,155,001
	50,751	**$3,626,359,496**

C. Total Completion Period Impacts: Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales	TOTAL Projected Sales/Year
1	[redacted]	[redacted]	[redacted]	[redacted]
2	[redacted]	[redacted]	[redacted]	[redacted]
3	[redacted]	[redacted]	[redacted]	[redacted]
4	[redacted]	[redacted]	[redacted]	[redacted]
5	[redacted]	[redacted]	[redacted]	[redacted]
	[redacted]	[redacted]	[redacted]	[redacted]

D. Total Completion Period Impacts: Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax	TOTAL Projected Taxes
1	$107,716,435	$39,880,943	$4,483,439	$40,354,536	$192,435,354
2	$127,456,122	$47,472,105	$7,506,511	$55,231,998	$237,666,737
3	$134,874,025	$49,969,309	$7,784,199	$63,763,264	$256,390,797
4	$140,811,894	$52,167,746	$8,031,348	$72,409,718	$273,420,706
5	$147,046,656	$54,476,105	$8,290,855	$83,017,972	$292,831,588
	$657,905,131	**$243,966,209**	**$36,096,352**	**$314,777,489**	**$1,252,745,181**

Total Impacts

I. TOTAL ECONOMIC IMPACTS *(Construction Period Impacts + Completion Period Impacts)*

A. Summary: Total Project Impacts

	TOTAL Projected FTEs	TOTAL Projected Payroll	TOTAL Projected Sales	TOTAL Projected Taxes
Construction Period Impacts	8,744	$626,873,405	$31,375,588	$81,130,148
Completion Period Impacts	15,747	$4,286,622,687	$7,295,328,699	$1,252,745,181
	24,491	**$4,913,496,093**	**$7,326,704,287**	**$1,333,875,328**

Total Impacts

The table to the right illustrates that projected taxes ($1.3 billion) meet at least 10% of the total development costs ($10,002,488).

Further, when combining the Construction Period and the first year after construction, the project significantly exceeds the 10% development cost threshold by $344,692,900 dollars.

TMUD Credit Objectives	
TMUD Project Cost	$100,027,488
10% of Development Cost Threshold	**$10,002,749**
Construction Taxes	$81,130,148
First Year Post-Construction Taxes	$273,565,501
Construction + Year 1	**$354,695,649**
Total Taxes	$1,333,875,328

EIS Preparer Qualifications

VISTA SITE SELECTION

Vista Site Selection LLC is a newly formed company, founded in September of 2022 by the law firm Vorys, Sater, Seymour and Pease LLP, focused on economic development, economic analysis, economic incentives and site location consulting. Vista's management team has over 75 years of collective experience in Economic Development and Site Selection in 49 US States and includes certified data analysts, economic consultants and GIS specialists, among others.

Vista's services included:

- ✓ Economic Insights, including Economic Footprint and Economic Impact Analysis
- ✓ Labor Analytics
- ✓ Development of Advanced, Customized Data Analytics Platforms and Mapping
- ✓ Retail Performance and Growth Analytics
- ✓ Return on Investment Insights for Companies and Communities
- ✓ Corporate Site Selection Advisory
- ✓ Tax Credit and Incentives Advisory
- ✓ Economic and Market Analysis

EIS Preparer Qualifications

This analysis will be performed by **Chris Magill**. Chris is a Certified Economist and Managing Director for Vista Site Selection. Chris has significant experience consulting on capital investment projects and has strategically negotiated and analyzed tax credit, grant and loan-financing solutions for capital investment projects in over 20 different states. Further, Chris utilizes data analytics to help better inform business leaders and site administrators on project ROI, economic impacts, site decisions and market conditions. Prior to joining Vista Site Selection, Chris served as the Economic Development Director at the Ice Miller law firm for 11 years, consulting on various matters related to economic development, economic incentives, public-private partnerships, community advisory and economic impact analysis. Prior to his time at Ice Miller, Chris worked at the Ohio Department of Development ("ODOD"), serving as the Executive Director of the Ohio Tax Credit Authority. During his time at ODOD, Chris managed and structured various tax credit programs and co-developed various economic incentive calculation tools.

Chris carries various economic certifications and has nearly 15 years of experience in authoring economic impact statements and analysis tools. Chris has experience instructing economic impact, fiscal return-on-investment and economic development courses for the International Economic Development and the Ohio Economic Development Association. Further, has volunteered his time instructing pro forma development courses for the Knowlton School of Architecture and Fisher College of Business at The Ohio State University in relation to the annual Urban Land Institute Student Heinz Competition and has served as a Planning Committee member and annual speaker for the Ohio Tax Conference. Chris also serves as the Vice President of the Board of Directors of the Ohio Statewide Development Corporation. Chris' credentials include:

- Certified Economist, *IMPLAN*
- Certification in Economic Measurement, *National Association of Business Economics*
- Certification of Business Applications of Statistics and Data Analytics, *National Association of Business Economics*
- Certification of Economic Strategy and Managerial Decision Making, *National Association of Business Economics*
- Master's in Business Administration, *Ohio University*

EIS Preparer Qualifications

The list depicted includes a sample of Chris Magill's economic impact study experience. Chris has authored economic impact studies for projects in more than 25 US States. This includes manufacturing megaprojects, corporate headquarter office projects, mixed-use projects, non-profit projects, policy changes and cultural/sports facility projects, among others.

Transformational Mixed-Use Tax Credit

Economic Impact Statement

Authored by:

VISTA SITE SELECTION

Introduction

This study is prepared by Vista Site Selection, LLC ("Vista"), a third-party entity, on behalf of an application for the Ohio Transformational Mixed-Use Tax Development Credit Program ("TMUD"). This study accomplishes two primary objectives:

1) To verify that increased tax collections resulting from the project will exceed 10% of the estimated eligible project costs and,

2) To articulate the economic impacts of the Project and/or larger Development to the Project Site and Surrounding Area during both the Construction Period, which is the time period in which the Project is being constructed and the Completion Period, which is the 5 years after Project construction is completed.

In accomplishing these objectives, this document will assess the following categories:

- ***Employment*** **-** The projected number of construction, operational, and tenant jobs created as a result of the Project and the average hourly wages for each job type.
- ***Revenue*** **-** Annual revenue projections generated from retail, entertainment, and dining sales.
- ***Tax Revenues*** **-** Annual revenue projections generated from sales tax, income tax, lodging tax, and property tax.

Economic impacts will be calculated utilizing IMPLAN software and the following methodology:

INPUTS

1. Provided by Developer
2. Calculated by Vista using market assumptions and data support

ECONOMIC OUTPUTS

1. Calculated utilizing IMPLAN software
2. Calculated by Vista utilizing IMPLAN and complementary data sources either publicly available, indexed/created by Vista or subscribed to by Vista.

TAX CALCULATIONS

1. Direct taxes calculated by Vista using state and local tax rates.
2. Indirect taxes calculated by Vista from indirect outputs, with some categories calculated using IMPLAN tax estimates and rates.

EIS Framework Categories and Sections

This study illustrates the transformational mixed use development's impact on the development site and surrounding area in terms of retail, entertainment and dining sales, job creation, property values, connectivity, and revenue from sales, income, lodging, and property taxes, as referenced in Ohio Revised Code 122.09(C)(1). The framework in this study will cover this in three major sections: 1) Construction Impacts, 2) Completion Period Impacts and 3) Total Impacts.

	1. Construction Impacts	2. Project Completion Period Impacts
Project	The direct economic impacts of the new construction and/or renovation and rehabilitation of structures included in the Project on the Project site during the construction period.	The direct and indirect economic impacts of the Project as defined in the application in the five years after completion of construction of the Project.
Development (if applicable)	The direct economic impacts of the construction and/or renovation and rehabilitation of structures included in the Development as defined in the application during the construction period. Does not include the Construction Project Impacts described above. If the Project is not part of a larger planned Development, this section is not applicable.	The direct and indirect economic impacts of the Development as defined in the application in the five years after completion of construction of the Project, exclusive of the impacts of the Project as identified above. If the Project is not part of a larger planned Development, this section is not applicable.
Surrounding Area Impacts	The indirect economic impacts caused by the new construction and/or renovation and rehabilitation of structures included in the Project in the surrounding area during the completion period of the Project, excluding any impacts specifically identified below in the Construction Catalyzed Project Impacts section.	The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below in the Catalyzed Project Impacts section.
Catalyzed Projects (if applicable)	The direct and indirect economic impacts from construction of the defined projects in the surrounding area that are directly caused or accelerated by the Project/Development during the completion period of the Project.	The direct and indirect economic impacts of other proposed, defined projects in the surrounding area that are directly caused or accelerated by the Project/Development in the five years after completion of construction of the Project.
	3. Total Impacts (1. Construction Impacts + 2. Project Completion Impacts)	

Project Geography

The Economic Impact geography is referred to as the Surrounding Area, which includes any zip code covered in whole or in part encompassed within a perimeter starting from the transformational mixed used development boundary and extending one-half miles out from that boundary.

The .5-mile radius from the Project boundary, which is located within 10 miles of a City with population of at least 100,000 residents includes the following zip codes:

1. **45202**
2. **45203**
3. **45214**
4. **45219**

Taxes & Rate Methodology

For simplicity, the Project, Development, Surrounding Area and Catalyzed Projects follow the same tax rates which are based on the **City of Cincinnati, Hamilton County**, the **City of Cincinnati School District** and the State of Ohio. It is worth noting that there may be small variations in the actual tax amounts, compared to these estimated amounts, based on per-parcel levies, other school districts and numerous factors particularly when factoring in the Surrounding Area and Catalyzed Project impacts.

Sales Taxes – sales taxes are calculated using sales and purchases of building tenants, purchases from residents and tourists within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional **20%** reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of resident expenditures and estimates of economic output provided by IMPLAN. The combined State and Local rate is **7.8%** in the project address (with **5.75%** to the State of Ohio, **1.25%** to **Hamilton County** and **.80%** to the **Southwest Ohio Regional Transit Authority**). Sales tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool for the project address. In circumstances where ticket sales for events occur, the **City of Cincinnati** admissions tax is applied to sales, which is **3%**. Admissions taxes are municipal taxes allowed as an exception under 715.013(C) of the Ohio Revised Code, serving as an alternative method of collecting taxes by a municipal administrator to Sales, Property, Income and Lodging taxes.

Income Taxes – income taxes are calculate as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax). Ohio Withholding Taxes utilize a bracketed rate structure based on salary (for this project is assumed to be **2.35%,** which is calculated on the Project average salary of **$90,000**, assuming a fixed tax of **$361** + an excess tax of **2.75%** for a salary over **$26,050**). The **City of Cincinnati** levies a **1.85%** income tax on people living and working in the **City of Cincinnati** (see **City of Cincinnati** – Income Tax Division).

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. Lodging taxes collected by **Hamilton County** at a rate of **6.5%** and the **City of Cincinnati (Hamilton County)** at a rate of **4%,** resulting in a total lodging tax rate of **10.5%.** Lodging rates can be found utilizing the Ohio Department of Taxation's tax analysis data series.

Property Taxes – property taxes are collected by various units of government and published by the County Auditor. Property taxes are assessed at 35% of the market value of the property, then an effective tax rate is applied and distributed to the local government taxing units. The effective tax rate of the property's assessed value is **9.1%. Phase 1 of the Development is considered either property tax exempt or abated, therefore adjustments to property tax collections were made to account for abatements and exemptions.**

Application of Growth Rates and Inflation – annual growth is assumed for revenue streams calculated within this document which includes property value, sales growth and wage growth. An examination of the Consumer Price Index for all Urban Consumers for calendar years 2021, 2022 and 2023 was utilized in which each half-year rate was averaged, arriving at a total rate of **5.5%.** This figure was reduced to **5%** under anticipation that the CPI and inflation will drop.

Construction Period Impacts

Input Methodology

Project Impacts

The value entered in Industry Output for construction represents full cost of the structure as provided by the Developer, and only the structure. Construction cost data was provided by the Developer in all circumstances (each building). This includes hard costs and soft costs. IMPLAN calculates employment based on the number of employees it would take to support the dollar value and type of a given economic event, using a combination of data sources including Census County Business Patterns (CBP), Bureau of Labor Statistics Covered Employment and Wages (CEW) and Bureau of Economic Analysis Regional Economic Accounts (REA) as the basis for its calculation. Further, IMPLAN uses additional data sources to classify its employment estimates into hours worked, headcount and compensation by specific occupation. Occupational source data used by IMPLAN includes Bureau of Labor Statistics (BLS) Occupational Employment Survey (OES), BLS Employment Projections national industry by occupation matrix, Census Bureau American Community Survey (ACS) Public Use Microdata Sample (PUMS) and O*NET™ which is a trademark of the U.S. Department of Labor, Employment and Training Administration. Employees are converted to Full-time equivalent employees (FTEs) by dividing the estimated number of hours of compensation for the job, as calculated by IMPLAN, by 2,080. There are no direct impacts to retail, entertainment and dining as these are not direct construction expenditures, but rather Surrounding Area effects.

Surrounding Area Impacts

Surrounding Area impacts during the Construction Period were calculating utilizing IMPLAN. In IMPLAN, the project was modeled as **$265,000,000** in Output under the industry 55 - Construction of New Commercial Structures, Including Farm Structures. Construction cost calculations were provided using costs provided by the Developer. Outputs resulting from the construction inputs in IMPLAN were filtered in IMPLAN only to show indirect effects of Project Construction. These impacts were categorized by use, to understand specific impacts to Retail, Entertainment and Dining. In this circumstance, the Surrounding Area's presence of significant entertainment, retail and dining establishments (professional sports stadiums, full-service restaurants, limited services restaurants, bars and shopping) create a higher degree of construction worker spending. Additional categories were created and aggregated if they were sales-taxable transactions. Lodging taxes follow a similar rate, as many construction workers travel to larger areas given the overall labor shortage of construction workers. Those who travel and stay overnight are typically provided lodging and meal per diems. Given IMPLAN captures dining expenditures, the lodging per diem method is utilized to get a more accurate picture of construction spending. A typical per-day per diem is $138 for lower cost areas and $222 for higher cost areas. Given the location within a major urban center (**Cincinnati**) the $222 figure is utilized (per diem rates provided by *PBMares CPAs and Consultants Guidance for Contractors Who Use Per Diem, 2022)*. Further it is assumed 15% of workers will travel as part of this arrangement during 30% of the annual weekdays per year. Lodging taxes are calculated off of estimated lodging expenditures.

Catalyzed Project Impacts

Catalyzed Project construction was calculated differently than Project Construction, as detailed information for Catalyzed Projects is not typically available, as such, costs were provided by the catalyzed project developers or estimated based off of square footage data gathered from available project information. In calculating construction impacts, costs were calculated on a per-square foot basis by analyzing comparable building sizes on the **Hamilton** County Auditor's website, costs of recent developments in the area and the size/scale of the project. In all cases, construction costs assumed 60% labor and 40% materials costs, and for purposes of estimating employment, a cost-per-worker of $136,000 was used, the rate provided by IMPLAN for the **45202, 45203, 45214 and 45219** zip codes. Lastly, average salaries for the area were calculated using IMPLAN employee compensation figures for **the 45202, 45203, 45214 and 45219** zip codes, estimated at **$56,000**. There is further detail on Catalyzed Project methodology later on in this document.

Construction Project Impacts

CONSTRUCTION	Project Construction		
	Year 1	Year 2	Totals
Property Value	$132,500,000	$132,500,000	**$265,000,000**
Labor	1,051	1,051	**2,101**
Materials	$53,000,000	$53,000,000	**$106,000,000**
Wages	$79,500,000	$79,500,000	**$159,000,000**
DIRECT	**Const. 1**	**Const. 2**	**Total**
Sales Tax	$4,134,000	$4,134,000	**$8,268,000**
Income Tax	$3,696,750	$3,696,750	**$7,393,500**
Lodging Tax	$0	$0	**$0**
Property Tax	$0	$0	**$0**
Total	**$7,830,750**	**$7,830,750**	**$15,661,500**

Any construction occurring prior to the Completion Period is not included in this calculation.

Construction Development Impacts

CONSTRUCTION	Development Construction		
	Year 1	Year 2	Totals
Property Value	$85,413,750	$85,413,750	**$170,827,500**
Labor	677	677	**1354**
Materials	$34,165,500	$34,165,500	**$68,331,000**
Wages	$51,248,250	$51,248,250	**$102,496,500**
DIRECT	**Const. 1**	**Const. 2**	**Total**
Sales Tax	$2,664,909	$2,664,909	**$5,329,818**
Income Tax	$2,383,044	$2,383,044	**$4,766,087**
Lodging Tax	$0	$0	**$0**
Property Tax	$0	$0	**$0**
Total	**$5,047,953**	**$5,047,953**	**$10,095,905**

Any construction occurring prior to the Completion Period (prior Development Phases) is not included in this calculation, therefore Phase 1 construction is omitted from Construction Period Impacts.

Construction Surrounding Area Impacts

SURROUNDING AREA	Surrounding Area Construction Impacts		
	Year 1	Year 2	Const. Total

Phase 3 (Development)	2027	2029

Completion Period Impacts

Methodology

Project and Development Impacts

In calculating the Project, the Developer provided data related to project costs, square footage, residential units, residential rents, building and tenant information to serve as inputs. Vista calculated employment, wages, sales and office purchases from these figures. In circumstances where tenant sales were not provided by the Developer, they were calculated by Vista utilizing Lightcast 2023 and IMPLAN estimated employment to support estimated sales. Sales were calculated using per-square-foot data estimates provided from CoStar for specific tenants or tenant types. Office and retail supplies purchases are estimated using a percentage of payroll based (5%-25% of payroll, **25%** being used for supplies needed for theatre operations). Other metrics, such as household incomes of the residents and resident spending in the Surrounding Area were calculated by Vista. Resident expenditures were calculated using averages from the *2022 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income*. Household income assumptions were calculated by assuming renters will spend **25%** of their income toward rent, there for the monthly rent price was divided by **25%,** then multiplied x 12 (months) to arrive at the household income rate for that particular unit grouping. Each consumer expenditure category was assigned an "absorption rate" to account for any expenditures that cannot be made within the Surrounding Area. Estimated wages and jobs use CoStar jobs per square foot metrics and wages utilize average wage for the specific tenant-use staffing pattern provided by Lightcast, sourced by the Bureau of Labor Statistics. For hotels that include conference space, it is assumed that space is programmed **226** days of the year with a mix of weddings, weekday conference, weekend conventions and 1-day ticketed events. Metrics for these events was based on comparable events which include the Ohio Tax Conference, Monroe Pop Fest, NAIOP Commercial Breakfast and typical wedding pricing. Lastly, Vista calculates visitor spending activity which will directly benefit the Surrounding Area. Vista calculated visitor activity using *Placer.ai* foot-traffic data to calculate expected visitors, which estimates annual visits, annual visitors and visitor locations both before and after arriving at the Project facility, providing a basis for Surrounding Area spending. The effects of visitors generated from the Project are reflected in Surrounding Area impacts.

Surrounding Area Impacts

Surrounding Area impacts were calculated utilizing three primary methods: 1) Indirect Impacts calculated by IMPLAN from Project inputs, including spending in Dining, Entertainment and Retail in the Surrounding Area, 2) Indirect effects to business from tourist spending, through increased sales and indirect jobs created and 3) Indirect property value impacts from the project. IMPLAN calculates indirect impacts from Project activity, by industry, which is then aggregated into Retail, Entertainment and Dining sales. Tourist spending utilizes *US Travel and Tourism Satellite Accounts* and Average Spending Rates for overnight visitors produced by the *Regional Tourism and Visitors Bureau*, which assume overnight visitors spend **$276** per day and non-overnight visitors spend **$110** per day. *Placer.ai* estimated **800,000** annual visitors for the Project (largely based on the entertainment venue) and FC Cincinnati provided stadium visitation of **1.68 million visitors**, which was used for the Development. Overnight visitors were calculated from *Placer.ai*'s **visitation estimates for the Development, which includes visitor journeys of uses visited by consumers to the Surrounding Area before and after consuming the Development** (those who visited a hotel before and after the show were calculated as overnight visitors). The resulting figure was **79,481** overnight visitors attributable to the Project and **167,077** overnight visitors attributable to the Development. Property value impacts were calculated based on home values within the Surrounding Area, and extracting the Development's share of projected growth based on historical growth and the Development's projected economic impacts to the Surrounding Area after the Project is complete.

Catalyzed Project Impacts

Catalytic projects follow a different method, given the prospective nature of the developments and lack of detail beyond planned square footage and uses. Projects were identified by the Developer with assistance from Vista, as either caused or accelerated by the project, including what year during the Project's Completion period each project would come online. Square footage was applied to a standard rate table be use and resulting figures were calculated into a series of tables for each project. In instances where these effects include the construction of certain public buildings, a separate set of factors to account for tax-exempt status in certain circumstances related to property and sales. This document elaborates on the methods and rates in later sections.

Project Inputs

INPUTS	Sales	FTEs	FTE Hourly	Payroll	Residents	Resident Incomes	Resident Spending
Residential Units	N/A (rents)	23	$21.63	$1,038,578	1,658	$198,960,000	$35,314,983
Restaurant	$[redacted]	35	$14.42	$1,042,313	0	$0	$0
Retail	$[redacted]	56	$16.83	$1,945,650	0	$0	$0
Hotel	$[redacted]	217	$21.63	$9,775,800	0	$0	$0
Office	$[redacted]	461	$96.15	$92,208,000	0	$0	$0
***Entertainment**	$[redacted]	787	$82.45	$134,970,150	0	$0	$0
Event Space (from Venue)	$[redacted]	120	$23.56	$5,880,000	0	$0	$0

*Entertainment operations represent a combination of 1) the planned renovations to FC Cincinnati's TQL Stadium and 2) the new entertainment venue. Employment estimates were calculated by IMPLAN, which calculate the number of employees needed to support the sales estimated for both venues post-Project investment. The IMPLAN industry used to estimate employment for the Entertainment use was "497 - Commercial Sports Except for Racing" and the industry used to estimate the entertainment venue employment was "500 – Promoters of Performing Arts and sports and agents for public figures".

Development Inputs

INPUTS	Sales	FTEs	Hrly	Payroll	Residents	Resident Incomes	Resident Spending
Residential Units	n/a	13	$21.63	$573,750	0	2,170	$260,400,000

Surrounding Area Visitor Spending from Project

The section below overviews anticipated visitations based on the utilization of Placer.ai on the building complex for current performances. Placer.ai. tracks cellular phone activity to create an accurate and recent picture of foot traffic. Below is a calculation of the indirect spending impact of visitors once the Project is fully complete. In order to estimate overnight visitors, Placer tracks both 1) the origin of the visitor to understand distance traveled and 2) if the visitor visited a hotel before and after the event. This provided a basis of estimation that 6.5% of visitors stayed overnight.

Project Visits		**800,000**	***Placer.ai estimate from comparable locations***	
Development Visits		**1,681,684**		
Rates			**PROJECT**	**DEVELOPMENT**
Stay Visitor per Day	$204.30	$ per	**79,481**	**167,077**
Lodging	42%	$150.00	$11,922,095	$25,061,496
F&B	29%	$58.38	$4,640,202	$9,754,191
Retail	15%	$29.63	$2,354,729	$4,949,888
Entertainment	6%	$20.00	$1,589,613	$3,341,533
Transportation	9%	$18.22	$1,448,158	$3,044,181
			$21,954,797	**$46,151,289**
Drive Visitor per Day	$75.00	$ per	**720,519**	**1,514,607**
Lodging	0%	$0.00	$0	$0
F&B	64%	$47.87	$34,488,755	$72,498,985
Retail	18%	$13.68	$9,853,930	$30,292,147
Entertainment	9%	$6.84	$4,926,965	$54,525,865

			$54,038,952	**$167,342,570**

Per-visitor rates based on US Travel and Tourism Satellite Accounts, tracking typical visitor spending, however increased to account for estimated ticket prices.

Surrounding Area Property Value Analysis

The section overviews the Project's effect on property value increases to the Surrounding Area. This analysis utilizes Census 2023 data and PolicyMap software as the source for 5-year change in Single Family Median Home Value and Median Single Family Home Values and number of Single Family Homes (2018-2023) by Zip Code and the more immediate Census Tract. Median value was multiplied by the number of current Single Family homes to establish a baseline home value. The 5-year Single Family Home Value growth rate was annualized and projected moving forward. A "Development and Project Share" was then calculated which uses the Development's total economic impact GDP impact as a percentage of total Surrounding Area GDP, both provided by IMPLAN, resulting in a share of **8.8%.** The GDP share was used as a barometer for projecting forward the Development's share of home value growth going forward.

Property taxes were applied to the increment of Single-Family home values to estimate tax impacts as home value impacts were added to the "Property Value" basis on the prior Surrounding Area impacts summary on page 18.

PROPERTY VALUE IMPACT CALCULATION

Zips	Households	Population	Median Real Estate Tax	Property Value Per	Total Property Value	Project Share of Incremental Residential Value	Development Share of Incremental Residential Value
45202	8,488	17,422	$5,895	$240,612	$2,042,316,735	$81,692,669	$179,723,873
45203	1,512	2,694	4487	$183,143	$276,912,000	$11,076,480	$24,368,256
45214	3,806	8,691	$1,502	$61,306	$233,331,102	$9,333,244	$20,533,137
45219	6,619	17,255	$2,487	$101,510	$671,896,041	$26,875,842	$59,126,852

Catalyzed Project Impacts

The Catalytic Effect the Project is quantified in this section. The projects catalyzed in this section all fall within Project's half-mile radius and are planned to be placed into series after this Project is complete. Each project was identified as being caused or accelerated by the Project as noted in Appendix A. Further, project impacts are captured during the five-year completion period in each project's corresponding table. The assumptions below were used to calculate impacts from development square footage programs of each catalyzed project. The following page overviews how these were calculated into FTES, Payroll, Sales and Taxes.

Catalyzed Project Rates	SF/Jobs	Salary	Sales/SF	Room Sales/SF	Rent/SF	Methodology
Apartment	15,000	$35,000	[redacted]	$0	[redacted]	Uses comparable market data within the County, Ohio Region, data provided by Developer and Rent.com rent estimates.
Hotel	700	$30,000	$100	$100	$0	Uses comparable hotel sales data for large cities.
Industrial	750	$55,000	$0	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Office	350	$75,000	$25	$0	$0	Lightcast & BLS Data for Surrounding Area for Business Occupations
Restaurant	600	$25,000	$350	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Retail	450	$30,000	$300	$0	$0	US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Arena/Events	750	$55,000	$95	$0	$0	Based on comparable arena construction data

	Operations Rate	Construction Rate	
% Jobs Dedicated to Operations	15%		Uses typical mix or type and area supported by IMPLAN
Indirect Retail Sales Rate	5%	2%	Uses typical mix or type and area supported by IMPLAN
Indirect Entertainment Sales Rate	7%	3%	Uses typical mix or type and area supported by IMPLAN
Indirect Dining Sales	10%	4%	Uses typical mix or type and area supported by IMPLAN
Construction Output/Worker		$136,000	Uses typical mix or type and area supported by IMPLAN
EC/Worker		$62,000	Uses typical mix or type and area supported by IMPLAN
% Cost Related to Construction Materials		40%	Typical method utilzied by RSMeans Construction Data
Sales Taxable Purchases	95%	100%	Analyzed exempt uses in relation to project from OTAX
Lodging Impact	2%	2%	Uses US Tourism Sattelite Accounts to estimate lodging impact of activity
Property Impact	12.5%	0.5%	Assumes typical indirect property value impact based on IMPLAN data
Value at Cost	85%	85%	Assumes market value based on hard costs from analysis of Auditor data
Renter HH Income	$65,100		Utilizes Census/ACS and HUD Data to Assume Area Family Incomes
Renters per SF	600		Calculated based on typical SF needed per renter from sample projects
Lodging Per-Diem		$227	PBMares CPAs and Consultant's Guidance for Contractors Who Use Per Diems
Worker Travel %		15%	Based on analysis of Lightcast inbound commuter data to the Surrounding Area
Worker Annual Weekdays		78.3	Assumes 30% of the weekdays "travel workers" commute to work and use a Per-Di

Catalyzed Project List

The City of Cincinnati has attested to the catalytic effect the Project will have on the Projects below in the attached letter under Exhibit A.

CATALYZED PROJECTS PLACED INTO SERVICE AFTER THE PROJECT IS COMPLETE WITHIN A HALF-MILE RADIUS OF THE TRANSFORMATIONAL MIXED USE DEVELOPMENT BOUNDARY										
Project	**Address**	**Placed Into Service**	**SF**	**Apartment**	**Hotel**	**Arena/Event**	**Office**	**Restaurant**	**Retail**	**Cost**

Totals			**2,915,879**	**2,175,375**	**487,000**	**-**	**88,504**	**69,000**	**96,000**	**$771,266,346**

Catalyzed Project Impacts

Each Catalytic Project is calculated utilizing the following methodology in correspondence with the rates from the previous page:

Category	Methodology
FTEs/Payroll	Calculates FTEs per SF by use and payroll using BLS wage data for each overarching use.
Operations FTEs/Payroll	Assumes the 15% of FTES are dedicated to operations, based on IMPLAN's typical mix of operations occupation categories, which includes two-level SIC code categories 37, 43 and 49.
Tenant FTEs/Payroll	Assumes the 75% of FTES are tenants, which is based off of a typical IMPLAN mix for the area, removing two-level SIC code categories 37, 43 and 49.
Retail	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Retail category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate retail spending for residents.
Entertainment	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Entertainment category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate entertainment spending for residents.
Dining	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Dining category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate dining spending for residents.

Catalyzed Project List

Catalyzed Project: Findlay Forward Market

Location: 1801 Race Street Cincinnati, OH 45202

Summary: The historic Findlay Market is planning a $21 million key renovation that will serve as the new Headquarters for Findlay Market Operatinos, expand food entrepreneurship and enhance its retail sales.

The Project will provide significant customer capacity for the market due to the high volume of events and visitation caused by the Project.

The City of Cincinnati has attested to the catalytic impact of this Project, furthering its catalytic effect. The City's attestation letter is provided at the end of this section.

Catalyzed Project List

Catalyzed Project: Ohm Patel Hotel

Location: 1416 Central Parkway, Cincinnati, Ohio

Summary: Located across the street from TQL Stadium, the construction of a 97-room, boutique hotel at the corner of Magnolia Street and Central Parkway is a Project that has been accelerated or directly caused by the investment into the West End neighborhood associated with the West End Mixed-Use Development. The direct economic impact of the Ohm Patel Hotel Project includes the jobs, earnings, and sales directly supported during the completion period of Phase II of the West End Mixed-Use Development. Tenant jobs will be directly supported by the Ohm Patel Hotel Project during the completion period of Phase II of the West End Mixed-Use Development.

The City of Cincinnati has attested to the catalytic impact of this Project, furthering its catalytic effect. The City's attestation letter is provided at the end of this section.

Catalyzed Project List

Catalyzed Project: Port Commercial Rehab

Location: 510 W Liberty Street, and 1201 Linn Street

Summary: The Port is rehabilitating three commercial buildings in the West End neighborhood located at 1901Baymiller Street, 510 W Liberty Street, and 1201 Linn Street. Collectively, these three buildings represent 24,504 square feet of commercial space. This is a project that has been accelerated or directly caused by the investment into the West End neighborhood associated with the West End Mixed-Use Development. Construction for this Project is anticipated to occur between 2024 and 2027.

The Project's visitation and pedestrian volume will create demand from additional retail/restaurant tenants in the downtown core and additional activity in surrounding the Project/Development. Without investment of the Project/Development the lack of activity generators and current market performance of retail and office developments may not support additional commercial development.

The City of Cincinnati has attested to the catalytic impact of this Project, furthering its catalytic effect. The City's attestation letter is provided at the end of this section.

Catalyzed Project List

Catalyzed Project: West End Kenyon Heights

Location: Lin Street/Central Avenue/Findlay Street/West Liberty Street

Summary: West End Kenyon Heights is a significant development program that includes the adaptive reuse and development of land located between the West End Neighborhood and Dayton Historic District.

The West End Development's significant annual visitation, combined with the significant infusion of new surrounding uses will support additional residential and commercial development, allowing these lots to be developed to meet market demand.

The City of Cincinnati has attested to the catalytic impact of this Project, furthering its catalytic effect. The City's attestation letter is provided at the end of this section.

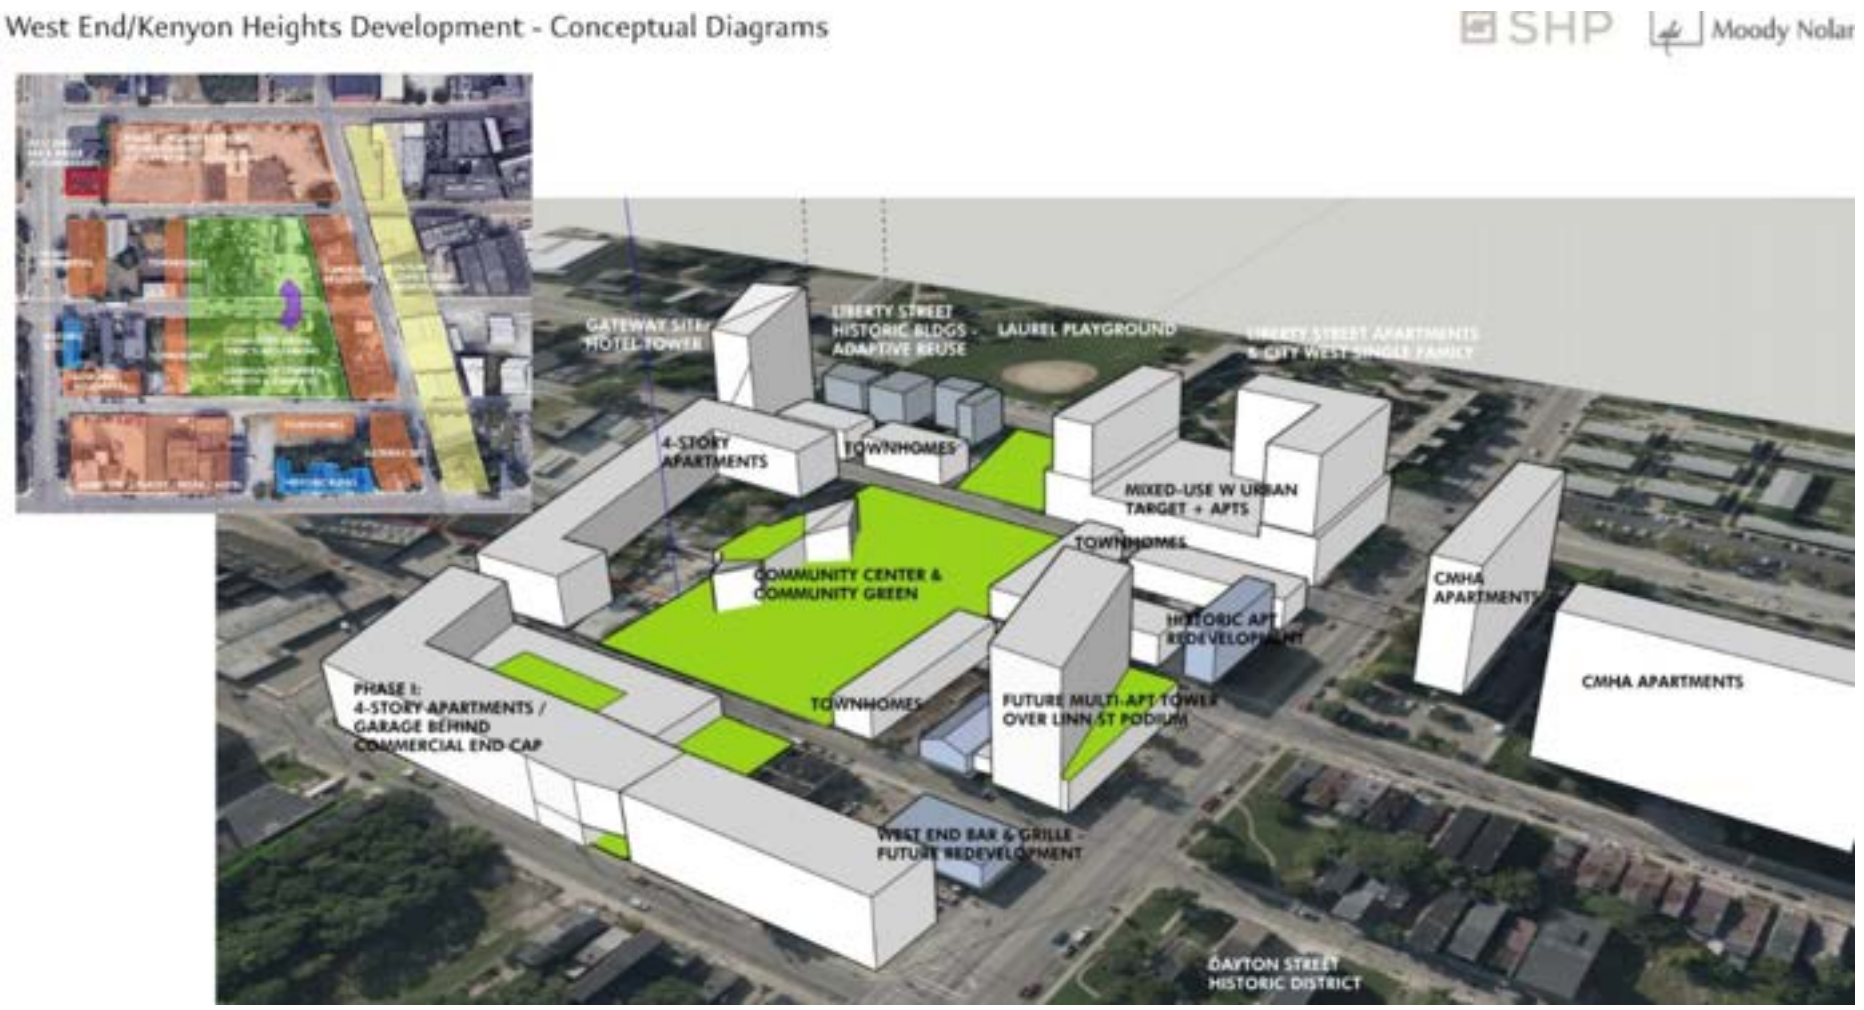
Catalyzed Project List



Rendering of West End/Kenyon Heights by Moody Nolan and SHP.

Catalyzed Project Attestations

city of CINCINNATI
COMMUNITY & ECONOMIC DEVELOPMENT

October 4, 2024

Ms. Lydia Mihalik
Director, Ohio Department of Development
State of Ohio
77 South High Street, 29thFloor
Columbus, OH 43215

Dear Director Mihalik:

The City of Cincinnati is excited about the true transformational effect the West End Mixed Use Development (the "Project") will have on its immediate half-mile radius, positively impacting the surrounding downtown residents, employers, institutions, and visitors. The purpose of this letter is to attest to the catalytic effect this Project will have in causing or accelerating key developments in the City of Cincinnati, specifically within the surrounding half-mile radius of the Project.

In addition to the immense impacts this Project will have to the City of Cincinnati, Hamilton County, and the region, the sheer volume of residents and commercial activity brought forth by the Project will accelerate a number of proposed, critical development projects that we anticipate will be privately financed without public subsidy. This full list of such proposed developments can be found in the attached Exhibit A to this document. Further, the Project will enhance our ability to attract new businesses, retain existing business, and cultivate top talent with existing live-work opportunities.

We appreciate your consideration of a Transformational Mixed Use Development Tax Credit Award for this Project and if you have any questions, do not hesitate to contact Dan Bower, Deputy Director at 513-352-6241 or dan.bower@cincinnati-oh.gov.

Sincerely,

Markiea L. Carter

Markiea L. Carter, Director

Total Impacts

Total Impacts

Construction Activity

The Project will create, cause and accelerate a total one-time infusion of 9,269 construction jobs and $620 million in payroll from construction activity from the Project, Development and Catalytic projects.

Jobs and Payroll

Additionally, the Project will create, cause and accelerate a total of 8,095 jobs, of which the 1,699 will be employed by the project, 3,444 from the Development and another 2,952 indirectly created, caused or accelerated to the Surrounding Area as a result of the Project.

Retail, Entertainment and Dining Sales

The Project will additionally generate, cause and accelerate over $6.2 billion in retail, dining and entertainment sales over a five-year period, including an immediate infusion of $60 million in sales from construction activity. Of these sales figures, $2.79 billion will come directly from the Project, $781 million from the Development, driving an additional $2.6 billion to the Surrounding Area and from Catalyzed Projects.

Taxes

The Project will result in approximately $1.34 billion in State and Local Taxes, of which $1.26 billion will be generated during the Completion Period from Project operations, Surrounding Area impacts and Catalyzed Project impacts. The additional $81.9 million comes in the form of Construction Period Taxes.

II. TOTAL CONSTRUCTION PERIOD IMPACTS

Total Impacts

I. TOTAL ECONOMIC IMPACTS *(Construction Period Impacts + Completion Period Impacts)*

A. Summary: Total Project Impacts

	TOTAL Projected FTEs	TOTAL Projected Payroll	TOTAL Projected Sales	TOTAL Projected Taxes
Construction Period Impacts	9,269	$620,136,478	$60,693,904	$81,989,103
Completion Period Impacts	8,095	$5,076,600,634	$6,139,737,570	$1,258,040,158
	17,364	**$5,696,737,112**	**$6,200,431,475**	**$1,340,029,262**

Total Impacts

The table to the right illustrates that projected taxes ($1.34 billion) meet at least 10% of the total development costs ($32.2 million).

Further, when combining the Construction Period and the first year after construction, the project significantly exceeds the 10% development cost threshold by $226,042,164 dollars.

TMUD Credit Objectives	
TMUD Project Cost	$322,837,000
10% of Development Cost Threshold	**$32,283,700**
Construction Taxes	$81,989,103
First Year Post-Construction Taxes	$176,336,760
Construction + Year 1	**$258,325,864**
Total Taxes	$1,340,029,262
Achieved 10% Taxes Threshold	**YES**
Achieve Alternative Method Potential	**YES**

VISTA SITE SELECTION

Vista Site Selection LLC is a newly formed company, founded in September of 2022 by the law firm Vorys, Sater, Seymour and Pease LLP, focused on economic development, economic analysis, economic incentives and site location consulting. Vista's management team has over 75 years of collective experience in Economic Development and Site Selection in 49 US States and includes certified data analysts, economic consultants and GIS specialists, among others.

Vista's services included:

- ✓ Economic Insights, including Economic Footprint and Economic Impact Analysis
- ✓ Labor Analytics
- ✓ Development of Advanced, Customized Data Analytics Platforms and Mapping
- ✓ Retail Performance and Growth Analytics
- ✓ Return on Investment Insights for Companies and Communities
- ✓ Corporate Site Selection Advisory
- ✓ Tax Credit and Incentives Advisory
- ✓ Economic and Market Analysis

EIS Preparer Qualifications

This analysis will be performed by **Chris Magill**. Chris is a Certified Economist and Managing Director for Vista Site Selection. Chris has significant experience consulting on capital investment projects and has strategically negotiated and analyzed tax credit, grant and loan-financing solutions for capital investment projects in over 20 different states. Further, Chris utilizes data analytics to help better inform business leaders and site administrators on project ROI, economic impacts, site decisions and market conditions. Prior to joining Vista Site Selection, Chris served as the Economic Development Director at the Ice Miller law firm for 11 years, consulting on various matters related to economic development, economic incentives, public-private partnerships, community advisory and economic impact analysis. Prior to his time at Ice Miller, Chris worked at the Ohio Department of Development ("ODOD"), serving as the Executive Director of the Ohio Tax Credit Authority. During his time at ODOD, Chris managed and structured various tax credit programs and co-developed various economic incentive calculation tools.

Chris carries various economic certifications and has nearly 15 years of experience in authoring economic impact statements and analysis tools. Chris has experience instructing economic impact, fiscal return-on-investment and economic development courses for the International Economic Development and the Ohio Economic Development Association. Further, has volunteered his time instructing pro forma development courses for the Knowlton School of Architecture and Fisher College of Business at The Ohio State University in relation to the annual Urban Land Institute Student Heinz Competition and has served as a Planning Committee member and annual speaker for the Ohio Tax Conference. Chris also serves as the Vice President of the Board of Directors of the Ohio Statewide Development Corporation. Chris' credentials include:

- Certified Economist, *IMPLAN*
- Certification in Economic Measurement, *National Association of Business Economics*
- Certification of Business Applications of Statistics and Data Analytics, *National Association of Business Economics*
- Certification of Economic Strategy and Managerial Decision Making, *National Association of Business Economics*
- Master's in Business Administration, *Ohio University*

I. INTRODUCTION

This analysis was undertaken to identify the economic impact of the proposed redevelopment at 8 and 12 Main Street in downtown Zanesville, Ohio. The property is located on the south side of Main Street immediately adjacent to the east end of the iconic Y Bridge. The site is adjacent to the Muskingum River and overlooks the historic Lock #10 Canal Park.

This report is based on guidelines for an Economic Impact Model as Defined in the Transformational Mixed-Use Program Guidelines issued by The State of Ohio.

There are two sources employed in this analysis.

The Implan Group, LLC input/output model has been used to determine employment and wage impact for the 8 Main project, as well as, the catalyzed projects.

Because of the reporting and data aggregating characteristics of the Implan Model, tax impact of a specific site may not be accurate. Implan Group has advised users to directly collect tax information.

Direct Data Collection - Taxes have been established based on applying the individual tax rates as established by each taxing authority.

II. PROJECT SUMMARY

The Baker Brothers Wholesale Grocery occupies two buildings on the south side of Main Street at the foot of the Y Bridge in downtown Zanesville, Ohio. The building to the east (12 Main Street) was constructed first in 1894. The adjacent brick building to the west (8 Main Street) was constructed in 1913 as an expansion to the original building and matches the original in size and floor levels. The 8 Main Street building was altered in 1978 when it was renovated into offices and showrooms for a furniture store. A two-story addition was constructed to the west as a showroom with offices and storage above. The 1978 addition and the front sections of the first and second floors of the 8 Main Street building were renovated into a PK-12 school that operated from 1994 to 1997. The remainder of the 1913 building was renovated into offices in 1995.

The site also includes the “to be vacated” section of First Street to the east.

The project includes the rehab and restoration of the buildings on 8 and 12 Main Street and will contain:

- 11,880 square feet of net rentable space. All of the first-floor space (except the short-term residential lobby) will be office space as well as the second-floor of the adjacent two-story building to the west.
- 29,624 gross square feet (38 rooms) of short-term residential space encompassing all of the upper floors except the second floor of the adjoining, west) building. The short-term residential lobby will be on the first floor.
- The total development cost is expected to be $8,654,275, including land cost.

The development is expected to open on January 1, 2025.

Construction cost:

[redacted]	
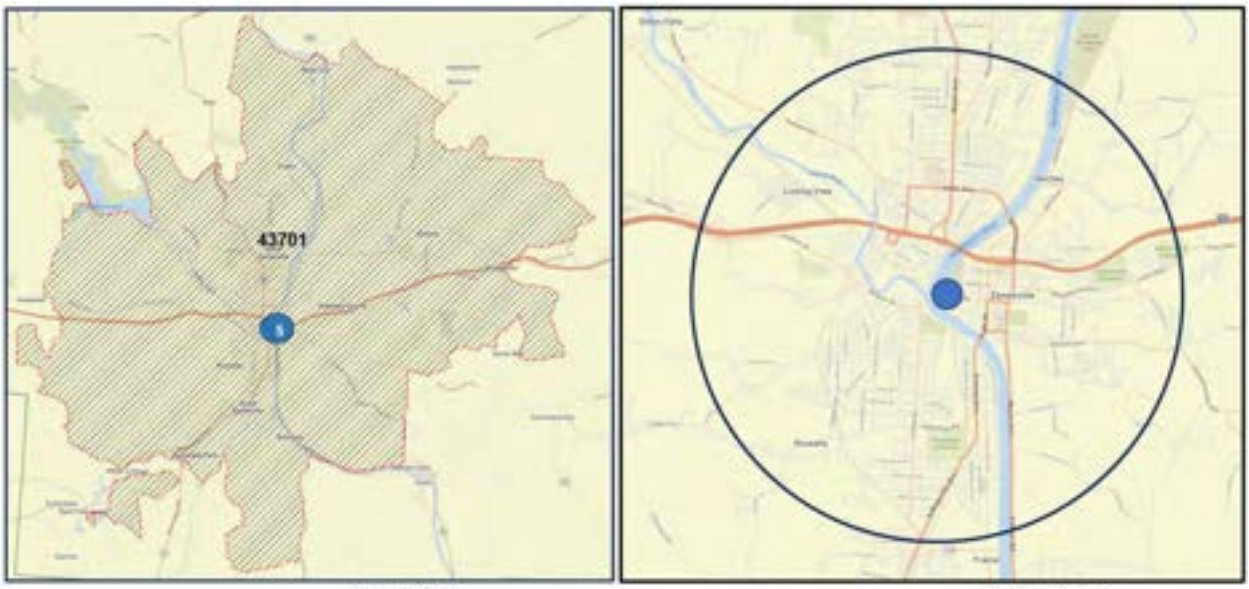
[redacted]	[redacted]
[redacted]	[redacted]
Total	$8,654,275

[redacted]

III. SURROUNDING AREA IDENTIFICATION

The surrounding area for this development is considered to be a two-mile radius and includes any ZIP Code (whether in whole or in part) impacted by the two-mile radius. The site is entirely within ZIP Code 43701 which includes most of Zanesville and the rural periphery. It includes all of the downtown and the historic neighborhoods of Putnam, Brighton, and McIntire Terrace.



Zip Code 43701 Two Mile Radius

IV. EXISTING PROPERTY

	PARCEL NUMBER	LAND AREA	GROSS SQUARE FEET	CURRENT PROPERTY TAXES

WB10

[redacted] The organization rents 2,224 square feet for [redacted]. Spaces are then sublet to local artists. The number of artists varies between 13 and 16. Most of the artists are at the facility part-time and their total sales are derived from sales at the gallery but also from art fairs and shows, private commissions, workshops, and other outside sales. [redacted] As such their incomes and sales have not been included in the following calculations. There are two employees (FTE) employed at the facility that have been included in the income tax estimates.

Based on the past 12 months of occupancy, the following are the estimated city income taxes:

CITY INCOME TAX AT EXISTING PROPERTY					
Tenant	**Percent Occupied**	**Average Wage (FTE)**	**Total Employees (FTE)**	**Total Wages**	**City Income** [redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	CLOSED DURING PAST 12 MONTHS			
[redacted]	[redacted]		[redacted]	[redacted]	$ [redacted]

WB10

The estimated city income tax generated by the existing property for the period September 1, 2022 to August 31, 2023 is $1,444

Based on the past 12 months' occupancy following are the estimated state income taxes.

STATE INCOME TAX AT EXISTING PROPERTY					
Tenant	Percent Occupied	Total Employees (FTE)	Average Wage	State Income Tax	Total State Income
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	CLOSED DURING PAST 12 MONTHS			
[redacted]		[redacted]			[redacted]

*Source: State of Ohio WB10

The estimated state income tax generated by the existing property for the period September 1, 2021, to August 310, 2022 was $1,382.

Because the artist in the facility generate their income from a variety of sources it is impossible to allocate those sales relating to the subject property. Sales taxes therefore have not been included in this section of the analysis.

Following is a summary of current, predevelopment, taxes currently generated by the subject property.

TAX CATEGORY	TAXES GENERATED
Property Tax	$6,146
City Income Tax	$1,444
State of Ohio Income Tax	$1,382
Total	$8,972

Combined taxes as the subject property are $8,972.

V. 8 MAIN STREET - ECONOMIC IMPACT

A. INCOME TAXES

All economic impact calculations in this section represent the direct and indirect economic impact by the subject site. Income and sales tax calculations are based on the Implan Group, LLC input/output model that established direct and indirect employment and or wages. Because of the limitations of the Implan model in estimating actual taxes, we have used tax rates as defined by the appropriate taxing authorities.

There will be 11,880 square feet of office space with a total of 81.9 employees and a 38-suite short-term residential facility with 9.6 employees (in the first year, increasing to 20.4 employees by year 5 when the property achieves stabilized occupancy). Zanesville has a 1.9% city income tax.

[redacted]Implan LLC WB3

EMPLOYEE STATE INCOME TAX

The State of Ohio has a progressive income tax ranging from 0.0% to 3.990%. State income taxes from employees at the subject site are based on the average of employees for lodging and office tenants by job classification and average wages. Potential income tax collections are based on a tax calculator provided by The State of Ohio.

The average income per employee in the commercial office space is $57,384 Applying the state income tax rate would yield state income tax of $1,279 per employee and a total of $104,758.

B. REAL ESTATE TAXES

In Muskingum County retail and hotels are all taxed at a commercial rate Taxes are estimated based on the total project cost to develop although, once completed, the value would be subject to the county appraiser. Taxes are computed based on 35% of the appraised value. The effective tax rate is 46.077375 mills. In the past 5 years, the voted tax rate has increased by 0.40 % while the effective tax rate has decreased by 0.35%. We have projected no change in the 5-year projected real estate taxes.

The property, as existing, has a current value of market value of $605,600 and a taxable value of $211,960. Total real estate taxes, for the existing site are $6,146.

The total development cost is expected to be $8,654,275 and the taxable value will be $3,028,996. Applying the effective tax rate yields a property tax of $139,568. Deducting the current property tax of $6,146 yields a net increase in property tax is $133,422.

INPUT/OUTPUT SPECIFICATIONS AND RESULTS

The Implan Group, LLC output of direct and indirect employees reflects total employees. These are converted to FTE employment by applying the Implan conversion rate and the resulting average annual and hourly wage. The conversion rate for offices is 0.969191817 and the rate for hotels and motels is 0.897606383. The blended rate is0.964143 based on the proportion of labor income. Input Type for offices is Industry Employment and is based on the number of employees per square foot of space. The specifications are as follows

Specifications: [redacted]

Because of the proximity to the Muskingum County Courthouse, the developer is targeting the selected specifications in the marketing of the facility.

Because [redacted] there are five separate calculations, one for each year.

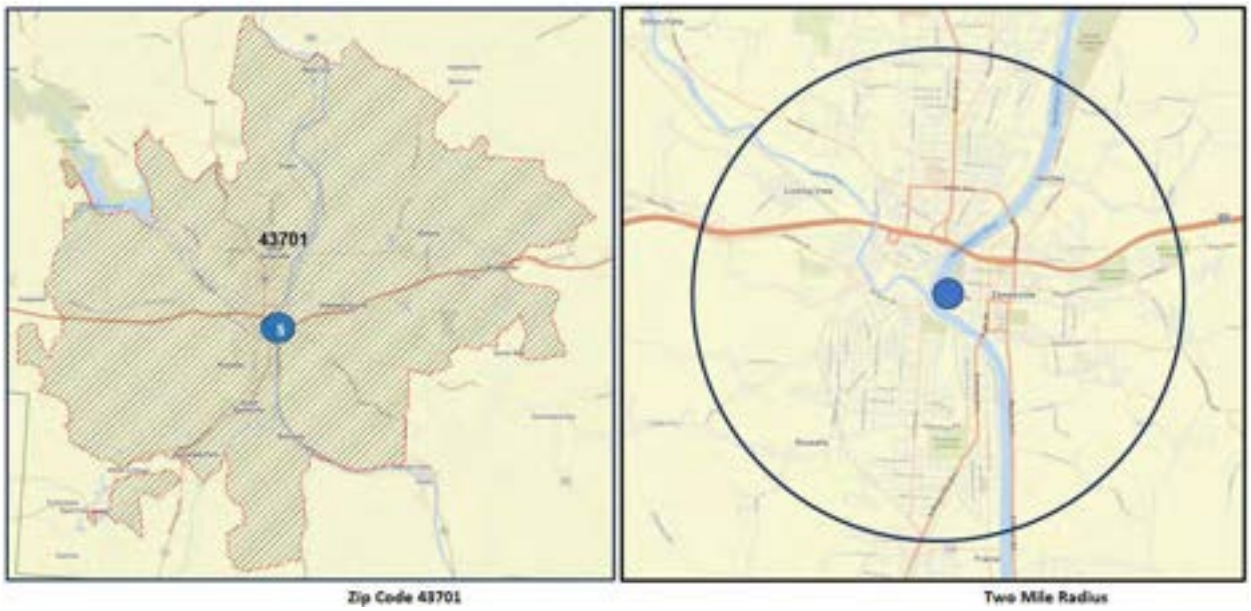
F. IMPACT ON SURROUNDING AREA

The surrounding area for this development is considered to be a two-mile radius and includes any ZIP Code (whether in whole or in part) impacted by the two-mile radius. The two-mile radius for the 8 Main Street development is entirely within ZIP Code 43701.



The two-mile radius of the subject property encompasses all of Downtown Zanesville. However, ZIP Code 43701 covers nearly the entire city and beyond. ZIP Code data is not reflective of the immediate neighborhood. Clearly, the most significant potential of the 8 Main Street development will be impacting the immediate downtown neighborhoods. Because the project will be nearly entirely made up of office, and short-term residential space, there will be a very high percentage of entry-level jobs. The short-term residential component is especially important in that it generates “fresh” dollars into the market supporting retail and restaurants on a daily basis.

POPULATION CHARACTERISTICS TWO MILE AND ZIP CODE 43701 ZANESVILLE, OHIO		
	TWO MILE RADIUS	43701 ZIP CODE
POPULATION AND HOUSING		
Population		
2010	21,317	54,874
2020	20,571	54,952
Change	-3.5%	0.1%
Households		
2010	8,775	23,089
2020	8,588	23,547
Change	-2.1%	2.0%
Housing Vacancy Rate	11.1%	8.1%
Average Household Income	$53,071	$70,052
EMPLOYMENT		
Population Age 16+	16,819	45,717
Employed	8,622	26,119
Unemployed	405	783
Unemployment Rate	4.5%	2.9%
Participation Rate	53.7%	58.8%
MAJOR EMPLOYMENT CATEGORIES		
Retail Trade	15.3%	14.3%
Manufacturing	10.0%	10.2%
Accommodation Food Service	12.4%	9.1%
Health Care	15.6%	17.0%

Source: esri WB 8

The two-mile radius will clearly be the most impacted area and the area with the greatest need for economic and residential improvement. The third largest employment category in the two mile radius is Accommodation and Food Service, which will be the largest employment category at the 8 Main Street development. Unemployment, while relatively low, is also highest within the two-mile radius. The two-mile radius has a residential vacancy rate of 11.1%, higher than the Zip Code rate of 8.1% One of the most significant impacts on the two-mile radius will be the impact of catalyzed projects which will bring 205 new residential units to the area, thereby raising the perception of the neighborhood and increasing demand.

8 Main Street development is in the CBD at the foot of the famous Y Bridge. The site has been identified in a recent study (conducted by Economic Development Strategies, LLC) for the City of Zanesville and the Zanesville-Muskingum Port Authority as a key, transformational, parcel in redeveloping Downtown Zanesville.

The site is four blocks from the Muskingum County Court House. It is also ideally positioned to impact the downtown neighborhoods to the west of the CBD.

Downtown Zanesville is blessed with the iconic Y Bridge which is the western gateway into the Central Business District. A total of 51% of the downtown perimeter is riverfront. Yet, over 50% of the river is used for parking lots with most of the remainder being the backs of buildings. Zanesville has turned its back on its most desirable, and valuable, asset. The 8 Main Street property will be the first privately developed site to take full advantage of the riverfront opportunity.

MAIN STREET CORRIDOR

The 8 Main Street development will be the keystone project anchoring the Main Street Corridor extending from the Muskingum River to Fifth Street. The total length of the corridor is 2,633 (using the frontage of both the north and south sides of Main Street.) feet with a total appraised value of $4,716,600, or $1,791 per linear foot. (This excludes the Muskingum County Courthouse and the Benco industrial buildings.)

The appraised value of the 8 Main Street development will be $7,262,700, or $32,279 per linear foot.

With the 8 Main Street property setting the standard for the redevelopment potential for the Main Street Corridor the total redeveloped appraised value would be $84,990,607 million, an increase of $80,274,007

VI. CATALYTIC PROPERTIES

All economic impact calculations in this section represent the direct and indirect economic impact of the subject site. Income and sales tax calculations are based on the Implan Group, LLC input/output model that established direct and indirect employment and or wages. Because of the limitations of the Implan model in estimating actual taxes, we have used tax rates as defined by the appropriate taxing authorities.

In Muskingum County apartments are all taxed at a commercial rate. Taxes are estimated based on the total project cost to develop although, once completed, the value would be subject to the county appraiser. Taxes are computed based on 35% of the appraised value. The effective tax rate is 46.077375 mills. In the past 5 years, the voted tax rate has increased by 0.40 % while the effective tax rate has

decreased by 0.35%. We have projected no change in the 5-year projected real estate taxes.

The total present-day real estate taxes are $2,133 and the total appraised value is $112,700.

The total development cost is expected to be $4,500,000 and the taxable value will be $1,575,000. Applying the effective tax rate yields a property tax of $72,572. The net increase in property tax is $70,439.

B. CAROL CROSSING APARTMENTS

1. PROJECT SUMMARY

Location East side of Zane Street opposite of Malinda Street
Zanesville, OH 43701
Developer: Woda Cooper Development, Inc.
Distance from Subject Development 0.9 miles
Estimated Completion Date 2025
Project Status: The LIHTC application has been approved, and site work and construction have been initiated.
Total Project Cost: $11,926,392
Hard Construction and Site Development Cost $8,586,939

USES

[redacted] [redacted]

This development is funded using the LIHTC program. The project has been approved by the Ohio Housing Finance Agency. Demolition and construction is expected to begin in 2023 with completion in 2025. [redacted]

Proximity to the 8 Main Street development is especially important because of the entry-level jobs created at the 8 Main Street Project, which the Developer believes will accelerate the feasibility and likelihood of success for this LIHTC project and similar potential projects. With incomes up to 70% of AMI a wide range of potentially improved employment opportunities will be available to residents.

Further, critical to the revitalization of downtown and core neighborhoods is the addition of employment opportunities and the perception of a vibrant downtown. The Zanesville downtown has had significant recent developments with the addition of art space, restaurants, and art galleries. However, the downtown comprises a very large area and, while in the aggregate, development has been significant, it has not created a critical mass, or focus. The proposed 8 Main Street development, as the west gateway into the downtown and at the foot of the iconic Y Bridge, will be the first significant high-profile downtown development.

3. REAL ESTATE TAXES

This project is located Zane Street about 0.9 miles from the subject property.

In Muskingum County apartments are all taxed at a commercial rate. Taxes are estimated based on the total project cost to develop although, once completed, the value would be subject to the county appraiser. Taxes are computed based on 35% of the appraised value. The effective tax rate is 46.077375 mills. In the past 5 years, the voted tax rate has increased by 0.40 % while the effective tax rate has decreased by 0.35%. We have projected no change in the 5-year projected real estate taxes.

The site is currently owned by the City of Zanesville and as such there are no real estate taxes at the present time.

The total development cost is expected to be $8586,939 and the taxable value will be $3,005,429. Applying the effective tax rate yields a property tax of $138,482.

Re: Assembly - Transformational Mixed-Use Development – Economic Impact Statement

Dear Mr. Sobczak:

At your request, Project Management Consultants, LLC has performed an Economic Impact Statement for the CASTO Assembly project, located at 457 Cleveland Avenue in Columbus, OH, utilizing inputs provided by your team, direct calculations, conservative assumptions, and the "IMPLAN" software and data produced by IMPLAN Group, LLC. We have not examined the Client-provided data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact statement. Further, this analysis is subject to the Assumptions and Limiting Conditions found in Appendix E of this report.

This report contains, to the fullest extent possible and practical, explanations of the data, reasoning, and analyses that were used to develop the opinions contained herein. The depth of discussion contained in the report is specific to the needs of the client.

Half Baked Holdings, LLC is the Client in this engagement and intended user of this report. As our client, Half Baked Holdings, LLC owns this report and permission must be granted from them before another third party can use this document. We assume that by reading this report another third party has accepted the terms of the original engagement letter including scope of work and limitations of liability. We are prepared to modify this document to meet any specific needs of the potential user under a separate agreement.

The Stated Purpose of this assignment is to assist with projections of job, tax, and wage information for application to the State of Ohio Transformational Mixed-Use Development Program. You agree not to use this report other than for the Stated Purpose, and you agree to indemnify us for any claims, damages, or losses that we may incur as the result of your use of the Report for other than the Stated Purpose. Without limiting the general applicability of this paragraph, under no circumstances may the Report be used in advertisements, solicitations and/or any form of securities offering.

The authors of this report certify that, while we represent the project in other capacities, we are not part of the development team, nor are we affiliated with any member of the development team. Please do not hesitate to contact us if there are any questions regarding the report or if Project Management Consultants, LLC can be of further assistance. It has been our pleasure to assist you with this project.

Sincerely,

Ryan P. Sommers, CPA
Managing Director of Financial Services
Project Management Consultants, LLC

PROJECT MANAGEMENT CONSULTANTS (PMC) EXPERIENCE

	Name	TMUD Experience & Background
	**Ryan P. Sommers, CPA** Managing Director of Financial Services	Ryan Sommers has an extensive background working with various tax credit programs and complex private and public finance structuring. Ryan's experience with tax credits includes Historic Tax Credits, New Markets Tax Credits, and Opportunity Zone Tax Credits. Ryan recognizes the critical value-add of the Transformational Mixed-Use Development ("TMUD") tax credit program. Since the program's inception he has become an expert on the program. He advises clients on project eligibility, economic impacts, tax credit monetization, and chances of application success. As managing director of financial services, Ryan identifies, secures and manages private and public financing opportunities for business expansion projects and real estate development. Ryan is currently managing a team responsible for 50+ projects throughout the country with $3 billion in development value including $600 million in public financing for public-private partnerships. He has helped his clients obtain over $200 million in state and federal Historic Tax Credits and over $100 million in New Markets Tax Credits. Ryan also created PMC's direct tax impact analysis models which help demonstrate exact tax estimates for a Project or Development site on the surrounding area, including income taxes, sales taxes, bed taxes and property taxes. Ryan has worked on this modeling for a decade. These outputs help demonstrate the ROI of a project to various government entities and provide him with experience needed to complete economic impact statements as complicated as those required for TMUD applications.
	**Kenneth S. Kalynchuk** Director and Principal	Ken Kalynchuk leads PMC's financial analyst and economic impact analysis team. Ken has conducted five economic impact statements (EIS reports) for Rounds 1 and 2 of the TMUD program, with emphasis on conservative estimates and common sense for whether projects can be considered catalyzed or not. Ken helps clients navigate the predevelopment stage of their projects through incentive, land use, and market research; pro forma development; feasibility analyses; economic impact analyses; and property tax analyses. Prior to joining the firm, Ken was a graduate research assistant with the Center for Economic Development at Cleveland State University, where he evaluated economic development programs and best practices in economic development policy, performed studies on Historic Preservation Tax Credit funding and rental markets, and wrote case studies and employment/demographic impact analyses. During his time at Cleveland State Ken learned IMPLAN software and economic impact techniques. These skills have helped clients at PMC, where Ken has helped generate economic impact reports and tax estimates for more than 7 years.

	Name	TMUD Experience & Background
	**Nora Walsh** Senior Analyst	In her more than two years with Project Management Consultants, Nora has worked with the PMC team to complete TMUD applications and economic impact analyses and has supported a half dozen clients on submitting comprehensive applications in Rounds 1 and 2 of the program. Nora leads the Economic Impact Statement (EIS) analysis process in collaboration with the team and has thus far conducted five EIS reports for the TMUD program. Nora brought her economic impact analysis and report writing skills from her experience with the Center for Economic Development at Cleveland State University where she analyzed economic impacts and compiled narratives around those impacts. Since joining PMC, Nora has become an expert in the IMPLAN analysis software and led the economic impact report analysis and writing processes in Round 1 and Round 2 for PMC clients, including PMC's three Round 2 winners.
	**John Sadosky** Project Director	As project director, John identifies, secures, and manages public and private financing opportunities for real estate development and business expansion projects. His expertise includes incentives for industrial and distribution center projects, including speculative development and projects requiring significant public infrastructure investments. John also manages public financing negotiations for site selection projects from intake through incentive procurement and compliance. Prior to joining PMC, John was a manager in Ernst & Young's indirect tax practice specializing in location investment, credits, and incentives. He has more than eight years of direct economic development experience in various roles in local government, nonprofit, and public accounting with significant experience in site selection consulting, credits and incentives negotiation, project management, and tax compliance. Throughout his career, John has worked with clients in the advanced manufacturing, retail, consumer products, and technology sectors. Additionally, he has worked on various product types including manufacturing, retail, mixed-use, multi-family, office, and public infrastructure.
	**Alexander Previts** Development Finance Manager	In his role as development finance manager, Alex assists in identifying, securing and managing public and private financing opportunities for development and construction projects. Alex specializes in helping corporate clients with headquarters relocation projects. In addition, he works with developers to repurpose vacant facilities and develop greenfield sites into productive reuse by utilizing property tax, local and state incentives. Alex has also worked with clients to pair their projects with Qualified Opportunity Zone investments and incentives. Alex works with clients through the finance structuring process by first identifying the needs and gap of the project and assessing the tools available for the project's financing at the local, regional and state level. Alex directs clients through the nuances of the predevelopment stage of their projects through incentive, land use, and market research; pro forma development; feasibility analyses; economic impact analyses; and property tax analyses. He focuses on structuring tax incentives, including tax increment financing (TIF), and monetizing TIF structures through bank and bond financing. His significant knowledge on TIF structures, property tax valuations, and property tax modeling are utilized in the TMUD EIS analyses.

EXECUTIVE SUMMARY

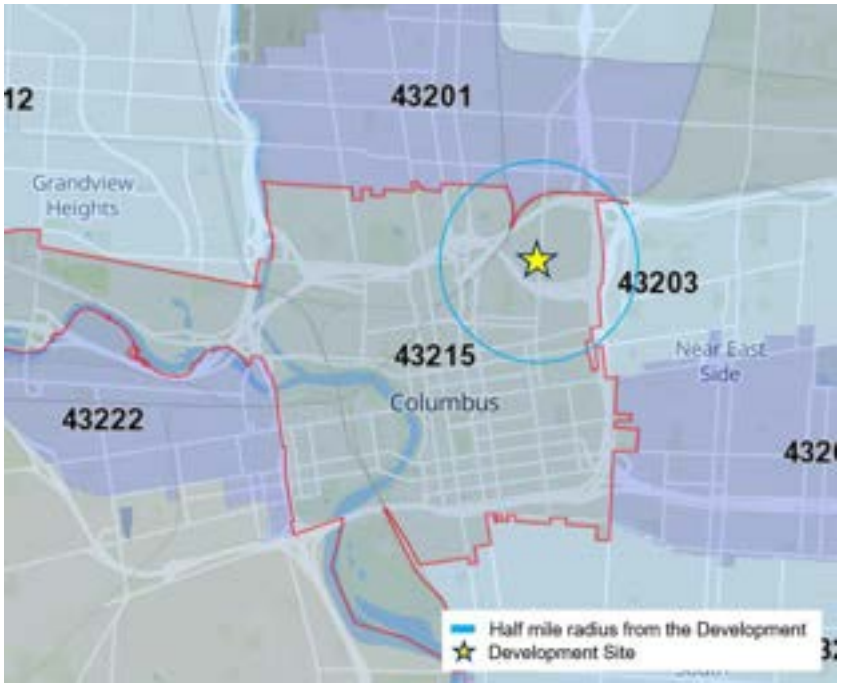
Project Management Consultants LLC (PMC) was engaged by CASTO Communities (the "Company") to analyze the economic and fiscal impacts of the Company's proposed Assembly project (the "Project") which is located along the Cleveland Avenue corridor in Columbus. The site was historically used for manufacturing purposes as both a Ford Model-T plant originally, then as the longstanding bakery facility for the regional Kroger grocery store chain. The site has been in need of redevelopment for many years. This analysis was prepared to support the Company's application for Ohio Transformational Mixed-Use Development ("TMUD") tax credits from the third round of the program in fiscal year 2024.

For purposes of this Economic Impact Statement, the Project will be completed in one phase and will not include "Development" impacts. The Construction period for purposes of the report runs from the TMUD application date (September 8, 2023) through the completion of the Project and expected certification by the Ohio Tax Credit Authority (December 31, 2025).

This report also takes into account certain incentives which will impact tax revenue. First, some construction impacts will not generate sales taxes due to the project utilizing Columbus Finance Authority conduit lease financing, which exempts certain construction materials from taxation. Lastly, some residential components of the property will be subject to property tax abatement and will therefore not generate full property taxes during the Construction nor Completion periods.

The Project consists of 363 proposed residential units, 59,189 square feet of commercial space with 412 structured parking spaces and 145 additional street or surface parking spots. To date, the Project has incurred approximately [redacted] in development costs. The remaining TMUD-eligible development costs for the Project represents an estimated [redacted] of the total $155,568,407 anticipated investment.

Economic and fiscal impacts ("Impacts") measured in terms of output, employment, labor income, and taxes were estimated primarily using the IMPLAN input-output model based on 2021 data, which is the most accurate data available and adjusted to reflect 2026 dollars, the first year of the 5-year completion period. Per requirements of the TMUD program defining the project's surrounding area, the impacts are presented at the local ZIP code level for the project ZIP code in Ohio, 43215, 43201, and 43203.



This report considers the one-time direct economic and fiscal impacts resulting from the construction of the Project, Surrounding Area (indirect) and Catalyzed Projects ("Construction Period Impacts"), as well as the permanent economic and fiscal impacts, direct and indirect, resulting from the ongoing activities associated with the Project, Surrounding Area and Catalyzed Projects ("Completion Period Impacts").

The impacts of the two components that are analyzed -- Construction Period Impacts and Completion Period Impacts are presented individually and as a whole in the Total Impacts section. Construction Period and Completion Period Impacts are presented in annual terms.

Project Management Consultants collaborated with CASTO to gather necessary data for both the Project and Development and to establish assumptions where needed. For detailed assumptions please find the Construction Period Impact Assumptions in Appendix A, Completion Period Impact Assumptions of the Project in Appendix B, Completion Period Impact Assumptions of the Surrounding Area in Appendix C, and Completion Period Impact Assumptions of the Catalyzed Project in Appendix D. Assumptions and Limiting Conditions can be found in Appendix E. Project Management Consultants used zip-code level data to collect employment, wage, and tax information. All tax impacts include State, County and local level tax estimates via IMPLAN analysis as well as direct analysis completed by PMC. All assumptions were verified by the developer to the highest degree of reasonableness.

The table below provides a quick reference of definitions for the items included in the economic impact statement summary tables that follow (pages 10-29). Additional information about terms and the methodology used in this study can be found in the Glossary and Methodology on page 30 through 31.

	Direct	Indirect
Jobs	Individuals directly involved in the redevelopment Project or working at the building upon completion of the redevelopment.	Multiplier-effect jobs at the industry level, such as suppliers, service providers, etc. (indirect).
Earnings or Labor Income	Wages and benefits paid to direct jobs.	Total wages and benefits associated with the indirect jobs.
Taxes	An estimate of all taxes and fees collected by state, county, municipal or other government entities, including, but not limited to property taxes, income taxes, sales taxes, and lodging taxes.	

Construction Period Impacts

Construction Project Impacts

The Project is anticipated to involve a direct investment of over $151 million to be completed over a three-year Construction Period from 2023 through December 31, 2025. During the Construction Period, the Project is anticipated to create a total of 1,149 direct construction jobs with $92.4 million in labor income. The Project is also estimated to generate $7.5 million in new sales and income taxes during the Construction Period. Please note that the estimates in the tables below represent annual impacts over the Construction Period.

Estimated Construction Impacts of the Project

- **1,149 Direct Jobs with $92.4 million in Direct Payroll total over the Construction Period**
- **$7.5 million in new sales and income taxes over the Construction Period**

Construction Jobs and Payroll Impacts of the Project

During the Construction Period, the Project is expected to create 1,149 total direct construction jobs and $92,454,086 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix A due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). The average hourly wage for construction jobs in year 2025 is estimated at $38.85. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Construction Project Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2023	[redacted]		
2024			
2025			

Construction Tax Impacts Of The Project

The Construction Period of the Project is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated over the Construction Period, as calculated by IMPLAN software and PMC utilizing the hard construction cost impacts outlined

in Appendix A. This input data was provided by the client based on their construction cost budget for the Project.

The table below illustrates the direct sales and income tax estimates analyzed by PMC using local tax rates to calculate direct taxes for the Construction Period. Income taxes were estimated using the appropriate local and state income tax rates (2.5% for Columbus and state income tax varied based on income bracket). Sales taxes were estimated using the combined county and state sales tax rate of 7.5%. Over the Construction Period, the Project is estimated to generate a total of $4,636,587 in direct local and state income taxes. Over the Construction Period, a total of $2,890,054 in county and state sales taxes on construction materials are estimated to be generated. The North Building of the Project will have a port authority sales tax exemption in place and sales taxes on that portion of the Project were not included in this analysis.

Construction Project Impacts: Sales, Income, Lodging and Property Taxes					
Year	**Projected Sales Tax ($)**	**Projected Income Tax ($)**	**Projected Lodging Tax ($)**	**Projected Property Tax ($)**	**TOTAL Projected Taxes**
2023	[redacted]				$683,928
2024					$4,104,712
2025					$2,738,001

Construction Surrounding Area Impacts

During the Construction Period, the Project is anticipated to create a total of 11 indirect construction jobs with $774,403 in indirect labor income in the surrounding area. The surrounding area is also estimated to generate $86,097 in new indirect property, sales and income taxes over the Construction Period (2023-2025). Surrounding area impacts were estimated using indirect impacts of the Project in IMPLAN. It is possible that the impacts are much greater in the surrounding area due to the catalytic nature of this development.

Construction Jobs and Payroll Impacts of the Surrounding Area

During the Construction Period, it is expected that 11 total indirect jobs will be created in the surrounding area due to construction activities on the site. The average hourly wage for these jobs in year 2025 is estimated at $35.94. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Construction Surrounding Area Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2023	[redacted]		
2024			
2025			

Construction Tax Impacts Of The Surrounding Area

During the Construction Period, the development is anticipated to generate significant new tax revenues within the surrounding area.

This surrounding area impacts identify the indirect taxes generated by the project over the Construction Period, as calculated by IMPLAN software utilizing the hard construction costs outlined in Appendix A. This input data was provided by the client based on their construction cost budget for the Project.

The table below illustrates the indirect and sales, income, lodging and property tax estimates generated in IMPLAN. Over the Construction Period, the Project is estimated to generate $86.097 in new taxes within the surrounding area. Of these taxes, it is expected that $49,174

new indirect sales taxes will be generated in the surrounding area as a result of this development project.

Construction Surrounding Area Impacts: Sales, Income, Lodging and Property Taxes					
Year	**Projected Sales Tax ($)**	**Projected Income Tax ($)**	**Projected Lodging Tax ($)**	**Projected Property Tax ($)**	**TOTAL Projected Taxes**
2023	[redacted]				$6,328
2024					$37,990
2025					$41,779

Indirect income taxes were estimated using IMPLAN. The table above shows the indirect income tax estimated impacts. Over the Construction Period, it is estimated that within the surrounding area a total of $3,051 in indirect local and state income taxes will be generated.

Property taxes were estimated based on client-provided data that was then input into IMPLAN. The table above shows the indirect property tax estimated impacts. Over the Construction Period, the surrounding area is expected to generate a total of $33,872 in indirect property taxes.

Construction Catalyzed Project Impacts

During the Construction Period, the Catalyzed Project is anticipated to create a total of 303 direct construction jobs with $24,692,803 in direct labor income at the Catalyzed Project site. The Catalyzed Project is also estimated to generate $2,395,620 in new direct sales and income taxes over the Construction Period (2023-2025). In Years 2026 through 2029 Construction Impacts for the Catalyzed Projects were included in the Completion Period Impacts section because these impacts will occur during the five-year Completion Period.

Construction Jobs and Payroll Impacts of the Catalyzed Project

During the Construction Period, it is expected that 303 total direct jobs will be created at the Catalyzed Project site. The average hourly wage for these jobs in year 2025 is estimated at $39.18. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Construction Catalyzed Project Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2023			
2024			
2025			

Construction Tax Impacts Of The Catalyzed Project

The Construction Period of the Catalyzed Project is anticipated to generate significant new tax revenues at the Catalyzed Project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated over the Construction Period, as calculated by IMPLAN software and PMC utilizing the hard construction cost impacts outlined in Appendix A. This input data was provided by the client.

The table below illustrates the direct sales and income tax estimates for the Catalyzed Project analyzed by PMC using local tax rates to calculate direct taxes for the Construction Period. Income taxes were estimated using the appropriate local and state income tax rates (2.5% for Columbus and state income tax varied based on income bracket). Sales taxes were estimated using the combined county and state sales tax rate of 7.5%. Over the Construction Period, the Catalyzed Project is estimated to generate a total of $1,240,620 in direct local and state income

taxes. Over the Construction Period, a total of $1,155,000 in county and state sales taxes on construction materials are estimated to be generated.

Construction Catalyzed Project Impacts: Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
2023	[redacted]				$-
2024					$-
2025					$2,395,620

COMPLETION PERIOD IMPACTS

PROJECT IMPACTS

Upon Project construction completion, the Project will have a significant ongoing annual impact on the State and local economy. This impact will come in the form of activities to support the maintenance and operation of the buildings, as well as from businesses that will locate operations at the development site as tenants. Once the buildings reach full occupancy, these ongoing activities are anticipated to support approximately 234 total direct jobs and generate $21.9 million of direct annual labor income in 2026.

The Project is also estimated to generate $14.1 million in new property, sales and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2026 through 2030. In addition, the Project is expected to generate approximately [redacted] million in retail, dining, and entertainment sales over the completion period.

Estimated Completion Period Impacts of the Project

- **234 Direct Jobs with $21.9 million in Direct Payroll in 2026**
- **$14.1 million in new property, sales and income taxes over the 5-year completion period**
- **[redacted] million in retail, dining, and entertainment sales over completion period**

PERMANENT (ANNUAL) JOBS AND PAYROLL IMPACTS OF THE PROJECT

Upon completion of construction, the Project is expected to create 234 total jobs, [redacted] of which will be jobs to support maintenance and operations of the buildings and commercial parking, [redacted] of which will be commercial tenant jobs. In year 2030, the [redacted] Operations jobs are expected to generate [redacted] in direct labor income with an average hourly wage of [redacted] (Operations job estimates are shown in the table below).

Project Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2026	[redacted]	[redacted]	[redacted]
2027			
2028			
2029			
2030			

In year 2030, the Project Tenant jobs are expected to generate a total of $24,330,404 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix B

due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). In 2030, Tenant jobs are expected to have an average hourly wage of [redacted]. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Project Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2026	[redacted]		
2027			
2028			
2029			
2030			

Permanent (Annual) Tax and Sales Impacts Of The Project

The Project is expected to be completed prior to calendar year 2026 following construction years 2023 through 2025. Based on TMUD application requirements, a completion period was set for calendar years 2026 through 2030, when the Project will experience its first five years of operations. During this period, the Project is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated by the project starting in 2026, as calculated by IMPLAN software and PMC utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix B. This input data was provided by the client based on planned tenants, operations wages and staffing, and resident income requirements for the apartment units.

The table below illustrates the permanent direct sales, income and property tax estimates analyzed by PMC using local tax rates to calculate direct taxes. Over the 5-year impact period, the Project is estimated to generate a total of $1,476,748 in direct local, county and state sales taxes within the Project site and surrounding area. Sales taxes were calculated using a [redacted] total tax rate for Franklin County.

Project Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
2026	[redacted]				$2,433,940
2027					$2,826,824
2028					$2,875,870
2029					$2,926,330
2030					$3,089,022

Income taxes were estimated using the appropriate local and state income tax rates (2.5% for Columbus and state income tax varied based on income bracket). The table above shows the direct permanent income tax estimated impacts. Over the 5-year completion period, the Project is estimated to generate a total of $7,432,280 in direct local and state income taxes.

Property taxes were estimated based on client-provided value estimates of the completed project. The table above shows the permanent incremental property tax estimated impacts. Over the 5-year impact period, the Project is expected to generate a total of $5,242,955 in direct incremental property taxes. The Project will have a 15-year, 100% tax abatement on the residential components of the project, therefore, the abated property taxes were not included in this analysis.

Project Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
2026	[redacted]			
2027				
2028				
2029				
2030				

The Project is expected to generate [redacted] in new sales revenues in the area over the 5-year completion period, as shown in the table above. These estimates were pulled from the direct sales calculated at the project site found in Appendix B.

Surrounding Area Impacts

Upon construction completion of the entire development, the project will have a significant ongoing annual impact on the State and local economy. This impact will be an indirect result of activities to support the maintenance and operation of buildings and potential tenants that will come to the surrounding area. Once the Project reaches full occupancy, the surrounding area is anticipated to support approximately [redacted] total indirect jobs and generate approximately [redacted] of indirect labor income annually.

The surrounding area is also estimated to generate $728,601 in new indirect property, sales, and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2026 through 2030. Surrounding area impacts were estimated using indirect impacts of the Project in IMPLAN. It is possible that the impacts are much greater in the surrounding area due to the catalytic nature of this development.

Permanent (Annual) Jobs and Payroll Impacts of the Surrounding Area

Upon completion of construction of the overall development, it is expected that 45 indirect jobs will be created in the surrounding area, [redacted] of which will be jobs to support maintenance and operations of buildings and commercial parking, and [redacted] of which will be commercial tenant jobs. Upon full occupancy of the development, in 2030 the [redacted] Operations jobs are expected to generate [redacted] in indirect labor income with an average hourly wage of [redacted] (Operations job estimates are shown in the table below)

Surrounding Area Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2026	[redacted]	[redacted]	[redacted]
2027			
2028			
2029			
2030			

In 2030, the surrounding area Tenant jobs are expected to generate a total of [redacted] in indirect labor income. Tenant jobs are expected to have an average hourly wage of [redacted]. Average hourly wages were calculated using the labor income per year divided by the number

of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Surrounding Area Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2026	[redacted]		
2027			
2028			
2029			
2030			

Permanent (Annual) Tax and Sales Impacts Of The Surrounding Area

During the five-year completion period, the overall development is anticipated to generate significant new tax revenues within the surrounding area.

The surrounding area impacts identify the indirect taxes generated by the project starting in 2026, as calculated by IMPLAN software utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix C. This input data was provided by the client based on planned tenants, operations wages and staffing, and resident income requirements for the apartment units.

The table below illustrates the permanent indirect and sales, income, lodging and property tax estimates generated in IMPLAN. Over the 5-year impact period, the overall development is estimated to generate $728,601 within the surrounding area.

The table below illustrates the permanent indirect and indirect sales, income, lodging and property tax estimates generated in IMPLAN. Over the five-year completion period, it is expected that $402,979 new indirect sales taxes will be generated in the surrounding area as a result of this development project.

Surrounding Area Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
2026	[redacted]				
2027					
2028					
2029					
2030					

Indirect income taxes were estimated using IMPLAN. The table above shows the indirect income tax estimated impacts. Over the 5-year completion period, it is estimated that within the surrounding area a total of $48,039 in indirect local and state income taxes will be generated.

Property taxes were estimated based on client-provided data that was then input into IMPLAN. The table above shows the indirect property tax estimated impacts. Over the 5-year impact period, the Project will generate a total of $277,580 in indirect property taxes.

Surrounding Area Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
2026				
2027				
2028				
2029				
2030				

The surrounding area is expected to generate significant new sales revenues in the area which will include [redacted] in total retail, dining and entertainment sales over the 5-year completion period, as shown in the table above. These estimates were generated in IMPLAN using a Household Spending analysis which shows only induced impacts.

Catalyzed Project Impacts

In addition to the Project itself, the Catalyzed Project will have a significant ongoing annual impact on the State and local economy. This impact will come in the form of activities to support the maintenance and operation of the buildings, as well as from businesses that will locate operations at the development site as tenants. Once the Catalyzed Project reaches full occupancy, it is anticipated to support approximately 580 total direct jobs and generate $47.4 million of direct labor income annually.

The Catalyzed Project is also estimated to generate $35,930,927 in new direct property, sales, bed, and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2026 through 2030. Construction Impacts from 2026 through 2029 for the Catalyzed Project were included in this section due to the impacts being generated during the five-year Completion Period. Per ODOD's guidance, sales taxes on construction materials and construction job income taxes for those years of construction were included in this analysis.

Permanent (Annual) Jobs and Payroll Impacts of the Catalyzed Project

Upon completion of construction of the Catalyzed Project, it is expected that 580 direct jobs will be created on the Catalyzed Project site, [redacted] of which will be jobs to support maintenance and operations of buildings and commercial parking, [redacted] of which will be commercial tenant jobs. Upon full occupancy of the Catalyzed Project, in 2030 the [redacted] Operations jobs are expected to generate [redacted] in direct labor income with an average hourly wage of [redacted] (Operations job estimates are shown in the table below)

Catalyzed Project Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2026	[redacted]		
2027			
2028			
2029			
2030			

In 2030, the surrounding area Tenant jobs are expected to generate a total of [redacted] in direct labor income. In 2030, Tenant jobs are expected to have an average hourly wage of [redacted]. Average hourly wages were calculated using the labor income per year divided by the number of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Catalyzed Project Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
2026	[redacted]		
2027			
2028			
2029			
2030			

Because construction of the Catalyzed Project will continue from 2026 through 2029, construction jobs and payroll for years 2026-2029 should be considered in this section. Between 2026 to 2029, the Catalyzed Project is expected to generate [redacted] construction jobs with approximately [redacted] in direct payroll.

Permanent (Annual) Tax and Sales Impacts Of The Catalyzed Project

The Catalyzed Project is expected to be fully completed during the five-year completion period following construction years 2025 through 2029. Based on TMUD application requirements, a completion period was set for calendar years 2026 through 2030, when the Project will experience its first five years of operations. During this period, the Catalyzed Project is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This portion of the report focuses on the direct taxes generated by the Catalyzed Project starting in 2026, as calculated by IMPLAN software and PMC utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix D. This input data was provided by the client based on information known about the Catalyzed Project.

The table below illustrates the permanent direct sales, income, lodging and property tax estimates analyzed by PMC using local tax rates to calculate direct taxes. Over the 5-year impact period, the Catalyzed Project is estimated to generate a total of $25,136,099 in direct local, county and state sales taxes within the Catalyzed Project site and surrounding area. Sales taxes were calculated using a [redacted] total tax rate for Franklin County.

Catalyzed Project Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
2026	[redacted]				$6,934,060
2027					$8,672,405
2028					$24,349,386
2029					$17,845,235
2030					$13,639,528

Income taxes were estimated using the appropriate local and state income tax rates (2.5% for Columbus and state income tax varied based on income bracket). The table above shows the direct permanent income tax estimated impacts. Over the 5-year completion period, the Catalyzed Project is estimated to generate a total of $34,260,126 in direct local and state income taxes.

Lodging taxes were estimated based on client-provided value estimates of the Catalyzed Project using the appropriate combined city and county lodging tax rate of [redacted]%. Over the 5-year completion period, it is estimated that the Catalyzed Project will generate $2,398,443 in lodging taxes.

Property taxes were estimated based on client-provided value estimates of the completed Catalyzed Project. The table above shows the permanent incremental property tax estimated impacts. Over the 5-year impact period, the Project is expected to generate a total of $9,645,944 in direct incremental property taxes. The Catalyzed Project will have a 15-year, 100% tax abatement on the residential components of the project, therefore, the abated property taxes were not included in this analysis.

Catalyzed Project Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
2026	[redacted]			
2027				
2028				
2029				
2030				

The Catalyzed Project is expected to generate [redacted] in new sales revenues in the area over the 5-year completion period, as shown in the table above. These estimates were pulled from the direct sales calculated at the Catalyzed Project site found in Appendix D.

PROJECTS CATALYZED - NARRATIVE

The Assembly Project has the potential to serve as a catalyst for the redevelopment of the Fort Hayes site, creating a new mixed-use neighborhood comprised of over 70 acres. The Fort Hayes site was originally a military post established in 1863. By the end of 2009, the last military presence vacated the site. Since 2007, the Fort Hayes site has been primarily used by the Columbus School District's Fort Hayes Metropolitan Education Center and bus depot.

The projected catalyzed redevelopment of the Fort Hayes contemplates a vibrant new neighborhood containing a wide mixed of uses. Additional catalyzed redevelopment is projected to occur through adaptive reuse of the existing building currently used by the Columbus Alternative High School and the construction of a replacement school. Assembly will serve as a catalyst due to its location being directly adjacent to the Fort Hayes site and being the first major redevelopment in this underdeveloped corridor in recent years. The following parameters were used to determine the new potential economic impact of the catalyzed project. These parameters are based on a conceptual study completed by a leading architecture firm based in Columbus, Ohio.

- Office: 1.5 million square feet
- Retail: 200,000 square feet
- Hotel: 60,000 square feet, 125 keys
- Multi-family Residential: 2,500 units

The catalyzed development is projected to be placed in service within five years after completion of construction of the Project. For purposes of this analysis, a construction timeline of 2025 through 2029 was utilized for the Catalyzed Project.

PROJECT RETURN ON INVESTMENT

In Year 5 (2030), the total Operations and Tenant jobs for the Project are expected to generate $[redacted] in new direct payroll. It is possible that upon completion of the Project that significantly more payroll will be generated due to local factors within the Project site's surrounding area.

The Project, the Surrounding Area and the Catalyzed Project are anticipated to generate $96,329,566 in combined new tax revenues for the State of Ohio and the local entities over the construction and 5-year completion period. Over the construction and 5-year completion period, the Project, Surrounding Area, and Catalyzed Project are estimated to generate $106,395,987 in retail, dining, and entertainment sales revenues. It is possible that upon completion of the Project that significantly more tax and sales revenues will be generated due to local factors and tax rates within the Project site's surrounding area. This Project will generate significant benefits for the City of Columbus and the State of Ohio and will catalyze additional development in Downtown Columbus.

Year 5 Operational Payroll of the Project:	[redacted]
Year 5 Tenant Payroll of the Project:	[redacted]
Total Year 5 Payroll of the Project:	[redacted]

Total New Taxes Generated (Over 5-Year Completion Period):	**$96,329,566**
Total New Retail, Dining and Entertainment Sales Generated (Over 5-Year Completion Period):	[redacted]

Tax Credit Requested	**$3,500,000**

GLOSSARY

Direct Jobs – Direct jobs comprise those individuals employed in the redevelopment of the building, its future operation, or involved in the operation of a business located at the Project (tenant) site upon redevelopment.

Direct Earnings/Labor Income – The labor income (wages and benefits) associated with the direct jobs.

Hard Construction Costs for IMPLAN Impact Analysis - Only Hard Construction Costs (including Architecture and Engineering costs, as prescribed by IMPLAN software modeling instructions for construction projects) were entered into IMPLAN. Costs such as acquisition, site work, soft costs, financing costs, and FF&E were excluded from this Direct Development Cost number.

Indirect Jobs – Jobs supported by industries purchasing from industries. For example, purchases of construction materials and other supplies from vendors within the study area. Those vendors employ workers to meet the demand of the Project (and other customers). This cycle may have many iterations between different industry sectors, and the coefficients associated with each industry are calculated within the IMPLAN model. See below for more information about IMPLAN.

Indirect Earnings/Labor Income – The earnings associated with the indirect jobs. This amount can include both wages and benefits paid to workers as well as income earned by business owners. Indirect earnings are calculated using the IMPLAN model.

Retail, Entertainment and Dining Sales – Sales were analyzed using a Household Income impact analysis in IMPLAN using the industry codes listed in Appendix C. This analysis uses only induced impacts to show how new households will impact sales and spending in the area using IMPLAN's estimates. These estimates were then combined with direct dining, entertainment and retail sales generated within the overall development site.

Taxes – This includes all taxes and fees collected by federal, state, county, municipal, or other government entities, including, but not limited to property taxes, income taxes, sales, taxes, license and registration fees, etc.

METHODOLOGY

This analysis was completed using the IMPLAN economic impact model, adjusted for 2026 dollars as well as for actual tax rates. IMPLAN is an input-output model that is used by many universities and government agencies to estimate economic and fiscal impacts. Input-output modeling describes commodity flows from producers to consumers. The value of commodities produced is equal to total industry purchases of commodities, services, employment compensation, value added, and imports.

An IMPLAN impact analysis involves specifying a series of expenditures or other changes and applying them to the region's economic multipliers. The expenditures are identified in terms of the sectoring scheme for the model, in producer prices, and in historical and current dollars with the year the analysis is conducted in as the base year. Only the dollars spent within the region are applied to the model.

The notion of a multiplier rests upon the difference between the initial effect of a change in final demand and the total effects of that change. Total effects can be calculated either as direct and indirect effects, or as direct, indirect, and induced effects. Direct effects are production changes associated with the immediate effects or final demand changes. Indirect effects are production changes in backward-linked industries caused by the changing input needs of directly affected industries (for example, additional purchases to produce additional output). Induced effects are the changes in regional household spending patterns caused by changes in household income generated from the direct and indirect effects.

Purchases for final use (final demand) drive the model. Industries producing goods and services for final demand purchase goods and services from other producers. These other producers, in turn, purchase goods and services. This buying of goods and services (indirect purchases) continues until leakage from the region (imports and value added) stops the cycle.

Creating a regional input-output model requires a tremendous amount of data. The costs of surveying industries within each region to derive a list of commodity purchases (production functions) are prohibitive. IMPLAN was developed as a cost-effective means to develop regional input-output models. The IMPLAN accounts closely follow the accounting conventions used in the "Input-Output Study of the U.S. Economy" by the Bureau of Economic Analysis (1980) and the rectangular format recommended by the United Nations.

APPENDIX C – SURROUNDING AREA ASSUMPTIONS

Induced Spending - Dining, Retail and Entertainment Sales	
Dining	
509	Full-service restaurants
510	Limited-service restaurants
Entertainment	
106	Breweries
107	Wineries
108	Distilleries
420	Scenic and sightseeing transportation and support activities for transportation
421	Couriers and messengers
430	Sound recording industries
431	Radio and television broadcasting
432	Cable and other subscription programming
447	Other real estate
474	Travel arrangement and reservation services
496	Performing arts companies
497	Commercial Sports Except Racing
499	Independent artists, writers, and performers
500	Promoters of performing arts and sports and agents for public figures
501	Museums, historical sites, zoos, and parks
502	Amusement parks and arcades
504	Other amusement and recreation industries
511	All other food and drinking places
Retail	
152	Printing
392	Wholesale - Motor vehicle and motor vehicle parts and supplies
393	Wholesale - Professional and commercial equipment and supplies
394	Wholesale - Household appliances and electrical and electronic goods
395	Wholesale - Machinery, equipment, and supplies
396	Wholesale - Other durable goods merchant wholesalers
397	Wholesale - Drugs and druggists' sundries

398	Wholesale - Grocery and related product wholesalers
399	Wholesale - Petroleum and petroleum products
400	Wholesale - Other nondurable goods merchant wholesalers
401	Wholesale - Wholesale electronic markets and agents and brokers
402	Retail - Motor vehicle and parts dealers
403	Retail - Furniture and home furnishings stores
404	Retail - Electronics and appliance stores
405	Retail - Building material and garden equipment and supplies stores
406	Retail - Food and beverage stores
407	Retail - Health and personal care stores
408	Retail - Gasoline stores
409	Retail - Clothing and clothing accessories stores
410	Retail - Sporting goods, hobby, musical instrument and book stores
411	Retail - General merchandise stores
412	Retail - Miscellaneous store retailers
413	Retail - Nonstore retailers
423	Newspaper publishers
429	Motion picture and video industries
437	News syndicates, libraries, archives and all other information services
451	General and consumer goods rental except video tapes and discs
466	Photographic services
467	Veterinary services
477	Landscape and horticultural services
493	Individual and family services
505	Fitness and recreational sports centers
512	Automotive repair and maintenance, except car washes
513	Car washes
514	Electronic and precision equipment repair and maintenance
516	Personal and household goods repair and maintenance
517	Personal care services
518	Death care services
519	Dry-cleaning and laundry services
520	Other personal services
Sales from the Sales Tax Estimates table were included in Induced Spending in they fell within these categories based on the Job Assumptions table.	

APPENDIX D – CATALYZED PROJECT ASSUMPTIONS

Catalyzed Project - Sales Tax Estimates				
Franklin County Sales Tax	7.50%

APPENDIX E - ASSUMPTIONS AND LIMITING CONDITIONS

1. The economic impact analysis contained herein relies on databases and software developed by IMPLAN Group LLC. MIG Inc. has been developing complex localized databases since 1993 and is an industry recognized leader in input-output databases and data modeling. As a result, we believe the information provided is a reliable basis to use in developing the economic impacts for the Project (s). However, we have not examined the data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact analysis.
2. All information contained in the report which was furnished by others was assumed to be true, correct, and reliable. A reasonable effort was made to verify such information, but the author assumes no responsibility for its accuracy.
3. The report was made assuming responsible ownership and capable management of the Project.
4. Possession of the report, or a copy thereof, does not carry with it the right of publication, nor may it be reproduced in whole or in part, in any manner, by any person, without the prior written consent of Project Management Consultants, LLC. Neither all nor any part of the report or copy thereof shall be disseminated to the general public by the use of advertising, public relations, news, sales, or other media for public communication without the prior written consent and approval of Project Management Consultants, LLC.
5. The author of this report is not required to give testimony or attendance in legal or other proceedings relative to this report or to the Subject unless satisfactory additional arrangements are made prior to the need for such services.
6. The opinions contained in this report are those of the author and no responsibility is accepted by the author for the results of actions taken by others based on information contained herein.
7. Acceptance of and/or use of this report constitutes acceptance of all assumptions and the above conditions.

Transformational Mixed-Use Tax Credit

Economic Impact Statement

Authored by:

VISTA SITE SELECTION

Introduction

This study is prepared by Vista Site Selection, LLC ("Vista"), a third-party entity, on behalf of an application for the Ohio Transformational Mixed-Use Tax Development Credit Program ("TMUD"). This study accomplishes two primary objectives:

1) To verify that increased tax collections resulting from the project will exceed 10% of the estimated eligible project costs and,

2) To articulate the economic impacts of the Project and/or larger Development to the Project Site and Surrounding Area during both the Construction Period, which is the time period in which the Project is being constructed and the Completion Period, which is the 5 years after Project construction is completed.

In accomplishing these objectives, this document will assess the following categories:

- ***Employment*** **-** The projected number of construction, operational, and tenant jobs created as a result of the Project and the average hourly wages for each job type.
- ***Revenue*** **-** Annual revenue projections generated from retail, entertainment, and dining sales.
- ***Tax Revenues*** **-** Annual revenue projections generated from sales tax, income tax, lodging tax, and property tax.

Economic impacts will be calculated utilizing IMPLAN software and the following methodology:

INPUTS

1. Provided by Developer
2. Calculated by Vista using market assumptions and data support

ECONOMIC OUTPUTS

1. Calculated utilizing IMPLAN software
2. Calculated by Vista utilizing IMPLAN and complementary data sources either publicly available, indexed/created by Vista or subscribed to by Vista.

TAX CALCULATIONS

1. Direct taxes calculated by Vista using state and local tax rates.
2. Indirect taxes calculated by Vista from indirect outputs, with some categories calculated using IMPLAN tax estimates and rates.

EIS Framework Categories and Sections

The framework in this study will cover three major sections: 1) Construction Impacts, 2) Completion Period Impacts and 3) Total Impacts.

	1. Construction Impacts	2. Project Completion Period Impacts
Project	The direct economic impacts of the new construction and/or renovation and rehabilitation of structures included in the Project on the Project site during the construction period.	The direct and indirect economic impacts of the Project as defined in the application in the five years after completion of construction of the Project.
Development (if applicable)	The direct economic impacts of the construction and/or renovation and rehabilitation of structures included in the Development as defined in the application during the construction period. Does not include the Construction Project Impacts described above. If the Project is not part of a larger planned Development, this section is not applicable.	The direct and indirect economic impacts of the Development as defined in the application in the five years after completion of construction of the Project, exclusive of the impacts of the Project as identified above. If the Project is not part of a larger planned Development, this section is not applicable.
Surrounding Area Impacts	The indirect economic impacts caused by the new construction and/or renovation and rehabilitation of structures included in the Project in the surrounding area during the completion period of the Project, excluding any impacts specifically identified below in the Construction Catalyzed Project Impacts section.	The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below in the Catalyzed Project Impacts section.
Catalyzed Projects (if applicable)	The direct and indirect economic impacts from construction of the defined projects in the surrounding area that are directly caused or accelerated by the Project/Development during the completion period of the Project.	The direct and indirect economic impacts of other proposed, defined projects in the surrounding area that are directly caused or accelerated by the Project/Development in the five years after completion of construction of the Project.
	3. Total Impacts (1. Construction Impacts + 2. Project Completion Impacts)	

Project Geography

The Economic Impact geography is referred to as the Surrounding Area, which includes any zip code covered in whole or in part encompassed within a perimeter starting from the transformational mixed used development boundary (**in green**) and extending one-half miles out from that boundary.

The illustration to the right is a .5-mile radius from the Project boundary, which is located within 10 miles of a City with population of at least 100,000 residents (Cincinnati), illustrating that the radius includes both the 45202 and 45203 zip code.

Taxes & Rate Methodology

For simplicity, the Project, Development, Surrounding Area and Catalyzed Projects follow the same tax rates which are based on the City of Cincinnati, Hamilton County, the Cincinnati City School District and the State of Ohio. It is worth noting that there may be small variations in the actual tax amounts, compared to these estimated amounts, based on per-parcel levies, other school districts and numerous factors particularly when factoring in the Surrounding Area and Catalyzed Project impacts.

Sales Taxes - are calculated using sales and purchases of building tenants, purchases from residents within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional 20% reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of resident expenditures and estimates of economic output provided by IMPLAN. The combined State and Local rate is 7.8% in the City of Cincinnati (with 5.75% to the State of Ohio, 1.25% to Hamilton County and .80% to the Southwest Ohio Regional Transit Authority). Sales tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool for the project address.

Income Taxes – income taxes are calculate as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax). Ohio Withholding Taxes utilize a bracketed rate structure based on salary (for this project is assumed to be 3.2%, which is calculated on the Project average salary of $99,840, assuming a fixed tax of $2,375 + an excess tax of 4.132% for a salary over $79,992). The City of Cincinnati levies a 1.85% income tax on people living and working in the City of Cincinnati (see City of Cincinnati – Income Tax Division).

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. Lodging taxes collected by Hamilton County at a rate of 6.5% and the City of Cincinnati at a rate of 4%, resulting in a total lodging tax rate of 10.5%. Lodging rates can be found utilizing the Ohio Department of Taxation's tax analysis data series.

Property Taxes – property taxes are collected by various units of government and published by the County Auditor. Property taxes are assessed at 35% of the market value of the property, then an effective tax rate is applied and distributed to the local government taxing units. The effective tax rate of the property's assessed value is 9.1%. Further, the property is part of a 100% Community Reinvestment Area Tax Abatement, however the Developer is paying Payments in Lieu of Taxes (PILOTs) to the School District (33%) and the City's Streetcar fund (15%), resulting in a net abatement rate of 52%. As such, it is only assumed that 48% of property taxes (in this case PILOTs) are collected for purposes of "Property Taxes" for the Project.

1. Construction Impacts

Methodology

Project Impacts

The value entered in Industry Output for construction represents full cost of the structure as provided by the Developer, and only the structure. Construction cost data was provided by the Developer in all circumstances (each building). This includes hard costs and soft costs. IMPLAN calculates employment based on the number of employees it would take to support the dollar value and type of a given economic event, using a combination of data sources including Census County Business Patterns (CBP), Bureau of Labor Statistics Covered Employment and Wages (CEW) and Bureau of Economic Analysis Regional Economic Accounts (REA) as the basis for its calculation. Further, IMPLAN uses additional data sources to classify its employment estimates into hours worked, headcount and compensation by specific occupation. Occupational source data used by IMPLAN includes Bureau of Labor Statistics (BLS) Occupational Employment Survey (OES), BLS Employment Projections national industry by occupation matrix, Census Bureau American Community Survey (ACS) Public Use Microdata Sample (PUMS) and O*NET™ which is a trademark of the U.S. Department of Labor, Employment and Training Administration. Employees are converted to Full-time equivalent employees (FTEs) by dividing the estimated number of hours of compensation for the job, as calculated by IMPLAN, by 2,080. There are no direct impacts to retail, entertainment and dining as these are not direct construction expenditures.

Surrounding Area Impacts

Surrounding Area impacts during the Construction Period were calculating utilizing IMPLAN. In IMPLAN, the project was modeled as $160,000,000 in Output under the industry 55 - Construction of New Commercial Structures, Including Farm Structures. Construction cost calculations were provided using costs provided by the Developer. Outputs resulting from the construction inputs in IMPLAN were filtered in IMPLAN only to show indirect effects of Project Construction. These impacts were categorized by use, to understand specific impacts to Retail, Entertainment and Dining. In this circumstance, the Surrounding Area's presence of significant entertainment, retail and dining establishments (professional sports stadiums, full-service restaurants, limited services restaurants, bars and shopping) create a higher degree of construction worker spending. Additional categories were created and aggregated if they were sales-taxable transactions. Lodging taxes follow a similar rate, as many construction workers travel to larger areas given the overall labor shortage of construction workers. Those who travel and stay overnight are typically provided lodging and meal per diems. Given IMPLAN captures dining expenditures, the lodging per diem method is utilized to get a more accurate picture of construction spending. In this instance. A typical per-day per diem is $138 for lower cost areas and $222 for higher cost areas. Given the location within a major urban center (Cincinnati) the $222 figure is utilized (per diem rates provided by *PBMares CPAs and Consultants Guidance for Contractors Who Use Per Diem, 2022)*. Further it is assumed 15% of workers will travel as part of this arrangement during 30% of the annual weekdays per year. Lodging taxes are calculated off of estimated lodging expenditures.

Catalyzed Project Impacts

Catalyzed Project construction was calculated differently than Project Construction, as detailed information for Catalyzed Projects is not typically available, as such, costs were provided by the catalyzed project developers or estimated based off of square footage data gathered from available project information. In calculating construction impacts, costs were calculated on a per-square foot basis by analyzing comparable building sizes on the Hamilton County Auditor's website, costs of recent developments in the area and the size/scale of the project. In all cases, construction costs assumed 60% labor and 40% materials costs, and for purposes of estimating employment, a cost-per-worker of $136,000 was used, the rate provided by IMPLAN for the 45202 and 45203 zip codes. Lastly, average salaries for the area were calculated using IMPLAN employee compensation figures for the 45202 and 45203 zip codes, estimated at $56,000. There is further detail on Catalyzed Project methodology later on in this document.

Construction Project Impacts

CONSTRUCTION	Project Construction		
	Year 1	Year 2	Totals
Property Value	$80,000,000	$80,000,000	**$160,000,000**
Labor	[redacted]	[redacted]	**1159**

2. Completion Period Impacts

Methodology

Project Impacts

In calculating the project, the Developer provided data related to project costs, square footage, residential units, residential rents, commercial rents and tenant information to serve as inputs. Vista calculated employment, wages, sales and office purchases from these figures, based on an examination of market sales per square foot, job densities and data from Data Axle-GIS Planning integration September, 2023, which projects employment, sales and wages for existing businesses. It is then assumed that the impacts of the tower's redevelopment will not only preserve existing tenants, but increase sales per square foot for these tenants based on the infusion of over 770 new residents earning incomes that coincode with the market-rate and luxury rents provided by the Project. Certain units are classified as AirBnB units and are subject to short-term rental regulations and lodging tax. Lastly, the office employment will be anchored by Cityworks co-working space, which in addition will house significant, high wage office employee payroll, will also realize annual membership rates. These locations have become more common arising from the pandemic and the decentralization of employees, appealing to small business owners, decentralized executives, investors and entrepreneurs. Given the revolving nature of employee activity, a higher degree of employees can be assumed (150 square feet per employee).

Other metrics, such as household incomes of the residents and resident spending in the Surrounding Area were calculated by Vista. Resident expenditures were calculated using averages from the *2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income*. Household income assumptions were calculated using Census and HUD average family income estimates for 1-person, 2-person and 3-person families at 100% and 120% Area Median Income averages. Each consumer expenditure category was assigned an "absorption rate" to account for any expenditures that cannot be made within the Surrounding Area.

Surrounding Area Impacts

Surrounding Area impacts were calculated primarily utilizing IMPLAN data. Metrics including FTEs, payroll, retail, dining and entertainment sales came directly from IMPLAN's indirect effects of Project impacts. Property taxes were calculated directly from IMPLAN, while sales taxes were calculated by aggregating resulting IMPLAN industry transactions into use categories, including Retail, Entertainment, Dining and other sales-taxable use categories. Indirect impacts to property values were calculated differently using computations on the effects of high-rise building development on nearby home values, US Census data and HUD data then combined with IMPLAN calculations to add the effect to commercial property values. The basis assumes the single-family home values of the Surrounding Area zip codes will increase as a result the tower Project, which is the second tallest building in the City of Cincinnati. Data from the National Association of Home Builders concludes that single family homes in close proximity to newly developed high-rise tower appreciate by at least 2.79%, however many other variables can influence this figure. The analysis conducted by Vista assumes that the base home value of the Surrounding Area is $849,310,000 (using the number of single family homes and median home value from Census data), and at least 2.79% of the annual incremental increases above that base figure can be attributed to the Project. For commercial properties, the IMPLAN's indirect real property tax calculations, filtered by non-residential uses, were divided by the 35% property tax assessment rate, then by the effective property tax rate, divided by an additional 30% to remove any abatement assumptions that would have been historically factored into IMPLAN's property tax calculations, to arrive at the impact of the Project on commercial properties. The results of single family and commercial property calculations were added, then tax rates were applied to project incremental tax impacts of indirect property impacts caused by the Project.

Catalyzed Project Impacts

Catalytic projects follow a different method, given the prospective nature of the developments and lack of detail beyond planned square footage and uses. Projects were identified by the Developer and City of Cincinnati with assistance from Vista, as either caused or accelerated by the project, including what year during the Project's Completion period each project would come online. Square footage was applied to a standard rate table be use and resulting figures were calculated into a series of tables for each project. This document elaborates on the methods and rates in later sections.

An annual growth factor of 5% was applied to payroll, sales and property growth based on an examination of the last three years of the 12-month percentage change in the Consumer Price Index (*BLS – 12 Month Change- All items in U.S. city average, all urban consumers, not seasonally adjusted).* Each half-year 12-month ending percent change was averaged to arrive at 5.50%. The property value growth is conservative when comparing to the Surrounding Area's growth in median real estate taxes paid over the last five years, which is 62.2% (12.4% annualized) when averaging the two Surrounding Area Zio Codes (*Census 2017-2021*). Further, Property Taxes are reduced by 52% to account for a Community Reinvestment Area property tax abatement structure described in the Methodology section.

Catalyzed Project Impacts

The Catalytic Effect the Project is quantified in this section. The projects catalyzed in this section all fall within Project's half-mile radius and are planned to be placed into series after this Project is complete. Each project was identified and attested by the City of Cincinnati as being caused or accelerated by the Project as noted in Appendix A. Further, project impacts are captured during the five-year completion period in each project's corresponding table. The assumptions below were used to calculate impacts from development square footage programs of each catalyzed project. The following page overviews how these were calculated into FTES, Payroll, Sales and Taxes.

Catalyzed Project Rates	SF/Jobs	Salary	Sales/SF	Room Sales/SF	Rent/SF	Methodology
Apartment	15,000	$35,000				Uses comparable market data within the Hamilton County, Ohio Region, data provided by Developer and Rent.com rent estimates.
Hotel	700	$30,000				Uses comparable hotel sales data for large cities.
Industrial	750	$55,000				US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Office	250	$120,000				Lightcast & BLS Data for Surrounding Area for Business Occupations
Restaurant	600	$25,000				US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast
Retail	450	$30,000				US Energy Administration Commercial Buildings Energy Survey, BLS/Lightcast

	Operations Rate	*Construction Rate*	
% Jobs Dedicated to Operations	15%		Uses typical mix or type and area supported by IMPLAN
Indirect Retail Sales Rate	5%	2%	Uses typical mix or type and area supported by IMPLAN
Indirect Entertainment Sales Rate	7%	3%	Uses typical mix or type and area supported by IMPLAN
Indirect Dining Sales	10%	4%	Uses typical mix or type and area supported by IMPLAN
Construction Output/Worker		$71,000	Uses typical mix or type and area supported by IMPLAN
EC/Worker		$49,171	Uses typical mix or type and area supported by IMPLAN
% Cost Related to Construction Materials		40%	Typical method utilzied by RSMeans Construction Data
Sales Taxable Purchases	95%	100%	Analyzed exempt uses in relation to project from OTAX
Lodging Impact	2%	2%	Uses US Tourism Sattelite Accounts to estimate lodging impact of activity
Property Impact	12.5%	0.5%	Assumes typical indirect property value impact based on IMPLAN data
Value at Cost	85%	85%	Assumes market value based on hard costs from analysis of Auditor data
Renter HH Income	$65,100		Utilizes Census/ACS and HUD Data to Assume Area Family Incomes
Renters per SF	600		Calculated based on typical SF needed per renter from sample projects
Lodging Per-Diem		$227	PBMares CPAs and Consultant's Guidance for Contractors Who Use Per Diems
Worker Travel %		15%	Based on analysis of Lightcast inbound commuter data to the Surrounding Area
Worker Annual Weekdays		78.3	Assumes 30% of the weekdays "travel workers" commute to work and use a Per-Diem

Catalyzed Project Impacts

Each Catalytic Project is calculated utilizing the following methodology in correspondence with the rates from the previous page:

Category	Methodology
FTEs/Payroll	Calculates FTEs per SF by use and payroll using BLS wage data for each overarching use.
Operations FTEs/Payroll	Assumes the 15% of FTES are dedicated to operations, based on IMPLAN's typical mix of operations occupation categories, which includes two-level SIC code categories 37, 43 and 49.
Tenant FTEs/Payroll	Assumes the 75% of FTES are tenants, which is based off of a typical IMPLAN mix for the area, removing two-level SIC code categories 37, 43 and 49.
Retail	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Retail category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate retail spending for residents.
Entertainment	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Entertainment category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate entertainment spending for residents.
Dining	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Dining category. Further, residential projects include 2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income to calculate dining spending for residents.

Catalyzed Project List

Catalyzed Project: [redacted]

Location: [redacted]

Summary: preliminary plans for [redacted] call for 35,000 square feet of retail and restaurant space and 475,000 square feet of multi-family development. The fully redeveloped Project is expected to infuse significant high-earning residents to provide a strong market for the restaurant and retail space, while the Development of Carew Tower will provide proof of concept for high-rise, luxury residential multi-family units, allowing mixed-use development projects like [redacted] to accelerate and follow suit.

Catalyzed Project List

Catalyzed Project: [redacted]

Location: [redacted]

Summary: this includes the redevelopment of the [redacted] the Project and essentially part of the Carew Tower complex. The momentum provided within the Project's complex of buildings with renovated retail, office, residential and restaurant space will create additional market demand for lodging needs including tourism visitors to the tower, business guests of the office users and families of the Project's multi-family residents.

Catalyzed Project List

Catalyzed Project: [redacted]

Location: [redacted]

Summary: The [redacted] building is undertaking a significant redevelopment of 50,000 Restaurant/Banquet space and 125,000 square feet of office space. The office and event space will be able to draw from the residents of the Project for nearby walkable talent and the event space will allow office users consuming the tower to utilize the banquet space for special events and conferences. The residents provided by the Project are expected to spend approximately $[redacted] annually on entertainment, food and beverage uses, creating a strong market for the [redacted] to move forward wit its development.

Catalyzed Project List

Catalyzed Project: [redacted]

Location: [redacted]

Summary: [redacted] will provide a variety of uses into the Downtown Cincinnati market, including residential space, office space, restaurant and retail. The Project will accelerate this development by providing a walkable living option for office employees, and over [redacted] in expenditures from residents on retail and restaurant uses combined, and causing another [redacted] in indirect retail and dining expenditures to the Surrounding Area, generating an appealing market opportunity for this Development.

3. Total Impacts

Total Impacts

Construction Activity

The Project's will create, cause and accelerate a total one-time infusion of 11,351 construction jobs and $588 million in payroll from construction activity from both the Project and Catalytic Projects resulting from over [redacted] in Project construction and [redacted] in Catalytic Project construction.

Jobs and Payroll

Additionally, the Project will create, cause and accelerate a total of 3,764 jobs, of which the 546 will be employed by the project and another 3,218 indirectly caused or accelerated as a result of the Project.

Retail, Entertainment and Dining Sales

The Project will additionally generate, cause and accelerate over [redacted] in retail, dining and entertainment sales over a five-year period, including an immediate infusion of [redacted] in sales from construction activity. Of these sales figures, [redacted] will come directly from the Project, driving an additional [redacted] to the Surrounding Area and causing/accelerating another [redacted] from Catalyzed Projects.

Taxes

The Project will result in approximately $454 million in State and Local Taxes, of which $382 million will be generated during the Completion Period from Project operations, Surrounding Area impacts and Catalyzed Project impacts. The additional $73 million comes in the form of Construction Period Taxes.

II. TOTAL CONSTRUCTION PERIOD IMPACTS

A. Total Construction Period Impacts: Construction Jobs

III. TOTAL COMPLETION PERIOD IMPACTS *(totals inputs from Completion Period Impacts worksheet)*

A. Total Completion Period Impacts: Operational Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	482	$38,830,629
2	549	$43,626,900
3	553	$44,149,050
4	559	$44,741,232
5	565	$45,417,929
		$216,765,741

B. Total Completion Period Impacts: Tenant Jobs

Year	Full-Time Equivalents	TOTAL Projected Payroll
1	2673	$237,370,889
2	3062	$265,637,480
3	3098	$269,793,744
4	3143	$274,475,846
5	3199	$279,789,587
		$1,327,067,546

C. Total Completion Period Impacts: Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales	TOTAL Projected Sales/Year
1	[redacted]	[redacted]	[redacted]	[redacted]
2	[redacted]	[redacted]	[redacted]	[redacted]
3	[redacted]	[redacted]	[redacted]	[redacted]
4	[redacted]	[redacted]	[redacted]	[redacted]
5	[redacted]	[redacted]	[redacted]	[redacted]
	[redacted]	[redacted]	[redacted]	[redacted]

D. Total Completion Period Impacts: Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax	TOTAL Projected Taxes
1	$14,537,678	$14,391,758	$11,544,246	$13,641,923	$54,115,605
2	$18,588,444	$17,991,376	$11,654,780	$29,912,236	$78,146,835
3	$18,744,644	$18,185,706	$11,661,142	$31,925,830	$80,517,322
4	$18,908,654	$18,389,752	$11,668,582	$34,212,354	$83,179,343
5	$19,080,864	$18,604,001	$11,677,344	$36,832,411	$86,194,621
	$89,860,284	**$87,562,593**	**$58,206,094**	**$146,524,755**	**$382,153,726**

Total Impacts

I. TOTAL ECONOMIC IMPACTS *(Construction Period Impacts + Completion Period Impacts)*

A. Summary: Total Project Impacts

	TOTAL Projected FTEs	TOTAL Projected Payroll	TOTAL Projected Sales	TOTAL Projected Taxes
Construction Period Impacts	11,352	$588,271,381	[redacted]	$72,819,503
Completion Period Impacts	3,764	$1,543,833,287	[redacted]	$382,153,726
	15,116	**$2,132,104,668**	[redacted]	**$454,973,229**

Total Impacts

The table to the right illustrates that projected taxes ($454 million) meet at least 10% of the total development costs $16 million).

Further, when combining the Construction Period and the first year after construction, the project significantly exceeds the 10% development cost threshold by $110 million dollars.

TMUD Credit Objectives	
TMUD Project Cost	$160,000,000
10% of Development Cost Threshold	$16,000,000
Construction Taxes	$72,819,503
First Year Post-Construction Taxes	$54,115,605
Construction + Year 1	$126,935,108
Total Taxes	$454,973,229
Achieved 10% Taxes Threshold	YES
Achieve Alternative Method Potential	YES

EIS Preparer Qualifications

EIS Preparer Qualifications

Vista Site Selection LLC is a newly formed company, founded in September of 2022 by the law firm Vorys, Sater, Seymour and Pease LLP, focused on economic development, economic analysis, economic incentives and site location consulting. Vista's management team has over 75 years of collective experience in Economic Development and Site Selection in 49 US States and includes certified data analysts, economic consultants and GIS specialists, among others.

Vista's services included:

- Economic Insights, including Economic Footprint and Economic Impact Analysis
- Labor Analytics
- Development of Advanced, Customized Data Analytics Platforms and Mapping
- Retail Performance and Growth Analytics
- Return on Investment Insights for Companies and Communities
- Corporate Site Selection Advisory
- Tax Credit and Incentives Advisory
- Economic and Market Analysis

EIS Preparer Qualifications

This analysis will be performed by Chris Magill. Chris is a Managing Director for Vista Site Selection. Chris has significant experience consulting on capital investment projects and has strategically negotiated and analyzed tax credit, grant and loan-financing solutions for capital investment projects in over 20 different states. Further, Chris utilizes data analytics to help better inform business leaders and site administrators on project ROI, economic impacts, site decisions and market conditions. Prior to joining Vista Site Selection, Chris served as the Economic Development Director at the Ice Miller law firm for 11 years, consulting on various matters related to economic development, economic incentives, public-private partnerships, community advisory and economic impact analysis. Prior to his time at Ice Miller, Chris worked at the Ohio Department of Development ("ODOD"), serving as the Executive Director of the Ohio Tax Credit Authority. During his time at ODOD, Chris managed and structured various tax credit programs and co-developed various economic incentive calculation tools.

Chris carries various economic certifications and has nearly 15 years of experience in authoring economic impact statements and analysis tools. Chris has experience instructing economic impact, fiscal return-on-investment and economic development courses for the International Economic Development and the Ohio Economic Development Association. Further, has volunteered his time instructing pro forma development courses for the Knowlton School of Architecture and Fisher College of Business at The Ohio State University in relation to the annual Urban Land Institute Student Heinz Competition and has served as a Planning Committee member and annual speaker for the Ohio Tax Conference. Chris also serves as the Vice President of the Board of Directors of the Ohio Statewide Development Corporation. Chris' credentials include:

- Certification in Economic Measurement, *National Association of Business Economics*
- Certification of Business Applications of Statistics and Data Analytics, *National Association of Business Economics*
- Certification of Economic Strategy and Managerial Decision Making, *National Association of Business Economics*
- Master's in Business Administration, *Ohio University*

EIS Preparer Qualifications

Prior to joining Vista, Chris Magill's related experience includes the following projects. It is worth noting that the majority of these projects were undertaken by Chris during his time at Ice Miller Whiteboard, LLC prior to joining Vista in January of 2023:

Economic Impact Project	Locality	Category

Appendix A – Catalytic Project List

city of CINCINNATI
COMMUNITY & ECONOMIC DEVELOPMENT

September 7, 2023

Ms. Lydia Mihalik
Director, Ohio Department of Development
State of Ohio
77 South High Street, 29th Floor
Columbus, OH 43215

Dear Director Mihalik:

The City of Cincinnati is excited about the true transformational effect the Carew Tower redevelopment (the "Project") will have to its immediate half-mile radius, positively impacting the surrounding downtown residents, employers, institutions, and visitors. The purpose of this letter is to attest to the catalytic effect this Project will have in causing or accelerating key developments in the City of Cincinnati, specifically within the surrounding half-mile radius of the Project. From our experience with this developer over the years including recent challenging times, they have met their obligations to date.

In addition to the immense impacts this Project will have to the City of Cincinnati, Hamilton County, and the region, the sheer volume of residents and commercial activity brought forth by the Project will accelerate a number of proposed, defined development projects that will be placed into service after the Project is complete. This full list of such developments can be found in the attached Exhibit A to this document. Further, the Project will enhance our ability to attract new businesses, retain existing business, and cultivate top talent with exciting live-work opportunities.

We appreciate your consideration of a Transformational Mixed Use Development Tax Credit Award for this Project and if you have any questions, do not hesitate to contact Justin Halter, Development Officer at: 513-352-6241 or justin.halter@cincinnati-oh.gov.

Sincerely,

Markiea L. Carter

Markiea L. Carter, Director

Cincinnati, Ohio Headquarter Hotel TMUD Economic Impact Statement

September 8, 2023

Construction Period Impacts (All figures shown in thousands)

Construction Period Impacts: Project

The Project is projected to cost $415.2 million (provided by the developer). Hunden assumed that labor would account for 60 percent of the Project cost, while materials would could for the remaining 40 percent. As a result, the Project is projected to generate 3,519 job-years from construction, evenly distributed between the two-year projected construction timeline.

Hunden assumed that construction workers would spend [redacted] percent of their annual salaries on retail goods, [redacted] percent of their annual salaries on entertainment in the local market. Hunden assumed workers would receive daily food and beverage stipends of [redacted] throughout the construction period.

Hunden used the combined state, county and local tax rates for sales [redacted]), income ([redacted]) and lodging ([redacted]) taxes due to the Project's location in downtown Cincinnati.

Sales taxes were generated as a result of retail, entertainment and dining sales, as well as material costs (40 percent of the Project budget) from the Project. Income taxes were generated from the number of construction jobs needed for the Project. Hunden assumed that 5 percent of the construction workforce would require travel, such as consultants and specialty contractors. This resulted in roughly 4,800 hotel nights.

Construction Project Impacts: Jobs

Year	Full-Time Equivalents	Average Hourly Wage	TOTAL Projected Payroll
1	[redacted]	[redacted]	[redacted]
[redacted]			
3			
4			
5			
	[redacted]	[redacted]	$ 259,273

Construction Project Impacts: Retail, Entertainment & Dining Sales

[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
3					$ -
4					$ -
5					$ -
	$ 25,076	$ 9,373	$ 189	$ -	$ 34,638

Construction Period Impacts: Development

The Development is projected to cost $200 million. Hunden assumed that labor would account for [redacted] percent of the Development cost, while materials would could for the remaining [redacted] percent. As a result, the Development is projected to generate 1,678 job-years from construction, evenly distributed between the two-year projected construction timeline.

Hunden assumed that construction workers would spend [redacted] percent of their annual salary on retail goods, [redacted] percent of their annual salaries on entertainment in the local market. Hunden assumed workers would receive daily food and beverage stipends of [redacted] throughout the construction period.

Hunden used the combined state, county and local tax rates for sales ([redacted]), income ([redacted]) and lodging ([redacted]) taxes due to the Development's location in downtown Cincinnati.

Sales taxes were generated as a result of retail, entertainment and dining sales, as well as material costs ([redacted] percent of the Development budget) from the Development. Income taxes were generated from the number of construction jobs needed for the Development.

Construction Period Impacts: Surrounding Area

Hunden utilized a Lightcast Impact Scenario spending report based on the level of spending for the Project/Development and omitted any impacts within catalyzed projects to calculate direct and indirect impacts of construction within the surrounding areas of the hotel development and convention center expansion.

The three zip codes included within the scope of the Project and Development include 45214, 45203 and 45202.

Lightcast provided projections for the number of jobs and total direct and indirect spending from other construction within these zip codes throughout the construction period of the Project and Development.

Construction Surrounding Area Impacts: Jobs

Construction Period Impacts: Catalyzed Projects

Hunden was provided a list of catalyzed Projects by 3CDC. Based of various project costs and construction timelines, Hunden projected the overall impact of each project.

Hunden assumed that construction workers would spend [redacted] percent of their annual salary on retail goods, [redacted] percent of their annual salaries on entertainment and [redacted] percent of their annual salary in the local market.

Hunden assumed that labor would account for [redacted] percent of the Catalyzed Project costs, while materials would could for the remaining [redacted] percent.

Due to varying starting and ending construction timelines, overall construction impact fluctuated throughout the five-year period following the opening of the Project and Development.

The following slide provides and overview of the list of Catalyzed Projects, including costs and estimated starting and ending construction dates.

Construction Catalyzed Impacts: Jobs

Year	Full-Time Equivalents	Average Hourly Wage	TOTAL Projected Payroll
			$ 1,844,153

Construction Catalyzed Impacts: Retail, Entertainment & Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales	TOTAL Projected Sales/Year

Completion Period Impacts
(All figures shown in thousands)

Completion Period Impacts: Project

Hunden ran a Smith Travel Research HOST report including nine regional headquarter hotels to understand their performance. By applying these competitive hotels' performance with penetration model of the Cincinnati market, Hunden projected the performance of the Project hotel.

Impact generated by the Project is driven by spending within the headquarter hotel. Spending within the hotel includes room rates, catering, other food and beverage and use of hotel amenity spaces. Spending within the Project is projected to increase over the first four years of operation as the hotel stabilizes in the market. Hunden applied IMPLAN multipliers (sourced from the Cincinnati market) to the direct spending within the Project to produce the combined level of direct and indirect impact due to the Project.

Hunden assumed that for the total number of jobs created due to the Project, [redacted] percent of jobs would be classified as operational jobs and [redacted] percent would be classified as tenant jobs. This assumption is a typical split based on IMPLAN reports, of which [redacted] percent are classified as "operations" under SIC codes that start with 37, 43 and 49.

Hunden used the combined state, county and local tax rates for sales ([redacted]), income ([redacted]) and lodging ([redacted]) taxes due to the Project's location in downtown Cincinnati.

Project Impacts: Operational Jobs

2	$				
	$ 16,012	**$ 7,267**	**$ 10,718**	**$ 6,460**	**$ 40,458**

Completion Period Impacts: Development

Projections for the Development were made by using the current level of activity within the Duke Energy Convention Center as a baseline of activity. With the expansion of the convention center and the introduction of a headquarter hotel into the market, Hunden projected an overall increase of [redacted] percent activity within the convention center, bringing more conventions, trade shows, special events, meeting and banquets into Cincinnati. As a more competitive regional group travel market, the expansion of the convention center and addition of the hotel are projected to drive increased spending and impact to the city and state.

Hunden applied IMPLAN multipliers (sourced from the Cincinnati market) to the direct spending within the convention center to produce the combined level of direct and indirect spending due to the Development.

Hunden assumed that for the total number of jobs created due to the Project, [redacted] percent of jobs would be classified as operational jobs and [redacted] percent would be classified as tenant jobs.

Hunden used the combined state, county and local tax rates for sales ([redacted]), income ([redacted]) and lodging ([redacted]) taxes due to the Project's location in downtown Cincinnati.

As a publicly owned asset, the convention center is not projected to pay property taxes.

Development Impacts: Operational Jobs

Year	Full-Time Equivalents	Average Hourly Wage	TOTAL Projected Payroll

	$ 27,918	$ 12,036	$ 9,933		$ 49,887

Completion Period Impacts: Surrounding Area

Hunden utilized a Lightcast Impact Scenario spending report based on the level of spending for the Project and Development and omitted any impacts within catalyzed projects to calculate direct and indirect impacts of job creation in the surrounding areas. The three zip codes included within the scope of the Project and Development include 45214, 45203 and 45202.

Hunden referenced U.S. Census Bureau data for household spending on retail goods, entertainment and dining within the 45214, 45203 and 45202 zip codes to determine the projected sales levels within the relevant surrounding areas over the five-year period after the Project's opening.

Hunden analyzed the changes in property tax levels within comparable markets that recently completed headquarter hotel projects. Hunden then compared the total market value of properties within the 45214, 45203 and 45202 zip codes from the Hamilton County Treasurer to calculate the total indirect impact in projected property tax over the five-year period.

Surrounding Area Impacts: Operational Jobs

Completion Period Impacts: Catalyzed Projects

Hunden ran proformas for each of the catalyzed projects provided by 3CDC that would be directly caused or accelerated by the Project/Development in accordance with each Catalyzed Project's projected completion date. The resulting levels of spending within each Catalyzed Project were applied to IMPLAN multipliers to determine the level of direct and indirect impact produced by each project.

The tables to the right provide a combined impact from all Catalyzed Projects. The following slides will provide impact summaries from each of the individual Catalyzed Projects.

Performance assumptions by asset class are summarized on the following slide.

Catalyzed Projects Impacts: Operational Jobs

Source: 3CDC

Hunden used CoStar and Smith Travel Research to build performance assumptions for the catalyzed hotel, retail/restaurant, residential and office projects. Wage rates were utilized using Lightcast BLS data for the Surrounding Area. Property values assume [redacted] percent of the cost of the project as the property tax basis. The following performance assumptions were used throughout the analysis.

Retail/Restaurant Assumptions:
- Lease Rate: $[redacted]/SF
- Sales: $[redacted]/SF

Office Assumptions:
- Lease Rate: $[redacted]/SF
- Average Salary: $[redacted]

[redacted] Hotel Assumptions:
- Year 1 ADR: $[redacted]
- Year 1 Occupancy: [redacted]

[redacted] Hotel Assumptions:
- Year 1 ADR: $[redacted]
- Year 1 Occupancy: [redacted]

Catalyzed Project: [redacted]

The [redacted] project is projected to include 34,000 square feet of retail space and 311,000 square feet of residential space (346 units). The Project is projected to open in July 2028.

The opening of the hotel and expanded convention center will create demand from additional retail/restaurant tenants in the downtown core, also making the downtown are a more attractive location for residents. [redacted] has the potential to support the momentum created by the Project/Development with additional retail and restaurant offerings and residential options.

The Project is projected to produce the following over the five-year period:

- **$[redacted] in Net New Spending**
- **$[redacted] in Net New Earnings**
- **[redacted] Net New FTE Jobs**
- **$11.3 million in sales, income and property taxes**

5-Yr. Summary of Impacts - [redacted]

Total	**$11.3**

Source: Hunden Partners

Catalyzed Project: [redacted]

The [redacted] project is projected to include 16,000 square feet of retail space and 112,000 square feet of office space. The Project is projected to open in January 2028.

The opening of the hotel and expanded convention center will create demand from additional retail/restaurant tenants in the downtown core and additional activity in surrounding the Project/Development. Without investment of the Project/Development the lack of activity generators and current market performance of retail and office developments may not support additional commercial development.

The Project is projected to produce the following over the five-year period:

- **$[redacted] in Net New Spending**
- **$[redacted] in Net New Earnings**
- **[redacted] Net New FTE Jobs**
- **$11.6 million in sales, income and property taxes**

Catalyzed Project: [redacted]

The [redacted] project is projected to cover a total of 710,000 square feet (including 20,000 square feet of office space). The Project is projected to open in July 2028 and have a capacity of roughly 18,000, potentially supporting basketball, hockey and other major indoor events.

Cincinnati is currently lacking an ample number of hotel rooms throughout the city to support major conventions and sporting events concurrently. The Project hotel has the potential to provide the city and state with an upper upscale/luxury offering to support additional major tourism events such as professional sporting events and other major arena-oriented events in downtown Cincinnati.

The Project is projected to produce the following over the five-year period:

- **$[redacted] in Net New Spending**
- **[redacted] in Net New Earnings**
- **[redacted] Net New FTE Jobs**
- **$63.8 million in sales, income and property taxes**

Catalyzed Project: [redacted]

The [redacted] project is projected include a 200,000 square-foot expansion of the Duke Energy Convention Center. The Project is projected to open in July 2030.

Without the introduction of a headquarter hotel in Cincinnati, the city will continue to struggle against regional competitors in attracting convention and association business. Without the attached or adjacent headquarter hotel property, there is no need to expand the center due to low level of natural growth in activity levels. As a more competitive convention destination, the Duke Energy Convention Center will need the potential to expand like competitive city have recently executed, or have plans to execute.

The Project is projected to produce the following over the five-year period:

- **$[redacted] in Net New Spending**
- **$[redacted] in Net New Earnings**
- **[redacted] Net New FTE Jobs**
- **$3.5 million in sales, income and property taxes**

Catalyzed Project: [redacted]

The [redacted] project is projected to include 79,000 square feet of hospitality space (102 keys). The Project is projected to open in March 2028.

The opening of the hotel and expanded convention center will create the need for additional hotel rooms in the market. Without additional demand drivers in the downtown market, additional hotel rooms in the market will compete for the same levels of business, driving lower occupancies and overall performance. The opening of the Project/Development creates the opportunity for additional hotel demand throughout the Cincinnati market, accelerating the stabilization of new hotel products.

The Project is projected to produce the following over the five-year period:

- **$[redacted] in Net New Spending**
- **$[redacted] in Net New Earnings**
- **[redacted] Net New FTE Jobs**
- **$5.6 million in sales, income and property taxes**

Catalyzed Project: [redacted]

The [redacted] project is projected to include a renovation of 450 hotel rooms. The Project is projected to be completed in September 2027.

As newer, higher-class hotels (such as the Project hotel) enter a market, there is a flight-to-quality for existing, older hotels. To capture new business in the city generated by the presence of the headquarter hotel, Cincinnati's existing hotels must renovate and update their offerings to remain competitive options in the city. Without the additional demand generated by the Project/Development, properties do not have a reason to invest in upgrading quality, as they remain the top option due to proximity to the convention center.

The Project is projected to produce the following over the five-year period:

- **$[redacted] in Net New Spending**
- **$[redacted] in Net New Earnings**
- **[redacted] Net New FTE Jobs**
- **$26.2 million in sales, income and property taxes**

Total Impacts
(All figures shown in thousands)

Total Construction Period Impacts

In total, the construction period of the Project, Development, Surrounding Area and Catalyzed Projects is projected to created 30,483 FTEs with a projected payroll of $1.2 billion.

Retail, entertainment and dining sales is projected to total over $[redacted] with roughly 14 percent coming from retail sales, 15 percent coming from entertainment sales and 71 percent coming from dining sales.

Construction activity is projected to generate roughly $89.0 million in sales tax, $30.9 million in income tax and $11.5 million in lodging tax throughout the five-year period, totaling $131.5 million in new taxes.

Letters Attesting to Catalyzed Projects and Project Impacts

city of CINCINNATI
COMMUNITY & ECONOMIC DEVELOPMENT

Ms. Lydia Mihalik
Director, Ohio Department of Development
State of Ohio
77 South High Street, 29th Floor
Columbus, OH 43215

Dear Director Mihalik:

Over the past several years, it has become increasingly evident that the area surrounding Cincinnati's Duke Energy Convention Center ("DECC") has stagnated and is badly in need of a new and coordinated strategy that will result in a revitalized **Convention Center District.** Cities with a thriving tourism industry feature a state-of-the-art convention center surrounded by active and vibrant restaurant and retail districts and outdoor spaces, along with a high-quality convention hotel. Importantly, for Cincinnati to succeed in the tourism and visitor economy, we must have a new Convention Headquarters Hotel to support conventions and major entertainment and sporting events.

Public and private entities have coalesced around the sense of urgency needed to move the Convention Center District project forward. The City of Cincinnati (the "City") and Hamilton County (the "County") selected the Cincinnati Center City Development Corp. ("3CDC") to serve as the Development Manager for the project, and we have worked collaboratively to advance the project forward. Significant progress has been made on predevelopment work for both the renovation of the DECC—a $200 million undertaking – and the construction of a new Convention Headquarters Hotel, which is expected to have a construction budget of approximately $415 million.

This is a once-in-a-generation opportunity to reimagine a critical area in our urban core, as evidenced by the total investment of nearly $635 million. Surrounding these two generational projects with additional investment in mixed-use and hospitality developments is equally important to our efforts. Fortunately, we are confident that the renovation of the DECC and construction of a new Convention Headquarters Hotel will have a catalytic impact on Cincinnati's entire urban core, with a particularly strong impact on the southwest corner of Cincinnati's Central Business District, where the Convention Center District is located.

Based on conversations with other developers and City partners, we believe an additional $1 billion will ultimately be invested in the urban core, through a combination of renovations and new construction infill projects. These proposed investments are the direct result of the Convention Center District project. These projects together total over 1.9 million square feet and include:

- Residential developments at 435 Elm, Shilito's, and 7th and Vine
- Hotel renovations or development at the Hyatt, Hilton, Westin,616 Race, and 33 W 4th
- Office development at the Nautilus site
- Major civic undertakings, including an expanded Convention Center

Cincinnati's urban core is healthy, strong, and steadily growing. But the $635 million investment in the Convention Center District, and the $1 billion in additional development that will result from the project moving forward, will expand that growth exponentially. In short, this is the exact type of project the Transformational Mixed-Use Development ("TMUD") Program was created to support. A TMUD tax credit will have a significant impact on the financing of the Convention Center District, making this catalytic project feasible, and supporting transformational change in Cincinnati's urban core for generations to come.

Thank you for your time and consideration on this important program. If you have any questions about the Convention Center District or any of the related projects, please do not hesitate to contact me.

Sincerely,

Markiea L. Carter

August 15, 2023

To Whom it May Concern:

Flaherty & Collins Properties ("Flaherty") understands that Portman Holdings, in partnership with the Cincinnati Center City Development Corporation ("3CDC"), the Port of Cincinnati Development Authority ("Port") and the City of Cincinnati ("City") are applying for an Ohio Transformational Mixed-Use Development ("TMUD") award for Headquarters Hotel ("TMUD Project"). Portman's partners are committed to a simultaneous renovation of the Duke Energy Convention Center and adjacent Whex Garage. Should those projects move forward, which Flaherty understands is contingent upon the TMUD award being received, Flaherty is prepared to acquire certain land currently owned by the Port, commonly referred to as the 435 Elm, and begin development of a $86.25 million mixed-use project. The project will consist of 311,000 square feet of residential apartments and 34,000 square feet of retail space.

While Flaherty is firmly committed to the ongoing development of Cincinnati's urban core, making an investment at the scale and size of the 435 Elm project is not something the organization would do lightly. The only way Flaherty will feel comfortable moving forward with this $86.25 million investment is with a guarantee that the two major projects in the Convention Center District will be proceeding. The renovation of the DECC and construction of the new Convention Headquarters Hotel will serve as catalytic projects in Cincinnati's urban core. Knowing that the City, County, 3CDC, and all other project partners are moving forward with nearly $700 million in investment in this critical section of Cincinnati's Central Business District will give Flaherty the confidence to advance the 435 Elm project. Therefore, securing the TMUD award for the Convention Center District is not only essential to moving that project forward – it's also necessary to move this project forward, as well.

It is Flaherty's understanding that the Nautilus project is just one development that is contingent upon the catalytic Convention Center District project coming to fruition. The transformational nature of the project makes it an ideal candidate for the TMUD award, as that contribution would have an exponential return on investment due to the accompanying development that would result from the project receiving the award.

If you have any questions or concerns, please feel free to contact me at 317-752-2335.

Sincerely,

James A. Crossin, VP Development and Principal

modelgroup

August 24, 2023

To Whom it May Concern:

Model Group understands that Portman Holdings, in partnership with the Cincinanti Center City Development Corporation ("3CDC"), the Port of Cincinnati Development Authority ("Port") and the City of Cincinnati ("City") are applying for an Ohio Transformational Mixed-Use Development ("TMUD") award for Headquarters Hotel ("TMUD Project"). Portman's partners are committed to a simultaneous renovation of the Duke Energy Convention Center and adjacent Whex Garage. Should those projects move forward, which Model understands is contingent upon the TMUD award being received, Model is prepared to acquire certain land currently owned by the Port, commonly referred to as the Nautilus site, and begin development of a $32 million mixed-use project. The project will consist of 112,000 square feet of office and 16,000 square feet of retail space.

While Model Group is firmly committed to the ongoing development of Cincinnati's urban core, making an investment at the scale and size of this project is not something the organization would do lightly. The only way Model will feel comfortable moving forward with this $32 million investment is with the certainty that the two major projects in the Convention Center District will be proceeding. The renovation of the DECC and construction of the new Convention Headquarters Hotel will serve as catalytic projects in Cincinnati's urban core. Knowing that the City, County, 3CDC, and all other project partners are moving forward with nearly $700 million in investment in this critical section of Cincinnati's Central Business District will give Model the confidence to advance the Nautilus project. Therefore, securing the TMUD award for the Convention Center District is not only essential to moving that project forward – it's also necessary to move this project forward, as well.

It is Model's understanding that the Nautilus project is just one development that is contingent upon the catalytic Convention Center District project coming to fruition. The transformational nature of the project makes it an ideal candidate for the TMUD award, as that contribution would have an exponential return on investment due to the accompanying development that would result from the project receiving the award.

Sincerely,

Bobby Maly

NORTH AMERICAN
PROPERTIES

August 23, 2023

To Whom it May Concern:

North American Properties (NAP) understands that Portman Holdings, the Cincinnati Center City Development Corporation (3CDC), the Port of Greater Cincinnati Development Authority (Port) and the City of Cincinnati (City) are applying for an Ohio Transformational Mixed-Use Development ("TMUD") award for the renovation of the Duke Energy Convention Center (DECC) and attached Convention Headquarters Hotel (TMUD Project). Should those projects move forward, which NAP understands is contingent upon the TMUD award being received, NAP is prepared to acquire certain land currently owned by the City, commonly referred to as the Shillito's site, and begin development of a $69 million mixed-use project. The project will consist of 241,000 square feet of residential and 35,000 square feet of commercial space.

While NAP is firmly committed to the ongoing development of Cincinnati's urban core, making an investment at the scale and size of the Shillito's project is not something we can pursue in isolation. The only way NAP would be prepared to move forward with this $69 million investment is with a guarantee that the two major projects in the Convention Center District will be proceeding. The renovation of the DECC and construction of the new Convention Headquarters Hotel will serve as catalytic projects in Cincinnati's urban core. Knowing that the City, County, 3CDC, and all other project partners are moving forward with nearly $700 million in investment in this critical section of Cincinnati's Central Business District will give NAP the confidence required to advance the Shilito's project. Therefore, securing the TMUD award for the Convention Center District is not only essential to moving that project forward – it's also necessary to move the Shillito's project forward.

It is NAP's understanding that the Shillito's project is just one development that is contingent upon the catalytic Convention Center District project coming to fruition. The transformational nature of the project makes it an ideal candidate for the TMUD award, as that contribution would have an exponential return on investment due to the accompanying development that would result from the project receiving the award.

Ms. Lydia Mihalik
Director
Ohio Department of Development
77 South High Street, 29th Floor
Columbus, OH 43215

Dear Director Mihalik:

Visit Cincy understands that Portman Holdings, the Cincinnati Center City Development Corporation (3CDC), the Port of Greater Cincinnati Development Authority (Port) and the City of Cincinnati (City) are applying for an Ohio Transformational Mixed-Use Development ("TMUD") award for the renovation of the Duke Energy Convention Center (DECC) and attached Convention Headquarters Hotel (TMUD Project).

Visit Cincy is the Cincinnati region's primary destination sales, marketing, and management organization. Its mission is to increase economic impact in the region by growing visitor expenditures related to conventions, trade shows and business meetings, and tourism. The renovation and expansion of our convention center and the development of a new, first-class headquarters hotel, together known as the Convention District, is critical to these efforts. Both facilities are critical pieces to building a world-class Convention District that will make our region more attractive to visitors and conventions of all sizes for years to come.

Another critical component to increasing Cincinnati's ability to attract business and leisure investment is a new, modern arena. Opened in 1975, the current arena is hindered by its size and interior space configuration. A new arena would position Cincinnati to attract major concerts, regional NCAA March Madness games, the Republican National Convention, the Democratic National Convention, and other large conventions. A modern arena can host high-value, high-profile entertainment and sporting events, conventions, and meetings to drive economic impact and quality of life for our fellow residents.

Visit Cincy understands that the convention center and convention center hotel project is contingent upon a TMUD award. Should the Convention District project be awarded, Visit Cincy is prepared to advance development of a new 18,000-seat arena with 690,000 square feet of arena space and 20,000 square feet of office. Preliminary work by Populous, an international award-winning and the world's largest sports architectural firm, shows how the arena will work on the City of Cincinnati's Town Center Garage site situated between the Duke Energy Convention Center and TQL Stadium. A new Cincinnati arena is estimated to cost approximately $700 million.

The Convention District project will absolutely be transformational in its impact in Cincinnati and the surrounding area because of its ability to catalyze projects like a new arena. Without an upgraded convention center and a new convention headquarters hotel, our community will not be in a position to advance the arena.

Thank you for your continued leadership for the State of Ohio and for your consideration of the Convention District TMUD application. Please feel free to contact me if you have any questions.

Sincerely,

Julie Calvert

To Whom it May Concern:

Keystone Hotels ("Keystone") understands that Portman Holdings, in partnership with the Cincinnati Center City Development Corporation ("3CDC"), the Port of Cincinnati Development Authority ("Port") and the City of Cincinnati ("City") are applying for an Ohio Transformational Mixed-Use Development ("TMUD") award for Headquarters Hotel ("TMUD Project"). Portman's partners are committed to a simultaneous renovation of the Duke Energy Convention Center and adjacent Whex Garage. Should those projects move forward, which Keystone understands is contingent upon the TMUD award being received, Keystone is prepared to acquire and develop two vacant properties into two hospitality projects. These projects are located at 616 Race and 33 W 4th. These projects total 85,000 and 79,000 square feet respectively and include a total of 222 hotel rooms and 12,000SF of first floor retail space.

While Keystone is firmly committed to the ongoing development of Cincinnati's urban core, making an investment at the scale and size of these projects is not something the organization would do lightly. The only way Keystone will feel comfortable moving forward with this $48 million investment is with a guarantee that the two major projects in the Convention Center District will be proceeding. The renovation of the DECC and construction of the new Convention Headquarters Hotel will serve as catalytic projects in Cincinnati's urban core. Knowing that the City, County, 3CDC, and all other project partners are moving forward with nearly $700 million in investment in this critical section of Cincinnati's Central Business District will give Keystone the confidence to advance the projects. Therefore, securing the TMUD award for the Convention Center District is not only essential to moving that project forward – it's also necessary to move this project forward, as well.

It is Keystone's understanding that these projects are just two of the developments that are contingent upon the catalytic Convention Center District project coming to fruition. The transformational nature of the project makes it an ideal candidate for the TMUD award, as that contribution would have an exponential return on investment due to the accompanying development that would result from the project receiving the award.

If you have any questions or concerns, please feel free to contact me directly at 513-295-1189.

Respectfully,

Subhas Patel

To Whom it May Concern:

The Cincinanti Center City Development Corporation ("3CDC") is working with the Port of Cincinnati Development Authority ("Port") and the City of Cincinnati ("City") to apply for an Ohio Transformational Mixed-Use Development ("TMUD") award for Headquarters Hotel ("TMUD Project"). 3CDC and the Port are committed to a simultaneous renovation of the Duke Energy Convention Center and adjacent Whex Garage. Should those projects move forward, which is contingent upon the TMUD award being received, 3CDC will begin the development of the surface parking lot it currently owns at the northeast corner of 7th and Vine Streets in downtown Cincinnati. The $35.1 million mixed-use project includes 93,000 square feet of residential space and 10,000 square feet of retail space.

While it is 3CDC's mission to redevelop Cincinnati's urban core, 3CDC does not believe that the conversion of surface parking to mixed-use is financially feasible without the catalytic impact of the Convention Center District investments described above. The transformational nature of the project makes it an ideal candidate for the TMUD award, as that contribution would have an exponential return on investment due to the accompanying development that would result from the project receiving the award.

If you have any questions or concerns, please feel free to contact Adam Gelter at 513-621-4400.

Sincerely,

Adam Gelter

To Whom it May Concern:

Over the past several years, it has become increasingly evident that the area surrounding Cincinnati's Duke Energy Convention Center (DECC) has stagnated and is badly in need of a new and coordinated strategy that will result in a revitalized **Convention Center District**. Cities with a thriving tourism industry feature a state-of-the-art convention center surrounded by active and vibrant restaurant and retail districts and outdoor spaces, along with a high-quality convention hotel in close proximity. Importantly, in order for Cincinnati to succeed in the tourism and visitor economy, we must have a new Convention Headquarters Hotel to support conventions as well as major entertainment and sporting events.

Public and private entities have coalesced around the sense of urgency needed to move the Convention Center District project forward. The City of Cincinnati and Hamilton County selected the Cincinnati Center City Development Corp. (3CDC) to serve as the Development Manager for the project, and we have worked collaboratively to advance the project forward. Significant progress has been made on predevelopment work for the construction of the new Convention Headquarters Hotel —a $415.2 million undertaking.

Portman Holdings, a firm with extensive experience developing convention hotels, was unanimously selected by a broad group of local stakeholders to serve as the developer of the new Convention Headquarters Hotel. 3CDC has entered into exclusive negotiations with Portman Holdings on a comprehensive development agreement along with other agreements.

On a parallel track, the entities involved in advancing the project have been jointly working on developing a common plan of financing for the project. The City, County, and Visit Cincy have actively worked with 3CDC – and Portman Holdings – to develop a financing model, which creates the $415.2 million required for the construction of the Convention Headquarters Hotel. This common plan of financing requires specific legislation to be passed – at the State, County, and City level – as well as financial commitments from the City, County, and Visit Cincy. Earlier this year, the State of Ohio passed enabling legislation in its budget bill that provided authorization to the City and County to take steps to abate the taxes on the new hotel and pledge the funds directly to a bond issuance to finance the gap in the project's capital stack.

This letter serves as confirmation that the City, County, Visit Cincy, and all other stakeholders intend to provide all necessary approvals to effectuate the common plan of financing for the construction of the Convention Headquarters Hotel.

If you have any questions about the Convention Center District, the construction of the hotel, the financing plan, or the related legislation, please do not hesitate to contact me.

Sincerely,

Julie Calvert

September 5, 2023

To Whom It May Concern:

Over the past several years, it has become increasingly evident that the area surrounding Cincinnati's Duke Energy Convention Center (DECC) has stagnated and is badly in need of a new and coordinated strategy that will result in a revitalized **Convention Center District**. Cities with a thriving tourism industry feature a state-of-the-art convention center surrounded by active and vibrant restaurant and retail districts and outdoor spaces, along with a high-quality convention hotel in close proximity. Importantly, in order for Cincinnati to succeed in the tourism and visitor economy, we must have a new Convention Headquarters Hotel to support conventions as well as major entertainment and sporting events.

Public and private entities have coalesced around the sense of urgency needed to move the Convention Center District project forward. Hamilton County and the City of Cincinnati selected the Cincinnati Center City Development Corp. (3CDC) to serve as the Development Manager for the project, and we have worked collaboratively to advance the project forward. Significant progress has been made on predevelopment work for both the renovation of the DECC—a $200 million undertaking – and the construction of a new Convention Headquarters Hotel, which is expected to have a construction budget of approximately $480 million.

This is a once-in-a-generation opportunity to reimagine a critical area in our urban core, as evidenced by the total investment of nearly $700 million. Surrounding these two generational projects with additional investment in mixed-use and hospitality developments is equally important to our efforts. Fortunately, we are confident that the renovation of the DECC and construction of a new Convention Headquarters Hotel will have a catalytic impact on Cincinnati's entire urban core, with a particularly strong impact on the southwest corner of Cincinnati's Central Business District, where the Convention Center District is located.

Based on conversations with other developers and City partners, we believe an additional $1 billion will ultimately be invested in the urban core, through a combination of renovations and new construction infill projects. These proposed investments are the direct result of the Convention Center District project. These projects together total over 1.9 million square feet and include but are not limited to:

- Residential developments at 435 Elm, Shilito's, and 7th and Vine
- Hotel renovations or development at the Hyatt, Hilton, Westin and 616 Race and 33 W 4th
- Office development at the Nautilus site
- Major civic undertakings such as an expanded Convention Center

Cincinnati's urban core is healthy, strong, and steadily growing. But the $700 million investment in the Convention Center District, and the $1 billion in additional development that will result from the project moving forward, will expand that growth exponentially. In short, this is the exact type of project the Transformational Mixed-Use Development (TMUD) Program was created to support. A TMUD tax credit will have a significant impact on the financing of the Convention Center District, making this catalytic project feasible, and supporting transformational change in Cincinnati's urban core for generations to come.

Thank you for your time and consideration on this important program. If you have any questions about the Convention Center District or any of the related projects, please do not hesitate to contact me.

Sincerely,

Jeffrey W. Aluotto

Ms. Lydia Mihalik
Director, Ohio Department of Development
State of Ohio
77 South High Street, 29th Floor
Columbus, OH 43215

Dear Director Mihalik:

Over the past several years, it has become increasingly evident that the area surrounding Cincinnati's Duke Energy Convention Center ("DECC") has stagnated and is badly in need of a new and coordinated strategy that will result in a revitalized **Convention Center District**. Cities with a thriving tourism industry feature a state-of-the-art convention center surrounded by active and vibrant restaurant and retail districts and outdoor spaces, along with a high-quality convention hotel. Importantly, for Cincinnati to succeed in the tourism and visitor economy, we must have a new Convention Headquarters Hotel to support conventions and major entertainment and sporting events.

Public and private entities have coalesced around the sense of urgency needed to move the Convention Center District project forward. The City of Cincinnati (the "City") and Hamilton County (the "County") selected the Cincinnati Center City Development Corp. ("3CDC") to serve as the Development Manager for the project, and we have worked collaboratively to advance the project forward. Significant progress has been made on predevelopment work for the construction of the new Convention Headquarters Hotel —a $415 million undertaking.

Portman Holdings, a firm with extensive experience developing convention hotels, was unanimously selected by a broad group of local stakeholders to serve as the developer of the new Convention Headquarters Hotel. 3CDC entered exclusive negotiations with Portman Holdings on a comprehensive development agreement and other agreements.

On a parallel track, the entities involved in advancing the project have been jointly working on developing a common plan of financing for the project. The City, County, and Visit Cincy have actively worked with 3CDC – and Portman Holdings – to develop the attached financing model, dated August 24, 2023 which contributes $70 million in revenue bonds into the overall $415 million budget required for the construction of the Convention Headquarters Hotel. This common financing plan requires specific legislation to be passed – at the State of Ohio, County, and City levels – and financial commitments from the City, County, and Visit Cincy. Earlier this year, the State of Ohio passed enabling legislation in its budget bill that authorized the City and County

to take steps to abate the taxes on the new hotel and pledge the funds directly to a bond issuance to finance the gap in the project's capital stack.

This letter serves as confirmation that the City intends to recommend the financing plan for the construction of the Convention Headquarters Hotel, subject to City Council authorization.

If you have questions about the Convention Center District, the hotel's construction, the financing plan, or the related legislation, please do not hesitate to contact me.

Sincerely,

September 7, 2023

Ms. Lydia Mihalik
Director, Ohio Department of Development
State of Ohio
77 South High Street, 29th Floor
Columbus, OH 43215

Dear Director Mihalik:

Over the past several years, it has become increasingly evident that the area surrounding Cincinnati's Duke Energy Convention Center ("DECC") has stagnated and is badly in need of a new and coordinated strategy that will result in a revitalized **Convention Center District.** Cities with a thriving tourism industry feature a state-of-the-art convention center surrounded by active and vibrant restaurant and retail districts and outdoor spaces, along with a high-quality convention hotel. Importantly, for Cincinnati to succeed in the tourism and visitor economy, we must have a new Convention Headquarters Hotel to support conventions and major entertainment and sporting events.

Public and private entities have coalesced around the sense of urgency needed to move the Convention Center District project forward. The City of Cincinnati (the "City") and Hamilton County (the "County") selected the Cincinnati Center City Development Corp. ("3CDC") to serve as the Development Manager for the project, and we have worked collaboratively to advance the project forward. Significant progress has been made on predevelopment work for the renovation of the DECC—a $200 million undertaking.

The development team identified to date includes Moody Nolan who has been selected as the lead design firm, working in tandem with its partners at TVS, and the Construction Manager is proposed to be a partnership of Messer Construction, TriVersity Construction, and Jostin Construction. Moody Nolan, TriVersity, and Jostin are City Certified Minority Business Enterprises (MBEs) and will account for a substantial portion of the project spend. Current work on the DECC renovation involves estimating project costs and refining the designs for the renovated space.

On a parallel track, the entities involved in advancing the project have been jointly working on developing a common plan of financing for the project. The City, County, and Visit Cincy have actively worked with 3CDC to develop the attached financing model, dated August 9, 2023, which we anticipate will finance the $200 million redevelopment of the DECC. This common financing plan requires specific legislation

commitments from the City, County, and Visit Cincy. Earlier this year, the State of Ohio passed enabling legislation in its budget bill that provided authorization to the County to increase its Transient Occupancy Tax (TOT) by 1%.

This letter serves as confirmation that the City intends to recommend the financing plan for the renovation of the DECC, subject to City Council authorization.

If you have questions about the Convention Center District, the renovation of the DECC, the financing plan, or the related legislation, please do not hesitate to contact me.

Connect Real Estate

Economic Impact Report – Marysville, OH

September 8, 2023

CONNECT
REAL ESTATE

Tel: 312-856-9100
Fax: 312-856-1379
www.bdo.com

330 N. Wabash, Suite 3200
Chicago, IL 60611

EXECUTIVE SUMMARY

The purpose of this report is to quantify the estimated direct and indirect economic and financial impact the potential Mixed Use Development project may have on Marysville, Ohio based on the proposed capital investment and job creation of the project.

Connect Real Estate ("Connect") is considering the construction of a new state-of-the-art Multi-Use Development property in the Millcreek Township community. If Connect moves forward with the project, the proposed project will result in approximately 260 Connect and tenant jobs, 150 construction jobs, and $71,280,000 in estimated capital investment. The property will be comprised of four parcels and six buildings, consisting of Retail & Hospitality Spaces, Co-Working Spaces, Recreational & Event Spaces, as well as three buildings containing a total of 190 affordable housing units.

To fully-understand the financial impact of the proposed project for the community, this report measures the direct, indirect, and induced economic and fiscal impacts that could take place because of the type and level of capital investment, revenue generating activity, and job creation by Connect and its Tenants in Marysville, OH (Union County).

In summary, and in order to give context to the information outlined within, please see below for some of the key insights gained from the analysis:

- Over $7.2 million in potential real property tax revenue over 5 years;
- Over $49.4 million in potential real property tax revenue over 30 years;
- Over $1.8 million in total use tax on the construction of the project;
- Over $50 million in state and local withholding tax on new employee earnings and $589 thousand on construction worker earnings;
- More than $37 million in labor income (earnings) potentially generated by the proposed project through indirect spending activity; and
- The creation of over 765 jobs indirectly supported by the potential spending activity of Connect.

It's important to note that all estimates above are measured over a 5-year period. For more detail, please refer to the contents of this report.

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Union County and City of Marysville, along with their representatives.

BDO USA, LLP, a Delaware limited liability partnership, is the U.S. member of BDO International Limited, a UK company limited by guarantee, and forms part of the international BDO network of independent member firms.

330 N. Wabash, Suite 3200
Chicago, IL 60611

ANALYSIS OVERVIEW

Direct, fiscal impacts were measured using:

- Estimated, future property tax paid to the City of Marysville and Union County;
- Estimated, future sales and use tax paid to the State of Ohio and Union County (based on the current Ohio sales tax rate of 5.75% and County sales tax rate of 1.5%) measured for both the direct capital investment by Connect and future sales tax resulting from revenue generating activities of the project; and
- Estimated, future withholding tax paid to the State of Ohio (based on the current Ohio withholding tax table) and the City of Marysville (based on current Marysville withholding tax rate of 1.5%) for the creation of 150 construction jobs, and 260 operations and tenant permanent jobs at the site.

In addition, to assess the future economic impact of the proposed Multi-Use Development, the following four metrics were used to estimate the indirect and induced fiscal impact of the project that is a direct result of the size of capital investment being made:

1. Employment: The number of jobs created or needed to support the investment.
2. Labor income: All forms of employment income, including employee compensation.
3. Output: The value of industry production by calendar year.
4. Value added: Compensation of employees, taxes on production and imports less subsidies, and gross operating surplus.

To measure the significance of each metric, IMPLAN datasets for Union County, Ohio were used to identify the indirect and induced values of the same. IMPLAN is the leading provider of economic impact data analysis for resource outputs on local communities. The platform utilizes an input-output model that combines a set of extensive databases, economic factors, the most up-to-date industry multipliers, and demographic statistics with a highly refined modeling system to determine how the effects of one industry will impact other sectors. The multipliers calculate total impact rather than direct "head count," to organize data, recall information, and process. Trade flow information is also considered to offer insights into the multidirectional movements of goods and services between economies. IMPLAN's data is constantly being vetted by industry-leading research analysts and is recognized as the most accurate and reliable of its kind. By inputting project specific data, IMPLAN quantifies the impact via a series of mathematical calculations spanning the software's database of interrelated input-output matrices.

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Union County and City of Marysville, along with their representatives.

Chicago, IL 60611

ASSUMPTIONS

All data provided and accumulated within this report was provided exclusively by Connect. Results are based solely on the information provided, and changes to the data points provided would likely alter results computed by IMPLAN. The assumptions provided by Connect include number of new jobs, annual employee payroll created, total project capital investment and anticipated revenue streams. BDO has not validated any of the information provided by Connect. BDO's role is strictly limited to using the information provided by Connect to create this Economic and Fiscal Impact Study.

Based on discussions with Connect, the following assumptions were utilized to complete this report:

- The proposed project will locate in Union County within the City of Marysville, Ohio;
- $71,280,000 in total, direct capital expenditures by Connect unless stated otherwise; and
- 260 new jobs will be created during the first 5 years and maintained for at least the next 10 years, generating a total estimated payroll equal to $93,610,104 over 5 years.
- Revenue projections will begin in Year 1 following completion of Phase 1 of the project:

Year	Revenue
1	[redacted]
2	
3	
4	
5	

Connect provided the five years of revenue projections. It is anticipated by Connect that all revenue will be generated within the State of Ohio. At this time, it is not feasible to determine a percentage of revenue that will be generated on sales to other counties in Ohio.

Additionally, the revenue projections provided by Connect comprises of projections for residential, dining, and entertainment sales.

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Union County and City of Marysville, along with their representatives.

BDO USA, LLP, a Delaware limited liability partnership, is the U.S. member of BDO International Limited, a UK company limited by guarantee, and forms part of the international BDO network of independent member firms.

330 N. Wabash, Suite 3200
Chicago, IL 60611

Detailed assumptions related to the calculations and estimates outlined within can be found in the corresponding sections of the report.

It's important to note that the projections outlined within this report and supporting documents are estimates only and are based on detailed inputs created and provided by Connect. Outcomes may vary based on actual project results and factors outside of Connect's or BDO's control. Any changes in project assumptions provided by the Company will impact the calculations and results outlined within.

DIRECT IMPACT

To understand the direct impact Connect's development may have on Marysville, Union County and the State of Ohio, we calculated the estimated new County and State level tax increment for both property and sales/use taxes over a 5-year period based on the creation of 260 new jobs and capital investment of approximately $71,280,000 for the construction of buildings and personal property. The major assumptions are outlined below:

Property Tax

In Ohio, property taxes are assessed and collected at the County level. The property tax calculation estimates a total tax rate of 14.5%.

For the purpose of this calculation, we assume that Market Value is equal to 80% of total real property cost, based on 2022 final tax rates. Based on our analysis, Connect's facility may generate an estimated $7.2 million in new property taxes over the next 5 years.

For more information, please see our detailed calculations provided in the appendix.

Sales Tax

The current sales tax rate in the State of Ohio is 7.5% of the selling price of tangible personal property on sales at retail, broken out as 5.75% in State sales tax, 1.25% in County sales tax, and .5% in Special sales tax. The use tax is complementary to the sales tax and is imposed at 7.5% of the purchase price of tangible personal property purchased. Connect will be required to collect and remit 7.5% of the selling price on all its sales of tangible personal property at the facility. In addition, much of the initial

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Union County and City of Marysville, along with their representatives.

purchases to construct and equip the project will also be subject to sales/use taxes, including the purchase or sale of:

- Tangible Personal Property utilized during construction;
- Furniture and Fixtures; and
- Tangible Personal Property created and sold as part of the manufacturing process.

Based on projected revenue from this project, we estimate that Connect's facility could generate approximately $3.2 million in State sales/use tax revenue.

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Union County and City of Marysville, along with their representatives.

INDIRECT IMPACT

Indirect impacts are the results of business-to-business transactions indirectly caused by the direct investment into the proposed project. Businesses initially benefiting from the direct effects will subsequently increase spending at other local businesses. The indirect effect is a measure of this increase in business-to-business activity.

Over the next five years the proposed project is expected to have an indirect impact on Union County resulting in the following:

- [redacted];
- 666 new jobs in the community;
  - [redacted];
  - [redacted];
- $37,611,949 in new labor income;
  - [redacted];
  - [redacted];
  - [redacted].

Please see our Impact Result by Employment and Impact Results Overview provided in the appendix for further details.

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Union County and City of Marysville, along with their representatives.

BDO USA, LLP, a Delaware limited liability partnership, is the U.S. member of BDO International Limited, a UK company limited by guarantee, and forms part of the international BDO network of independent member firms.

330 N. Wabash, Suite 3200
Chicago, IL 60611

INDUCED IMPACT

Induced impacts are the results of increased personal income caused by the direct and indirect impacts. Businesses experiencing increased revenue from the direct and indirect effects will subsequently increase payroll expenditures by hiring more employees, increasing payroll hours, raising salaries, etc. Households will, in turn, increase spending at local businesses. The induced effect is a measure of this increase in household-to-business activity.

Over the next five years the proposed project is expected to have an induced impact on Union County resulting in the following:

- 371 new jobs;
  - [redacted];
  - [redacted]; and
  - [redacted];
- $10,434,244 new labor income;
  - [redacted];
  - [redacted];
  - [redacted];

Please see our Impact Result by Employment and Impact Results Overview provided in the appendix for further details.

Collectively, the indirect and induced impact as it relates to state and local tax revenue is equal to approximately $69,753,726:

- [redacted];
- [redacted];
- [redacted];

APPENDIX

Definitions

Indirect impact: the results of business-to-business transactions indirectly caused by the direct investment into the Multi-Use Development. Businesses initially benefiting from the direct effects will subsequently increase spending at other local businesses. The indirect effect is a measure of this increase in business-to-business activity.

Induced impact: the results of increased personal income caused by the direct and indirect impacts. Businesses experiencing increased revenue from the direct and indirect effects will subsequently increase payroll expenditures (by hiring more employees, increasing payroll hours, raising salaries, etc.). Households will, in turn, increase spending at local businesses. The induced effect is a measure of this increase in household-to-business activity.

Labor Income: all forms of employment income, including employee compensation (wages + benefits).

Multipliers: formulas based on various direct/indirect/induced effects to create matrices to determine specific economic effects.

Output by Absolute Value: defined as value added (employee compensation, other property income and tax on production and imports) plus intermediate expenditures (materials needed on a day-to-day basis).

Other Property Type Income: A.K.A. Gross Operational Surplus. All money collected by an industry that isn't paid into the operations of the company. This would include profits, capital consumption allowance, payments for rent, royalties & interest income.

Other taxes: all taxes paid to governments other than payroll and income/profits, not already included on a specific line item (ex: excise taxes, fees and fines, licenses and permits, etc). The tax impact report splits the TOPI tax impacts into the various categories based on the picture of that region's economy. There are not industry-specific taxes paid (other than total TOPI, which is industry-specific) so the distribution will be an all-industry average.

Property Taxes: on a state and local basis include all property taxes on all real property paid to Union County.

Taxes on Production and Imports: (sales tax, property tax, custom duties, and other taxes and fees) less government subsidies

Value Added: The difference between an industry's or an establishment's total output and the cost of its intermediate inputs (gross output – intermediate inputs). Value added consists of compensation of employees, taxes on production and imports less subsidies, and gross operating surplus.

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Union County and City of Marysville, along with their representatives.

Executive Summary

Dayton Arcade Partners, LLC intends to invest $139.8 million to redevelop four phases of the Arcade District – South Arcade Part 2, North Arcade, Centre City Building, and Air City Garage – in downtown Dayton.[1] The Arcade District Project will include 200 apartments, 380 parking spaces, a 94-room hotel, 48,500 square feet of office space, 35,200 square feet of retail space, 25,000 square feet of restaurant space, and 10,000 square feet of event space. Construction is anticipated to begin in 2024 with the opening of the Arcade District Project expected in 2026. This proposed Project will drive substantial economic activity for the Surrounding Area during the five years after construction is complete.[2]

This report estimates the Project, Development, Surrounding Area, and catalyzed project impacts generated by the Arcade District Project during the construction period as well as during the completion period. The construction period refers to the period between the start and end of construction, whereas the completion period refers to the first five years of operation. The economic impact on jobs, earnings, and sales as well as the fiscal impact on tax revenue for state and local jurisdictions are included. Economic impacts are separated into operations impacts, which represent the management of the Project site after construction is complete and operations commence, and the tenant impacts. Operations impacts represent the labor required to operate the Arcade District Project as well as the associated impacts on earnings. Tenant impacts represent the labor required by anticipated tenants of the Arcade District Project and the associated impacts on earnings and sales. All dollars reported in this analysis reflect nominal dollars unless otherwise stated.

Construction Period Impacts

Comprising the Project, Surrounding Area, and catalyzed project impacts, Table 1 details the total economic impacts of the construction and related activities of the Arcade District Project and the catalyzed projects.[3] During the construction period, the construction and related activities of the Arcade District Project and the catalyzed projects will directly and indirectly support a total of 1,729 construction jobs with earnings of $167.4 million in the Surrounding Area's economy. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage is $46.56.

Table 1: Total Construction Period Impacts on Jobs and Payroll

Year of Construction	FTE Construction Jobs	Average Hourly Wage	Total Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
Total	**1,729**	**$46.56**	**$167,447,709**

Source: Economics Center calculations.

During the construction period, the construction and related activities of Arcade District Project and the catalyzed projects will generate a total of $437.2 million in sales in the Surrounding Area, as detailed in Table 2. Of the total sales generated during the construction period, $407.9 million are direct sales and

[1] Reported in 2023 dollars.
[2] The Surrounding Area for a development located within ten miles of a major city, determined by starting from the corporate boundary of the major city and extending out ten miles from that boundary, is defined as the area encompassed within a perimeter starting from the transformational mixed-use development boundary and extending one-half mile out from that boundary. For the Arcade District Project, the Surrounding Area is defined as zip codes 45401, 45402, 45405, 45410, 45412, 45422, 45423, and 45482.
[3] The impacts of the South Arcade Part 1 phase of the Arcade District Development are not included in the construction period impacts since construction has been completed.

$29.3 million are indirect sales. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, construction sales as well as indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

As detailed in Table 3, the construction and related activities of the Arcade District Project and the catalyzed projects will generate income tax revenue for the State of Ohio and the City of Dayton. A total of nearly $8.7 million in income tax revenue will be generated by the construction and related activities of the Arcade District Project and the catalyzed projects during the construction period. The State of Ohio will receive nearly $4.5 million, while the City of Dayton will receive $4.2 million.

Completion Period Impacts

The total economic impact of the Arcade District Project includes the jobs, earnings, and sales resulting from Project, Development, Surrounding Area, and catalyzed project impacts. As shown in Table 4, a total of 125 operations jobs will be directly and indiretly supported by the Arcade District Project and the Arcade District Development. These operations jobs will have total earnings of $9.4 million during the completion period. The average annual earnings of the operations jobs supported by the Arcade District Project and the Arcade District Development will be $76,277. Assuming 40 working hours per week for 52 weeks per year, this equates to an average hourly wage of $36.67.

Table 4: Total Completion Period Impacts on Operations Jobs and Payroll

[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
Total	**125**	**$36.67**	**$9,434,339**

Source: Economics Center calculations.

Tenants of the Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects hire and pay wages to employees needed to maintain daily operations. As detailed in Table 5, a total of 15,045 tenant jobs with earnings of $1.1 billion will be directly and indirectly supported during the completion period. The direct and indirect jobs supported by tenants of the Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects will have average annual earnings of $72,367. This equates to an average hourly wage of tenant jobs of $34.79, assuming 40 working hours per week for 52 weeks per year.

[redacted]	[redacted]	[redacted]	[redacted]
Total	**15,045**	**$34.79**	**$1,088,881,784**

Source: Economics Center calculations.

As detailed in Table 6, the Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects will generate a total of $4.3 billion in total sales during the completion period. Of the total sales generated during the completion period, $3.6 billion represent direct sales of tenants of the Project, Development, and catalyzed projects. These direct sales will lead to further indirect sales in the Surrounding Area of $695.8 million. The total sales genereated during the completion period are comprised of $4.2 billion in retail sales, $3.0 million in entertainment sales, and $178.3 million in dining sales. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Total	**$4,151,247,038**	**$2,988,438**	**$178,324,298**	**$4,332,559,774**

Source: Economics Center calculations.

As detailed in Table 7, the total fiscal impacts include the sales, income, lodging, and property tax revenue generated by the Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects during the completion period. The spending of the hotel, restaurant, retail, and commercial shoppers will generate $41.0 million in sales tax revenue for the State of Ohio and Montgomery County. The State of Ohio and the City of Dayton will benefit from a total of $55.6 million in income tax revenue during the completion period. Montgomery County and the City of Dayton will benefit from $4.1 million in lodging tax revenue from hotel guests during the completion period. The Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects will generate $61.8 million in property tax revenue. In total, the Arcade District Project will create nearly $162.5 million in fiscal benefits for state and local jurisdictions during the completion period.

Source: Economics Center calculations.

Total Economic and Fiscal Impacts

The total impacts of the Arcade District Project refer to the Project, Development, Surrounding Area, and catalyzed project impacts generated during both the construction period and the completion period, as detailed in Table 8. The Arcade District Project is estimated to support 1,729 jobs with $167.4 million in earnings during the construction period and support 15,170 jobs with $1.1 billion in earnings during the completion period. Construction and related activities will generate $437.2 million in sales during the construction period, while operations and tenant businesses will generate $4.3 billion in sales during the completion period. Additionally, the Arcade District Project is estimated to generate $8.7 million in

[4] Payments in lieu of taxes are included in property tax revenue.

taxes during the construction period and $162.5 million in taxes during the completion period. Collectively, the Arcade District Project will support 16,899 jobs with earnings of $1.3 billion, generate $4.8 billion in sales, and generate $171.2 million in taxes during the construction and completion periods. During the fifth year of the completion period, the Arcade District Project will support 3,034 jobs with earnings of $229.0 million, generate $903.2 million in sales, and generate $33.5 million in taxes.

Introduction

The Arcade District Project is a proposed mixed-use development in the City of Dayton that will drive substantial economic activity in the Surrounding Area.[5] The Arcade District Project is anticipated to start construction in 2024 and open in 2026. Dayton Arcade Partners, LLC plans to invest more than $139.8 million to redevelop the Arcade District.[6] As shown in Table 9, the Arcade District Project will include [redacted], [redacted], a [redacted] hotel, 48,500 square feet of office space, 35,200 square feet of retail space, 25,000 square feet of restaurant space, and 10,000 square feet of event space.

Table 9: Mixed-Use Breakdown of the Proposed Arcade District Project

Type of Mixed-Use	Dimensions/Quantity
Multifamily Residential	149,000 square feet ([redacted])
Parking	143,000 square feet ([redacted])
Hotel	91,000 square feet ([redacted])
Office	48,500 square feet
Retail	35,200 square feet
Restaurants	25,000 square feet
Event Space	10,000 square feet

Source: Dayton Arcade Partners, LLC.

The Arcade District Development encompasses the redevelopment of 11 buildings across two city blocks in Dayton's central business district. The Arcade District Development will include [redacted], [redacted], a [redacted] hotel, 130,000 square feet of institutional/event space, 77,500 square feet of office space, 41,400 square feet of retail space, 35,000 square feet of restaurant space, and 10,000 square feet of event space.

The Arcade District Project refers to four phases – South Arcade Part 2, North Arcade, Centre City Building, Air City Parking Garage – of the larger Arcade District Development. Phase 1 of the Arcade District Development, referred to as the South Arcade Part 1, completed construction in 2021. Per the Ohio Department of Development's Transformational Mixed-Use Development (TMUD) Guidelines, the impacts of the South Arcade Part 1 phase of the Arcade District Development are not included in the construction period impacts since construction has been completed. However, the South Arcade Part 1 phase of the Arcade District Development is included in the completion period impacts.

This report estimates the Project, Development, Surrounding Area, and catalyzed project impacts generated by the Arcade District Project during the construction period as well as during the completion period.[7] The construction period refers to the period between the start and end of construction, whereas the completion period refers to the first five years of operation. The economic impact on jobs, earnings, and sales as well as the fiscal impact on tax revenues for state and local jurisdictions are detailed for each impact category in the following sections. All dollars reported in this analysis reflect nominal dollars

[5] The Surrounding Area for a development located within ten miles of a major city, determined by starting from the corporate boundary of the major city and extending out ten miles from that boundary, is defined as the area encompassed within a perimeter starting from the transformational mixed-use development boundary and extending one-half mile out from that boundary. For the Arcade District Project, the Surrounding Area is defined as zip codes 45401, 45402, 45405, 45410, 45412, 45422, 45423, and 45482.

[6] Reported in 2023 dollars.

[7] Dayton Arcade Partners, LLC provided the list of projects directly caused or catalyzed by the Arcade District Project and the associated project details.

unless otherwise stated. Long-run inflation estimates for 2022 through 2031 were obtained from the National Economic Estimating Conference.[8]

Methodology

Economic Impact

This economic impact analysis measures the amount of economic transactions expected to result from the construction and related activities as well as the operations and tenants of the Arcade District Project. The economic impact analysis includes the impacts of the construction and related activities, the operations resulting from the management of the Project site after construction is complete and operations commence, and the impacts of the tenant businesses of the Arcade District Project.

Economic impact figures represent the effects that a given mixed-use development and its associated economic activities have upon a surrounding community. The economic impacts are reported in terms of jobs, earnings, and economic actvitity (or sales). The number of jobs represents full-time equivalent employees. Earnings refer to the compensation of employees excluding personal contributions to Social Security, Medicare, or employee pension plans. Average annual earnings represent the total earnings divided by the number of jobs. The average hourly wage represents the average annual earnings divided by 2,080 hours, which assumes 40 working hours per week for 52 weeks per year. If less than one job is supported, the average hourly wage detailed represents an annualized wage assuming 2,080 working hours per year. Lastly, economic activity refers to the total cost of construction and related activities, the direct sales of tenant businesses, and the subsequent spending on goods and services occuring in the local economy.

The impacts of construction and related activities represent the investment and labor necessary to construct or redevelop the Arcade District Project and the associated impacts on earnings. The impacts of operations represent the labor required to operate the Arcade District Project as well as the associated impacts on earnings. The impacts of the tenant businesses represent the labor required by anticipated tenants of the Arcade District Project and the associated impacts on earnings and economic activity.

Mixed-use developments will affect local communities through the purchases of local goods and services made by the development and its tenants. In turn, those local businesses supported purchase goods and services at other local businesses. The direct impacts during the construction period include the cost of design, building materials and equipment, and the earnings of construction employees. The direct impacts during the completion period include the local cost of supplies, maintence, and wages paid to employees resulting from the operations of the development and from the tenant businesses. These direct expenditures affect other industries by increasing demand for products and services, creating jobs associated with the provision of these products and services, and generating incomes. This is the indirect impact, or the additional economic impact that is a result from inter-industry linkages. The indirect impacts are the expenditures and employment that are created in the local economy to the extent that industries and households are supported by and respond to the new demands of the directly impacted industries. Finally, the direct and indirect impacts create induced impacts due to the spending of private households. Per the Ohio Department of Development's TMUD Program Economic Impact Statement Framework for fiscal year 2024, induced impact are excluded from this analysis.

The Economics Center used an input-output model to conduct this economic impact analysis. Input-output models give a picture of the direct and indirect impacts of a given business or organization on its local economy. The input-output model includes industry- and location-specific multipliers that capture the interdependencies of an economy's various industries, quantifying how direct expenditures

[8] (National Economic Estimating Conference 2023)

on goods or services by a particular industry (or to individuals in the form of wages) yield additional changes in jobs, earnings, and economic activity within that economy. Multipliers are figures that represent all of the inter-industry relationships measured in the input-output model. Multipliers were sourced from Lightcast, a third-party provider of labor market data. Lightcast utilizes labor market data and other publicly available sources in a proprietary methodology to allow for tailored economic multipliers in a specified geographic area. For every dollar spent by a given organization in a particular industry, multipliers reflect how many more dollars will be spent in a local economy by other businesses, thereby determining the total economic impact of a project or investment. Multipliers also measure how many jobs and the amount of earnings that will be generated in an economy for a given level of expenditure.

All economic impact figures refer to the impact of the Arcade District Project on its Surrounding Area. The Surrounding Area for a project located within ten miles of a major city, determined by starting from the corporate boundary of the major city and extending out ten miles from that boundary, is defined as the area encompassed within a perimeter starting from the transformational mixed-use development boundary and extending one-half mile out from that boundary and includes any zip code covered in whole or in part. For the Arcade District Project, the Surrounding Area is defined as zip codes 45401, 45402, 45405, 45410, 45412, 45422, 45423, and 45482.

The Economics Center calculated the economic impact of the construction and related activities of the Arcade District Project using estimates of construction costs by year as well as the size and scope of the Project, Development, and catalyzed projects, which were provided by Dayton Arcade Partners, LLC. Economic impact calculations were supplemented with industry data for the Surrounding Area from Lightcast. Industry data for the average annual earnings per job within the construction industry are utilized to estimate the earnings generated by construction. Additionally, industry data is also utilized to estimate the jobs supported by the construction and related activities of the Arcade District Project.

The Economics Center calculated the economic impact of the operations of the Project and of the tenant businesses using projected revenues and/or employees provided by Dayton Arcade Partners, LLC. Data provided by Dayton Arcade Partners, LLC was supplemented with industry data for the Surrounding Area from Lightcast. All dollars reported in this analysis reflect nominal dollars.

According to Dayton Arcade Partners, LLC, the operations of the Arcade District Project will support nine full-time equivalent employees each year. The Economics Center calculated the economic impact of the operations of the Sourth Arcade Part 1 phase of the Arcade District Development by using estimates of the number of square feet per job. For nonresidential spaces, it was assumed that 35,657 square feet of space supports one job.[9] The earnings associated with these jobs is estimated using industry data for the Surrounding Area from Lightcast.

The economic impact of the hotel, retail, and restaurant spaces of the Arcade District Project are estimated based on direct sales generated. The sales of the hotel's operations are estimated based on the number of hotel rooms, occupancy, and the average daily room rate provided by Dayton Arcade Partners, LLC. Projections of the direct sales of the retail and restaurant spaces associated with the hotel were also provided by Dayton Arcade Partners, LLC. The retail space within the hotel is projected to generate $650,000 in sales annually, whereas the restaurant space within the hotel is projected to generate $3.5 million in sales annually.[10] Dayton Arcade Partners, LLC also projects that the hotel will support 35 jobs annually. The Arcade District Project also includes retail and restaurant spaces not associated with the hotel. These retail and restaurant spaces are projected to generate $850 in sales

[9] (International Facility Management Association 2010)
[10] Reported in 2023 dollars.

per square foot, according to Dayton Arcade Partners, LLC.[11] According to Dayton Arcade Partners, LLC, the retail and restaurat spaces within the South Arcade Part 1 phase of the Arcade District Development are also projected to generate $850 in sales per square foot.[12] Industry data for the Surrounding Area was utilized to estimate the direct jobs supported by the retail and restaurant spaces and direct earnings generated by the hotel, retail, and restaurant spaces. Direct jobs are estimated using the sales per job of the respective industries, and direct earnings are estimated using the average annual earnings per job of the respective industries.

The economic impact of the institutional/event and office spaces with the Arcade District Development is estimated based on the direct jobs supported. According to the City of Davis, 278 square feet of office space supports one job.[13] According to the U.S. Energy Information Administration, approximately 2,265 square feet of meeting space supports one job.[14] The institutional/event space is assumed to support one job per 1,272 square feet, based on an average square feet per job of office and meeting spaces. Industry data for the Surrounding Area were utilized to estimate direct sales and direct earnings. Direct sales are estimated using the sales per job for the resepective industries, and direct earnings are estimated using the average annual earnings per job of the respective industries.

The catalyzed projects of the Arcade District Project encompass a combination of hotel, restaurant, retail, commercial, office, entertainment, and innovation spaces. The economic impact of the hotel space is estimated based on the average revenue per room. According to STR, the average revenue per room in July 2023 was $110.33.[15] After regionally adjusting to the Dayton-Kettering Metropolitan Statistical Area, the average room revenue per room is $102.09.[16] The economic impact of the restaurant and retail spaces is estimated based on the sales per square foot. According to a report by Bloom Intelligence, the sales per square foot for full-service restaurants and limited-service restaurants is between $250 and $325 and between $300 and $400, respectively, assuming the restaurant is generating a profit.[17] The Economics Center used the average sales per square foot of full-service and limited-service restaurants, which is $319.[18] According to a Cushman and Wakefield report, Cincinnati and Dayton had approximately 63.2 million square feet of retail space in second quarter of 2022.[19] The total retail sales in the Cincinnati and Dayton-Kettering Metropolitan Statistical Areas totaled approximately $20.7 billion during 2022, according to data from Lightcast. Therefore, the sales per square foot of retail spaces in Cincinnati and Dayton equates to approximately $327.[20] The economic impact of commercial space is based on the average sales per square foot of restaurant and retail spaces, or $323. The economic impact of the office, meeting, and entertainment spaces is based on the direct jobs supported. According to the City of Davis, 278 square feet of office space supports one job.[21] According to the U.S. Energy Information Administration, approximately 2,265 square feet of meeting space supports one job, whereas 2,401 square feet of entertainment space supports one job.[22] The direct jobs and revenue supported by the innovation space were provided by Infinity Labs via Dayton Arcade Partners, LLC. Industry data for the Surrounding Area were utilized to estimate direct jobs, direct earnings, and/or direct sales depending on the use type.

Per the Ohio Revised Code, Section 4173.01, a retail establishment refers to "a place of business open to the general public for the sale of goods or services." Per the Ohio Revised Code, Section 5739.01, a retail sale includes "all sales, except those in which the purpose of the consumer is to resell the thing transferred or benefit of the service provided, by a person engaging in business, in the form in which the same is, or is to be, received by the person." By these definitions and for the puposes of the TMUD application, retail sales reported in this Economic Impact Statement are inclusive of sales at the retail, office, hotel, commercial, parking, and event use spaces of the the Arcade District Project. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, construction sales as well as indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Fiscal Impact

Once the Arcade District Project is operational, fiscal impacts will accrue for the State of Ohio, Montgomery County, the City of Dayton, and Dayton Public Schools. The fiscal impact represents the subsequent impact of construction, operations, and tenants on state and local jurisdictions. Fiscal impacts include sales, income, lodging, and property tax revenue as well as collections through alternate tax methods such as payments in lieu of taxes (PILOT payments). These revenues constitute a one-time fiscal impact during construction period, and a recurring impact during the completion period.

Sales tax revenue for the State of Ohio and Montgomery County are generated by the spending at the hotel, restaurant, retail, and commercial spaces. The earnings of construction, operations, and tenant employees will generate income tax revenue for the State of Ohio and the City of Dayton. The operations of the hotel generate lodging tax revenue for Montgomery County and the City of Dayton. Montgomery County, the City of Dayton, and Dayton Public Schools benefit from increases in property tax revenues. Additionally, Dayton Arcade Partners, LLC will also make PILOT payments to Dayton Public Schools.

All fiscal impacts are calculated using the most recent, applicable tax rates for the State of Ohio, the county, and local jurisdictions. It is assumed that all tax rates remain unchanged in future years. State income tax revenues are calculated using the average annual earnings for the direct and indirect jobs supported by each use type. Therefore, the total state income tax revenues reported will not match estimates based on the average annual earnings of all jobs supported.

Construction Period Impacts

Construction Project Impacts

Prior to the Arcade District Project coming online, the Project will impact the local economy through construction and related activities. Construction projects such as the Arcade District Project require large quantities of building materials, many purchased from local businesses, as well as the services of local building contractors and related trades. The construction period refers to the period between the start of construction and the opening of the Project. For the Arcade District Project, the construction period refers to 2024 through 2025.

As shown in Table 10, the construction and related activities of the Arcade District Project will directly support 565 jobs at the Project site during the construction period. The jobs supported will have total earnings of $56.3 million during the construction period. The direct jobs supported by the construction and related activities of the Arcade District Project will have average annual earnings of $99,646. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the construction and related activities of the Arcade District Project is $47.91.

Year of Construction	FTE Construction Jobs	Average Hourly Wage	Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
Total	**565**	**$47.91**	**$56,262,425**

Source: Economics Center calculations.

As shown in Table 11, the construction and related activities of the Arcade District Project are estimated to generate $146.8 million in construction sales. This represents the direct sales generated by the construction and related activities of the Arcade District Project. For the purposes of the TMUD Program, construction sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Table 11: Construction Project Impacts on Sales

Source: Economics Center calculations.

The jobs directly supported by the construction and related activities of the Arcade District Project generate income tax revenue for the State of Ohio and the City of Dayton. The direct jobs supported by the construction and related activities of the Arcade District Project will generate a total of $2.9 million in income tax revenue during the construction period, as shown in Table 12. The State of Ohio will receive $1.5 million, while the City of Dayton will receive $1.4 million.

Table 12: Construction Project Impacts on Taxes

Source: Economics Center calculations.

Construction Development Impacts

The Arcade District Development encompasses the redevelopment of 11 buildings across two city blocks in Dayton's central business district. The Arcade District Project refers to four phases – South Arcade Part 2, North Arcade, Centre City Building, and Air City Parking Garage – of the larger Arcade District Development. Phase 1 of the Arcade District Development, referred to as the South Arcade Part 1, completed construction in 2021. The South Arcade Part 1 phase includes 130,000 square feet of institutional/event space, 29,000 square feet of office space, 10,000 square feet of restaurant space, and 6,200 square feet of retail space. The total development costs of the South Arcade Part 1 phase

were approximately $60.1 million. Per the Ohio Department of Development's TMUD Guidelines, the impacts of the South Arcade Part 1 phase of the Arcade District Development are not included in the construction period impacts since construction has been completed. However, the South Arcade Part 1 phase of the Arcade District Development is included in the completion period impacts.

Construction Surrounding Area Impacts

The direct economic activity generated by the construction and related activities of the Arcade District Project will generate additional indirect impacts within the Surrounding Area as a result of the inter-industry linkages. The local businesses that benefit from the direct expenditures of the construction of the Arcade District Project will, in turn, continue to spend in the local economy some of the dollars originally spent on the construction and related activities of the Arcade District Project. This process will repeat itself until all the original dollars leak out of the economy of the Surrounding Area.

As detailed in Table 13, the construction and related activities of the Arcade District Project will indirectly support 56 jobs with earnings of $4.0 million in the Surrounding Area. The indirect jobs supported will have average annual earnings of $72,158. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the indirect jobs supported by the construction and related activities of the Arcade District Project is $34.69.

Table 13: Construction Surrounding Area Impacts on Jobs and Payroll

Year of Construction	FTE Jobs	Average Hourly Wage	Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
Total	**56**	**$34.69**	**$4,003,498**

Source: Economics Center calculations.

During the construction period, the spending on the construction and related activities of the Arcade District Project will lead to further indirect spending of $10.5 million in the Surrounding Area, as detailed in Table 14. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Table 14: Construction Surrounding Area Impacts on Sales

Year of Construction	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales	Total Projected Sales
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Total	**$10,540,266**	**N/A**	**N/A**	**$10,540,266**

Source: Economics Center calculations.

Income tax revenue is generated for the State of Ohio and the City of Dayton by the indirect jobs supported by the construction and related activities of the Arcade District Project. The indirect jobs supported by the construction and related activities of the Arcade District Project will generate a total of $197,498 in income tax revenue during the construction period, as shown in Table 15. The State of Ohio will receive $97,411, while the City of Dayton will receive $100,087.

Table 15: Construction Surrounding Area Impacts on Taxes

Construction Catalyzed Impacts

The Arcade District is in the center of a deeply distressed part of downtown Dayton with over 2.0 million square feet of blighted vacant and underutilized buildings in adjacent blocks. With virtually no retail, housing, or hospitality uses, this desolate area at the heart of downtown has long been a focal point of Dayton's revitalization efforts. As a result, the Mayor, City Commission, and City Manager made the resurrection of the Dayton Arcade and launch of the Arcade District the City's Top Economic and Community Development Priority for eight years. The Arcade District is the centerpiece of the City's arts and technology ecosystem.

The Arcade District Development will directly cause or accelerate 12 additional projects in the Surrounding Area. The direct and indirect economic and fiscal impacts of the construction and related activities of each catalyzed project are detailed in this section. The economic impact refers to the jobs, earnings, and sales directly generated by the construction of the catalyzed projects and the additional indirect impacts within the Surrounding Area as a result of the inter-industry linkages. The fiscal impacts refer to the income tax revenue generated for state and local jurisdictions by the catalyzed projects.

Hotel Ardent

The redevelopment of the 10-story Barclay Building at the corner of First and Main Street in downtown Dayton is a Project that has been accelerated or directly caused by the Arcade District. Located on the same block of Dayton's premier performing arts venues, the Hotel Ardent Project comprises a 118-room boutique hotel as well as 4,000 square feet of commercial space. This Project has been identified as a critical next step, in conjunction with other housing and hospitality developments, in resetting the vibrancy of the struggling Main Street corridor. Construction started in 2021 with the opening of the Hotel Ardent Project expected in fall 2023. The total development costs associated with the Hotel Ardent Project were approximately $26.5 million.[23] Because the Hotel Ardent Project completed construction prior to the construction period for the Arcade District Project, the construction impacts are not included per the TMUD Guidelines. However, the Hotel Ardent Project is included in the completion period impacts.

Dayton International Peace Museum

The expansion of the Dayton International Peace Museum (Peace Museum) included the renovation of 5,000 square feet of space at 10 Courthouse Plaza SW and is a Project that has been accelerated or directly caused by the Arcade District. The expansion of the Peace Museum features an open environment and contains a 150-seat theater, exhibition space, and classrooms. Construction for this Project occurred in 2022. The total development costs associated with the Peace Museum Project were approximately $500,000.[24] Because the Peace Museum Project completed construction prior to the

[23] Assumed to be reported in 2022 dollars.
[24] Assumed to be reported in 2022 dollars.

construction period for the Arcade District Project, the construction impacts are not included per the TMUD Guidelines. However, the Peace Museum Project is included in the completion period impacts.

Power House

The Power House Project is the historic renovation of a Dayton Power and Light steam power plant, which is one of Dayton's oldest buildings, into a research and development prototyping facility for Infinity Labs (I-Labs). Built in 1887, the industrial building is otherwise a likely candidate for near-term demolition in its current state. The Power House Project will comprise 45,000 square feet of collaboration space. Of this space, 2,200 square feet is dedicated Sensitive Compartmented Information Facility (SCIF) space for Department of Defense Projects and 10,000 square feet will be specialized high-tech labs including biotechnology, nanotechnology, eukaryotic, rapid prototyping, and bio hazard rated wet labs.

As one of Southwest Ohio's fastest growing tech startups, I-Labs estimates that the Power House Project will generate $355.1 million in sales and support the direct employment of 460 jobs when the project is operational in 2024.[25] By adding SCIFs, specialty lab, and highly sophisticated pilot product maker space to the downtown Dayton entrepreneurial ecosystem, the Power House Project expands on the innovation renaissance started by the Arcade District and will attract significant investment into the Dayton Region. Ken Edge, CEO of I-Labs, describes I-Labs' choice to launch its fast-growing business in downtown Dayton as due to the synergies with the Arcade Innovation Hub. I-Labs will be locating their office space in South Arcade Part 2, establishing collaborative entrepreneurial support service and workforce training relationships with The Entrepreneurs Center, University of Dayton, Sinclair Community College, and other Arcade Innovation Hub resources. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Power House Project are approximately $25.0 million.[26] The construction period for the Arcade District Project refers to 2024 through 2025. Therefore, only the second year of construction of the Power House Project is included.

As shown in Table 16, the construction and related activities of the Power House Project will directly support 50 jobs during the construction period of the Arcade District Project. The jobs supported will have total earnings of $5.0 million. The direct jobs supported by the construction and related activities of the Power House Project will have average annual earnings of $98,673. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the construction and related activities of the Power House Project is $47.44.

Table 16: Power House Direct Construction Impacts on Jobs and Payroll

Year of Construction	FTE Construction Jobs	Average Hourly Wage	Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
Total	**50**	**$47.44**	**$4,982,247**

Source: Economics Center calculations.

As shown in Table 17, the construction and related activities of the Power House Project are estimated to generate $13.0 million in construction sales during the construction period of the Arcade District Project. This represents the direct economic activity generated by the Power House Project. For the

[25] Assumed to be reported in 2024 dollars.
[26] Assumed to be reported in 2023 dollars.

purposes of the TMUD Program, construction sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

The direct jobs supported by the construction and related activities of the Power House Project will generate a total of $257,918 in income tax revenue for the State of Ohio and the City of Dayton during the construction period of the Arcade District Project, as shown in Table 18. The State of Ohio will receive $133,362, while the City of Dayton will receive $124,556.

As detailed in Table 19, the construction and related activities of the Power House Project will indirectly support five jobs with earnings of $354,525 in the Surrounding Area during the construction period of the Arcade District Project. The indirect jobs supported will have average annual earnings of $71,454. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the indirect jobs supported by the construction and related activities of the Power House Project is $34.35.

Table 19: Power House Indirect Construction Impacts on Jobs and Payroll

As detailed in Table 20, the spending on the construction and related activities of the Power House Project will lead to further indirect spending of $933,380 in the Surrounding Area during the construction period of the Arcade District Project. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Algonquin Hotel/Dayton Grand

Vacant for the better part of the last 10 years, the renovation of the former Algonquin Hotel (more recently known as the Dayton Grand) at 11 S. Ludlow Street is a Project catalyzed by the revitalization of downtown Dayton spurred by the Arcade District. This Project is located in a part of downtown Dayton with no nearby amenities prior to the Arcade District Development. The Mayfair Group, developer of the Algonquin Hotel/Dayton Grand Project, is quick to emphasize how critical the Arcade District is to their decision to move forward with their investment. The renewed Dayton Grand will comprise 103 apartments, 4,000 square feet of restaurant space, and 12,000 square feet of entertainment space. Additionally, the Mayfair Group is signing a lease for a 5,500 square foot restaurant space in the South Arcade Part 2 across Ludlow Street with the goal of "double loading" both sides of the street with evening and weekend activity. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Algonquin Hotel/Dayton Grand Project are approximately $26.0 million.[27] The construction period for the Arcade District Project refers to 2024 through 2025. Therefore, only the second year of construction of the Algonquin Hotel/Dayton Grand Project is included.

As shown in Table 22, the construction and related activities of the Algonquin Hotel/Dayton Grand Project will directly support 53 jobs during the construction period of the Arcade District Project. The jobs supported will have total earnings of $5.2 million. The direct jobs supported by the construction and related activities of the Algonquin Hotel/Dayton Grand Project will have average annual earnings of $98,673. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the construction and related activities of the Algonquin Hotel/Dayton Grand Project is $47.44.

[27] Assumed to be reported in 2023 dollars.

As shown in Table 23, the construction and related activities of the Algonquin Hotel/Dayton Grand Project are estimated to generate $13.5 million in construction sales during the construction period of the Arcade District Project. This represents the direct economic activity generated by the Algonquin Hotel/Dayton Grand Project. For the purposes of the TMUD Program, construction sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

As detailed in Table 26, the spending on the construction and related activities of the Algonquin Hotel/Dayton Grand Project will lead to further indirect spending of $970,715 in the Surrounding Area during the construction period of the Arcade District Project. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Dayton Convention Center

The renovation of the 48-year old Dayton Convention Center aims to bolster the conference and event offerings in downtown Dayton and provide a regional attraction for the Dayton Region. The Dayton Convention Center has long struggled in the mid-city market. However, the leadership of the Convention Center Authority points to the revitalization occurring as a result of the Arcade District as essential to energizing the currently desolate environment around the Dayton Convention Center. The Arcade District's planned 14 food and beverage offerings encompassing 52,000 square feet within a block walk—where there is only one restaurant currently—will establish the lively, safe ecosystem necessary to propel the Dayton Convention Center's marketing. The Arcade District's "Best in Ohio" event spaces add

an important attraction for conference planners looking for exciting off-site venues. Finally, the new 332 high quality hotel rooms in the North Arcade and the two catalyzed hotel projects, the Hotel Ardent and Grant Deneau Tower Projects, create much needed room options to complement the undersized Radisson Convention Center hotel. The combination of these Arcade District factors is accelerating and expanding the Dayton Convention Center Project. The Dayton Convention Center Project will renovate 150,000 square feet of meeting space including a 77,000 square foot exhibit hall, 22 meeting rooms, three ballrooms, and a theater. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Dayton Convention Center Project are approximately $35.0 million.[28] The construction period for the Arcade District Project refers to 2024 through 2025. Therefore, only the second year of construction of the Dayton Convention Center Project is included.

As shown in Table 28, the construction and related activities of the Dayton Convention Center Project will directly support 71 jobs during the construction period of the Arcade District Project. The jobs supported will have total earnings of $7.0 million. The direct jobs supported by the construction and related activities of the Dayton Convention Center Project will have average annual earnings of $98,673. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the construction and related activities of the Dayton Convention Center Project is $47.44.

As shown in Table 29, the construction and related activities of the Dayton Convention Center Project are estimated to generate $18.2 million in construction sales during the construction period of the Arcade District Project. This represents the direct economic activity generated by the Dayton Convention Center Project. For the purposes of the TMUD Program, construction sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Grant Deneau Tower

The Windsor Group is redeveloping Dayton's first modern high-rise building at 40 W. Fourth Street, which has been vacant for at least the last six years. The Grant Deneau Tower Project is located directly across the street from the Arcade District and is cited by the Windsor Group as being catalyzed by the Arcade District. Contributing to the mixed-use reactivation of Dayton's urban core, the Grant Deneau Tower Project will comprise 60 luxury apartments, a 120-room hotel, 90,000 square feet of office space, and 10,000 square feet of restaurant space. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Grant Deneau Tower Project are approximately $50.0 million.[29] The construction period for the Arcade District Project refers to 2024 through 2025. Therefore, only the second year of construction of the Grant Deneau Tower Project is included.

As shown in Table 34, the construction and related activities of the Grant Deneau Tower Project will directly support 101 jobs during the construction period of the Arcade District Project. The jobs supported will have total earnings of $10.0 million. The direct jobs supported by the construction and related activities of the Grant Deneau Tower Project will have average annual earnings of $98,673. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the construction and related activities of the Grant Deneau Tower Project is $47.44.

Midwest Tool Complex Redevelopment

The Windsor Group is demolishing a former industrial property on the 100 block of Webster Street to build a new, four-story apartment building. The Midwest Tool Complex Redevelopment Project will have 102 residential units on the upper floors and 4,750 square feet of retail space on the ground level. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Midwest Tool Complex Redevelopment Project are approximately $25.0 million.[30] The construction period for the Arcade District Project refers to 2024 through 2025. Therefore, only the second year of construction of the Midwest Tool Complex Redevelopment Project is included.

As shown in Table 40, the construction and related activities of the Midwest Tool Complex Redevelopment Project will directly support 50 jobs during the construction period of the Arcade District Project. The jobs supported will have total earnings of $5.0 million. The direct jobs supported by the construction and related activities of the Midwest Tool Complex Redevelopment Project will have average annual earnings of $98,673. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the construction and related activities of the Midwest Tool Complex Redevelopment Project is $47.44.

Price Stores and Journal Herald Buildings

The Windsor Group is leveraging the vibrancy and activation created by the Arcade District in downtown Dayton to redevelop the historic Price Stores and Journal Herald Buildings located on the block adjacent to the Centre City Building of the Arcade District. The Price Stores and Journal Herald Buildings have been vacant for over ten years. The Price Stores and Journal Herald Buildings Project will comprise 35 market rate apartments on floors two through five and 14,530 square feet of commercial space on the first floor. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Prices Stores and Journal Herald Buildings Project are

approximately $12.0 million.[31] The construction period for the Arcade District Project refers to 2024 through 2025. Therefore, only the second year of construction of the Price Stores and Journal Herald Buildings Project is included.

As shown in Table 46, the construction and related activities of the Price Stores and Journal Herald Buildings Project will directly support 24 jobs during the construction period of the Arcade District Project. The jobs supported will have total earnings of $2.4 million. The direct jobs supported by the construction and related activities of the Price Stores and Journal Herald Buildings Project will have average annual earnings of $98,673. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the construction and related activities of the Price Stores and Journal Herald Buildings Project is $47.44.

Delco

Crawford Hoying, in partnership with the Port Authority, City of Dayton, and the Dayton Public School District, are redeveloping the Dayton Engineering Laboratories Company (Delco) building at 340 East First Street in downtown Dayton. The Delco building was constructed in 1915 to serve as the second plant for the Delco Company, but was later abandoned in the 1980s. This is a project that has been accelerated or directly caused by the Arcade District. The Delco Project will comprise 160 apartments, 480 parking spaces, 60,000 square feet of office space, and 15,000 square feet of retail space. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Delco Project are approximately $85.0 million.[33] The construction period for the Arcade District Project refers to 2024 through 2025. Therefore, only the second year of construction of the Delco Project is included.

As shown in Table 58, the construction and related activities of the Delco Project will directly support 172 jobs during the construction period of the Arcade District Project. The jobs supported will have total earnings of $16.9 million. The direct jobs supported by the construction and related activities of the Delco Project will have average annual earnings of $98,673. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the construction and related activities of the Delco Project is $47.44.

[33] Assumed to be reported in 2023 dollars.

As shown in Table 59, the construction and related activities of the Delco Project are estimated to generate $44.2 million in construction sales during the construction period of the Arcade District Project. This represents the direct economic activity generated by the Delco Project. For the purposes of the TMUD Program, construction sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Source: Economics Center calculations.

The direct jobs supported by the construction and related activities of the Delco Project will generate a total of $876,920 in income tax revenue during the construction period of the Arcade District Project, as shown in Table 60. The State of Ohio will receive $453,429, while the City of Dayton will receive $423,491.

As detailed in Table 61, the construction and related activities of the Delco Project will indirectly support 17 jobs with earnings of $1.2 million in the Surrounding Area during the construction period of the Arcade District Project. The indirect jobs supported will have average annual earnings of $71,454. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the indirect jobs supported by the construction and related activities of the Delco Project is $34.35.

As detailed in Table 62, the spending on the construction and related activities of the Delco Project will lead to further indirect spending of $3.2 million in the Surrounding Area during the construction period of the Arcade District Project. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

211 and 225 S. Main Street

The historic renovation of the vacant Fidelity Medical Building at 211 S. Main Street and the nearby vacant building at 225 S. Main Street is a Project accelerated or directly caused by the investment of the Arcade District. The 211 and 225 S. Main Street Project will comprise 100 market rate apartments and 4,000 square feet of commercial space. This Project is vital to the success of the Dayton Convention Center renovation. Construction for this Project is anticipated to occur between 2024 and 2025. The

total development costs associated with the 211 and 225 S. Main Street Project are approximately $54.3 million.[34]

As shown in Table 64, the construction and related activities of the 211 and 225 S. Main Street Project will directly support 220 jobs during the construction period of the Arcade District Project. The jobs supported will have total earnings of $21.9 million. The direct jobs supported by the construction and related activities of the 211 and 225 S. Main Street Project will have average annual earnings of $99,808. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the construction and related activities of the 211 and 225 S. Main Street Project is $47.98.

As shown in Table 65, the construction and related activities of the 211 and 225 S. Main Street Project are estimated to generate $57.1 million in construction sales during the construction period of the Arcade District Project. This represents the direct economic activity generated by the 211 and 225 S. Main Street Project. For the purposes of the TMUD Program, construction sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

As detailed in Table 68, the spending on the construction and related activities of the 211 and 225 S. Main Street Project will lead to further indirect spending of $4.1 million in the Surrounding Area during the construction period of the Arcade District Project. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Fourth and Ludlow

Made possible by the investment in the Arcade District, the Fourth and Ludlow Project will renovate the original portion of the historic Cox Media/Dayton Daily News Building that was built in the early 1900s. This long vacant, blighted building and the demolished 2.5-acre site of the old Dayton Daily News surrounding it will first be a construction staging area for the Arcade District and then be transformed into a mixed-use development. The site is directly across the street from the South Arcade block of the Arcade District, integrating the South Arcade, Grant Deneau Tower, and Algonquin Hotel/Dayton Grand sites as lively, double loaded retail streets. The Project also infills a vacant block connecting to the Sinclair Community College campus, Ohio's largest community college. The Fourth and Ludlow Project will comprise 250 parking spaces and 16,190 square feet of retail space. Construction for this Project is anticipated to occur between 2024 and 2025. Dayton Arcade Partners, LLC has site control of this site and commits to development of this site following completion of the North Arcade and South Arcade. The total development costs associated with the Fourth and Ludlow Project are approximately $54.0 million.[35]

As shown in Table 70, the construction and related activities of the Fourth and Ludlow Project will directly support 218 jobs during the construction period of the Arcade District Project. The jobs supported will have total earnings of $21.8 million. The direct jobs supported by the construction and related activities of the Fourth and Ludlow Project will have average annual earnings of $99,808. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the construction and related activities of the Fourth and Ludlow Project is $47.98.

Total Construction Catalyzed Impacts

The total construction jobs and associated payroll of the construction and related activities of the catalyzed projects of the Arcade District Project are detailed in Table 76. The catalyzed projects will directly and indirectly support a total of 1,109 construction jobs with earnings of $107.2 million in the Surrounding Area's economy during the construction period of the Arcade District Project. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the jobs supported by the construction and related activities of the catalyzed projects is $46.47.

Table 76: Total Catalyzed Construction Impacts on Jobs and Payroll

Year of Construction	FTE Construction Jobs	Average Hourly Wage	Total Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
Total	**1,109**	**$46.47**	**$107,181,787**

Source: Economics Center calculations.

As detailed in Table 77, the construction and related activities of the catalyzed projects of the Arcade District Project will generate a total of $279.8 million in sales within the Surrounding Area, of which $261.1 million are direct sales and $18.7 million are indirect sales. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, construction sales as well as indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Completion Period Impacts

Project Impacts

The Arcade District Project will include [redacted], [redacted], a [redacted] hotel, 48,500 square feet of office space, 35,200 square feet of retail space, 25,000 square feet of restaurant space, and 10,000 square feet of event space. The total development costs associated with Project construction are approximately $139.8 million.[36]

Once the Arcade District Project is operational, annual economic impacts in the form of jobs, earnings, and sales will be directly generated by the operations and tenant businesses of the Arcade District Project. Additionally, fiscal impacts in the form of tax revenues and collections through alternate tax methods will be generated for state and local jurisdictions. The impacts of operations represent the labor required to operate the Arcade District Project as well as the associated impacts on earnings. The impacts of the tenant businesses represent the labor required by anticipated tenants of the Arcade District Project and the associated impacts on earnings and sales.

Full economic and fiscal impacts of operations of the Arcade District Project will be realized once target occupancy and sales are reached and operating revenues and expenditures stabilize. The economic and fiscal impacts discussed in this section reflect full occupancy and target-level sales.

Operations impacts result from the management of the Project site after construction is complete and operations commence. As shown in Table 79, the operations of Arcade District Project will directly support 11 jobs per year. These operations jobs represent the labor required to manage the Project site

[36] Reported in 2023 dollars.

such as leasing agents, grounds crew, and maintenance and custodial staff. A total of 55 operations jobs will be supported during the completion period. The operations jobs supported will have total earnings of $4.4 million during the completion period, or an average of $874,432 per year. The direct jobs supported by the operations of the Arcade District Project will have average annual earnings of $79,494. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the operations of the Arcade District Project is $38.22.

[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
Total	**55**	**$38.22**	**$4,372,159**

Source: Economics Center calculations.

The tenant businesses of the Arcade District Project will generate revenues from services provided by tenants of the office and event spaces as well as through hotel, restaurant, retail, and parking purchases. These businesses will also hire and pay wages to employees needed to maintain daily operations. The economic impact of the tenant businesses of the Arcade District Project respresent the sales, jobs, and earnings generated at the Project site.

Once tenant operations commence, the Arcade District Project will directly support 3,560 tenant jobs at the Project site with earnings of $173.6 million during the completion period, as detailed in Table 80. Each year an average of 712 tenant jobs with earnings of $34.7 million will be directly supported by the tenant businesses of the Arcade District Project. This translates into average annual earnings of $48,805 per employee. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of direct employees of tenant businesses is $23.46.

[redacted]	[redacted]	[redacted]	[redacted]
Total	**3,560**	**$23.46**	**$173,624,867**

Source: Economics Center calculations.

As detailed in Table 81, the tenant businesses operating within the Arcade District Project will directly generate an estimated $524.4 million in sales during the completion period. The direct sales of tenant businesses over the completion period comprise $420.7 million in retail sales and $103.8 million in

dining sales. On average, a total of $104.9 million in sales will be directly generated by the tenant businesses of the Arcade District Project each year.

Table 82 details the fiscal impacts of the operations and tenant businesses of the Arcade District Project. During the completion period, the spending of the Arcade District Project's hotel, restaurant, and retail shoppers will generate $21.2 million in sales tax revenues for the State of Ohio and Montgomery County. The State of Ohio and the City of Dayton will benefit from a total of $8.3 million in income tax revenues as a result of operations and tenant businesses during the completion period. Montgomery County and the City of Dayton will benefit from $1.1 million in lodging tax revenues from hotel guests. Additionally, the Arcade District Project will generate nearly $3.0 million in property tax revenue. In total, the Arcade District Project will directly create approximately $33.6 million in fiscal benefits for state and local jurisdictions during the completion period.

Development Impacts

The Arcade District Project is part of the larger Arcade District Development. The Arcade District Development encompasses the redevelopment of 11 buildings across two city blocks in Dayton's central business district. The Arcade District Project refers to four phases – South Arcade Part 2, North Arcade, Centre City Building, and Air City Parking Garage – of the larger Arcade District Development. Phase 1 of the Arcade District Development, referred to as the South Arcade Part 1, completed construction in 2021. The South Arcade Part 1 phase of the Arcade District Development encompasses 130,000 square

[37] Payments in lieu of taxes are included in property tax revenue.

feet of institutional/event space, 29,000 square feet of office space, 10,000 square feet of restaurant space, and 6,200 square feet of retail space.

Per the Ohio Department of Development's TMUD Guidelines, the impacts of the South Arcade Part 1 phase of the Arcade District Development are not included in the construction period impacts since construction has been completed. However, the South Arcade Part 1 phase of the Arcade District Development is included in the completion period impacts.

Annual economic impacts in the form of jobs, earnings, and sales are directly generated by the operations and tenant businesses of the South Arcade Part 1 phase of the Arcade District Development. Additionally, fiscal impacts in the form of tax revenues are generated for state and local jurisdictions. The impacts of operations represent the labor required to operate the South Arcade Part 1 phase of the Arcade District Development as well as the associated impacts on earnings. The impacts of the tenant businesses represent the labor required by tenants of the South Arcade Part 1 phase of the Arcade District Development and the associated impacts on earnings and sales.

The economic and fiscal impacts of the South Arcade Part 1 phase of the Arcade District Development are reported for the completion period associated with the Arcade District Project, which refers to 2026 through 2030. The economic and fiscal impacts discussed in this section reflect full occupancy and target-level sales.

Direct Impacts

Operations impacts result from the management of the Development site after construction is complete and operations commence. As shown in Table 83, the operations of the South Arcade Part 1 phase of the Arcade District Development will directly support five jobs per year. These jobs represent the labor required to manage the site such as leasing agents, grounds crew, and maintenance and custodial staff. A total of 25 jobs will be supported during the completion period of the Arcade District Project. The jobs supported will have total earnings of $2.5 million during the completion period, or an average of $496,799 per year. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the operations of the South Arcade Part 1 phase of the Arcade District Development is $48.61.

Table 83: Direct Development Impacts on Operations Jobs and Payroll

The tenant businesses of the South Arcade Part 1 phase of the Arcade District Development generate revenues from services provided by tenants of the institutional/event and office spaces as well as through restaurant and retail purchases. These businesses also hire and pay wages to employees needed to maintain daily operations. The economic impact of the tenant businesses of the South Arcade Part 1

phase of the Arcade District Development respresent the sales, jobs, and earnings generated at the Development site.

During the compeltion period of the Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development will directly support 1,760 jobs at the Development site with earnings of $104.7 million, as detailed in Table 84. Each year an average of 352 jobs with earnings of $20.9 will be directly supported by the tenant businesses of the South Arcade Part 1 phase of the Arcade District Development. This translates into average annual earnings of $59,592 per employee. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of direct employees of tenant businesses is $28.65.

As detailed in Table 85, the tenant businesses operating within the South Arcade Part 1 phase of the Arcade District Development will directly generate an estimated $290.3 million in sales during the completion period of the Arcade District Project. The direct sales of tenant businesses during the completion period comprise $241.1 million in retail sales and $49.2 million in dining sales. On average, a total of $58.1 million in sales will be directly generated by the tenant businesses of the South Arcade Part 1 phase of the Arcade District Development each year.

Table 86 details the direct fiscal impacts of the operations and tenant businesses of the South Arcade Part 1 phase of the Arcade District Development. During the completion period of the Arcade District Project, the spending of the restaurant and retail shoppers will generate $6.0 million in sales tax revenues for the State of Ohio and Montgomery County. The State of Ohio and the City of Dayton will benefit from a total of $5.2 million in income tax revenues as a result of operations and tenant

businesses during the completion period of the Arcade District Project. The South Arcade Part 1 phase of the Arcade District Development has a 100.0 percent property tax exemption. An annual PILOT payment of $60,000 will be made to Dayton Public Schools for the South Arcade Part 1 and the South Arcade Part 2 phases of the Arcade District Development. Because this is a collective PILOT payment, it is included in the Project impacts section. In total, the South Arcade Part 1 phase of the Arcade District Development will directly create approximately $11.2 million in fiscal benefits for state and local jurisdictions during the completion period of the Arcade District Project.

Indirect Impacts

The operations of the South Arcade Part 1 phase of the Arcade District Development will result in additional indirect impacts within the Surrounding Area. As shown in Table 87, the operations of the South Arcade Part 1 phase of the Arcade District Development will indirectly support three jobs per year in the Surrounding Area's economy. The average hourly wage of the indirect operations jobs supported is $27.42, assuming 40 working hours per week for 52 weeks per year. During the completion period of the Arcade District Project, 15 jobs with earnings of $935,029 will be indirectly supported in the Surrounding Area by the operations of the South Arcade Part 1 phase of the Arcade District Development.

The tenants of the South Arcade Part 1 phase of the Arcade District Development will source portions of the goods and services required for ongoing operations from other businesses in the Surrounding Area, thus generating additional spending and supporting more jobs locally. The businesses that benefit from the direct expenditures of the tenants of the South Arcade Part 1 phase of the Arcade District Development will, in turn, continue to spend in the local economy some of the dollars originally spent

by the tenant businesses of the South Arcade Part 1 phase of the Arcade District Development. This process will repeat itself until all the original dollars leak out of the economy of the Surrounding Area.

The business-to-business purchases of the tenenat businesses will indirectly support an average of 62 additional jobs in the Surrounding Area each year. As detailed in Table 88, a total of 310 tenant jobs will be indirectly supported during the completion period of the Arcade District Project. The indirect jobs supported by the tenant businesses of the South Arcade Part 1 phase of the Arcade District Development will have earnings of $21.9 million during the completiond period, or approximately $4.4 million per year. The indirect jobs supported will have average annual earnings of $70,540. This equates to an average hourly wage of $33.91, assuming 40 working hours per week for 52 weeks per year.

During the completion period of the Arcade District Project, the direct economic activity generated by the tenants of the South Arcade Part 1 phase of the Arcade District Development will result in additional indirect economic activity of $57.7 million within the Surrounding Area, or an average of $11.5 million per year, as detailed in Table 89. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Total Impacts

As shown in Table 91, the operations of the South Arcade Part 1 phase of the Arcade District Development will support a total of eight jobs per year, or a total of 40 jobs during the completion period of the Arcade District Project. The jobs supported will have total earnings of $3.4 million during the completion period, or an average of $683,805 per year. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the jobs supported by the operations of the South Arcade Part 1 phase of the Arcade District Development is $40.13.

The South Arcade Part 1 phase of the Arcade District Development will support a total of 2,070 jobs at the Development site with earnings of $126.6 million during the completion period of the Arcade District Project, as detailed in Table 92. Each year an average of 414 jobs with earnings of $25.3 million will be supported by the tenant businesses of the South Arcade Part 1 phase of the Arcade District Development. This translates into average annual earnings of $61,234. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage is $29.44.

Surrounding Area Impacts

The direct economic activity generated by the operations and tenant businesses of the Arcade District Project will generate additional indirect impacts within the Surrounding Area as a result of the inter-industry linkages. The direct expenditures associated with the operations and tenant businesses of the Arcade District Project affect other industries by increasing demand for products and services, creating jobs associated with the provision of these products and services, and generating incomes.

The operations of the Arcade District Project will result in additional indirect impacts within the Surrounding Area. As shown in Table 95, the operations of the Arcade District Project will indirectly support six jobs per year in the Surrounding Area's economy. The indirect operations jobs supported will have total earnings that average $328,631 per year, or approximately $59,268 per job. This equates to an average hourly wage of $28.49, assuming 40 working hours per week for 52 weeks per year. During the completion period, a total of 30 jobs with earnings of $1.6 million will be indirectly supported in the Surrounding Area by the operations of the Arcade District Project.

The tenants of the Arcade District Project will source portions of the goods and services required for ongoing operations from other businesses in the Surrounding Area, thus generating additional spending and supporting more jobs locally. The businesses that benefit from the direct expenditures of the Arcade District Project tenants will, in turn, continue to spend in the local economy some of the dollars originally spent by the tenant businesses of the Arcade District Project. This process will repeat itself until all the original dollars leak out of the economy of the Surrounding Area.

The business-to-business purchases of the tenenat businesses will indirectly support an average of 119 additional jobs in the Surrounding Area each year. As detailed in Table 96, a total of 595 jobs will be indirectly supported during the completion period. The indirect jobs supported by the tenant businesses of the Arcade District Project will have earnings of $39.6 million during the completion period, or approximately $7.9 million per year. The indirect jobs supported will have average annual earnings of $66,515. This equates to an average hourly wage of $31.98, assuming 40 working hours per week for 52 weeks per year.

Upon its completion, the Arcade District Project will increase residential property values in the Surrounding Area within a few years after construction completion. In a 2015 study, it was concluded that residential property values were positively impacted upon delivery of a new commercial development within a 0.5-mile radius of construction.[38] The study found residential properties inside of the radius initially decreased by 1.7 percent in the year immediately after construction completion, but subsequently increased by 1.7 percent per year when compared to the residential properties just outside

[38] (Wiley 2015)

of the radius. Upon the completion of the Arcade District Project, it is estimated that the increased residential property values inside the Surrounding Area will result in a net increase of $200,849 in property tax revenue during the completion period, as shown in Table 98.

Additionally, the indirect jobs and earnings supported by the operations and tenant businesses of the Arcade District Project will generate a total of $2.0 million in income tax revenue during the completion period, as shown in Table 98. Of the income tax revenue generated during the completion period, the State of Ohio will receive $975,129, while the City of Dayton will receive $1.0 million. During the completion period, a total of $2.2 million in fiscal benefits will be indirectly generated by the operations and tenant businesses of the Arcade District Project.

Catalyzed Project Impacts

The Arcade District Project is in the center of a deeply distressed part of downtown Dayton with over 2.0 million square feet of blighted vacant and underutilized buildings in adjacent blocks. With virtually no retail, housing, or hospitality uses, this desolate area at the heart of downtown has long been a focal point of Dayton's revitalization efforts. As a result, the Mayor, City Commission, and City Manager made the resurrection of the Dayton Arcade and launch of the Arcade District the City's Top Economic and Community Development Priority for eight years. The Arcade District is the centerpiece of the City's arts and technology ecosystem.

The Arcade District Project will directly cause or accelerate 12 additional projects in the Surrounding Area. The direct and indirect economic impact as well as the total fiscal impact of each catalyzed project will be detailed in this section. The economic impact refers to the jobs, earnings, and sales directly generated by the catalyzed projects and the additional indirect impacts within the Surrounding Area as a result of the inter-industry linkages. The fiscal impact refers to the sales, income, lodging, and property tax revenues generated by the catalyzed projects for state and local jurisdictions. The economic and fiscal impacts discussed in this section reflect full occupancy and target-level sales.

Hotel Ardent

The redevelopment of the 10-story Barclay Building at the corner of First and Main Street in downtown Dayton is a Project that has been accelerated or directly caused by the Arcade District. Located on the same block of Dayton's premier performing arts venues, the Hotel Ardent Project comprises a 118-room boutique hotel as well as 4,000 square feet of commercial space. This Project has been identified as a critical next step, in conjunction with other housing and hospitality developments, in resetting the vibrancy of the struggling Main Street corridor. Construction started in 2021 with the opening of the

Hotel Ardent Project expected in fall 2023. The total development costs associated with the Hotel Ardent Project were approximately $26.5 million.[39]

The direct economic impact of the Hotel Ardent Project includes the jobs, earnings, and sales directly supported during the completion period of the Arcade District Project. As detailed in Table 99, a total of 280 tenant jobs with earnings of $9.5 million will be directly supported by the Hotel Ardent Project during the completion period of the Arcade District Project. These direct jobs will have annual earnings that average $34,164. This equates to an average hourly wage of $16.42, assuming 40 working hours per week for 52 weeks per year.

As detailed in Table 100, the Hotel Ardent Project will generate $32.3 million in retail sales during the completion period of the Arcade District Project through the purchases made by patrons of the hotel and commercial spaces. On average, the Hotel Ardent Project will generate nearly $6.5 million in sales annually during the completion period of the Arcade District Project.

Table 101 details the direct fiscal impact of the tenant businesses of the Hotel Ardent Project. During the completion period of the Arcade District, the spending of the hotel and commercial shoppers will generate $2.4 million in sales tax revenues for the State of Ohio and Montgomery County. The State of Ohio and the City of Dayton will benefit from a total of $402,306 in income tax revenues as a result of tenant businesses during the completion period. Montgomery County and the City of Dayton will benefit from $1.5 million in lodging tax revenues from hotel guests. Additionally, the Hotel Ardent Project will

[39] Assumed to be reported in 2022 dollars.

generate $4.2 million in property tax revenue, assuming no property tax abatement agreement is established. In total, the Hotel Ardent Project will directly create approximately $8.5 million in fiscal benefits for state and local jurisdictions during the completion period of the Arcade District Project.

The indirect economic impact of the Hotel Ardent Project includes the subsequent jobs, earnings, and sales generated in the Surrounding Area during the completion period of the Arcade District Project as a result of the inter-industry linkages. As detailed in Table 102, the Hotel Ardent Project will indirectly support a total of 30 jobs with earnings of $2.2 million. These indirect tenant jobs will have annual earnings that average $67,538. This equates to an average hourly wage of $32.47, assuming 40 working hours per week for 52 weeks per year.

As detailed in Table 103, the Hotel Ardent Project will indirectly generate an additional $4.9 million in sales in the Surrounding Area during the completion period of the Arcade District Project, or an average of $976,214 per year. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Dayton International Peace Museum

The expansion of the Dayton International Peace Museum (Peace Museum) included the renovation of 5,000 square feet of space at 10 Courthouse Plaza SW and is a Project that has been accelerated or directly caused by the Arcade District. The expansion of the Peace Museum features an open environment and contains a 150-seat theater, exhibition space, and classrooms. Construction for this Project occurred in 2022. The total development costs associated with the Peace Museum Project were approximately $500,000.[40]

The direct economic impact of the Peace Museum Project includes the jobs, earnings, and sales directly supported during the completion period of the Arcade District Project. As detailed in Table 105, a total of 10 jobs with earnings of $579,261 will be directly supported by the Peace Museum Project during the completion period of the Arcade District Project. These direct jobs will have annual earnings that average $55,632. This equates to an average hourly wage of $26.75, assuming 40 working hours per week for 52 weeks per year.

[40] Assumed to be reported in 2022 dollars.

As detailed in Table 106, the Peace Museum Project will generate $1.5 million in entertainment sales during the completion period of the Arcade District Project through the purchases made by patrons of the Peace Museum. On average, the Peace Museum Project will generate $302,327 in sales annually during the completion period of the Arcade District Project.

Table 107 details the direct fiscal impact of the Peace Museum Project. During the completion period of the Arcade District, the State of Ohio and the City of Dayton will benefit from a total of $30,629 in income tax revenues as a result of the Peace Museum Project. Assuming no property tax abatement agreement is established, the Peace Museum Project will generate $75,115 in property tax revenue during the completion period of the Arcade District Project. In total, the Peace Museum Project will directly create $105,744 in fiscal benefits for state and local jurisdictions during the completion period of the Arcade District Project.

The indirect economic impact of the Peace Museum Project includes the subsequent jobs, earnings, and sales generated in the Surrounding Area during the completion period of the Arcade District Project as a result of the inter-industry linkages. As detailed in Table 108, the Peace Museum Project will indirectly support a total of two jobs with earnings of $86,869. These indirect tenant jobs will have annual earnings that average $56,747. This equates to an average hourly wage of $27.28, assuming 40 working hours per week for 52 weeks per year.

Power House

The Power House Project is the historic renovation of a Dayton Power and Light steam power plant, which is one of Dayton's oldest buildings, into a research and development prototyping facility for Infinity Labs (I-Labs). Built in 1887, the industrial building is otherwise a likely candidate for near-term demolition in its current state. The Power House Project will comprise 45,000 square feet of collaboration space. Of this space, 2,200 square feet is dedicated Sensitive Compartmented Information Facility (SCIF) space for Department of Defense Projects and 10,000 square feet will be specialized high-tech labs including biotechnology, nanotechnology, eukaryotic, rapid prototyping, and bio hazard rated wet labs.

As one of Southwest Ohio's fastest growing tech startups, I-Labs estimates that the Power House Project will generate $355.1 million in sales and support the direct employment of 460 jobs when the project is operational in 2024.[41] By adding SCIFs, specialty lab, and highly sophisticated pilot product maker space to the downtown Dayton entrepreneurial ecosystem, the Power House Project expands on the innovation renaissance started by the Arcade District and will attract significant investment into the Dayton Region. Ken Edge, CEO of I-Labs, describes I-Labs' choice to launch its fast-growing business in downtown

[41] Assumed to be reported in 2024 dollars.

Dayton as due to the synergies with the Arcade Innovation Hub. I-Labs will be locating their office space in South Arcade Part 2, establishing collaborative entrepreneurial support service and workforce training relationships with The Entrepreneurs Center, University of Dayton, Sinclair Community College, and other Arcade Innovation Hub resources. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Power House Project are approximately $25.0 million.[42]

The direct economic impact of the Power House Project includes the jobs, earnings, and sales directly supported during the completion period of the Arcade District Project. As detailed in Table 111, a total of 2,300 tenant jobs with earnings of $303.9 million will be directly supported by the Power House Project during the completion period of the Arcade District Project. These direct jobs will have annual earnings that average $132,114. This equates to an average hourly wage of $63.52, assuming 40 working hours per week for 52 weeks per year.

Table 113 details the direct fiscal impact of the Power House Project. During the completion period of the Arcade District Project, the State of Ohio and the City of Dayton will benefit from a total of $16.7 million in income tax revenues as a result of the Power House Project. Assuming no property tax abatement agreement is established, the Power House Project will generate an estimated $3.5 million in property tax revenue during the completion period of the Arcade District Project. In total, the Power House Project will directly create approximately $20.1 million in fiscal benefits for state and local jurisdictions during the completion period of the Arcade District Project.

Algonquin Hotel/Dayton Grand

Vacant for the better part of the last 10 years, the renovation of the former Algonquin Hotel (more recently known as the Dayton Grand) at 11 S. Ludlow Street is a Project catalyzed by the revitalization of downtown Dayton spurred by the Arcade District. This Project is located in a part of downtown Dayton with no nearby amenities prior to the Arcade District Development. The Mayfair Group, developer of the Algonquin Hotel/Dayton Grand Project, is quick to emphasize how critical the Arcade District is to their decision to move forward with their investment. The renewed Dayton Grand will comprise 103 apartments, 4,000 square feet of restaurant space, and 12,000 square feet of entertainment space. Additionally, the Mayfair Group is signing a lease for a 5,500 square foot restaurant space in the South Arcade Part 2 across Ludlow Street with the goal of "double loading" both sides of the street with evening and weekend activity. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Algonquin Hotel/Dayton Grand Project are approximately $26.0 million.[44]

The direct economic impact of the Algonquin Hotel/Dayton Grand Project includes the jobs, earnings, and sales directly supported during the completion period of the Arcade District Project. As detailed in

[44] Assumed to be reported in 2023 dollars.

Table 117, a total of 95 tenant jobs with earnings of $2.8 million will be directly supported by the Algonquin Hotel/Dayton Grand Project during the completion period of the Arcade District Project. These direct jobs will have annual earnings that average $29,469. This equates to an average hourly wage of $14.17, assuming 40 working hours per week for 52 weeks per year.

Table 119 details the direct fiscal impact of the tenant businesses of the Algonquin Hotel/Dayton Grand Project. During the completion period of the Arcade District Project, the spending of the restaurant shoppers will generate $542,502 in sales tax revenues for the State of Ohio and Montgomery County. The State of Ohio and the City of Dayton will benefit from a total of $156,161 in income tax revenues as a result of tenant businesses during the completion period of the Arcade District. Additionally, the Algonquin Hotel/Dayton Grand Project will generate $3.6 million in property tax revenue, assuming no property tax abatement agreement is established. In total, the Algonquin Hotel/Dayton Grand Project will directly create approximately $4.3 million in fiscal benefits for state and local jurisdictions during the completion period of the Arcade District Project.

Dayton Convention Center

The renovation of the 48-year old Dayton Convention Center aims to bolster the conference and event offerings in downtown Dayton and provide a regional attraction for the Dayton Region. The Dayton Convention Center has long struggled in the mid-city market. However, the leadership of the Convention Center Authority points to the revitalization occurring as a result of the Arcade District as essential to energizing the currently desolate environment around the Dayton Convention Center. The Arcade District's planned 14 food and beverage offerings encompassing 52,000 square feet within a block walk—where there is only one restaurant currently—will establish the lively, safe ecosystem necessary to propel the Dayton Convention Center's marketing. The Arcade District's "Best in Ohio" event spaces add an important attraction for conference planners looking for exciting off-site venues. Finally, the new 332 high quality hotel rooms in the North Arcade and the two catalyzed hotel projects, the Hotel Ardent and Grant Deneau Tower Projects, create much needed room options to complement the undersized Radisson Convention Center hotel. The combination of these Arcade District factors is accelerating and expanding the Dayton Convention Center Project. The Dayton Convention Center Project will renovate 150,000 square feet of meeting space including a 77,000 square foot exhibit hall, 22 meeting rooms, three ballrooms, and a theater. Construction for this Project is anticipated to occur between 2023 and

2024. The total development costs associated with the Dayton Convention Center Project are approximately $35.0 million.[45]

The direct economic impact of the Dayton Convention Center Project includes the jobs, earnings, and sales directly supported during the completion period of the Arcade District Project. As detailed in Table 123, a total of 330 tenant jobs with earnings of $11.9 million will be directly supported by the Dayton Convention Center Project during the completion period of the Arcade District Project. These direct jobs will have annual earnings that average $35,931. This equates to an average hourly wage of $17.27, assuming 40 working hours per week for 52 weeks per year.

Grant Deneau Tower

The Windsor Group is redeveloping Dayton's first modern high-rise building at 40 W. Fourth Street, which has been vacant for at least the last six years. The Grant Deneau Tower Project is located directly across the street from the Arcade District and is cited by the Windsor Group as being catalyzed by the Arcade District. Contributing to the mixed-use reactivation of Dayton's urban core, the Grant Deneau Tower Project will comprise 60 luxury apartments, a 120-room hotel, 90,000 square feet of office space, and 10,000 square feet of restaurant space. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Grant Deneau Tower Project are approximately $50.0 million.[46]

The direct economic impact of the Grant Deneau Tower Project includes the jobs, earnings, and sales directly supported during the completion period of the Arcade District Project. As detailed in Table 129, a total of 2,005 tenant jobs with earnings of $162.5 million will be directly supported by the Grant Deneau Tower Project during the completion period of the Arcade District Project. These direct jobs will

[46] Assumed to be reported in 2023 dollars.

have annual earnings that average $81,072. This equates to an average hourly wage of $38.98, assuming 40 working hours per week for 52 weeks per year.

As detailed in Table 130, the Grant Deneau Tower Project will generate $447.7 million in direct sales during the completion period of the Arcade District Project through the services provided by office tenants and the purchases made by patrons of the hotel and restaurant spaces. The direct sales comprise $429.6 million in retail sales and $18.1 million in dining sales. On average, the Grant Deneau Tower Project will generate $89.5 million in sales annually during the completion period of the Arcade District Project.

Table 131 details the direct fiscal impact of the tenant businesses of the Grant Deneau Tower Project. During the completion period of the Arcade District Project, the spending of the hotel and restaurant shoppers will generate $3.3 million in sales tax revenues for the State of Ohio and Montgomery County. The State of Ohio and the City of Dayton will benefit from a total of $8.3 million in income tax revenues as a result of tenant businesses during the completion period of the Arcade District Project. Montgomery County and the City of Dayton will benefit from $1.5 million in lodging tax revenues from hotel guests. Additionally, the Grant Deneau Tower Project will generate $7.0 million in property tax revenue, assuming no property tax abatement agreement is established. In total, the Grant Deneau Tower Project will directly create approximately $20.1 million in fiscal benefits for state and local jurisdictions during the completion period of the Arcade District Project.

The indirect economic impact of the Grant Deneau Tower Project includes the subsequent jobs, earnings, and sales generated in the Surrounding Area during the completion period of the Arcade District Project as a result of the inter-industry linkages. As detailed in Table 132, the Grant Deneau Tower Project will indirectly support a total of 540 jobs with earnings of $36.4 million. These indirect tenant jobs will have annual earnings that average $67,333. This equates to an average hourly wage of $32.37, assuming 40 working hours per week for 52 weeks per year.

As detailed in Table 133, the Grant Deneau Tower Project will indirectly generate an additional $96.9 million in sales in the Surrounding Area during the completion period of the Arcade District Project, or an average of nearly $19.4 million per year. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Midwest Tool Complex Redevelopment

The Windsor Group is demolishing a former industrial property on the 100 block of Webster Street to build a new, four-story apartment building. The Midwest Tool Complex Redevelopment Project will have 102 residential units on the upper floors and 4,750 square feet of retail space on the ground level. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Midwest Tool Complex Redevelopment Project are approximately $25.0 million.[47]

The direct economic impact of the Midwest Tool Complex Redevelopment Project includes the jobs, earnings, and sales directly supported during the completion period of the Arcade District Project. As detailed in Table 135, a total of 80 tenant jobs with earnings of $2.9 million will be directly supported by the Midwest Tool Complex Redevelopment Project during the completion period of the Arcade District Project. These direct jobs will have annual earnings that average $36,816. This equates to an average hourly wage of $17.70, assuming 40 working hours per week for 52 weeks per year.

Price Stores and Journal Herald Buildings

The Windsor Group is leveraging the vibrancy and activation created by the Arcade District in downtown Dayton to redevelop the historic Price Stores and Journal Herald Buildings located on the block adjacent to the Centre City Building of the Arcade District. The Price Stores and Journal Herald Buildings have been vacant for over ten years. The Price Stores and Journal Herald Buildings Project will comprise 35 market rate apartments on floors two through five and 14,530 square feet of commercial space on the first floor. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Prices Stores and Journal Herald Buildings Project are approximately $12.0 million.[48]

The direct economic impact of the Prices Stores and Journal Herald Buildings Project includes the jobs, earnings, and sales directly supported during the completion period of the Arcade District Project. As detailed in Table 141, a total of 250 tenant jobs with earnings of $8.2 million will be directly supported by the Prices Stores and Journal Herald Buildings Project during the completion period of the Arcade

[48] Assumed to be reported in 2023 dollars.

District Project. These direct jobs will have annual earnings that average $32,888. This equates to an average hourly wage of $15.81, assuming 40 working hours per week for 52 weeks per year.

The 503

Weyland Ventures is constructing a new 156-unit apartment building at the northeast corner of East Fourth Street and Wayne Avenue. This is a project that has been accelerated or directly caused by the Arcade District. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with The 503 Project are approximately $25.0 million.[49] The household spending impacts have been omitted from this analysis to avoid the potential for double counting of economic impacts generated at the Arcade District Project.

Assuming no property tax abatement agreement is established, The 503 is estimated to generate property tax revenue during the completion period of the Arcade District Project. As detailed in Table 147, The 503 is estimated to generate $3.5 million in property tax revenue during the completion period of the Arcade District Project.

[49] Assumed to be reported in 2023 dollars.

Delco

Crawford Hoying, in partnership with the Port Authority, City of Dayton, and the Dayton Public School District, are redeveloping the Dayton Engineering Laboratories Company (Delco) building at 340 East First Street in downtown Dayton. The Delco building was constructed in 1915 to serve as the second plant for the Delco Company, but was later abandoned in the 1980s. This is a project that has been accelerated or directly caused by the Arcade District. The Delco Project will comprise 160 apartments, 480 parking spaces, 60,000 square feet of office space, and 15,000 square feet of retail space. Construction for this Project is anticipated to occur between 2023 and 2024. The total development costs associated with the Delco Project are approximately $85.0 million.[50]

The direct economic impact of the Delco Project includes the jobs, earnings, and sales directly supported during the completion period of the Arcade District Project. As detailed in Table 148, a total of 1,325 tenant jobs with earnings of $108.9 million will be directly supported by the Delco Project during the completion period of the Arcade District Project. These direct jobs will have annual earnings that average $82,177. This equates to an average hourly wage of $39.51, assuming 40 working hours per week for 52 weeks per year.

Table 150 details the direct fiscal impact of the tenant businesses of the Delco Project. During the completion period of the Arcade District Project, the spending of the retail shoppers will generate $2.1 million in sales tax revenues for the State of Ohio and Montgomery County. The State of Ohio and the City of Dayton will benefit from a total of $5.5 million in income tax revenues as a result of tenant businesses during the completion period of the Arcade District Project. Additionally, the Delco Project will generate $11.8 million in property tax revenue, assuming no property tax abatement agreement is established. In total, the Delco Project will directly create approximately $19.5 million in fiscal benefits for state and local jurisdictions during the completion period of the Arcade District Project.

The indirect economic impact of the Delco Project includes the subsequent jobs, earnings, and sales generated in the Surrounding Area during the completion period of the Arcade District Project as a result of the inter-industry linkages. As detailed in Table 151, the Delco Project will indirectly support a total of 365 jobs with earnings of $24.3 million. These indirect tenant jobs will have annual earnings that average $66,661. This equates to an average hourly wage of $32.05, assuming 40 working hours per week for 52 weeks per year.

As detailed in Table 152, the Delco Project will indirectly generate an additional $65.4 million in sales in the Surrounding Area during the completion period of the Arcade District Project, or an average of $13.1 million per year. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

211 and 225 S. Main Street

The historic renovation of the vacant Fidelity Medical Building at 211 S. Main Street and the nearby vacant building at 225 S. Main Street is a Project accelerated or directly caused by the investment of the Arcade District. The 211 and 225 S. Main Street Project will comprise 100 market rate apartments and 4,000 square feet of commercial space. This Project is vital to the success of the Dayton Convention Center renovation. Construction for this Project is anticipated to occur between 2024 and 2025. The total development costs associated with the 211 and 225 S. Main Street Project are approximately $54.3 million.[51]

The direct economic impact of the 211 and 225 S. Main Street Project includes the jobs, earnings, and sales directly supported during the completion period of the Arcade District Project. As detailed in Table 154, a total of 70 tenant jobs with earnings of $2.3 million will be directly supported by the 211 and 225 S. Main Street Project during the completion period of the Arcade District Project. These direct jobs will have annual earnings that average $32,888. This equates to an average hourly wage of $15.81, assuming 40 working hours per week for 52 weeks per year.

As detailed in Table 155, the 211 and 225 S. Main Street Project will generate $7.3 million in direct retail sales during the completion period of the Arcade District Project through the purchases made by patrons of the commercial space. On average, the 211 and 225 S. Main Street Project will generate $1.5 million in sales annually during the completion period of the Arcade District Project.

[51] Assumed to be reported in 2023 dollars.

Table 156 details the direct fiscal impact of the tenant businesses of the 211 and 225 S. Main Street Project. During the completion period of the Arcade District Project, the spending of the commercial shoppers will generate $549,932 in sales tax revenues for the State of Ohio and Montgomery County. The State of Ohio and the City of Dayton will benefit from a total of $96,663 in income tax revenues as a result of tenant businesses during the completion period of the Arcade District Project. Additionally, the 211 and 225 S. Main Street Project will generate $7.6 million in property tax revenue, assuming no property tax abatement agreement is established. In total, the 211 and 225 S. Main Street Project will directly create approximately $8.2 million in fiscal benefits for state and local jurisdictions during the completion period of the Arcade District Project.

Fourth and Ludlow

Made possible by the investment in the Arcade District, the Fourth and Ludlow Project will renovate the original portion of the historic Cox Media/Dayton Daily News Building that was built in the early 1900s. This long vacant, blighted building and the demolished 2.5-acre site of the old Dayton Daily News surrounding it will first be a construction staging area for the Arcade District and then be transformed into a mixed-use development. The site is directly across the street from the South Arcade block of the Arcade District, integrating the South Arcade, Grant Deneau Tower, and Algonquin Hotel/Dayton Grand sites as lively, double loaded retail streets. The Project also infills a vacant block connecting to the Sinclair Community College campus, Ohio's largest community college. The Fourth and Ludlow Project will comprise 250 parking spaces and 16,190 square feet of retail space. Construction for this Project is anticipated to occur between 2024 and 2025. Dayton Arcade Partners, LLC has site control of this site and commits to development of this site following completion of the North Arcade and South Arcade. The total development costs associated with the Fourth and Ludlow Project are approximately $54.0 million.[52]

The direct economic impact of the Fourth and Ludlow Project includes the jobs, earnings, and sales directly supported during the completion period of the Arcade District Project. As detailed in Table 160, a total of 265 tenant jobs with earnings of $9.8 million will be directly supported by the Fourth and Ludlow Project during the completion period of the Arcade District Project. These direct jobs will have annual earnings that average $36,816. This equates to an average hourly wage of $17.70, assuming 40 working hours per week for 52 weeks per year.

Table 162 details the direct fiscal impact of the tenant businesses of the Fourth and Ludlow Project. During the completion period of the Arcade District Project, the spending of the retail shoppers will generate $2.3 million in sales tax revenues for the State of Ohio and Montgomery County. The State of Ohio and the City of Dayton will benefit from a total of $429,559 in income tax revenues as a result of tenant businesses during the completion period of the Arcade District Project. Additionally, the Fourth and Ludlow Project will generate $7.5 million in property tax revenue, assuming no property tax abatement agreement is established. In total, the Fourth and Ludlow Project will directly create approximately $10.2 million in fiscal benefits for state and local jurisdictions during the completion period of the Arcade District Project.

Total Catalyzed Project Impacts

The total economic impact of the catalyzed projects of the Arcade District Project include the jobs, earnings, and sales directly and indirectly generated in the Surrounding Area. As shown in Table 166, catalyzed projects will directly and indirectly support a total of 8,825 jobs with earnings of $749.0 million in the Surrounding Area's economy during the completion period of the Arcade District Project. The jobs supported by catalzed projects of the Arcade District Project will have annual earnings that average $84,869. This equates to an average hourly wage of $40.80, assuming 40 working hours per week for 52 weeks per year.

As detailed in Table 167, the catalyzed projects of the Arcade District Project will generate a total of nearly $3.4 billion in sales within the Surrounding Area during the completion period of the Arcade District Project. Of the total economic activity generated, $2.8 billion represents the direct sales and $535.3 million represents the indirect sales. The sales generated during the completion period comprise $3.3 billion in retail sales, $3.0 million in entertainment sales, and $25.3 million in dining sales. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

During the completion period, the spending of the patrons of the hotel, restaurant, retail, and commercial spaces of the catalyzed projects will directly generate $13.8 million in sales tax revenue for the State of Ohio and Montgomery County. The catalyzed projects of the Arcade District Project will generate a total of $39.0 million in income tax revenue for the State of Ohio and the City of Dayton.

The spending of hotel guests will generate $3.0 million in lodging tax revenue for Montgomery County and the City of Dayton. Additionally, the catalyzed projects of the Arcade District Project will generate a total of $58.7 million in property tax revenues during the completion period of the Arcade District Project, assuming no tax abatement agreements are established. As detailed in Table 168, the catalyzed projects of the Arcade District Project will create nearly $114.5 million in total fiscal benefits for state and local jurisdictions during the completion period of the Arcade District Project.

Total Economic and Fiscal Impacts

Total Construction Period Impacts

The total economic impact of the construction and related activities of the Arcade District Project include the jobs, earnings, and sales resulting from Project, Development, Surrounding Area, and catalyzed impacts within the Surrounding Area. As shown in Table 169, the construction and related activities will support a total of 1,729 construction jobs with earnings of $167.4 million in the Surrounding Area's economy during the construction period. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage is $46.56.

Table 169: Total Construction Period Impacts on Jobs and Payroll

During the construction period, the construction and related activities of Arcade District Project and the catalyzed projects will generate a total of $437.2 million in construction sales in the Surrounding Area, as detailed in Table 170. Direct sales represent $407.9 million of the total sales generated during the construction period, whereas indirect sales represent $29.3 million. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, construction sales as well as indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Total Completion Period Impacts

The total economic impact of the Arcade District Project includes the jobs, earnings, and sales resulting from Project, Development, Surrounding Area, and catalyzed impacts. As shown in Table 172, a total of 125 operations jobs will be directly and indiretly supported during the completion period. These jobs represent the labor required to manage the Project and Development sites such as leasing agents, grounds crew, and maintenance and custodial staff. These operations jobs will have total earnings of $9.4 million during the completion period. The total jobs supported by the operations of the Arcade District Project and the South Arcade Part 1 phase of the Arcade District Development will have average annual earnings of $76,277. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the operations jobs is $36.67.

Table 172: Total Completion Period Impacts on Operations Jobs and Payroll

Tenants of the Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects hire and pay wages to employees needed to maintain daily operations. As detailed in Table 173, a total of 15,045 tenant jobs will be directly and indirectly supported during the completion period. These tenant jobs will have total earnings of nearly $1.1 billion during the completion period. The direct and indirect jobs supported by tenants of the Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects will have average annual earnings of $72,367. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of tenant jobs is $34.79.

Total	**15,045**	**$34.79**	**$1,088,881,784**

Source: Economics Center calculations.

As detailed in Table 174, the Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects will generate a total of $4.3 billion in total sales during the completion period. Of the total sales generated during the completion period, $3.6 billion represent direct sales of tenants of the Project, Development, and catalyzed projects. These direct sales will lead to further indirect sales in the Surrounding Area of $695.8 million. The total sales genereated during the completion period are comprised of $3.5 billion in retail sales, $3.0 million in entertainment sales, and $178.3 million in dining sales. The Economics Center is unable to disaggregate indirect sales into specific spending categories due to the characteristics of input-output models and multipliers. For the purposes of the TMUD Program, indirect sales are considered retail sales per the definition of a retail sale in the Ohio Revised Code, Section 5739.01.

Table 174: Total Completion Period Impacts on Sales

Year of Operation	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales	Total Projected Sales

As detailed in Table 175, the total fiscal impacts include the sales, income, lodging, and property tax revenue generated by the Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects during the completion period. The spending of the hotel,

restaurant, retail, and commercial shoppers will generate $41.0 million in sales tax revenue for the State of Ohio and Montgomery County. The State of Ohio and the City of Dayton will benefit from a total of $55.6 million in income tax revenue during the completion period. Montgomery County and the City of Dayton will benefit from $4.1 million in lodging tax revenue from hotel guests during the completion period. The Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects will generate $61.8 million in property tax revenue.[53] In total, the Arcade District Project will create approximately $162.5 million in fiscal benefits for state and local jurisdictions during the completion period.

Total Economic and Fiscal Impacts

Table 176 details the total economic and fiscal impacts of the Arcade District Project, which comprise the Project, Development, Surrounding Area, and catalyzed project impacts generated during both the construction and completion periods. The Arcade District Project is estimated to support 1,729 jobs with $167.4 million in earnings during the construction period and support 15,170 jobs with $1.1 billion in earnings during the completion period. Construction and related activities will generate $437.2 million in sales during the construction period, while operations and tenant businesses will generate $4.3 billion in sales during the completion period. Additionally, the Arcade District Project is estimated to generate $8.7 million in taxes during the construction period and $162.5 million in taxes during the completion period. Collectively, the Arcade District Project will support 16,899 jobs with earnings of $1.3 billion, generate $4.8 billion in sales, and generate $171.2 million in taxes during the construction and completion periods. During the fifth year of the completion period, the Arcade District Project will support 3,034 jobs with earnings of $229.0 million, generate $903.2 million in sales, and generate $33.5 million in taxes.

Table 176: Total Economic and Fiscal Impacts

Impact Type	Total Projected FTE Jobs	Total Projected Payroll	Total Projected Sales	Total Projected Taxes
Construction Period Impacts	1,729	$167,447,709	$437,176,731	$8,651,522
Completion Period Impacts	15,170	$1,098,316,123	$4,332,559,774	$162,546,333
Total Impacts	**16,899**	**$1,265,763,832**	**$4,769,736,505**	**$171,197,855**

[53] The catalyzed projects were assumed to have no property tax abatement agreement in place.
[54] Payments in lieu of taxes are included in property tax revenue.

Conclusion

The Arcade District Project is a proposed mixed-use development located in downtown Dayton. This proposed mixed-use development will include [redacted], [redacted], a [redacted] hotel, [redacted] With an estimated $139.8 million capital investment, the Arcade District Project will generate considerable economic activity in the Surrounding Area during the construction period as well as after construction is complete and operations commence.[55]

Economic impact figures represent the effects that a given mixed-use development and its associated economic activities have upon a surrounding community. The economic impacts are reported in terms of jobs, earnings, and sales. Fiscal impacts represent the subsequent impacts on state and local jurisdictions. Fiscal impacts include sales, income, lodging, and property tax revenue as well as collections through alternate tax methods such as PILOT payments. The total economic and fiscal impacts represent the sum of the Project, Development, Surrounding Area, and catalyzed impacts from the construction period and the completion period.

The construction and related activities of the Arcade District Project will generate a total of $437.2 million in sales in the Surrounding Area during the construction period, of which $407.9 million are direct sales and $29.3 million are indirect sales. A total of 1,729 construction jobs with earnings of $167.4 million will be directly and indirectly supported in the Surrounding Area's economy during the construction period. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage is $46.56. The earnings supported by the construction and related activities of the Arcade District Project will generate income tax revenue for the State of Ohio and the City of Dayton totaling $8.7 million during the construction period.

During the completion period, a total of 125 operations jobs will be directly and indiretly supported by the Arcade District Project and the South Arcade Part 1 phase of the Arcade District Development. These operations jobs will have total earnings of $9.4 million during the completion period. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the operations jobs supported is $36.67. Additionally, a total of 15,045 tenant jobs will be directly and indirectly supported during the completion period by the Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects. These tenant jobs will have total earnings of $1.1 billion during the completion period. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of tenant jobs is $34.79.

The Arcade District Project, the South Arcade Part I phase of the Arcade District Development, and the catalyzed projects will generate a total of $4.3 billion in total sales during the completion period. Of the total sales generated during the completion period, $3.6 billion represent direct sales of tenants of the Project, Development, and catalyzed projects. These direct sales will lead to further indirect sales in the Surrounding Area of $695.8 million. [redacted]

During the completion period, the Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects will generate fiscal benefits totaling $162.5 million for state and local jurisdictions. The spending of the hotel, restaurant, retail, and commercial shoppers will generate $41.0 million in sales tax revenue for the State of Ohio and Montgomery County. The State of Ohio and the City of Dayton will benefit from a total of $55.6 million in income tax revenue. Montgomery County and the City of Dayton will benefit from $4.1 million in lodging tax revenue from hotel guests.

[55] Reported in 2023 dollars.

The Arcade District Project, the South Arcade Part 1 phase of the Arcade District Development, and the catalyzed projects will generate $61.8 million in property tax revenue.

The Arcade District Project is estimated to support 1,729 jobs with $167.4 million in earnings during the construction period and support 15,170 jobs with $1.1 billion in earnings during the completion period. Construction and related activities will generate $437.2 million in sales during the construction period, while operations and tenant businesses will generate $4.3 billion in sales during the completion period. Additionally, the Arcade District Project is estimated to generate $8.7 million in taxes during the construction period and $162.5 million in taxes during the completion period. Collectively, the Arcade District Project will support 16,899 jobs with earnings of $1.3 billion, generate $4.8 billion in economic activity, and generate $171.2 million in taxes during the construction and completion periods.

About the Economics Center

The Alpaugh Family Economics Center began as a teacher training initiative of the Cincinnati Chamber of Commerce in 1976. In 1977, the Center was incorporated and established a permanent existence as part of the University of Cincinnati. While teacher training has remained as a core service, the Center has added student programs and competitions, an award-winning online financial program called $martPath, partnerships for the financial education of the larger community, and a research team to serve businesses and governmental partners in our region and across the State. The Alpaugh Family Economics Center is a part of the Council for Economic Education's national network and a member of the Association of University Business and Economic Research.

The Research and Consulting division of The Alpaugh Family Economics Center provides unbiased, non-partisan economic data and analyses to help clients make better financial, policy, and economic and workforce development decisions. Our dynamic approach and critical data analyses empower business and civic leaders to respond to changing economic conditions, strengthen local economies, and improve the quality of life for their communities. Our work includes everything from economic impact studies to benefit-cost analyses, return on investment analyses, and workforce development initiatives. For decades, the Center has been the choice organization to provide critical data analyses to more than 30 business clients annually. Through this work, the Center and its partners contribute to the health and vitality of our economy.

The Research and Consulting division of The Alpaugh Family Economics Center completed 10 economic impact analyses for developers across Ohio during the fiscal year 2022 funding cycle of the Transformational Mixed-Use Development Program (TMUD). The Ohio Department of Development funded eight "General" Projects, two of which were applications with economic impact analyses prepared by the Economics Center. The TMUD tax credits received by our development partners represented approximately half of the "General" project funding allocation for fiscal year 2022. During the fiscal year 2023 funding cycle, the Research and Consulting division of The Alpaugh Family Economics Center completed four economic impact analyses for developers across Ohio. The Ohio Department of Development funded six "Major City" Projects and seven "General" Projects, of which one "Major City" Project and one "General" Project had applications with economic impact analyses prepared by the Economics Center.

Project Staff

Dr. Julie Heath

Dr. Julie Health is the Executive Director Emeritus of The Alpaugh Family Economics Center. Dr. Heath is a member of the National Association of Economic Educators. She was a member of the national Board of Directors of the Council for Economic Education and a member of the Economics Standing Committee of the National Assessment of Education Progress. Dr. Heath led the two national committees charged by President Obama's Advisory Council on Financial Capability with integrating financial literacy in the Common Core.

Prior to coming to the University of Cincinnati, Dr. Heath spent 26 years at the University of Memphis. Dr. Heath was the director of the Center for Economic Education at the University of Memphis. In that role, with the support of the State of Tennessee and First Tennessee, she founded the $mart Tennessee program in 2006, which provides financial education to children in elementary, middle, and high schools.

At the University of Memphis, Dr. Heath taught undergraduate and graduate classes and served as head of the Economics Department. She is the recipient of a number of honors and awards. Dr. Heath has received the two highest teaching awards at the University of Memphis: the Thomas W. Briggs Foundation's Excellence in Teaching Award in 2000, and the Distinguished Teaching Award in 2010. The Carnegie Foundation recognized Dr. Heath with the 2010 Tennessee Professor of the Year Award.

In 2008, she earned the Kenneth G. Elzinga Distinguished Teaching Award, the economics discipline's highest award, and was the recipient of the Educator of the Year Award from the National Association for Financial Literacy. She received the Harold Love Award for Community Involvement in 2007, and in 2006, was named the Financial Educator of the Year by the Tennessee Bankers Association.

She was named a Money Magazine "Money Hero" for August of 2013. Dr. Heath received the Alumni Professional Achievement Award from Bluffton University in 2012. She was named a "Woman of Influence" by Venue and LEAD magazines, Cincinnati, in 2014, and a "Woman of Achievement" by the Girl Scouts in 2016. Dr. Heath received a Pillar Award for Executive Director of the Year from Medical Mutual in 2019. Additionally, Dr. Heath served as a Visiting Scholar for the Consumer Financial Protection Bureau for 2019.

Dr. Heath received her Ph.D. in Economics at the University of South Carolina, specializing in labor economics and quantitative methods. She received a Visiting Research Fellowship to Princeton University to conduct research in economics education and has published extensively in the area. She is the author or co-author of over 40 academic articles. She also received a Rockefeller Foundation grant to study women and poverty. Her research focuses on the labor market, particularly women's labor force issues, economic and financial education, curriculum development, assessment, and quantitative analyses.

Brad Evans

Brad Evans is a Co-Executive Director and the Director of Research at The Alpaugh Family Economics Center. A graduate of Miami University, Brad maintains professional memberships in the International Development Council and the Ohio Economic Development Association, and he is currently serving on the Board of Directors for the Butler County Port Authority.

In addition to overseeing processes and timelines for project milestones and deliverables, Brad possesses expertise in state and local financing mechanisms including the Ohio Enterprise Zone Program, Tax Increment Financing, Joint Economic Development Districts, Community Reinvestment Areas, and Job Creation Tax Credits.

Megan Heare

Megan Heare is a Senior Research Associate at The Alpaugh Family Economics Center. Megan earned her Bachelor's Degree in Mathematics from the University of Southern Indiana and holds a Master's Degree in Economics from the University of Cincinnati. Megan also possesses a credential as a Certified Business Economist from the National Association of Business Economists. Megan's research focuses on investments in human capital, education, economic and workforce development, and health care.

Dr. Benjamin Brennan

Dr. Benjamin Brennan started with The Alpaugh Family Economics Center in 2023 as a Research Associate. Dr. Brennan earned his Ph.D. from the University of Oregon in 2018 where he focused on macroeconomics and econometrics. Dr. Brennan holds a Master's Degree in Social and Applied Economics from Wright State University and earned his Bachelor's Degree from Arcadia University.

Re: Valor Acres Phase I- Transformational Mixed-Use Development – Economic Impact Statement

Dear Ms. Makepeace:

At your request, Project Management Consultants, LLC has performed an Economic Impact Statement for the DiGeronimo Companies' Valor Acres Phase I project, which is located at the northwest corner of Brecksville Road and Miller Road in Brecksville, OH, utilizing inputs provided by your team, direct calculations, conservative assumptions, and the "IMPLAN" software and data produced by IMPLAN Group, LLC. We have not examined the Client-provided data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact statement. Further, this analysis is subject to the Assumptions and Limiting Conditions found in Appendix F of this report.

This report contains, to the fullest extent possible and practical, explanations of the data, reasoning, and analyses that were used to develop the opinions contained herein. The depth of discussion contained in the report is specific to the needs of the client.

VA LAND LLC is the Client in this engagement and intended user of this report. As our client, VA LAND LLC owns this report and permission must be granted from them before another third party can use this document. We assume that by reading this report another third party has accepted the terms of the original engagement letter including scope of work and limitations of liability. We are prepared to modify this document to meet any specific needs of the potential user under a separate agreement.

The Stated Purpose of this assignment is to assist with projections of job, tax, and wage information for application to the State of Ohio Transformational Mixed-Use Development Program. You agree not to use this report other than for the Stated Purpose, and you agree to indemnify us for any claims, damages, or losses that we may incur as the result of your use of the Report for other than the Stated Purpose. Without limiting the general applicability of this

paragraph, under no circumstances may the Report be used in advertisements, solicitations and/or any form of securities offering.

The authors of this report certify that, while we represent the project in other capacities, we are not part of the development team, nor are we affiliated with any member of the development team. Please do not hesitate to contact us if there are any questions regarding the report or if Project Management Consultants, LLC can be of further assistance. It has been our pleasure to assist you with this project.

Sincerely,

Ryan P. Sommers, CPA
Managing Director of Financial Services
Project Management Consultants, LLC

PROJECT MANAGEMENT CONSULTANTS (PMC) EXPERIENCE

	Name	TMUD Experience & Background
	**Ryan P. Sommers, CPA** Managing Director of Financial Services	Ryan Sommers has an extensive background working with various tax credit programs and complex private and public finance structuring. Ryan's experience with tax credits includes Historic Tax Credits, New Markets Tax Credits, and Opportunity Zone Tax Credits. Ryan recognizes the critical value-add of the Transformational Mixed-Use Development ("TMUD") tax credit program. Since the program's inception he has become an expert on the program. He advises clients on project eligibility, economic impacts, tax credit monetization, and chances of application success. As managing director of financial services, Ryan identifies, secures and manages private and public financing opportunities for business expansion projects and real estate development. Ryan is currently managing a team responsible for 50+ projects throughout the country with $3 billion in development value including $600 million in public financing for public-private partnerships. He has helped his clients obtain over $200 million in state and federal Historic Tax Credits and over $100 million in New Markets Tax Credits. Ryan also created PMC's direct tax impact analysis models which help demonstrate exact tax estimates for a Project or Development site on the surrounding area, including income taxes, sales taxes, bed taxes and property taxes. Ryan has worked on this modeling for a decade. These outputs help demonstrate the ROI of a project to various government entities and provide him with experience needed to complete economic impact statements as complicated as those required for TMUD applications.
	**Kenneth S. Kalynchuk** Director and Principal	Ken Kalynchuk leads PMC's financial analyst and economic impact analysis team. Ken has conducted five economic impact statements (EIS reports) for Rounds 1 and 2 of the TMUD program, with emphasis on conservative estimates and common sense for whether projects can be considered catalyzed or not. Ken helps clients navigate the predevelopment stage of their projects through incentive, land use, and market research; pro forma development; feasibility analyses; economic impact analyses; and property tax analyses. Prior to joining the firm, Ken was a graduate research assistant with the Center for Economic Development at Cleveland State University, where he evaluated economic development programs and best practices in economic development policy, performed studies on Historic Preservation Tax Credit funding and rental markets, and wrote case studies and employment/demographic impact analyses. During his time at Cleveland State Ken learned IMPLAN software and economic impact techniques. These skills have helped clients at PMC, where Ken has helped generate economic impact reports and tax estimates for more than 7 years.

	Name	TMUD Experience & Background
	**Nora Walsh** Senior Analyst	In her more than two years with Project Management Consultants, Nora has worked with the PMC team to complete TMUD applications and economic impact analyses and has supported a half dozen clients on submitting comprehensive applications in Rounds 1 and 2 of the program. Nora leads the Economic Impact Statement (EIS) analysis process in collaboration with the team and has thus far conducted five EIS reports for the TMUD program. Nora brought her economic impact analysis and report writing skills from her experience with the Center for Economic Development at Cleveland State University where she analyzed economic impacts and compiled narratives around those impacts. Since joining PMC, Nora has become an expert in the IMPLAN analysis software and led the economic impact report analysis and writing processes in Round 1 and Round 2 for PMC clients, including PMC's three Round 2 winners.
	**John Sadosky** Project Director	As project director, John identifies, secures, and manages public and private financing opportunities for real estate development and business expansion projects. His expertise includes incentives for industrial and distribution center projects, including speculative development and projects requiring significant public infrastructure investments. John also manages public financing negotiations for site selection projects from intake through incentive procurement and compliance. Prior to joining PMC, John was a manager in Ernst & Young's indirect tax practice specializing in location investment, credits, and incentives. He has more than eight years of direct economic development experience in various roles in local government, nonprofit, and public accounting with significant experience in site selection consulting, credits and incentives negotiation, project management, and tax compliance. Throughout his career, John has worked with clients in the advanced manufacturing, retail, consumer products, and technology sectors. Additionally, he has worked on various product types including manufacturing, retail, mixed-use, multi-family, office, and public infrastructure.
	**Alexander Previts, CPA** Development Finance Manager	In his role as development finance manager, Alex assists in identifying, securing and managing public and private financing opportunities for development and construction projects. Alex specializes in helping corporate clients with headquarters relocation projects. In addition, he works with developers to repurpose vacant facilities and develop greenfield sites into productive reuse by utilizing property tax, local and state incentives. Alex has also worked with clients to pair their projects with Qualified Opportunity Zone investments and incentives. Alex works with clients through the finance structuring process by first identifying the needs and gap of the project and assessing the tools available for the project's financing at the local, regional and state level. Alex directs clients through the nuances of the predevelopment stage of their projects through incentive, land use, and market research; pro forma development; feasibility analyses; economic impact analyses; and property tax analyses. He focuses on structuring tax incentives, including tax increment financing (TIF), and monetizing TIF structures through bank and bond financing. His significant knowledge on TIF structures, property tax valuations, and property tax modeling are utilized in the TMUD EIS analyses.

EXECUTIVE SUMMARY

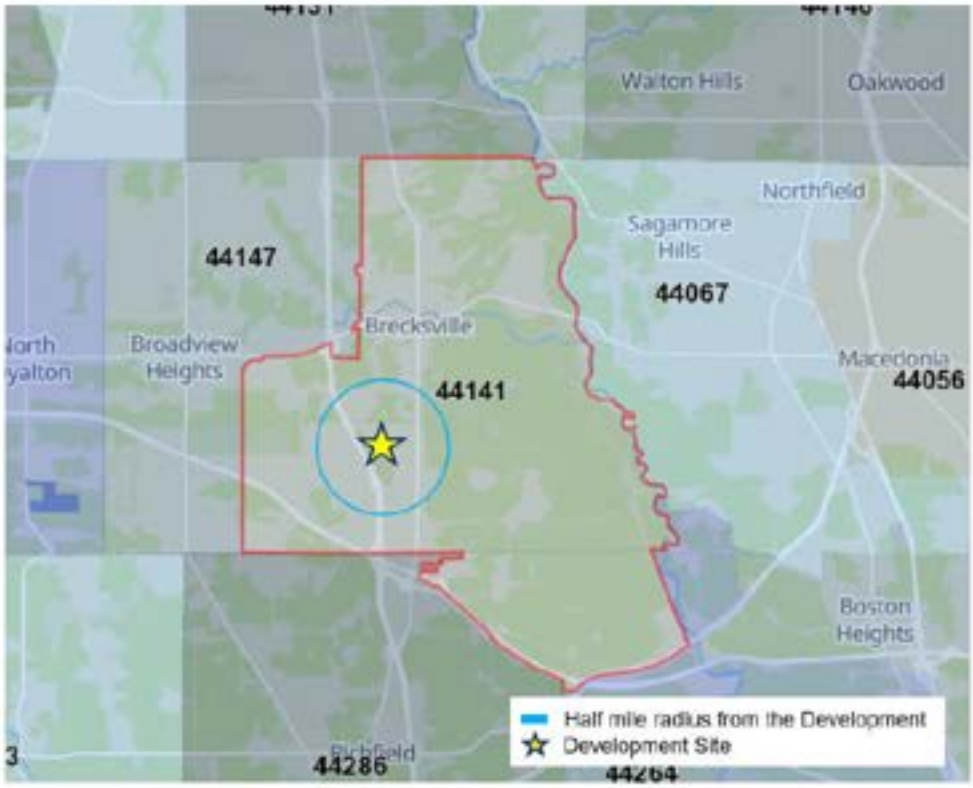
Project Management Consultants LLC (PMC) was engaged by DiGeronimo Companies (the "Company") to analyze the economic and fiscal impacts of the Company's proposed Valor Acres Phase I project (the "Project") which is located at the northwest corner of Brecksville Road and Miller Road in Brecksville, OH. The project is located at the former site of the Veteran's Administration Hospital complex which closed in 2011, leaving the site vacant for over a decade. The site has been vacant and in need of a functional use for many years. The development team has prepared a redevelopment plan which includes transforming the site into an exciting mixed-use community in Brecksville, OH. This analysis was developed to support the Company's application for Ohio Transformational Mixed-Use Development ("TMUD") tax credits from the third round of the program in fiscal year 2024.

For purposes of this Economic Impact Statement, the overall development will be completed in multiple phases. Therefore, this report will consider impacts of the "Project" (or "Phase I"), and the "Development" (Phase II) separately. The Construction period for purposes of the report runs from the TMUD application date (September 8, 2023) through the completion of the Project and expected certification by the Ohio Tax Credit Authority (December 31, 2026).

The Project consists of 368 proposed residential units, a 132-key hotel, 159,360 square feet of office/coworking space, 67,077 square feet of retail and restaurant space and 710 structured parking spaces. To date, the Project has incurred approximately $45,860,000 in development costs. The remaining TMUD-eligible development costs for the Project represents an estimated $155,687,248 of the total $201,547,248 anticipated Project investment.

The Development (Valor Acres Phase II) consists of 220 proposed residential units, a 150-key hotel, 734,492 square feet of office space, 103,623 square feet of retail and restaurant space, a 35,420 square foot grocery store and 1,200 structured parking spaces. The total estimated Development costs of Phase II are approximately $410,047,824. The estimated timeline of construction commencement and completion is June 2024 to December 2027.

Economic and fiscal impacts ("Impacts") measured in terms of output, employment, labor income, and taxes were estimated primarily using the IMPLAN input-output model based on 2021 data, which is the most accurate data available and adjusted to reflect 2026 dollars, the first year of the 5-year completion period. Per requirements of the TMUD program defining the project's surrounding area, the impacts are presented at the local ZIP code level for the project ZIP code in Ohio, 44141.



This report considers the one-time direct economic and fiscal impacts resulting from the construction of the Project, Development, Surrounding Area (indirect) and Catalyzed Projects ("Construction Period Impacts"), as well as the permanent economic and fiscal impacts, direct and indirect, resulting from the ongoing activities associated with the Project, Development, Surrounding Area and Catalyzed Projects ("Completion Period Impacts").

The impacts of the two components that are analyzed -- Construction Period Impacts and Completion Period Impacts are presented individually and as a whole in the Total Impacts section. Construction Period and Completion Period Impacts are presented in annual terms.

Project Management Consultants collaborated with DiGeronimo Companies to gather necessary data for both the Project and Development and to establish assumptions where needed. For detailed assumptions please find the Construction Period Impact Assumptions in Appendix A, Completion Period Impact Assumptions of the Project in Appendix B, Completion Period Impact Assumptions of the Development in Appendix C, Completion Period Impact Assumptions of the Surrounding Area in Appendix D, and Completion Period Impact Assumptions of the Catalyzed Project in Appendix E. Assumptions and Limiting Conditions can be found in Appendix F. Project Management Consultants used zip-code level data to collect employment, wage, and tax information. All tax impacts include State, County and local level tax estimates via IMPLAN analysis as well as direct

analysis completed by PMC. All assumptions were verified by the Company to the highest degree of reasonableness.

The table below provides a quick reference of definitions for the items included in the economic impact statement summary tables that follow (pages 10-34). Additional information about terms and the methodology used in this study can be found in the Glossary and Methodology on page 35 through 36.

	Direct	Indirect
Jobs	Individuals directly involved in the redevelopment Project or working at the building upon completion of the redevelopment.	Multiplier-effect jobs at the industry level, such as suppliers, service providers, etc. (indirect).
Earnings or Labor Income	Wages and benefits paid to direct jobs.	Total wages and benefits associated with the indirect jobs.
Taxes	An estimate of all taxes and fees collected by state, county, municipal or other government entities, including, but not limited to property taxes, income taxes, sales taxes, and lodging taxes.	

Construction Period Impacts

Construction Project Impacts

The Project is anticipated to involve a direct investment of more than $155 million to be completed over a four-year Construction Period from 2023 through December 31, 2026. During the Construction Period, the Project is anticipated to create a total of 1,168 direct construction jobs with $77.7 million in labor income. The Project is also estimated to generate $8.04 million in new sales and income taxes during the Construction Period. Please note that the estimates in the tables below represent annual impacts over the Construction Period.

Estimated Construction Impacts of the Project

- **1,168 Direct Jobs with $77.7 million in Direct Payroll total over the Construction Period**
- **$8.04 million in new sales and income taxes over the Construction Period**

Construction Jobs and Payroll Impacts of the Project

During the Construction Period, the Project is expected to create 1,168 total direct construction jobs and $77,713,409 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix A due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). The average hourly wage for construction jobs in year 2026 is estimated at $32.58. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Construction Project Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

Construction Tax Impacts Of The Project

The Construction Period of the Project is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated over the Construction Period, as calculated by IMPLAN software and PMC utilizing the hard construction cost impacts outlined in Appendix A. This input data was provided by the client based on their construction cost budget for the Project.

The table below illustrates the direct sales and income tax estimates analyzed by PMC using local tax rates to calculate direct taxes for the Construction Period. Income taxes were estimated using the appropriate local and state income tax rates (2% for Brecksville and state income tax varied based on income bracket). Sales taxes were estimated using the appropriate county and state sales tax rate of 8%. Over the Construction Period, the Project is estimated to generate a total of $3,392,689 in direct local and state income taxes. Over the Construction Period, a total of $4,646,312 in county and state sales taxes on construction materials are estimated to be generated.

Construction Project Impacts: Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]					

Construction Development Impacts

The Development is anticipated to involve a direct investment of over $408 million to be completed over a four-year Construction Period from 2024 through 2027. Year 2027 Construction Impacts for the Development were included in the Completion Period Impacts section because these impacts will occur during the five-year Completion Period. During the Construction Period, the Development is anticipated to create a total of 2,183 direct construction jobs with $145.2 million in labor income. The Development is also estimated to generate $15.4 million in new sales and income taxes during the Construction Period. Please note that the estimates in the tables below represent annual impacts over the Construction Period.

Estimated Construction Impacts of the Development

- **2,183 Direct Jobs with 145.2 million in Direct Payroll total over the Construction Period**
- **$15.4 million in new sales and income taxes over the Construction Period**

Construction Jobs and Payroll Impacts of the Development

During the Construction Period, the Development is expected to create 2,183 total direct construction jobs and $145,204,196 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix A due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). The average hourly wage for construction jobs in year 2026 is estimated at $32.17. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Construction Development Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll

Construction Tax Impacts Of The Development

The Construction Period of the Development is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated over the Construction Period, as calculated by IMPLAN software and PMC utilizing the hard construction cost impacts outlined in Appendix A. This input data was provided by the client based on their construction cost budget for the Development.

The table below illustrates the direct sales and income tax estimates analyzed by PMC using local tax rates to calculate direct taxes for the Construction Period. Income taxes were estimated using the appropriate local and state income tax rates (2% for Brecksville and state income tax varied based on income bracket). Sales taxes were estimated using the appropriate county and state sales tax rate of 8%. Over the Construction Period, the Development is estimated to generate a total of $6,336,883 in direct local and state income taxes. Over the Construction Period, a total of $9,069,307 in county and state sales taxes on construction materials are estimated to be generated.

Construction Development Impacts: Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Construction Surrounding Area Impacts

During the Construction Period, the Project is anticipated to create a total of approximately 8 indirect construction jobs with $771,803 in indirect labor income in the surrounding area. The surrounding area is also estimated to generate $116,279 in new indirect property, sales and income taxes over the Construction Period (2023-2026). Surrounding area impacts were estimated using indirect impacts of the Project in IMPLAN. It is possible that the impacts are much greater in the surrounding area due to the catalytic nature of this development.

Construction Jobs and Payroll Impacts of the Surrounding Area

During the Construction Period, it is expected that 8 total indirect jobs will be created in the surrounding area due to construction activities on the site. The average hourly wage for these jobs in year 2026 is estimated at $45.13. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Construction Surrounding Area Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

Construction Tax Impacts Of The Surrounding Area

During the Construction Period, the development is anticipated to generate significant new tax revenues within the surrounding area.

This surrounding area impacts identify the indirect taxes generated by the project over the Construction Period, as calculated by IMPLAN software utilizing the hard construction costs outlined in Appendix A. This input data was provided by the client based on their construction cost budget for the Project and Development.

The table below illustrates the indirect and sales, income, lodging and property tax estimates generated in IMPLAN. Over the Construction Period, the Project is estimated to generate $116,279 in new taxes within the surrounding area. Of these taxes, it is expected that $59,259

new indirect sales taxes will be generated in the surrounding area as a result of this development project.

Construction Surrounding Area Impacts: Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]					

Indirect income taxes were estimated using IMPLAN. The table above shows the indirect income tax estimated impacts. Over the Construction Period, it is estimated that within the surrounding area a total of $3,567 in indirect local and state income taxes will be generated.

Property taxes were estimated based on client-provided data that was then input into IMPLAN. The table above shows the indirect property tax estimated impacts. Over the Construction Period, the surrounding area is expected to generate a total of $53,453 in indirect property taxes.

Construction Catalyzed Project Impacts

During the Construction Period (2023-2027), the Catalyzed Projects are anticipated to create a total of 895 direct construction jobs with $59,560,961 in direct labor income at the Catalyzed Project sites. The Catalyzed Projects are also estimated to generate $3,200,267 in new direct sales and income taxes during this period. The construction impacts for one Catalyzed project, The Sherwin-Williams Company's Research and Development Center, are shown in 2023 and 2024. This project will not generate direct sales taxes during construction due to the project's utilization of Cleveland-Cuyahoga County Port Authority conduit lease financing, which exempts certain construction materials from taxation. The second catalyzed project will commence in 2026. Year 2027 Construction Impacts for the Catalyzed Projects were included in the Completion Period Impacts section because these impacts will occur during the five-year Completion Period.

Construction Jobs and Payroll Impacts of the Catalyzed Projects

During the Construction Period, it is expected that 895 total direct jobs will be created at the Catalyzed Project sites. The average hourly wage for these jobs in year 2026 is estimated at $33.74. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Construction Catalyzed Project Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll

Construction Tax Impacts Of The Catalyzed Projects

The Construction Period of the Catalyzed Projects is anticipated to generate significant new tax revenues at the Catalyzed Project site and within the surrounding area.

The table below illustrates the direct sales and income tax estimates for the Catalyzed Projects analyzed by PMC using local tax rates to calculate direct taxes for the Construction Period. Income taxes were estimated using the appropriate local and state income tax rates (2% for Brecksville and state income tax varied based on income bracket). Sales taxes were estimated

using the appropriate county and state sales tax rate of 8%. Over the Construction Period, the Catalyzed Projects are estimated to generate a total of $2,600,267 in direct local and state income taxes. Over the Construction Period, a total of $600,000 in county and state sales taxes on construction materials are estimated to be generated. The Sherwin Williams R&D Center will utilize Cleveland-Cuyahoga County Port Authority sales tax exemption for construction materials and so sales taxes for this portion of construction were not included in the analysis.

Construction Catalyzed Project Impacts: Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Completion Period Impacts

Project Impacts

Upon Project construction completion, the Project will have a significant ongoing annual impact on the State and local economy. This impact will come in the form of activities to support the maintenance and operation of the buildings, as well as from businesses that will locate operations at the development site as tenants or occupants, such as at the Sherwin-Williams Company's Research and Development Center. Once the buildings reach full occupancy, these ongoing activities are anticipated to support approximately 784 total direct jobs and generate $57.1 million of direct annual labor income in 2027.

The Project is also estimated to generate $67.4 million in new property, sales, lodging and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2027 through 2031. In addition, the Project is expected to generate approximately [redacted] in retail, dining, and entertainment sales over the completion period.

Estimated Completion Period Impacts of the Project

- 784 Direct Jobs with $57.1 million in Direct Payroll in 2027
- $67.4 million in new property, sales and income taxes over the 5-year completion period
- $[redacted] in retail, dining, and entertainment sales over completion period

Permanent (Annual) Jobs and Payroll Impacts of the Project

Upon completion of construction, the Project is expected to create 784 total jobs, 25 of which will be jobs to support maintenance and operations of the buildings and commercial parking, 759 of which will be commercial tenant jobs. In year 2031, the 25 Operations jobs are expected to generate $1,649,960 in direct labor income with an average hourly wage of $31.73. (Operations job estimates are shown in the table below).

Project Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

In year 2031, the Project Tenant jobs are expected to generate a total of $62,627,822 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix B due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). In 2031, Tenant jobs are expected to have an average hourly wage of $39.67. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Project Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

Permanent (Annual) Tax and Sales Impacts Of The Project

The Project is expected to be completed prior to calendar year 2027 following construction years 2023 through 2026. Based on TMUD application requirements, a completion period was set for calendar years 2027 through 2031, when the Project will experience its first five years of operations. During this period, the Project is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated by the project starting in 2027, as calculated by IMPLAN software and PMC utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix B. This input data was provided by the client based on planned tenants, operations wages and staffing, and resident income requirements for the apartment units.

The table below illustrates the permanent direct sales, income, lodging and property tax estimates analyzed by PMC using local tax rates to calculate direct taxes. Over the 5-year impact period, the Project is estimated to generate a total of $21,435,625 in direct local, county and state sales taxes within the Project site and surrounding area. Sales taxes were calculated using a 8% total tax rate for Cuyahoga County.

Project Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Income taxes were estimated using the appropriate local and state income tax rates (2% for Brecksville and state income tax varied based on income bracket). The table above shows the direct permanent income tax estimated impacts. Over the 5-year completion period, the Project is estimated to generate a total of $14,755,080 in direct local and state income taxes.

Lodging taxes were estimated using a combined tax rate of 9.5% (6.5% for Cuyahoga County and 3% for Brecksville). The table above shows the direct permanent lodging tax estimated impacts that will be generated by the hotel on site. Over the 5-year completion period, the Project is estimated to generate a total of $3,231,959 in direct lodging taxes.

Property taxes were estimated based on client-provided value estimates of the completed project. The table above shows the permanent incremental property tax estimated impacts. Over the 5-year impact period, the Project is expected to generate a total of $27,960,650 in direct incremental property taxes.

Project Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

The Project is expected to generate $[redacted] in new sales revenues in the area over the 5-year completion period, as shown in the table above. These estimates were pulled from the direct sales calculated at the project site found in Appendix B.

Development Impacts

Upon construction completion of the overall development, the Development will have a significant ongoing annual impact on the State and local economy. This impact will come in the form of activities to support the maintenance and operation of the buildings, as well as from businesses that will locate operations at the development site as tenants. Once the buildings reach full occupancy, these ongoing activities are anticipated to support approximately 1,234 total direct jobs and generate $99.7 million of direct annual labor income in 2027. By Year 5 (2031), 2,822 direct jobs with $255.4 million in direct payroll are expected to be generated.

The Development is also estimated to generate $153.3 million in new property, sales, lodging and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2027 through 2031. In addition, the Project is expected to generate approximately $[redacted] in retail, dining, and entertainment sales over the completion period.

Estimated Completion Period Impacts of the Development

- 1,234 Direct Jobs with $[redacted] in Direct Payroll in 2027 (2,822 Direct Jobs in 2031 with $[redacted] in Direct Payroll)
- $153.3 million in new property, sales and income taxes over the 5-year completion period
- $[redacted]n in retail, dining, and entertainment sales over completion period

Permanent (Annual) Jobs and Payroll Impacts of the Development

Upon completion of construction, the Development is expected to create 2,822 total jobs, 20 of which will be jobs to support maintenance and operations of the buildings and commercial parking, 2,802 of which will be commercial tenant jobs. In year 2031, the 20 Operations jobs are expected to generate $1,319,968 in direct labor income with an average hourly wage of $31.73. (Operations job estimates are shown in the table below).

Development Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

In year 2031, the Development Tenant jobs are expected to generate a total of $254,107,776 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix C due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). In 2031, Tenant jobs are expected to have an average hourly wage of $43.60. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Development Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

Because construction of the Development will continue into 2027, construction jobs and payroll for year 2027 should be considered in this section. In 2027, the Development is expected to generate 991 construction jobs with $66.68 million in direct payroll.

Permanent (Annual) Tax and Sales Impacts Of The Development

The Development is expected to be completed prior to calendar year 2028 following construction years 2024 through 2027. Based on TMUD application requirements, a completion period was set for calendar years 2027 through 2031, when the Project will experience its first five years of operations. Because construction of the Development will continue into 2027, which happens during the Completion Period, construction sales and income taxes for Year 2027 were included in this section's estimates.

This report focuses on the direct and indirect taxes generated by the project starting in 2027, as calculated by IMPLAN software and PMC utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix C. This input data was provided by the client based on planned tenants, operations wages and staffing, and resident income requirements for the apartment units.

The table below illustrates the permanent direct sales, income, lodging and property tax estimates analyzed by PMC using local tax rates to calculate direct taxes. Over the 5-year

impact period, the Development is estimated to generate a total of $49,459,979 in direct local, county and state sales taxes within the Project site and surrounding area. Sales taxes were calculated using an 8% total tax rate for Cuyahoga County.

Development Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]					

Income taxes were estimated using the appropriate local and state income tax rates (2% for Brecksville and state income tax varied based on income bracket). The table above shows the direct permanent income tax estimated impacts. Over the 5-year completion period, the Development is estimated to generate a total of $47,819,223 in direct local and state income taxes.

The Development will include a hotel component of which lodging taxes were estimated using a combined tax rate of 9.5%. The table above shows the direct permanent lodging tax estimated impacts that will be generated on site. Over the 5-year completion period, the Development is estimated to generate a total of $3,976,437 in direct lodging taxes.

Property taxes were estimated based on client-provided value estimates of the completed project. The table above shows the permanent incremental property tax estimated impacts. Over the 5-year impact period, the Development is expected to generate a total of $52,066,531 in direct incremental property taxes.

Development Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
[redacted]				

In total the Development is expected to generate $[redacted] in new retail, entertainment and dining sales revenues in the area over the 5-year completion period, as shown in the table above. These estimates were pulled from the direct sales calculated at the project site found in Appendix C.

Surrounding Area Impacts

Upon construction completion of the entire development, the project will have a significant ongoing annual impact on the State and local economy. This impact will be an indirect result of activities to support the maintenance and operation of buildings and potential tenants that will come to the surrounding area. Once the Project reaches full occupancy, the surrounding area is anticipated to support approximately 20 total indirect jobs and generate approximately $2.0 million of indirect labor income annually.

The surrounding area is also estimated to generate $640,046 in new indirect property, sales, and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2027 through 2031. Surrounding area impacts were estimated using indirect impacts of the Project in IMPLAN. It is possible that the impacts are much greater in the surrounding area due to the catalytic nature of this development.

Permanent (Annual) Jobs and Payroll Impacts of the Surrounding Area

Upon completion of construction of the overall development, it is expected that approximately 20 indirect jobs will be created in the surrounding area, 0.16 of which will be jobs to support maintenance and operations of buildings and commercial parking, and 20 of which will be commercial tenant jobs. Upon full occupancy of the development, in 2031 the 0.16 Operations jobs are expected to generate $16,823 in indirect labor income with an average hourly wage of $50.55 (Operations job estimates are shown in the table below)

Surrounding Area Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

In 2031, the surrounding area Tenant jobs are expected to generate a total of $1,983,846 in indirect labor income. Tenant jobs are expected to have an average hourly wage of $48.51. Average hourly wages were calculated using the labor income per year divided by the number

of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Surrounding Area Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

Permanent (Annual) Tax and Sales Impacts Of The Surrounding Area

During the five-year completion period, the overall development is anticipated to generate significant new tax revenues within the surrounding area.

The surrounding area impacts identify the indirect taxes generated by the project starting in 2027, as calculated by IMPLAN software utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix D. This input data was provided by the client based on planned tenants, operations wages and staffing, and resident income requirements for the apartment units.

The table below illustrates the permanent indirect sales, income, lodging and property tax estimates generated in IMPLAN. Over the five-year completion period, it is expected that $317,235 in new indirect sales taxes will be generated in the surrounding area as a result of this development project.

Surrounding Area Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Indirect income taxes were estimated using IMPLAN. The table above shows the indirect income tax estimated impacts. Over the 5-year completion period, it is estimated that within

the surrounding area a total of $38,014 in indirect local and state income taxes will be generated.

Property taxes were estimated based on client-provided data that was then input into IMPLAN. The table above shows the indirect property tax estimated impacts. Over the 5-year impact period, the overall development will generate a total of $284,797 in indirect property taxes.

Surrounding Area Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

The surrounding area is expected to generate significant new sales revenues in the area which will include $[redacted] in total retail, dining and entertainment sales over the 5-year completion period, as shown in the table above. These estimates were generated in IMPLAN using a Household Spending analysis which shows only induced impacts.

Catalyzed Project Impacts

In addition to the Project itself, the Catalyzed Projects will have a significant ongoing annual impact on the State and local economy. This impact will come in the form of activities to support the maintenance and operation of the buildings, as well as from businesses that will locate operations at the Catalyzed Project sites as tenants. Once the Catalyzed Projects reach full occupancy, it is anticipated to support approximately 1,860 total direct jobs and generate $177.5 million of direct labor income annually.

The Catalyzed Projects are also estimated to generate $78,585,658 in new direct property, sales, and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2027 through 2031. Due to the end uses of both Catalyzed Projects, no retail, dining or entertainment sales are expected to be generated on either project site.

Permanent (Annual) Jobs and Payroll Impacts of the Catalyzed Projects

Upon completion of construction of the Catalyzed Projects, it is expected that 1,860 direct jobs will be created on the Catalyzed Project sites, of which all will be commercial tenant jobs. The Catalyzed Projects are not expected to create any operational jobs only tenant jobs.

Catalyzed Project Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

In 2031, the Catalyzed Projects Tenant jobs are expected to generate a total of $177,447,976 in direct labor income. In 2031, Tenant jobs are expected to have an average hourly wage of $45.87. Average hourly wages were calculated using the labor income per year divided by the number of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Catalyzed Project Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

Because construction of the Catalyzed Projects will continue into 2027, construction jobs and payroll for year 2027 should be considered in this section. In 2027, the Catalyzed Projects are expected to generate 132 construction jobs with $9.3 million in direct payroll.

Permanent (Annual) Tax and Sales Impacts Of The Catalyzed Projects

The Catalyzed Projects are expected to be fully completed during the five-year completion period following construction years 2023 through 2027. Based on TMUD application requirements, a completion period was set for calendar years 2027 through 2031, when the Project will experience its first five years of operations. Because construction of the Catalyzed Projects will continue into 2027, which happens during the Completion Period, construction sales and income taxes for Year 2027 were included in this section's estimates.

This portion of the report focuses on the direct taxes generated by the Catalyzed Projects starting in 2027, as calculated by IMPLAN software and PMC utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix E. This input data was provided by the client based on information known about the Catalyzed Projects.

The table below illustrates the permanent direct sales, income, and property tax estimates analyzed by PMC using local tax rates to calculate direct taxes. Over the 5-year impact period, the Catalyzed Projects are estimated to generate a total of $600,000 in direct local, county and state sales taxes within the Catalyzed Project sites and surrounding area. Sales taxes were calculated using an 8% total tax rate for Cuyahoga County.

Catalyzed Project Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Income taxes were estimated using the appropriate local and state income tax rates (2% for Brecksville and state income tax varied based on income bracket). The table above shows the direct permanent income tax estimated impacts. Over the 5-year completion period, the Catalyzed Projects are estimated to generate a total of $35,945,405 in direct local and state income taxes.

Property taxes were estimated based on client-provided value estimates of the completed Catalyzed Projects. The table above shows the permanent incremental property tax estimated impacts. Over the 5-year impact period, the Catalyzed Projects are expected to generate a total of $42,040,253 in direct incremental property taxes.

Catalyzed Project Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Due to the end uses of both Catalyzed Projects, no retail, dining or entertainment sales are expected to be generated on either project site.

PROJECTS CATALYZED – NARRATIVE

Catalyzed Project #1: Sherwin-Williams Company Research and Development Center

Within the Valor Acres surrounding area, as well as both adjacent to the Project and Development AND to be integrated with the Project and Development, is located the planned Sherwin-Williams Company's (the "Company") new global Research & Development Center (the "R&D Center"). For reference, the R&D Center is being constructed on parcel 604-08-008 and is marked in the materials submitted with this application. This catalyzed project is a 600,000 square-foot office, research, development and testing facility planned by the Company to consolidate and expand its research and development activities into one central location in Brecksville, Ohio. According to the Company's website and numerous publicly available documents, the R&D Center is expected to bring 900 jobs to the surrounding area, with potential for the growth of hundreds of additional jobs over time. This R&D Center will support the Company's new product development, research and engineering in order to expand its product lines and enable the Company's growth over time.

This catalyzed project's construction in Brecksville, Ohio is contingent upon the Development and Project being completed, allowing the Company and its employees and customers to be integrated into a walkable community with amenities to benefit the Company and its employees and customers, including restaurants, hotel, apartments, retail and recreational connections. We have enclosed a letter from the Company confirming that selection of Brecksville, Ohio as the location for the planned R&D Center was accelerated and contingent upon the completion of the Development and Project by the Applicant. The developer of Valor Acres, an affiliate of the Applicant, originally sold the R&D Center land to the Company for the planned R&D Center in October 2020. In negotiations with the developer to select Brecksville, Ohio as the location for its R&D Center and retain this Fortune 500 employer in Northeast Ohio over the Company's many options across the Country, the Company emphasized the importance of the Development and Project's completion and opening in driving the selection and completion timeline of the R&D Center and affording the Company the ability to retains its operations in the State of Ohio. It was critical to the Company that in order for it to invest in the consolidation and construction of its R&D Center in Ohio, the surrounding area needed the critical amenities Valor Acres provides for its employees, guests and customers. To further emphasize the importance and integration of the R&D Center and the Project and Development, the Company, City of Brecksville and the developer affiliate of Applicant entered into certain publicly recorded documents that require specific development

uses, timelines and development guidelines for the Development and Project, which includes numerous amenities that previously did not exist in the surrounding area.

The R&D Center broke ground in October 2021 and is anticipated to be complete by December 2024. The minimum hard cost commitment as documented in public documents is approximately $250,000,000. The applicant estimates that the R&D Center is approximately 60% complete as of September 8, 2023, so this EIS statement only takes into consideration that approximately $100,000,000 in hard cost spend is yet to be incurred between September 8, 2023 and the completion of the catalyzed project by December 2024. The EIS assumes only 900 jobs across the five-year completion period are new to the surrounding area, but not new to the state.

Catalyzed Project #2: Brecksville Business Park

Within the Valor Acres Surrounding area sits a large area of land (approximately 40.69 acres) controlled by the Ray Fogg Building Methods Company for nearly 50 years (purchased in 1969), which specializes in office and industrial development in Northeast Ohio. The site, named Brecksville Business Park (the "Business Park") is marked on application materials, but for reference includes parcels 604-16-010, 604-16-009, 604-15-004, 604-16-005, 604-16-008, 604-16-013, and 604-16-012, all owned by Fogg Brecksville Dev. Co. ("Fogg"). Fogg is documented in recent news articles with Brecksville City officials indicating it has planned to develop this Business Park for decades but the time was not right until around 2022, wherein it then commenced planning and securing lot split and infrastructure plan approvals. According to a Cleveland.com article from March 28, 2022 by Bob Sandrick, Michael Merle of Fogg indicated "It's a piece of property we've owned for 50 years. We think the time is right (to develop it). And we think it's going to be good for us and it's going to be good for the end users and it's going to be good for the city of Brecksville." This timing aligns with the construction starts of both Valor Acres Phase I and the addition of new on-and-off highway ramps from I-77 to Miller Road adjacent to the Business Park and Valor Acres and the commencement of construction of the R&D Center and Valor Acres.

Plans for the Business Park are documented in Fogg's publicly available marketing materials, which market the land as available for up to 500,000 square feet of built space. The Applicant is a competitor to Fogg in the construction of office and industrial space across the Cleveland region and has indicated it believes the Business Park is likely to be fully developed within the next 5 years (by 2028). Applicant has received inquiries from numerous large office, industrial and distribution tenants for the Brecksville area since breaking ground on Valor

Acres and believe the demand is strong for companies to relocate near the Development, the Project, the R&D Center, and the new I-77 highway connection at Miller Road, which separates the Business Park from Valor Acres.

The Applicant believes the Business Park will be developed with approximately 500,000 square feet of space. This Business Park is likely to be 10% office space and 90% warehouse/industrial, based on Applicant's experience with similar sites and projects across the Northeast Ohio region. This EIS includes this planned project since it has plans for development, is very likely to occur, and is directly catalyzed and accelerated by the construction of Valor Acres Phase I. Conservative assumptions for costs and jobs created were used, as provided by the client.

PROJECT RETURN ON INVESTMENT

In Year 5 (2031), the total Operations and Tenant jobs for the Project are expected to generate $64,277,782 in new direct payroll. It is possible that upon completion of the Project that significantly more payroll will be generated due to local factors within the Project site's surrounding area.

The Project, Development, Surrounding Area and the Catalyzed Projects are anticipated to generate $326,692,924 in combined new tax revenues for the State of Ohio and the local entities over the construction and 5-year completion period. Over the construction and 5-year completion period, the Project, Surrounding Area and Catalyzed Project are estimated to generate $[redacted] in retail, dining and entertainment sales revenues. It is possible that upon completion of the Project that significantly more tax and sales revenues will be generated due to local factors and tax rates within the Project site's surrounding area. This Project will generate significant benefits for the City of Brecksville and the State of Ohio and will catalyze additional development in Brecksville and the surrounding area.

Year 5 Operational Payroll of the Project:	**$1,649,960**
Year 5 Tenant Payroll of the Project:	**$62,627,822**
Total Year 5 Payroll of the Project:	**$64,277,782**

Total New Taxes Generated (Over 5-Year Completion Period):	**$326,692,924**
Total New Retail, Dining and Entertainment Sales Generated (Over 5-Year Completion Period):	**$[redacted]**

Tax Credit Requested	**$10,000,000**

GLOSSARY

Direct Jobs – Direct jobs comprise those individuals employed in the redevelopment of the building, its future operation, or involved in the operation of a business located at the Project (tenant) site upon redevelopment.

Direct Earnings/Labor Income – The labor income (wages and benefits) associated with the direct jobs.

Hard Construction Costs for IMPLAN Impact Analysis - Only Hard Construction Costs (including Architecture and Engineering costs, as prescribed by IMPLAN software modeling instructions for construction projects) were entered into IMPLAN. Costs such as acquisition, site work, soft costs, financing costs, and FF&E were excluded from this Direct Development Cost number.

Indirect Jobs – Jobs supported by industries purchasing from industries. For example, purchases of construction materials and other supplies from vendors within the study area. Those vendors employ workers to meet the demand of the Project (and other customers). This cycle may have many iterations between different industry sectors, and the coefficients associated with each industry are calculated within the IMPLAN model. See below for more information about IMPLAN.

Indirect Earnings/Labor Income – The earnings associated with the indirect jobs. This amount can include both wages and benefits paid to workers as well as income earned by business owners. Indirect earnings are calculated using the IMPLAN model.

Retail, Entertainment and Dining Sales – Sales were analyzed using a Household Income impact analysis in IMPLAN using the industry codes listed in Appendix D. This analysis uses only induced impacts to show how new households will impact sales and spending in the area using IMPLAN's estimates. These estimates were then combined with direct dining, entertainment and retail sales generated within the overall development site.

Taxes – This includes all taxes and fees collected by federal, state, county, municipal, or other government entities, including, but not limited to property taxes, income taxes, sales, taxes, license and registration fees, etc.

METHODOLOGY

This analysis was completed using the IMPLAN economic impact model, adjusted for 2027 dollars as well as for actual tax rates. IMPLAN is an input-output model that is used by many universities and government agencies to estimate economic and fiscal impacts. Input-output modeling describes commodity flows from producers to consumers. The value of commodities produced is equal to total industry purchases of commodities, services, employment compensation, value added, and imports.

An IMPLAN impact analysis involves specifying a series of expenditures or other changes and applying them to the region's economic multipliers. The expenditures are identified in terms of the sectoring scheme for the model, in producer prices, and in historical and current dollars with the year the analysis is conducted in as the base year. Only the dollars spent within the region are applied to the model.

The notion of a multiplier rests upon the difference between the initial effect of a change in final demand and the total effects of that change. Total effects can be calculated either as direct and indirect effects, or as direct, indirect, and induced effects. Direct effects are production changes associated with the immediate effects or final demand changes. Indirect effects are production changes in backward-linked industries caused by the changing input needs of directly affected industries (for example, additional purchases to produce additional output). Induced effects are the changes in regional household spending patterns caused by changes in household income generated from the direct and indirect effects.

Purchases for final use (final demand) drive the model. Industries producing goods and services for final demand purchase goods and services from other producers. These other producers, in turn, purchase goods and services. This buying of goods and services (indirect purchases) continues until leakage from the region (imports and value added) stops the cycle.

Creating a regional input-output model requires a tremendous amount of data. The costs of surveying industries within each region to derive a list of commodity purchases (production functions) are prohibitive. IMPLAN was developed as a cost-effective means to develop regional input-output models. The IMPLAN accounts closely follow the accounting conventions used in the "Input-Output Study of the U.S. Economy" by the Bureau of Economic Analysis (1980) and the rectangular format recommended by the United Nations.

APPENDIX D – SURROUNDING AREA ASSUMPTIONS

Induced Spending - Dining, Retail and Entertainment Sales	
Dining	
509	Full-service restaurants
510	Limited-service restaurants
Entertainment	
106	Breweries
107	Wineries
108	Distiller
420	Scenic and sightseeing transportation and support activities for transportation
421	Couriers and messengers
430	Sound recording industries
431	Radio and television broadcasting
432	Cable and other subscription programming
447	Other real estate
474	Travel arrangement and reservation services
496	Performing arts companies
497	Commercial Sports Except Racing
499	Independent artists, writers, and performers
500	Promoters of performing arts and sports and agents for public figures
501	Museums, historical sites, zoos, and parks
502	Amusement parks and arcades
504	Other amusement and recreation industries
511	All other food and drinking places
Retail	
152	Printing
392	Wholesale - Motor vehicle and motor vehicle parts and supplies
393	Wholesale - Professional and commercial equipment and supplies
394	Wholesale - Household appliances and electrical and electronic goods
395	Wholesale - Machinery, equipment, and supplies
396	Wholesale - Other durable goods merchant wholesalers
397	Wholesale - Drugs and druggists' sundries

pmc
project management consultants

398	Wholesale - Grocery and related product wholesalers
399	Wholesale - Petroleum and petroleum products
400	Wholesale - Other nondurable goods merchant wholesalers
401	Wholesale - Wholesale electronic markets and agents and brokers
402	Retail - Motor vehicle and parts dealers
403	Retail - Furniture and home furnishings stores
404	Retail - Electronics and appliance stores
405	Retail - Building material and garden equipment and supplies stores
406	Retail - Food and beverage stores
407	Retail - Health and personal care stores
408	Retail - Gasoline stores
409	Retail - Clothing and clothing accessories stores
410	Retail - Sporting goods, hobby, musical instrument and book stores
411	Retail - General merchandise stores
412	Retail - Miscellaneous store retailers
413	Retail - Nonstore retailers
423	Newspaper publishers
429	Motion picture and video industries
437	News syndicates, libraries, archives and all other information services
451	General and consumer goods rental except video tapes and discs
466	Photographic services
467	Veterinary services
477	Landscape and horticultural services
493	Individual and family services
505	Fitness and recreational sports centers
512	Automotive repair and maintenance, except car washes
513	Car washes
514	Electronic and precision equipment repair and maintenance
516	Personal and household goods repair and maintenance
517	Personal care services
518	Death care services
519	Dry-cleaning and laundry services
520	Other personal services
Sales from the Sales Tax Estimates table were included in Induced Spending in they fell within these categories based on the Job Assumptions table.

APPENDIX F

ASSUMPTIONS AND LIMITING CONDITIONS

1. The economic impact analysis contained herein relies on databases and software developed by IMPLAN Group LLC. MIG Inc. has been developing complex localized databases since 1993 and is an industry recognized leader in input-output databases and data modeling. As a result, we believe the information provided is a reliable basis to use in developing the economic impacts for the Project (s). However, we have not examined the data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact analysis.
2. All information contained in the report which was furnished by others was assumed to be true, correct, and reliable. A reasonable effort was made to verify such information, but the author assumes no responsibility for its accuracy.
3. The report was made assuming responsible ownership and capable management of the Project.
4. Possession of the report, or a copy thereof, does not carry with it the right of publication, nor may it be reproduced in whole or in part, in any manner, by any person, without the prior written consent of Project Management Consultants, LLC. Neither all nor any part of the report or copy thereof shall be disseminated to the general public by the use of advertising, public relations, news, sales, or other media for public communication without the prior written consent and approval of Project Management Consultants, LLC.
5. The author of this report is not required to give testimony or attendance in legal or other proceedings relative to this report or to the Subject unless satisfactory additional arrangements are made prior to the need for such services.
6. The opinions contained in this report are those of the author and no responsibility is accepted by the author for the results of actions taken by others based on information contained herein.
7. Acceptance of and/or use of this report constitutes acceptance of all assumptions and the above conditions.

Fairfield Shoe Factory

Transformational Mixed-Use Tax Credit

Economic Impact Statement

Authored by:

VISTA SITE SELECTION

Introduction

This study is prepared by Vista Site Selection, LLC ("Vista"), a third-party entity, on behalf of an application for the Ohio Transformational Mixed-Use Tax Development Credit Program ("TMUD"). This study accomplishes two primary objectives:

1) To verify that increased tax collections resulting from the project will exceed 10% of the estimated eligible project costs and,

2) To articulate the economic impacts of the Project and/or larger Development to the Project Site and Surrounding Area during both the Construction Period, which is the time period in which the Project is being constructed and the Completion Period, which is the 5 years after Project construction is completed.

In accomplishing these objectives, this document will assess the following categories:

- ***Employment*** **-** The projected number of construction, operational, and tenant jobs created as a result of the Project and the average hourly wages for each job type.
- ***Revenue*** **-** Annual revenue projections generated from retail, entertainment, and dining sales.
- ***Tax Revenues*** **-** Annual revenue projections generated from sales tax, income tax, lodging tax, and property tax.

Economic impacts will be calculated utilizing IMPLAN software and the following methodology:

INPUTS

1. Provided by Developer
2. Calculated by Vista using market assumptions and data support

ECONOMIC OUTPUTS

1. Calculated utilizing IMPLAN software
2. Calculated by Vista utilizing IMPLAN rates.

TAX CALCULATIONS

1. Direct taxes calculated by Vista using state and local tax rates.
2. Indirect taxes calculated by Vista from indirect outputs, with some categories calculated using IMPLAN tax estimates and rates.

EIS Framework Categories and Sections

The framework in this study will cover three major sections: 1) Construction Impacts, 2) Completion Period Impacts and 3) Total Impacts.

	1. Construction Impacts	2. Project Completion Period Impacts
Project	The direct economic impacts of the new construction and/or renovation and rehabilitation of structures included in the Project on the Project site during the construction period.	The direct and indirect economic impacts of the Project as defined in the application in the five years after completion of construction of the Project.
Development (if applicable)	The direct economic impacts of the construction and/or renovation and rehabilitation of structures included in the Development as defined in the application during the construction period. Does not include the Construction Project Impacts described above. If the Project is not part of a larger planned Development, this section is not applicable.	The direct and indirect economic impacts of the Development as defined in the application in the five years after completion of construction of the Project, exclusive of the impacts of the Project as identified above. If the Project is not part of a larger planned Development, this section is not applicable.
Surrounding Area Impacts	The indirect economic impacts caused by the new construction and/or renovation and rehabilitation of structures included in the Project in the surrounding area during the completion period of the Project, excluding any impacts specifically identified below in the Construction Catalyzed Project Impacts section.	The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below in the Catalyzed Project Impacts section.
Catalyzed Projects (if applicable)	The direct and indirect economic impacts from construction of the defined projects in the surrounding area that are directly caused or accelerated by the Project/Development during the completion period of the Project.	The direct and indirect economic impacts of other proposed, defined projects in the surrounding area that are directly caused or accelerated by the Project/Development in the five years after completion of construction of the Project.
	3. Total Impacts (1. Construction Impacts + 2. Project Completion Impacts)	

Project Geography

The Economic Impact geography is referred to as the Surrounding Area, which includes any zip code covered in whole or in part encompassed within a perimeter starting from the transformational mixed used development boundary and extending two miles out from that boundary.

The illustration to the right is a 2-mile radius from the Project boundary, illustrating that the radius entirely sits within the 43130 zip code.

Taxes & Rate Methodology

For simplicity, the Project, Development, Surrounding Area and Catalyzed Projects follow the same tax rates which are based on the City of Lancaster, Fairfield County, the Lancaster City School District and the State of Ohio. It is worth noting that there may be small variations in the actual tax amounts, compared to these estimated amounts, based on per-parcel levies, other school districts and numerous factors.

Sales Taxes - are calculated using sales and purchases of building tenants, purchases from residents within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional 20% reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of resident expenditures and estimates of economic output provided by IMPLAN. The combined State and Local rate is 6.75% in Lancaster (with 5.75% to the State of Ohio and 1% to Fairfield County). Property tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool.

Income Taxes – income taxes are calculate as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax) and the City (Municipal Income Tax). Ohio Withholding Taxes utilize a bracketed rate structure based on salary (which for this project is assumed to be 2.7%), while Municipal Income Taxes are fixed and applied to wages and net profits, which is a rate of 2.3%. In addition, the Lancaster City School District levies a 1.5% tax on earned income. Lastly, all residents pay a minimum of 0.75% tax on taxable income (commuter tax). Income tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool.

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. Lodging taxes collected by both the City (3%) and County (4.5%) for a blended rate of 7.5%. Lodging rates can be found utilizing the Ohio Department of Taxation's tax analysis data series.

Property Taxes – property taxes are collected by various units of government and published by the County Auditor. Property taxes are assessed at 35% of the market value of the property, then an effective tax rate is applied and distributed to the local government taxing units. The effective tax rate of the property's assessed value is 5.13%

1. Construction Impacts

Methodology

Project Impacts

Construction inputs were provided by the Developer through the construction contractor, Wash Construction Group, LLC. Wash provided a full list of construction labor and wages needed to complete the project from its own detailed analysis, resulting in 271 FTEs and wages, calculated by using the weighted average 2020 wage/hr. for all positions, increased by 2% year to expected wages in 2023 and 2024. Given Walsh Construction is an experienced contractor it is believed these estimates are reasonably certain to conclude and follows. Similar calculations conducted by Vista would estimate $65,000 to $165,000 in construction cost per worker to complete a construction project. In this case, Walsh estimates result in $73,800 per worker. There are no direct impacts to retail, entertainment and dining as these are not direct construction expenditures.

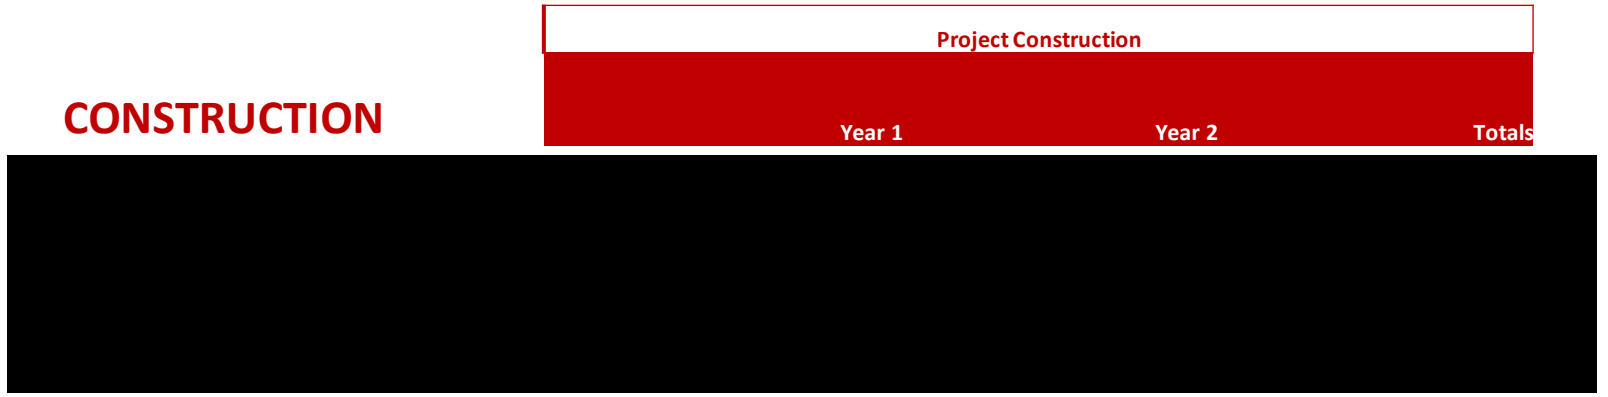
Surrounding Area Impacts

Surrounding Area impacts during the Construction Period were calculating utilizing IMPLAN. In IMPLAN, the project was modeled as $20 million in Output under the industry 55 - Construction of New Commercial Structures, Including Farm Structures. Construction cost data was provided by the Developer through Wash Construction Group, LLC. Outputs resulting from the construction inputs in IMPLAN were filtered in IMPLAN only to show indirect effects of Project Construction. These impacts were categorized by use, to understand specific impacts to Retail, Entertainment and Dining. Additional categories were created and aggregated if the were sales-taxable transactions.

Catalyzed Project Impacts

Catalyzed Project construction was calculated differently than Project Construction, as detailed information for Catalyzed Projects is not typically available, as such, costs were either provided 1) by Destination Downtown Lancaster through its discussion with Catalyzed Project owners or 2) estimated based off of square footage data provided by Destination Downtown Lancaster. In calculating construction impacts, costs were calculated on a per-square foot basis by analyzing comparable building sizes on the Fairfield County Auditor's website, costs of recent developments in the area and the size/scale of the project. In all cases, construction costs assumed 60% labor and 40% materials costs, and for purposes of estimating employment, a cost-per-worker of $71,000 was used, similar to the figures provided by Walsh Construction Group, LLC. Lastly, average salaries for the area were calculated using IMPLAN employee compensation figures for the 43130 zip code, estimated at $49,171.

Construction Project Impacts



DIRECT	Const. 1	Const. 2	Total
Total	$703,075	$703,075	$1,406,151

Construction Development Impacts

[redacted]			

DIRECT & INDIRECT

	Const. 1	Const. 2	Total
[redacted]			
Total	**$10,410,476**	**$10,410,476**	**$20,820,952**

2. Completion Period Impacts

Methodology

Project Impacts

In calculating the project, the Developer provided data related to project costs, tenants, tenant FTEs, tenant sales and tenant wages. These figures came directly from the tenants, specifically in each tenant's Letter of Intent to occupy the Project. These inputs are detailed on the following page. Commercial rent rates were provided from the Developer's proforma. Other metrics, such as household incomes of the residents and resident spending in the Surrounding Area were calculated by Vista. Resident expenditures were calculated using averages from the *2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income*. Household income assumptions were calculated using Census and HUD average family income estimates for 1-person, 2-person and 3-person families at 100% and 120% Area Median Income averages. Each consumer expenditure category was assigned an "absorption rate" to account for any expenditures that cannot be made within the Surrounding Area.

Surrounding Area Impacts

Surrounding Area impacts were calculated primarily utilizing IMPLAN data. Metrics including FTEs, payroll, retail, dining and entertainment sales came directly from IMPLAN's indirect effects of Project impacts. Property taxes were calculated directly from IMPLAN, while sales taxes were calculated by aggregating resulting IMPLAN industry transactions into use categories, including Retail, Entertainment, Dining and other sales-taxable use categories. Lastly, given the catalytic effect of the Project to other uses, the indirect Retail, Entertainment and Dining sales increase annually by 15% in the Surrounding Area as more projects come online and more economic activity circulates. This would not be the case but for the catalytic effect of the Development and the City's overall need for employment opportunities, amenities and other goods and services.

Catalyzed Project Impacts

Catalytic projects follow a different method, given the prospective nature of the developments and lack of detail beyond planned square footage and uses. Projects were identified by the Downtown Lancaster Alliance in coordination with the Mayor and Port Authority as either caused or accelerated by the Lancaster Shoe Factory project, including what year during the Project's Completion period each project would come online. Square footage was applied to a standard rate table be use and resulting figures were calculated into a series of tables for each project. This document elaborates on the methods and rates in later sections.

.

[redacted]						
Total	$272,940	$285,120	$298,552	$313,411	$329,901	$1,499,924

Catalyzed Project Impacts

The Catalytic Effect the Project is quantified in this section. The projects catalyzed in this section all fall within Project's two-mile radius and are planned to be placed into series after this Project is complete. Each project was identified and attested by the City of Lancaster has being caused or accelerated by the Project as noted in Appendix A. Further, project impacts are captured during the five-year completion period in each project's corresponding table. The assumptions below were used to calculate impacts from development square footage programs of each catalyzed project. The following page overviews how these were calculated into FTES, Payroll, Sales and Taxes.

Catalyzed Project Impacts

Each Catalytic Project is calculated utilizing the following methodology in correspondence with the rates from the previous page:

Category	Methodology
FTEs/Payroll	Calculates FTEs per SF by use and payroll using BLS wage data for each overarching use.
Operations FTEs/Payroll	Assumes the 15% of FTES are dedicated to operations, based on IMPLAN's typical mix of operations occupation categories, which includes two-level SIC code categories 37, 43 and 49.
Tenant FTEs/Payroll	Assumes the 75% of FTES are tenants, which is based off of a typical IMPLAN mix for the area, removing two-level SIC code categories 37, 43 and 49.
Retail	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Retail category.
Entertainment	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Entertainment category.
Dining	Assumes a standard calculation for each project which assumes that a percentage of total sales are re-spent to retail uses by indirect economic activity. The percentages were used analyzing a sample of IMPLAN indirect impacts for industries aggregated into a Dining category.

3. Total Impacts

Total Impacts

Construction Activity

The Project's will create, cause and accelerate a total one-time infusion of 3,783 construction jobs and $186.1 million in payroll from construction activity from both the Project and Catalytic projects.

Jobs and Payroll

Additionally, the Project will create, cause and accelerate a total of 318 tenant jobs and 39 operations jobs, of which the 89 will be employed by the project and another 277 caused or accelerated as a result of the Project.

Retail, Entertainment and Dining Sales

The Project will additionally generate, cause and accelerate over $63 million in retail, dining and entertainment sales over a five-year period, including an immediate infusion of $2.5 million in sales from construction activity. Of these sales figures, $32 million will come directly from the Project, driving an additional $15 million to the Surrounding Area and causing/accelerating another $12.4 million from Catalyzed Projects.

Taxes

The Project will result in approximately $57 million in State and Local Taxes, of which $34 million will be generated during the Completion Period from Project operations, Surrounding Area impacts and Catalyzed Project impacts. The additional $23 million comes in the form of Construction Period Taxes.

Total Impacts

EIS Preparer Qualifications

EIS Preparer Qualifications

Vista Site Selection LLC is a newly formed company, founded in September of 2022 by the law firm Vorys, Sater, Seymour and Pease LLP, focused on economic development, economic analysis, economic incentives and site location consulting. Vista's management team has over 75 years of collective experience in Economic Development and Site Selection in 49 US States and includes certified data analysts, economic consultants and GIS specialists, among others.

Vista's services included:

- Economic Insights, including Economic Footprint and Economic Impact Analysis
- Labor Analytics
- Development of Advanced, Customized Data Analytics Platforms and Mapping
- Retail Performance and Growth Analytics
- Return on Investment Insights for Companies and Communities
- Corporate Site Selection Advisory
- Tax Credit and Incentives Advisory
- Economic and Market Analysis

EIS Preparer Qualifications

This analysis will be performed by Chris Magill. Chris is a Managing Director for Vista Site Selection. Chris has significant experience consulting on capital investment projects and has strategically negotiated and analyzed tax credit, grant and loan-financing solutions for capital investment projects in over 20 different states. Further, Chris utilizes data analytics to help better inform business leaders and site administrators on project ROI, economic impacts, site decisions and market conditions. Prior to joining Vista Site Selection, Chris served as the Economic Development Director at the Ice Miller law firm for 11 years, consulting on various matters related to economic development, economic incentives, public-private partnerships, community advisory and economic impact analysis. Prior to his time at Ice Miller, Chris worked at the Ohio Department of Development ("ODOD"), serving as the Executive Director of the Ohio Tax Credit Authority. During his time at ODOD, Chris managed and structured various tax credit programs and co-developed various economic incentive calculation tools.

Chris carries various economic certifications and has nearly 15 years of experience in authoring economic impact statements and analysis tools. Chris has experience instructing economic impact, fiscal return-on-investment and economic development courses for the International Economic Development and the Ohio Economic Development Association. Further, has volunteered his time instructing pro forma development courses for the Knowlton School of Architecture and Fisher College of Business at The Ohio State University in relation to the annual Urban Land Institute Student Heinz Competition and has served as a Planning Committee member and annual speaker for the Ohio Tax Conference. Chris also serves as the Vice President of the Board of Directors of the Ohio Statewide Development Corporation. Chris' credentials include:

- Certification in Economic Measurement, *National Association of Business Economics*
- Certification of Business Applications of Statistics and Data Analytics, *National Association of Business Economics*
- Certification of Economic Strategy and Managerial Decision Making, *National Association of Business Economics*
- Master's in Business Administration, *Ohio University*

EIS Preparer Qualifications

Prior to joining Vista, Chris Magill's related experience includes the following projects. It is worth noting that the majority of these projects were undertaken by Chris during his time at Ice Miller Whiteboard, LLC prior to joining Vista in January of 2023:

To Whom It May Concern:

The Fairfield Shoe Factory redevelopment will have a transformational impact to our Downtown and Community at large. Further, in our opinion, we can attest that the redevelopment of the Fairfield Shoe Factory project will cause or accelerate the attached list of projects in a 2-mile surrounding area radius.

This project is already serving as a catalyst for development within our community and we are thrilled that this transformational project is happening within our community.

Sincerely,

Amanda Everitt

Amanda Everitt
Executive Director

Projects Catalyzed by Lancaster Shoe Factory * all Projects Estimated to be Placed into Service after the Lancaster Shoe Factory is Complete				
Project Name	**Description**	**Address**	**Lancaster Shoe Factory Post-completion Year Placed into Service**	**Projected Investment**
Bauman Building	Located 0.284 miles down Columbus Street, this is a planned renovation of historic and abandoned, 2400 sf of commercial space, of which the purchaser plans to add both residential and commercial space.	217 S Columbus Street	Year 2	$250,000
Clear Sky Health Center	New 40,000-square-foot building will feature all private rooms, a rehabilitative gym with specialized equipment, a dining room with a dedicated chef and food service staff, and an activity of daily living space to allow patients to receive therapy in rooms that emulate home conditions	1201 River Valley Blvd, Lancaster, OH 43130	Year 1	$30,000,000
Gateway Site	Located just 904 feet away from the Project, the Gateway Site is a planned four-story, mixed use development with first floor retail, hotel, restaurant & residential on second, third and fourth floor, parking garage.	Corner of W Main and Memorial Drive, Lancaster OH 43130	Year 1	$4,441,647
Lancaster High School	Brand New High School (construction is underway).	1312 Granville Pike, Lancaster, OH 43130	Year 2	$200,000,000
Smith Building	Located .285 miles from the Project, this is a 5,000 sf mixed use, two-story building, planned for a general store on first floor and bourbon bar on second floor. Additional resident and visitor capacity provided by the residential units and AirBnB provide support for general merchandise retail and an additional bar to the area.	207 S Broad Street, Lancaster OH 43130	Year 1	$1,300,000
St. James Place	Located just 1,090 feet from the Project, this is a 3-story mixed use development with first floor commercial, second floor commercial and third floor one-bedroom units.	128 N Broad Street, Lancaster, OH 43130	Year 2	$500,000
Wilson Building	Located adjacent to the Smith Building, the project includes renovation of the historic, 5-story commercial building residential with ground-floor retail and office space.	201/203 S Broad Street, Lancaster, OH 43130	Year 2	$5,200,000

EIS Summary and Project Overview

EIS Summary

Silverlode Consulting ("Silverlode") was engaged by Indus Development, LLC ("Indus" or the "Developer") to estimate the economic impact and increase in state and local tax collections associated with the proposed Lostro Building mixed-use development (the "Project") in Athens, Ohio. This Economic Impact Statement ("EIS") was prepared to support the Developer's application to the Ohio Department of Development ("ODOD") for consideration for an award of Ohio Transformational Mixed-Use Development ("TMUD") tax credits.

This EIS demonstrates the Project's eligibility for both the TMUD program generally, and the alternative method of valuing the TMUD tax credits ("AMV") as described in Section 122.09(F) of the Ohio Revised Code ("ORC"). As set forth in this report, TMUD eligible development costs ("Development Costs") are estimated to be approximately $10.95 million, and the estimated increase in tax collections is expected to reach $1.59 million within one year after the Project is completed, which exceeds the $1.10 million (10%) AMV eligibility threshold for the first year following Project completion.

During the Project's construction and the five years that follow, or the Completion Period, the estimated increase in tax collections is expected to reach approximately $6.3 million, which is approximately 6.3 times the $1.0 million of TMUD tax credits requested for the Project.

This EIS provides the economic impact data and supporting information requested by ODOD for considering TMUD and AMV eligibility, based upon ODOD's guidance as of the date of this report.

Project Overview

The Lostro Building is a proposed, mixed-use redevelopment project in downtown Athens. The approximately 33,000 square foot building would be redeveloped into student and short-term extended stay suites, casual restaurants, and retail.

The Project would provide new housing and restaurant opportunities a few blocks from Ohio University.

[redacted]. The top two floors of the Lostro Building are planned to include 22 extended-stay suites that will mainly cater to students. In the summer months, these same units will be used for short-term stays. Development costs are estimated to be approximately $10.95 million.

Project Overview	
Project SF	32,908
Development costs	$10,953,765
TMUD tax credit request	$1,000,000
Construction commencement	Q4 2023
Construction completion	Q4 2024

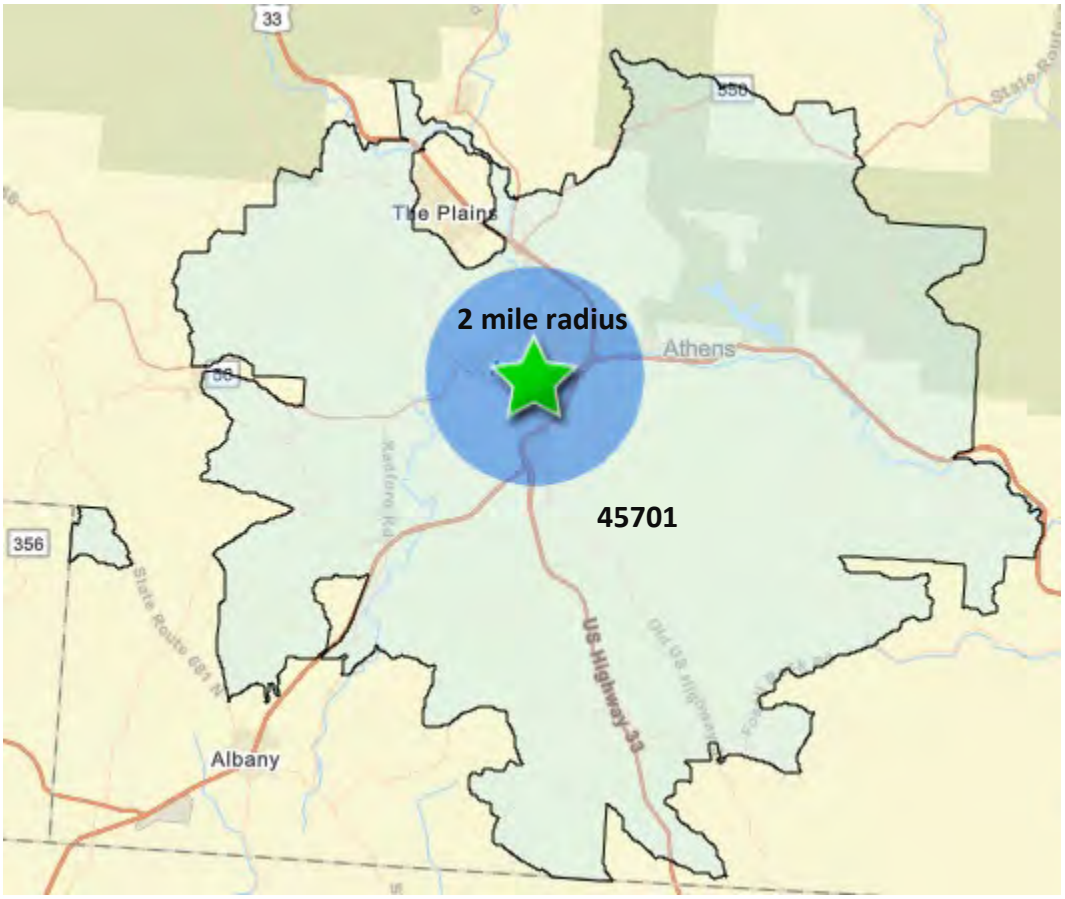
Short-term Rental Assumptions
[redacted]

Surrounding Area & Radius

This EIS estimates the economic impacts associated with the Project on the region comprised of Athens zip code 45701, which fully contains the two-mile radius around the Development (the "Surrounding Area" or "Radius"). The map below illustrates the relationship between the zip code and the area within the Radius.



Visitors

These analyses assume visitors staying in the Project's short-term units would bring new spending to the Surrounding Area. This spending was estimated using per diem rates for federal travel. The impact of this increase in visitor spending is included in the Surrounding Area impacts attributable to the Project in these analyses.

Construction Period Surrounding Area Methodology

The Construction impacts in the Surrounding Area include only the indirect construction impacts in the Surrounding Area that occur as a result of construction employees or items/supplies used in the construction process.

Catalyzed Projects

Due to its location and significance to downtown Athens, the Project is expected to catalyze additional redevelopment and development projects during its construction and in the five years after completion of construction of the Project. These "Catalyzed Projects" are defined as proposed projects which would be located within the two-mile radius, which would be directly caused or accelerated by the Project, are not imminent or committed to at the time of the TMUD application, and are not prior TMUD tax credit recipients or expected to be current TMUD applicants. Currently, the Project is anticipated to catalyze two such projects.

In total, the two identified Catalyzed Projects represent an estimated $6 million of investments. The *Individual Catalyzed Projects Impacts* section of this EIS presents the impacts of the Catalyzed Projects individually. The Developer identified the Catalyzed Projects and provided the information necessary to model their economic impact.

Catalyzed Project #1 Description

The City of Athens is planning to undertake three beautification projects located at State, Washington, and Union Streets. The projects will include new light poles and tree planting, new sidewalks and drives, and stamped concrete crosswalks over seven blocks in downtown Athens. All of the streetscape projects are within a few blocks of the Lostro Building.

The Lostro Building will catalyze the City of Athens Street Beautification projects because residents and visitors of the Project will frequent downtown retail, dining, and entertainment establishments, particularly as the neighborhood's walkability improves. The City is expediting their streetscape projects to dovetail with the Project utility work to limit the street closures for both the streetscape projects and Lostro Building.

Catalyzed Project #2 Description

The Armory Building is a 12,000 square foot coworking, event, and office project located less than half a mile from the Lostro Building.

The Armory, which was built in 1915, was originally used to house the National Guard and is on the National Register of Historic Places and located in the Athens Downtown Historic District. The building was primarily used for military purposes and community events. In recent years, the Armory has only been used for City storage.

The City of Athens is repurposing the Athens Armory into a coworking space, event space, and headquarters for Athens County Foundation. The space, which will be the only coworking venue in

the City of Athens, will create a modern office environment for a growing remote work economy.

The Lostro Building will catalyze the Armory Building project because the uses are synergistic. In addition to activating the streetscape, patrons of the Armory, especially those who are coworking, will have additional restaurant options. The event space users may require overnight lodging and may need banquet catering services provided by one of the new restaurants.

Additionally, the Armory and the Lostro serve as historically significant landmark “bookends” to an activated Court Street. For the architecturally curious, both will serve as monuments to Athens’ past while serving the needs of today’s citizens. Rather than having two shuttered and decaying buildings, the city will have a bustling streetscape while retaining its unique heritage.

TMUD Qualification and Alternative Method of Valuation

As shown below, during the Project's construction and the five years that follow, the estimated increase in tax collections is expected to reach approximately $6.3 million, which is approximately 6.3 times the $1.0 million of TMUD tax credits requested for the Project. Further, the estimated increase in tax collections is expected to reach $1.59 million within one year after the Project is completed, which exceeds the $1.10 million (10%) AMV eligibility threshold for the first year following Project completion.

To determine the increase in state and local tax collections, only taxes collected under chapters 718, 5705, 5739, 5741, and 5747 of the Ohio Revised Code were considered. Property tax estimates included in this analysis include tax increment financing service payments, but do not include abated real estate taxes.

Methodology

Data Sources and Reasonableness of Key Inputs

The Developer's pro-forma financial models and sources/uses analyses, which we understand are being provided to other third parties such as banks and other financial institutions, and thus are assumed to be reliable, and Project tenant data were the source of most project information. The IMPLAN model, which is described in detail in the Methodology section, was also a key source of not only outputs, but key inputs as identified in the table below.

Assumptions Provided by IMPLAN
All indirect impacts
Project short Term Rental FTEs and wages
Project retail FTEs and wages
Catalyzed project FTEs and payroll by use
Direct property tax as a result of construction
Direct property tax as a result of catalyzed project operations

Silverlode assumed a three percent annual rate of inflation.

Where necessary, we relied on independent third-party data, established real estate industry data sources including CoStar, and estimates from the Developer, who has a demonstrated history of success in Ohio. Throughout the modeling, Silverlode also employed professional conservatism to ensure that the inputs and assumptions were reasonable. Silverlode assessed information provided by the Developer for reasonableness, but did not "audit" or validate such information.

IMPLAN

Much of this analysis was completed using the IMPLAN (IMpact Analysis for PLANning) economic impact modeling system. IMPLAN is an input-output model that was originally developed by the U.S. Forest Service in the 1970's and is one of the most respected and widely used approaches to regional economic impact analysis. IMPLAN is used by more than 1,000 universities, government agencies, and consultants to estimate the economic and fiscal impacts of investments and/or changes in one or more industries.

2019 IMPLAN data was used for this study. The Developer provided the capital investment and other operational data necessary to prepare this analysis. The IMPLAN software applies industry specific inflators to convert results to year the impacts will occur.

Data underlying the IMPLAN model is updated annually using thousands of data points from over 90 sources. The main sources for this data include:

- U.S. Bureau of Labor Statistics (BLS) Quarterly Census of Employment and Wages (QCEW)
- U.S. Bureau of Economic Analysis (BEA) Regional Economic Accounts (REA)
- U.S. Census Bureau County Business Patterns (CBP)
- U.S. Bureau of Economic Analysis National Income and Product Accounts (NIPA)

Direct and Indirect Impacts

Economic and fiscal impacts can be divided into three component parts, which are referred to as direct, indirect, and induced. **At the direction of ODOD, this EIS does not include induced impacts.**

A **direct** effect describes an initial, or first-round change in the economy and is the starting point for economic impact analysis. Changes in an economy create "ripples" of economic activity throughout the region being analyzed. These ripples are described as indirect effects (induced effects are not included in this EIS). A positive direct effect causes increased purchases within the economy being modeled, as well as "leakage" of economic activity out of the economy being studied in the form of imports into the economy from other areas outside the economy.

Generally speaking, direct describes activity attributable to the economic activity being modeled. In this EIS, direct impacts include the economic activity of the Project and Surrounding Area (employees, associated payroll, construction investments, etc.). Direct jobs comprise full, part-time, and temporary employees and jobs supported by the Project and future redevelopment and development projects within the Surrounding Area.

Indirect effects represent changes in the industries that provide goods and services to the economic activity being modeled (e.g., suppliers, service providers, etc.). Indirect effects occur in a repeating cycle but diminish in each round as economic activity "leaks" from the region being modeled. Indirect effects cease when the last dollar of economic activity leaks from the economy being studied. Indirect effects are estimated using IMPLAN. In this EIS, indirect impacts include the economic activity of the entities that provide goods and services to the Developer, the Project's tenants, and the Surrounding Area.

Total impact refers only to the cumulative result of all rounds of direct and indirect economic activity.

Silverlode Consulting Qualifications

Company Overview

Silverlode Consulting was founded in 2002 by two leaders of EY's and PwC's consulting practices. As a national leader in the field of economic impact analysis, we have helped hundreds of organizations, ranging from non-profit arts groups to multi-national corporations, to measure their impacts on their communities and communicate those impacts to their stakeholders. For over twenty years, Silverlode has meticulously estimated and effectively communicated the impacts of projects, the presence of organizations, and investments in communities. Our work has helped clients to gain approvals, secure funding, and positively shift public opinion. More information about our firm and our work in economic impact analysis can be found on our website www.silverlodeconsulting.com.

Dennis McAndrew | Founder and President

Dennis has over 25 years of experience estimating economic impacts. He has completed hundreds of projects measuring the impacts associated with development projects, complex health systems, major transportation projects, industry associations, economic development groups, arts, entertainment, and sports organizations, and other entities. Dennis also provides strategic guidance to businesses, developers, economic development organizations, and governmental entities involved in large-scale economic development projects. Dennis is an IMPLAN Certified Economist. Prior to founding Silverlode Consulting in 2002, Dennis worked in the consulting practices of EY and PwC. Dennis earned a Master of Business Administration degree from Georgetown University and a Bachelor of Arts degree in Economics from John Carroll University. Dennis is a certified public accountant (inactive) and is a member of the American Institute of Certified Public Accountants (AICPA).

Michelle Moll | Senior Consultant

Michelle Moll has been an integral part of Silverlode for over a decade. Michelle is an IMPLAN Certified Economist and spearheads Silverlode's modeling for economic impact and other analyses for corporate and public sector clients. Michelle also works with corporate clients to negotiate, procure, and manage compliance for economic incentives. Prior to joining Silverlode, Michelle was a financial analyst with Netrex and a Senior Auditor for PwC. Michelle earned a Bachelor of Science in Accounting from Miami University and is a Certified Public Accountant (inactive).

Kelly Moody has been a consultant with Silverlode Consulting since 2012. She manages client relationships and projects for Silverlode’s economic impact consulting services and a variety of other public sector and corporate consulting projects. Before joining Silverlode, Kelly was a Manager of Consulting at Allegro Realty Advisors, Ltd. and a Manager at Team NEO. Kelly holds a Bachelor of Science in Business Administration in Marketing from the University of Richmond.

Salvation Army Site Redevelopment

Transformational Mixed-Use Tax Credit

Economic Impact Statement

Authored by:

VISTA SITE SELECTION

Introduction

This study is prepared by Vista Site Selection, LLC ("Vista"), a third-party entity, on behalf of an application for the Ohio Transformational Mixed-Use Tax Development Credit Program ("TMUD"). This study accomplishes two primary objectives:

1) To verify that increased tax collections resulting from the project will exceed 10% of the estimated eligible project costs and,

2) To articulate the economic impacts of the Project and/or larger Development to the Project Site and Surrounding Area during both the Construction Period, which is the time period in which the Project is being constructed and the Completion Period, which is the 5 years after Project construction is completed.

In accomplishing these objectives, this document will assess the following categories:

- ***Employment*** **-** The projected number of construction, operational, and tenant jobs created as a result of the Project and the average hourly wages for each job type.
- ***Revenue*** **-** Annual revenue projections generated from retail, entertainment, and dining sales.
- ***Tax Revenues*** **-** Annual revenue projections generated from sales tax, income tax, lodging tax, and property tax.

Economic impacts will be calculated utilizing IMPLAN software and the following methodology:

INPUTS

1. Provided by Developer
2. Calculated by Vista using market assumptions and data support

ECONOMIC OUTPUTS

1. Calculated utilizing IMPLAN software
2. Calculated by Vista utilizing IMPLAN and complementary data sources either publicly available, indexed/created by Vista or subscribed to by Vista.

TAX CALCULATIONS

1. Direct taxes calculated by Vista using state and local tax rates.
2. Indirect taxes calculated by Vista from indirect outputs, with some categories calculated using IMPLAN tax estimates and rates.

EIS Framework Categories and Sections

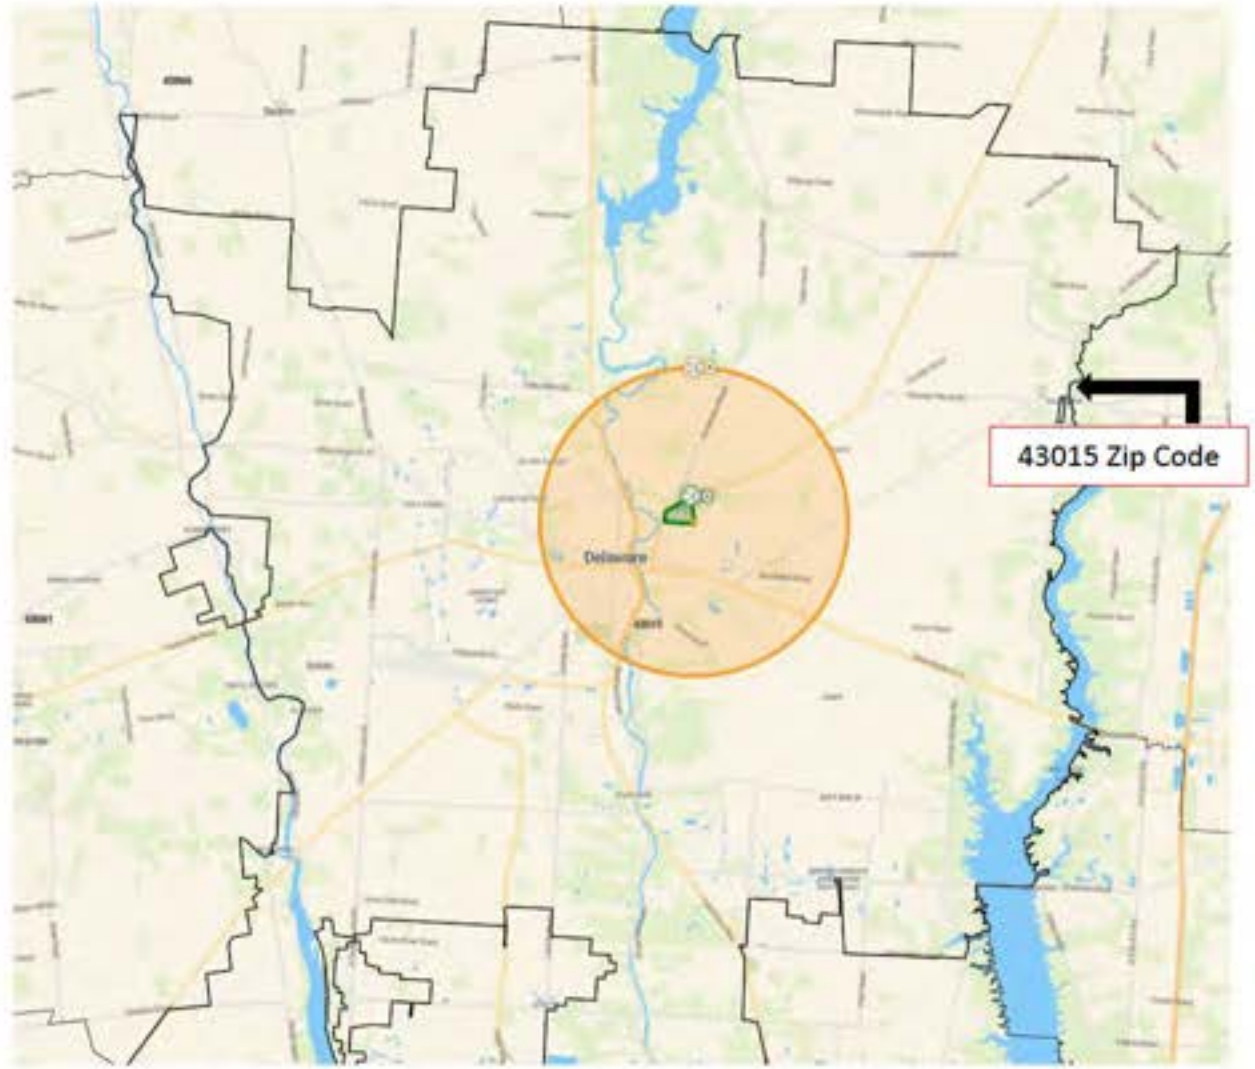
The framework in this study will cover three major sections: 1) Construction Impacts, 2) Completion Period Impacts and 3) Total Impacts.

	1. Construction Impacts	2. Project Completion Period Impacts
Project	The direct economic impacts of the new construction and/or renovation and rehabilitation of structures included in the Project on the Project site during the construction period.	The direct and indirect economic impacts of the Project as defined in the application in the five years after completion of construction of the Project.
Development (if applicable)	The direct economic impacts of the construction and/or renovation and rehabilitation of structures included in the Development as defined in the application during the construction period. Does not include the Construction Project Impacts described above. If the Project is not part of a larger planned Development, this section is not applicable.	The direct and indirect economic impacts of the Development as defined in the application in the five years after completion of construction of the Project, exclusive of the impacts of the Project as identified above. If the Project is not part of a larger planned Development, this section is not applicable.
Surrounding Area Impacts	The indirect economic impacts caused by the new construction and/or renovation and rehabilitation of structures included in the Project in the surrounding area during the completion period of the Project, excluding any impacts specifically identified below in the Construction Catalyzed Project Impacts section.	The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below in the Catalyzed Project Impacts section.
Catalyzed Projects	The direct and indirect economic impacts from construction of the defined projects in the surrounding area that are directly caused or accelerated by the Project/Development during the completion period of the Project.	The direct and indirect economic impacts of other proposed, defined projects in the surrounding area that are directly caused or accelerated by the Project/Development in the five years after completion of construction of the Project.
	3. Total Impacts (1. Construction Impacts + 2. Project Completion Impacts)	

Project Geography

The Economic Impact geography is referred to as the Surrounding Area, which includes any zip code covered in whole or in part encompassed within a perimeter starting from the transformational mixed used development boundary (**in green**) and extending two miles out from that boundary.

The project is located precisely 10.8 miles from the nearest City with a population of at least 100,000 resident (the City of Columbus). The illustration to the right is a 2-mile radius from the Project boundary, illustrating that the radius entirely sits within the 43015 zip code (**zip code boundaries are in black**).



Taxes & Rate Methodology

For simplicity, the Project, Development, Surrounding Area and Catalyzed Projects follow the same tax rates which are based on the City of Delaware, Delaware County, the Delaware City School District and the State of Ohio. It is worth noting that there may be small variations in the actual tax amounts, compared to these estimated amounts, based on per-parcel levies, other school districts and numerous factors particularly when factoring in the Surrounding Area and Catalyzed Project impacts.

Sales Taxes - are calculated using sales and purchases of building tenants, purchases from residents within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional 20% reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of resident expenditures and estimates of economic output provided by IMPLAN. The combined State and Local rate is 7% in Delaware (with 5.75% to the State of Ohio and 1.25% to Delaware County). Sales tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool for the project address.

Income Taxes – income taxes are calculate as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax) and the City (Municipal Income Tax). Ohio Withholding Taxes utilize a bracketed rate structure based on salary (which for this project is assumed to be 2.6%), while Municipal Income Taxes are fixed and applied to wages and net profits, which is a rate of 1.85%. Lastly, all residents pay a minimum of 1.85% tax on taxable income which may or may not be subject to credits due to resident circumstances. Income tax data can be found utilizing the Ohio Department of Taxation's The Finder tax district lookup tool.

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. Lodging taxes collected by both the City (3%) and County (6%) for a blended rate of 9%. Lodging rates can be found utilizing the Ohio Department of Taxation's tax analysis data series.

Property Taxes – property taxes are collected by various units of government and published by the County Auditor. Property taxes are assessed at 35% of the market value of the property, then an effective tax rate is applied and distributed to the local government taxing units. The effective tax rate of the property's assessed value is 6.49%

1. Construction Impacts

Methodology

Project Impacts

The value entered in Industry Output for construction represents full cost of the structure as provided by the Developer, and only the structure. Construction cost data was provided by the Developer in all circumstances (each building). This includes hard costs and soft costs. IMPLAN calculates employment based on the number of employees it would take to support the dollar value and type of a given economic event, using a combination of data sources including Census County Business Patterns (CBP), Bureau of Labor Statistics Covered Employment and Wages (CEW) and Bureau of Economic Analysis Regional Economic Accounts (REA) as the basis for its calculation. Further, IMPLAN uses additional data sources to classify its employment estimates into hours worked, headcount and compensation by specific occupation. Occupational source data used by IMPLAN includes Bureau of Labor Statistics (BLS) Occupational Employment Survey (OES), BLS Employment Projections national industry by occupation matrix, Census Bureau American Community Survey (ACS) Public Use Microdata Sample (PUMS) and O*NET™ which is a trademark of the U.S. Department of Labor, Employment and Training Administration. Employees are converted to Full-time equivalent employees (FTEs) by dividing the estimated number of hours of compensation for the job, as calculated by IMPLAN, by 2,080. There are no direct impacts to retail, entertainment and dining as these are not direct construction expenditures.

Surrounding Area Impacts

Surrounding Area impacts during the Construction Period were calculating utilizing IMPLAN. In IMPLAN, the project was modeled as $89,093,973 in Output under the industry 55 - Construction of New Commercial Structures, Including Farm Structures. Construction cost calculations were provided using costs provided by the Developer. Outputs resulting from the construction inputs in IMPLAN were filtered in IMPLAN only to show indirect effects of Project Construction. These impacts were categorized by use, to understand specific impacts to Retail, Entertainment and Dining. Additional categories were created and aggregated if the were sales-taxable transactions. Lodging taxes follow a similar rate, as many construction workers travel to larger areas given the overall labor shortage of construction workers. Those who travel and stay overnight are typically provided lodging and meal per diems. Given IMPLAN captures dining expenditures, the lodging per diem method is utilized to get a more accurate picture of construction spending, but was not utilized for dining. In this instance. A typical per-day per diem is $138 for lower cost areas and $222 for higher cost areas. Given the high median home sale price of $386,000 (*Black Knight – 43015 zip code, 2022*) and Median Household Incomes $24,000 higher than the State average (*$85,989 – 43015 Zip Code - Census 2021*) the $222 figure is utilized (per diem rates provided by *PBMares CPAs and Consultants Guidance for Contractors Who Use Per Diem, 2022)*. Further it is assumed 15% of workers will travel as part of this arrangement during 30% of the annual weekdays per year. Lodging taxes are calculated off of estimated lodging expenditures.

Catalyzed Project Impacts

Catalyzed Project construction was calculated differently than Project Construction, as detailed information for Catalyzed Projects is not typically available, as such, costs were either provided 1) by the City of Delaware through its discussion with Catalyzed Project owners or 2) estimated based off of square footage data provided by the City of Delaware through each Catalyzed Project's zoning application. In calculating construction impacts, costs were calculated on a per-square foot basis by analyzing comparable building sizes on the County Auditor's website, costs of recent developments in the area and the size/scale of the project. In all cases, construction costs assumed 60% labor and 40% materials costs, and for purposes of estimating employment, a cost-per-worker of $136,000 was used, the rate provided by IMPLAN for the 43015 zip code. Lastly, average salaries for the area were calculated using IMPLAN employee compensation figures for the 43015 zip code, estimated at $48,575.

CATALYZED PROJECTS

TOTALS

	Catalyzed Project Construction		
	Year 1	Year 2	Total
[redacted]			

DIRECT & INDIRECT	Const. 1	Const. 2	Construction Totals
[redacted]			
Total	$6,044,510	$6,044,510	$12,089,021

2. Completion Period Impacts

Methodology

Project Impacts

In calculating the project, the Developer provided data related to project costs, tenants, tenant FTEs, tenant sales and tenant wages. These inputs are detailed on the following page. Commercial rent rates were provided from the Developer's proforma. Other metrics, such as household incomes of the residents and resident spending in the Surrounding Area were calculated by Vista. Resident expenditures were calculated using averages from the *2020 Consumer Expenditure Survey – Shares of Annual Aggregate expenditures and sources of income*. Household income assumptions were calculated using Census and HUD average family income estimates for 1-person, 2-person and 3-person families at 100% and 120% Area Median Income averages. Each consumer expenditure category was assigned an "absorption rate" to account for any expenditures that cannot be made within the Surrounding Area. Further, resident incomes assume 1-bedroom households earn $61,639, 2-bedroom households earn $95,943 and 3-bedroom households earn $96,468. Resident spending is ultimately captured in the "Sales Basis" calculations of Project impact.

Surrounding Area Impacts

Surrounding Area impacts were calculated primarily utilizing IMPLAN data. Metrics including FTEs, payroll, retail, dining and entertainment sales came directly from IMPLAN's indirect effects of Project impacts. Property taxes were calculated directly from IMPLAN, while sales taxes were calculated by aggregating resulting IMPLAN industry transactions into use categories, including Retail, Entertainment, Dining and other sales-taxable use categories. Lastly, given the catalytic effect of the Project to other uses, the indirect Retail, Entertainment and Dining sales increase annually by 15% in the Surrounding Area as more projects come online and more economic activity circulates. This would not be the case but for the catalytic effect of the Development and the City's overall need for employment opportunities, amenities and other goods and services.

Catalyzed Project Impacts

Catalytic projects follow a different method, given the prospective nature of the developments and lack of detail beyond planned square footage and uses. Projects were identified by the City of Delaware in coordination with the Mayor's Office as either caused or accelerated by the project, including what year during the Project's Completion period each project would come online. Square footage was applied to a standard rate table be use and resulting figures were calculated into a series of tables for each project. This document elaborates on the methods and rates in later sections.

Project Inputs

INPUTS	Type	Sales	FTEs	Hrly	Payroll	Units	Residents	Resident Income	Resident Spending
[redacted]									
Totals/Averages		**$10,340,443**	**12**	**$26.77**	**$693,514**	**597**	**1,285**	**$49,216,368**	**$17,871,803**

Residential Units – information provided by the Developer. Residents, incomes and spending calculated by Vista.

Amphitheater – assumes $100,000 in ticketed event sales. [redacted]

Shelter – information provided by the Developer on payroll and employment. Employment and payroll was modeled in IMPLAN to calculate effects of a shelter operation.

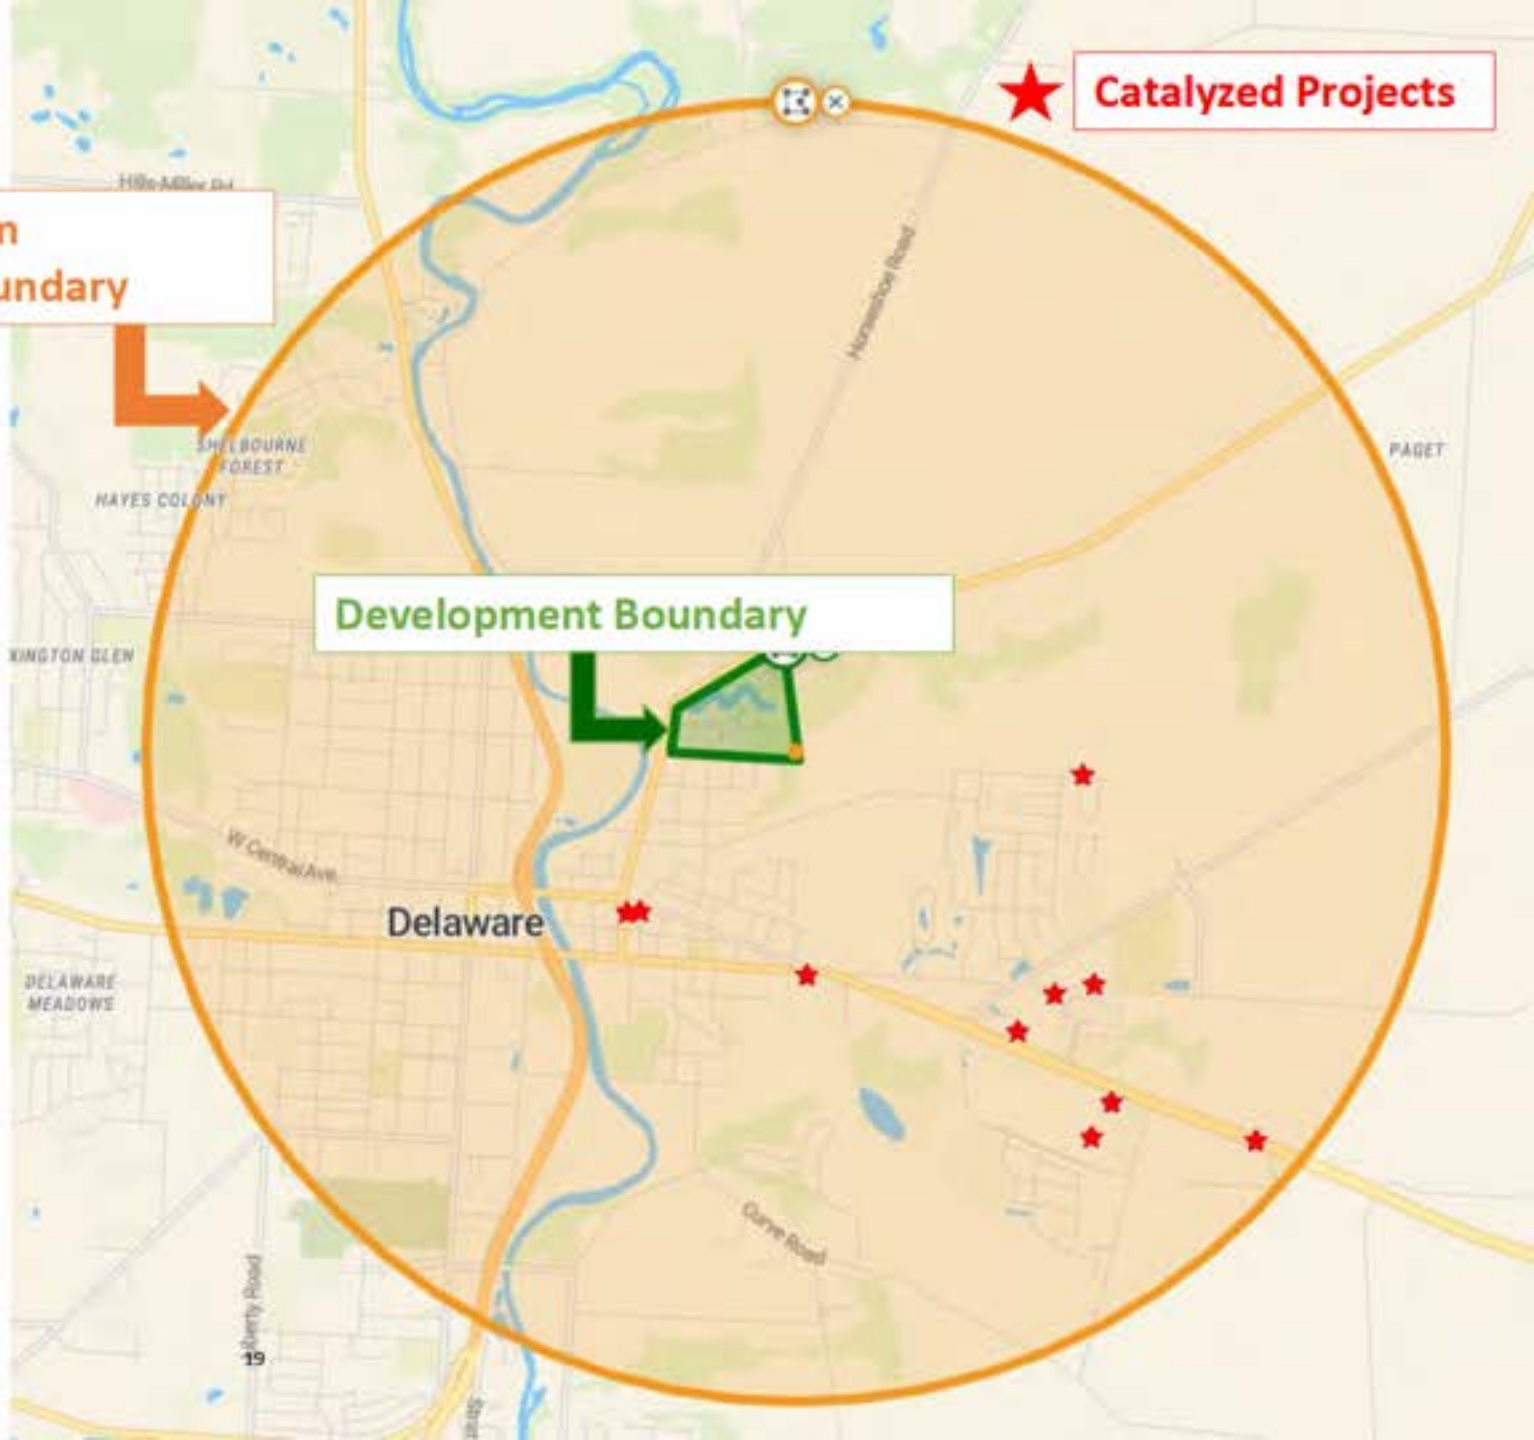
Catalyzed Project Rates

Project impacts are captured during the five-year completion period in each project's corresponding table. The assumptions below were used to calculate impacts from development square footage programs of each catalyzed project. The following page overviews how these were calculated into FTES, Payroll, Sales and Taxes.

Catalyzed Project Rates SF/Jobs Salary Sales/SF Room Sales/SF Rent/SF Methodology

Catalyzed Project Locations



Catalyzed Project Impacts

Each Catalytic Project is calculated utilizing the following methodology in correspondence with the rates from the previous page:

Category	Methodology
[redacted]	[redacted]
[redacted]	[redacted]
[redacted]	[redacted]
[redacted]	[redacted]
[redacted]	[redacted]
[redacted]	[redacted]

3. Total Impacts

Total Impacts

Construction Activity

The Project's will create, cause and accelerate a total one-time infusion of 2,619 construction FTEs and $236 million in payroll from construction activity from both the Project and Catalytic projects.

Jobs and Payroll

Additionally, the Project will create, cause and accelerate a total of 451 FTEs, of which the 12 will be employed by the project and another 439 FTEs caused or accelerated as a result of the Project.

Retail, Entertainment and Dining Sales

[redacted]

Taxes

The Project will result in approximately $78.6 in State and Local Taxes, of which $61.4 will be generated during the Completion Period from Project operations, Surrounding Area impacts and Catalyzed Project impacts. The additional $17.4 million comes in the form of Construction Period Taxes.

Total Impacts

The table to the right illustrates that projected taxes ($78.6 million) meet at least 10% of the total development costs ($8.9 million).

Further, when combining the Construction Period and the first year after construction completion, the project significantly exceeds the 10% development cost threshold by more than $12 million dollars.

TMUD Credit Objectives	
TMUD Project Cost	$89,093,973
10% of Development Cost Threshold	**$8,909,397**
Construction Taxes	$17,421,339
First Year Post-Construction Taxes	$4,507,333
Construction + Year 1	**$21,928,672**
Total Taxes	$78,861,099
Achieved 10% Taxes Threshold	**YES**
Achieve Alternative Method Potential	**YES**

EIS Preparer Qualifications

EIS Preparer Qualifications

Vista Site Selection LLC is a newly formed company, founded in September of 2022 by the law firm Vorys, Sater, Seymour and Pease LLP, focused on economic development, economic analysis, economic incentives and site location consulting. Vista's management team has over 75 years of collective experience in Economic Development and Site Selection in 49 US States and includes certified data analysts, economic consultants and GIS specialists, among others.

Vista's services included:

- Economic Insights, including Economic Footprint and Economic Impact Analysis
- Labor Analytics
- Development of Advanced, Customized Data Analytics Platforms and Mapping
- Retail Performance and Growth Analytics
- Return on Investment Insights for Companies and Communities
- Corporate Site Selection Advisory
- Tax Credit and Incentives Advisory
- Economic and Market Analysis

EIS Preparer Qualifications

This analysis will be performed by Chris Magill. Chris is a Managing Director for Vista Site Selection. Chris has significant experience consulting on capital investment projects and has strategically negotiated and analyzed tax credit, grant and loan-financing solutions for capital investment projects in over 20 different states. Further, Chris utilizes data analytics to help better inform business leaders and site administrators on project ROI, economic impacts, site decisions and market conditions. Prior to joining Vista Site Selection, Chris served as the Economic Development Director at the Ice Miller law firm for 11 years, consulting on various matters related to economic development, economic incentives, public-private partnerships, community advisory and economic impact analysis. Prior to his time at Ice Miller, Chris worked at the Ohio Department of Development ("ODOD"), serving as the Executive Director of the Ohio Tax Credit Authority. During his time at ODOD, Chris managed and structured various tax credit programs and co-developed various economic incentive calculation tools.

Chris carries various economic certifications and has nearly 15 years of experience in authoring economic impact statements and analysis tools. Chris has experience instructing economic impact, fiscal return-on-investment and economic development courses for the International Economic Development and the Ohio Economic Development Association. Further, has volunteered his time instructing pro forma development courses for the Knowlton School of Architecture and Fisher College of Business at The Ohio State University in relation to the annual Urban Land Institute Student Heinz Competition and has served as a Planning Committee member and annual speaker for the Ohio Tax Conference. Chris also serves as the Vice President of the Board of Directors of the Ohio Statewide Development Corporation. Chris' credentials include:

- Certification in Economic Measurement, *National Association of Business Economics*
- Certification of Business Applications of Statistics and Data Analytics, *National Association of Business Economics*
- Certification of Economic Strategy and Managerial Decision Making, *National Association of Business Economics*
- Master's in Business Administration, *Ohio University*

EST 1808

CITY OF DELAWARE OHIO

Department of Development
77 S High St, 29th Floor
Columbus OH 43215
RE: Transformational Mixed Use Tax Credit for Sunset Ridge Associates LP/T&R Properties Salvation Army Redevelopment

To whom this may concern at the Ohio Department of Development,

I write this letter on behalf of the City of Delaware. The Salvation Army Redevelopment of Parcel #51941003012000 and 51944207001000 for 592 multifamily units, public recreational open space, and a men's shelter will bring increased economic development into the City of Delaware.

Since the zoning and preliminary development plan approval of the above project, titled Greenwood Commons, via City Ordinance Numbers 23-34, 23-35, and 23-36, numerous projects have come to the City of Delaware. Based on the recent City of Delaware approvals and the vicinity of these projects to the Greenwood Commons/Salvation Army Redevelopment, it is our belief that these projects have either been caused or will be accelerated by the demand created from the future residents and open recreational space of the Greenwood Commons/Salvation Army Redevelopment.

Attached on the next page are the projects where we believe this to be the case, which includes estimated costs and completion dates.

Respectfully,

Kent H. Shafer

Vice Mayor, City of Delaware

VISTA SITE SELECTION

AN ECONOMIC IMPACT AND INPUT/OUTPUT ANALYSIS
PREPARED FOR
THE THOMPSON BUILDING
522 MARKET STREET,
EAST LIVERPOOL, OHIO 43920
September 8, 2023

Prepared for:
Gary Fischer
554 W 9th Street,
Lorain, Ohio 44052

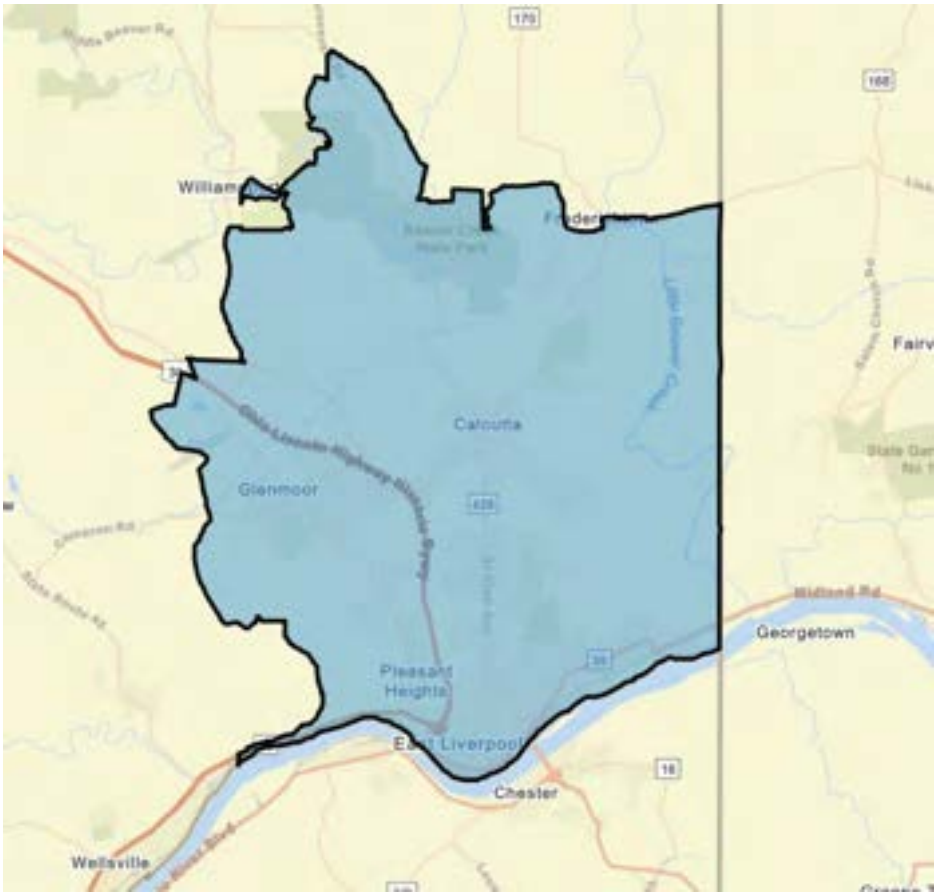
Prepared by:
The Montrose Group LLC
100 East Broad Street, Suite 2320
Columbus, Ohio 43215

I. INTRODUCTION

This analysis was undertaken to identify the economic impact of the proposed redevelopment of The Thompson Building located at 522 Market Street, East Liverpool, Ohio 43920. The redevelopment of the Thomson building will serve as an anchor to the downtown redevelopment efforts of East Liverpool. The tenant commitments already secured represent the largest net new job creation project in the historic downtown area of East Liverpool in over a decade. The investments made in building rehabilitation and the corresponding job creation from new tenants/businesses and the addition of new residential units will catalyze additional business development in the downtown area and bring much needed foot traffic and activity for other existing businesses in the area.

The Thompson Building's current vacant and dilapidated state is emblematic of the surrounding community that has suffered decades of economic decline. Its location at a unique confluence of multiple city streets and its high visibility in an important part of East Liverpool positions this project to inspire community pride, additional new investment, and redevelopment efforts. Conversely, if left in its current condition, the Thompson building becomes a convenient excuse to not invest in the surrounding area. The rehabilitation of the Thompson building will provide a shining example of how to combine the preservation of historic structures with strategic economic development that creates jobs, improves community health, and supports neighboring incumbent businesses. The granting of the TMUD tax credit will serve to validate the ongoing efforts to invigorate the local economy and inspire future public/private redevelopment efforts.

ZIP Code 43920 Map



The Thompson Block is one of the most important structures in East Liverpool's Downtown. Its prominent location at the "diamond" and rich history in the community only add to its importance. The building is a wonderful example of a late Victorian commercial structure and maintains its elaborate ornamentation. This project will save the building from further decay and provide space for new businesses and residents in the downtown. The project will rehabilitate the empty structure and provide construction and permanent jobs as well as new downtown residents. It will provide much needed activity in a portion of the downtown that has been neglected. Saving the building will restore not only a great historic structure, but a portion of East Liverpool's historic identity. This is a required element as the building is collapsing and is beginning to cause damage to the Thompson Block.

The redevelopment includes rehabilitation of the existing Thompson Building structure.

- 4 story building
- 5 apartments
- 11,050 square feet of residential, retail and office space
- Total Project Cost: $2,129,500

The development is expected to open in 2025.

II. EXISTING PROPERTY

In order to compare the predevelopment with the post development tax impact, a summary of predevelopment taxes is provided. The property is currently vacant and owned by the City of East Liverpool Community Improvement Corporation, however, when fully occupied it will contain approximately 11,050 square feet on four floors, of which all 11,050 square feet will be used for mixed-use purposes.

The building is currently 100% vacant as defined in the vacancy table below.

EXISTING PROPERTY VACANCY TABLE

Space	Tenant	Square Feet	Months Vacant	Percent Vacant	Effective Vacant Space
[redacted]					
12 Month Average Vacancy					100.0%

With no existing tenants in the building, no current employment and wage economic impacts exist for the Thompson Building. Additionally, the structure is owned by the City of East Liverpool Community Improvement Corporation and no property taxes are paid on the property. No special assessment taxes are being paid.

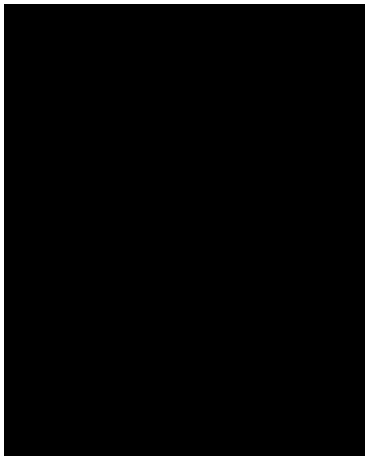
The following Economic Impact Statement was generated to show the cumulative “Net Gain” sales, income, output, value added, and taxes, the overall economic impact, over the construction period and the five years of stabilized occupancy based on a total project cost of $2,129,500 at the Project Site and inclusive of proposed and concurrent developments within a 2-mile radius of the Project Site.

III. POST DEVELOPMENT INPUT (TAXES)

A. PROJECT COST

Total Project Cost $2,129,500

B. BUILDING CONFIGURATION



Total net rentable square feet are distributed as follows:

Retail
Residential
Office Space
Total Net Rentable Space

C. INPUT AT STABILIZED OCCUPANCY (2026)

Apartments

- [redacted]

Retail / Office

- [redacted]
- [redacted]
- [redacted]

IV. OUTPUT AT STABILIZED OCCUPANCY

All economic impact calculations in this section represent the direct economic impact of the subject site. Income and sales tax calculations are based on the IMPLAN Group, LLC input/output model that establishes direct employment, wages and/or sales. Because of the limitations of the IMPLAN model in estimating actual taxes, we have used tax rates as defined by the appropriate taxing authorities. Given current interest in the development, the developer believes the property will achieve full residential occupancy and partial retail/office occupancy at the completion of construction as reflected in this analysis.

A. CITY INCOME TAX

1. Employee City Income Tax

There will be 7,480 square feet of retail and office space available for lease on the first, second and third floor of the Thompson Building. [redacted] The following is a distribution of space, employees, wages, and taxes generated by property use category. The City of East Liverpool, Ohio has a 1.5% income tax on all earned wages or earned income.

- 55 Full-Time Equivalent Employees
    - 10 Part-Time Employees = 5 Full-Time Employees
    - 50 Full-Time Employee
- 3 Full-Time Operational Jobs
- Total Payroll of Thompson Building employees.
- Total new city income taxes generated annually - $36,000.

2. Residential City Income Tax

[redacted]

- 5 units
    - [redacted]

[redacted]

The following tables show number of renters, employees, annual and hourly wages, and total taxes.

Total City Income Tax

Year	Employees	Payroll	Annual Salary	Average hourly wage	City Income Tax
[redacted]					

Total City Income Tax - Office

Year	Employees	Payroll	Annual Salary	Average hourly wage	City Income Tax

[redacted]					

B. STATE INCOME TAX

The State of Ohio has a progressive income tax ranging from 0.0% to 4.797%. State income taxes from employees at the subject site are based on the average of employees for retail, restaurant, office and residential tenants by job classification and average wages. Potential income tax collections are based on tax tables provided by the State of Ohio. The potential state income tax generated from the proposed development is $38,218.29 in year one.

Total State Income Tax

Year	Employees	Payroll	Annual Salary	Average hourly wage	State Income Tax
[redacted]					

Total State Income Tax - Office

Year	Employees	Payroll	Annual Salary	Average hourly wage	State Income Tax
[redacted]					

C. ECONOMIC IMPACT OF CONSTRUCTION

The State of Ohio has a progressive income tax ranging from 0.0% to 4.797%. State income taxes from employees at the subject site are based on the average of employees for retail, and office tenants by job classification and average wages. Potential income tax collections are based on a tax calculator provided by The State of Ohio.

F. CATALYZED PROJECTS

The catalyzed projects surrounding the Thompson Building involve the redevelopment of an adjacent building in East Liverpool. The developer, Cozza Development, has worked throughout East Liverpool for many years and recently redeveloped an old bank building into a new restaurant called “The Vault” (https://cadencevault.plus/). This building was vacant for numerous years and has since turned into a success for downtown East Liverpool. The developer of The Thompson Building plans to redevelop another local building in downtown East Liverpool into additional office space for the Thompson Building tenant, True North. True North Consulting Group was founded in 2014 as a spinoff of Elert & Associates. They offer a full portfolio of consulting services. Their team has over 100 collective years of experience in structured cabling, audio visual, physical security, networking, unified communications, and data centers. These jobs would be relocating from West Virginia to Ohio.

Overall, the redevelopment of The Thompson Building will lead to a revitalization of downtown East Liverpool that will cause a domino effect of development throughout the city by Cozza Development.

G. METHODOLOGY

The primary source of project information stemmed from the Developer's pro-forma financial models and sources/uses analyses. These documents, distributed to various third parties including banks and financial institutions, are generally regarded as reliable. Additionally, the Methodology section provides a comprehensive description of the IMPLAN model, which played a pivotal role not only in generating outputs but also in furnishing crucial inputs, as outlined in the table below. IMPLAN Assumptions encompassed the following aspects:

- Indirect impacts
- Project residential real estate wages
- Project retail real estate FTEs and wages
- FTEs and wages catalyzed by the project
- Direct property tax arising from construction
- Direct property tax resulting from catalyzed project operations

Wage Increase Assumptions

The Montrose Group has made assumptions surrounding the increase in wages that will occur to the residents and employees of The Thompson Building project, surrounding area, and catalyzed projects. The wage increases each year equates to an increase of 4.58%. This increase stems from the average increase in wages for Franklin County residents from 2010 to 2021.

IMPLAN

Much of this analysis was completed using the IMPLAN (IMpact Analysis for PLANning) economic impact modeling system. IMPLAN utilizes an economic modeling technique called Input-Output analysis and a Social Accounting Matrix, which is a type of applied economic analysis that tracks the interdependence among various producing and consuming industries of an economy and the spending of households. It measures the relationship between a given set of demands for final goods and services and the inputs required to satisfy those demands.

2021 IMPLAN data was used for this study. The Developer provided the capital investment and other operational data necessary to prepare this analysis. The IMPLAN software applies industry specific inflators to convert results to year the impacts will occur.

Data underlying the IMPLAN model is updated annually using thousands of data points from over 90 sources. The main sources for this data include:

- U.S. Bureau of Labor Statistics (BLS) Quarterly Census of Employment and Wages (QCEW)
- U.S. Bureau of Economic Analysis (BEA) Regional Economic Accounts (REA)
- U.S. Census Bureau County Business Patterns (CBP)
- U.S. Bureau of Economic Analysis National Income and Product Accounts (NIPA)

Direct and Indirect Impacts

Economic and fiscal impacts can be divided into three component parts, which are referred to as direct, indirect, and induced. **At the direction of ODOD, this EIS does not include induced impacts.**

A **direct** effect describes an initial, or first-round change in the economy and is the starting point for economic impact analysis. Changes in an economy create “ripples” of economic activity throughout the region being analyzed. These ripples are described as indirect effects (induced effects are not included in this EIS). A positive direct effect causes increased purchases within the economy being modeled, as well as “leakage” of economic activity out of the economy being studied in the form of imports into the economy from other areas outside the economy.

Generally speaking, direct describes activity attributable to the economic activity being modeled. In this EIS, direct impacts include the economic activity of the Project and Surrounding Area (employees, associated payroll, construction investments, etc.). Direct jobs comprise full, part-time, and temporary employees and jobs supported by the Project and future redevelopment and development

projects within the Surrounding Area.

Indirect effects represent changes in the industries that provide goods and services to the economic activity being modeled (e.g., suppliers, service providers, etc.). Indirect effects occur in a repeating cycle but diminish in each round as economic activity "leaks" from the region being modeled. Indirect effects cease when the last dollar of economic activity leaks from the economy being studied. Indirect effects are estimated using IMPLAN. In this EIS, indirect impacts include the economic activity of the entities that provide goods and services to the Developer, the Project's tenants, and the Surrounding Area.

Total impact refers only to the cumulative result of all rounds of direct and indirect economic activity.

ESRI (Environmental Systems Research Institute) is a prominent global provider of geographic information system (GIS) software, tools, and solutions. Founded in 1969 by Jack and Laura Dangermond, ESRI has played a pivotal role in revolutionizing how organizations analyze and visualize spatial data. With its headquarters in Redlands, California, ESRI has grown into a leading company in the geospatial technology industry.

ESRI Demographics is a global collection of authoritative demographic data for over 170 countries and regions, supplying context and adding insight to the maps and location-based analyses of organizations worldwide. Esri Standard Demographics provides a consistent data source and methodology across 170+ countries or regions. Many data variables are homogenous across these regions, allowing users to easily compare global markets and communities. Esri Advanced Demographics provides a detailed set of data within a country or region and includes more data variables or finer levels of geography than those available through Standard Demographics. Users can perform more detailed analyses of an area of interest within a country or region. Advanced Demographics are available for a limited set of countries or regions.

H. Qualifications and Limitations

The Montrose Group, LLC provides economic development planning, lobbying, marketing and public finance and incentive consulting services. The firm brings together some of the leading practitioners in economic development planning and strategy engaged in economic development planning at the state, local, and regional levels, and corporate site location. Together the team utilizes a Learn, Listen and Do approach to economic development planning that starts with fundamental economic development research to understand who a community or site is then listens to what the community wants the region or site to be and then develops a detailed action plan tied to local and outside funding sources centered on the

business retention and attraction of high wage jobs and capital investment.

Nothing in this report should be considered legal advice as the Montrose Group LLC is not a law firm and does not provide legal advice. Competent legal counsel should be sought prior to relying on any strategy outlined in this report.

Montrose Group Brings a Multi-Disciplinary Team to Economic Development Planning. Montrose provides a multi-disciplinary project management team to serve the MSMCIA in the development of a comprehensive strategic plan. The Montrose team includes senior leaders who are respected experts in their economic development discipline. Wade Williams, Montrose's Director of Economic Development, will take the lead in serving MSMCIA for this project with the support of the Montrose economic development team listed below.

Wade Williams, Director of Economic Development. Wade Williams provides economic development consulting and corporate site location services to companies and communities based on his 20 years of experience. Prior to joining Montrose Group, Wade was the Founder of the Economic Development Group, a regional economic development consulting firm focused on providing innovative consulting solutions for his clients. Wade has held leadership positions in various organizations, including serving as Vice President of Business Development at REDI Cincinnati, where he oversaw targeted attraction efforts domestically and internationally. He also spent a decade in a COO capacity with NKY Tri-ED, a three-county EDO in the Cincinnati region.

Dave Robinson, Principal, and Founder, Montrose, LLC. Dave Robinson serves clients based on 30 years of experience as a member of the Ohio House of Representatives, economic development executive, lobbyist, lawyer, and public relations executive before the federal, state, and local governments. Dave is a national economic development author with The Energy Economy, and Economic Development from the State & Local Perspective. Mr. Robinson has substantial economic development strategy experience including co-authoring over 40 strategic economic development plans and infrastructure and incentive strategies, negotiating $150M in local, state, and federal financing for economic development projects, and managing a range of economic development for public and private sector clients.

Nate Green, Partner, and Managing Director of Economic Development,
Montrose, LLC. Nate Green serves clients based upon his over 24 years of economic development experience including as an investment banker, leader at JobsOhio and the Ohio Department of Development and the Cleveland Port Authority and a regional economic development organization. Green has substantial local and state economic development leadership experience, advises local communities on economic development matters throughout Ohio, has co-authored over 40 economic development strategic plans and manages a range of economic development for public and private sector clients.

Harrison Crume, Manager of Economic Development. As Manager of Economic Development, Harrison Crume assists clients with economic development research and planning, including economic impact statements, housing market studies, industrial site development, Transformational Mixed Use District program, Downtown Redevelopment District plans, corporate site location analysis, and regional comprehensive economic development plans as well as advising clients on economic development projects in particular housing development projects. Harrison is very engaged in the management of economic development projects for a range of public and private sector clients, and recently has completed the research and listening aspects of three comprehensive economic development strategic plans and three housing studies.

Ryan Scribner, Director of Economic Development, Montrose Group. Ryan Scribner provides corporate site location, economic development advisory, and planning services to companies and communities based upon 20 years of public and private sector economic development service, including as the leader of the regional economic development organization for Pickaway County, Ohio, as Pickaway County Administrator and public policy positions with the Ohio Board of Regents and Ohio General Assembly. Ryan has successfully negotiated and closed over $2 billion in large-scale industrial projects, developed a highly respected workforce development program, guided community economic development planning for cities, counties, and townships, and supported the development and operation of Joint Economic Development Districts, port authorities as well as Transportation

Improvement Districts. Mr. Scribner successfully attracted a global Italian manufacturing company to Ohio as part of a major foreign direct investment win. Ryan is serving companies with corporate site location projects, advises 10 counties in Eastern Ohio and 4 communities in Central Ohio for economic development advisory services, is coordinating housing studies for an Illinois community, and advising the operation of a county Transportation Improvement District.

Tim Biggam, Director of Government Relations, Montrose Group. Tim Biggam provides Ohio lobbying services to clients before local, state, and federal government officials 15 years in state government. Starting as an aide in the Ohio Senate, Mr. Biggam most recently served as the Legislative Director for Governor John R. Kasich serving as the top lobbyist for the administration and being engaged in all issues facing the state of Ohio that included tax, policy, budget, and regulatory matters. Mr. Biggam also worked on the national Presidential campaign of Governor Kasich, at the Ohio Department of Natural Resources, Ohio Department of Transportation and Ohio Municipal League. Tim represents over a dozen clients before the state of Ohio including Accenture, Bowling Green State University, Columbus Association for the Performing Arts, Ohio cities of Forest Park, Piqua and Strongsville, developers Flaherty and Collins Newark Development Partners, Madison County, Ohio, Bon Secours Mercy Health, and leading charter school Performance Academies.

Re: Central Park- Transformational Mixed-Use Development – Economic Impact Statement

Dear Mr. DiCarlantonio:

At your request, Project Management Consultants, LLC has performed an Economic Impact Statement for the Wallick Development, LLC's Central Park project, located off of Central Parkway in Heath, OH, utilizing inputs provided by your team, direct calculations, conservative assumptions, and the "IMPLAN" software and data produced by IMPLAN Group, LLC. We have not examined the Client-provided data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact statement. Further, this analysis is subject to the Assumptions and Limiting Conditions found in Appendix E of this report.

This report contains, to the fullest extent possible and practical, explanations of the data, reasoning, and analyses that were used to develop the opinions contained herein. The depth of discussion contained in the report is specific to the needs of the client.

Heath CP Dev LLC is the Client in this engagement and intended user of this report. As our client, Heath CP Dev LLC owns this report and permission must be granted from them before another third party can use this document. We assume that by reading this report another third party has accepted the terms of the original engagement letter including scope of work and limitations of liability. We are prepared to modify this document to meet any specific needs of the potential user under a separate agreement.

The Stated Purpose of this assignment is to assist with projections of job, tax, and wage information for application to the State of Ohio Transformational Mixed-Use Development Program. You agree not to use this report other than for the Stated Purpose, and you agree to indemnify us for any claims, damages, or losses that we may incur as the result of your use of the Report for other than the Stated Purpose. Without limiting the general applicability of this paragraph, under no circumstances may the Report be used in advertisements, solicitations and/or any form of securities offering.

The authors of this report certify that, while we represent the project in other capacities, we are not part of the development team, nor are we affiliated with any member of the development team. Please do not hesitate to contact us if there are any questions regarding the report or if Project Management Consultants, LLC can be of further assistance. It has been our pleasure to assist you with this project.

Sincerely,

Ryan P. Sommers, CPA
Managing Director of Financial Services
Project Management Consultants, LLC

PROJECT MANAGEMENT CONSULTANTS (PMC) EXPERIENCE

	Name	TMUD Experience & Background
	**Ryan P. Sommers, CPA** Managing Director of Financial Services	Ryan Sommers has an extensive background working with various tax credit programs and complex private and public finance structuring. Ryan's experience with tax credits includes Historic Tax Credits, New Markets Tax Credits, and Opportunity Zone Tax Credits. Ryan recognizes the critical value-add of the Transformational Mixed-Use Development ("TMUD") tax credit program. Since the program's inception he has become an expert on the program. He advises clients on project eligibility, economic impacts, tax credit monetization, and chances of application success. As managing director of financial services, Ryan identifies, secures and manages private and public financing opportunities for business expansion projects and real estate development. Ryan is currently managing a team responsible for 50+ projects throughout the country with $3 billion in development value including $600 million in public financing for public-private partnerships. He has helped his clients obtain over $200 million in state and federal Historic Tax Credits and over $100 million in New Markets Tax Credits. Ryan also created PMC's direct tax impact analysis models which help demonstrate exact tax estimates for a Project or Development site on the surrounding area, including income taxes, sales taxes, bed taxes and property taxes. Ryan has worked on this modeling for a decade. These outputs help demonstrate the ROI of a project to various government entities and provide him with experience needed to complete economic impact statements as complicated as those required for TMUD applications.
	**Kenneth S. Kalynchuk** Director and Principal	Ken Kalynchuk leads PMC's financial analyst and economic impact analysis team. Ken has conducted five economic impact statements (EIS reports) for Rounds 1 and 2 of the TMUD program, with emphasis on conservative estimates and common sense for whether projects can be considered catalyzed or not. Ken helps clients navigate the predevelopment stage of their projects through incentive, land use, and market research; pro forma development; feasibility analyses; economic impact analyses; and property tax analyses. Prior to joining the firm, Ken was a graduate research assistant with the Center for Economic Development at Cleveland State University, where he evaluated economic development programs and best practices in economic development policy, performed studies on Historic Preservation Tax Credit funding and rental markets, and wrote case studies and employment/demographic impact analyses. During his time at Cleveland State Ken learned IMPLAN software and economic impact techniques. These skills have helped clients at PMC, where Ken has helped generate economic impact reports and tax estimates for more than 7 years.

	Name	TMUD Experience & Background
	**Nora Walsh** Senior Analyst	In her more than two years with Project Management Consultants, Nora has worked with the PMC team to complete TMUD applications and economic impact analyses and has supported a half dozen clients on submitting comprehensive applications in Rounds 1 and 2 of the program. Nora leads the Economic Impact Statement (EIS) analysis process in collaboration with the team and has thus far conducted five EIS reports for the TMUD program. Nora brought her economic impact analysis and report writing skills from her experience with the Center for Economic Development at Cleveland State University where she analyzed economic impacts and compiled narratives around those impacts. Since joining PMC, Nora has become an expert in the IMPLAN analysis software and led the economic impact report analysis and writing processes in Round 1 and Round 2 for PMC clients, including PMC's three Round 2 winners.
	**John Sadosky** Project Director	As project director, John identifies, secures, and manages public and private financing opportunities for real estate development and business expansion projects. His expertise includes incentives for industrial and distribution center projects, including speculative development and projects requiring significant public infrastructure investments. John also manages public financing negotiations for site selection projects from intake through incentive procurement and compliance. Prior to joining PMC, John was a manager in Ernst & Young's indirect tax practice specializing in location investment, credits, and incentives. He has more than eight years of direct economic development experience in various roles in local government, nonprofit, and public accounting with significant experience in site selection consulting, credits and incentives negotiation, project management, and tax compliance. Throughout his career, John has worked with clients in the advanced manufacturing, retail, consumer products, and technology sectors. Additionally, he has worked on various product types including manufacturing, retail, mixed-use, multi-family, office, and public infrastructure.
	**Alexander Previts** Development Finance Manager	In his role as development finance manager, Alex assists in identifying, securing and managing public and private financing opportunities for development and construction projects. Alex specializes in helping corporate clients with headquarters relocation projects. In addition, he works with developers to repurpose vacant facilities and develop greenfield sites into productive reuse by utilizing property tax, local and state incentives. Alex has also worked with clients to pair their projects with Qualified Opportunity Zone investments and incentives. Alex works with clients through the finance structuring process by first identifying the needs and gap of the project and assessing the tools available for the project's financing at the local, regional and state level. Alex directs clients through the nuances of the predevelopment stage of their projects through incentive, land use, and market research; pro forma development; feasibility analyses; economic impact analyses; and property tax analyses. He focuses on structuring tax incentives, including tax increment financing (TIF), and monetizing TIF structures through bank and bond financing. His significant knowledge on TIF structures, property tax valuations, and property tax modeling are utilized in the TMUD EIS analyses.

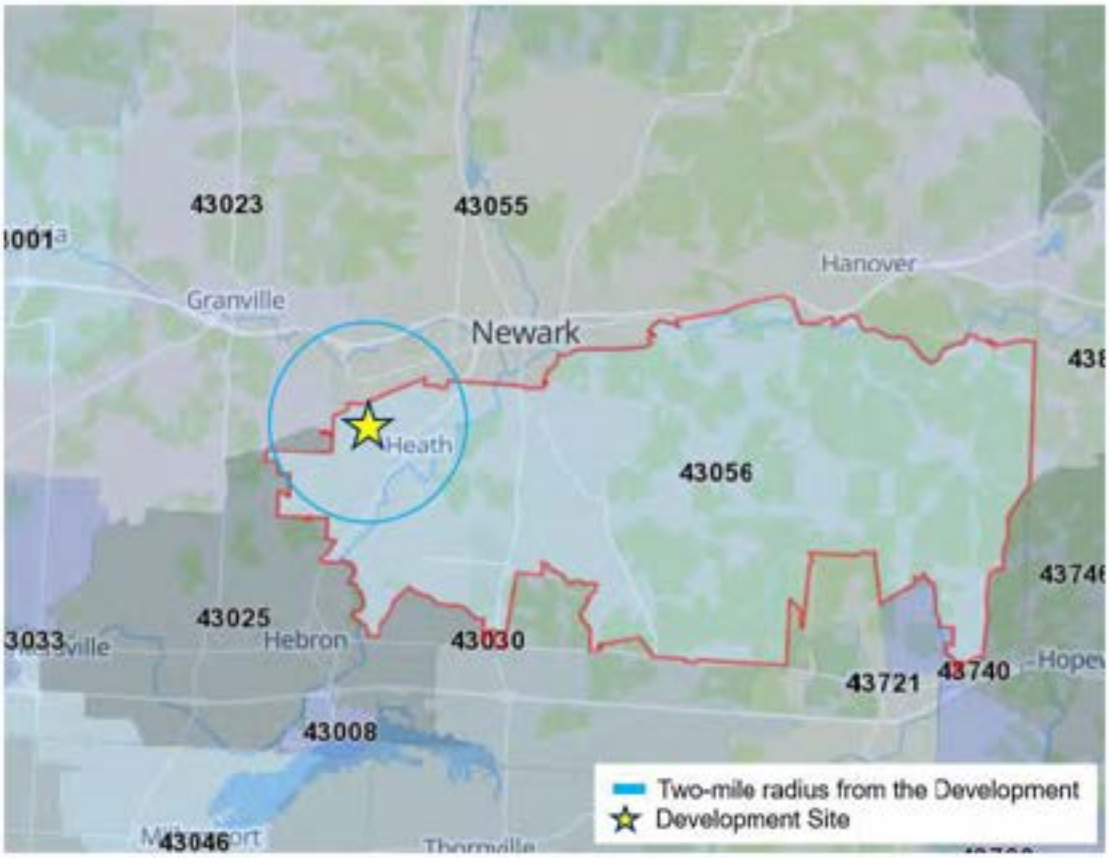
EXECUTIVE SUMMARY

Project Management Consultants LLC (PMC) was engaged by Wallick Development, LLC (the "Company") to analyze the economic and fiscal impacts of the Company's proposed Central Park project (the "Project") which is located off of Central Parkway in Heath, OH. This analysis was prepared to support the Company's application for Ohio Transformational Mixed-Use Development ("TMUD") tax credits from the third round of the program in fiscal year 2024.

For purposes of this Economic Impact Statement ("EIS"), the overall development will be completed in multiple phases. Therefore, this report will consider impacts of the "Project" or "Phase I" and the "Development" (all remaining phases). The Construction period for purposes of the report runs from the date of the TMUD application submittal (September 8, 2023) through the completion of the Project and expected certification by the Ohio Tax Credit Authority (December 31, 2027).

The Project consists of 424 proposed residential units, 4,200 square feet of office space, and 37,800 square feet of retail and restaurant space (including a gym/recreation facility). The Development consists of 432 proposed residential units, a 94,000 SF senior living facility, and 20,000 square feet of restaurant and brewery space. The remaining TMUD-eligible expenditures is $96,495,000 and the total Development investment (including all Phases) is $218,160,583 To date, the Project has incurred approximately $35,000 in architectural and engineering fees.

Economic and fiscal impacts ("Impacts") measured in terms of output, employment, labor income, and taxes were estimated primarily using the IMPLAN input-output model based on 2021 data, which is the most accurate data available and adjusted to reflect 2028 dollars, the first year of the 5-year completion period. Per requirements of the TMUD program defining the project's surrounding area, the impacts are presented at the local ZIP code level for the project ZIP codes in Ohio, 43056, 43055, 43023, and 43025. As this development is considered a "General Project" the radius for the surrounding area was set at 2 miles from the boundary of the project site.



This report considers the one-time direct economic and fiscal impacts resulting from the construction of the Project, Development, and Surrounding Area (indirect) ("Construction Period Impacts"), as well as the permanent economic and fiscal impacts, direct and indirect, resulting from the ongoing activities associated with the Project, Development, and Surrounding Area ("Completion Period Impacts").

The impacts of the two components that are analyzed -- Construction Period Impacts and Completion Period Impacts are presented individually and as a whole in the Total Impacts section. Construction Period and Completion Period Impacts are presented in annual terms.

Project Management Consultants collaborated with Wallick Development, LLC to gather necessary data for both the Project and Development and to establish assumptions where needed. For detailed assumptions please find the Construction Period Impact Assumptions in Appendix A, Completion Period Impact Assumptions of the Project in Appendix B, Completion Period Impact Assumptions of the Development in Appendix C, and Completion Period Impact Assumptions of the Surrounding Area in Appendix D. Assumptions and Limiting Conditions can be found in Appendix E. Project Management Consultants used zip-code level data to collect employment, wage, and tax information. All tax impacts include State, County and local level tax estimates via IMPLAN

analysis as well as direct analysis completed by PMC. All assumptions were verified by the developer to the highest degree of reasonableness.

The table below provides a quick reference of definitions for the items included in the economic impact statement summary tables that follow (pages 10-30). Additional information about terms and the methodology used in this study can be found in the Glossary and Methodology on page 31 through 32.

	Direct	Indirect
Jobs	Individuals directly involved in the redevelopment Project or working at the building upon completion of the redevelopment.	Multiplier-effect jobs at the industry level, such as suppliers, service providers, etc. (indirect).
Earnings or Labor Income	Wages and benefits paid to direct jobs.	Total wages and benefits associated with the indirect jobs.
Taxes	An estimate of all taxes and fees collected by state, county, municipal or other government entities, including, but not limited to property taxes, income taxes, sales taxes, and lodging taxes.	

CONSTRUCTION PERIOD IMPACTS

CONSTRUCTION PROJECT IMPACTS

The Project is anticipated to involve a direct investment of approximately $71 million to be completed over a three-year Construction Period from the 2025 through the end of December 31, 2027. During the Construction Period, the Project is anticipated to create a total of 688 direct construction jobs with $42.9 million in labor income. The Project is also estimated to generate $3.9 million in new sales and income taxes during the Construction Period. Please note that the estimates in the tables below represent annual impacts over the Construction Period.

Estimated Construction Impacts of the Project

- **688 Direct Jobs with $42.9 million in Direct Payroll total over the Construction Period**
- **$3.9 million in new sales and income taxes over the Construction Period**

CONSTRUCTION JOBS AND PAYROLL IMPACTS OF THE PROJECT

During the Construction Period, the Project is expected to create 688 total direct construction jobs and $42,930,032 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix A due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). [redacted] Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Construction Project Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

CONSTRUCTION TAX IMPACTS OF THE PROJECT

The Construction Period of the Project is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated over the Construction Period, as calculated by IMPLAN software and PMC utilizing the hard construction cost impacts outlined

in Appendix A. This input data was provided by the client based on their construction cost budget for the Project.

The table below illustrates the direct sales and income tax estimates analyzed by PMC using local tax rates to calculate direct taxes for the Construction Period. Income taxes were estimated using the appropriate local and state income tax rates (2% for Heath and state income tax varied based on income bracket). Sales taxes were estimated using the appropriate county and state sales tax rate of 7.25%. Over the Construction Period, the Project is estimated to generate a total of $1,849,873 direct local and state income taxes. Over the Construction Period, a total of $2,059,497 in county and state sales taxes on construction materials are estimated to be generated.

Construction Project Impacts: Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Construction Development Impacts

The Development is anticipated to involve a direct investment of approximately $89 million to be completed over a four-year Construction Period from 2028 through 2031. All Development Construction Impacts (Years 2028-2031) were included in the Completion Period Impacts section because these impacts will occur during the five-year Completion Period. During the Construction Period, the Development is anticipated to create a total of 862 direct construction jobs with $54.6 million in labor income. The Development is also estimated to generate $4.95 million in new sales and income taxes during the Construction Period. These impacts are not reflected in this section they will be reflected in the Completion Period of the Development section per guidance from ODOD.

Estimated Construction Impacts of the Development

- **862 Direct Jobs with $54.6 million in Direct Payroll total over the Construction Period**
- **$4.95 million in new sales and income taxes over the Construction Period**

Construction Jobs and Payroll Impacts of the Development

All Construction Impacts of the Development are included in the Completion Period Impacts.

Construction Development Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

Construction Tax Impacts Of The Development

The Construction Period of the Development is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated over the Construction Period, as calculated by IMPLAN software and PMC utilizing the hard construction cost impacts outlined in Appendix A. This input data was provided by the client based on their construction cost budget for the Development. All Construction Impacts of the Development are included in the Completion Period Impacts.

Construction Development Impacts: Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Construction Surrounding Area Impacts

During the Construction Period, the Project is anticipated to create a total of approximately 45 indirect construction jobs with $2,707,714 in indirect labor income in the surrounding area. The surrounding area is also estimated to generate $815,748 in new indirect property, sales and income taxes over the Construction Period (2025-2027). Surrounding area impacts were estimated using indirect impacts of the Project in IMPLAN. It is possible that the impacts are much greater in the surrounding area due to the catalytic nature of this development.

Construction Jobs and Payroll Impacts of the Surrounding Area

During the Construction Period, it is expected that approximately 45 total indirect jobs will be created in the surrounding area due to construction activities on the site. [redacted]. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Construction Surrounding Area Impacts: Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

Construction Tax Impacts Of The Surrounding Area

During the Construction Period, the development is anticipated to generate significant new tax revenues within the surrounding area.

This surrounding area impacts identify the indirect taxes generated by the project over the Construction Period, as calculated by IMPLAN software utilizing the hard construction costs outlined in Appendix A. This input data was provided by the client based on their construction cost budget for the Project and Development.

The table below illustrates the indirect and sales, income, lodging and property tax estimates generated in IMPLAN. Over the Construction Period, the Project is estimated to generate $882,907 in new taxes within the surrounding area. Of these taxes, it is expected that $475,126

new indirect sales taxes will be generated in the surrounding area as a result of this development project.

Construction Surrounding Area Impacts: Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Indirect income taxes were estimated using IMPLAN. The table above shows the indirect income tax estimated impacts. Over the Construction Period, it is estimated that within the surrounding area a total of $28,662 in indirect local and state income taxes will be generated.

Property taxes were estimated based on client-provided data that was then input into IMPLAN. The table above shows the indirect property tax estimated impacts. Over the Construction Period, the surrounding area is expected to generate a total of $311,960 in indirect property taxes.

Construction Catalyzed Project Impacts

The Central Park Transformational Mixed-Use Development will have a catalytic impact on economic growth in Heath, Ohio. Specific catalyzed projects of scale were not identified as of the writing of this Economic Impact Statement for inclusion in this report.

COMPLETION PERIOD IMPACTS

PROJECT IMPACTS

Upon Project construction completion, the Project will have a significant ongoing annual impact on the State and local economy. This impact will come in the form of activities to support the maintenance and operation of the buildings, as well as from businesses that will locate operations at the development site as tenants. Once the buildings reach full occupancy, these ongoing activities are anticipated to support approximately 107 total direct jobs and generate $3.27 million of direct annual labor income in 2028.

The Project is also estimated to generate $12.9 million in new property, sales, and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2028 through 2032. In addition, the Project is expected to generate approximately $55.7 million in retail, dining, and entertainment sales over the completion period.

Estimated Completion Period Impacts of the Project

- 107 Direct Jobs with $3.27 million in Direct Payroll in 2028
- $12.9 million in new property, sales and income taxes over the 5-year completion period
- $55.7 million in retail, dining, and entertainment sales over completion period

PERMANENT (ANNUAL) JOBS AND PAYROLL IMPACTS OF THE PROJECT

Upon completion of construction, the Project is expected to create 107 total jobs, 10 of which will be jobs to support maintenance and operations of the buildings and commercial parking, 97 of which will be commercial tenant jobs. In year 2032, the 10 Operations jobs are expected to generate $343,213 [redacted] (Operations job estimates are shown in the table below).

Project Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

In year 2032, the Project Tenant jobs are expected to generate a total of $3,338,602 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix B

due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). In 2032, Tenant jobs are expected to have an average hourly wage of $16.62. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Project Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

Permanent (Annual) Tax and Sales Impacts Of The Project

The Project is expected to be completed prior to calendar year 2028 following construction years 2025 through 2027. Based on TMUD application requirements, a completion period was set for calendar years 2028 through 2032, when the Project will experience its first five years of operations. During this period, the Project is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated by the project starting in 2028, as calculated by IMPLAN software and PMC utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix B. This input data was provided by the client based on planned tenants, operations wages and staffing, and resident income requirements for the apartment units.

The table below illustrates the permanent direct sales, income, lodging and property tax estimates analyzed by PMC using local tax rates to calculate direct taxes. Over the 5-year impact period, the Project is estimated to generate a total of $4,040,807 in direct local, county and state sales taxes within the Project site. Sales taxes were calculated using a 7.25% total tax rate for Licking County.

Project Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Income taxes were estimated using the appropriate local and state income tax rates (2% for Heath and state income tax varied based on income bracket). The table above shows the direct permanent income tax estimated impacts. Over the 5-year completion period, the Project is estimated to generate a total of $1,519,095 in direct local and state income taxes.

Property taxes were estimated based on client-provided value estimates of the completed project and a client-provided property tax incentive structure to be used by the Project and Development. The table above shows the permanent incremental property tax estimated impacts. Over the 5-year impact period, the Project is expected to generate a total of $7,352,965 in direct incremental property taxes. A 15-year, 100% tax abatement will be utilized on the Project site whereby the developer will be required to make payments to the local school district and a newly established New Community Authority (NCA). The difference between the total taxes that would have been paid if not for the abatement and the school district payments will be paid to the NCA in the form of NCA charges. Per the published TMUD guidelines, NCA charges are instructed to be included in the property tax projections.

Project Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

The Project is expected to generate $55,735,270 in new sales revenues in the area over the 5-year completion period, as shown in the table above. These estimates were pulled from the direct sales calculated at the project site found in Appendix B.

Development Impacts

Upon construction completion of the overall development, the Development will have a significant ongoing annual impact on the State and local economy. This impact will come in the form of activities to support the maintenance and operation of the buildings, as well as from businesses that will locate operations at the development site as tenants. Once the buildings reach full occupancy, these ongoing activities are anticipated to support approximately 114 total direct jobs and generate $4.5 million of direct annual labor income by Year 5 (2032).

The Development is also estimated to generate $11.2 million in new property, sales, and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2028 through 2032. In addition, the Project is expected to generate approximately $26.9 million in retail, dining, and entertainment sales over the completion period.

Estimated Completion Period Impacts of the Development

- 114 Direct Jobs in 2032 with $4.5 million in Direct Payroll)
- $11.2 million in new property, sales and income taxes over the 5-year completion period
- $26.9 million in retail, dining, and entertainment sales over completion period

Permanent (Annual) Jobs and Payroll Impacts of the Development

Upon completion of construction, the Development is expected to create 114 total jobs, 64 of which will be jobs to support maintenance and operations of the buildings and commercial parking, 50 of which will be commercial tenant jobs. [redacted]

(Operations job estimates are shown in the table below).

Development Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]			

In year 2032, the Development Tenant jobs are expected to generate a total of $1,532,499 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix C due to the averaging of the hourly wage and the multiple decimal points that are not shown

in the tables). In 2032, Tenant jobs are expected to have an average hourly wage of $14.74. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Development Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

Because construction of the Development will begin in 2028, construction jobs and payroll for years 2028-2031 should be considered in this section. In 2028-2031, the Development is expected to generate 862 construction jobs with $54.6 million in direct payroll.

Permanent (Annual) Tax and Sales Impacts Of The Development

The Development is expected to be completed prior to calendar year 2032 following construction years 2028 through 2031. Based on TMUD application requirements, a completion period was set for calendar years 2028 through 2032, when the Project will experience its first five years of operations. Because construction of the Development will begin in 2028, which happens during the Completion Period, construction sales and income taxes for Years 2028-2031 were included in this section's estimates.

This report focuses on the direct and indirect taxes generated by the project starting in 2028, as calculated by IMPLAN software and PMC utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix C. This input data was provided by the client based on planned tenants, operations wages and staffing, and resident income requirements for the apartment units.

The table below illustrates the permanent direct sales, income, lodging and property tax estimates analyzed by PMC using local tax rates to calculate direct taxes. Over the 5-year impact period, the Development is estimated to generate a total of $4,541,519 in direct local, county and state sales taxes within the Project site and surrounding area. Sales taxes were calculated using an 7.25% total tax rate for Licking County.

Development Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]					

Income taxes were estimated using the appropriate local and state income tax rates (2% for Heath and state income tax varied based on income bracket). The table above shows the direct permanent income tax estimated impacts. Over the 5-year completion period, the Development is estimated to generate a total of $3,823,650 in direct local and state income taxes.

Property taxes were estimated based on client-provided value estimates of the completed project and a client-provided property tax incentive structure to be used by the Project and Development, described below. The table above shows the permanent incremental property tax estimated impacts. Over the 5-year impact period, the Development is expected to generate a total of $2,882,549 in direct incremental property taxes. A 15-year, 100% tax abatement will be utilized on the Project site whereby the developer will be required to make payments to the local school district and a newly established New Community Authority (NCA). The difference between the total taxes that would have been paid if not for the abatement and the school district payments will be paid to the NCA in the form of NCA charges. Per the published TMUD guidelines, NCA charges are instructed to be included in the property tax projections.

Development Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
[redacted]				

The Development is expected to generate $26,931,648 in new sales revenues in the area over the 5-year completion period, as shown in the table above. These estimates were pulled from the direct sales calculated at the project site found in Appendix C.

Surrounding Area Impacts

Upon construction completion of the entire development, the Project will have a significant ongoing annual impact on the State and local economy. This impact will be an indirect result of activities to support the maintenance and operation of buildings and potential tenants that will come to the surrounding area. Once the Project reaches full occupancy, the surrounding area is anticipated to support approximately 32 total indirect jobs and generate approximately $1.7 million of indirect labor income annually.

The surrounding area is also estimated to generate $449,363 in new indirect property, sales, and income taxes over the five-year completion period as defined by Ohio Department for Development, which for this project is 2028 through 2032. Surrounding area impacts were estimated using indirect impacts of the Project in IMPLAN. It is possible that the impacts are much greater in the surrounding area due to the catalytic nature of this development.

Permanent (Annual) Jobs and Payroll Impacts of the Surrounding Area

Upon completion of construction of the overall development, it is expected that approximately 32 indirect jobs will be created in the surrounding area, 12 of which will be jobs to support maintenance and operations of buildings and commercial parking, and 19 of which will be commercial tenant jobs. Upon full occupancy of the development, in 2032 the 12 Operations jobs are expected to generate $588,382 in indirect labor income with an average hourly wage of $22.43 (Operations job estimates are shown in the table below)

Surrounding Area Impacts: Operational Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

In 2032, the surrounding area Tenant jobs are expected to generate a total of $1,154,948 in indirect labor income. Tenant jobs are expected to have an average hourly wage of $28.80. Average hourly wages were calculated using the labor income per year divided by the number

of jobs and then divided by 2,080 hours of work per year. (Table below displays the Tenant job estimates).

Surrounding Area Impacts: Tenant Jobs			
Year	Full-Time Equivalents	Average Hourly Wage ($)	TOTAL Projected Payroll
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

Permanent (Annual) Tax and Sales Impacts Of The Surrounding Area

During the five-year completion period, the overall development is anticipated to generate significant new tax revenues within the surrounding area.

The surrounding area impacts identify the indirect taxes generated by the project starting in 2028, as calculated by IMPLAN software utilizing the operations, commercial tenant, and resident spending impacts outlined in Appendix D. This input data was provided by the client based on planned tenants, operations wages and staffing, and resident income requirements for the apartment units.

The table below illustrates the permanent indirect sales, income, and property tax estimates generated in IMPLAN. Over the five-year completion period, it is expected that $226,412 in new indirect sales taxes will be generated in the surrounding area as a result of this development project.

Surrounding Area Impacts - Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	TOTAL Projected Taxes
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Indirect income taxes were estimated using IMPLAN. The table above shows the indirect income tax estimated impacts. Over the 5-year completion period, it is estimated that within

the surrounding area a total of $74,293 in indirect local and state income taxes will be generated.

Property taxes were estimated based on client-provided data that was then input into IMPLAN. The table above shows the indirect property tax estimated impacts. Over the 5-year impact period, the overall development will generate a total of $148,658 in indirect property taxes.

Surrounding Area Impacts - Retail, Entertainment and Dining Sales				
Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)	TOTAL Projected Sales/Year
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

The surrounding area is expected to generate significant new sales revenues in the area which will include $20,910,401 in total retail, dining and entertainment sales over the 5-year completion period, as shown in the table above. These estimates were generated in IMPLAN using a Household Spending analysis which shows only induced impacts.

Catalyzed Project Impacts

The Central Park Transformational Mixed-Use Development will have a catalytic impact on economic growth in Heath, Ohio. Specific catalyzed projects of scale were not identified as of the writing of this Economic Impact Statement for inclusion in this report.

CATALYZED PROJECT NARRATIVE

The Central Park Transformational Mixed-Use Development will have a catalytic impact on economic growth in Heath, Ohio. Specific catalyzed projects of scale were not identified as of the writing of this Economic Impact Statement for inclusion in this report.

PROJECT RETURN ON INVESTMENT

In Year 5 (2032), the total Operations and Tenant jobs for the Project are expected to generate $3,681,815 in new direct payroll. It is possible that upon completion of the Project that significantly more payroll will be generated due to local factors within the Project site's surrounding area.

The Project, Development, and Surrounding Area are anticipated to generate $29,335,067 in combined new tax revenues for the State of Ohio and the local entities over the construction and 5-year completion period. Over the construction and 5-year completion period, the Project, and Surrounding Area estimated to generate $103,577,318 in retail, dining and entertainment sales revenues. It is possible that upon completion of the Project that significantly more tax and sales revenues will be generated due to local factors and tax rates within the Project site's surrounding area. This Project will generate significant benefits for the City of Heath and the State of Ohio and will catalyze additional development in Heath and the surrounding area.

Total New Taxes Generated (Over 5-Year Completion Period):	**$29,335,067**
Total New Retail, Dining and Entertainment Sales Generated (Over 5-Year Completion Period):	**$103,577,318**

Tax Credit Requested	**$8,500,000**

GLOSSARY

Direct Jobs – Direct jobs comprise those individuals employed in the redevelopment of the building, its future operation, or involved in the operation of a business located at the Project (tenant) site upon redevelopment.

Direct Earnings/Labor Income – The labor income (wages and benefits) associated with the direct jobs.

Hard Construction Costs for IMPLAN Impact Analysis - Only Hard Construction Costs (including Architecture and Engineering costs, as prescribed by IMPLAN software modeling instructions for construction projects) were entered into IMPLAN. Costs such as acquisition, site work, soft costs, financing costs, and FF&E were excluded from this Direct Development Cost number.

Indirect Jobs – Jobs supported by industries purchasing from industries. For example, purchases of construction materials and other supplies from vendors within the study area. Those vendors employ workers to meet the demand of the Project (and other customers). This cycle may have many iterations between different industry sectors, and the coefficients associated with each industry are calculated within the IMPLAN model. See below for more information about IMPLAN.

Indirect Earnings/Labor Income – The earnings associated with the indirect jobs. This amount can include both wages and benefits paid to workers as well as income earned by business owners. Indirect earnings are calculated using the IMPLAN model.

Retail, Entertainment and Dining Sales – Sales were analyzed using a Household Income impact analysis in IMPLAN using the industry codes listed in Appendix C. This analysis uses only induced impacts to show how new households will impact sales and spending in the area using IMPLAN's estimates. These estimates were then combined with direct dining, entertainment and retail sales generated within the overall development site.

Taxes – This includes all taxes and fees collected by federal, state, county, municipal, or other government entities, including, but not limited to property taxes, income taxes, sales, taxes, license and registration fees, etc.

METHODOLOGY

This analysis was completed using the IMPLAN economic impact model, adjusted for 2028 dollars as well as for actual tax rates. IMPLAN is an input-output model that is used by many universities and government agencies to estimate economic and fiscal impacts. Input-output modeling describes commodity flows from producers to consumers. The value of commodities produced is equal to total industry purchases of commodities, services, employment compensation, value added, and imports.

An IMPLAN impact analysis involves specifying a series of expenditures or other changes and applying them to the region's economic multipliers. The expenditures are identified in terms of the sectoring scheme for the model, in producer prices, and in historical and current dollars with the year the analysis is conducted in as the base year. Only the dollars spent within the region are applied to the model.

The notion of a multiplier rests upon the difference between the initial effect of a change in final demand and the total effects of that change. Total effects can be calculated either as direct and indirect effects, or as direct, indirect, and induced effects. Direct effects are production changes associated with the immediate effects or final demand changes. Indirect effects are production changes in backward-linked industries caused by the changing input needs of directly affected industries (for example, additional purchases to produce additional output). Induced effects are the changes in regional household spending patterns caused by changes in household income generated from the direct and indirect effects.

Purchases for final use (final demand) drive the model. Industries producing goods and services for final demand purchase goods and services from other producers. These other producers, in turn, purchase goods and services. This buying of goods and services (indirect purchases) continues until leakage from the region (imports and value added) stops the cycle.

Creating a regional input-output model requires a tremendous amount of data. The costs of surveying industries within each region to derive a list of commodity purchases (production functions) are prohibitive. IMPLAN was developed as a cost-effective means to develop regional input-output models. The IMPLAN accounts closely follow the accounting conventions used in the "Input-Output Study of the U.S. Economy" by the Bureau of Economic Analysis (1980) and the rectangular format recommended by the United Nations.

APPENDIX E

ASSUMPTIONS AND LIMITING CONDITIONS

1. The economic impact analysis contained herein relies on databases and software developed by IMPLAN Group LLC. MIG Inc. has been developing complex localized databases since 1993 and is an industry recognized leader in input-output databases and data modeling. As a result, we believe the information provided is a reliable basis to use in developing the economic impacts for the Project (s). However, we have not examined the data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact analysis.
2. All information contained in the report which was furnished by others was assumed to be true, correct, and reliable. A reasonable effort was made to verify such information, but the author assumes no responsibility for its accuracy.
3. The report was made assuming responsible ownership and capable management of the Project.
4. Possession of the report, or a copy thereof, does not carry with it the right of publication, nor may it be reproduced in whole or in part, in any manner, by any person, without the prior written consent of Project Management Consultants, LLC. Neither all nor any part of the report or copy thereof shall be disseminated to the general public by the use of advertising, public relations, news, sales, or other media for public communication without the prior written consent and approval of Project Management Consultants, LLC.
5. The author of this report is not required to give testimony or attendance in legal or other proceedings relative to this report or to the Subject unless satisfactory additional arrangements are made prior to the need for such services.
6. The opinions contained in this report are those of the author and no responsibility is accepted by the author for the results of actions taken by others based on information contained herein.
7. Acceptance of and/or use of this report constitutes acceptance of all assumptions and the above conditions.

EIS Framework Categories and Sections

The framework in this study will cover three major sections: 1) Construction Impacts, 2) Completion Period Impacts and 3) Total Impacts.

This study is prepared by Vista Site Selection, LLC ("Vista"), a third-party entity, on behalf of an application for the Ohio Transformational Mixed-Use Tax Development Credit Program ("TMUD"). This study accomplishes two primary objectives:

1) To verify that increased tax collections resulting from the project will exceed 10% of the estimated eligible project costs and,

2) To articulate the economic impacts of the Project and/or larger Development to the Project Site and Surrounding Area during both the Construction Period, which is the time period in which the Project is being constructed and the Completion Period, which is the 5 years after Project construction is completed.

In accomplishing these objectives, this document will assess the following categories:

- ***Employment*** **-** The projected number of construction, operational, and tenant jobs created as a result of the Project and the average hourly wages for each job type.
- ***Revenue*** **-** Annual revenue projections generated from retail, entertainment, and dining sales.
- ***Tax Revenues*** **-** Annual revenue projections generated from sales tax, income tax, lodging tax, and property tax.

Economic impacts will be calculated utilizing IMPLAN software and the following methodology:

	1. Construction Impacts	2. Project Completion Period Impacts
Project	The direct economic impacts of the new construction and/or renovation and rehabilitation of structures included in the Project on the Project site during the construction period.	The direct and indirect economic impacts of the Project as defined in the application in the five years after completion of construction of the Project.
Development (if applicable)	The direct economic impacts of the construction and/or renovation and rehabilitation of structures included in the Development as defined in the application during the construction period. Does not include the Construction Project Impacts described above. If the Project is not part of a larger planned Development, this section is not applicable.	The direct and indirect economic impacts of the Development as defined in the application in the five years after completion of construction of the Project, exclusive of the impacts of the Project as identified above. If the Project is not part of a larger planned Development, this section is not applicable.
Surrounding Area Impacts	The indirect economic impacts caused by the new construction and/or renovation and rehabilitation of structures included in the Project in the surrounding area during the completion period of the Project, excluding any impacts specifically identified below in the Construction Catalyzed Project Impacts section.	The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below in the Catalyzed Project Impacts section.
Catalyzed Projects (if applicable)	The direct and indirect economic impacts from construction of the defined projects in the surrounding area that are directly caused or accelerated by the Project/Development during the completion period of the Project.	The direct and indirect economic impacts of other proposed, defined projects in the surrounding area that are directly caused or accelerated by the Project/Development in the five years after completion of construction of the Project.
	3. Total Impacts (1. Construction Impacts + 2. Project Completion Impacts)	

What is an Economic Impact Analysis?

An Economic Impact Analysis (EIA) analyzes the effect of an event in a defined geographic area. These geographies may be a parcel, a municipality, county, region, state or country. For purposes of this study, the geography is referred to as the "Surrounding Area." Events occurring within the Surrounding Area come in many forms, typically engendered from industry changes in revenue, business profits, wages, jobs or capital investment, among others. In this analysis, IMPLAN software was used to map the multiplier effects of each event. These events serve as **inputs** and produce economic impacts **(outputs)** into four categories:

1. ***Output*** – representing the value of industry production. For the service and retail sectors, this represents sales or the value of goods sold.
2. ***Employment*** – representing the number of jobs created directly by the project and through direct industry spending.
3. ***Labor Income*** - all forms of employment income paid to employees, including Employee Compensation (wages and benefits) and Proprietor Income (payments received by self-employed individuals and unincorporated business owners).
4. ***Value Added*** - the difference between an industry's or an establishment's total output and the cost of its intermediate inputs. It is a measure of the contribution to GDP.

For purposes of this study, within each impact category, exists two types of effects:

Direct Effects the set of expenditures applied to an impact analysis. It represents a series (or single) of production changes or expenditures made by producers/consumers as a result of an activity. Applying these initial changes to the multipliers in the IMPLAN model will then display how the region will respond economically to these initial changes (in output, employment, labor income and value added).

Indirect Effects represent the impact of local industries buying goods and services from other local industries. A local industry may include businesses, non-profits, residents of a residential development, institutions and governments. The cycle of spending works its way backward through the supply chain until all money leaks from the local economy, either through imports or by payments to value added. The impacts are calculated by applying Direct Effects to IMPLAN multipliers.

Tax Rate Methodology

Below is a summary of tax collection methodology utilized in estimating taxes[9]:

Sales Taxes – sales taxes are calculated using sales and purchases of building tenants, purchases from residents within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional 25% reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of resident expenditures and estimates of economic output provided by IMPLAN. Sales taxes are collected by the County, State and Transit Authority from the following rates:

State of Ohio	5.75%
Montgomery County	1.25%
MVRTA	0.50%

Income Taxes – income taxes are calculate as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax) and the City (Municipal Income Tax). Ohio Withholding Taxers utilize a bracketed rate structure based on salary. As such, a blended wage rate was utilized for all jobs created for the project, resulting in a 2.8% withholding tax rate. Below are the income tax rates applicable to the Project.

State of Ohio	2.8%
City of Dayton	2.5%

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. The tax is collected by both the City and County utilizing the following rates:

Montgomery County	6.5%
City of Dayton	4.0%

Property Taxes – property taxes are collected by various unit of local government through the County Auditor's Website based off of a 35% assessed rate of the project's market value.

Total Rate	10.7%
Montgomery County	*14.7%*
Dayton City School District	*67.6%*
Dayton City	*9.3%*
Dayton Metro Library	*2.8%*
Fiver Rivers Metro Park District	*1.8%*

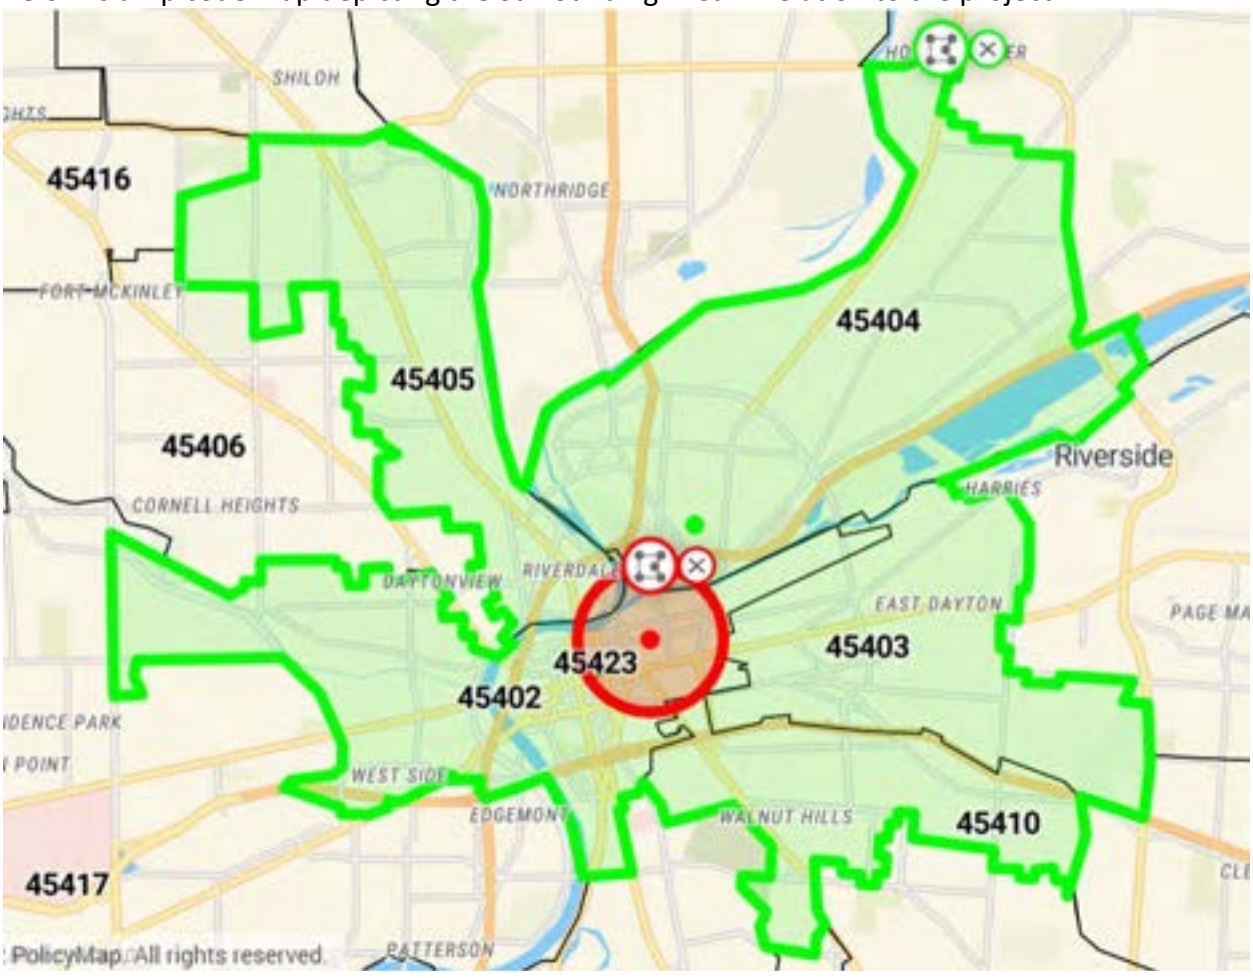
[9] Tax Rate Sources: Property Tax – Montgomery County Auditor; Income Tax & Sales Tax: Ohio Department of Taxation "The Finder" address search function; Lodging Tax – City of Dayton and Montgomery County Finance Department.

Surrounding Area

The "Surrounding area" means any zip code covered in whole or in part encompassed within a perimeter starting from the Delco project boundary and extending one-half mile out from that boundary. The Delco is located within the 45402 zip code and the Surrounding Area in total encompasses 6 zip codes: 45402, 45403, 45404, 45405, 45410, and 45423.

Additionally, the area includes Census Tracts 39113090302, 39113080700, 39113070300, 39113080500, 39113001800, 39113080100, 39113090304, 39113003500, 39113001600, 39113001700, 39113080200, 39113165100, 39113003404, 39113001900, 39113010200, 39113001501, 39113002500, 39113000500, 39113091000, 39113070202, 39113090600, 39113003800, 39113090900, 39113002900, 39113000400, 39113004100, 39113002600, 39113080600, 39113002000, 39113080400, 39113000700, 39113080300, 39113003000, 39113001100, 39113000801, 39113003402, 39113003900, 39113003201, 39113003300, 39113002400, 39113002200, 39113000900, 39113165200, 39113002300, 39113000600, 39113000802, 39113002700, 39113003403, 39113001000, 39113001200[1].

Below is a zip code map depicting the Surrounding Area in relation to the project:



[1] Data and mapping provided by PolicyMap GIS software; custom region built by Ice Miller Whiteboard.

CONSTRUCTION PERIOD IMPACTS

METHODOLOGY

The value entered in Industry Output for construction represents full cost of the structure as provided by the Developer, and only the structure. Construction cost data was provided by the Developer in all circumstances (each building). This includes hard costs and soft costs. IMPLAN then calculates estimated employment and labor income needed to support such costs, classifying employees, hours worked and compensation down to the individual occupational code.

Because Employment, by definition, is based on where the job is located, not where an individual resides, Employment includes estimates of the full value full-time, part-time and temporary Employment on the job site during the year. Additional considerations of costs attributed to construction are considered below. Employees are converted to Full-time equivalent employees (FTEs) by dividing the estimated number of hours of compensation for the job, as calculated by IMPLAN, by 2,080.

PROJECT, DEVELOPMENT AND SURROUNDING AREA

Calculations for the Project and Development represent only Direct construction impacts and inputs. Further, because many of the buildings within the Development are from previously implemented Phases of the Development, only construction impacts of The Project are realized in this section. Indirect construction impacts are included in the Surrounding Area section, and represent impacts that occur as a result of construction employees or items/supplies used in the construction process only. Induced impacts are not included in this addendum.

The Surrounding Area encompasses 6 zip codes: 45402, 45403, 45404, 45405, 45410, and 45423.

CONSTRUCTION INPUTS

Development inputs are omitted as construction for previously implemented phases of the Development have already occurred.

COMPLETION PERIOD IMPACTS

Methodology and Project Information

The Delco ("The Project") is a transformational mixed-use development proposed along the Water Street District within the City of Dayton, adjacent to Day Air Ballpark, home of the Cincinnati Reds Single-A affiliate Dayton Dragons, running along the Miami River. The Project includes the construction of 216,754 square feet of parking, 23,336 square feet of retail, 142,093 square feet of 140 residential units and 89,764 square feet of office.

DEVELOPMENT									

Residential Spending Methodology

The table below summarizes the analysis utilized to estimate resident spending. Per-resident spending was calculated using the 2019 Consumer Expenditure Survey (CES)[2] for the Midwest Region. For each consumer spending category, a "Distribution of Spending" is provided by the CES. [redacted]

Residential Spending Methodology – Detailed Table

TYPICAL SPEND - MIDWEST AVERAGE - Consumer Expenditure Survey 2019

[redacted]

Once a per-resident expenditure is calculated, the expenditure category of the Surrounding Area is analyzed to determine that the Surrounding Area has adequate supply of goods or services within that category to allow for the expenditure to take place within the Surrounding Area. The table below illustrates an "Absorption Rate" calculated for each expenditure category based on 1) availability of the commodity (see "Area Supply") and 2) typical spending habits. For instance, clothing and apparel has been increasingly purchased online[3] , and apparel consumers may prefer to travel to a mall or retail centers outside of the surrounding area. As such, a 43% regional absorption was applied to that category. In other circumstances, educational options are robust within the

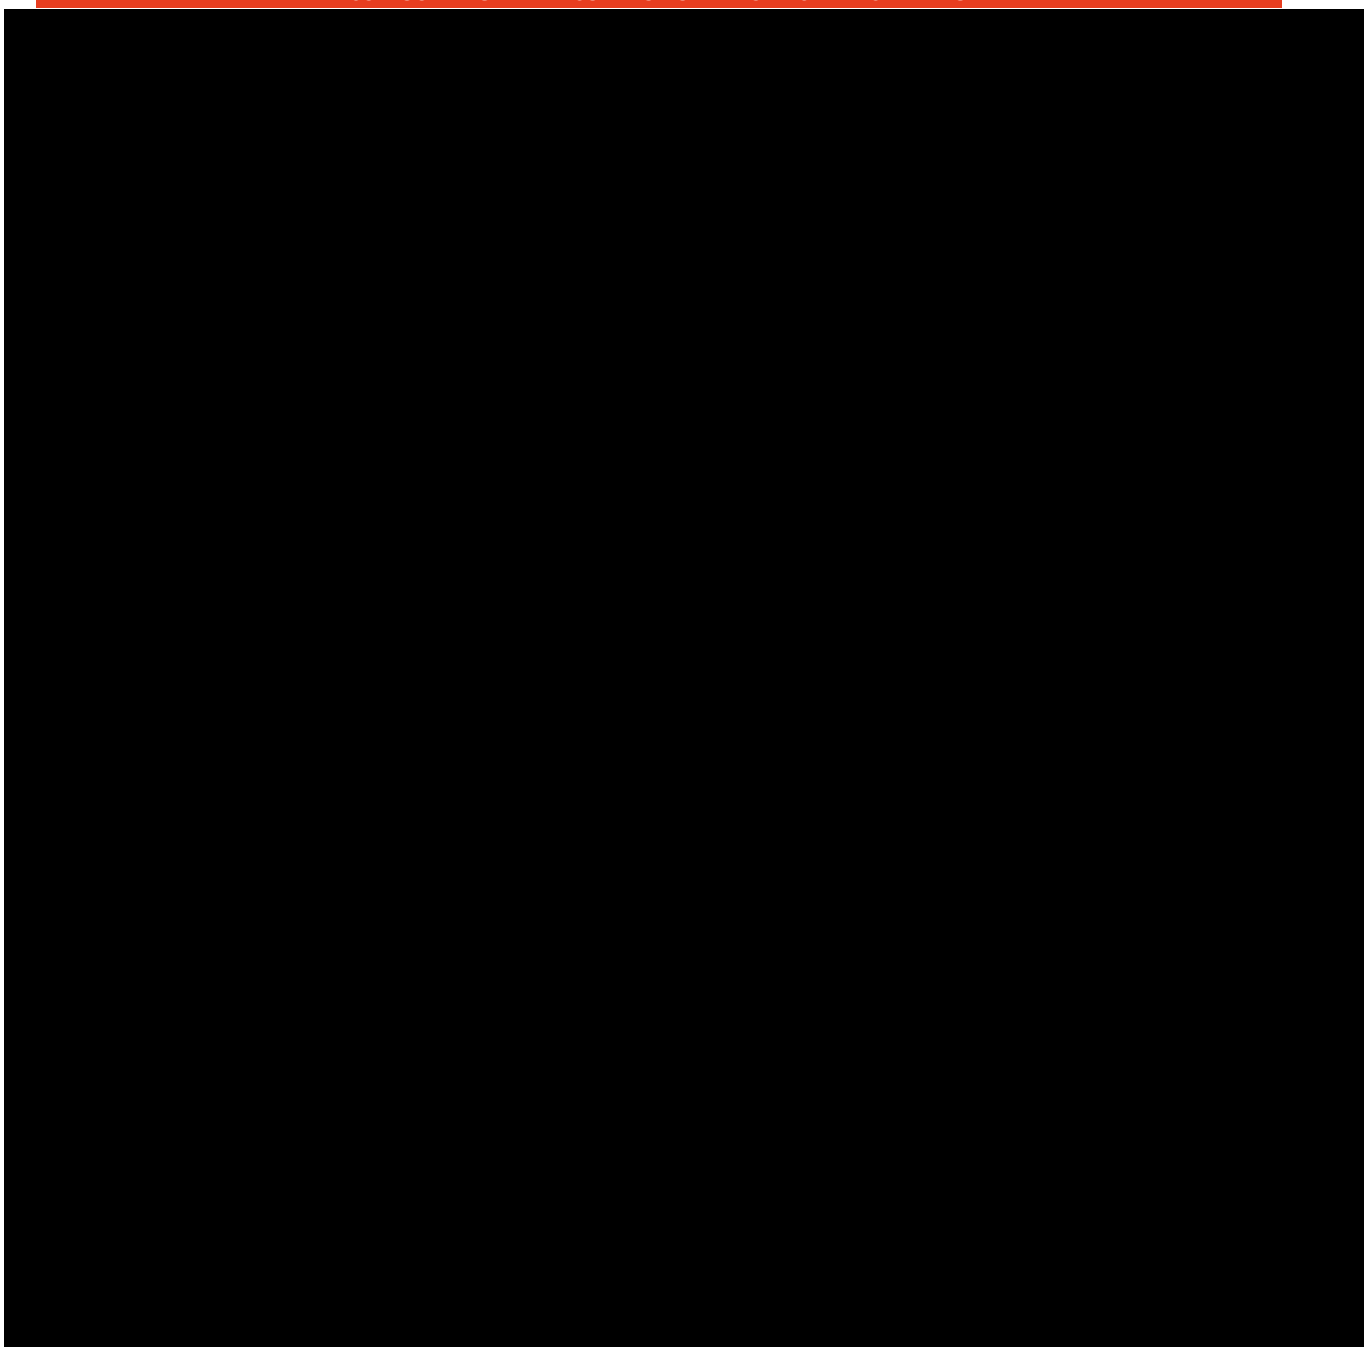
[2] Source Data: Table 1800. Region of residence: Annual expenditure means, shares, standard errors, and coefficients of variation, Consumer Expenditure Surveys, 2020 https://www.bls.gov/cex/tables/calendar-year/mean-item-share-average-standard-error/cu-region-1-year-average-2020.pdf

[3] 14.3% of total retails sales come from online purchases. https://www.census.gov/retail/mrts/www/data/pdf/ec_current.pdf

Surrounding Area due to the presence of a higher educational institution and schools. As a result, 100% of hat commodity would be purchased within the Surrounding Area.

The Absorption Rate is applied to each expenditure category to represent resident spending within the Surrounding Area.

SURROUNDING AREA ABSORPTION OF DIRECT RESIDENT SPENDING



[4] Calculations by Ice Miller Whiteboard; Area Supply data provided by IMPLAN "Commodity Trade Summary" for the custom Region built for zip codes 45402, 45403, 45404, 45405, 45410, and 45423.

Employment, Output and Tax Impacts

Economic Impacts – *Employment*

The table below summarizes employment and employee compensation[5] needed to support estimated sales and activity resulting from the project. Employment represents total headcount (including part time jobs). Employment remains flat given the industries under consideration are higher turnover. Further, compensation is adjusted by 2% annually to account for inflation[6].

PROJECT	2024	2025	2026	2027	2028
[redacted]					

[5] Employment and employee compensation estimates derived from IMPLAN as a result of inputs overviwed in the Economic Events section.

[6] 2% inflation derived from an examination of the Consumer Price Index, 5 year average for all Urban Consumers.

[redacted]					

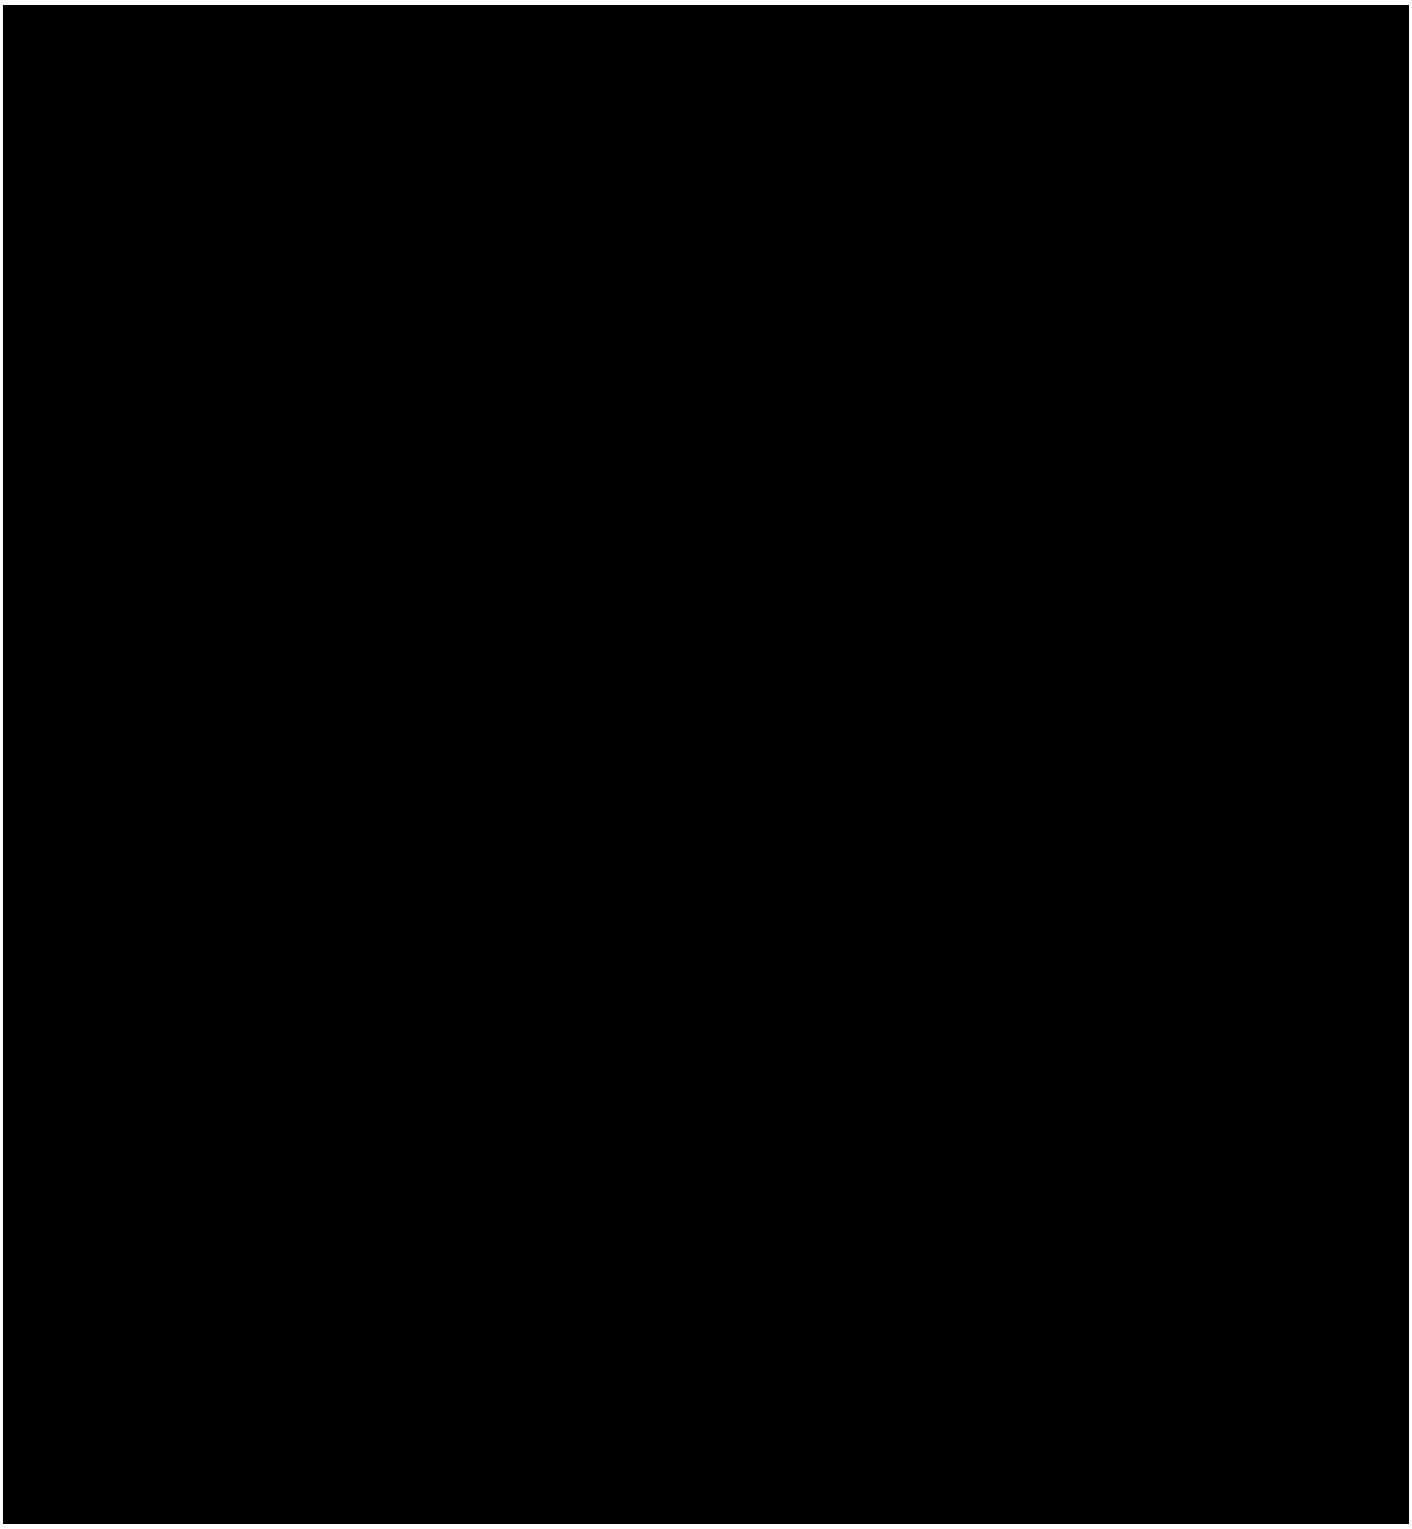
Sales Impacts to Retail, Dining and Entertainment



[8] Source Data: IMPLAN Output Summary

Below is a summary of tax collections by amount and tax type.

Property Tax Notes:

***CRA Abatement* –** the entire property is subject to a 100% CRA Property Tax Abatement, of which 5% of property taxes will be collected by the schools through a payment in lieu of taxes (PILOT).

PILOT Payments ("Pilots") – in order to adequately cover debt service on bond payments, The Delco building and the AC Hotel will be paying minimum service payments associated with a 100%, 30 year Tax Increment Financing District that runs with the property. Service payments during the five-year Completion period per building are indicated below.

NCA Charges – the property is within a New Community Authority District. As a result, Community Development Charges are levied on hotel room sales (1%), an annual fixed payment of $140,000 associated with the hotel surface parking lot and an annual payment to ensure debt service coverage. Payments per building during the Completion Period are overviewed below.

Indirect Impact to Property Values

The Water Street District II Development has had and will continue to have an immense impact on property values in the Surrounding Area from Direct and Indirect economic activity. While induced economic effects address the re-spending of household income from new labor income (which is not captured in this study), the Surrounding Area's single family home values and commercial property values will see a significant boost in value, creating new property tax revenues. In order to calculate this impact, single family home values were calculated in aggregate for the Surrounding Area based on the data below:

	CENSUS 2022 (Annualized Calculated by Vista)						
Zip Codes	SF Homes	SF Home Value	Calculated Home Value	SF Home Value Growth	Annualized	Real Estate Tax Change	Annualized
45402	4,205	$89,100	$374,665,500	48.01%	9.60%	62.13%	12.43%
45403	4,836	$61,100	$295,479,600	11.09%	2.22%	6.34%	1.27%
45404	3,648	$59,800	$218,150,400	2.40%	0.48%	6.94%	1.39%
45405	6,441	$62,000	$399,342,000	3.68%	0.74%	5.63%	1.13%
45410	5,804	$73,800	$428,335,200	7.89%	1.58%	6.69%	1.34%
45423	-	$0	$0	0	0.00%	0%	0.00%
Total	**24,934**	**$68,821**	**$1,715,972,700**				

On order to understand how single-family home value growth will be apportioned to growth caused by the Project an "Water Street Share" of growth was utilized based on an analysis of gross domestic product (GDP) caused by the Project in relation to current GDP per each zip code in the Surrounding Area.

IMPLAN	
Zip Code GDP	Water District Estimated GDP
$4,000,000,000	$612,350,212
$509,000,000	$612,350,212
$2,000,000,000	$612,350,212
$707,000,000	$612,350,212
$408,000,000	$612,350,212
$0	$612,350,212
$7,624,000,000	**$612,350,212**

This served as the overarching upper limit in how much growth moving forward can be attributed to the Development from direct and indirect economic activity. The GDP Impact rate was multiplied by the Annualized Home Value Growth Rate to obtain the portion of typical growth attributable to the Development, then the difference in GDP rate, if higher than the annualized rate, was added back. The resulting figure was divided by 2, representing two growth scenarios 1) the principal zip code of the Development and 2) the adjacent zip codes of the Development. This result was then added by 5% to account for new growth cause by the Project, CPI inflation (which over the last three years is 5.5%) and to capture commercial property growth caused by the Development. Adjacent zip codes do not utilize the 5% addition to the "Water Street Share" calculation. The resulting "Water Street Share" was applied to the "Calculated Single Family Home Value" to calculate the Development's share of value increases, then the "Annualized" rate was applied to the same figure to calculate "Adjusted Base Value." The table below illustrates the increment attributable to the Development and "Adjusted Base Value."

Vista Caclulation (Base Value * (1+ Water Street Share) - Adjusted Base Value = Water Street Property Value Impact

Confirmation of Tax Revenues Meeting 10% of Development Costs

The overall costs for all phases of the Development are approximately $218.8 million and eligible costs needed to complete the Project are approximately $43.4 million. Increased taxes during the completion period exceed both 10% of Total Development Costs and 10% of Eligible Costs to Complete the Project. The table below overviews this.

	Total	10%	Taxes Generated Completion Period	Taxes Generated Construction + Completion Period
Total Development Costs	$218,800,000	$21,880,000	$102,435,568	$109,839,919
Remaining to Complete Project	$43,480,900	$4,348,090	$102,435,568	$109,839,919

EIS PREPARER QUALIFICATIONS

Company & Personnel Background and Work Experience

Vista Site Selection LLC is a newly formed company, founded in September of 2022 by the law firm Vorys, Sater, Seymour and Pease LLP, focused on economic development, economic analysis, economic incentives and site location consulting. Vista's management team has over 75 years of collective experience in Economic Development and Site Selection in 49 US States and includes certified data analysts, economic consultants and GIS specialists, among others.

Vista's services included:

- Economic Insights, including Economic Footprint and Economic Impact Analysis
- Labor Analytics
- Development of Advanced, Customized Data Analytics Platforms and Mapping
- Retail Performance and Growth Analytics
- Return on Investment Insights for Companies and Communities
- Corporate Site Selection Advisory
- Tax Credit and Incentives Advisory
- Economic and Market Analysis

This analysis will be performed by Chris Magill. Chris is a Managing Director for Vista Site Selection. Chris has significant experience consulting on capital investment projects and has strategically negotiated and analyzed tax credit, grant and loan-financing solutions for capital investment projects in over 20 different states. Further, Chris utilizes data analytics to help better inform business leaders and site administrators on project ROI, economic impacts, site decisions and market conditions. Prior to joining Vista Site Selection, Chris served as the Economic Development Director at the Ice Miller law firm for 11 years, consulting on various matters related to economic development, economic incentives, public-private partnerships, community advisory and economic impact analysis. Prior to his time at Ice Miller, Chris worked at the Ohio Department of Development ("ODOD"), serving as the Executive Director of the Ohio Tax Credit Authority. During his time at ODOD, Chris managed and structured various tax credit programs and co-developed various economic incentive calculation tools.

Chris carries various economic certifications and has nearly 15 years of experience in authoring economic impact statements and analysis tools. Chris has experience instructing economic impact, fiscal return-on-investment and economic development courses for the International Economic Development and the Ohio Economic Development Association. Further, has volunteered his time instructing pro forma development courses for the Knowlton School of Architecture and Fisher College of Business at The Ohio State University in relation to the annual Urban Land Institute Student Heinz Competition and has served as a Planning Committee member and annual speaker for the Ohio Tax Conference. Chris also serves as the Vice President of the Board of Directors of the Ohio Statewide Development Corporation. Chris' credentials include:

- Certification in Economic Measurement, *National Association of Business Economics*
- Certification of Business Applications of Statistics and Data Analytics, *National Association of Business Economics*
- Certification of Economic Strategy and Managerial Decision Making, *National Association of Business Economics*
- Master's in Business Administration, *Ohio University*

Prior to joining Vista, Chris Magill's related experience includes the following projects. It is worth noting that the majority of these projects were undertaken by Chris during his time at Ice Miller Whiteboard, LLC prior to joining Vista in January of 2023:

TABLE OF CONTENTS

Project Construction Impacts 3

Development Construction Impacts 5

Surrounding Area Construction Impacts 7

Summary of Total Construction Impacts 9

Construction Return on Investment 10

Appendix. 11

Project Construction Impacts

The Project is anticipated to involve a direct investment of over $120 million to be completed over a four-year Construction Period from 2022 through 2025. During the Construction Period, the Project is anticipated to create a total of 1,157 direct construction jobs with $77 million in labor income. The Project is also estimated to generate $3.7 million in new property, sales, lodging, and income taxes during the Construction Period. Please note that the estimates in the tables below represent annual impacts over the Construction Period.

Estimated Construction Impacts of the Project

- **1,157 Direct Jobs with $77 million in Direct Payroll total over the Construction Period**
- **$3.7 million in new property, sales, lodging and income taxes over the Construction Period**

Construction Jobs and Payroll Impacts of the Project

During the Construction Period, the Project is expected to create 1,157 total direct construction jobs and $77,052,060 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix A due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). The average hourly wage for construction jobs in year 2025 is estimated at $32.48. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Phase I – Construction Jobs		
Year	Full-Time Equivalents	Average Hourly Wage ($)
2022	170	$31.42
2023	650	$32.04
2024	130	$31.95
2025	207	$32.48

Construction Tax Impacts Of The Project

The Construction Period of the Project is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated over the Construction Period, as calculated by IMPLAN software and PMC utilizing the hard construction cost impacts outlined

in Appendix A. This input data was provided by the client based on their construction cost budget for the Project.

The table below illustrates the direct sales, income, lodging and property tax estimates analyzed by PMC using local tax rates to calculate direct taxes for the Construction Period. Income taxes were estimated using the appropriate local and state income tax rates (2.5% for Cleveland and state income tax varied based on income bracket). The table below shows the direct construction income tax estimated impacts. Over the Construction Period, the Project is estimated to generate a total of $3,776,515 in direct local and state income taxes. Construction material sales taxes are not included in this analysis due to the port authority sales tax exemption in place.

Phase I – Construction Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	Projected Total ($)
2022	$0	$544,572	$0	$0	$544,572
2023	$0	$2,123,054	$0	$0	$2,123,054
2024	$0	$423,395	$0	$0	$423,395
2025	$0	$685,495	$0	$0	$685,495
2026	$0	$0	$0	$0	$0

Development Construction Impacts

The Development is anticipated to involve a direct investment of over $163 million to be completed over a three-year Construction Period from 2026 through 2028. During the Construction Period, the Development is anticipated to create a total of 1,460 direct construction jobs with $104.5 million in labor income. The Development is also estimated to generate $5.1 million in new property, sales, lodging, and income taxes during the Construction Period. Please note that the estimates in the tables below represent annual impacts over the Construction Period.

Estimated Construction Impacts of the Development

- **1,460 Direct Jobs with $104.5 million in Direct Payroll total over the Construction Period**
- **$5.1 million in new property, sales, lodging and income taxes over the Construction Period**

Construction Jobs and Payroll Impacts of the Development

During the Construction Period, the Development is expected to create 1,460 total direct construction jobs and $104,533,374 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix B due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). The average hourly wage for construction jobs in year 2028 is estimated at $35.06. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Phase II – Construction Jobs		
Year	Full-Time Equivalents	Average Hourly Wage ($)
2026	483	$33.77
2027	474	$34.41
2028	503	$35.06

Construction Tax Impacts Of The Development

The Construction Period of the Development is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated over the Construction Period, as calculated by IMPLAN software and PMC utilizing the hard construction cost impacts outlined

in Appendix B. This input data was provided by the client based on their construction cost budget for the Development.

The table below illustrates the direct sales, income, lodging and property tax estimates analyzed by PMC using local tax rates to calculate direct taxes for the Construction Period. Income taxes were estimated using the appropriate local and state income tax rates (2.5% for Cleveland and state income tax varied based on income bracket). The table below shows the direct construction income tax estimated impacts. Over the Construction Period, the Development is estimated to generate a total of $5,123,430 in direct local and state income taxes. Construction material sales taxes are not included in this analysis due to the port authority sales tax exemption in place.

Phase II – Construction Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	Projected Total ($)
2026	$0	$1,662,672	$0	$0	$1,662,672
2027	$0	$1,662,672	$0	$0	$1,662,672
2028	$0	$1,798,087	$0	$0	$1,798,087
2029	$0	$0	$0	$0	$0
2030	$0	$0	$0	$0	$0

Surrounding Area Construction Impacts

During the Construction Period, the Project and Development are anticipated to create a total of 0.93 indirect construction jobs with $87,377 in indirect labor income in the surrounding area. The surrounding area is also estimated to generate $6,930 in new indirect property, sales, lodging, and income taxes over the Construction Period (2022-2028). Surrounding area impacts were estimated using indirect impacts of the Project and Development in IMPLAN. It is possible that the impacts are much greater in the surrounding area due to the catalytic nature of this development.

Construction Jobs and Payroll Impacts of the Surrounding Area

During the Construction Period, it is expected that 0.93 total indirect jobs will be created in the surrounding area due to construction activities on the site. The average hourly wage for these jobs in year 2028 is estimated at $48.06. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Surrounding Area - Construction Job Impacts		
Year	Full-Time Equivalents	Average Hourly Wage ($)
2022	0.05	$41.93
2023	0.18	$41.22
2024	0.07	$46.19
2025	0.11	$47.28
2026	0.17	$45.47
2027	0.17	$45.17
2028	0.18	$48.06

Construction Tax Impacts Of The Surrounding Area

During the Construction Period, the development is anticipated to generate significant new tax revenues within the surrounding area.

This surrounding area impacts identify the indirect taxes generated by the project over the Construction Period, as calculated by IMPLAN software utilizing the hard construction costs outlined in Appendix A & B. This input data was provided by the client based on their construction cost budget for the Project and Development.

The table below illustrates the indirect and sales, income, lodging and property tax estimates generated in IMPLAN. Over the Construction Period, the overall development is estimated to generate $6,930 in new taxes within the surrounding area. Of these taxes, it is expected that $3,399 new indirect sales taxes will be generated in the surrounding area as a result of this development project.

Surrounding Area – Construction Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	Projected Total ($)
2022	$191	$17	$0	$183	$390
2023	$657	$59	$0	$631	$1,347
2024	$335	$25	$0	$321	$681
2025	$538	$41	$0	$516	$1,095
2026	$549	$42	$0	$526	$1,117
2027	$560	$42	$0	$537	$1,139
2028	$571	$43	$0	$548	$1,162

Indirect income taxes were estimated using IMPLAN. The table above shows the indirect income tax estimated impacts. Over the Construction Period, it is estimated that within the surrounding area a total of $269 in indirect local and state income taxes will be generated.

Property taxes were estimated based on client-provided data that was then input into IMPLAN. The table above shows the indirect property tax estimated impacts. Over the Construction Period, the surrounding area is expected to generate a total of $3,261 in indirect property taxes.

Summary of Total Construction Impacts

Total Construction Impacts of the Project, Development and Surrounding Area

Over the Construction Period, the total Construction jobs for the Project, Development and Surrounding Area are expected to generate $181,662,641 in new direct and indirect payroll. In 2028, Construction jobs are estimated to have an average hourly wage of $35.07. Average hourly wages were calculated using the labor income per year divided by the number of jobs and then divided by 2,080 hours of work per year.

Total - Construction Jobs		
Year	Full-Time Equivalents	Average Hourly Wage ($)
2022	170.05	$31.42
2023	650.18	$32.04
2024	130.07	$31.95
2025	207.11	$32.49
2026	483.17	$33.77
2027	474.17	$34.41
2028	503.18	$35.07

Total – Construction Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	Projected Total ($)
2022	$191	$544,588	$0	$183	$544,962
2023	$657	$2,123,113	$0	$631	$2,124,401
2024	$335	$423,420	$0	$321	$424,075
2025	$538	$685,535	$0	$516	$686,589
2026	$549	$1,662,713	$0	$526	$1,663,788
2027	$560	$1,662,714	$0	$537	$1,663,810
2028	$571	$1,798,130	$0	$548	$1,799,248

The tables above summarize the total construction impacts for the Project, Development and Surrounding Area expected to be generated during the Construction Period. Over the Construction Period, the development is anticipated to generate $8,906,875 in combined new tax revenues for the State of Ohio and the local entities.

Construction Period Return on Investment

During the Construction Period, the Project, Development and Surrounding Area are anticipated to generate $8,906,875 in combined new tax revenues for the State of Ohio and the local entities. The total Construction Tax Impacts in this Construction Addendum can be added to the Economic Impact Statement to get the total tax impact of the overall development. It is possible that the Construction Period of the development could generate significantly more tax revenues due to local factors and tax rates within the Project site's surrounding area. This Project will generate significant benefits for the City of Cleveland, University Circle and the State of Ohio and will catalyze additional development in the City of Cleveland.

Total Estimated Tax Impacts Generated Over the Construction Period (2022-2028):	**$8,906,875**

APPENDIX A - PROJECT ASSUMPTIONS

Phase I - Construction Cost Assumptions							
Industry Input	Construction Year - 2022	Construction Year - 2023	Construction Year - 2024	Construction Year - 2025	Total Construction Costs	IMPLAN Code	Notes
Construction of new commercial structures, including farm structures	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	55	Includes hard costs plus A&E of commercial space, garage and hotel components
Construction of new multifamily residential structures	[redacted]	[redacted]			[redacted]	58	Includes hard costs of Library Lofts and Artisan
TOTAL	**$16,198,947**	**$61,657,946**	**$16,095,871**	**$26,059,934**	**$120,012,698**		

Phase I - Construction Job Assumptions			
Year	Number of Jobs	Payroll	Average Hourly Wage
2022	170	$11,110,383	$31.42
2023	650	$43,314,662	$32.04
2024	130	$8,638,118	$31.95
2025	207	$13,985,499	$32.48
TOTAL	**1,157**	**$77,048,662**	**$32.02**
City of Cleveland Income Tax Rate – 2.5%, State Income Tax Rate varies dependent upon income tax bracket.			

APPENDIX B – DEVELOPMENT ASSUMPTIONS

Phase II - Construction Cost Assumptions						
Industry Input	**Construction Year – 2026**	**Construction Year - 2027**	**Construction Year - 2028**	**Total Construction Costs**	**IMPLAN Code**	**Notes**
Construction of new commercial structures, including farm structures	[redacted]	[redacted]	[redacted]	[redacted]	55	Includes hard costs plus A&E of commercial space, garage and office components
Construction of new single-family residential structures			[redacted]	[redacted]	57	Includes hard costs and A&E of townhome component
Construction of new multifamily residential structures	[redacted]	[redacted]	[redacted]	[redacted]	58	Includes hard costs plus A&E of multi-family residential component
TOTAL	**$52,732,631**	**$52,732,631**	**$57,920,631**	**$163,385,894**		

Phase II - Construction Job Assumptions			
Year	**Number of Jobs**	**Payroll**	**Average Hourly Wage**
2026	483	$33,921,913	$33.77
2027	474	$33,921,913	$34.41
2028	503	$36,684,662	$35.06
TOTAL	**1,460**	**$104,528,489**	**$34.42**
City of Cleveland Income Tax Rate – 2.5%, State Income Tax Rate varies dependent upon income tax bracket.			

APPENDIX C

ASSUMPTIONS AND LIMITING CONDITIONS

1. The economic impact analysis contained herein relies on databases and software developed by IMPLAN Group LLC. MIG Inc. has been developing complex localized databases since 1993 and is an industry recognized leader in input-output databases and data modeling. As a result, we believe the information provided is a reliable basis to use in developing the economic impacts for the Project (s). However, we have not examined the data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact analysis.
2. All information contained in the report which was furnished by others was assumed to be true, correct, and reliable. A reasonable effort was made to verify such information, but the author assumes no responsibility for its accuracy.
3. The report was made assuming responsible ownership and capable management of the Project.
4. Possession of the report, or a copy thereof, does not carry with it the right of publication, nor may it be reproduced in whole or in part, in any manner, by any person, without the prior written consent of Project Management Consultants, LLC. Neither all nor any part of the report or copy thereof shall be disseminated to the general public by the use of advertising, public relations, news, sales, or other media for public communication without the prior written consent and approval of Project Management Consultants, LLC.
5. The author of this report is not required to give testimony or attendance in legal or other proceedings relative to this report or to the Subject unless satisfactory additional arrangements are made prior to the need for such services.
6. The opinions contained in this report are those of the author and no responsibility is accepted by the author for the results of actions taken by others based on information contained herein.
7. Acceptance of and/or use of this report constitutes acceptance of all assumptions and the above conditions.

TABLE OF CONTENTS

Project Construction Impacts 3

Surrounding Area Construction Impacts 5

Summary of Total Construction Impacts 7

Construction Return on Investment 8

Appendix. 9

Project Construction Impacts

The Project is anticipated to involve a direct investment of over $93 million to be completed over a three-year Construction Period from 2022 through 2024. During the Construction Period, the Project is anticipated to create a total of 404 direct construction jobs with $30.8 million in labor income. The Project is also estimated to generate $1.3 million in new property, sales, lodging, and income taxes during the Construction Period. Please note that the estimates in the tables below represent annual impacts over the Construction Period.

Estimated Construction Impacts of the Project

- **404 Direct Jobs with $30.8 million in Direct Payroll total over the Construction Period**
- **$1.3 million in new property, sales, lodging and income taxes over the Construction Period**

Construction Jobs and Payroll Impacts of the Project

During the Construction Period, the Project is expected to create 404 total direct construction jobs and $30,861,105 in direct labor income (Total payroll varies slightly compared to the total payroll shown in Appendix A due to the averaging of the hourly wage and the multiple decimal points that are not shown in the tables). The average hourly wage for construction jobs in year 2024 is estimated at $37.45. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Project – Construction Jobs		
Year	Full-Time Equivalents	Average Hourly Wage ($)
2022	103	$36.02
2023	202	$36.73
2024	99	$37.45

Construction Tax Impacts Of The Project

The Construction Period of the Project is anticipated to generate significant new tax revenues at the project site and within the surrounding area.

This report focuses on the direct and indirect taxes generated over the Construction Period, as calculated by IMPLAN software and PMC utilizing the hard construction cost impacts outlined in Appendix A. This input data was provided by the client based on their construction cost budget for the Project.

The table below illustrates the direct sales, income, lodging and property tax estimates analyzed by PMC using local tax rates to calculate direct taxes for the Construction Period. Income taxes were estimated using the appropriate local and state income tax rates (1.8% for Cincinnati and state income tax varied based on income bracket). The table below shows the direct construction income tax estimated impacts. Over the Construction Period, the Project is estimated to generate a total of $1,327,733 in direct local and state income taxes.

Project – Construction Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	Projected Total ($)
2022	$0	$330,849	$0	$0	$330,849
2023	$0	$663,878	$0	$0	$663,878
2024	$0	$333,007	$0	$0	$333,007
2025	$0	$0	$0	$0	$0
2026	$0	$0	$0	$0	$0

Surrounding Area Construction Impacts

During the Construction Period, the Project is anticipated to create a total of 10.85 indirect construction jobs with $866,215 in indirect labor income in the surrounding area. The surrounding area is also estimated to generate $100,639 in new indirect property, sales, lodging, and income taxes over the Construction Period (2022-2024). Surrounding area impacts were estimated using indirect impacts of the Project in IMPLAN. It is possible that the impacts are much greater in the surrounding area due to the catalytic nature of this development.

Construction Jobs and Payroll Impacts of the Surrounding Area

During the Construction Period, it is expected that 10.85 total indirect jobs will be created in the surrounding area due to construction activities on the site. The average hourly wage for these jobs in year 2024 is estimated at $38.85. Average hourly wages were calculated using the labor income per year estimated by IMPLAN for the industry divided by the number of jobs and then divided by 2,080 hours of work per year. (Construction job estimates are shown in the table below).

Surrounding Area - Construction Job Impacts		
Year	Full-Time Equivalents	Average Hourly Wage ($)
2022	2.77	$37.86
2023	5.42	$38.42
2024	2.66	$38.85

Construction Tax Impacts Of The Surrounding Area

During the Construction Period, the development is anticipated to generate significant new tax revenues within the surrounding area.

This surrounding area impacts identify the indirect taxes generated by the project over the Construction Period, as calculated by IMPLAN software utilizing the hard construction costs outlined in Appendix A. This input data was provided by the client based on their construction cost budget for the Project.

The table below illustrates the indirect and sales, income, lodging and property tax estimates generated in IMPLAN. Over the Construction Period, the overall development is estimated to generate $100,639 in new taxes within the surrounding area. Of these new taxes, it is expected

that $52,160 new indirect sales taxes will be generated in the surrounding area as a result of this development project.

Surrounding Area – Construction Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	Projected Total ($)
2022	$13,130	$711	$0	$11,492	$25,333
2023	$26,080	$1,412	$0	$22,827	$50,319
2024	$12,950	$701	$0	$11,335	$24,987
2025	$0	$0	$0	$0	$0
2026	$0	$0	$0	$0	$0

Indirect income taxes were estimated using IMPLAN. The table above shows the indirect income tax estimated impacts. Over the Construction Period, it is estimated that within the surrounding area a total of $2,824 in indirect local and state income taxes will be generated.

Property taxes were estimated based on client-provided data that was then input into IMPLAN. The table above shows the indirect property tax estimated impacts. Over the Construction Period, the surrounding area is expected to generate a total of $45,655 in indirect property taxes.

Summary of Total Construction Impacts

Total Construction Impacts of the Project and Surrounding Area

Over the Construction Period, the total Construction jobs for the Project and Surrounding Area are expected to generate $31,690,263 in new direct and indirect payroll. In 2024, Construction jobs are estimated to have an average hourly wage of $37.48. Average hourly wages were calculated using the labor income per year divided by the number of jobs and then divided by 2,080 hours of work per year.

Total - Construction Jobs		
Year	Full-Time Equivalents	Average Hourly Wage ($)
2022	105.6	$36.07
2023	207.2	$36.77
2024	101.6	$37.48

Total – Construction Sales, Income, Lodging and Property Taxes					
Year	Projected Sales Tax ($)	Projected Income Tax ($)	Projected Lodging Tax ($)	Projected Property Tax ($)	Projected Total ($)
2022	$13,130	$331,560	$0	$11,492	$356,182
2023	$26,080	$665,289	$0	$22,827	$714,196
2024	$12,950	$333,708	$0	$11,335	$357,993
2025	$0	$0	$0	$0	$0
2026	$0	$0	$0	$0	$0

The tables above summarize the total construction impacts for the Project and Surrounding Area expected to be generated during the Construction Period. Over the Construction Period, the development is anticipated to generate $1,428,372 in combined new tax revenues for the State of Ohio and the local entities.

Construction Period Return on Investment

During the Construction Period, the Project and Surrounding Area are anticipated to generate $1,428,372 in combined new tax revenues for the State of Ohio and the local entities. The total Construction Tax Impacts in this Construction Addendum can be added to the Economic Impact Statement to get the total tax impact of the overall development. It is possible that the Construction Period of the development could generate significantly more tax revenues due to local factors and tax rates within the Project site's surrounding area. This Project will generate significant benefits for the City of Cincinnati and the State of Ohio and will catalyze additional development in Downtown Cincinnati.

Total Estimated Tax Impacts Generated Over the Construction Period (2022-2024):	**$1,428,372**

APPENDIX A - PROJECT ASSUMPTIONS

Project - Construction Cost Assumptions						
Industry Input	Construction Year - 2022	Construction Year - 2023	Construction Year - 2024	Total Construction Costs	IMPLAN Code	Notes
Maintenance and repair construction of non-residential structures	[redacted]	[redacted]	[redacted]	$97,286,175	60	Includes hard costs plus A&E and tenant improvements of the building.

Project - Construction Job Assumptions			
Year	Number of Jobs	Payroll	Average Hourly Wage
2022	103	$7,706,591	$36.02
2023	202	$15,413,182	$36.73
2024	99	$7,706,591	$37.45
TOTAL	**404**	**$30,826,363**	
City of Cincinnati Income Tax Rate – 1.8%, State Income Tax Rate varies dependent upon income tax bracket.			

APPENDIX B

ASSUMPTIONS AND LIMITING CONDITIONS

1. The economic impact analysis contained herein relies on databases and software developed by IMPLAN Group LLC. MIG Inc. has been developing complex localized databases since 1993 and is an industry recognized leader in input-output databases and data modeling. As a result, we believe the information provided is a reliable basis to use in developing the economic impacts for the Project (s). However, we have not examined the data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact analysis.
2. All information contained in the report which was furnished by others was assumed to be true, correct, and reliable. A reasonable effort was made to verify such information, but the author assumes no responsibility for its accuracy.
3. The report was made assuming responsible ownership and capable management of the Project.
4. Possession of the report, or a copy thereof, does not carry with it the right of publication, nor may it be reproduced in whole or in part, in any manner, by any person, without the prior written consent of Project Management Consultants, LLC. Neither all nor any part of the report or copy thereof shall be disseminated to the general public by the use of advertising, public relations, news, sales, or other media for public communication without the prior written consent and approval of Project Management Consultants, LLC.
5. The author of this report is not required to give testimony or attendance in legal or other proceedings relative to this report or to the Subject unless satisfactory additional arrangements are made prior to the need for such services.
6. The opinions contained in this report are those of the author and no responsibility is accepted by the author for the results of actions taken by others based on information contained herein.
7. Acceptance of and/or use of this report constitutes acceptance of all assumptions and the above conditions.

1. What is an Economic Impact Analysis?

An Economic Impact Analysis (EIA) analyzes the effect of an event in a defined geographic area. These geographies may be a parcel, a municipality, county, region, state or country. For purposes of this study, the geography is referred to as the "Surrounding Area." Events occurring within the Surrounding Area come in many forms, typically engendered from industry changes in revenue, business profits, wages, jobs or capital investment, among others. In this analysis, IMPLAN software was used to map the multiplier effects of each event. These events serve as **inputs** and produce economic impacts **(outputs)** into four categories:

1. ***Output*** – representing the value of industry production. For the service and retail sectors, this represents sales or the value of goods sold.
2. ***Employment*** – representing the number of jobs created directly by the project and through direct industry spending.
3. ***Labor Income*** - all forms of employment income paid to employees, including Employee Compensation (wages and benefits) and Proprietor Income (payments received by self-employed individuals and unincorporated business owners).
4. ***Value Added*** - the difference between an industry's or an establishment's total output and the cost of its intermediate inputs. It is a measure of the contribution to GDP.

For purposes of this study, within each impact category, exists two types of effects:

Direct Effects the set of expenditures applied to an impact analysis. It represents a series (or single) of production changes or expenditures made by producers/consumers as a result of an activity. Applying these initial changes to the multipliers in the IMPLAN model will then display how the region will respond economically to these initial changes (in output, employment, labor income and value added).

Indirect Effects represent the impact of local industries buying goods and services from other local industries. A local industry may include businesses, non-profits, residents of a residential development, institutions and governments. The cycle of spending works its way backward through the supply chain until all money leaks from the local economy, either through imports or by payments to value added. The impacts are calculated by applying Direct Effects to IMPLAN multipliers.

2. The Development/Project Overview

Downtown Painesville to Grand River Corridor will span over eight (8) acres between Grand River Walk, the surface parking lots, 113 Main, and Victoria Place. In total, the Project will result in new construction and redevelopment of 356,347 gross square feet of mixed-use space, nearly sufficient to meet the major city eligibility criteria.

The Grand River Walk portion (Building 1) of the Project will consist of a 2.01-acre site with a single large mixed-use building consisting of 147,785 gross square feet. The 2nd through 5th floors of the building will be dedicated to the residential component of the GRW portion of the Project, with roughly 88,288 rentable square feet, and an additional 17,614 square feet of common area space. Additionally, the Project will include a 24,852 square foot podium parking structure, bringing the total building and podium area to 147,785 square feet. Of the 120 residential units, 10% will be dedicated to studio units (573 SF average), 40% to 1-bedrooms (672 SF average), 40% to 1-bedrooms with den space (767 SF average), and the remaining 10% will be dedicated to 2-bedroom units (1,026 SF average). Rents for the apartments will range from just under $1,100 per month to over $1,600 per month. The first-floor retail component of Grand River Walk will consist of 13,378 square feet. The ideal tenant mix will include restaurant/brewery space and convenience and amenity- focused retail space. Retail tenants will also benefit from outdoor terrace space (roughly 7,028 SF), which will provide additional seating and views of Kiwanis Recreation Park, the Grand River, and a public amphitheater. The Development will also feature the latest in-demand amenities for residents, including a pool, outdoor balconies, fitness center, a lobby, and community center, and a mail/package room. Approximately 132 parking spaces will be designated for the residential units, 69 of which will be below-grade spaces, and the remaining 63 will be surface spaces (1.10 space to unit ratio). There will be an additional 76 surface spaces for the retail component of the Project, bringing the total number of parking spaces to 208.

Use Summary:

- Multifamily Housing: mix of studio, 1-bedroom, and 2-bedroom units (88,288 RSF)
- Retail Space: 7,968 sq. ft. located on the first floor of the Project
- Restaurant: 5,410 sq. ft. located on the first floor of the Project
- Structured Parking: 208 total spaces with 69 below-grade and 139 surface spaces (podium parking: 24,852 SF)
- Recreational Areas: Pool, fitness center, and outdoor patio seating

The Victoria Place portion (Building 3) of the Project will be a mixed-use building made up of commercial offices, a restaurant, and 75 market rate multifamily apartment units on a 1.75 acre site comprising a good portion of the Downtown Painesville Square. The 188,338 square foot three story building will undergo a complete renovation, including a façade renovation, the creation of 75 multifamily units totaling 72,300 sq. ft., updating the 37,474 square feet of existing office space, and 5,798 square feet of restaurant and retail space that will serve as a catalyst for revitalization of Painesville's Downtown Square. The goal of Victoria Place is to inspire investment, rehabilitation, and revitalization of Painesville's Downtown, and to strengthen the local economy and community.

113 Main (Building 2) is located on a 0.2 acre parcel on the corner of State and Main and shares a party wall with Victoria Place. CLE intends to redevelop that 20,225 square foot building over three (3) stories to accommodate a restaurant on the first floor and office workspace on the second and third floors.

With the anticipated influx of residents and visitors to the Project, GRW LLC has entered into a private Lease with a neighboring property owner and a Sublease with the City of Painesville for use of surface parking lots located in the middle of Grand River Walk and Victoria Place. These parking lots will support customer parking for the office, retail, and restaurant uses and provide ample visitor parking for the Project.

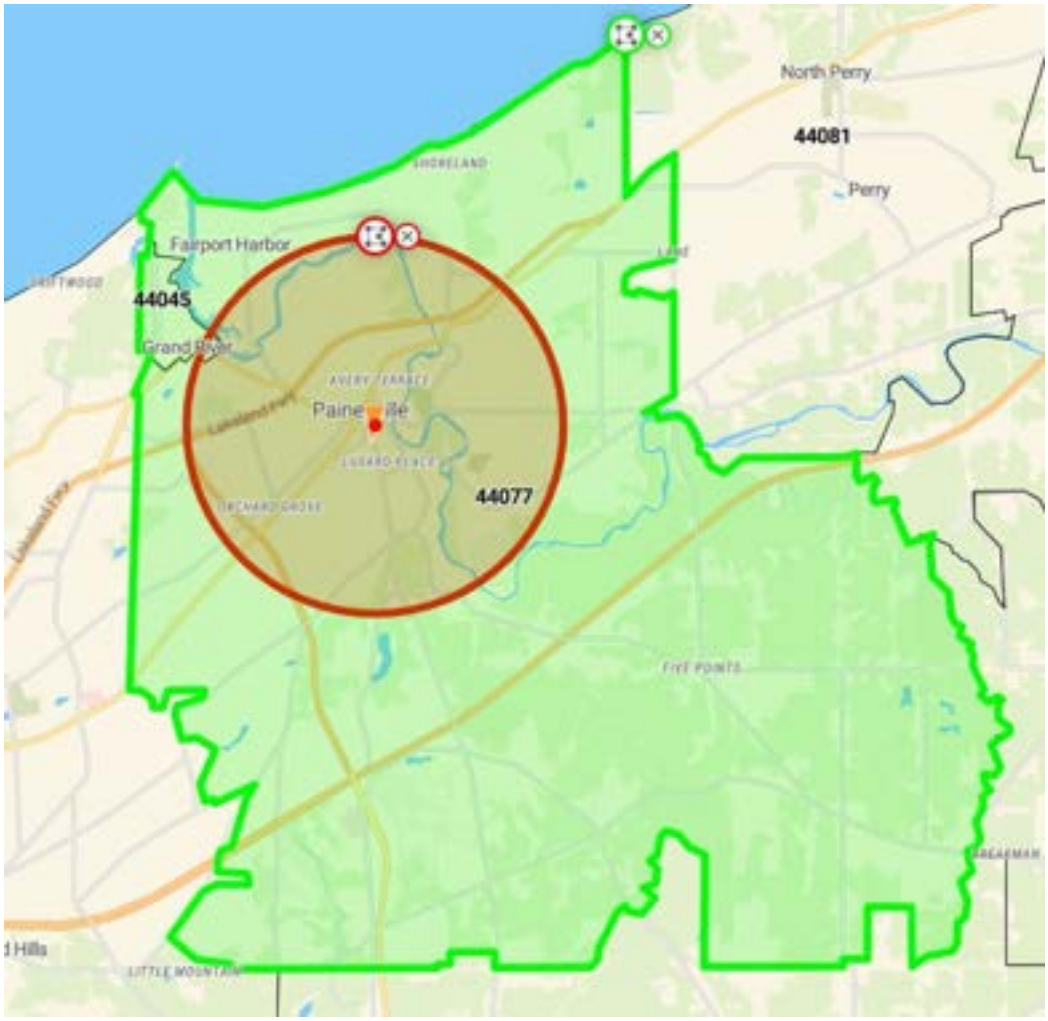
The combination of Grand River Walk and Victoria Place happening at the same time will be completely transformative to Downtown Painesville, and in many ways, to the entire City of Painesville, by bringing Painesville a sense of place that it has never had, and will not be able to have without the boost it needs from a critical TMUD award.

3. Surrounding Area

The "Surrounding area" for purposes of this study is defined as any zip code covered in whole or in part encompassed within a perimeter starting from the project boundary and extending two miles out from that boundary. The project is located within the 44077 zip code and the Surrounding Area in total encompasses 2 zip codes: 44077 and 44045.

Additionally, the Surrounding Area encompasses the following census tracts: 39085205002, 39085204800, 39085204900, 39085206200, 39085204200, 39085204700, 39085204304, 39085204400, 39085204000, 39085204303, 39085204500.[1]

Below is a zip code map depicting the Surrounding Area in relation to the project:



[1] Data and mapping provided by PolicyMap GIS software; custom region built by Vista Site Selection.

4. PROJECT TIMELIME AND PHASING

5. PROJECT DIRECT IMPACTS

The following section overviews the direct impacts of The Project.

PROJECT DIRECT ACTIVITY

Operations Jobs

Year	Full-time Equivalents	Average Hourly Wage ($)	Payroll
1	8	$45.95	$740,090
2	8	$47.10	$758,593
3	8	$48.28	$777,557
4	8	$49.49	$796,996
5	8	$50.72	$816,921
Total	**8**	**$50.72**	**$816,921**

Tenant Jobs

Year	Full-time Equivalents	Average Hourly Wage ($)	Payroll
1	164	$43.50	$14,801,812
2	164	$44.59	$15,171,858
3	164	$45.71	$15,551,154
4	164	$46.85	$15,939,933
5	164	$48.02	$16,338,431
Total	**164**	**$48.02**	**$16,338,431**

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales ($)	Projected Entertainment Sales ($)	Projected Dining Sales ($)
1	[redacted]	[redacted]	[redacted]

2	$606,880	$1,043,606	$0	$0	$1,650,486
3	$625,414	$1,070,719	$0	$0	$1,696,133
4	$644,511	$1,098,540	$0	$0	$1,743,052
5	$664,190	$1,127,090	$0	$0	$1,791,280
Total	**$3,129,890**	**$5,357,139**	**$0**	**$0**	**$8,487,029**

INPUTS

The following assumptions were modeled into IMPLAN in calculating economic impacts. Input data is provided by the Developer and verified by Vista Site Selection. Data is then classified into IMPLAN industry categories and entered into IMPLAN based on Headcount, Payroll and Estimated Sales, Rents or Expense columns as indicated in the table below.

Use	SF/Units	Headcount	Payroll	Estimated Sales, Rents and Expenses	IMPLAN Input
Commercial 1	60,000	100	$[redacted]	$[redacted]	441 Monetary authorities and depository credit intermediation
Restaurant 1	12,000	20	$[redacted]	$[redacted]	509 Full-service restaurants
Apartments 1	64	3	$[redacted]	$[redacted]	448 Tenant-occupied housing
Restaurant 2	7,969	15	$[redacted]	$[redacted]	509 Full-service restaurants
Brewery	5,410	12	$[redacted]	$[redacted]	511 All other food and drinking places
Apartments 2	120	3	$[redacted]	$[redacted]	448 Tenant-occupied housing
Office 1	24,000	96	$[redacted]	$[redacted]	469 Management of companies and enterprises
Resident Spending	184	N/A	$0	$2,959,000	• Retail – Food and beverage • Full-service Restaurants • Limited- Service Restaurants • All Other Food & Drinking Places • Other Housing Support Services • Local Government Utilities • General Merchandize Stores • Retail – Clothing and Accessories • Retail – Gasoline Stores • Transit and ground passenger Services • Offices of Physicians • Commercial Sports • Retail – Health and Personal Care • Insurance Carriers, except direct life • Junior Colleges, Colleges, Universities and Professional Schools • Miscellaneous Store Retailers
Resident Incomes	195	$0	$11,016,000	$0	448 Tenant-occupied housing
Office Expenses/Supplies	$0	$0	$0	$[redacted]	405 Retail - Building material and garden equipment and supplies stores

6. DEVELOPMENT IMPACTS

This section is intentionally left blank.

7. SURROUNDING AREA IMPACTS

Surrounding Area impacts were calculated by IMPLAN Economic Modeling software based on inputs identified in both Project and Development Uses. In this section, "Development" refers to the Development without The Project.

SURROUNDING AREA IMPACTS

Operations Jobs

Year	Full-time Equivalents	Average Hourly Wage ($)	Payroll
1	0.97	$37.50	$75,492
2	0.97	$38.44	$77,379
3	0.97	$39.40	$79,314
4	0.97	$40.38	$81,296
5	0.97	$41.39	$83,328
Total	**0.97**	**$41.39**	**$84,961**

Tenant Jobs

Year	Full-time Equivalents	Average Hourly Wage ($)	Payroll
1	12.58	$57.69	$1,509,836
2	12.58	$59.13	$1,547,581
3	12.58	$60.61	$1,586,271

Total	**$1,748,457**	**$380,937**	**$10,944**	**$138,325**	**$2,278,664**

8. CATALYZED PROJECT IMPACTS

Small communities like Painesville have had difficulty finding re-use of strictly retail and commercial buildings as large as Victoria Place in today's market. At the same time, the vitality of Painesville's downtown relies upon their appropriate re-use. The Project being proposed will help secure high-quality office space providing the City with potential for new income tax revenues, while also focusing new investments on underutilized parts of this building. The residential component to the project will help the City retain and recruit talent to the local workforce by providing a high quality and competitively priced housing option to live and work.

Overall small downtowns have to find new investment opportunities. Painesville is the seat of Lake County and recent new investment around the square has totaled more than $35 Million in the construction of a new County Administration Building. Additionally, the City has invested over $1 Million in two new streetscape projects that have enhanced walkability, parking and added street amenities. The Project will now serve as a catalyst for private investment targeting the attraction of new office and commercial anchor tenants. The City is also committed to working with the Developer to ensure the attraction of the region's key targeted industries. Targeting these industries directly aligns with the City's Economic Development Strategic Plan in which the City is working to secure new corporate anchor office tenants, exploring new technology, and focusing on the attraction of companies that pay 150% above minimum wage and offer solid benefits packages with professional growth opportunities for employees in our region. The City is currently working on new incentives to ensure they have the tools to attract key targeted anchor tenants. As they have done in the past, the City will also work directly with TeamNEO and Jobs Ohio marketing this Project as prime office real estate within the east Cleveland area. Having a regional partnership between Jobs Ohio, TeamNEO, the Lake Development Authority, the City of Painesville and the Lake County Commissioners is important to support the directives of new job creation and bring competitive office sites in small urban communities within the northeast Ohio region. Attached in Appendix A is a letter from the City of Painesville Economic Development Director, stating her belief that the Project will cause or accelerate the projects contained within this catalyzed project category.

The catalytic effect this Project will have is quantified in this section. The projects catalyzed in this section all fall within the Project's two-mile radius and are planned to be placed into service after this Project is complete. Further, project impacts are captured during the five-year completion period in each project's corresponding table. The following assumptions were used to calculate impacts from development square footage programs of each catalyzed project.

Use	SF/Jobs	Salary	Sales/SF	Room Sales/SF	Rent/SF	Methodology
Apartment	15000	$35,000	$0	$0	[redacted]	Uses comparable market data within the Northeast Ohio Region, data provided by Developer and Rent.com rent estimates.
Hotel	700	$40,000	[redacted]	[redacted]	$0	Uses comparable hotel sales data for cities under 20,000 in population, assumes 68% occupancy.
Industrial	750	$55,000	$0	$0	$0	Uses data gathered by an Industrial Market analysis authored by Portland State University
Office	350	$65,000	$0	$0	$0	Based on CBRE market data on jobs per sf.
Restaurant	600	$25,000	[redacted]	$0	$0	Based on data provided by Developer in Painesville market
Retail	450	$30,000	[redacted]	$0	$0	Based on data provided by Developer in Painesville market

Richmond Street Business Park

Located on a main arterial corridor into Downtown Painesville, Richmond Street has long been littered with fast food chains, despite the City of Painesville's identified need for healthier restaurant options in the community. Negotiations with the developer of this project have stagnated over the past 7 years as the demographics of the Downtown area have lacked the higher income residents to support such retail food options. Downtown Painesville to Grand River Corridor Project will serve as a much-needed catalyst for this project by providing office workers, higher earning renters, and visitors traveling on Richmond Street and around the Downtown Painesville area. The City of Painesville has indicated that talks with the developer have resumed, in earnest, as a result of the pendency and potential for the Downtown Painesville to Grand River Corridor Project.

Casement Development

The largest tract of undeveloped acreage in Painesville and Painesville Township, the Casement Development project that is currently being considered would incorporate townhomes, multi-family and single family development, and nearby amenity convenience mixed-use space on approximately 400 acres of land. In the same manner as the New Downtown Residential, this site is poised to be catalyzed by the completion of the Downtown Painesville to Grand River Corridor Project as it helps establish a market demand for new multi-family construction options, and even more importantly, it gets more people talking favorably about Painesville and will make them more inclined to want to live in that area, in part, because they will be so close to such a nice, new mixed-use development as the Downtown Painesville to Grand River Corridor Project. Residents could easily transition from Downtown Painesville to the Casement Development once they have children, or vice versa when they become empty-nesters.

Encore Business Park

This contemplated mixed-use development would include approximately 170,000 square feet of Industrial space, 55,000 square feet of hotel space, and 10,000 square feet each of restaurant and retail space. The completion of the Downtown Painesville to Grand River Corridor Project will help establish the market viability of the Encore Estates project by demonstrating the demand for new constructions with a mix of commercial uses in Painesville. Downtown Painesville to Grand Corridor River Project would also help attract industrial-focused companies that would not otherwise locate to Painesville due to a lack of available quality multifamily units for their workforce in the City of Painesville. The Downtown Painesville to Grand River Corridor Project's ability to attract additional business to the area would, in turn, help catalyze the Encore Estates Business Park project by stimulating more commercial activity and more overall vibrancy and business attraction to the City of Painesville.

Downtown Residential

The City of Painesville has long sought a developer to utilize an 8-acre vacant hospital site for residential purposes. While many national builders have expressed interest, a lack of market comparisons have held developers back from making a commitment. The Downtown Painesville to Grand River Corridor Project would catalyze this project by drawing higher income residents to the area and provide the necessary market data that developers rely on when determining where to build and that their lenders utilize to support the security of the loan. Additionally, the Downtown Painesville to Grand River Corridor Project would provide many of the amenities that prospective downtown residents desire, further justifying the market viability of residential product in Downtown Painesville.

Brookstone Hotel

Lake Development Authority has identified strong demand for a hotel in the Encore Business Park area. Downtown Painesville to Grand River Project Corridor Project will help accelerate business and leisure travel to the area through the office space, retail, restaurant, and community amenity components of the Project. The prospective Hotel will total $17 million and feature 95 rooms in 65,000 square feet of hotel space. Having a nearby transformational mixed-use development for hotel guests to enjoy will directly cause, or at least accelerate, the development of that hotel project.

Ohio Associated Enterprises

Ohio Associated Enterprises, an advanced manufacturing company, relocated 88 jobs from its California operation to Painesville in 2020. That company is now considering expanding its footprint in Painesville with $6 million in new and expanded industrial use. The Downtown Painesville to Grand River Project Corridor Project will catalyze this development by providing new housing for the company's employees as well as additional dining and retail options that will encourage that company to proceed with its Painesville expansion.

Shamrock Mixed Use

The increase in residential rental properties included in the Downtown Painesville to Grand River Project Corridor Project will be a direct catalyst for this new single-family residential development. The City of Painesville has a young demographic with an average age of 31. The Downtown Painesville to Grand River Project Corridor Project will attract more graduate students, recent college graduates, and young professionals to live in Downtown Painesville. After a few years, they will start families of their own. These young families often transition into single-family homes once they feel established in the community. The addition of Shamrock Development, a $3 million investment in a new residential development will bolster the strong interest for new single-family homes located in the City of Painesville.

Blue Heron Residential Development

The City has also had significant population increases over the past decade that are resulting in demand for greater neighborhood amenities and higher-end residential dwellings as many of these incoming residents are relocating to the area for new employment opportunities, particularly with several large corporations and professional services firms that are based in the area. Blue Heron Residential Development is aiming to fill that need with a $2.8 million new luxury home development..

Chase Bank Restaurant & Entertainment District

Renew Partners ("Renew"), through its affiliate Vic Place LLC, is redeveloping the Victoria Place building as part of the Downtown Painesville + Grand River Project (the "Project"). Simultaneously Renew is currently developing a former bank building less than a quarter mile away from the Project to provide student housing for Lake Erie College students ("Chase Bank"). Renew is considering including a 5,124 square foot restaurant with 1,343 sq. ft. of cooking space on the first floor of the Chase Bank building. In the event that the Project is able to move forward as a result of being awarded a TMUD tax credit certificate, the Project will have a direct catalytic effect on the Chase Bank Restaurant. The increase in residents and employees in Downtown Painesville will provide the customers, activity, energy, and vibrancy necessary to support adding the restaurant space to the first floor of the building and increase Renew's ability to secure a solid restaurant operator as a tenant for the space. Attached in Appendix is a summary from the Developer speaking to the catalytic effect the Project has on this Development.

Further catalyzed by this effort, a restaurant group out of the nearby City of Willoughby is anticipating investing $1.1 million to renovate a 2,400 square foot former bank building into a restaurant and bar. Downtown sorely lacks late night establishments and the Downtown Painesville to Grand River Project Corridor Project will catalyze this project by helping to establish an entertainment district Downtown and offering evening dining and entertainment options that will be synergistic with one another.

8 North State Street – Key Bank Building

Should the Downtown Painesville to Grand River Project Corridor Project be awarded TMUD tax credits, Grand River Walk LLC and/or its affiliates ("GRW LLC") are prepared to continue their investment in the Downtown Painesville area with the purchase of 8 North State Street, a building and parking lot immediately adjacent to the Project. Locally known as the "Key Bank Building", this office building is roughly 50% occupied and in major need of rehabilitation. This acquisition, which is currently under purchase agreement and will not move forward or close without a Round 2 TMUD award for the Project, would result in an estimated $8 million of additional investment in Downtown Painesville rehabilitation and redevelopment expenditures by GRW LLC. Located in a Nationally Registered Historic Property ("NHRP") District and containing 51,000+/- rentable square feet, GRW LLC would pursue federal and Ohio historic tax credits for qualified rehabilitation expenditures to redevelop that property and reduce vacancy. The catalytic impact to 8 North State Street will not be possible, and the principals of Grand River Walk LLC will not move forward with acquisition and future investment, unless the Project first becomes viable (financially and otherwise) through an awarded Round 2 TMUD Tax Credit Certificate. The Project will serve as the initial catalyst for the advancement of Painesville's economic growth, whereby properties like 8 North State Street will benefit from the effects of the Downtown Painesville to Grand River Project Corridor Project's impact to the immediate area, Painesville residents, employees, and businesses. Attached in Appendix A is an attestation letter from The Developers Marous Development Group LLC and Grand River Walk LLC attesting to the catalytic effect the Project will have on this Development.

10. Residential Spending Methodology

The table below summarizes the analysis utilized to estimate resident spending. Per-resident spending was calculated using the 2019 Consumer Expenditure Survey (CES)[2] for the Midwest Region. For each consumer spending category, a "Distribution of Spending" is provided by the CES. In order to determine actual expenditures, annual incomes are calculated from prospective renters, assuming that renters are spending 25% of their annual income on the Project's projected rents. For instance, someone renting a building at a rent of $1,700 would earn an income of $81,600.

TYPICAL SPEND - MIDWEST AVERAGE - Consumer Expenditure Survey 2019				
Consumer Item			**Apartments 1**	**Apartments 2**
Residents			210	112
Typical Expenditures per Resident			$11,432	$16,483
Surrounding Area Coverage			100%	100%
Surrounding Area Expenditures			$11,432	$16,483
Total Typical Project Resident Spending			$2,400,633	$1,846,118
Consumer unit characteristics (mean values):				
	Rent		$1,179	$1,700
	Income		$56,592	$81,600
Annual aggregate expenditures per		20.2	$11,431.58	$16,483.20
Disttribution of Spending				
Food		11.6	$1,326.06	$1,912.05
Alcoholic beverages		3.5	$400.11	$576.91
Housing		32.3	$3,692.40	$5,324.07
Apparel and services		2.5	$285.79	$412.08
Transportation		17.2	$1,966.23	$2,835.11
Healthcare		7.6	$868.80	$1,252.72
Entertainment		5.6	$640.17	$923.06
Personal care products and services		1.1	$125.75	$181.32
Reading		0.2	$22.86	$32.97
Education		1.6	$182.91	$263.73
Miscellaneous		1.4	$160.04	$230.76
Cash contributions		3.7	$422.97	$609.88
Personal insurance and pensions		11.7	$1,337.50	$1,928.53

Once a per-resident expenditure is calculated, the expenditure category of the Surrounding Area is analyzed to determine that the Surrounding Area has adequate supply of goods or services within that category to allow for the expenditure to take place within the Surrounding Area. The table below illustrates an "Absorption Rate" calculated for each expenditure category based on 1) availability of the commodity (see "Area Supply") and 2) typical spending habits. For instance, clothing and apparel has been increasingly purchased online[3] , and apparel consumers may prefer to travel to a mall or retail centers outside of the surrounding area. As such, a 43% regional absorption was applied to that category. In other circumstances, educational options are robust within the Surrounding Area due to the presence of a higher educational institution and schools. As a result, 100% of hat commodity would be purchased within the Surrounding Area.

Economic Impacts – *Project and Surrounding Area Taxes by Tax Type*

Below is a summary of tax collection methodology utilized in estimating taxes[6]:

Sales Taxes – sales taxes are calculated using sales and purchases of building tenants, purchases from residents within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional 20% reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of resident expenditures and estimates of economic output provided by IMPLAN. Sales taxes are collected by the County, State and Transit Authority from the following rates, totaling a 7.25% State & Local rate:

State of Ohio	5.75%
County	1%
Transit	.5%

Income Taxes – income taxes are calculate as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax) and the City (Municipal Income Tax). Ohio Withholding Taxers utilize a bracketed rate structure based on salary, while Municipal Income Taxes are fixed and applied to wages and net profits. As such, a blended wage rate was utilized for all jobs created for the project, resulting in a 2.8% withholding tax rate. Below are the income tax rates applicable to the Project for a total State & Local Rate of 4.8%.

State of Ohio	2.8%
City	2%

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. Lodging taxes collected by both the City and County utilizing the following rates, for a total State & Local Rate of 3%:

County	3%
City	0%

Property Taxes – property taxes are collected by various unit of local government through the County Auditor's Website based off of a 35% assessed rate of the project's market value. The Indirect taxes are estimated by IMPLAN based on project operations. When factoring in the 35% assessment rate a 9.44% effective rate, a tax rate of 3.30% is used on the market value of the Project to collect property taxes.

Total Rate	9.44%

[6] Tax Rate Sources: Property Tax - Lake County Auditor; Income Tax & Sales Tax: Ohip Department of Taxation "The Finder" address search function; Lodging Tax – Ohio Department of Taxation.

Below is a summary of tax collections by amount and tax type. The top row of each category represents the taxable base of the specific tax.

PROJECT	2024	2025	2026	2027	2028
Property Value	$40,399,800	$40,803,798	$41,211,836	$41,623,954	$42,040,194

About VISTA SITE SELECTION

Vista Site Selection LLC is a newly formed company, founded in September of 2022 by the law firm Vorys, Sater, Seymour and Pease LLP, focused on economic development, economic analysis, economic incentives and site location consulting. Vista's management team has over 75 years of collective experience in Economic Development and Site Selection in 49 US States and includes certified data analysts, economic consultants and GIS specialists, among others. Vista's services included:

Economic Insights, including Economic Footprint and Economic Impact Analysis

- Labor Analytics
- Development of Advanced, Customized Data Analytics Platforms and Mapping
- Retail Performance and Growth Analytics
- Return on Investment Insights for Companies and Communities
- Corporate Site Selection Advisory
- Tax Credit and Incentives Advisory
- Economic and Market Analysis

Qualifications of Personnel

This analysis was performed by Chris Magill. Chris is a Managing Director for Vista Site Selection and a Certified Economist. Chris has significant experience consulting on capital investment projects and has strategically negotiated and analyzed tax credit, grant and loan-financing solutions for capital investment projects in over 20 different states. Further, Chris utilizes data analytics to help better inform business leaders and site administrators on project ROI, economic impacts, site decisions and market conditions. Prior to joining Vista Site Selection, Chris served as the Economic Development Director at the Ice Miller law firm for 11 years, consulting on various matters related to economic development, economic incentives, public-private partnerships, community advisory and economic impact analysis. Prior to his time at Ice Miller, Chris worked at the Ohio Department of Development ("ODOD"), serving as the Executive Director of the Ohio Tax Credit Authority. During his time at ODOD, Chris managed and structured various tax credit programs and co-developed various economic incentive calculation tools.

Chris is a Certified Economist, carries various other economic certifications and has nearly 15 years of experience in authoring economic impact statements and analysis tools. Chris has experience instructing economic impact, fiscal return-on-investment and economic development courses for the International Economic Development and the Ohio Economic Development Association. Further, has volunteered his time instructing pro forma development courses for the Knowlton School of Architecture and Fisher College of Business at The Ohio State University in relation to the annual Urban Land Institute Student Heinz Competition and has served as a Planning Committee member and annual speaker for the Ohio Tax Conference. Chris also serves as the Vice President of the Board of Directors of the Ohio Statewide Development Corporation. Chris'

credentials include:

- Certified Economist, *IMPLAN*
- Certification in Economic Measurement, *National Association of Business Economics*
- Certification of Business Applications of Statistics and Data Analytics, *National Association of Business Economics*
- Certification of Economic Strategy and Managerial Decision Making, *National Association of Business Economics*
- Master's in Business Administration, *Ohio University*

ADDENDUM #1 – CONSTRUCTION IMPACTS

METHODOLOGY

The value entered in Industry Output for construction represents full cost of the structure as provided by the Developer, and only the structure. Construction cost data was provided by the Developer in all circumstances (each building). This includes hard costs and soft costs. IMPLAN calculates employment based on the number of employees it would take to support the dollar value and type of a given economic event, using a combination of data sources including Census County Business Patterns (CBP), Bureau of Labor Statistics Covered Employment and Wages (CEW) and Bureau of Economic Analysis Regional Economic Accounts (REA) as the basis for its calculation. Further, IMPLAN uses additional data sources to classify its employment estimates into hours worked, headcount and compensation by specific occupation. Occupational source data used by IMPLAN includes Bureau of Labor Statistics (BLS) Occupational Employment Survey (OES), BLS Employment Projections national industry by occupation matrix, Census Bureau American Community Survey (ACS) Public Use Microdata Sample (PUMS) and O*NET™ which is a trademark of the U.S. Department of Labor, Employment and Training Administration.

Because Employment, by definition, is based on where the job is located, not where an individual resides, Employment includes estimates of the full value full-time, part-time and temporary Employment on the job site during the year. Additional considerations of costs attributed to construction are considered below. Employees are converted to Full-time equivalent employees (FTEs) by dividing the estimated number of hours of compensation for the job, as calculated by IMPLAN, by 2,080.

PROJECT, DEVELOPMENT AND SURROUNDING AREA

Calculations for the Project represent only Direct construction impacts and inputs. Indirect construction impacts are included in the Surrounding Area section, and represent impacts that occur as a result of construction employees or items/supplies used in the construction process only. Induced impacts are not included in this addendum.

The Surrounding Area encompasses 4 zip codes: 44077 and 44045.

transformational.development.ohio.gov

Dear Department Development Representative:

The City of Painesville's Economic Development Department has been actively working to attract new residents, employers, and entertainment options to Downtown Painesville and the City as a whole. The City has worked closely with Marous Development Group and Renew Partners to bring a project to fruition that aligns well with the City of Painesville's Downtown Master Plan and that will further the City's larger development goals. The Downtown Painesville to Grand River Corridor Project (the "Project") will give Downtown Painesville a newfound sense of place and will directly cause or accelerate many anticipated developments in the City, including additional mixed-use developments, building renovation, and expansion in the Downtown district.

Specifically, I believe that the Project would directly cause or accelerate the additional projects that are set forth in the attached catalyzed projects list. Moreover, the Project will also enhance our ability to attract businesses that we want located in Painesville. The City is actively working with multiple developers and other involved business owners to help bring the projects in the attached list to fruition.

For these and other reasons, the City of Painesville strongly supports the award of a TMUD Tax Credit Certificate for the Project. The Downtown Painesville to Grand River Corridor Project is the type of transformative development that Painesville has not been fortunate enough to experience and will completely transform Downtown Painesville extending to the Grand River.

We appreciate your consideration in advance! If you have questions, please do not hesitate to contact either myself or Painesville City Manager Doug Lewis at (440) 392-5800 or dlewis@Qainesville.com .

Sincerely,
CITY OF PAINESVILLE, OHIO

Gath - Bi,{erman

RENEW PARTNERS LLC

Date: 7/7/2022

Ohio Department of Development
77 South High Street
Columbus, OH. 43215

RE: Renew Partners LLC through its affiliate Vic Place LLC - Downtown Painesville to Grand River Corridor Project

TMUD Catalyzation: Chase Bank Restaurant

Renew Partners ("Renew"), through its affiliate Vic Place LLC, is redeveloping the Victoria Place building as part of the Downtown Painesville to Grand River Corridor Project (the "Project"). Simultaneously Renew is currently developing a former bank building less than a quarter mile away from the Project to provide student housing for Lake Erie College students ("Chase Bank"). Renew is considering including a 5,124 square foot restaurant with 1,343 sq. ft. of cooking space on the first floor of the Chase Bank building. In the event that the Project is able to move forward as a result of being awarded a TMUD tax credit certificate, the Project will have a direct catalytic effect on the Chase Bank Restaurant. The increase in residents and employees in Downtown Painesville will provide the customers, activity, energy, and vibrancy necessary to support adding the restaurant space to the first floor of the building and increase Renew's ability to secure a solid restaurant operator as a tenant for the space.

If you have any questions and/or concerns, please feel free to contact Shawn Neece, Email: shawn@renewptr.com PH: 440-901-2024

Sincerely,

Warren Vickers

MAROUS
DEVELOPMENT
GROUP

July 8, 2022

Ohio Development of Development
77 South High Street
Columbus, Ohio 43215

RE: Grand River Walk Project – Painesville, Ohio (the "GRW Project") in conjunction with the Downtown Painesville to Grand River Walk Corridor (the "TMUD Project") – TMUD Catalyzation: 8 North State Street

To Whom It May Concern:

As discussed in the accompanying Ohio Transformational Mixed-Use Development ("TMUD") application for the above referenced TMUD Project, Grand River Walk LLC, an affiliated entity of Marous Development Group, will acquire certain land currently owed by the City of Painesville and will develop the above referenced GRW Project. The GRW Project will consist of a new and vibrant, $26.7 million, mixed-use development consisting of 120 new market rate apartments, new restaurant and retail spaces, and a covered parking structure.

Should the TMUD Project be awarded TMUD tax credits, Grand River Walk LLC and/or its affiliates ("GRW LLC") are prepared to continue their investment in the Downtown Painesville area with the purchase of 8 North State Street, a building and parking lot immediately adjacent to the Project. Locally known as the "Key Bank Building", this office building is roughly 50% occupied and in major need of rehabilitation. This acquisition, which is currently under purchase agreement and will not move forward or close without a Round 2 TMUD award for the TMUD Project, would result in an estimated $8 million of investment in downtown Painesville through land acquisition, rehabilitation, and redevelopment expenditures by GRW LLC. Located in a Nationally Registered Historic Property ("NHRP") District and containing 51,000+/- rentable square feet, GRW LLC intends to pursue federal and Ohio historic tax credits for qualified rehabilitation expenditures to redevelop the property and reduce vacancy. The catalytic impact to 8 North State Street will not be possible, and the principals of Grand River Walk LLC will not move forward with acquisition and future investment, unless the Project first becomes viable through an awarded Round 2 TMUD tax credit certificate. The TMUD Project will serve as the initial catalyst for the advancement of Painesville's economic growth, whereby properties like 8 North State Street will benefit from the effects of Downtown Painesville + Grand River's impact to the immediate area, Painesville residents, employees, and businesses.

Should the Ohio Department of Development have any questions or needs, please contact John E. Spear by email at jspear@marous-dg.com.

Sincerely,

Marous Development Group LLC

and Grand River Walk LLC

Economic Impact Statement

Erieview Holdings, LLC is planning to undertake the rehabilitation and conversion of Erieview Tower, a high-rise office building located at "Main and Main", into a Class-A mixed-use development in the heart of Downtown Cleveland, Ohio.

The Project will feature, 227 Marriott-Branded Luxury Residential Apartments Branded by W Residences, a 210 Key Marriott-Branded Hotel Managed by W Hotels, serving as the first W Hotel brand in Ohio and outside of Chicago in the Midwest, retention of 300,000 square-foot Class-A office Space, future conversion of the Galleria into a lifestyle center and heated Indoor Parking Spaces (underground). Below is a synopsis of impacts to the Erieview Tower development.

Annual Impacts to the Surrounding Area

- $367 million in Annual Economic Output
- 1,468 Permanent Jobs
- $107 million in Annual Labor Income
- $56 million in State & Local Taxes collected over 5 Years: (after tax abatements)

One-time Construction Impacts to the Surrounding Area

- $85.2 million in Economic Output
- 818 Jobs
- $52 million in Labor Income
- $56 million in Economic Value Added
- $5.5 million in State and Local Taxes collected

The Project will incur Total Development Costs of approximately $93.7 million and as the table below illustrates, the projected "Tax Collections" which includes Sales Taxes, Lodging Taxes, Property Taxes, and Income Taxes will exceed 10% of Total Development Costs.

Tax Collections	Year 1	Year 2	Year 3	Year 4	Year 5	Total
Income Taxes	$4,900,452	$5,017,083	$5,136,489	$5,258,738	$5,383,896	**$25,696,658**
Lodging Taxes	$1,035,903	$1,133,645	$1,236,318	$1,273,408	$1,311,610	**$5,990,884**
Property Taxes	$1,892,577	$1,930,429	$1,969,037	$2,008,418	$2,048,586	**$9,849,047**
Sales Taxes	$1,452,710	$1,585,053	$1,677,027	$1,721,360	$1,766,879	**$8,203,030**
Total	$9,281,643	$9,666,209	$10,018,872	$10,261,924	$10,510,971	$49,739,619

In addition, the Project will enhance quality of life and catalyze additional spending on dining, entertainment and retail to the Surrounding Area. The table below illustrates total sales generated to the Surrounding Area during the five years immediately following construction.

Retail, Entertainment & Dining Sales	Year 1	Year 2	Year 3	Year 4	Year 5	Total
Retail Sales	[redacted]					$39,307,072
Entertainment Sales						$67,378,737
Dining Sales						$26,336,942
Totals	$25,367,953	$25,971,710	$26,589,837	$27,222,675	$27,870,575	$133,022,751

Introduction

Erieview Tower was purchased in August 2018 with plans to redevelop the building and convert twelve floors in the mid-tier of the tower for a W Residences and eight floors in the lower-tier for a W Hotels by Marriott. This will be the first luxury brand hotel in Downtown Cleveland in almost 30 years, since The Ritz-Carlton opened in Tower City and the first W Hotel brand in Ohio and outside of Chicago within the Midwestern United States.

On August 5, 2020, the Project was awarded $5.0 million in state historic tax credits, the largest award in the highly competitive statewide contest, by the Ohio Department of Development. The Sponsor secured an LOI with Marriott International for their W branded Hotels and Residences, which will include an entire floor dedicated to state-of-the-art amenities featuring a spa, 38th floor restaurant with unobstructed 360-degree views of Downtown Cleveland, rooftop bar, and a refreshed lobby entrance that will have a living room concept feel with a separate bar and cafe, and direct access to both the hotel and apartment units.

The office tower is the fourth tallest building in Cleveland, and the nineth tallest in the state of Ohio. Tenants above the seventh floor enjoy lake views from all sides of the building.

The Property is within walking distance to all downtown amenities and attractions including the Rock and Roll Hall of Fame, First Energy Stadium (Cleveland Browns), Rocket Mortgage FieldHouse (Cleveland Cavaliers), Progressive Field (Cleveland Indians), Great Lakes Science Center, and easily accessible off East 9th Street, the primary artery into Cleveland's financial district and major route connecting Interstates 90, 71, and 77.

In conjunction with this project, this document serves as an Economic Impact Analysis of Erieview Tower.

Impact Analysis Overview

An Economic Impact Analysis (EIA) analyzes the effect of an event in a defined geographic area. These geographies vary from a parcel, to a municipality, county, region, state or country. An event comes in many forms, typically engendered from industry changes in revenue, business profits, wages, jobs or capital investment, among others. In this analysis, IMPLAN software was used to map the multiplier effects of each event.

This analysis will include an examination of the economic impacts of the Project, in two major phases:

> ***Construction Phase*** - represents jobs, income and spending created as a result of the increased construction spending associated with the project, during the construction period of the project. This is a non-recurring, one-time impact. This phase also includes construction worker spending on goods and services during the construction period.
> ***Operational Phase*** – this phase generates an ongoing impact that creates economic activity each year of operations by the businesses at the project site. If the operators, business and organizations maintain the level of projected business operations, the Operational Phase experiences a recurring impact.

In modeling impacts, a series of economic activities result based on project assumptions from the various uses. An economic activity occurs when one or more events represent a related spending change within the Surrounding Area. Typically, these events include, but are not limited to, industry production

(business, construction or retail), consumption of goods and services and institutional spending. These events serve as inputs and produce economic impacts into four categories:

1. ***Output*** – representing the value of industry production. For the service and retail sectors, this represents sales or the value of goods sold.
2. ***Employment*** – representing the number of jobs created directly by the project and through direct industry spending.
3. ***Labor Income*** - all forms of employment income paid to employees, including Employee Compensation (wages and benefits) and Proprietor Income (payments received by self-employed individuals and unincorporated business owners).
4. ***Value Added*** - the difference between an industry's or an establishment's total output and the cost of its intermediate inputs. It is a measure of the contribution to GDP

Within each impact category, exists three types of effects, each effect is calculated as part of this study:

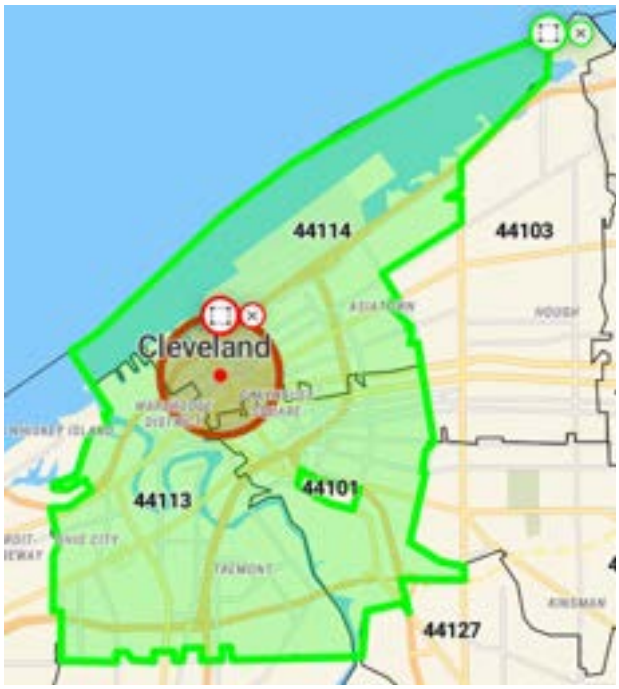
> ***Direct Effects*** the set of expenditures applied to an impact analysis. It represents a series (or single) of production changes or expenditures made by producers/consumers as a result of an activity. Applying these initial changes to the multipliers in the IMPLAN model will then display how the region will respond economically to these initial changes (in output, employment, labor income and value added).
>
> ***Indirect Effects*** represent the impact of local industries buying goods and services from other local industries. The cycle of spending works its way backward through the supply chain until all money leaks from the local economy, either through imports or by payments to value added. The impacts are calculated by applying Direct Effects to IMPLAN multipliers.
>
> ***Induced Effects*** represents the response by an economy to an initial change (direct effect) that occurs through re-spending of income received by a component of value added, recognizing that labor income (employee compensation and proprietor income components of value added) is not a leakage to the regional economy. This money is recirculated through the household spending patterns causing further local economic activity.

In estimating taxes, tax estimates are made for State and Local taxes, including income tax, lodging tax, property tax and sales tax during a) the construction period and b) the first five (5) years of full building operations generated to the Surrounding Area. Income taxes are based on wages paid to employees. Lodging taxes are based on room sales, however lodging taxes do not apply in circumstances where a guest has occupied a room for more than 30 days (a non-transient guest). Property taxes are derived from the assessed appraised value of the property resulting from new building construction, then distributed to the taxing districts illustrated below. The property includes a property tax abatement for residential uses during the first 15 years and as a result, estimated property taxes will not be collected on the residential portion of the development. Sales taxes are derived from taxable sales taking place with vendors within the Surrounding Area. It is worth noting that sales taxes on purchases made in Development building are calculated in a number of different ways: a) using IMPLAN tax estimates, which account for historical sales tax collections by use, b) estimated supplies purchases where data has been provided by the Developer and c) estimated taxable sales (revenues), in which a factor of 70% is applied to account for potential exemptions in events where intimate spending interactions are unknown, for example, this variable would account for carryout food orders, which are not sales taxable as opposed to dining in, which is sales taxable. Further, in instances of method b and c, an additional 50% factor is used to account for any sales or purchases caused by the Development, occurring outside of the Surrounding Area.

The Surrounding Area

The Project is located in the heart of Cleveland's central business district with an abundance of restaurants, attractions, and housing available in the near vicinity. With a revitalized downtown and increased population into the city's urban core, Downtown Cleveland has seen a wide variety of both public and private investments including hotels, condominium projects, apartments, retail, entertainment, cultural ventures, infrastructure, public spaces and much more. This has created a more desirable outlook for the Property's surrounding areas and a true work/life/play environment throughout Downtown.

Geographically, this study will address the impacts the Development's *Surrounding Area*. The Surrounding Area constitutes any zip code covered in whole or in part within a half-mile radius of the development site, which includes Zip Codes 44101, 44113 and 44114.



The Surrounding Area includes census tracts 39035107101, 39035111202, 39035103602, 39035108201, 39035104800, 39035980100, 39035107701, 39035104200, 39035107802, 39035108701, 39035108301, 39035110501, 39035104400, 39035103900, 39035103500, 39035103800, 39035109701, 39035109301, 39035104100, 39035103100, 39035103300, 39035108400, 39035104300[1].

The Surrounding Area is approximately 8.63 square miles in land area with a population of 34,527, including 15,693 households and 132,660 employees spanning 293 industries. Gross Domestic Product (GDP) of the area is $15.6 billion, with total Personal Income of $3.8 billion[2].

[1] *Source:* US Census; PolicyMap; Ice Miller Whiteboard
[2] *Source*: IMPLAN Regional Overview

From a demand perspective, of the $15.6 billion in GDP, $2.7 billion comes from household demand, $677 million from State & Local Government Demand, $304 million from Federal Government Demand, $1.3 billion from Capital and $11 billion from Net Exports. The top producing industries in terms of economic output are 1) Insurance Carriers ($2.7b), 2) Financial Services ($2.5b), 3) Legal Services ($1,8b), 4) Hospitals ($1.3b), 5) Headquartered Companies ($1,2b), and 6) Computer Programming Services ($1,01b)[3].

Approximately 50.8% of Households are considered Low-Income, making less than 60% of Area Median Income. Further, 43.2% of Households make less than $25,000 annually, 17% above the County Average and 22% above the State average and 1,805 people age 16 or older are unemployed. Additionally, residential vacancies (4,83%) and business vacancies (24.6%) are higher than the State average (4.53% and 17.75%, respectively)[4]. Per capita income for the Surrounding Area is $30,617.

Project Summary

The 40-story office tower, the fourth largest in Cleveland (529 feet) was built in 1964, renovated in 1987, and most recently upgraded the lobby in 2020. It features international style architecture and was the centerpiece of the Erieview urban renewal project initiated in the late 1960s. The Tower has been a staple of the Downtown Cleveland landscape for over half a decade and recently achieved historic status, listed as a historic building by the National Park Registry. There are lucrative incentives for the redevelopment of the Property including federal and state tax credits, and various public subsidies. The Tower consists of approximately 700,000 square feet of space and provides a vast array of luxury services and amenities including an indoor heated parking garage, banquet space, and a state-of-the-art conference center.

Within the tower is the The Galleria, a 130,000 square-foot glass enclosed, two-story open-air structure, was developed by the Richard E. Jacobs Group and built in 1987. It was one of the first major retail projects since the 1920s and sparked the downtown revitalization of the early '90s. The retailers offer an eclectic mix, including a large food court and Cleveland's Winking Lizard Tavern, which attracts the downtown working class and also has become a popular event space.

Erieview Holdings, LLC is planning to undertake the rehabilitation and conversion of the tower, a high-rise office building located at "Main and Main", into a Class-A mixed-use development in the heart of Downtown Cleveland, Ohio.

The Project will feature, 227 [redacted] Luxury Residential Apartments [redacted], a 210 Key [redacted] Hotel Managed by [redacted], retention of 300,000 square-foot Class-A office Space, future conversion of the Galleria into a lifestyle center and heated Indoor Parking Spaces (underground). Below is further detail related to the economic events associated within the proposed Development.

Residential Conversion – Construction plans reflect the conversion of twelve floors from the mid-rise office into 227 luxury residential apartments, starting on the 17th floor. The Property will offer a separate entrance for the residents, along with first class amenities including 24 hour doorman/concierge services, onsite building superintendent and top-of-the-line fitness center in addition to the YMCA located on the first floor of the Galleria, all for an additional charge on an a la carte basis. Each floor will be equipped with a trash room and chute to sub-cellar compaction room and designated recyclables. Residential units will have premium quality interior finishes including stainless steel appliances, in-unit stacked washer-dryers, hardwood floors, solid core wood doors, individually controlled heating and cooling systems, and 10-foot high ceilings with panoramic views of Lake Erie, Burke Lakefront Airport, and the downtown corridor. The various restaurants and tenants in the Tower and Galleria make this building one of the most equipped and versatile buildings in Downtown Cleveland. The apartments will have dedicated elevator corridors to help accommodate the flow of traffic between the W Hotels, W Residences, and office tenants. Estimated rent revenue over a five-year period is below:

2023	2024	2025	2026	2027
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

In addition, the residential units will be able to take advantage of the following amenities:

- ✓ HEATED, UNDERGROUND PARKING - Below the Galleria and Office Tower are 421 heated, indoor parking spaces, which provide secure and convenient access to the various components of the

project. The former Stouffer's kitchen, which is adjacent to the current parking garage, below the office tower, will be repurposed to make way for another 100+/- parking spaces as part of the residential conversion. There will be a total of 521 +/- parking spaces upon completion.

- ✓ GRAND BALLROOM & EVENT CENTER - As part of the hotel conversion, the second floor of the Galleria will be completely renovated for a 15,000 square-foot Grand Ballroom and Event Center. The space will feature a cocktail/reception area and three studio rooms that will have the ability to accommodate 500+ guests for events such as weddings, conferences, and various other events.
- ✓ STATE-OF-THE-ART CONFERENCE ROOM - The fourth floor of the office tower features a state-of-the-art conference room, available to reserve, that can accommodate groups of up to 75 attendees. This conference space will be renovated as part of the hotel conversion and will be available to hotel guests and residences.
- ✓ The YMCA of Greater Cleveland opened in the Galleria at Erieview in 2016 and features a three-lane lap pool, yoga studio, spinning studio, spa, and wellness center.
- ✓ Onsite food service is offered in the large food hall within the Galleria where anyone can enjoy the various food options available. This is currently going through a renovation with new food concepts coming soon.

From a rent perspective, weighted average gross rent is expected to be $1,684. Below is a summary of the unit mix:

Type	Count	% Mix	Avg. SF/Unit	Projected Rent (Mo.)
Efficiency	[redacted]	[redacted]	[redacted]	[redacted]

1BR/1BA + Den	[redacted]	[redacted]	[redacted]	[redacted]
2BR/2BA	[redacted]	[redacted]	[redacted]	[redacted]

Hotel - The Owners have a signed Letter of Intent with Marriott International to convert eight floors (inclusive of the amenity floor) in the low-rise of Erieview Tower into a [redacted], along with a restaurant on the 38th floor (where the former Top of the Town restaurant was located), lobby bar/lounge/cafe, and a destination rooftop bar, which will be the highest restaurant in the state. The ground floor of the office tower will welcome guests staying at the hotel with a bellman, valet service, and a 24-hour concierge ready to make their stay a memorable one. The second floor of the Galleria will house a 15,000 square-foot Grand Ballroom for large conferences and wedding receptions, and the fourth floor of the office tower will be the future home to the state-of-the-art fitness center and spa. The low-rise will have approximately 210 luxury guest rooms and suites. The rooftop bar, which will be a destination for many Clevelanders and guests of the hotel featuring unobstructed views of Lake Erie and Downtown Cleveland.

[redacted] is perfectly suited for the city of Cleveland, as it aligns well with the cities culture and personality, being recognized as the Rock and Roll capital of the world. Below is an overview of revenues associated with the hotel conversion.

	2023	2024	2025	2026	2027
Rooms	[redacted]				
Food & Beverage					
Rooftop Bar					
Lobby Lounge Bar					
Banquets and Catering					

The Hotel will have onsite parking in the underground heated garage with 24-hour valet service available. Hotel guests will get to enjoy all of the superior amenities including the fitness center, 15,000 square-foot Grand Ballroom (located on the second floor of the Galleria), spa, and 10,000 square feet of dedicated meeting space, driving additional foot traffic through the building. The restaurant on the 38th floor and rooftop bar will have 360 degree views of the city, perfect for a special happy hour drink or a late night dinner, overlooking Lake Erie, FirstEnergy Stadium, and all that Downtown Cleveland has to offer.

Office **-** Erieview Tower is home to a prestigious collection of office tenants. Occupants include law firms, established financial corporations, and innovative consultants. With abundant amenities, ideal access and close proximity to all that Downtown Cleveland has to offer, several of the property's largest tenants have remained in the building for over a decade. The heated parking garage below the building has been a major perk for tenants, allowing them to drive from the comfort of their home, directly into the parking garage and walk straight up to their office, without ever stepping foot outdoors.

After the redevelopment of the building, the office is expected to add 135,823 square feet of new office tenants, while being able to retain and preserve the existing 164,177 square feet of current tenants. But-for this project, these tenants would be at risk of relocating out of the Surrounding Area. Below is an estimation of jobs anticipated from new tenants and those from retained tenants:

	2023	2024	2025	2026	2027
New Office					
Employment	452	452	452	452	452
Compensation	$26,447,548	$27,077,000	$27,721,432	$28,381,202	$29,056,675
Existing Office					
Employment	548	548	548	548	548
Compensation	$50,087,847	$51,279,938	$52,500,400	$53,749,910	$55,029,158

Employment for both New and Existing office users was calculated using a square feet per job metric of 250 sf/job. Existing jobs were grouped into broad categories using a list of tenants provided by the Developer. These categories include Legal, Asset Management, Banking, Headquarters Operations and Consulting Services.

In determining potential new tenants, tenant types were selected based on unmet commodity demand in the Surrounding Area. An assumption was made that two large office tenants would occupy the remaining space, or as an alternative, office tenants within two industries clusters. The first is Insurance Agencies, Brokerages and Related Services. Currently there is $874 million in demand for these services in the Surrounding Area, with only 65.7% of Surrounding Area supply meeting that demand[6]. The second,

[5] Assumes a 3% growth rate provided by the Developer
[6] *Source:* IMPLAN Commodity Summary – Supply Demand Ratios by Commodity

being Financial Services, in which industry production continues to grow annually within the Surrounding Area[7].

Retail **-** The Galleria is currently occupied by ten tenants, from national banks to local restaurants, travel agents, and retail stores along with a 40,060 square foot YMCA of Greater Cleveland. This two-story enclosed shopping mall is currently going through a complete renovation of the existing food court with plans to open a new food hall concept in 2022. A well-established restaurateur signed a license agreement to operate 5 total food concepts, 3 permanent ones and 2 rotating from a group of well-established restaurants within the Cleveland area. Inca Tea, a privately held company which specializes in exclusive teas, signed a new lease and is currently under construction in the Galleria with plans to open in Summer of 2021.

Similarly to the Office, after the redevelopment of the building, retail is expected to add 62,774 square feet of new office tenants, while being able to retain and preserve the existing 70,888 square feet of current tenants. But-for this project, these tenants would continue to be impacted by negative factors associated with building vacancies and lack of capacity, with risk of closure. Below is an estimation of sales anticipated from new tenants and those from retained tenants:

	2023	2024	2025	2026	2027
New Retail					
Clothing & Clothing Accessories	$1,000,000	$1,023,800	$1,048,166	$1,073,113	$1,098,653
Health and Personal Care	$1,000,000	$1,023,800	$1,048,166	$1,073,113	$1,098,653
Sporting Apparel/Hobby/Music	$3,029,000	$3,101,090	$3,174,896	$3,250,459	$3,327,820
Existing Retail					
Gym	$1,300,000	$1,330,940	$1,362,616	$1,395,047	$1,428,249
Restaurant	$3,000,000	$3,071,400	$3,144,499	$3,219,338	$3,295,959
Marketing Agency	$1,733,000	$1,774,245	$1,816,472	$1,859,704	$1,903,965
Museum/Novelty	$1,000,000	$1,023,800	$1,048,166	$1,073,113	$1,098,653

In determining potential new tenants, tenant types were selected based on unmet commodity demand in the Surrounding Area. The following tenant groups were selected based on unmet demand for local commodities:

Commodity	Gross Demand ($)	Percent Met by Surrounding Area Supply	Unmet Demand ($)
Clothing and Clothing Accessory Stores	$24.5 million	66.7%	$8.1 million
Health and Personal Care Stores	$20.8 million	54.9%	$9.4 million
Sporting Apparel/Hobby/Music Stores	$10.2 million	34.6%	$6.7 million

***Note on Payroll & Sales Growth –** in estimating annual payroll and sales growth for tenants, a five-year average of the Consumer Price Index for All Urban Consumers, Midwest United States, was used. In month-ending August, the figure is **2.38%.**

Source: IMPLAN; Ice Miller Whiteboard

The table to the right illustrates Dining, Entertainment and Retail Sales by Industry Category. The Entertainment industry is the largest beneficiary of the three, particularly in Events, likely associated with the new hotel space and increased activity from the Development to Downtown Cleveland, "Other Food and Drinking Places" which includes bars and pubs, and Commercial Sports and Sports Promotions, which includes professional sports teams. With the presence of three professional sports teams in the City, one could estimate the potential of an additional 3,000 – 7,000 in ticket sales caused by the Development using average ticket price ranges of $31 (baseball) to $81 (professional football).

Category	Sales Impact
Dining	$7,496,011
509 - Full-service restaurants	$7,460,945
510 - Limited-service restaurants	$35,066

Grand Total	$25,367,953

Impacts to Low-Income Residents and Unemployed Persons

As mentioned above, the Surrounding Area includes some economic challenges, with high concentrations of low-income residents, unemployed people and per-capita income of $30,716.

The project will assist in combating these issues by providing employment opportunities in professions with various skills, education and qualification requirements that can both increase incomes and area employment. Approximately 42.2% of jobs caused by project operations and 57.3% of jobs caused by construction require high school degrees or less than a high school degree. Further, approximately 17.6% of jobs caused by operations and 23.5% of jobs caused by construction require an associates degree or post-secondary (post-high school) certificate.

Lastly, average employee compensation from all jobs caused by project operations average $65,900 per job, exceeding the Surrounding Area's per capita income by 115%.

ECONOMIC IMPACT METHODOLOGY

Economic Impact Analysis (EIA) refers to any number of processes that trace how changes in spending, such as business closures, new industrial or infrastructural developments, natural disasters, and conventions, move through an economy. An impact study measures the cumulative effects of that spending on a defined geographic region. Portions of this analysis were completed using the IMPLAN EIA model. IMPLAN Data used for this study is based largely on spending interactions from calendar year 2019. Other data sources include:

1. U.S. Bureau of Labor Statistics (BLS) Covered Employment and Wages (CEW) program
2. U.S. Bureau of Labor Statistics Consumer Expenditure Survey (Urban Populations over 1 million)
3. U.S. Bureau of Economic Analysis (BEA) Regional Economic Information System (REA) program
4. U.S. Bureau of Economic Analysis Benchmark I/O Accounts of the U.S
5. JobsOhio Info USA-GIS Planning integration. October, 2021 & Applied Geographic Solutions
6. BEA Output estimates
7. BLS Consumer Expenditure Survey
8. U.S. Census Bureau County Business Patterns (CBP) program
9. U.S. Census Bureau Decennial Census and Population Surveys
10. U.S. Census Bureau Economic Censuses and Surveys
11. U.S. Department of Agriculture Census
12. PolicyMap Software Subscription
13. American Community Survey – 2019
14. U.S. Census Bureau
15. Valassis Lists

GLOSSARY – Key Terms

Employee and Employment Multipliers. An employee is a person who enters an agreement, which may be formal or informal, with an enterprise to work for the enterprise in return for remuneration in cash or in kind (full-time and part-time). Multipliers are used to estimate the total number of jobs (both full-time and part-time) throughout the economy that are needed, directly and indirectly, to deliver $1 million of final demand for a specific commodity.

Direct effects - the set of expenditures applied to the predictive model (i.e., I/O multipliers) for impact analysis. It is a series (or single) of production changes or expenditures made by producers/consumers as a result of an activity or policy. These initial changes are determined by an analyst to be a result of this activity or policy. Applying these initial changes to the multipliers in an IMPLAN model will then display how the region will respond, economically to these initial changes.

Indirect effects - the impact of local industries buying goods and services from other local industries. The cycle of spending works its way backward through the supply chain until all money leaks from the local economy, either through imports or by payments to value added. The impacts are calculated by applying Direct Effects to the Type I Multipliers.

Labor Income - all forms of employment income, including Employee Compensation (wages and benefits) and Proprietor Income.

Output - output represents the value of industry production. In IMPLAN these are annual production estimates for the year of the data set and are in producer prices. For manufacturers this would be sales plus/minus change in inventory. For service sectors production = sales. For Retail and wholesale trade, output = gross margin and not gross sales.

Value added - the difference between an industry's or an establishment's total output and the cost of its intermediate inputs. It equals gross output (sales or receipts and other operating income, plus inventory change) minus intermediate inputs (consumption of goods and services purchased from other industries or imported). Value added consists of compensation of employees, taxes on production and imports less subsidies (formerly indirect business taxes and nontax payments), and gross operating surplus (formerly other value added). (BEA) Gross value added is the value of output less the value of intermediate consumption; it is a measure of the contribution to GDP made by an individual producer, industry or sector; gross value added is the source from which the primary incomes of the SNA are generated and is therefore carried forward into the primary distribution of income account. (SNA)

Direct Taxes – direct taxes are primarily calculated based on project information provided by the Developer and rates prescribed by taxing units. For property taxes, hard construction costs are used as the estimated market value. For sales taxes, only Ohio taxable sales such as on-premises dining, hotel room stays, resident spending on household items, certain professional services and business operational supplies purchases are subject to sales tax. An exemption list and guidance materials from the Ohio Department of Taxation was used to determine taxable sales interactions.

Indirect Taxes - the "State/Local" tax table estimates taxes paid to all state and local units of government in the study area. In IMPLAN Online, the tables for county government, sub-county general government, sub-county special government, and state government together will sum the values reported in "State/Local" table. Given IMPLAN maps all indirect interactions, tax calculations within this category are made using IMPLAN.

- County - estimates revenue collected by county governments.
- Sub County General - estimates revenue collected by city, township, and village, etc., governments.
- Sub County Special - estimates revenue collected by units of government such as public school districts and fire districts.
- State - estimates revenue collected by state governments.

This methodology was used in estimating indirect and induced taxes only, as State and Local tax rates were tied to known direct spending in order to calculate estimated direct tax revenues.

1. What is an Economic Impact Analysis?

An Economic Impact Analysis (EIA) analyzes the effect of an event in a defined geographic area. These geographies may be a parcel, a municipality, county, region, state or country. For purposes of this study, the geography is referred to as the "Surrounding Area." Events occurring within the Surrounding Area come in many forms, typically engendered from industry changes in revenue, business profits, wages, jobs or capital investment, among others. In this analysis, IMPLAN software was used to map the multiplier effects of each event. These events serve as **inputs** and produce economic impacts **(outputs)** into four categories:

1. ***Output*** – representing the value of industry production. For the service and retail sectors, this represents sales or the value of goods sold.
2. ***Employment*** – representing the number of jobs created directly by the project and through direct industry spending.
3. ***Labor Income*** - all forms of employment income paid to employees, including Employee Compensation (wages and benefits) and Proprietor Income (payments received by self-employed individuals and unincorporated business owners).
4. ***Value Added*** - the difference between an industry's or an establishment's total output and the cost of its intermediate inputs. It is a measure of the contribution to GDP.

For purposes of this study, within each impact category, exists two types of effects:

Direct Effects the set of expenditures applied to an impact analysis. It represents a series (or single) of production changes or expenditures made by producers/consumers as a result of an activity. Applying these initial changes to the multipliers in the IMPLAN model will then display how the region will respond economically to these initial changes (in output, employment, labor income and value added).

Indirect Effects represent the impact of local industries buying goods and services from other local industries. A local industry may include businesses, non-profits, residents of a residential development, institutions and governments. The cycle of spending works its way backward through the supply chain until all money leaks from the local economy, either through imports or by payments to value added. The impacts are calculated by applying Direct Effects to IMPLAN multipliers.

2. The Development/Project Overview

Hall of Fame Village powered by Johnson Controls is a 100-acre tourism development located in Canton, Ohio on real property adjacent to (and surrounding) the Pro Football Hall of Fame Museum. The Development currently in progress, includes a Hall of Fame Indoor Waterpark, The Eleven – A Hilton Tapestry Hotel, the Constellation Center for Excellence, the Center for Performance, a Retail Promenade known as the Fan Engagement Zone and the Play-Action Plaza.

This document serves as an Economic Impact Study for the Development currently in progress as described above, ("The Development") and will further analyze the Economic Impacts of the Hilton Tapestry Hotel and the Indoor Waterpark ("The Project").

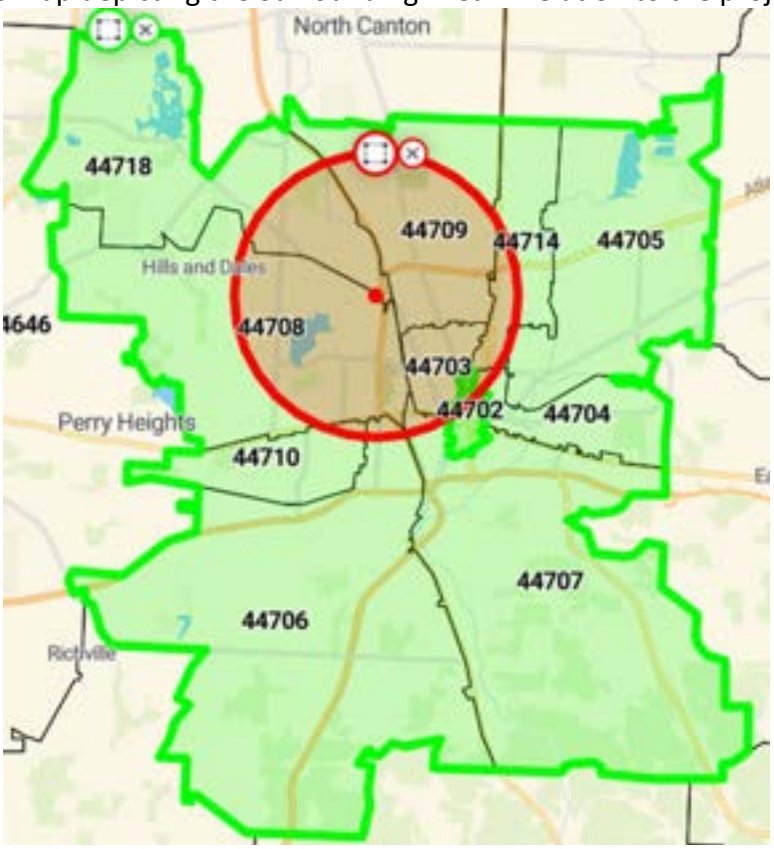
The information contained in this study is provided solely for purposes of a request/application for Transformational Mixed-Use Tax Credits and any subsequent monitoring of those credits, if awarded, and cannot be used or relied upon by any other person.

3. Surrounding Area

The Property is located at the 100 acres surrounding 2626 Fulton Drive NW in Canton Ohio. This study will address the impacts the Development's Surrounding Area. The Surrounding Area constitutes any zip code covered in whole or in part within a two-mile radius of the development site, which includes Zip Codes 44704, 44703, 44705, 44708, 44714, 44709, 44706, 44710, 44707 and 44718.

Additionally, the Surrounding area encompasses the following census tracts: 39151713000, 39151714901, 39151714802, 39151713201, 39151713100, 39151712400, 39151714400, 39151713300, 39151711312, 39151713202, 39151712300, 39151711402, 39151712202, 39151711322, 39151711321, 39151711800, 39151712201, 39151711501, 39151711900, 39151711600, 39151702300, 39151713402, 39151701800, 39151713501, 39151713401, 39151702500, 39151711502, 39151700700, 39151700200, 39151711700, 39151702100, 39151701500, 39151700400, 39151700800, 39151701200, 39151701000, 39151701300, 39151700500, 39151700300, 39151701100, 39151700600, 39151700100 and 39151701700[1].

Below is a zip code map depicting the Surrounding Area in relation to the project:



The Surrounding Area is 61.33 square miles in land area and includes 109,680 residents and 47,126 households. Approximately 41% of households (19,248) are considered Low-income Households, in which household income represents 60% of Area Median Income, and 5,028 people are unemployed[2]. From an economics perspective, the Surrounding Area's Gross Domestic Product is $7.5 billion, its total employment is 82,598, spanning 302 industries[3].

INPUTS AND DESCRIPTION

Indoor Water Park (Construction Cost: $93.7 million)
A 147,000-square-foot football-themed waterpark with waterslide tower, lazy river, wave pool, zero entry fun zone, swim up bar and outdoor entertainment area. The park is expected to be technology-driven, football-themed experiential attraction with 85,000 square feet of indoor waterpark wet space.

[redacted] **Hotel (Construction Cost: $57.5 million)**
A seven-story, 154,000-square-foot premium [redacted] Hotel with 180 guestrooms, including 10 suites. Featuring a 5,000-square-foot ballroom plus 2,100 square feet of meeting rooms, indoor pool and fitness center, as well as a full-service 106-seat restaurant with indoor and outdoor seating. The hotel will be branded as an upscale, football-themed hotel.

INPUTS AND DESCRIPTION

Hall of Fame Village Sports Complex (Construction Cost: [redacted])
The Hall of Fame Village Sports Complex offers two state of the art turf fields and a championship grass field. These 3 fields are the result of Phase 1 construction, part of an 8-field project. All three fields can accommodate a multitude of sports including football, lacrosse, and soccer. The next Phase of construction includes additional enhancements to the complex.

Center for Performance (Construction Cost: [redacted])
An entertainment and performance area containing 85,000 square feet of exhibition halls and athletic performance space. This facility will be home to the NFL Alumni Academy and will offer world-class offices, training facilities & practice fields.

Constellation Center for Excellence (Construction Cost: [redacted])
Located at the west end zone of Tom Benson Hall of Fame Stadium, the 75,000-square-foot retail, research and office building will serve as the anchor for a one-of-a kind media mesh video wall attached to the side of the structure.

Retail Promenade - Fan Engagement Zone (Construction Cost: [redacted])
Walkable retail complex for guests with rooftop views of campus and the Tom Benson Hall of Fame Stadium., includes 82,000 square feet of unique restaurant & retail offering, includes sports entertainment & themed, experiential offerings

Play-Action Plaza
A 3.5-acre green space located adjacent to the Retail Promenade/Fan Engagement Zone. The space will be football-themed and will include recreation, events and informal gatherings

NFL Alumni Academy
The NFL Alumni Academy is an unprecedented in-season training program developing "NFL Ready" players training and preparing on the campus of the Pro Football Hall-of-Fame Village in Canton, Ohio. The Academy will train the top free agent football players in preparation to sign an in-season contract with NFL teams looking to replace 500+ active roster players lost during each season due to injury.

The Academy combines world class sports science advances in athlete performance, data analytics and digital analysis together with old school technique and improving Football IQ. This player development program is be led by former NFL coaches and players teaching, coaching and mentoring future NFL players with an iconic brand at the NFL Alumni Academy.

[4]

[4] Source Data: IMPLAN Output Summary

Economic Impacts – *Taxes by Detailed Tax Type*

Below is a summary of tax collection methodology utilized in estimating taxes[5]:

Sales Taxes – sales taxes are calculated using sales and purchases of building tenants, purchases from residents within the Surrounding Area and hotel room stays. In order to account for exemptions, the exemption list provided in the Ohio Department of Taxation Annual Report was utilized and an additional 25% reduction was applied to sales to ensure exempted activities are not counted. Indirect Sales taxes were calculated based off of expenditures and estimates of economic output provided by IMPLAN. Sales taxes are collected by the County, State and Transit Authority from the following rates:

State of Ohio	5.75%
County	0.50%
Transit	0.25%

Income Taxes – income taxes are calculate as a percentage of employee compensation of direct employment within the project and indirect employment caused by the project. Income taxes are collected by the State of Ohio (Ohio Withholding Tax) and the City (Municipal Income Tax). Ohio Withholding Taxers utilize a bracketed rate structure based on salary. As such, a blended wage rate was utilized for all jobs created for the project, resulting in a 2.7% withholding tax rate. Below are the income tax rates applicable to the Project.

State of Ohio	2.69%
City	2.50%

Lodging Taxes – lodging taxes are collected from room sales of guests staying less than 30 days for each stay. The basis for sales from indirect lodging taxes derives from an analysis of Tourism Sales Tax Collections related to the Hotel and Accommodations industry from the Ohio Department of Taxation Data series[6]. Dividing total Ohio sales taxes by those collected by the Hotel and Accommodations industry, the resulting figure is $0.02 cents for every sales-taxable dollar spent in Ohio is dedicated to Hotel and Accommodations and as such, it is assumed $0.02 for every sales tax dollar generated in the project can provide a basis for estimated Surrounding Area lodging taxes for HOFV, regarded as a tourism asset. Lodging taxes are collected by both the City and County utilizing the following rates:

County	6%
City	3%

Property Taxes – property taxes are collected by various unit of local government through the County Auditor's Website based off of a 35% assessed rate of the project's market value. The Indirect taxes are estimated by IMPLAN based on project operations.

[5] Tax Rate Sources: Property Tax – Stark County Auditor; Income Tax & Sales Tax: Ohio Department of Taxation "The Finder" address search function; Lodging Tax – City of Canton and Stark County Finance Department.
[6] Ohio Department of Taxation – Tax Data Series – s6q1fy22 – Sales & Use Collections for Industries Related to Travel and Tourism & s2q1fy22 State and Permissive Sales and Use Tax Collections for Major Industrial Classifications

Effective Rate	5.46%
County Dist.	13.64%
School District	74.45%
Township	0.12%
City	8.19%
Special District	3.56%

Below is a summary of tax collections by amount and tax type. The top row of each category represents the taxable base of the specific tax.

Impacts to Low-Income Residents and Unemployed Persons

As mentioned above, approximately 41% of households (19,248) are considered Low-income Households, in which household income represents 60% of Area Median Income, and 5,028 people are unemployed.

The project will assist in combating these issues by providing employment opportunities directly and in the Surrounding Area in professions with various skills, education and qualification requirements that can both increase incomes and area employment. Below is a synopsis of new job availability caused by the project. In addition to Headquarters, Office and specialized higher educational jobs, approximately

59% of jobs created by the Project would be available to those with an education level of a high school degree or lower[7].

About IceMiller WHITEBOARD

Ice Miller Whiteboard LLC is a wholly-owned subsidiary of the Ice Miller LLP Law Firm. Located in Columbus, the Ice Miller Whiteboard provides growth and development strategies to corporations, organizations and state and local governments through operating professional groups that focus in 1) Government relations, lobbying and public policy consultation, 2) Economic development, including, fiscal and economic impact analysis, planning, site selection and incentives negotiation, structuring and compliance, 3) Telecommunications, broadband and network solutions and 4) Public-Private Partnerships (P3s).

Ice Miller Whiteboard is designed to deliver complete, tailored solutions from within one high-level, strategic organization. The group brings a distinct perspective to the many industries it serves. Ice Miller Whiteboard professionals understand the intricacies of economic growth and development.

Qualifications of Personnel

Chris Magill has over 15 years of economic development experience and 12 years of experience in developing economic and tax revenue impact studies and calculation tools for governments and businesses. During Chris' tenure at the Ohio Department of Development, he authored a series of tax revenue calculation tools for the Job Creation and Job Retention Tax Credit programs. In 2011, Chris co-created the Ohio Department of Development's original ROI Calculator that estimates tax revenue returns for corporate projects to assist in making decisions on incentives and public investment. Chris has a Master's in Business Administration from Ohio University, and carries a number of economic certifications including certifications in economic measurement, economics of strategy and decision making and applications of statistics and data analytics. At Ice Miller Whiteboard, Chris advises clients in communicating project economics to public entities in return for public investment in an effort to attract new business, retain and expand existing business and create new companies through entrepreneurship.

- Bachelors of Science, Bowling Green State University
- Masters in Business Administration, Ohio University
- Certificate in Economic Measurement - National Association for Business Economics
- Certificate in Economics of Strategy and Managerial Decision Making - National Association for Business Economics
- Certificate in Business Applications of Statistics and Data Analytics - National Association for Business Economics
- Trained in IMPLAN Software Economic Modeling Course Instructor - Ohio Economic Development Institute Finance Course - Public Incentives Return on Investment

Selected Work Experience:

- ✓ Creating an economic impact, fiscal impact and tax revenue calculation tool for the City of Gahanna, Ohio.
- ✓ Creating an economic impact tax revenue calculation tool for the City of Mason, Ohio.
- ✓ Authored economic impact studies for the following projects:
    - Old Montgomery County Fairgrounds Redevelopment (Dayton, Ohio)
    - Arts N' Stark (Canton, Ohio)
    - JPMorgan Chase & Otterbein University Fintech R&D Lab (Westerville, Ohio)
    - Merchant Building (formerly North Market Tower) (Columbus, Ohio)
    - Whitehall Development Blueprint Site Scenarios (Whitehall, Ohio)
    - Economic Impacts of Venture Capital to Ohio (Drive Capital)
    - Mt. Carmel Redevelopment (Columbus, Ohio)
    - Erieview Tower (Cleveland, Ohio)
    - Hall of Fame Village Phase 2 (Canton, Ohio)
    - Renkert Building Redevelopment (Canton, Ohio)
    - High North Worthington Mall Redevelopment (Worthington, Ohio)
    - CoverMyMeds Campus (Columbus, Ohio)
    - Grove City Southwestern Area Plan Overpass Scenarios (Grove City, Ohio)
    - Center Ice Reynoldsburg Mixed Use Arena Development (Reynoldsburg, Ohio)
    - Economic & Health Impacts of Free Meal Delivery Services (Columbus, Ohio)
    - Goodwill (Indianapolis, Indiana)
    - Economic Impacts of thee (3) confidential, multi-state site selection manufacturing project
    - Economic Impacts of solar investment of a fortune 500 company
    - Economic Impacts of Transit Corridor Investment (Central Ohio)

ADDENDUM #1 – CONSTRUCTION IMPACTS

METHODOLOGY

The value entered in Industry Output for construction represents full cost of the structure as provided by the Developer, and only the structure. Construction cost data was provided by the Developer in all circumstances (each building). This includes hard costs and soft costs. IMPLAN then calculates estimated employment and labor income needed to support such costs, classifying employees, hours worked and compensation down to the individual occupational code.

Because Employment, by definition, is based on where the job is located, not where an individual resides, Employment includes estimates of the full value full-time, part-time and temporary Employment on the job site during the year. Additional considerations of costs attributed to construction are considered below. Employees are converted to Full-time equivalent employees (FTEs) by dividing the estimated number of hours of compensation for the job, as calculated by IMPLAN, by 2,080.

PROJECT, DEVELOPMENT AND SURROUNDING AREA

Calculations for the Project and Development represent only Direct construction impacts and inputs. Indirect construction impacts are included in the Surrounding Area section, and represent impacts that occur as a result of construction employees or items/supplies used in the construction process only. Induced impacts are not included in this addendum.

The Surrounding Area encompasses 10 zip codes: 44704, 44703, 44705, 44708, 44714, 44709, 44706, 44710, 44707 and 44718.

MEMORANDUM

To: **Ohio Department of Development**

From: MCA Center, LLC and Traction Partners, LLC
c/o The Model Group, LLC and Parkes Development Group, LLC

Re: **Economic Impact Statement**

Date: June 30, 2022

Please find attached the third-party report conducted by the University of Cincinnati Economics Center for Research and Consulting showing that the Project's anticipated increase in tax collections during the completion period exceeds 10% of the estimated development costs of the Project. 10% of the estimated development costs for the Project is approximately $11,713,348.

Tax collections are anticipated to exceed $51MM See *Table 29: Total Fiscal Impact (page 27 of report).*

Executive Summary

Model Group and Parkes Development Group intend to invest $123.8 million to redevelop the Mercantile Library and Traction Buildings in downtown Cincinnati located at 414 and 432 Walnut Street, respectively.[1] The Mercantile Library/Traction Building Project will include 172 apartments, a 151-room hotel, 64,488 square feet of office space, 28,538 square feet of restaurant space, 15,050 square feet of library space, 14,600 square feet of event space, and 10,917 square feet of retail space. Construction is anticipated to begin in 2023 with the opening of the Mercantile Library/Traction Building Project expected in mid-2024. This proposed Project will drive substantial economic activity for the Surrounding Area during the five years after construction is complete.[2]

This report estimates the Project, Surrounding Area, catalyzed project, and total impacts generated by the Mercantile Library/Traction Building Project on the Surrounding Area. The economic impact on jobs, earnings, and economic activity as well as the fiscal impact on tax revenues for state and local jurisdictions are included. Economic impacts are separated into operations impacts, which represent the management of the Project site after construction is complete and operations commence, and the tenant impacts. Operations impacts represent the labor required to operate the Mercantile Library/Traction Building Project as well as the associated impacts on earnings. Tenant impacts represent the labor required by anticipated tenants of the Mercantile Library/Traction Building Project and the associated impacts on earnings and economic activity. All dollars reported in this analysis reflect nominal dollars unless otherwise stated.

Project Impacts

- Operations of the completed Mercantile Library/Traction Building Project will directly support a total of 45 jobs with earnings of $3.7 million during the first five years of operation. The annual earnings of operations jobs average $83,459, which equates to an average hourly wage of $40.12.
- During the first five years of operation, the completed Mercantile Library/Traction Building Project will directly generate $162,067 in earnings tax revenue for the State of Ohio and the City of Cincinnati.
- The tenant businesses of the Mercantile Library/Traction Building Project will directly generate $759.7 million in economic activity at the Project site during the first five years of operation. A total of 3,485 jobs with earnings of $267.1 million will be directly supported by tenant businesses of the Mercantile Library/Traction Building Project. Tenant jobs will have average annual earnings of $76,629, which equates to an average hourly wage of $36.84.
    - The direct economic activity generated by tenant businesses over the first five years of operation comprises $62.0 million in hotel sales, $58.1 million in retail sales, $154.1 million in restaurant sales, $471.8 million in office sales, $10.8 million in library sales, and $3.0 million in event space sales.

[1] Reported in 2022 dollars.
[2] The Surrounding Area for a development located within ten miles of a major city, determined by starting from the corporate boundary of the major city and extending out ten miles from that boundary, is defined as the area encompassed within a perimeter starting from the transformational mixed-use development boundary and extending one-half mile out from that boundary. For the Mercantile Library/Traction Building Project, the Surrounding Area is defined as zip code 45202.

- During the first five years of operation, the tenant businesses of the Mercantile Library/Traction Building Project will directly generate fiscal benefits totaling $42.2 million for state and local jurisdictions.
    - The State of Ohio will receive $7.2 million in earnings tax revenues and $15.8 million in sales tax revenues.
    - Hamilton County will receive $4.0 million in lodging tax revenues and $5.6 million in sales tax revenues.
    - The City of Cincinnati will receive $4.8 million in earnings tax revenues and $922,215 in voluntary tax incentive payments.
    - Payments in lieu of taxes (PILOT payments) totaling $3.9 million will be made to Cincinnati Public Schools.

Surrounding Area Impacts

- In addition to the direct impacts, the operations and tenant businesses of the completed Mercantile Library/Traction Building Project will generate additional indirect impacts within the Surrounding Area as a result of the inter-industry linkages. In total, the direct economic activity generated by operations and tenant business will result in an additional $148.3 million in indirect economic activity in the Surrounding Area during the first five years of operation. The completed Mercantile Library/Traction Building Project will indirectly support a total of 610 jobs with $54.0 million in earnings during the first five years of operation. The annual earnings of indirect jobs average $88,665, which equates to an average hourly wage of $42.63.
- During the first five years of operation, the Mercantile Library/Traction Building Project will indirectly generate fiscal benefits totaling $3.8 million through earnings and property tax revenue.
    - During the first five years of operation, the indirect jobs supported by the completed Mercantile Library/Traction Building Project will generate $2.4 million in earnings tax revenue for the State of Ohio and the City of Cincinnati.
    - Upon its completion, the Mercantile Library/Traction Building Project will increase residential property values in the Surrounding Area resulting in an additional $1.5 million in property tax revenue during the first five years of the Project's operation. Of the total increase in property tax revenue, Hamilton County will receive $332,090, the City of Cincinnati will receive $153,099, and Cincinnati Public Schools will receive $972,381.

Catalyzed Project Impacts

- The Mercantile Library/Traction Building Project will directly cause or accelerate four additional projects in the Surrounding Area during the completion period.
    - The 7th Street Redevelopment Project entails the redevelopment of three historical buildings on 7th Street in downtown Cincinnati. The 7th Street Redevelopment Project will comprise 113 residential units and 12,850 square feet of commercial space. This Project is anticipated to start construction in mid-2023 and take approximately 18 to 24 months to complete. The total development costs associated with the redevelopment of the three historical buildings on 7th Street are approximately $34.2 million.[3]

[3] Reported in 2022 dollars.

  - The City Club Phase II Project involves the redevelopment of the former PNC Bank Tower in downtown Cincinnati. The City Club Phase II Project will comprise 250 residential 113 units and 30,000 square feet of office space. This Project is anticipated to start construction late 2023 and take approximately 18 to 24 months to complete. The total development costs associated with the redevelopment of the former PNC Bank Tower are approximately $75.0 million.[4]
  - The redevelopment of the Terrace Plaza Hotel downtown Cincinnati is a project that has been accelerated by the Mercantile Library/Traction Building Project. The Terrace Plaza Hotel Redevelopment Project will comprise the converting of the hotel building into a yet-to-be determined number of residential units and retail/restaurant space with interior structured parking. This Project is anticipated to start construction by late 2023 and take approximately 18 to 24 months to complete. The total development costs associated with this redevelopment project are approximately $50.0 million.[5]
  - Redeveloping the former Macy's Office Building in downtown Cincinnati is a project that has been accelerated by the Mercantile Library/Traction Building Project. The Macy's Office Building Redevelopment Project will comprise converting the former office space into 338 residential units with a parking garage. This Project is anticipated to start construction in mid-2023 and take approximately 18 to 24 months to complete. The total development costs associated with this redevelopment project are approximately $73.0 million.[6]

- The four projects directly caused or accelerated by the Mercantile Library/Traction Building Project will generate a total of $218.9 million in economic activity during the completion period, of which $182.1 million represents the direct economic activity. A total of 765 jobs with earnings of $82.2 million will be directly and indirectly supported during the completion period by the catalyzed projects of the Mercantile Library/Traction Building Project.

Total Impacts

- During the first five years of operation, the Mercantile Library/Traction Building Project will generate $1.1 billion in economic activity. The sales of tenant business will directly generate $941.8 million in economic activity, while the subsequent spending will indirectly generate $185.2 million in economic activity. The Mercantile Library/Traction Building Project will directly and indirectly support a total of 4,905 jobs with earnings of $407.0 million.
- During the first five years of operation, the Mercantile Library/Traction Building Project will generate fiscal benefits totaling $51.9 million for state and local jurisdictions through the Project, Surrounding Area, and catalyzed project impacts.
  - Earnings tax revenues of $11.1 million will accrue to the State of Ohio and $7.3 million will accrue to the City of Cincinnati. A total of $18.4 in earnings tax revenue will be generated.
  - Lodging tax revenues of $4.0 million will accrue to Hamilton County.
  - Of the $1.5 million in additional property tax revenue generated, Hamilton County will receive $332,090, the City of Cincinnati will receive $153,099, and Cincinnati Public Schools will receive $972,381.

[4] Reported in 2022 dollars.
[5] Reported in 2022 dollars.
[6] Reported in 2022 dollars.

- The State of Ohio and Hamilton County will receive $17.1 million and $6.1 million in sales tax revenue, respectively. A total of $23.1 million sales tax revenue will be generated.
- PILOT payments totaling $3.9 million will be made to Cincinnati Public School District.
- The City of Cincinnati will also receive $922,215 in voluntary tax incentive payments.

Introduction

The Mercantile Library/Traction Building Project is a proposed mixed-use development in the City of Cincinnati, Hamilton County. The proposed redevelopment of the Mercantile Library and Traction Buildings at 414 and 432 Walnut Street will drive substantial economic activity in the Surrounding Area.[7] The Mercantile Library/Traction Building Project is anticipated to start construction in 2023 and open in mid-2024. Model Group and Parkes Development Group plan to invest approximately $123.8 million to redevelop the Mercantile Library and Traction Buildings.[8] As shown in Table 1, the Mercantile Library/Traction Building Project will include 172 apartments, a 151-room hotel, 64,488 square feet of office space, 28,538 square feet of restaurant space, 15,050 square feet of library space, 14,600 square feet of event space, and 10,917 square feet of retail space.

Table 1: Use Breakdown of the Proposed Mercantile Library/Traction Building Project

Type of Mixed-Use	Dimensions/Quantity
Multifamily Residential	96,619 square feet (172 units)
Hotel	113,969 square feet (151 rooms)
Office	64,488 square feet
Restaurants	28,538 square feet
Library	15,050 square feet
Event Space	14,600 square feet
Retail	10,917 square feet

Source: Model Group and Parkes Development Group.

This report estimates the Project, Surrounding Area, catalyzed project, and total impacts generated by the Mercantile Library/Traction Building Project on the Surrounding Area.[9] The economic impact on jobs, earnings, and economic activity as well as the fiscal impact on tax revenues for state and local jurisdictions are detailed for each impact category in the following sections. Table 2 provides a guide to the tables associated with each impact category described in the Ohio Department of Development's Transformational Mixed-Use Development (TMUD) Program Economic Impact Statement Framework, released May 2022 and updated June 10, 2022. All dollars reported in this analysis reflect nominal dollars unless otherwise stated. Long-run inflation estimates for 2022 through 2031 were obtained from the National Economic Estimating Conference.[10]

Table 2: TMUD Economic Impact Statement Table Guide

Impact Category	Associated Tables
Project Impacts	Table 3 - Table 11, Table 31 - Table 36
Surrounding Area Impacts	Table 12 - Table 19
Catalyzed Project Impacts	Table 20 - Table 27
Total Impacts	Table 28 - Table 30, Table 37

[7] The Surrounding Area for a development located within ten miles of a major city, determined by starting from the corporate boundary of the major city and extending out ten miles from that boundary, is defined as the area encompassed within a perimeter starting from the transformational mixed-use development boundary and extending one-half mile out from that boundary. For the Mercantile Library/Traction Building Project, the Surrounding Area is defined as zip code 45202.
[8] Reported in 2022 dollars.
[9] Model Group and Parkes Development Group provided the list of projects directly caused or catalyzed by the Mercantile Library/Traction Building Project and the associated project details.
[10] (National Economic Estimating Conference 2021)

Methodology

Economic Impact

This economic impact analysis measures the amount of economic transactions expected to result from the operations of the Mercantile Library/Traction Building Project. The economic impact analysis includes the impacts of operations resulting from the management of the Project site after construction is complete and operations commence as well as the impacts of the tenant businesses of the Mercantile Library/Traction Building Project.

Economic impact figures represent the effects that a given mixed-use development and its associated economic activities have upon a surrounding community. The economic impacts are reported in terms of jobs, earnings, and economic actvitity. The number of jobs represents full-time equivalent employees. Earnings refer to the compensation of employees excluding personal contributions to Social Security, Medicare, or employee pension plans. Average earnings represent the total earnings divided by the number of jobs. Lastly, economic activity refers to the direct sales of tenant businesses and the subsequent spending on goods and services occuring in the local economy. The impacts of operations represent the labor required to operate the Mercantile Library/Traction Building Project as well as the associated impacts on earnings. The impacts of the tenant businesses represent the labor required by anticipated tenants of the Mercantile Library/Traction Building Project and the associated impacts on earnings and economic activity.

Mixed-use developments will affect local communities through the purchases of local goods and services made by the development and its tenants. In turn, those local businesses supported purchase goods and services at other local businesses. The direct impacts of a development include the impacts resulting from the operations of the development and the impacts resulting from the tenenat businesses. The direct impacts include the local cost of supplies, maintence, and wages paid to employees. These direct expenditures affect other industries by increasing demand for products and services, creating jobs associated with the provision of these products and services, and generating incomes. This is the indirect impact, or the additional economic impact that is a result from inter-industry linkages. The indirect impacts are the expenditures and employment that are created in the local economy to the extent that industries and households are supported by and respond to the new demands of the directly impacted industries. Finally, the direct and indirect impacts create induced impacts due to the spending of private households. Per the Ohio Department of Development's TMUD Program Economic Impact Statement Framework, released May 2022 and updated June 10, 2022, induced impact are excluded from this analysis.

The Economics Center used an input-output model to conduct this economic impact analysis. Input-output models give a picture of the direct and indirect impacts of a given business or organization on its local economy. The input-output model includes industry- and location-specific multipliers that capture the interdependencies of an economy’s various industries, quantifying how direct expenditures on goods or services by a particular industry (or to individuals in the form of wages) yield additional changes in jobs, earnings, and economic activity within that economy. Multipliers are figures that represent all of the inter-industry relationships measured in the input-output model. Multipliers were sourced from Lightcast, a third-party provider of labor market data. Lightcast utilizes labor market data and other publicly available sources in a proprietary methodology to allow for tailored economic multipliers in a specified geographic area. For every dollar spent by a given organization in a particular industry, multipliers reflect how many more dollars will be spent in a local economy by other businesses, thereby determining the total economic impact of a project or investment. Multipliers also measure how many jobs and the amount of earnings that will be generated in an economy for a given level of expenditure.

All economic impact figures refer to the impact of the Mercantile Library/Traction Building Project on its Surrounding Area. The Surrounding Area for a development located within ten miles of a major city, determined by starting from the corporate boundary of the major city and extending out ten miles from that boundary, is defined as the area encompassed within a perimeter starting from the transformational mixed-use development boundary and extending one-half mile out from that boundary and includes any zip code covered in whole or in part. For the Mercantile Library/Traction Building Project, the Surrounding Area is defined as zip code 45202.

The Economics Center calculated the economic impact of the operations of the Project by using estimates of the number of square feet per job. For residential spaces, it was assumed that 50,000 square feet of space supports one job.[11] For nonresidential spaces, it was assumed that 35,657 square feet of space supports one job.[12]

The Economics Center calculated the economic impact of the tenant businesses using projected revenues and/or employees for the industries proposed to locate at the Mercantile Library/Traction Building Project, which wereprovided by Model Group and Parkes Development Group. Data provided by Model Group and Parkes Development Group were supplemented with industry data for the Surrounding Area from Lightcast.

The economic impact of the hotel, retail, restaurant, and commercial spaces are estimated based on direct sales generated. The sales of the hotel's operations are estimated based on the number of hotel rooms, occupancy, and the average daily room rate provided by Model Group and Parkes Development Group. Additionally, the restaurant sales associated with the hotel and the direct jobs supported by the hotel and its restaurant space were provided by Model Group and Parkes Development Group. Model Group and Parkes Development estimate that the retail and restaurant spaces (excluding the hotel) will generate [redacted] in sales per square foot. Industry data for the Surrounding Area was utilized to estimate the direct jobs and direct earnings generated. Direct jobs are estimated using the sales per job of the respective industries, and direct earnings are estimated using the average annual earnings per job of the respective industries.

The economic impact of the office, library, and event spaces are estimated based on the direct jobs supported. Model Group and Parkes Development Group estimate that the office and library spaces of the Mercantile Library/Traction Building Project will support [redacted] respectively. According to the U.S. Energy Information Administration, approximately 2,265 square feet of event space supports one job.[13] Industry data for the Surrounding Area were utilized to estimate direct sales and direct earnings. Direct sales are estimated using the sales per job for the resepective industries, and direct earnings are estimated using the average annual earnings per job of the respective industries.

The economic impact of the commercial space of the catalyzed projects is estimated based on the average sales per square foot of retail and restaurant spaces in general. According to a Cushman and Wakefield report, Cincinnati and Dayton have approximately 61.2 million square feet of retail space.[14] The total retail sales in the Cincinnati and Dayton Metropolitan Statistical Areas (MSAs) totaled approximately $18.6 billion during 2021, according to data from Lightcast. Therefore, the sales per square foot of retail spaces in Cincinnati and Dayton equates to approximately $304. According to a report by Bloom Intelligence, the sales per square foot for full-service restaurants and limited-service

[11] (FacilitiesNet 2017)
[12] (International Facility Management Association 2010)
[13] (U.S. Energy Information Administration 2021)
[14] (Cushman and Wakefield 2022)

restaurants is between $250 and $325 and between $300 and $400, respectively, assuming the restaurant is generating a profit.[15] The Economics Center used the average sales per square foot of full-service and limited-service restaurants, which is $319. The sales per square foot of commercial space is approximately $311. Industry data for the Surrounding Area was utilized to estimate the direct jobs and direct earnings generated. Direct jobs are estimated using the sales per job of the respective industries, and direct earnings are estimated using the average annual earnings per job of the respective industries.

The economic impact of the office space of the catalyzed projects is estimated based on the direct jobs supported. According to the City of Davis, 278 square feet of office space supports one job.[16] Industry data for the Surrounding Area were utilized to estimate direct sales and direct earnings. Direct sales are estimated using the sales per job for the resepective industries, and direct earnings are estimated using the average annual earnings per job of the respective industries.

Fiscal Impact

Once the Mercantile Library/Traction Building Project is operational, fiscal impacts will accrue for the State of Ohio, Hamilton County, the City of Cincinnati, and Cincinnati Public Schools. The fiscal impact represents the subsequent impact of the operations of the Mercantile Library/Traction Building Project on state and local jurisdictions. Fiscal impacts include earnings, lodging, property, and sales tax revenue as well as collections through alternate tax methods such as payments in lieu of taxes (PILOT payments) and voluntary tax incentive payments.

The earnings of operations and tenant employees of the Mercantile Library/Traction Building Project will generate earnings tax revenues for the State of Ohio and the City of Cincinnati. The operations of the hotel generate lodging tax revenues for Hamilton County. Sales tax revenues for the State of Ohio and Hamilton County are generated by the spending at the hotel, retail, restaurant, and commercial spaces. The developers of the Mercantile Library/Traction Building Project will also make PILOT payments to Cincinnati Public Schools and voluntary tax incentive payments to the City of Cincinnati. Additionally, Hamilton County, the City of Cincinnati, and Cincinnati Public Schools benefit from increases in property tax revenues due to increases in residential property values in the Surrounding Area.

All fiscal impacts are calculated using the most recent, applicable tax rates for the State of Ohio, the county, and local jurisdictions. It is assumed that all tax rates remain unchanged in future years. State earnings tax revenues are calculated using the average annual earnings for the direct and indirect jobs supported by each use type. Therefore, the total state earnings tax revenues reported will not match estimates based on the average annual earnings of all jobs supported.

Project Impacts

The Mercantile Library/Traction Building Project will include 172 apartments, a 151-room hotel, 64,488 square feet of office space, 28,538 square feet of restaurant space, 15,050 square feet of library space, 14,600 square feet of event space, and 10,917 square feet of retail space.. The total development costs associated with Project construction are approximately $123.8 million.[17]

Once the Mercantile Library/Traction Building Project is operational, annual economic impacts in the form of jobs, earnings, and economic activity will be directly generated by the operations and tenant businesses of the Mercantile Library/Traction Building Project. Additionally, fiscal impacts in the form of

[15] (Bloom Intelligence n.d.)
[16] (City of Davis 2008)
[17] Reported in 2022 dollars.

tax revenues and collections through alternate tax methods will be generated for state and local jurisdictions. The impacts of operations represent the labor required to operate the Mercantile Library/Traction Building Project as well as the associated impacts on earnings. The impacts of the tenant businesses represent the labor required by anticipated tenants of the Mercantile Library/Traction Building Project and the associated impacts on earnings and economic activity.

Full economic and fiscal impacts of operations of the Mercantile Library/Traction Building Project will be realized once target occupancy and sales are reached and operating revenues and expenditures stabilize. The economic and fiscal impacts discussed in this section reflect full occupancy and target-level sales. The completion period of the Mercantile Library/Traction Building Project refers to 2025 through 2029 with year one referring to the first year after Project construction is complete.

Operations Impacts

Economic Impact

Operations impacts result from the management of the Project site after construction is complete and operations commence. As shown in Table 3, the operations of Mercantile Library/Traction Building Project will directly support nine jobs per year. These jobs represent the labor required to manage the Project site such as leasing agents, grounds crew, and maintenance and custodial staff. A total of 45 jobs will be supported during the first five years of operation. The jobs supported will have total earnings of $3.7 million during the first five years of operation, or an average of $740,722 million per year. The direct jobs supported by the operations of the Mercantile Library/Traction Building Project will have average annual earnings of $83,459. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the operations of the Mercantile Library/Traction Building Project is $40.12.

Table 3: Direct Jobs and Earnings Impact of Project Operations at the Project Site

Year of Operation	Jobs	Earnings	Average Hourly Wage
Year 1 (2025)	9	$707,553	$38.33
Year 2 (2026)	9	$723,119	$39.17
Year 3 (2027)	9	$739,751	$40.07
Year 4 (2028)	9	$757,505	$41.03
Year 5 (2029)	9	$775,685	$42.02
Total	**45**	**$3,703,613**	**$40.12**

Source: Economics Center calculations.

Fiscal Impact

The operations of the Mercantile Library/Traction Building Project will directly generate a total of $162,067 in earnings tax revenue for the State of Ohio and the City of Cincinnati during the first five years of operation, as shown in Table 4. Of the earnings tax revenue generated during the first five years of operation, the State of Ohio will receive $95,402, while the City of Cincinnati will receive $66,665. On average, a total of $32,413 in earnings tax revenue will be directly generated annually due to the operations of the Mercantile Library/Traction Building Project.

Table 4: Direct Fiscal Impact of Project Operations

Year of Operation	State of Ohio	City of Cincinnati	Total Earnings Tax Revenue
Year 1 (2025)	$17,952	$12,736	**$30,688**
Year 2 (2026)	$18,455	$13,016	**$31,471**
Year 3 (2027)	$19,018	$13,316	**$32,334**
Year 4 (2028)	$19,660	$13,635	**$33,295**
Year 5 (2029)	$20,317	$13,962	**$34,279**
Total	**$95,402**	**$66,665**	**$162,067**

Source: Economics Center calculations.

Tenant Impacts

Economic Impact

The tenant businesses of the Mercantile Library/Traction Building Project will generate revenues from services provided by tenants of the office, library, and event spaces as well as through hotel, retail, and restaurant purchases. These businesses will also hire and pay wages to hundreds of employees needed to maintain daily operations. The economic impact of the tenant businesses of the Mercantile Library/Traction Building Project respresent the economic activity, jobs, and earnings generated at the Project site.

Tenant businesses of the Mercantile Library/Traction Building Project will directly generate economic activity, comprising business sales, wages and salaries paid to employees, and other non-wage operating expenditures made by tenants. As detailed in Table 5, the tenant businesses operating within the Mercantile Library/Traction Building Project will directly generate an estimated $759.7 million in economic activity during the first five years of operation. The direct economic activity of tenant businesses over the first five years of operation comprises $62.0 million in hotel sales, $58.1 million in retail sales, $154.1 million in restaurant sales, $471.8 million in office sales, $10.8 million in library sales, and $3.0 million in event space sales. On average, a total of $151.9 million in economic activity will be directly generated by the tenant businesses of the Mercantile Library/Traction Building Project each year.

Table 5: Direct Sales of Project Tenants by Use Type at the Project Site

Year of Operation	Hotel	Retail	Restaurants	Office	Library	Event Space	Total Direct Sales
Year 1 (2025)	$9,865,686	$11,092,448	$28,773,851	$90,130,138	$2,057,239	$578,474	**$142,497,836**
Year 2 (2026)	$11,955,792	$11,336,482	$29,895,482	$92,113,001	$2,102,499	$591,200	**$147,994,456**
Year 3 (2027)	$12,810,993	$11,597,221	$30,853,687	$94,231,600	$2,150,856	$604,798	**$152,249,155**
Year 4 (2028)	$13,387,188	$11,875,555	$31,802,576	$96,493,158	$2,202,477	$619,313	**$156,380,267**
Year 5 (2029)	$13,989,476	$12,160,568	$32,773,377	$98,808,994	$2,255,336	$634,177	**$160,621,928**
Total	**$62,009,135**	**$58,062,274**	**$154,098,973**	**$471,776,891**	**$10,768,407**	**$3,027,962**	**$759,743,642**

Source: Economics Center calculations.

Once tenant operations commence, the Mercantile Library/Traction Building Project will directly support 3,485 jobs at the Project site with earnings of $267.1 million during the first five years of operation, as detailed in Table 6. Each year an average of 697 jobs with earnings of $53.4 million will be directly supported by the tenant businesses of the Mercantile Library/Traction Building Project. This translates

into average annual earnings of $76,629 per employee. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of direct employees of tenant businesses is $36.84.

Table 6: Direct Jobs and Earnings Impact of Project Tenants at the Project Site

Year of Operation	Jobs	Earnings	Average Hourly Wage
Year 1 (2025)	697	$50,846,873	$35.06
Year 2 (2026)	697	$52,011,886	$35.87
Year 3 (2027)	697	$53,357,110	$36.79
Year 4 (2028)	697	$54,742,381	$37.75
Year 5 (2029)	697	$56,164,777	$38.73
Total	**3,485**	**$267,123,027**	**$36.84**

Source: Economics Center calculations.

The economic impacts of tenant businesses are disaggregated by use-type in Appendix A.

Fiscal Impact

Fiscal impacts will accrue for the State of Ohio, Hamilton County, the City of Cincinnati, and the Cincinnati Public School District once the Mercantile Library/Traction Building Project is operational. The earnings of Mercantile Library/Traction Building Project employees will generate earnings tax revenues for the State of Ohio and the City of Cincinnati, and the spending of the Mercantile Library/Traction Building Project's hotel, retail, and restaurant shoppers will generate sales tax revenues for the State of Ohio and Hamilton County. The hotel's visitors will generate lodging tax revenues for Hamilton County during their stay. Additionally, a payment in lieu of taxes (PILOT payment) to Cincinnati Public School District and voluntary tax incentive payment to the City of Cincinnati will be made by the Developers of the Mercantile Library/Traction Building Project.

Table 7 details the fiscal impacts of the tenant businesses of the Mercantile Library/Traction Building Project by type. The State of Ohio and the City of Cincinnati will benefit from a total of $12.0 million in earnings tax revenues as a result of tenant businesses during the first five years of operation. Hamilton County will benefit from $4.0 million in lodging tax revenues from hotel guests. During the first five years of operation, the spending of the Mercantile Library/Traction Building Project's hotel, retail, and restaurant shoppers will generate $21.4 million in sales tax revenues for the State of Ohio and Hamilton County. Cincinnati Public School District will receive PILOT payments totaling $3.9 million during the first five years of operation. Additionally, voluntary tax incentive payments totaling $922,215 will be made to the City of Cincinnati. In total, the Mercantile Library/Traction Building Project will create approximately $42.2 million in fiscal benefits to state and local jurisdictions during the first five years of tenant operation.

Table 7: Direct Fiscal Impact of Project Tenants

Year of Operation	Earnings Tax Revenue	Lodging Tax Revenue	Sales Tax Revenue	PILOT Payment	Voluntary Tax Incentive Payment	Total Tax Revenue
Year 1 (2025)	$2,266,400	$641,270	$3,879,095	$772,908	$184,443	**$7,744,116**
Year 2 (2026)	$2,329,631	$777,126	$4,148,645	$772,908	$184,443	**$8,212,753**
Year 3 (2027)	$2,402,276	$832,715	$4,310,428	$772,908	$184,443	**$8,502,770**
Year 4 (2028)	$2,477,265	$870,167	$4,451,095	$772,908	$184,443	**$8,755,878**
Year 5 (2029)	$2,554,243	$909,316	$4,596,027	$772,908	$184,443	**$9,016,937**

Table 8 details the fiscal impacts accruing to state and local jurisdictions by type resulting from the tenant businesses of the Mercantile Library/Traction Building Project during the first five years of operation. The tenant businesses of the Mercantile Library/Traction Building Project will generate earnings tax revenues of $7.2 million for the State of Ohio as well as $4.8 million for the City of Cincinnati. Hamilton County will benefit from $4.0 million in lodging tax revenues. Hamilton County will also benefit from $5.6 million in sales tax revenue, while the State of Ohio will benefit from $15.8 million in sales tax revenue. Cincinnati Public Schools will receive $3.9 million in PILOT payments. Additionally, the City of Cincinnati will receive $922,215 in voluntary tax incentive payments.

Table 8: Direct Fiscal Impact of Project Tenants by Government Entity, Years 1-5

Government Entity	Earnings Tax Revenue	Lodging Tax Revenue	Sales Tax Revenue	PILOT Payment	Voluntary Tax Incentive Payment	Total Tax Revenue
State of Ohio	$7,221,600	N/A	$15,764,797	N/A	N/A	**$22,986,397**
Hamilton County	N/A	$4,030,594	$5,620,493	N/A	N/A	**$9,651,087**
City of Cincinnati	$4,808,214	N/A	N/A	N/A	$922,215	**$5,730,429**

Total Impacts

Economic Impact

The total economic impacts include the jobs, earnings, and economic activity directly resulting from the Mercantile Library/Traction Building Project's operations and tenant businesses. Economic impacts reflect full occupancy and target-level sales. Table 9 details the total direct economic impacts that will accrue after construction of the Mercantile Library/Traction Building Project is complete and operations commence. During the first five years of the Project's operation, the Mercantile Library/Traction Building

[18] The total fiscal impact reported in Table 7 and Table 8 may not match due to rounding.
[19] The total fiscal impact reported in Table 7 and Table 8 may not match due to rounding.

Project will directly support 3,530 jobs with earnings of $270.8 million. On average, 706 jobs with earnings of $54.2 million will be directly supported each year. The tenant sales of the Mercantile Library/Traction Building Project represent the direct economic activity generated and will total $759.7 million during the first five years of the Project's operation. An average of $151.9 million in direct economic activity will generated at the Project site annually during the first five years of the Project's operation.

Table 9: Total Direct Economic Impact at the Project Site

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	706	$51,554,426	$35.11	$142,497,836
Year 2 (2026)	706	$52,735,005	$35.91	$147,994,456
Year 3 (2027)	706	$54,096,861	$36.84	$152,249,155
Year 4 (2028)	706	$55,499,886	$37.79	$156,380,267
Year 5 (2029)	706	$56,940,462	$38.78	$160,621,928
Total	**3,530**	**$270,826,640**	**$36.89**	**$759,743,642**

Fiscal Impact

Table 10 details the fiscal related Project impacts of the Mercantile Library/Traction Building Project by type. The State of Ohio and the City of Cincinnati will benefit from a total of $12.2 million in earnings tax revenues as a result of the operations and tenant businesses of the Mercantile Library/Traction Building Project during the first five years of operation. Hamilton County will benefit from $4.0 million in lodging tax revenues from hotel guests. During the first five years of operation, the spending of the Mercantile Library/Traction Building Project's hotel, retail, and restaurant shoppers will generate $21.4 million in sales tax revenues for the State of Ohio and Hamilton County. Cincinnati Public Schools will receive PILOT payments totaling $3.9 million during the first five years of operation. Additionally, voluntary tax incentive payments totaling $922,215 will be made to the City of Cincinnati. In total, the operations and tenant businesses of the Mercantile Library/Traction Building Project will directly create approximately $42.4 million in fiscal benefits to state and local jurisdictions during the first five years of operation.

Table 10: Total Direct Fiscal Impact

Year of Operation	Earnings Tax Revenue	Lodging Tax Revenue	Sales Tax Revenue	PILOT Payment	Voluntary Tax Incentive Payment	Total Tax Revenue
Year 1 (2025)	$2,297,088	$641,270	$3,879,095	$772,908	$184,443	**$7,774,804**
Year 2 (2026)	$2,361,102	$777,126	$4,148,645	$772,908	$184,443	**$8,244,224**
Year 3 (2027)	$2,434,610	$832,715	$4,310,428	$772,908	$184,443	**$8,535,104**

Table 11 details the fiscal impacts accruing to state and local jurisdictions by type resulting from the operations and tenant businesses of the Mercantile Library/Traction Building Project during the first five years of operation. The operations and tenant businesses of the Mercantile Library/Traction Building Project will directly generate earnings tax revenues of $7.3 million for the State of Ohio as well as $4.9 million for the City of Cincinnati. Hamilton County will benefit from $4.0 million in lodging tax revenues. Hamilton County will also benefit from $5.6 million in sales tax revenue, while the State of Ohio will benefit from $15.8 million in sales tax revenue. Cincinnati Public Schools will receive $3.9 million in PILOT payments. Additionally, the City of Cincinnati will receive $922,215 in voluntary tax incentive payments.

Table 11: Total Direct Fiscal Impact by Government Entity, Years 1-5

Government Entity	Earnings Tax Revenue	Lodging Tax Revenue	Sales Tax Revenue	Pilot Payment	Voluntary Tax Incentive Payment	Total Tax Revenue
State of Ohio	$7,317,002	N/A	$15,764,797	N/A	N/A	**$23,081,799**
Hamilton County	N/A	$4,030,594	$5,620,493	N/A	N/A	**$9,651,087**

Surrounding Area Impacts

The direct economic activity generated by the operations and tenant businesses of the Mercantile Library/Traction Building Project will generate additional indirect impacts within the Surrounding Area as a result of the inter-industry linkages. The direct expenditures associated with the operations and tenant businesses of the Mercantile Library/Traction Building Project affect other industries by increasing demand for products and services, creating jobs associated with the provision of these products and services, and generating incomes.

Project Impacts

Operations Impacts

Economic Impact

The operations of the Mercantile Library/Traction Building Project will result in additional indirect impacts within the Surrounding Area. As shown in Table 12, the operations of the Mercantile Library/Traction Building Project will indirectly support four jobs per year in the Surrounding Area's economy. The indirect jobs supported will have total earnings that average $296,439 per year, or approximately $69,346 per job. This equates to an average hourly wage of $33.34, assuming 40 working hours per week for 52 weeks per year. During the first five years of operation, a total of 20 jobs with earnings of $1.5 million will be indirectly supported in the Surrounding Area by the operations of the Mercantile Library/Traction Building Project.

[21] The totals reported in Table 10 and Table 11 may not match due to rounding.

Table 12: Indirect Jobs and Earnings Impact of Project Operations on the Surrounding Area

Year of Operation	Jobs	Earnings	Average Hourly Wage
Year 1 (2025)	4	$283,165	$31.85
Year 2 (2026)	4	$289,395	$32.55
Year 3 (2027)	4	$296,051	$33.30
Year 4 (2028)	4	$303,156	$34.09
Year 5 (2029)	4	$310,432	$34.91
Total	**20**	**$1,482,199**	**$33.34**

Source: Economics Center calculations.

Fiscal Impact

The indirect jobs and earnings supported by the operations of the Mercantile Library/Traction Building Project will generate a total of $62,760 in earnings tax revenue for the State of Ohio and the City of Cincinnati during the first five years of operation, as shown in Table 13. Of the earnings tax revenue generated during the first five years of operation, the State of Ohio will receive $36,080, while the City of Cincinnati will receive $26,680. On average, a total of $12,552 in earnings tax revenue will be indirectly generated annually due to the operations of the Mercantile Library/Traction Building Project.

Table 13: Indirect Fiscal Impact of Project Operations

Year of Operation	State of Ohio	City of Cincinnati	Total Earnings Tax Revenue
Year 1 (2025)	$6,788	$5,097	**$11,885**
Year 2 (2026)	$6,989	$5,209	**$12,198**
Year 3 (2027)	$7,203	$5,329	**$12,532**
Year 4 (2028)	$7,433	$5,457	**$12,890**
Year 5 (2029)	$7,667	$5,588	**$13,255**
Total	**$36,080**	**$26,680**	**$62,760**

Source: Economics Center calculations.

Tenant Impacts

Economic Impact

The tenants of the Mercantile Library/Traction Building Project will source portions of the goods and services required for ongoing operations from other businesses in the Surrounding Area, thus generating additional spending and supporting more jobs locally. The businesses that benefit from the direct expenditures of the Mercantile Library/Traction Building Project tenants will, in turn, continue to spend in the local economy some of the dollars originally spent by the tenant businesses of the Mercantile Library/Traction Building Project. This process will repeat itself until all the original dollars leak out of the economy of the Surrounding Area.

During the first five years of operation, the direct economic activity generated by the tenants of the Mercantile Library/Traction Building Project will result in additional indirect economic activity of $148.3 million within the Surrounding Area, or an average of $29.7 million per year. The business-to-business purchases of the tenenat businesses will indirectly support an average of 117 additional jobs in the Surrounding Area each year. As detailed in Table 14, a total of 585 jobs will be indirectly supported during the first five years of operation. The indirect jobs supported by the tenant businesses of the

Mercantile Library/Traction Building Project will have earnings of $52.5 million during the first five years of operation, or approximately $10.5 million per year. The indirect jobs supported will have average annual earnings of $89,368. This equates to an average hourly wage of $42.97, assuming 40 working hours per week for 52 weeks per year.

Table 14: Indirect Economic Impact of Project Tenants on the Surrounding Area

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	117	$9,991,361	$40.88	$27,859,777
Year 2 (2026)	117	$10,220,768	$41.82	$28,892,543
Year 3 (2027)	117	$10,486,665	$42.91	$29,708,329
Year 4 (2028)	117	$10,760,009	$44.03	$30,506,152
Year 5 (2029)	117	$11,040,716	$45.18	$31,325,150
Total	**585**	**$52,499,519**	**$42.97**	**$148,291,951**

Source: Economics Center calculations.

The indirect economic impacts of tenant businesses are disaggregated by use-type in Appendix A.

Fiscal Impact

The tenant businesses of the Mercantile Library/Traction Building Project will indirectly generate a total of $2.3 million in earnings tax revenue for the State of Ohio and the City of Cincinnati during the first five years of operation, as shown in Table 15. Of the earnings tax revenue generated during the first five years of operation, the State of Ohio will receive $1.4 million, while the City of Cincinnati will receive $944,991. On average, a total of $464,727 in earnings tax revenue will be indirectly generated annually due to the operations of the Mercantile Library/Traction Building Project.

Table 15: Indirect Fiscal Impact of Project Operations

Year of Operation	State of Ohio	City of Cincinnati	Total Earnings Tax Revenue
Year 1 (2025)	$258,239	$179,844	**$438,083**
Year 2 (2026)	$265,793	$183,974	**$449,767**
Year 3 (2027)	$274,926	$188,760	**$463,686**
Year 4 (2028)	$284,778	$193,680	**$478,458**
Year 5 (2029)	$294,908	$198,733	**$493,641**
Total	**$1,378,644**	**$944,991**	**$2,323,635**

Source: Economics Center calculations.

Other Impacts

Upon its completion, the Mercantile Library/Traction Building Project will increase residential property values in the Surrounding Area. In a 2015 study, it was concluded that residential property values were positively impacted upon delivery of a new commercial development within a 0.75-mile radius of construction.[22] The study found residential properties inside of the radius increased by 1.15 percent more each year when compared to the residential properties just outside of the radius. For purposes of the TMUD Program, the Economics Center limited the residential property value impacts to a 0.5-mile radius surrounding the proposed development.

[22] (Wiley 2015)

Upon the completion of the Mercantile Library/Traction Building Project, it is estimated that the increased residential property values inside the Surrounding Area will result in an additional $90,005 of property tax revenue during the first year of operation. By the fifth year of operation, the increased residential property values are estimated to generate $504,838 in property tax revenue, as shown in Table 16. During the first five years of operation, the increased residential property values inside the Surrounding Area will result in an additional $1.5 million of property tax revenue. Of the increase in property tax revenue during the first five years of operation, Hamilton County[23] will receive $332,090, the City of Cincinnati will receive $153,099, and Cincinnati Public Schools will receive $972,381.

Table 16: Fiscal Impact of Increased Residential Property Values

Year of Operation	Hamilton County	City of Cincinnati	Cincinnati Public Schools	Total Property Tax Revenue
Year 1 (2025)	$20,506	$9,454	$60,045	**$90,005**
Year 2 (2026)	$42,156	$19,435	$123,437	**$185,028**
Year 3 (2027)	$65,063	$29,994	$190,505	**$285,562**
Year 4 (2028)	$89,344	$41,189	$261,604	**$392,137**
Year 5 (2029)	$115,021	$53,027	$336,790	**$504,838**
Total	**$332,090**	**$153,099**	**$972,381**	**$1,457,570**

Source: Economics Center calculations.

Total Impacts

Economic Impact

The operations and tenant businesses of the Mercantile Library/Traction Building Project will result in additional indirect impacts within the Surrounding Area due to the inter-industry linkages and household economic relationships. As detailed in Table 17, a total of 610 jobs with earnings of $54.0 million will be indirectly supported in the Surrounding Area during the first five years of the Project's operation. An average of 122 indirect jobs with earnings of $10.8 million will be supported each year. The business-to-business purchases of the tenenat businesses will result in additional spending of $148.3 million in the Surounding Area during the first five years of the Project's operation. An average of $29.7 million in indirect spending will occur annually in the Surrounding Area.

Table 17: Total Indirect Economic Impact on the Surrounding Area

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	122	$10,274,526	$40.57	$27,859,777
Year 2 (2026)	122	$10,510,163	$41.50	$28,892,543
Year 3 (2027)	122	$10,782,716	$42.57	$29,708,329
Year 4 (2028)	122	$11,063,165	$43.68	$30,506,152
Year 5 (2029)	122	$11,351,148	$44.82	$31,325,150

Source: Economics Center calculations.

[23] Hamilton County also includes the portions of property tax revenue distributed to Great Parks of Hamilton County and the Cincinnati/Hamilton County Library.

Fiscal Impact

The indirect jobs and earnings supported by the operations and tenant businesses of the Mercantile Library/Traction Building Project will generate a total of $2.4 million in earnings tax revenue for the State of Ohio and the City of Cincinnati during the first five years of operation, as shown in Table 18. Additionally, the increase in residential property values in the Surrounding Area will result in an additional $1.5 million in property tax revenue during the first five years of operation. In total, $3.8 million in fiscal benefits will be indirectly generated by the operations and tenant businesses of the Mercantile Library/Traction Building Project during the first five years of operation.

Table 18: Total Indirect Fiscal Impact

Year of Operation	Earnings Tax Revenue	Property Tax Revenue	Total Tax Revenue
Year 1 (2025)	$449,968	$90,005	**$539,973**
Year 2 (2026)	$461,965	$185,028	**$646,993**

Table 19 details the indirect fiscal impacts accruing to state and local jurisdictions by type during the first five years of the Project's operation. The State of Ohio will benefit from $1.4 million in earnings tax revenue. Hamilton County will benefit from $332,090 in property tax revenue. The City of Cincinnati will benefit from $971,671 in earnings tax revenue and $153,099 in property tax revenue. Additionally, Cincinnati Public Schools will benefit from $972,381 in property tax revenue. During the first five years of Project operations, the Mercantile Library/Traction Building Project will indirectly generate fiscal benefits of $1.4 million for the State of Ohio, $332,090 for Hamilton County, $1.1 million for the City of Cincinnati, and $972,381 for Cincinnati Public Schools.

Table 19: Total Indirect Fiscal Impact by Government Entity, Years 1-5

Year of Operation	Earnings Tax Revenue	Property Tax Revenue	Total Tax Revenue
State of Ohio	$1,414,724	N/A	**$1,414,724**
Hamilton County	N/A	$332,090	**$332,090**
City of Cincinnati	$971,671	$153,099	**$1,124,770**
Cincinnati Public Schools	N/A	$972,381	**$972,381**
Total	**$2,386,395**	**$1,457,570**	**$3,843,965**

Catalyzed Project Impacts

The Mercantile Library/Traction Building Project will directly cause or accelerate four additional projects in the Surrounding Area during the completion period. The direct and indirect economic impact as well as the total fiscal impact of each catalyzed project will be detailed in this section. The economic impact refers to the jobs, earnings, and economic activity directly generated by the catalyzed projects and the additional indirect impacts within the Surrounding Area as a result of the inter-industry linkages. The

fiscal impact refers to the earnings and sales tax revenues generated by the catalyzed projects for state and local jurisdictions. The economic and fiscal impacts discussed in this section reflect full occupancy and target-level sales.

7th Street Redevelopment Project

The redevelopment of three historical buildings on 7th Street in downtown Cincinnati is a project that has been accelerated by the Mercantile Library/Traction Building Project. The 7th Street Redevelopment Project will comprise 113 residential units and 12,850 square feet of commercial space. This Project is anticipated to start construction in mid-2023 and take approximately 18 to 24 months to complete. The total development costs associated with the redevelopment of the three historical buildings on 7th Street are approximately $34.2 million.[24]

Economic Impact

The direct economic impact of the 7th Street Redevelopment Project includes the jobs, earnings, and economic activity directly supported during the completion period of the Mercantile Library/Traction Building Project. As detailed in Table 20, the 7th Street Redevelopment Project will generate $22.4 million in direct economic activity during the completion period. During the completion period, a total of 185 jobs with earnings of $7.1 million will be directly supported by the 7th Street Redevelopment Project. These direct jobs will have annual earnings that average $37,957. This equates to an average hourly wage of $18.25, assuming 40 working hours per week for 52 weeks per year.

Table 20: Direct Economic Impact of 7th Street Redevelopment Project

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	37	$1,356,361	$17.43	$4,277,723
Year 2 (2026)	37	$1,386,201	$17.81	$4,371,833
Year 3 (2027)	37	$1,418,084	$18.22	$4,472,386
Year 4 (2028)	37	$1,452,118	$18.66	$4,579,723
Year 5 (2029)	37	$1,486,968	$19.11	$4,689,636
Total	**185**	**$7,099,732**	**$18.25**	**$22,391,301**

Source: Economics Center calculations.

The indirect economic impact of the 7th Street Redevelopment Project includes the subsequent jobs, earnings, and economic activity generated in the Surrounding Area during the completion period as a result of the inter-industry linkages. As detailed in Table 21, the 7th Street Redevelopment Project will indirectly generate an additional $3.9 million in economic activity in the Surrounding Area during the completion period. A total of 20 jobs with earnings of $1.6 million will be indirectly supported by the commercial space of the 7th Street Redevelopment Project. These indirect jobs will have annual earnings that average $86,945. This equates to an average hourly wage of $41.80, assuming 40 working hours per week for 52 weeks per year.

[24] Reported in 2022 dollars.

Table 21: Indirect Economic Impact of 7th Street Redevelopment Project on the Surrounding Area

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	4	$303,015	$39.93	$747,543
Year 2 (2026)	4	$309,681	$40.81	$763,989
Year 3 (2027)	4	$316,804	$41.75	$781,560
Year 4 (2028)	4	$324,407	$42.75	$800,318
Year 5 (2029)	4	$332,193	$43.77	$819,525
Total	**20**	**$1,586,100**	**$41.80**	**$3,912,935**

Source: Economics Center calculations.

Fiscal Impact

Fiscal impacts will accrue for the State of Ohio, Hamilton County, and the City of Cincinnati once the 7th Street Redevelopment Project is operational. The 7th Street Redevelopment Project will generate earnings tax revenues of $172,963 for the State of Ohio as well as $156,342 for the City of Cincinnati. The direct employees of the commercial space will directly generate $259,554 in earnings tax revenue, while the indirect jobs supported in the Surrounding Area indirectly generate $69,751 in earnings tax revenue. A total of $329,305 in earnings tax revenue will be directly and indirectly generated during the completion period as a result of restaurant space at the 7th Street Redevelopment Project. During the completion period, the sales generated within the commercial space of the 7th Street Redevelopment Project will directly generate $1.7 million in sales tax revenues, of which the State of Ohio will receive $1.3 million and Hamilton County will receive $459,022. As detailed in Table 22, the 7th Street Redevelopment Project will create a total of $2.1 million in fiscal benefits to state and local jurisdictions during the completion period.

Table 22: Total Fiscal Impact of 7th Street Redevelopment Project

Year of Operation	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
Year 1 (2025)	$62,234	$333,662	**$395,896**
Year 2 (2026)	$63,931	$341,003	**$404,934**
Year 3 (2027)	$65,745	$348,846	**$414,591**

City Club Phase II Project

The redevelopment of the former PNC Bank Tower in downtown Cincinnati is a project that has been accelerated by the Mercantile Library/Traction Building Project. The City Club Phase II Project will comprise 250 residential units and 30,000 square feet of office space. This Project is anticipated to start construction late 2023 and take approximately 18 to 24 months to complete. The total development

costs associated with the redevelopment of the former PNC Bank Tower are approximately $75.0 million.[25]

Economic Impact

The direct economic impact of the City Club Phase II Project includes the jobs, earnings, and economic activity directly supported during the completion period of the Mercantile Library/Traction Building Project. As detailed in Table 23, the City Club Phase II Project will generate $159.7 million in direct economic activity during the completion period. During the completion period, a total of 432 jobs with earnings of $62.0 million will be directly supported by the City Club Phase II Project. These direct jobs will have annual earnings that average $143,734. This equates to an average hourly wage of $69.10, assuming 40 working hours per week for 52 weeks per year.

Table 23: Direct Economic Impact of the City Club Phase II Project

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	N/A	N/A	N/A	N/A
Year 2 (2026)	108	$14,974,583	$66.71	$38,535,277
Year 3 (2027)	108	$15,318,998	$68.25	$39,421,589
Year 4 (2028)	108	$15,686,654	$69.89	$40,367,707
Year 5 (2029)	108	$16,063,134	$71.56	$41,336,532
Total	**432**	**$62,043,369**	**$69.10**	**$159,661,105**

Source: Economics Center calculations.

The indirect economic impact of the City Club Phase II Project includes the subsequent jobs, earnings, and economic activity generated in the Surrounding Area during the completion period as a result of the inter-industry linkages. As detailed in Table 24, the City Club Phase II Project will indirectly generate an additional $33.0 million in economic activity in the Surrounding Area during the completion period. A total of 128 jobs with earnings of $11.5 million will be indirectly supported by the office space of the City Club Phase II Project. These indirect jobs will have annual earnings that average $90,257. This equates to an average hourly wage of $43.39, assuming 40 working hours per week for 52 weeks per year.

Table 24: Indirect Economic Impact of the City Club Phase II Project on the Surrounding Area

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	N/A	N/A	N/A	N/A
Year 2 (2026)	32	$2,764,280	$41.89	$7,957,890
Year 3 (2027)	32	$2,827,859	$42.86	$8,140,922
Year 4 (2028)	32	$2,895,727	$43.88	$8,336,304
Year 5 (2029)	32	$2,965,225	$44.94	$8,536,375
Total	**128**	**$11,453,091**	**$43.39**	**$32,971,491**

[25] Reported in 2022 dollars.

Fiscal Impact

Fiscal impacts will accrue for the State of Ohio and the City of Cincinnati once the City Club Phase II Project is operational. The City Club Phase II Project will generate earnings tax revenues of $2.2 million for the State of Ohio as well as $1.3 million for the City of Cincinnati. The direct employees of the office space will directly generate $3.0 million in earnings tax revenue, while the indirect jobs supported in the Surrounding Area indirectly generate $507,208 in earnings tax revenue. As detailed in Table 25, the City Club Phase II Project will create a total of $3.5 million in fiscal benefits to the State of Ohio and City of Cincinnati during the completion period of the Mercantile Library/Traction Building Project.

Table 25: Total Fiscal Impact of the City Club Phase II Project

Year of Operation	State of Ohio	City of Cincinnati	Total Tax Revenue
Year 1 (2025)	N/A	N/A	**N/A**
Year 2 (2026)	$529,831	$319,299	**$849,130**
Year 3 (2027)	$545,725	$326,643	**$872,368**
Year 4 (2028)	$562,897	$334,483	**$897,380**
Year 5 (2029)	$580,482	$342,510	**$922,992**
Total	**$2,218,935**	**$1,322,935**	**$3,541,870**

Terrace Plaza Hotel Redevelopment Project

The redevelopment of the Terrace Plaza Hotel in downtown Cincinnati is a project that has been accelerated by the Mercantile Library/Traction Building Project. The Terrace Plaza Hotel Redevelopment Project will comprise the converting of the hotel building into a yet-to-be determined number of residential units and retail/restaurant space with interior structured parking. This Project is anticipated to start construction by late 2023 and take approximately 18 to 24 months to complete. The total development costs associated with this redevelopment project are approximately $50.0 million.[26] The household spending impacts have been omitted from this analysis to avoid the potential for double counting of economic impacts generated at the Mercantile Library/Traction Buidling Project. Further, as the amount of retail and restaurant space is not currently known, those operations impacts have been omitted from this analysis.

Former Macy's Office Building Redevelopment Project

The redevelopment of the former Macy's Office Building in downtown Cincinnati is a project that has been accelerated by the Mercantile Library/Traction Building Project. The Macy's Office Building Redevelopment Project will comprise the conversion of the former office space into 338 residential units with a parking garage. This Project is anticipated to start construction in mid-2023 and take approximately 18 to 24 months to complete. The total development costs associated with this redevelopment project are approximately $73.0 million.[27] The household spending impacts have been omitted from this analysis to avoid the potential for double counting of economic impacts generated at the Mercantile Library/Traction Buidling Project.

[26] Reported in 2022 dollars.

Total

Economic Impact

The total economic impact of the catalyzed projects of the Mercantile Library/Traction Building Project include the jobs, earnings, and economic activity resulting from the commercial space of the 7th Street Redevelopment Project and the office space of the City Club Phase II Project. As shown in Table 26, catalyzed projects will directly and indirectly support a total of 765 jobs with earnings of $82.2 million in the Surrounding Area's economy during the completion period. During the completion period, a total of $218.9 million in economic activity will occur within the Surrounding Area. Of the total economic activity generated, $182.1 million represents the direct economic activity and $36.9 million represents the indirect economic activity. The direct economic activity comprises $22.4 million in commercial sales from the 7th Street Redevelopment Project and $159.7 million in economic activity from the City Club Phase II office space.

Table 26: Total Economic Impact of Catalyzed Projects

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	41	$1,659,376	$19.46	$5,025,266
Year 2 (2026)	181	$19,434,745	$51.62	$51,628,989
Year 3 (2027)	181	$19,881,744	$52.81	$52,816,456
Year 4 (2028)	181	$20,358,906	$54.08	$54,084,052
Year 5 (2029)	181	$20,847,519	$55.37	$55,382,069
Total	**765**	**$82,182,290**	**$51.65**	**$218,936,832**

Source: Economics Center calculations.

Fiscal Impact

Fiscal impacts will accrue for the State of Ohio, Hamilton County, and the City of Cincinnati once the catalyzed projects are operational. The catalyzed projects of the Mercantile Library/Traction Building Project will generate earnings tax revenues of $2.4 million for the State of Ohio as well as $1.5 million for the City of Cincinnati. A total of $3.9 million in earnings tax revenue will be directly and indirectly generated during the completion period as a result of the catalyzed projects. During the completion period, the spending of the patrons of the commercial space of the catalyzed projects will directly generate $1.7 million in sales tax revenues, of which $1.3 million will accrue to the State of Ohio and $459,022 will accrue to Hamilton County. As detailed in Table 27, the catalyzed projects of the Mercantile Library/Traction Building Project will create more than $5.6 million in total fiscal benefits to state and local jurisdictions during the completion period.

Table 27: Total Fiscal Impact of Catalyzed Projects

Year of Operation	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
Year 1 (2025)	$62,234	$333,662	$395,896
Year 2 (2026)	$913,061	$341,003	$1,254,064
Year 3 (2027)	$938,113	$348,846	$1,286,959

Total Impacts

Economic Impacts

The total economic impact of the operations and tenant businesses of the Mercantile Library/Traction Building Project include the jobs, earnings, and economic activity resulting from Project, Surrounding Area, and catalyzed project impacts. As shown in Table 28, the Mercantile Library/Traction Building Project will directly and indirectly support a total of 4,905 jobs with earnings of $407.0 million in the Surrounding Area's economy during the first five years of the Project's operation. An average of 981 jobs with $81.4 million in earnings will be supported each year. During the first five years of the Project's operation, a total of $1.1 billion in direct and indirect spending will occur within the Surrounding Area. Of the total economic activity generated, $941.8 million is the direct impact and $185.2 million is the indirect impact. An average of $225.4 million in total spending is estimated to occur each year. Appendix B details the total direct sales by use type generated by the Mercantile Library/Traction Building Project and the catalyzed projects.

Table 28: Total Economic Impact

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	869	$63,488,328	$35.12	$175,382,879
Year 2 (2026)	1,009	$82,679,913	$39.40	$228,515,988
Year 3 (2027)	1,009	$84,761,321	$40.39	$234,773,940
Year 4 (2028)	1,009	$86,921,957	$41.42	$240,970,471
Year 5 (2029)	1,009	$89,139,129	$42.47	$247,329,147
Total	**4,905**	**$406,990,648**	**$39.89**	**$1,126,972,425**

Fiscal Impacts

As detailed in Table 29, the total fiscal impacts include the earnings, lodging, property, and sales tax revenue generated by the Mercantile Library/Traction Building Project as well as PILOT payments and voluntary tax incentive payments made by the developers of the Mercantile Library/Traction Building Project. The State of Ohio and the City of Cincinnati will benefit from a total of $18.4 million in earnings tax revenue during the first five years of the Project's operation. Hamilton County will benefit from $4.0 million in lodging tax revenues from hotel guests during the first five years of the Project's operation. The increase in residential property values in the Surrounding Area will result in an additional $1.5 million of property tax revenue. The spending of the hotel, retail, restaurant, and commercial shoppers will generate $23.1 million in sales tax revenues for the State of Ohio and Hamilton County. Cincinnati Public Schools will receive PILOT payments totaling $3.9 million during the first five years of the Project's operation. Additionally, voluntary tax incentive payments totaling $922,215 will be made to the City of Cincinnati. In total, the Mercantile Library/Traction Building Project will create approximately $51.9 million in fiscal benefits to state and local jurisdictions during the first five years of operation.

Table 29: Total Fiscal Impact

Year of Operation	Earnings Tax Revenue	Lodging Tax Revenue	Property Tax Revenue	Sales Tax Revenue	PILOT Payment	Voluntary Tax Incentive Payment	Total Tax Revenue
Year 1 (2025)	$2,809,290	$641,270	$90,005	$4,212,757	$772,908	$184,443	**$8,710,673**
Year 2 (2026)	$3,736,128	$777,126	$185,028	$4,489,648	$772,908	$184,443	**$10,145,281**
Year 3 (2027)	$3,848,941	$832,715	$285,562	$4,659,274	$772,908	$184,443	**$10,583,843**
Year 4 (2028)	$3,966,977	$870,167	$392,137	$4,808,313	$772,908	$184,443	**$10,994,945**
Year 5 (2029)	$4,088,116	$909,316	$504,838	$4,961,819	$772,908	$184,443	**$11,421,440**

Table 30 details the fiscal impacts accruing to state and local jurisdictions by type during the first five years of the Project's operation. The State of Ohio will benefit from $11.1 million in earnings tax revenue as well as $17.1 million in sales tax revenue. Hamilton County will benefit from $4.0 in lodging tax revenue, $332,090 in property tax revenue, and $6.1 million in sales tax revenue. The City of Cincinnati will benefit from $7.3 million in earnings tax revenue, $153,099 in property tax revenue, and $922,215 in voluntary tax incentive contributions. Cincinnati Public Schools will benefit from $972,381 in property tax revenue and $3.9 million in PILOT payments. During the first five years of Project operations, the Mercantile Library/Traction Building Project will generate fiscal benefits of $28.2 million for the State of Ohio, $10.4 million for Hamilton County, $8.4 million for the City of Cincinnati, and $4.8 million for Cincinnati Public Schools.

Table 30: Total Fiscal Impact by Government Entity, Years 1-5

Government Entity	Earnings Tax Revenue	Lodging Tax Revenue	Property Tax Revenue	Sales Tax Revenue	PILOT Payment	Voluntary Tax Incentive Payment	Total Tax Revenue
State of Ohio	$11,123,624	N/A	N/A	$17,052,297	N/A	N/A	**$28,175,921**
Hamilton County	N/A	$4,030,594	$332,090	$6,079,515	N/A	N/A	**$10,442,199**
City of Cincinnati	$7,325,828	N/A	$153,099	N/A	N/A	$922,215	**$8,401,142**

Source: Economics Center calculations.

Conclusion

The Mercantile Library/Traction Building Project is a proposed mixed-use development located in the City of Cincinnati. This proposed mixed-use development will include 172 apartments, a 151-room hotel, 64,488 square feet of office space, 28,538 square feet of restaurant space, 15,050 square feet of library space, 14,600 square feet of event space, and 10,917 square feet of retail space.. With an estimated $123.8 million capital investment, the Mercantile Library/Traction Building Project will generate

[28] The total fiscal impact reported in Table 29 and Table 30 may not match due to rounding.
[29] The total fiscal impact reported in Table 29 and Table 30 may not match due to rounding.

considerable economic activity in the Surrounding Area after construction is complete and operations commence.[30]

Economic impact figures represent the effects that a given mixed-use development and its associated economic activities have upon a surrounding community. The economic impacts are reported in terms of jobs, earnings, and economic activity. Economic activity refers to the direct sales of tenant businesses and catalyzed projects as well as the subsequent spending on goods and services occuring in the local economy. Fiscal impacts represent the subsequent impacts on state and local jurisdictions. Fiscal impacts include earnings, lodging, property, and sales tax revenue as well as collections through alternate tax methods such as PILOT payments and voluntary tax incentive payments. The total economic and fiscal impacts represent the sum of the Project, Surrounding Area, and catalyzed project impacts.

The Mercantile Library/Traction Building Project will generate a total of $1.1 billion in economic activity during the first five years of operation. The direct economic activity generated represents the sales of tenant businesses. The sales of tenant businesses over the first five years of operation comprise $62.0 million in hotel sales, $58.1 million in retail sales, $154.1 million in restaurant sales, $631.4 million in office sales, $10.8 million in Mercantile Library activity, $3.0 million in event space sales, and $22.4 million in commercial sales. The $941.8 million in direct economic activity will lead to further indirect spending of $185.2 million in the Surrounding Area. The Mercantile Library/Traction Building Project will directly support 4,147 jobs with earnings of $340.0 million. Indirectly, the Mercantile Library/Traction Building Project will support 981 jobs with earnings of $67.0 million. During the first five years of operation, a total of 4,905 jobs with earnings of $407.0 million will be supported in the Surrounding Area by the Mercantile Library/Traction Building Project.

During the first five years of operation, the Mercantile Library/Traction Building Project will generate fiscal benefits totaling $51.9 million for state and local jurisdictions. The State of Ohio and the City of Cincinnati will benefit from a total of $18.4 million in earnings tax revenues. Hamilton County will benefit from $4.0 million in lodging tax revenues from hotel guests. The increase in residential property values in the Surrounding Area will result in an additional $1.5 million of property tax revenue. The spending of the hotel, retail, restaurant, and commercial, shoppers will generate $23.1 million in sales tax revenues for the State of Ohio and Hamilton County. Cincinnati Public Schools will receive PILOT payments totaling $3.9 million. The City of Cincinnati will also benefit from $922,215 in voluntary tax incentive payments.

ECONOMICS CENTER
RESEARCH AND CONSULTING

About the Economics Center

The Alpaugh Family Economics Center began as a teacher training initiative of the Cincinnati Chamber of Commerce in 1976. In 1977, the Center was incorporated and established a permanent existence as part of the University of Cincinnati. While teacher training has remained as a core service, the Center has added student programs and competitions, an award-winning online financial program called $martPath, partnerships for the financial education of the larger community, and a research team to serve businesses and governmental partners in our region and across the State. The Alpaugh Family Economics Center is a part of the Council for Economic Education's national network and a member of the Association of University Business and Economic Research.

The Research and Consulting division of The Alpaugh Family Economics Center provides unbiased, non-partisan economic data and analyses to help clients make better financial, policy, and economic and workforce development decisions. Our dynamic approach and critical data analyses empower business and civic leaders to respond to changing economic conditions, strengthen local economies, and improve the quality of life for their communities. Our work includes everything from economic impact studies to benefit-cost analyses, return on investment analyses, and workforce development initiatives. For decades, the Center has been the choice organization to provide critical data analyses to more than 30 business clients annually. Through this work, the Center and its partners contribute to the health and vitality of our economy.

The Research and Consulting division of The Alpaugh Family Economics Center completed 10 economic impact analyses for developers across Ohio during the fiscal year 2022 funding cycle of the Transformational Mixed-Use Development Program (TMUD). The Ohio Department of Development funded eight "General" Projects, two of which were applications with economic impact analyses prepared by the Economics Center. The TMUD tax credits received by our development partners represented approximately half of the "General" project funding allocation for fiscal year 2022.

Project Staff

Dr. Julie Heath

Dr. Julie Health is the Chief Executive Officer and Executive Director of The Alpaugh Family Economics Center. Dr. Heath is a member of the National Association of Economic Educators. She was a member of the national Board of Directors of the Council for Economic Education and a member of the Economics Standing Committee of the National Assessment of Education Progress. Dr. Heath led the two national committees charged by President Obama's Advisory Council on Financial Capability with integrating financial literacy in the Common Core.

Prior to coming to the University of Cincinnati, Dr. Heath spent 26 years at the University of Memphis. Dr. Heath was the director of the Center for Economic Education at the University of Memphis. In that role, with the support of the State of Tennessee and First Tennessee, she founded the $mart Tennessee program in 2006, which provides financial education to children in elementary, middle, and high schools.

At the University of Memphis, Dr. Heath taught undergraduate and graduate classes and served as head of the Economics Department. She is the recipient of a number of honors and awards. Dr. Heath has received the two highest teaching awards at the University of Memphis: the Thomas W. Briggs Foundation's Excellence in Teaching Award in 2000, and the Distinguished Teaching Award in 2010. The Carnegie Foundation recognized Dr. Heath with the 2010 Tennessee Professor of the Year Award.

In 2008, she earned the Kenneth G. Elzinga Distinguished Teaching Award, the economics discipline's highest award, and was the recipient of the Educator of the Year Award from the National Association for Financial Literacy. She received the Harold Love Award for Community Involvement in 2007, and in 2006, was named the Financial Educator of the Year by the Tennessee Bankers Association.

She was named a Money Magazine "Money Hero" for August of 2013. Dr. Heath received the Alumni Professional Achievement Award from Bluffton University in 2012. She was named a "Woman of Influence" by Venue and LEAD magazines, Cincinnati, in 2014, and a "Woman of Achievement" by the Girl Scouts in 2016. Dr. Heath received a Pillar Award for Executive Director of the Year from Medical Mutual in 2019. Additionally, Dr. Heath served as a Visiting Scholar for the Consumer Financial Protection Bureau for 2019.

Dr. Heath received her Ph.D. in Economics at the University of South Carolina, specializing in labor economics and quantitative methods. She received a Visiting Research Fellowship to Princeton University to conduct research in economics education and has published extensively in the area. She is the author or co-author of over 40 academic articles. She also received a Rockefeller Foundation grant to study women and poverty. Her research focuses on the labor market, particularly women's labor force issues, economic and financial education, curriculum development, assessment, and quantitative analyses.

Brad Evans

Brad Evans is Director of Research and serves as an economic development specialist at The Alpaugh Family Economics Center. A graduate of Miami University, Brad maintains professional memberships in the International Development Council and the Ohio Economic Development Association, and he is currently serving on the Board of Directors for the Butler County Port Authority.

In addition to overseeing processes and timelines for project milestones and deliverables, Brad possesses expertise in state and local financing mechanisms including the Ohio Enterprise Zone Program, Tax Increment Financing, Joint Economic Development Districts, Community Reinvestment Areas, and Job Creation Tax Credits.

Megan Heare

Megan Heare is a Senior Research Associate at The Alpaugh Family Economics Center. Megan earned her Bachelor's Degree in Mathematics from the University of Southern Indiana and holds a Master's Degree in Economics from the University of Cincinnati. Megan also possesses a credential as a Certified Business Economist from the National Association of Business Economists.

Megan's research focuses on investments in human capital, education, economic and workforce development, and health care.

North Market Public Support 42

Introduction & Findings

Silverlode Consulting ("Silverlode") was engaged by NM Developer, LLC ("Rockbridge" or the "Developer") to estimate the economic impact and increase in state and local tax collections associated with Rockbridge's proposed development of the North Market Mixed-Use Project. This Economic Impact Statement (EIS) and the supporting addenda were prepared to support the Developer's application to the Ohio Department of Development ("ODOD") for consideration for an award of Ohio Transformational Mixed-Use Development ("TMUD") tax credits.

This EIS and the supporting Addenda demonstrate the Project's eligibility for both the TMUD program generally, and the alternative method of valuing the TMUD tax credits ("AMV"). TMUD eligible development costs are estimated to be approximately $341.1 million. The estimated increase in tax collections is expected to reach $87.0 million within one year after the Project is completed, which well exceeds (2.6 times) the $34 million (10%) AMV eligibility threshold for the first year following Project completion as described in Section 122.09(F) of the Ohio Revised Code ("ORC"). During the Project's construction and the five years that follow its completion, the estimated increase in tax collections is expected to reach approximately $782.7 million, which is approximately 23 times the $34 million of TMUD tax credits requested for the Project.

This EIS and the supporting Addenda provide the economic impact data and supporting information requested by ODOD for considering TMUD and AMV eligibility, based upon ODOD's guidance as of the date of this report.

Project Overview

The proposed North Market Mixed-Use Project ("North Market" or "Project") is located adjacent to the distinctive, historic North Market. North Market is a 146-year-old market where visitors can find variety of merchants offering fresh produce, meat, poultry, seafood, flowers, specialty food items, international prepared foods and distinctive gifts. The Project will include an expansion to the iconic market to continue its legacy and provide new opportunities for promising entrepreneurs. The project will also provide unique opportunities for residents and visitors within the Central Ohio area.

The North Market project will include 31 stories of residential, luxury hotel, office, parking, restaurant/retail, north market expansion, event space, as well as indoor and outdoor recreational and public spaces. The development will allow for the community, visitors, and residents to utilize new amenities and public spaces within the North Market district.

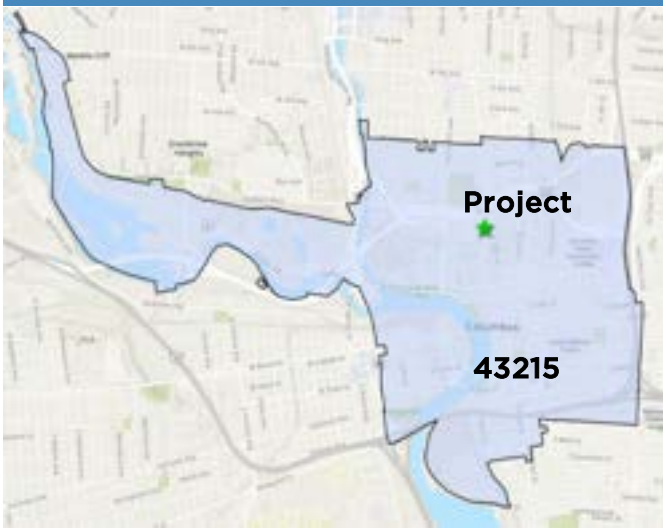
The North Market Mixed-Use Project building is nearly 700,000 square feet and includes 121 premium residential units, a social club and spa, and a 212-room boutique hotel with 17,000 square feet of event and meeting space. In addition, the second residential brand in the building will consist of 52 loft units with 35 workforce units, 68,660 square feet of Class A office space, a parking garage with 353 parking spaces, destination restaurants, bars and retail concepts, 10,000 square feet of indoor and outdoor public spaces and an approximately 10,000 square foot expansion of the North Market that would facilitate new merchants and event space. The project would transform the district into a premier living, working and shopping destination.

The estimated development cost of the Project is $344.8 million with $341.1 million of eligible TMUD tax credit eligible expenditures. The Developer is applying for approximately $34 million of TMUD tax credits to enable the development to proceed. With an award of the requested TMUD tax credits, construction is expected to commence in 2022 and be completed in 2025.

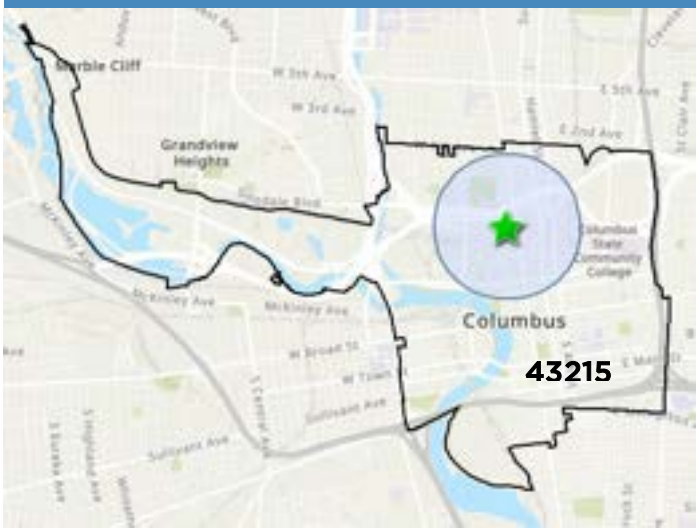
Surrounding Area & Radius

This study estimates the economic impacts associated with the Project on the region comprised of Columbus zip code 43215 (the "Surrounding Area"), which is approximately five square miles in size, portions of which are within a one-half mile (2,640 foot) radius of the Development (the "Radius"). The maps below depict the zip code in the Surrounding Area and the area within the Radius.

Surrounding Area



Radius



EIS Sections

Economic impacts associated with the Project are presented in the following sections of this report:

- **Project Impacts** – The direct and indirect economic impacts of the current phase of the North Market Mixed-Use Project (the "Project"), which is the subject of the TMUD application, in the five years after completion of construction of the Project.
- **Development Impacts** – The Project will be undertaken in a single phase, so no Development impacts are presented with this EIS.
- **Surrounding Area Impacts** – The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below.
- **Catalyzed Projects Impacts** – The direct and indirect economic impacts of other proposed, defined projects ("Catalyzed Projects") within a one-half mile (2,640 foot) radius of the Project (the "Radius") that the Developer expects would be directly caused or accelerated by the Project in the five years after completion of construction of the Project.
- **Total Impacts** – The sum of all impacts described above.

Additionally, the construction impacts from the Project, Surrounding Area, and Catalyzed Projects are presented individually and in aggregate in Addendum #1: Construction Impacts.

The combined operational and construction impacts are presented in Addendum #2: Total Impacts (operational and construction). Addendum #2 also provides the estimated increase in state and local taxes resulting during the one and five-year periods following the completion of Project construction and demonstrates the Project's eligibility for both the TMUD program generally, and the alternative method of valuing the TMUD tax credits ("AMV") as described in Section 122.09(F) of the Ohio Revised Code ("ORC"), specifically.

Project Impacts

The direct and indirect economic impacts of the current phase of the North Market Mixed-Use Project (the "Project") in the five years after completion of construction of the Project are estimated below.

Operations Jobs

Year	Full-Time Equivalents	Average Hourly Wage
1	19	$ 26.93
2	19	$ 28.07
3	19	$ 28.84
4	19	$ 29.45
5	19	$ 30.08

Tenant Jobs

Year	Full-Time Equivalents	Average Hourly Wage
1	991	$ 33.95
2	1,090	$ 32.19
3	1,139	$ 31.67
4	1,181	$ 31.21
5	1,203	$ 31.09

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
1	$ 9,859,000	$ 23,897,000	$ 16,422,000
2	$ 10,057,000	$ 28,803,000	$ 18,373,000
3	$ 10,259,000	$ 32,760,000	$ 18,914,000
4	$ 10,464,000	$ 35,430,000	$ 19,434,000
5	$ 10,673,000	$ 36,773,000	$ 19,972,000

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
1	$ 3,877,000	$ 3,262,000	$ 2,749,000	$ 602,000
2	$ 4,420,000	$ 3,403,000	$ 3,022,000	$ 702,000
3	$ 4,780,000	$ 3,499,000	$ 3,463,000	$ 750,000
4	$ 5,040,000	$ 3,574,000	$ 3,654,000	$ 772,000
5	$ 5,201,000	$ 3,624,000	$ 3,827,000	$ 791,000

Development Impacts

The Project will be undertaken in a single phase, so no Development impacts are presented with this EIS.

Surrounding Area Impacts

The other sections of this EIS measure the direct and indirect impacts of the operations of the Project and Catalyzed projects on the Surrounding Area. However, the Project is expected to positively impact the Surrounding Area in these additional ways, as well. The economic impacts associated with the following additional impacts on the Surrounding Area during the Completion Period were estimated for this EIS and are presented in the table that follows:

- Residential Impacts: The development of 173 new residential units by the Project is expected to bring 260 new permanent residents to the Surrounding Area, which would result in additional household spending and tax generation within the Surrounding Area.
- Additional North Market Visitor Impacts: The Projects would expand the existing North Market by over 25% and add an outdoor plaza. This expansion would add new food, drink, and retail businesses. In addition, the increased residential, office, event, visitor, etc. activity in the adjacent Project tower would significantly increase economic activity for existing businesses located in North Market.
- RTRX Visitor Impacts: The Project would increase the number of attendees to the annual RTRX conference, many of whom would visit from outside the region. These visits would result in significant visitor spending for lodging, dining, and incidentals
- Hotel Market Impacts: The Project's luxury hotel will disrupt the hotel market in the Surrounding Area and raise room rates and property values across the hotel market. The Developer conducted in-depth analyses of comparable markets based on extensive national real estate data and identified a consistent economic dynamic where similar transformational projects were introduced and subsequently produced significant incremental hotel revenue and property value increases for those markets. The analyses supported economic impact statement inputs and the team can outline further upon request.
- Office Market Impacts: The Project's Class A office space will disrupt the office market in the Surrounding Area and raise lease rates and property values across the office market. The Developer conducted in-depth analyses of comparable markets based on extensive national real estate data and identified a consistent economic dynamic where similar transformational projects were introduced and subsequently produced significant incremental office rent growth and property value increases for those markets. The analyses supported economic impact statement inputs and the team can outline further upon request.
- Multi-Family Residential Market Impacts: The project's luxury multi-family residential units will disrupt the multi-family residential market in the Surrounding

Area and raise rental incomes and property values across the multi-family market. The Developer conducted in-depth analyses of comparable markets based on extensive national real estate data and identified a consistent economic dynamic where similar transformational projects were introduced and subsequently produced significant incremental multi-family residential property value increases for those markets. The analyses supported economic impact statement inputs and the team can outline further upon request.

- Convention Center Impacts: The Project's transformational impact and iconic profile, including a premier luxury hotel and desirable event spaces, will help attract and support additional convention business in the Surrounding Area. Major conventions require both significant hotel room availability and specifically high-end hotel availability, which the local market currently lacks. This product gap contributed to missing national-level business in the past, which this Project will help address. The North Market Mixed-Use Project will be the type of project that will help Ohio's capital city capture high-profile national conventions, which drive significant economic impact through hotel room nights, travel, as well as dining and retail spend.

In addition to the above, key inputs and assumptions are presented in EIS Appendix B: Key Inputs & Assumptions.

Operations Jobs

Catalyzed Projects Impacts

The Project is expected to directly cause or accelerate additional redevelopment and development projects ("Catalyzed Projects"), within the Radius, during the Completion Period. The map and table below identify the additional developments which the Developer expects will be directly caused or accelerated by the Project during the Completion Period.

Any parcels that are wholly or partially located within one-half mile of the boundaries of the Development were included. Development projects in the Radius that are imminent or committed to at the time of this report were excluded, as were any projects that applied for tax credits under the Transformational Mixed-Use Development program in 2021. Information about projects in the Radius that may be applying for TMUD this round was not available.

The Developer provided the development scope information necessary to model the economic impact of the Catalyzed Projects individually and in total.

In total, the Catalyzed Projects represent an estimated $622.3 million of private sector investments and more than 1.4 million square feet of new and/or renovated space.

It is critical to note that two of the Catalyzed Projects, representing $269.2 million in investments (43% of Radius area total) would be undertaken directly by the Developer. Therefore, the Developer's confidence in the estimates used for these projects is particularly high.

These Rockbridge-driven Catalyzed Projects (#1 and #4 on the map which follows) within the Radius represent nearly 600,000 additional square feet of apartment, hotel, office, and retail space including 150 additional residential units and 350 additional hotel rooms.

The table below details the assumptions that were provided by the Developer to enable this modeling.

Map #	Property Name	Address	Owner	Developer
1	Chestnut Square	111 E. Nationwide Blvd.	Rockbridge	Rockbridge
2	Vine Street Arena District Development	147 Spruce St.	Hamilton Parker Company	NRI Developer
3	Warehouse District	260 E. Naghten St.	Hackman Capital Partners	Hackman Capital Partners
4	The Jeffrey Hotel	718 N. 4th St.	Jeffrey Phase 10 LLC	Rockbridge

Map #	Development Cost	Construction Start	Construction End	Apartment Units	Hotel Rooms	Office SF	Retail SF	Other SF

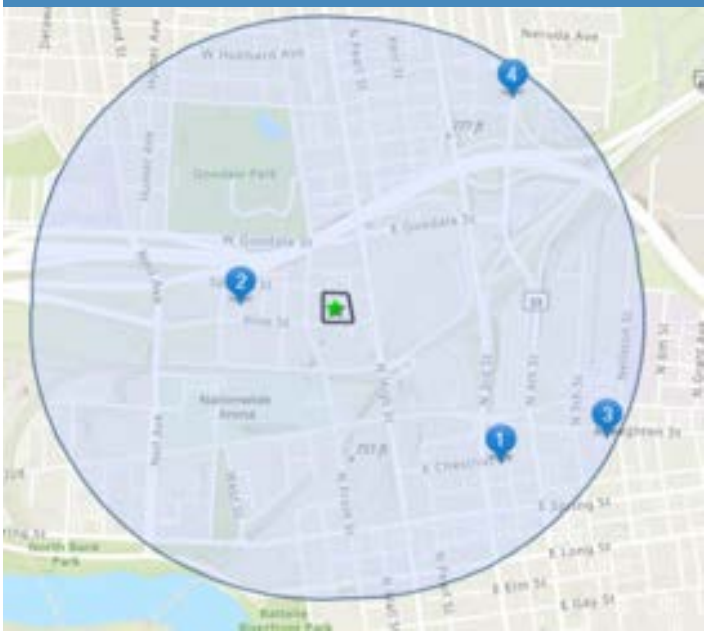
Catalyzed Projects in Radius



How Projects Would Be Directly Caused or Accelerated by The Project

Developments #1 and #4 are planned on land that is currently owned, in negotiations to be owned, or anticipated to be controlled by Rockbridge. The North Market project will raise the value and development pressure on all surrounding sites. A successful North Market development will attract tenants who would benefit from proximity to this development.

Developments #2 & #3 are located on sites that are owned by others and are near the project, but the Developer has had direct contact with the owner and developer of the sites. The North Market project would improve the economic viability of these projects.

The resulting direct and indirect economic impacts of the Catalyzed Projects in the five years after completion of construction of the Project are estimated below.

Operations Jobs

Year	Full-Time Equivalents	Average Hourly Wage
1	9	$ 32.98
2	29	$ 31.66
3	29	$ 32.03
4	29	$ 32.37
5	29	$ 32.72

Tenant Jobs

Year	Full-Time Equivalents	Average Hourly Wage
1	1,234	$ 45.79
2	2,715	$ 47.11
3	2,715	$ 47.50
4	2,715	$ 47.88
5	2,715	$ 48.26

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
1	$ 9,375,000	$ 22,356,000	$ 7,824,000
2	$ 55,318,000	$ 32,577,000	$ 11,401,000
3	$ 56,424,000	$ 33,228,000	$ 11,628,000

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
1	$ 3,396,000	$ 6,351,000	$ 2,236,000	$ 3,096,000
2	$ 8,430,000	$ 14,233,000	$ 3,257,000	$ 7,629,000
3	$ 8,586,000	$ 14,350,000	$ 3,323,000	$ 7,634,000
4	$ 8,742,000	$ 14,464,000	$ 3,390,000	$ 7,639,000
5	$ 8,904,000	$ 14,579,000	$ 3,457,000	$ 7,643,000

Total Impacts

The sum of the impacts of the Project, Surrounding Area, and Catalyzed Projects in the five years after completion of construction of the Project are estimated below.

Operations Jobs

Year	Full-Time Equivalents	Average Hourly Wage
1	28	$ 28.88
2	48	$ 30.24
3	48	$ 30.77
4	48	$ 31.22
5	48	$ 31.67

Tenant Jobs

Year	Full-Time Equivalents	Average Hourly Wage
1	2,423	$ 38.64
2	4,099	$ 41.07
3	4,242	$ 40.61
4	4,403	$ 40.06
5	4,542	$ 39.70

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
1	$ 28,850,000	$ 63,078,000	$ 24,691,000
2	$ 77,695,000	$ 105,053,000	$ 36,803,000
3	$ 80,275,000	$ 145,798,000	$ 45,268,000
4	$ 83,473,000	$ 165,049,000	$ 46,196,000
5	$ 85,142,000	$ 191,691,000	$ 47,856,000

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
1	$ 9,246,000	$ 10,576,000	$ 6,584,000	$ 30,205,000
2	$ 17,461,000	$ 19,454,000	$ 10,273,000	$ 63,931,000
3	$ 21,318,000	$ 20,572,000	$ 14,179,000	$ 96,352,000
4	$ 22,990,000	$ 21,770,000	$ 15,809,000	$ 132,471,000
5	$ 25,202,000	$ 23,004,000	$ 18,394,000	$ 172,546,000

Methodology

Reasonableness of Key Inputs

The key inputs and assumptions used to prepare each section of the EIS and the supporting addenda are provided in EIS appendix D: Key Inputs & Assumptions. The Developer's pro-forma financial models and sources/uses analyses, which we understand are being provided to other third parties such as banks and other financial institutions, and thus are assumed to be reliable, were the source of most project information. The IMPLAN model, which is described in detail below, was also a key source of not only outputs, but key inputs. Finally, where necessary, we relied on established real estate industry rules of thumb, independent third-party data, and estimates from the Developer, who has a long history of success in Ohio. Throughout the modeling, Silverlode also employed an appropriate amount of professional conservatism to ensure that the inputs and assumptions were reasonable.

IMPLAN

Much of this analysis was completed using the IMPLAN (IMpact Analysis for PLANning) economic impact modeling system. IMPLAN is an input-output model that was originally developed by the U.S. Forest Service in the 1970's and is one of the most respected and widely used approaches to regional economic impact analysis. IMPLAN is used by more than 1,000 universities, government agencies, and consultants to estimate the economic and fiscal impacts of investments and/or changes in one or more industries.

2019 IMPLAN data was used for this study. The Developer provided the capital investment and other operational data necessary to prepare this analysis. The IMPLAN software applies industry specific inflators to convert results to year the impacts will occur.

Data underlying the IMPLAN model is updated annually using thousands of data points from over 90 sources. The main sources for this data include:

- U.S. Bureau of Labor Statistics (BLS) Quarterly Census of Employment and Wages (QCEW)
- U.S. Bureau of Economic Analysis (BEA) Regional Economic Accounts (REA)
- U.S. Census Bureau County Business Patterns (CBP)
- U.S. Bureau of Economic Analysis National Income and Product Accounts (NIPA)

Direct and Indirect Impacts

Economic and fiscal impacts can be divided into three component parts, which are referred to as direct, indirect, and induced. *At the direction of ODOD, this EIS does not include induced impacts.*

A direct effect describes an initial, or first-round change in the economy and is the starting point for economic impact analysis. Changes in an economy create "ripples" of economic activity throughout the region being analyzed. These ripples are described as indirect effects (induced effects are not included in this EIS). A positive direct effect causes increased purchases within the economy being modeled, as well as "leakage" of economic activity out of the economy being studied in the form of imports into the economy from other areas outside the economy. Generally speaking, direct describes activity attributable to the economic activity being modeled. In this EIS, direct impacts include the economic activity of the Project and Surrounding Area (employees, associated payroll, construction investments, etc.). Direct jobs comprise full, part-time, and temporary employees and jobs supported by the Project and future redevelopment and development projects within the Surrounding Area.

Indirect effects represent changes in the industries that provide goods and services to the economic activity being modeled (e.g., suppliers, service providers, etc.). Indirect effects occur in a repeating cycle but diminish in each round as economic activity "leaks" from the region being modeled. Indirect effects cease when the last dollar of economic activity leaks from the economy being studied. Indirect effects are estimated using IMPLAN. In this EIS, indirect impacts include the economic activity of the entities that provide goods and services to the Developer, the Project's tenants, and the Surrounding Area.

Total impact refers only to the cumulative result of all rounds of direct and indirect economic activity.

Silverlode Consulting Qualifications

Company Overview

Silverlode Consulting was founded in 2002 by two leaders of EY's and PwC's consulting practices. As a national leader in the field of economic impact analysis, we have helped hundreds of organizations, ranging from non-profit arts groups to multi-national corporations, to measure their impacts on their communities and communicate those impacts to their stakeholders. For over twenty years, Silverlode has meticulously estimated and effectively communicated the impacts of projects, the presence of organizations, and investments in communities. Our work has helped clients to gain approvals, secure funding, and positively shift public opinion. More information about our firm and our work in economic impact analysis can be found on our website www.silverlodeconsulting.com.

Representative Silverlode economic impact clients are shown below.

Dennis McAndrew | Founder and President

Dennis has over 25 years of experience estimating economic impacts. He has completed hundreds of projects measuring the impacts associated with development projects, complex health systems, major transportation projects, industry associations, economic development groups, arts, entertainment, and sports organizations, and other entities. Dennis also provides strategic guidance to businesses, developers, economic development organizations, and governmental entities involved in large-scale economic development projects. Prior to founding Silverlode Consulting in 2002, Dennis worked in the consulting practices of EY and PwC. Dennis earned a Master of Business Administration degree from Georgetown University and a Bachelor of Arts degree in Economics from John Carroll University. Dennis is a certified public accountant (inactive) and is a member of the American Institute of Certified Public Accountants (AICPA).

Michelle Moll | Senior Consultant

Michelle Moll has been an integral part of Silverlode for over a decade. Michelle spearheads the modeling for economic impact and other analyses for corporate and public sector clients. She is an experienced IMPLAN user and has created innovative ways of using the tool to estimate unique client impacts. Prior to joining Silverlode, Michelle was a financial analyst with Netrex and a Senior Auditor for PwC. Michelle earned a Bachelor of Science in Accounting from Miami University and is a Certified Public Accountant (inactive).

Kelly Moody | Senior Consultant

Kelly Moody has been a consultant with Silverlode Consulting since 2012. She manages client relationships and projects for Silverlode's economic impact consulting services and a variety of other public sector and corporate consulting projects. Before joining Silverlode, Kelly was a Manager of Consulting at Allegro Realty Advisors, Ltd. and a Manager at Team NEO. Kelly holds a Bachelor of Science in Business Administration in Marketing from the University of Richmond.

EIS Appendix A: Individual Catalyzed Impacts

The following sections estimate the direct and indirect economic impacts of projects within the Radius that would be directly caused and accelerated by the Project in the five years after completion of construction of the Project.

Catalyzed Project #1: Chestnut Square Project

Rockbridge Capital, the parent company of the Lead Applicant (NM Developer LLC), owns and controls a collection of underutilized assets 0.4 miles from the future North Market Mixed-Use Project (to be formally known as The Merchant Building), at 111 E. Nationwide Blvd., currently identified as "Chestnut Square."

Rockbridge would like to redevelop the property, but requires market rates and rents to rise to make the project economically viable for redevelopment. The planned scope for this redevelopment incorporates multi-family residential, office, hotel, and retail uses, all with associated structured parking and contemplating a scheduled completion in 2026. Given the alignment in use mix between the Project and the vision for Chestnut Square, Rockbridge's ability to improve and redevelop Chestnut Square will be dependent upon and catalyzed by the development of the North Market Mixed-Use Project. Further, by introducing a quality, never-before-seen product to the Columbus market, the transformational North Market Mixed-Use Project will raise the rate ceiling for hotel, office, and multifamily assets, paving the way for the Chestnut Square redevelopment as an economically viable project. Accordingly, the execution of the Chestnut Square redevelopment, which will itself bring material economic impact, hinges upon the North Market Mixed-Use Project proceeding, and thus, upon it being awarded TMUD credit.

Operations Jobs

4	1,061	$ 51.43
5	1,061	$ 51.83

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
1	$ 9,375,000	$ 9,581,000	$ 3,353,000
2	$ 9,563,000	$ 9,773,000	$ 3,420,000
3	$ 9,754,000	$ 9,968,000	$ 3,488,000
4	$ 9,949,000	$ 10,167,000	$ 3,558,000
5	$ 10,148,000	$ 10,370,000	$ 3,629,000

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
1	$ 2,076,000	$ 6,028,000	$ 958,000	$ 2,580,000
2	$ 2,109,000	$ 6,077,000	$ 977,000	$ 2,580,000
3	$ 2,144,000	$ 6,126,000	$ 997,000	$ 2,580,000
4	$ 2,178,000	$ 6,174,000	$ 1,017,000	$ 2,580,000
5	$ 2,214,000	$ 6,222,000	$ 1,037,000	$ 2,580,000

Catalyzed Project #2: Vine Street Arena District Development Site

Hamilton Parker Company ("Hamilton Parker"), a local construction materials firm, real estate developer, and close relationship with Rockbridge owns the vacant land and surface parking at and around 147 Spruce St., 0.11 miles from the North Market Mixed-Use Project and adjacent to a newly developed Chipotle Mexican Grill corporate office.

Adjacent current uses also include shuttered bars, a medical marijuana dispensary, and a liquor store. The scope for this site includes a use mix of multi-family residential, office, and retail, as well as additional structured parking and is anticipated to be completed in 2027. The Lead Applicant has certain specific information about this project, including projected timeline, through its relationship with the landowner and its interim leasing of some of the current vacant property for North Market Mixed-Use Project construction support. Based upon research and evidence from similar scenarios in comparable markets, the introduction of the Project's market-leading product immediately adjacent to this site will provide a dramatic catalyst, driving rent increases for the development on the Vine / Spruce Street Arena District Development site. Rent increases will facilitate its financial viability, and will also increase the site's land value, providing equity to the project's developers, and facilitating the capitalization of the development. As a result, the redevelopment viability and execution at the Vine Street Arena District Development site, which will itself bring material economic impact, hinges upon the North Market Mixed-Use Project proceeding, and thus, upon it being awarded TMUD credit.

5	$ 3,473,000	$ 6,031,000	$ -	$ 3,289,000

Catalyzed Project #3: Warehouse District Project

Hackman Capital Partners ("Hackman"), a local and national real estate developer, owns vacant warehouse space at and around 260 E. Naghten St., 0.45 miles from the North Market Mixed-Use Project, and adjacent to Chestnut Square, as part of their proposed Warehouse District redevelopment.

The Warehouse District redevelopment is estimated to be completed in 2027. The planned scope for this mixed-use redevelopment incorporates multi-family residential, office, hotel, and retail uses. Given these projects' alignment in use mix and based upon research and evidence from similar scenarios in comparable markets, the North Market Mixed-Use Project's success will be a major determining factor in the viability of this redevelopment at 260 E. Naghten. The quality of product within the North Market Mixed-Use Project will foster transformational impacts across the market, as it catalyzes Chestnut Square and the Warehouse District, creating a connected cascade of significant, mixed-use development within the Surrounding Area. As a result of the North Market Mixed-Use Project's receipt of a TMUD award, the redevelopment viability and execution at the Warehouse District, which will itself bring material economic impact, will be able to become a reality because of the North Market Mixed-Use Project proceeding with the support of a TMUD award.

5	$ 1,788,000	$ 1,984,000	$ 1,037,000	$ 1,257,000

Catalyzed Project #4: The Jeffrey Hotel

Rockbridge Capital, the parent company of the Lead Applicant (NM Developer LLC), has had negotiations to develop a hotel on a vacant site within the Jeffrey Park development. This hotel site, only 0.5 miles from the future North Market Mixed-Use Project, is located at 718 N. 4th St., and, if feasible, contemplates a scheduled completion in 2026.

Based upon research and evidence from similar scenarios in comparable markets, the North Market Mixed-Use Project's introduction of luxury hotel product will have a transformational impact upon local hotel rates across the chain scale and throughout the market. Given Rockbridge's expertise in the hotel industry, local knowledge of existing hotel rates and viability, and direct visibility into the impact of the North Market Mixed-Use Project proceeding, it is in a unique position to understand the feasibility of this project. Rockbridge's ability to develop a financially viable hotel at Jeffrey Park will be catalyzed by the development of the North Market Mixed-Use Project, and thus, is dependent upon the award of this TMUD credit.

2	$ -	$ 13,031,000	$ 4,560,000
3	$ -	$ 13,292,000	$ 4,651,000
4	$ -	$ 13,558,000	$ 4,744,000
5	$ -	$ 13,829,000	$ 4,839,000

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
1	$ 1,320,000	$ 323,000	$ 1,278,000	$ 516,000
2	$ 1,347,000	$ 328,000	$ 1,303,000	$ 516,000
3	$ 1,374,000	$ 333,000	$ 1,329,000	$ 516,000
4	$ 1,401,000	$ 337,000	$ 1,356,000	$ 517,000
5	$ 1,429,000	$ 342,000	$ 1,383,000	$ 517,000

EIS Appendix B: Key Inputs and Assumptions

Inputs	Project Assumptions	Surrounding Area Assumptions	Catalyzed Projects Assumptions	Source(s)	Reasoning
Residential real estate revenue	Developer estimate from detailed project proformas: $29.18/SF annual gross rent revenue in Y1, with annual growth through Y5	IMPLAN estimate	$28.20/SF annual lease rate, 80% leasable area	Developer/ Costar	
Residential real estate FTEs	Developer estimate	N/A	IMPLAN estimate	Developer/ IMPLAN	IMPLAN estimates jobs, which were then converted to FTEs using IMPLAN's industry-specific conversion factor
Residential real estate payroll	Developer estimate	N/A	IMPLAN estimate	Developer/ IMPLAN	IMPLAN estimates labor income (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry-specific conversion factor
Hotel revenue	Developer estimates $226 of RevPAR in Y1 with annual growth in subsequent years	N/A	RevPAR of $175 in 2022 with inflation in subsequent years	Developer	Developer estimate for Project based on detailed Project proforma, and for Catalyzed Project based on expected luxury hotels catalyzed
Hotel FTEs	IMPLAN estimate based upon revenue	N/A	IMPLAN estimate	IMPLAN	IMPLAN estimates jobs, which were then converted to FTEs using IMPLAN's industry-specific conversion factor
Hotel payroll	IMPLAN estimate based upon revenue	N/A	IMPLAN estimate	IMPLAN	IMPLAN estimates labor income (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry-specific conversion factor
Hotel food and beverage revenue	Developer estimate from detailed project proformas	IMPLAN estimate	35% of RevPar	Developer/ IMPLAN/ Industry rule of thumb	
Hotel food and beverage FTEs	IMPLAN estimate based upon revenue	N/A	IMPLAN estimate	IMPLAN	IMPLAN estimates jobs, which were then converted to FTEs using IMPLAN's industry-specific conversion factor
Hotel food and beverage payroll	IMPLAN estimate based upon revenue	N/A	IMPLAN estimate	IMPLAN	IMPLAN estimates labor income (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry-specific conversion factor
Full service restaurant revenue	Developer estimate from detailed project proformas	IMPLAN estimate	$325/SF annually	Developer/ IMPLAN/ Industry estimate	
Limited service restaurant revenue	Developer estimate	IMPLAN estimate	$375/SF annually	Developer/ IMPLAN/ Industry estimate	
Full service / limited service restaurant FTEs	IMPLAN estimate based upon revenue	N/A	IMPLAN estimate	IMPLAN	IMPLAN estimates jobs, which were then converted to FTEs using IMPLAN's industry-specific conversion factor
Full service / limited service restaurant payroll	IMPLAN estimate based upon revenue	N/A	IMPLAN estimate	IMPLAN	IMPLAN estimates labor income (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry-specific conversion factor

Inputs	Project Assumptions	Surrounding Area Assumptions	Catalyzed Projects Assumptions	Source(s)	Reasoning
Recreation tenant revenue	Developer estimate from detailed project proformas	IMPLAN estimate	IMPLAN estimate for indirect impact	Developer/ IMPLAN	
Recreation tenant FTEs	IMPLAN estimate based upon revenue	N/A	IMPLAN estimate	IMPLAN	IMPLAN estimates jobs, which were then converted to FTEs using IMPLAN's industry-specific conversion factor
Recreation tenant payroll	IMPLAN estimate based upon revenue	N/A	IMPLAN estimate	IMPLAN	IMPLAN estimates labor income (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry-specific conversion factor
Parking revenue, FTEs and payroll	Developer estimate from detailed project proformas	N/A	N/A	Developer	
Commercial real estate revenue	Developer estimate from detailed project proformas	N/A	$24/SF office annual lease rate, 80% leasable area; $35/SF retail annual lease rate, $30/SF restaurant annual lease rate	Developer/ Costar	
Commercial real estate FTEs	Developer estimate from detailed project proformas	N/A	IMPLAN estimate	Developer/ IMPLAN	IMPLAN estimates jobs, which were then converted to FTEs using IMPLAN's industry-specific conversion factor
Commercial real estate payroll	Developer estimate from detailed project proformas	N/A	IMPLAN estimate	Developer/ IMPLAN	IMPLAN estimates labor income (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry-specific conversion factor
Office tenant FTEs	225 SF/job	N/A	250 SF/job	Developer/ Industry estimate/ IMPLAN	Developer estimate and IMPLAN jobs based on industry averages were converted to FTEs using IMPLAN's industry specific conversion factor. 50% of jobs were assumed to be in the IMPLAN legal services industry and 50% in other financial investment activities industry
Office tenant payroll	IMPLAN estimate based upon number of jobs	N/A	IMPLAN estimate	IMPLAN	IMPLAN estimates labor income (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry-specific conversion factor
Office tenant revenue	IMPLAN estimate based upon number of jobs	N/A	IMPLAN estimate	IMPLAN	
Retail revenue	$656/SF	Developer estimate of increased sales to existing NM @ $9.84 per visitor / IMPLAN estimate	$375/SF annually	Developer/ Industry estimate	Sales/SF was applied to the North Market expansion (Project). This is based on existing sales/SF at the North Market, adjusted for inflation. In the Surrounding Area, current spending per visitor amount was applied to new visitors, residents, employees, etc. of the project.
Retail FTEs	IMPLAN estimate based upon revenue	IMPLAN estimate	IMPLAN estimate	IMPLAN	IMPLAN estimates jobs, which were then converted to FTEs using IMPLAN's industry-specific conversion factor
Retail payroll	IMPLAN estimate based upon revenue	IMPLAN estimate	IMPLAN estimate	IMPLAN	IMPLAN estimates labor income (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry-specific conversion factor
# of residents	1.5 residents/unit in 174 units	N/A	N/A	Per developer, industry rule of thumb	

Input	Project Assumptions	Surrounding Area Assumptions	Catalyzed Projects Assumptions	Source(s)	Reasoning
Avg. income of residents	Residents spend 20% of gross income on rent	IMPLAN estimate based upon spending of new residents to the modeled geography	N/A	Developer/ Industry estimate/ IMPLAN	
Local Retail, entertainment and dining spending by residents		IMPLAN estimate of surrounding area spending for retail, entertainment and dining based upon household income level of new residents to the modeled geography			
% of residents working from home	35%	N/A	N/A	Developer/ Industry estimate	Project impacts include FTEs and earnings of new residents as tenant jobs and payroll. All residents are assumed to be new to the Surrounding Area. For purpose of estimating state income tax, 20% of residents are assumed to be new.
New Community Authority	Developer estimates				The Project is a part of a NCA, which levies additional tax on lodging (included in lodging taxes) and on office rent (included in property tax)
Sales tax	7.5% of taxable revenue per IMPLAN estimate	IMPLAN estimate	7.5% of taxable revenue per IMPLAN estimate	Ohio Department of Taxation	Consultant estimated direct sales tax based upon estimated taxable sales. Indirect sales tax was estimated by IMPLAN.
Municipal income tax	2.5% of direct and indirect earnings. Municipal net profits taxes estimated by IMPLAN	2.5% of direct and indirect earnings. 2.5% of new NOI	2.5% of direct and indirect earnings	City of Columbus tax rate	Consultant estimated direct and indirect local income tax by applying local tax rate to new direct and indirect labor income (net of benefits using IMPLAN benefits factor).
State income tax	Direct and indirect wages - 2.4% or 2.91%, depending on income level. IMPLAN estimated corporate profit taxes	Direct and indirect wages - 2.4%. Incremental NOI- 3.99%.	Direct and indirect wages - 2.4%. IMPLAN estimated corporate net profit taxes	Rates per Ohio Department of Taxation tax tables	2.4% was calculated as the average tax rate from 2021 tax rate table for an individual earning between $44 - $88K. 2.91% was calculated as the average tax rate from 2021 tax rate table for an individual earning $120K (used for residents working from home). 3.99% or the incremental tax rate on income over $110K from the 2021 table was utilized to represent the tax rate on incremental NOI from the Surrounding Area, assuming that this income flows through to highly compensated individuals earning over this threshold.
Lodging tax	10% of lodging revenue	IMPLAN estimate	10% of lodging revenue. IMPLAN estimate	Franklin County/ City of Columbus	Consultant estimated lodging revenue. Indirect sales tax was estimated by IMPLAN.
Property tax	Direct property tax from developer estimate from detailed proforma (excludes abated taxes). Indirect property tax estimated by IMPLAN	Incremental increase in market value for Hotel, Office, & Multifamily properties in the surrounding area times 2.64%	IMPLAN estimate	Developer/ Franklin County Auditor/ IMPLAN	

Addendum #1: Construction Impacts

This Addendum estimates the economic impacts associated with construction of the Project, Surrounding Area, and Catalyzed Projects. Information about the methodology used to prepare these estimates, the zip code(s) included in the Surrounding Area, the key inputs, and a statement about the reasonableness of the inputs are included within the EIS.

Project: Construction Impacts

The direct (indirect excluded) economic impacts of the construction of the current phase of the Project are estimated below.

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Project Construction Y1	659	$ 31.63
Project Construction Y2	659	$ 31.63
Project Construction Y3	659	$ 31.63
Project Operating Y1	-	$ -
Project Operating Y2	-	$ -
Project Operating Y3	-	$ -
Project Operating Y4	-	$ -
Project Operating Y5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Project Construction Y1	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -
Project Construction Y3	$ -	$ -	$ -
Project Operating Y1	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Project Construction Y1	$ -	$ 2,589,000	$ -	$ 479,000
Project Construction Y2	$ -	$ 2,589,000	$ -	$ 479,000
Project Construction Y3	$ -	$ 2,589,000	$ -	$ 479,000
Project Operating Y1	$ -	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -	$ -

Development: Construction Impacts

The Project will be undertaken in a single phase, therefore no Development impacts are presented.

Surrounding Area: Construction Impacts

The indirect (direct excluded) economic impacts of the construction of the current phase of the Project are estimated below.

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Project Construction Y1	9	$ 29.98
Project Construction Y2	9	$ 29.98
Project Construction Y3	9	$ 29.98
Project Operating Y1	-	$ -
Project Operating Y2	-	$ -
Project Operating Y3	-	$ -
Project Operating Y4	-	$ -
Project Operating Y5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Project Construction Y1	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -
Project Construction Y3	$ -	$ -	$ -
Project Operating Y1	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Project Construction Y1	$ 94,000	$ 63,000	$ -	$ 75,000
Project Construction Y2	$ 94,000	$ 63,000	$ -	$ 75,000
Project Construction Y3	$ 94,000	$ 63,000	$ -	$ 75,000
Project Operating Y1	$ -	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -	$ -

Catalyzed Projects: Construction Impacts

The direct and indirect economic impacts arising from the construction of other proposed, defined projects ("Catalyzed Projects") within a one-half mile (2,640 foot) radius of the Project (the "Radius") that would be directly caused or accelerated by the Project during the Completion Period of the Project are estimated below.

Additional information about the Catalyzed Projects can be found in the Catalyzed Projects Impacts section of the EIS. The construction economic impacts of individual Catalyzed Projects are reported separately in Addendum #1A Individual Catalyzed Projects Construction Impacts.

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Project Construction Y1	-	$ -
Project Construction Y2	1,059	$ 32.15
Project Construction Y3	2,520	$ 32.38
Project Operating Y1	1,461	$ 32.54
Project Operating Y2	-	$ -
Project Operating Y3	-	$ -
Project Operating Y4	-	$ -
Project Operating Y5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Project Construction Y1	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -
Project Construction Y3	$ -	$ -	$ -
Project Operating Y1	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Project Construction Y1	$ -	$ -	$ -	$ -
Project Construction Y2	$ 562,000	$ 3,470,000	$ -	$ 452,000
Project Construction Y3	$ 1,063,000	$ 8,314,000	$ -	$ 855,000
Project Operating Y1	$ 501,000	$ 4,844,000	$ -	$ 403,000
Project Operating Y2	$ -	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -	$ -

Total: Construction Impacts

The total of all estimated construction impacts are presented below.

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Project Construction Y1	668	$ 31.60
Project Construction Y2	1,727	$ 31.94
Project Construction Y3	3,188	$ 32.22
Project Operating Y1	1,461	$ 32.54
Project Operating Y2	-	$ -
Project Operating Y3	-	$ -
Project Operating Y4	-	$ -
Project Operating Y5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Project Construction Y1	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -
Project Construction Y3	$ -	$ -	$ -
Project Operating Y1	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Project Construction Y1	$ 94,000	$ 2,652,000	$ -	$ 554,000
Project Construction Y2	$ 656,000	$ 6,122,000	$ -	$ 1,006,000
Project Construction Y2	$ 1,157,000	$ 10,966,000	$ -	$ 1,409,000
Project Operating Y1	$ 501,000	$ 4,844,000	$ -	$ 403,000
Project Operating Y2	$ -	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -	$ -

Addendum #1A: Individual Catalyzed Projects Construction Impacts

This section estimates the economic impacts arising from the construction of future developments that would be directly caused and accelerated by the Project in the five years after completion of construction of the Project. Additional details about the catalyzed projects can be found in the EIS.

Catalyzed Project #1: Construction Impacts

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Proj. Construction Y1	-	$ -
Proj. Construction Y2	779	$ 32.23
Proj. Construction Y3	779	$ 32.23
Operating 1	-	$ -
Operating 2	-	$ -
Operating 3	-	$ -
Operating 4	-	$ -
Operating 5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Proj. Construction Y1	$ -	$ -	$ -
Proj. Construction Y2	$ -	$ -	$ -
Proj. Construction Y3	$ -	$ -	$ -
Operating 1	$ -	$ -	$ -
Operating 2	$ -	$ -	$ -
Operating 3	$ -	$ -	$ -
Operating 4	$ -	$ -	$ -
Operating 5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Proj. Construction Y1	$ -	$ -	$ -	$ -
Proj. Construction Y2	$ 394,000	$ 2,557,000	$ -	$ 317,000
Proj. Construction Y3	$ 394,000	$ 2,557,000	$ -	$ 317,000
Operating 1	$ -	$ -	$ -	$ -
Operating 2	$ -	$ -	$ -	$ -
Operating 3	$ -	$ -	$ -	$ -
Operating 4	$ -	$ -	$ -	$ -
Operating 5	$ -	$ -	$ -	$ -

Catalyzed Project #2: Construction Impacts

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Proj. Construction Y1	-	$ -
Proj. Construction Y2	-	$ -
Proj. Construction Y3	969	$ 32.40
Operating 1	969	$ 32.40
Operating 2	-	$ -
Operating 3	-	$ -
Operating 4	-	$ -
Operating 5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Proj. Construction Y1	$ -	$ -	$ -
Proj. Construction Y2	$ -	$ -	$ -
Proj. Construction Y3	$ -	$ -	$ -
Operating 1	$ -	$ -	$ -
Operating 2	$ -	$ -	$ -
Operating 3	$ -	$ -	$ -
Operating 4	$ -	$ -	$ -
Operating 5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Proj. Construction Y1	$ -	$ -	$ -	$ -
Proj. Construction Y2	$ -	$ -	$ -	$ -
Proj. Construction Y3	$246,000	$ 3,198,000	$ -	$ 198,000
Operating 1	$246,000	$ 3,198,000	$ -	$ 198,000
Operating 2	$ -	$ -	$ -	$ -
Operating 3	$ -	$ -	$ -	$ -
Operating 4	$ -	$ -	$ -	$ -
Operating 5	$ -	$ -	$ -	$ -

Catalyzed Project #3: Construction Impacts

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Proj. Construction Y1	-	$ -
Proj. Construction Y2	-	$ -
Proj. Construction Y3	492	$ 32.82
Operating 1	492	$ 32.82
Operating 2	-	$ -
Operating 3	-	$ -
Operating 4	-	$ -
Operating 5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Proj. Construction Y1	$ -	$ -	$ -
Proj. Construction Y2	$ -	$ -	$ -
Proj. Construction Y3	$ -	$ -	$ -
Operating 1	$ -	$ -	$ -
Operating 2	$ -	$ -	$ -
Operating 3	$ -	$ -	$ -
Operating 4	$ -	$ -	$ -
Operating 5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Proj. Construction Y1	$ -	$ -	$ -	$ -
Proj. Construction Y2	$ -	$ -	$ -	$ -
Proj. Construction Y3	$ 255,000	$ 1,646,000	$ -	$ 205,000
Operating 1	$ 255,000	$ 1,646,000	$ -	$ 205,000
Operating 2	$ -	$ -	$ -	$ -
Operating 3	$ -	$ -	$ -	$ -
Operating 4	$ -	$ -	$ -	$ -
Operating 5	$ -	$ -	$ -	$ -

Catalyzed Project #4: Construction Impacts

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Proj. Construction Y1	-	$ -
Proj. Construction Y2	281	$ 31.94
Proj. Construction Y3	281	$ 31.94
Operating 1	-	$ -
Operating 2	-	$ -
Operating 3	-	$ -
Operating 4	-	$ -
Operating 5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Proj. Construction Y1	$ -	$ -	$ -
Proj. Construction Y2	$ -	$ -	$ -
Proj. Construction Y3	$ -	$ -	$ -

Operating 2	$ -	$ -	$ -
Operating 3	$ -	$ -	$ -
Operating 4	$ -	$ -	$ -
Operating 5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Proj. Construction Y1	$ -	$ -	$ -	$ -
Proj. Construction Y2	$ 168,000	$ 913,000	$ -	$ 135,000
Proj. Construction Y3	$ 168,000	$ 913,000	$ -	$ 135,000
Operating 1	$ -	$ -	$ -	$ -
Operating 2	$ -	$ -	$ -	$ -
Operating 3	$ -	$ -	$ -	$ -
Operating 4	$ -	$ -	$ -	$ -
Operating 5	$ -	$ -	$ -	$ -

Addendum #2: Total Impacts (Operational and Construction)

Total Impacts

The tables below represent the total economic impact associated with the operational and construction activities of the Project, Surrounding Area, and Catalyzed Projects.

Operations Jobs

Year	Full-Time Equivalents	Average Hourly Wage
1	28	$ 28.88
2	48	$ 30.24
3	48	$ 30.77
4	48	$ 31.22
5	48	$ 31.67

Tenant Jobs

Year	Full-Time Equivalents	Average Hourly Wage
1	2,423	$ 38.64
2	4,099	$ 41.07
3	4,242	$ 40.61
4	4,403	$ 40.06
5	4,542	$ 39.70

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Project Construction Y1	668	$ 31.60
Project Construction Y2	1,727	$ 31.94
Project Construction Y3	3,188	$ 32.22
Project Operating Y1	1,461	$ 32.54
Project Operating Y2	-	$ -
Project Operating Y3	-	$ -
Project Operating Y4	-	$ -
Project Operating Y5	-	

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Project Construction Y1	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -
Project Construction Y3	$ -	$ -	$ -
Project Operating Y1	$ 28,850,000	$ 63,078,000	$ 24,691,000
Project Operating Y2	$ 77,695,000	$ 105,053,000	$ 36,803,000
Project Operating Y3	$ 80,275,000	$ 145,798,000	$ 45,268,000
Project Operating Y4	$ 83,473,000	$ 165,049,000	$ 46,196,000
Project Operating Y5	$ 85,142,000	$ 191,691,000	$ 47,856,000

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Project Construction Y1	$ 94,000	$ 2,652,000	$ -	$ 554,000
Project Construction Y2	$ 656,000	$ 6,122,000	$ -	$ 1,006,000
Project Construction Y3	$ 1,157,000	$ 10,966,000	$ -	$ 1,409,000
Project Operating Y1	$ 9,747,000	$ 15,420,000	$ 6,584,000	$ 30,608,000
Project Operating Y2	$ 17,461,000	$ 19,454,000	$ 10,273,000	$ 63,931,000
Project Operating Y3	$ 21,318,000	$ 20,572,000	$ 14,179,000	$ 96,352,000
Project Operating Y4	$ 22,990,000	$ 21,770,000	$ 15,809,000	$ 132,471,000
Project Operating Y5	$ 25,202,000	$ 23,004,000	$ 18,394,000	$ 172,546,000
Total	**$ 98,625,000**	**$ 119,960,000**	**$ 65,239,000**	**$ 498,877,000**

Total	**$ 782,701,000**	

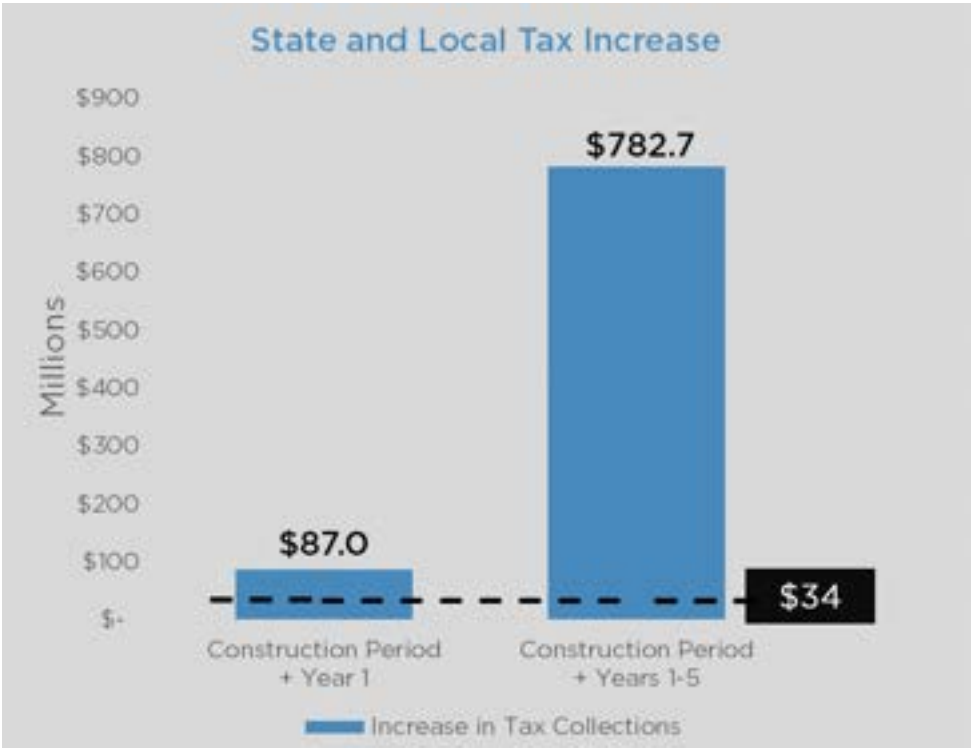
TMUD Qualification and Alternative Method of Valuation

The Developer requests that ODOD consider this EIS and the associated addenda both for the purposes of determining TMUD eligibility and eligibility for the alternative method of valuing the TMUD tax credits ("AMV") as described in Section 122.09(F) of the Ohio Revised Code ("ORC").

Having reviewed the provisions of ORC Section 122.09 and ODOD's guidance to date, Silverlode can confirm, with reasonable certainty, that the increase in tax collections in the Surrounding Area would exceed ten percent (10%) of the estimated development costs within one year after the Project is completed.

As set forth in this report, TMUD eligible development costs ("Development Costs") are estimated to be approximately $341.1 million, and the estimated increase in tax collections is expected to reach $87.0 million within one year after the Project is completed, which well exceeds (2.6 times) the $34 million (10%) AMV eligibility threshold for the first year following Project completion. During the Project's construction and the five years that follow its completion, the estimated increase in tax collections is expected to reach approximately $782.7 million, which is approximately 23 times the $34 million of TMUD tax credits requested for the Project.

To determine the increase in state and local tax collections, only taxes collected under chapters 718, 5705, 5739, 5741, and 5747 of the Ohio Revised Code were considered. Property tax estimates included in this analysis include tax increment financing service payments, but do not include abated real estate taxes. The computation of the increase in tax collections does not include baseline taxes being collected.



North Market Public Support

Economic Impact Statement

Further, the importance and transformational nature of this project is highlighted by the State and Local leaders, including the business, civic and institutional community. The pages that follow include statements addressing the project's impact from key leaders, business owners, community stakeholders and others invested in Ohio's future.

JAMES MERKEL
CEO, ROCKBRIDGE

"This transformational and iconic project began with a big vision for driving impact in our city and our state – exactly the type of catalytic vision the TMUD program was designed to support. Every aspect of the project – from its blueprint to its funding structure – was designed to address our state's most essential needs including housing, density, small business incubation that promotes diversity, walkability, accommodation enhancement to grow convention business, and more. It also models the power of public-private collaboration in urban development while celebrating the resilience, grit and entrepreneurial spirit of our treasured North Market merchants. As a local firm, Rockbridge is proud to have successfully executed premier mixed-use projects and experiences across the country, and we look forward bringing this vision to life for the State of Ohio and our capital city."

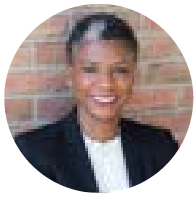
Economic Impact Statement

ANDREW J. GINTHER
MAYOR, CITY OF COLUMBUS

"It's exciting to see this transformational vision progressing at such a critical time in Columbus, as this proposed plan for the project not only secures the preservation and expansion of the North Market – it also creates construction and permanent jobs for residents. This partnership between public and private entities addresses the region's need for housing Columbus residents can afford and adds important hotel accommodations that help us compete for convention business and events."

MICHAEL STEVENS
DIRECTOR OF DEVELOPMENT, CITY OF COLUMBUS

"The City is pleased to support this project for Ohio's new Transformational Mixed-Use Development Tax Credit, as it represents the type of catalytic economic impact the program was created to support. The project expands our city's ability to compete for large conventions; protects a historic treasure that fosters commerce and community exchange; creates residential housing including affordable workforce units; creates a new parking solution; offers social and recreational activities; and much more. This project is vital for Columbus and without the TMUD credit, the project cannot move forward."



JANELLE N. COLEMAN
PRESIDENT, AMERICAN ELECTRIC POWER FOUNDATION
VICE PRESIDENT, COMMUNITY ENGAGEMENT, DIVERSITY INCLUSION

"In urban development today, many projects are designed to capitalize on opportunities that exist within communities – but few are deliberately designed to meet a community's socioeconomic needs while providing for its residents and protecting its historic assets. The North Market Mixed-Use Development Project is poised to help our community grow stronger in many ways and will be a rising tide for the surrounding area, Columbus, and our entire statewide economy."

DEE HASLAM
COLUMBUS CREW INVESTOR/CO-OWNER; CLEVELAND BROWNS OWNER; CEO HASLAM SPORTS GROUP

"During the 2020 MLS season, we learned that ultimate success in professional sports can only be achieved when team goals are held in higher regard than individual goals. We are extremely excited about the opportunities that can be created for the city of Columbus, our region, and across the state of Ohio when the North Market Mixed-Use development is completed. Success will come with a continued focus on mutual respect paired with bold leadership and a team-first mindset. This approach represents a winning combination, and I strongly support the efforts to move this transformational project forward to benefit the entire region."

ALEX FISCHER
PRESIDENT AND CEO, COLUMBUS PARTNERSHIP

"Transformational projects absolutely demand a willingness to work together across public and private boundary lines to solve problems. The key to success stems from a bold vision for a better future, and our region has established a great track record for this type of innovation. The North Market Mixed-Use Development is one of the best examples of the type of community minded development we need to be successful as a city and as a state in the future."

Economic Impact Statement

KENNY MCDONALD
PRESIDENT AND CEO, ONE COLUMBUS

"The North Market project is a great example of how collaboration in the development realm can dramatically change the face of local and statewide economies. This project, quite simply, needs to move forward – and awarding the Transformational Mixed-Use Development Tax Credit to the project is critical to ensuring that happens."

BRIAN ROSS
PRESIDENT AND CEO, EXPERIENCE COLUMBUS

"It is extremely important that our city's historic and vibrant North Market thrives for years to come and adds a distinct hospitality experience that does not exist today for our visitors and residents. The North Market enhancement will help differentiate our destination and attract millions of dollars into Columbus and Ohio."

DOUG ULMAN
CEO, PELOTONIA

"At Pelotonia, we're incredibly proud of the legacy and power of what we built – but none of us can claim we did it alone. That is certainly the spirit of this transformational project, and it's remarkable to see new innovation that will change the face of Columbus and our state. This project stands to be truly dramatic and impactful for Columbus and all of Ohio. I strongly support this important project and it's awarding of the TMUD credit so that it can help our state grow and prosper."

CHRIS OLSEN
PARTNER, DRIVE CAPITAL

"At Drive Capital, we support projects that aim to transform; and we partner with founders who are solving critical problems in massive markets. In order for us to get involved, we have to be convinced that a project's/company's vision and the leadership team are truly world class. The North Market Mixed-Use Development is unique in its structure and vision and we believe it sets a high-water mark for how cities everywhere should be approaching urban development and small business incubation. This is the type of project that the forward-looking cities need and that growing businesses demand."

SUE ZAZON
CENTRAL OHIO PRESIDENT, HUNTINGTON BANK

"It's easy to understand a tall building going up in an urban center or new residential units being built. What's at the heart of this project, however, is something so critical to our community but easy to overlook – the small business merchants and the historic legacy of the North Market. This project embodies how large developments can be directly impactful to small businesses and job growth; and how old and new elements can be combined to live in harmony. This mixed-use design will be a change agent for future positive development in Ohio's capital city. Rockbridge is exceptionally creative and builds experiences via real estate, not just buildings. This unique, experiential building will have a transformational impact and help drive growth for Ohio as we compete for talent. It also is a great representation of public/private partnership. I encourage the State of Ohio to support this project via the TMUD tax credit."

Economic Impact Statement

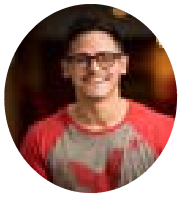
Lastly, this project will enhance and support the North Market and its merchants, providing additional space, capacity and financial support to ensure it will thrive long-term. Below is a collection of statements from a number of North Market leadership and merchants, illustrating this project's importance to North Market itself.

RICK HARRISON WOLFE
EXECUTIVE DIRECTOR, NORTH MARKET DEVELOPMENT AUTHORITY
EXECUTIVE DIRECTOR, OHIO PUBLIC MARKET AUTHORITY

"The North Market must continue to be an evolving institution to stay relevant and prosperous. This project will provide financial stability, expand merchant space, and provide more areas for the public to engage with the market and our merchants. It is a groundbreaking project for a public market on a global scale."

MARTY MCGREEVY
OWNER, MARKET BLOOMS
LONGEST RUNNING MERCHANT | AT THE MARKET SINCE 1990

"In 1876, a group of merchants collaborated to become The North Market. 145 years later we are still reaping the benefits of these individuals' vision. Originally started as a way to provide their neighbors with sustenance, the Market now feeds the city of Columbus with a vibrant destination. Working together on this Mixed-Use project pays tribute to these earliest merchants."



JOE DELOSS
HOT CHICKEN TAKEOVER
SMALL BUSINESS SUCCESS STORY | MISSION DRIVEN OWNER FOR EQUITABLE EMPLOYMENT

"The evolution of the North Market represents such a huge opportunity for our city and our community of entrepreneurs. This space has already been home to so many of the ideas, businesses, and people that have made Columbus such a destination. It's hard to even imagine the potential of an enhanced facility, more vendors, and more traffic - I know whatever comes of it will enrich our community even further."

Economic Impact Statement

ABDILAHI & MOHAMMED HASSAN
OWNERS, HOYO'S KITCHEN

SMALL BUSINESS OWNERS & PURVEYORS OF SOMALI CUISINE

"We never would have survived as a family owned business by only marketing to Somali diners, so being invited to bring Hoyo's to the North Market was a turning point in our mission to bring African cuisine into the mainstream. Columbus has the second-largest Somali population in the United States, which many people don't know. This is our way of helping our community understand the best of our Somali culture and meet the neighbors they didn't know they had."

JEN BURTON
CO-OWNER, THE BARREL AND BOTTLE

SMALL BUSINESS OWNER

"As North Market merchants, we are, in a way, ambassadors to Columbus. We recommend restaurants, bars and shopping to all that come through our doors while they are in town. The market has grown into a real hub of new and exciting things! It really highlights all different cultures and genres of food in Columbus and it's ever-evolving. It is an amazing place to start and grow a business. It is a small business family community that has a huge impact on Columbus as a whole. This development will be just what the market has needed and we cannot wait for it to happen!"

COLLIN CASTORE
CO-OWNER, THE BARRELL AND BOTTLE

MERCHANT REPRESENTATIVE TO NMDA BOARD OF DIRECTORS

"The downtown North Market has played a vital role incubating Columbus small business and showcasing talented vendors for decades. The cooperative mixed use tower offers a unique opportunity and a truly unique space that will continue to showcase the best and most creative parts of our city. We can't wait to grow with our North Market."

MEMORANDUM

To: **Ohio Department of Development**

From: Van Wert County Foundation

Re: **Economic Impact Statement**

Date: July 5, 2022

Please find attached the third-party report conducted by the University of Cincinnati Economics Center for Research and Consulting showing that the Van Wert Forward Project Phase II's projected increase in tax collections during the completion period exceeds 10% of the estimated development costs of the Project. 10% of the estimated development costs for the Project is approximately $1.12MM.

Tax collections are anticipated to exceed $7.5MM. See *Table 44: Total Fiscal Impact* (page 35 of report).

Executive Summary

Model Group intends to invest $11.2 million to redevelop five adjacent, historical buildings in downtown Van Wert.[1] The Van Wert Forward II Project will include 15 apartments, 3,180 square feet of office space, 2,635 square feet of restaurant space, and 1,625 square feet of retail space. Construction is anticipated to begin in 2023 with the opening of the Van Wert Forward II Project expected in 2025. This proposed Project will drive substantial economic activity in the Surrounding Area during the five years after construction is complete, referred to as the completion period.[2]

This report estimates the Project, Development, Surrounding Area, catalyzed project, and total impacts generated by the Van Wert Forward II Project on the Surrounding Area. The economic impact on jobs, earnings, and economic activity as well as the fiscal impact on tax revenues for state and local jurisdictions are included. Economic impacts are separated into operations impacts, which represent the management of the Project site after construction is complete and operations commence, and the tenant impacts. Operations impacts represent the labor required to operate the Van Wert Forward II Project as well as the associated impacts on earnings. Tenant impacts represent the labor required by anticipated tenants of the Van Wert Forward II Project and the associated impacts on earnings and economic activity. All dollars reported in this analysis reflect nominal dollars unless otherwise stated

Project Impacts

- Operations of the completed Van Wert Forward II Project will directly support a total of five jobs with earnings of $171,065 during the first five years of operation. The annual earnings of operations jobs average $66,504, which equates to an average hourly wage of $31.97.
- During the first five years of operation, the completed Van Wert Forward II Project will directly generate $7,048 in earnings tax revenue for the State of Ohio and the City of Van Wert.
- The tenant businesses of the Van Wert Forward II Project will directly generate $23.9 million in economic activity at the Project site during the first five years of operation. A total of 175 jobs with earnings of $7.1 million will be directly supported by tenant businesses of the Van Wert Forward II Project. Tenant jobs will have average annual earnings of $40,349, which equates to an average hourly wage of $19.40.
    - The direct economic activity generated during the first five years of operation comprises $15.5 million in office sales, $5.2 million in restaurant sales, $3.2 million in retail sales.
- During the first five years of operation, the tenant businesses of the Van Wert Forward II Project will directly generate fiscal benefits totaling $857,537 for state and local jurisdictions.
    - The State of Ohio will receive $130,806 in earnings tax revenues and $479,968 in sales tax revenues.
    - Van Wert County will receive $125,209 in sales tax revenues.
    - The City of Van Wert will receive $121,554 in earnings tax revenues.

[1] Reported in 2022 dollars.
[2] The Surrounding Area for a development not located within ten miles of a major city, determined by starting from the corporate boundary of the major city and extending out ten miles from that boundary, is defined as the area encompassed within a perimeter starting from the transformational mixed-use development boundary and extending two miles out from that boundary. For the Van Wert Forward II Project, the Surrounding Area is defined as zip code 45891.

Development Impacts

- The Van Wert Forward II Project is part of the larger Van Wert Forward Development. The Van Wert Forward Development encompasses the redevelopment of 19 adjacent, historical buildings in downtown Van Wert. The Van Wert Forward Development will include 58 apartments and a total of 49,035 square feet of tenant space. The tenant space comprises 20,059 square feet of restaurant space, 17,695 square feet of office space, 6,920 square feet of institutional space to house a co-working space and business incubator, and 4,361 square feet of retail space. The total development costs of the Van Wert Forward Development are approximately $42.2 million.[3]
- Phase I of the Van Wert Forward Development is currently under construction and was awarded a tax credit during the fiscal year 2022 funding cycle for the Transformational Mixed-Use Development Program, and phase II refers to the Project. Therefore, the Van Wert Forward Development related impacts refer to only the impacts generated by phase III of the Van Wert Forward Development.
- Phase III of the Van Wert Forward Development encompasses the redevelopment of three historic properties in downtown Van Wert. Construction of phase III is expected to occur in 2024. Phase III of the Van Wert Forward Development will include two apartments and 7,106 square feet of commercial space. The commercial space of phase III comprises 4,370 square feet of office space and 2,736 square feet of retail space. The total development costs associated with construction of the Van Wert Forward Development are approximately $4.2 million.[4]
- Opening in 2025, the operations of the completed phase III of the Van Wert Forward Development will directly support one job with earnings of $89,619 during the completion period. The average annual hourly wage of operations jobs supported by phase III of the Van Wert Forward Development is $31.05.
- During the completion period, the completed phase III of the Van Wert Forward Development will directly generate $3,830 in earnings tax revenue for the State of Ohio and the City of Van Wert.
- The tenant businesses of phase III of the Van Wert Forward Development will directly generate $26.7 million in economic activity at the Development site during the completion period. The direct economic activity comprises $21.3 million in office sales and $5.4 million in retail sales. A total of 125 jobs with earnings of $7.9 million will be directly supported by tenant businesses of phase III of the Van Wert Forward Development. Tenant jobs will have average annual earnings of $62,189, which equates to an average hourly wage of $29.90.
- During the completion period, the tenant businesses of phase III of the Van Wert Forward Development will directly generate fiscal benefits totaling $710,290 for state and local jurisdictions.
    - The State of Ohio will receive $186,130 in earnings tax revenues and $380,261 in sales tax revenues.
    - Van Wert County will receive $80,416 in sales tax revenues.
    - The City of Van Wert will receive $135,483 in earnings tax revenues.

[3] Reported in 2022 dollars.
[4] Reported in 2022 dollars.

Surrounding Area Impacts

- In addition to the direct impacts, the operations and tenant businesses of the completed Van Wert Forward II Project and phase III of the Van Wert Forward Development will generate additional indirect impacts within the Surrounding Area as a result of the inter-industry linkages. In total, the direct economic activity generated by operations and tenant business will result in an additional $12.3 million in indirect economic activity in the Surrounding Area during the completion period. The completed Van Wert Forward II Project and phase III of the Van Wert Forward Development will indirectly support a total of 75 jobs with $4.3 million in earnings during the completion period. The average hourly wage of indirect jobs is $27.58.
- During the completion period, the Van Wert Forward II Project and phase III of the Van Wert Forward Development will indirectly generate fiscal benefits totaling $523,633 through earnings and property tax revenue.
    - During the completion period, the indirect jobs supported by the completed Van Wert Forward II Project and phase III of the Van Wert Forward Development will generate $171,418 in earnings tax revenue for the State of Ohio and the City of Van Wert.
    - Upon its completion, the Van Wert Forward II Project will increase residential property values in the Surrounding Area resulting in an additional $352,215 in property tax revenue during the first five years of the Project's operation. Of the total increase in property tax revenue, Van Wert County will receive $36,551, the City of Van Wert[5] will receive $26,327, Van Wert City Schools will receive $266,333, and the Joint Vocational School District will receive $23,004.

Catalyzed Project Impacts

- The Van Wert Forward II Project will directly cause or accelerate three additional projects in the Surrounding Area during the completion period.
    - The redevelopment of the vacant, historical building at 223 E. Main Street in downtown Van Wert will comprise 17,500 square feet of restaurant space. This Project is anticipated to start construction in early 2023 and take approximately 18 to 24 months to complete. The total development costs associated with the redevelopment of the historical building at 223 E. Main Street are approximately $3.5 million.[6]
    - The redevelopment of the former theater building at 147 E. Main Street in downtown Van Wert will comprise 7,900 square feet of entertainment space. This Project is anticipated to start construction in early 2023 and take approximately 18 to 24 months to complete. The total development costs associated with the redevelopment of the historical building at 147 E. Main Street are approximately $1.5 million.[7]
    - The Van Wert Forward IV Project encompasses the redevelopment of four historic properties in downtown Van Wert. This Project is outside the scope of the Van Wert Forward Development and is therefore included as a catalyzed project. The Van Wert Forward IV Project is anticipated to start construction in late 2023 and take approximately 18 to 24 months to complete. The Van Wert Forward IV Project will include 60 apartments and 20,000 square feet of commercial space for retail and/or

[5] The City of Van Wert also includes the portions of property tax revenue distributed to the township and other entities.
[6] Reported in 2022 dollars.
[7] Reported in 2022 dollars.

restaurant tenants. The total development costs associated with construction of the Van Wert Forward IV Project are approximately $23.8 million.[8]

- The three projects directly caused or accelerated by the Van Wert Forward II Project will generate a total of $73.7 million in economic activity during the completion period, of which $67.2 million represents the direct economic activity. The direct economic activity generated comprises $34.3 million in restaurant sales, $31.7 million in commercial sales, and $1.2 million in entertainment sales. A total of 1,008 jobs with earnings of $24.2 million will be directly and indirectly supported during the completion period by the catalyzed projects of the Van Wert Forward II Project.

Total Impacts

- During the completion period, the Project, Development, Surrounding Area, and catalyzed project impacts of the Van Wert Forward II Project will generate $136.6 million in economic activity. The sales of office, restaurant, retail, entertainment, and commercial business will directly generate $117.7 million in economic activity, while the subsequent spending will indirectly generate $18.9 million in economic activity. The Van Wert Forward II Project will directly and indirectly support a total of 1,388 jobs with earnings of $43.7 million.
- During the completion period, the Van Wert Forward II Project will generate fiscal benefits totaling $7.5 million for state and local jurisdictions through the Project, Development, Surrounding Area, and catalyzed project impacts.
    - Earnings tax revenues of $655,933 will accrue to the State of Ohio and $751,406 will accrue to the City of Van Wert. A total of $1.4 million in earnings tax revenue will be generated.
    - Of the $352,215 in additional property tax revenue generated, Van Wert County will receive $36,551, the City of Van Wert will receive $26,327, Van Wert City Schools will receive $266,333, and the Joint Vocational School District will receive $23,004.
    - The State of Ohio and Van Wert County will receive $4.6 million and $1.2 million in sales tax revenue, respectively. A total of $5.8 million in sales tax revenue will be generated.

[8] Reported in 2022 dollars.

Introduction

The Van Wert Forward II Project is a proposed mixed-use development in the City of Van Wert, Van Wert County. The proposed redevelopment of five adjacent, historical buildings in downtown Van Wert will drive substantial economic activity in the Surrounding Area.[9] The Van Wert Forward II Project is anticipated to start construction in 2023 and open in 2025. Model Group plans to invest approximately $11.2 million to construct the Van Wert Forward II Project.[10] As shown in Table 1, the Van Wert Forward II Project will include 15 apartments, 3,180 square feet of office space, 2,635 square feet of restaurant space, 1,625 square feet of retail space.

Table 1: Use Breakdown of the Proposed Van Wert Forward II Project

Type of Mixed-Use	Dimensions/Quantity
Multifamily Residential	15,290 square feet (15 apartments)
Office	3,180 square feet
Restaurants	2,635 square feet
Retail	1,625 square feet

Source: Model Group.

The Van Wert Forward II Project refers to phase II of the larger Van Wert Forward Development. Phase I of the Van Wert Forward Development was awarded a tax credit of $2.6 million during the fiscal year 2022 funding cycle for the Transformational Mixed-Use Development (TMUD) Program. Per the Ohio Department of Development's Transformational Mixed-Use Development Guidelines, the impacts of phase I of the Van Wert Forward Development are not included in this report since it was already awarded a tax credit.

This report estimates the Project, Development, Surrounding Area, catalyzed project, and total impacts generated by the Van Wert Forward II Project on the Surrounding Area.[11] The economic impact on jobs, earnings, and economic activity as well as the fiscal impact on tax revenues for state and local jurisdictions are detailed for each impact category in the following sections. Table 2 provides a guide to the tables associated with each impact category described in the Ohio Department of Development's TMUD Program Economic Impact Statement Framework, released May 2022 and updated June 10, 2022. All dollars reported in this analysis reflect nominal dollars unless otherwise stated. Long-run inflation estimates for 2022 through 2031 were obtained from the National Economic Estimating Conference.[12]

[9] The Surrounding Area for a development not located within ten miles of a major city, determined by starting from the corporate boundary of the major city and extending out ten miles from that boundary, is defined as the area encompassed within a perimeter starting from the transformational mixed-use development boundary and extending two miles out from that boundary. For the Van Wert Forward II Project, the Surrounding Area is defined as zip code 45891.
[10] Reported in 2022 dollars.
[11] Model Group provided the list of projects directly caused or catalyzed by the Van Wert Forward II Project and the associated project details.

Methodology

Economic Impact

This economic impact analysis measures the amount of economic transactions expected to result from the operations of the Van Wert Forward II Project. The economic impact analysis includes the impacts of operations resulting from the management of the Project site after construction is complete and operations commence as well as the impacts of the tenant businesses of the Van Wert Forward II Project.

Economic impact figures represent the effects that a given mixed-use development and its associated economic activities have upon a surrounding community. The economic impacts are reported in terms of jobs, earnings, and economic actvitity. The number of jobs represents full-time equivalent employees. Earnings refer to the compensation of employees excluding personal contributions to Social Security, Medicare, or employee pension plans. Average earnings represent the total earnings divided by the number of jobs. Lastly, economic activity refers to the direct sales of tenant businesses and the subsequent spending on goods and services occuring in the local economy. The impacts of operations represent the labor required to operate the Van Wert Forward II Project as well as the associated impacts on earnings. The impacts of the tenant businesses represent the labor required by anticipated tenants of the Van Wert Forward II Project and the associated impacts on earnings and economic activity.

Mixed-use developments will affect local communities through the purchases of local goods and services made by the development and its tenants. In turn, those local businesses supported purchase goods and services at other local businesses. The direct impacts of a development include the impacts resulting from the operations of the development and the impacts resulting from the tenenat businesses. The direct impacts include the local cost of supplies, maintence, and wages paid to employees. These direct expenditures affect other industries by increasing demand for products and services, creating jobs associated with the provision of these products and services, and generating incomes. This is the indirect impact, or the additional economic impact that is a result from inter-industry linkages. The indirect impacts are the expenditures and employment that are created in the local economy to the extent that industries and households are supported by and respond to the new demands of the directly impacted industries. Finally, the direct and indirect impacts create induced impacts due to the spending of private households. Per the Ohio Department of Development's TMUD Program Economic Impact Statement Framework, released May 2022 and updated June 10, 2022, induced impact are excluded from this analysis.

The Economics Center used an input-output model to conduct this economic impact analysis. Input-output models give a picture of the direct and indirect impacts of a given business or organization on its local economy. The input-output model includes industry- and location-specific multipliers that capture the interdependencies of an economy's various industries, quantifying how direct expenditures on goods or services by a particular industry (or to individuals in the form of wages) yield additional changes in jobs, earnings, and economic activity within that economy. Multipliers are figures that

represent all of the inter-industry relationships measured in the input-output model. Multipliers were sourced from Lightcast, a third-party provider of labor market data. Lightcast utilizes labor market data and other publicly available sources in a proprietary methodology to allow for tailored economic multipliers in a specified geographic area. For every dollar spent by a given organization in a particular industry, multipliers reflect how many more dollars will be spent in a local economy by other businesses, thereby determining the total economic impact of a project or investment. Multipliers also measure how many jobs and the amount of earnings that will be generated in an economy for a given level of expenditure.

All economic impact figures refer to the impact of the Van Wert Forward II Project on its Surrounding Area. The Surrounding Area for a project not located within ten miles of a major city, determined by starting from the corporate boundary of the major city and extending out ten miles from that boundary, is defined as the area encompassed within a perimeter starting from the transformational mixed-use development boundary and extending two miles out from that boundary and includes any zip code covered in whole or in part. For the Van Wert Forward II Project, the Surrounding Area is defined as zip code 45891.

The Economics Center calculated the economic impact of the operations of the Project by using estimates of the number of square feet per job. For residential spaces, it was assumed that 50,000 square feet of space supports one job.[13] For nonresidential spaces, it was assumed that 35,657 square feet of space supports one job.[14]

The Economics Center calculated the economic impact of the tenant businesses using projected revenues and/or employees for the industries proposed to locate at the Van Wert Forward II Project using projections provided by Model Group and supplemented with industry data for the Surrounding Area from Lightcast.

The economic impact of the retail and restaurant spaces are estimated based on direct sales generated per square foot. Model Groups estimates that the retail and restaurant spaces of the Van Wert Forward will generate $350 in sales per square foot. Industry data for the Surrounding Area was utilized to estimate the direct jobs and direct earnings generated. Direct jobs are estimated using the sales per job of the respective industries, and direct earnings are estimated using the average annual earnings per job of the respective industries.

The economic impact of the office space is estimated based on the direct jobs supported. Model Group estimates that approximately 286 square feet of office space of the Van Wert Forward will support one job. Industry data for the Surrounding Area were utilized to estimate direct sales and direct earnings. Direct sales are estimated using the sales per job for the resepective industries, and direct earnings are estimated using the average annual earnings per job of the respective industries.

The economic impact of the entertainment space is estimated based on the direct jobs supported. According to the U.S. Energy Information Administration, approximately 2,393 square feet of entertainment space supports one job.[15] Industry data for the Surrounding Area were utilized to estimate direct sales and direct earnings. Direct sales are estimated using the sales per job for the resepective industries, and direct earnings are estimated using the average annual earnings per job of the respective industries.

[15] (U.S. Energy Information Administration 2021)

Fiscal Impact

Once the Van Wert Forward II Project is operational, fiscal impacts will accrue for the State of Ohio, Van Wert County, the City of Van Wert, Van Wert City Schools, and the Joint Vocational School District. The fiscal impact represents the subsequent impact of the operations of the Van Wert Forward II Project on state and local jurisdictions. Fiscal impacts include earnings, property, and sales tax revenue.

The earnings of operations and tenant employees of the Van Wert Forward II Project will generate earnings tax revenues for the State of Ohio and the City of Van Wert. Sales tax revenues for the State of Ohio and Van Wert County are generated by the spending at the hotel, restaurant, and retail spaces. Additionally, Van Wert County, the City of Van Wert, Van Wert City Schools, and the Joint Vocational School District benefit from increases in property tax revenues due to increases in residential property values in the Surrounding Area.

All fiscal impacts are calculated using the most recent, applicable tax rates for the State of Ohio, the county, and local jurisdictions.[16] It is assumed that all tax rates remain unchanged in future years. State earnings tax revenues are calculated using the average annual earnings for the direct and indirect jobs supported by each use type. Therefore, the total state earnings tax revenues reported will not match estimates based on the average annual earnings of all jobs supported.

Project Impacts

The Van Wert Forward II Project will include 15 apartments, 3,180 square feet of office space, 2,635 square feet of restaurant space, and 1,625 square feet of retail space. The total development costs associated with Project construction are approximately $11.2 million.[17]

Once the Van Wert Forward II Project is operational, annual economic impacts in the form of jobs, earnings, and economic activity will be directly generated by the operations and tenant businesses of the Van Wert Forward II Project. Additionally, fiscal impacts in the form of tax revenues will be generated for state and local jurisdictions. The impacts of operations represent the labor required to operate the Van Wert Forward II Project as well as the associated impacts on earnings. The impacts of the tenant businesses represent the labor required by anticipated tenants of the Van Wert Forward II Project and the associated impacts on earnings and economic activity.

Full economic and fiscal impacts of operations of the Van Wert Forward II Project will be realized once target occupancy and sales are reached and operating revenues and expenditures stabilize. The economic and fiscal impacts discussed in this section reflect full occupancy and target-level sales.

Operations Impacts

Economic Impact

Operations impacts result from the management of the Project site after construction is complete and operations commence. As shown in Table 3, the operations of Van Wert Forward II Project will directly support one job per year. These jobs represent the labor required to manage the Project site such as leasing agents, grounds crew, and maintenance and custodial staff. A total of five jobs will be supported during the first five years of operation. The jobs supported will have total earnings of $171,065 during the first five years of operation, or an average of $34,213 per year. The direct jobs supported by the operations of the Van Wert Forward II Project will have average annual earnings of $66,504. Assuming

[16] The distribution of the additional property tax revenue accruing to various local jurisdictions utilizes published tax rates for 2020 due to discrepancies in the published tax rates for 2021.
[17] Reported in 2022 dollars.

40 working hours per week for 52 weeks per year, the average hourly wage of the direct jobs supported by the operations of the Van Wert Forward II Project is $31.97.

Table 3: Direct Jobs and Earnings Impact of Project Operations at the Project Site

Year of Operation	Jobs	Earnings	Average Hourly Wage
Year 1 (2025)	1	$32,681	$30.54
Year 2 (2026)	1	$33,400	$31.21
Year 3 (2027)	1	$34,168	$31.93
Year 4 (2028)	1	$34,988	$32.70
Year 5 (2029)	1	$35,828	$33.48
Total	**5**	**$171,065**	**$31.97**

Source: Economics Center calculations.

Fiscal Impact

The operations of the Van Wert Forward II Project will directly generate a total of $7,048 in earnings tax revenue for the State of Ohio and the City of Van Wert during the first five years of operation, as shown in Table 4. Of the earnings tax revenue generated during the first five years of operation, the State of Ohio will receive $4,106, while the City of Van Wert will receive $2,942. On average, a total of $1,410 in earnings tax revenue will be directly generated annually due to the operations of the Van Wert Forward II Project.

Table 4: Direct Fiscal Impact of Project Operations

Year of Operation	State of Ohio	City of Van Wert	Total Earnings Tax Revenue
Year 1 (2025)	$772	$562	**$1,334**
Year 2 (2026)	$795	$574	**$1,369**
Year 3 (2027)	$820	$588	**$1,408**
Year 4 (2028)	$846	$602	**$1,448**
Year 5 (2029)	$873	$616	**$1,489**
Total	**$4,106**	**$2,942**	**$7,048**

Tenant Impacts

Economic Impact

The tenant businesses of the Van Wert Forward II Project will generate revenues from services provided by tenants of the office space as well as through restaurant and retail purchases. These businesses will also hire and pay wages to employees needed to maintain daily operations. The economic impact of the tenant businesses of the Van Wert Forward II Project respresent the economic activity, jobs, and earnings generated at the Project site.

Tenant businesses of the Van Wert Forward II Project will directly generate economic activity, comprising business sales, wages and salaries paid to employees, and other non-wage operating expenditures made by tenants. As detailed in Table 5, the tenant businesses operating within the Van Wert Forward II Project will directly generate an estimated $23.9 million in economic activity during the first five years of operation. The direct economic activity of tenant businesses over the first five years of operation

comprises $15.5 million in office sales, $5.2 million in restaurant sales, and $3.2 million in retail sales. On average, a total of $4.8 million in economic activity will be directly generated by the tenant businesses of the Van Wert Forward II Project each year.

Table 5: Direct Sales of Project Tenants by Use Type at the Project Site

Year of Operation	Office	Restaurant	Retail	Total Direct Sales
Year 1 (2025)	[redacted]	[redacted]	[redacted]	[redacted]
Year 2 (2026)	[redacted]	[redacted]	[redacted]	[redacted]
Year 3 (2027)	[redacted]	[redacted]	[redacted]	[redacted]
Year 4 (2028)	[redacted]	[redacted]	[redacted]	[redacted]
Year 5 (2029)	[redacted]	[redacted]	[redacted]	[redacted]
Total	**$15,512,846**	**$5,163,163**	**$3,184,113**	**$23,860,122**

Source: Economics Center calculations.

Once tenant operations commence, the Van Wert Forward II Project will directly support 175 jobs at the Project site with earnings of $7.1 million during the first five years of operation, as detailed in Table 6. Each year an average of 35 jobs with earnings of $1.4 million will be directly supported by the tenant businesses of the Van Wert Forward II Project. This translates into average annual earnings of $40,349 per employee. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of direct employees of tenant businesses is $19.40.

Table 6: Direct Jobs and Earnings Impact of Project Tenants at the Project Site

Year of Operation	Jobs	Earnings	Average Hourly Wage
Year 1 (2025)	35	$1,350,126	$18.53
Year 2 (2026)	35	$1,379,829	$18.94
Year 3 (2027)	35	$1,411,565	$19.37
Year 4 (2028)	35	$1,445,442	$19.84
Year 5 (2029)	35	$1,480,133	$20.31
Total	**175**	**$7,067,095**	**$19.40**

Source: Economics Center calculations.

The economic impacts of tenant businesses are disaggregated by use-type in Appendix A.

Fiscal Impact

Fiscal impacts will accrue for the State of Ohio, Van Wert County, and the City of Van Wert once the Van Wert Forward II Project is operational. The earnings of Van Wert Forward II Project employees will generate earnings tax revenues for the State of Ohio and the City of Van Wert, and the spending of the Van Wert Forward II Project's restaurant and retail shoppers will generate sales tax revenues for the State of Ohio and Van Wert County.

Table 7 details the fiscal impacts of the tenant businesses of the Van Wert Forward II Project by type. The State of Ohio and the City of Van Wert will benefit from a total of $252,360 in earnings tax revenues as a result of tenant businesses during the first five years of operation. During the first five years of operation, the spending of the Van Wert Forward II Project's restaurant and retail shoppers will generate

$605,178 in sales tax revenues for the State of Ohio and Van Wert County. In total, the Van Wert Forward II Project will create $857,538 in fiscal benefits to state and local jurisdictions during the first five years of tenant operation.

Table 7: Direct Fiscal Impact of Project Tenants

Year of Operation	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
Year 1 (2025)	$47,846	$115,616	**$163,462**
Year 2 (2026)	$49,078	$118,159	**$167,237**
Year 3 (2027)	$50,395	$120,877	**$171,272**
Year 4 (2028)	$51,801	$123,778	**$175,579**
Year 5 (2029)	$53,240	$126,748	**$179,988**
Total[18]	**$252,360**	**$605,178**	**$857,538**

Source: Economics Center calculations.

Table 8 details the fiscal impacts accruing to state and local jurisdictions by type resulting from the tenant businesses of the Van Wert Forward II Project during the first five years of operation. The tenant businesses of the Van Wert Forward II Project will generate earnings tax revenues of $130,806 for the State of Ohio as well as $121,554 for the City of Van Wert. Van Wert County will benefit from $125,209 in sales tax revenue, while the State of Ohio will benefit from $479,968 in sales tax revenue.

Table 8: Direct Fiscal Impact of Project Tenants by Government Entity, Years 1-5

Government Entity	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
State of Ohio	$130,806	$479,968	**$610,774**
Van Wert County	N/A	$125,209	**$125,209**
City of Van Wert	$121,554	N/A	**$121,554**
Total[19]	**$252,360**	**$605,177**	**$857,537**

Total Impacts

Economic Impact

The total economic impacts include the jobs, earnings, and economic activity directly resulting from the Van Wert Forward II Project's operations and tenant businesses. Economic impacts reflect full occupancy and target-level sales. Table 9 details the total Project related economic impacts that will accrue after construction of the Van Wert Forward II Project is complete and operations commence. During the first five years of the Project's operation, the Van Wert Forward II Project will directly support 180 jobs with earnings of $7.2 million. On average, 36 jobs with earnings of $1.4 million will be directly supported each year. The tenant sales of the Van Wert Forward II Project represent the direct economic activity generated and will total $23.9 million during the first five years of the Project's operation. An average of $4.8 million in direct economic activity will generated at the Project site annually during the first five years of the Project's operation.

[18] The total fiscal impact reported in Table 7 and Table 8 may not match due to rounding.
[19] The total fiscal impact reported in Table 7 and Table 8 may not match due to rounding.

Table 9: Total Direct Economic Impact of the Project at the Project Site

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	36	$1,382,807	$18.70	$4,558,333
Year 2 (2026)	36	$1,413,229	$19.12	$4,658,616
Year 3 (2027)	36	$1,445,733	$19.56	$4,765,764
Year 4 (2028)	36	$1,480,430	$20.02	$4,880,143
Year 5 (2029)	36	$1,515,961	$20.51	$4,997,266
Total	**180**	**$7,238,160**	**$19.58**	**$23,860,122**

Fiscal Impact

Table 10 details the fiscal related Project impacts of the Van Wert Forward II Project by type. The State of Ohio and the City of Van Wert will benefit from a total of $259,408 in earnings tax revenues as a result of the operations and tenant businesses of the Van Wert Forward II Project during the first five years of operation. During the first five years of operation, the spending of the Van Wert Forward II Project's restaurant and retail shoppers will generate $605,178 in sales tax revenues for the State of Ohio and Van Wert County. In total, the operations and tenant businesses of the Van Wert Forward II Project will directly create $864,586 in fiscal benefits to state and local jurisdictions during the first five years of operation.

Table 10: Total Direct Fiscal Impact of the Project

Year of Operation	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
Year 1 (2025)	$49,180	$115,616	**$164,796**
Year 2 (2026)	$50,447	$118,159	**$168,606**
Year 3 (2027)	$51,803	$120,877	**$172,680**
Year 4 (2028)	$53,249	$123,778	**$177,027**
Year 5 (2029)	$54,729	$126,748	**$181,477**
Total[20]	**$259,408**	**$605,178**	**$864,586**

Source: Economics Center calculations.

Table 11 details the fiscal impacts accruing to state and local jurisdictions by type resulting from the operations and tenant businesses of the Van Wert Forward II Project during the first five years of operation. The operations and tenant businesses of the Van Wert Forward II Project will directly generate earnings tax revenues of $134,912 for the State of Ohio as well as $124,496 for the City of Van Wert. Van Wert County will benefit from $125,209 in sales tax revenue, while the State of Ohio will benefit from $479,968 in sales tax revenue.

[20] The total fiscal impact reported in Table 10 and Table 11 may not match due to rounding.

Table 11: Total Direct Fiscal Impact of the Project by Government Entity, Years 1-5

Government Entity	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
State of Ohio	$134,912	$479,968	**$614,880**
Van Wert County	N/A	$125,209	**$125,209**
City of Van Wert	$124,496	N/A	**$124,496**
Total[21]	**$259,408**	**$605,177**	**$864,585**

Development Impacts

The Van Wert Forward II Project is part of the larger Van Wert Forward Development. The Van Wert Forward Development encompasses the redevelopment of 19 adjacent, historical buildings in downtown Van Wert. The Van Wert Forward Development will include 58 apartments and a total of 49,035 square feet of tenant space. The tenant space comprises 20,059 square feet of restaurant space, 17,695 square feet of office space, 6,920 square feet of institutional space to house a co-working space and business incubator, and 4,361 square feet of retail space. The total development costs of the Van Wert Forward Development are approximately $42.2 million.[22]

Phase I of the Van Wert Forward Development is currently under construction and was awarded a tax credit during the fiscal year 2022 funding cycle for the TMUD Program, and phase II refers to the Project. Therefore, the Van Wert Forward Development related impacts refer to only the impacts generated by phase III of the Van Wert Forward Development.

Phase III of the Van Wert Forward Development encompasses the redevelopment of three historic properties in downtown Van Wert. Construction of phase III is expected to occur in 2024. Phase III will include two apartments and 7,106 square feet of commercial space. The commercial space of phase III comprises 4,370 square feet of office space and 2,736 square feet of retail space. The total development costs associated with construction of phase III of the Van Wert Forward Development are approximately $4.2 million.[23]

Once the phase III of the Van Wert Forward Development is operational in 2025, annual economic impacts in the form of jobs, earnings, and economic activity will be directly generated by the operations and tenant businesses. Additionally, fiscal impacts in the form of tax revenues will be generated for state and local jurisdictions. The impacts of operations represent the labor required to operate phase III of the Van Wert Forward Development as well as the associated impacts on earnings. The impacts of the tenant businesses represent the labor required by anticipated tenants of phase III of the Van Wert Forward Development and the associated impacts on earnings and economic activity. The economic and fiscal impacts of phase III the Van Wert Forward Development are reported for the completion period associated with the Van Wert Forward II Project, which refers to 2025 through 2029. The economic and fiscal impacts discussed in this section reflect full occupancy and target-level sales.

[21] The total fiscal impact reported in Table 10 and Table 11 may not match due to rounding.
[22] Reported in 2022 dollars.
[23] Reported in 2022 dollars.

Operations Impacts

Economic Impact

Operations impacts result from the management of the Development site after construction is complete and operations commence. As shown in Table 12, the operations of phase III of Van Wert Forward Development will directly support one job during the completion period. These jobs represent the labor required to manage the Development site such as leasing agents, grounds crew, and maintenance and custodial staff. The job supported will have total earnings of $89,619 during the completion period. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of the direct job supported by the operations of phase III of the Van Wert Forward Development is $39.30.

Table 12: Direct Jobs and Earnings Impact of Development Operations at the Development Site

Year of Operation	Jobs	Earnings	Average Hourly Wage
Year 1 (2025)	<1	$17,121	$37.54
Year 2 (2026)	<1	$17,498	$38.36
Year 3 (2027)	<1	$17,900	$39.24
Year 4 (2028)	<1	$18,330	$40.19
Year 5 (2029)	<1	$18,770	$41.15
Total	**1**	**$89,619**	**$39.30**

Source: Economics Center calculations.

Fiscal Impact

The operations of phase III of the Van Wert Forward Development will directly generate a total of $3,830 in earnings tax revenue for the State of Ohio and the City of Van Wert during the completion period, as shown in Table 13. Of the total earnings tax revenue generated during the completion period, the State of Ohio will receive $2,289, while the City of Van Wert will receive $1,541.

Table 13: Direct Fiscal Impact of Development Operations

Year of Operation	State of Ohio	City of Van Wert	Total Earnings Tax Revenue
Year 1 (2025)	$432	$294	$726
Year 2 (2026)	$444	$301	$745
Year 3 (2027)	$457	$308	$765
Year 4 (2028)	$471	$315	$786
Year 5 (2029)	$485	$323	$808
Total	**$2,289**	**$1,541**	**$3,830**

Tenant Impacts

Economic Impact

The tenant businesses of phase III of the Van Wert Forward Development will generate revenues from office and retail purchases. These businesses will also hire and pay wages to employees needed to maintain daily operations. The economic impact of the tenant businesses of phase III of the Van Wert Forward Development respresent the economic activity, jobs, and earnings generated at the Development site.

Tenant businesses of the Van Wert Forward Development will directly generate economic activity, comprising business sales, wages and salaries paid to employees, and other non-wage operating expenditures made by tenants. As detailed in Table 14, the tenant businesses operating within phase III of the Van Wert Forward Development will directly generate an estimated $26.7 million in economic activity during the completion period. The direct economic activity of tenant businesses comprises $21.3 million in office sales and $5.4 million in retail sales. Once tenant operations commence, phase III of the Van Wert Forward Development will directly support 125 jobs at the Development site with earnings of $7.9 million during the completion period. This translates into average annual earnings of $62,189 per employee. Assuming 40 working hours per week for 52 weeks per year, the average hourly wage of direct employees of tenant businesses of phase III of the Van Wert Forward Development is $29.90.

Table 14: Direct Economic Impact of Development Tenants at the Development Site

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	25	$1,504,833	$28.56	$5,096,870
Year 2 (2026)	25	$1,537,939	$29.19	$5,209,001
Year 3 (2027)	25	$1,573,312	$29.86	$5,328,808
Year 4 (2028)	25	$1,611,071	$30.58	$5,456,699
Year 5 (2029)	25	$1,649,737	$31.31	$5,587,659
Total	**125**	**$7,876,892**	**$29.90**	**$26,679,037**

Fiscal Impact

Fiscal impacts will accrue for the State of Ohio, Van Wert County, and the City of Van Wert once phase III of the Van Wert Forward Development is operational. The earnings of employees of phase III of the Van Wert Forward Development will generate earnings tax revenues for the State of Ohio and the City of Van Wert, and the spending of the Van Wert Forward Development's retail shoppers will generate sales tax revenues for the State of Ohio and Van Wert County.

Table 15 details the fiscal impacts of the tenant businesses of phase III of the Van Wert Forward Development by type. The State of Ohio and the City of Van Wert will benefit from a total of $321,612 in earnings tax revenues during the completion period as a result of tenant businesses. During the completion period, the spending of retail shoppers at phase III of the Van Wert Forward Development will generate $388,678 in sales tax revenues for the State of Ohio and Van Wert County. In total, phase III of the Van Wert Forward Development will create approximately $710,290 in fiscal benefits to state and local jurisdictions during the completion period.

Table 15: Direct Fiscal Impact of Development Tenants

Year of Operation	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
Year 1 (2025)	$60,911	$74,254	**$135,165**
Year 2 (2026)	$62,512	$75,888	**$138,400**
Year 3 (2027)	$64,222	$77,634	**$141,856**
Year 4 (2028)	$66,049	$79,497	**$145,546**
Year 5 (2029)	$67,918	$81,405	**$149,323**
Total[24]	**$321,612**	**$388,678**	**$710,290**

Table 16 details the fiscal impacts accruing to state and local jurisdictions by type resulting from the tenant businesses of the Van Wert Forward Development during the completion period. The tenant businesses of the Van Wert Forward Development will generate earnings tax revenues of $186,130 for the State of Ohio as well as $135,483 for the City of Van Wert. Van Wert County will benefit from $80,416 in sales tax revenue, while the State of Ohio will benefit from $308,261 in sales tax revenue.

Table 16: Direct Fiscal Impact of Development Tenants by Government Entity, Years 1-5

Government Entity	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
State of Ohio	$186,130	$308,261	**$494,391**
Van Wert County	N/A	$80,416	**$80,416**
City of Van Wert	$135,483	N/A	**$135,483**
Total[25]	**$321,613**	**$388,677**	**$710,290**

Total Impacts

Economic Impact

The total economic impacts include the jobs, earnings, and economic activity directly resulting from phase III of the Van Wert Forward Development's operations and tenant businesses. Economic impacts reflect full occupancy and target-level sales. Table 17 details the total direct economic impacts that will accrue after construction of the Van Wert Forward Development is complete and operations commence. During the completion period, the Van Wert Forward Development will directly support 125 jobs with earnings of $8.0 million. The tenant sales of phase III of the Van Wert Forward Development represent the direct economic activity generated and will total $26.7 million during the completion period.

[24] The total fiscal impact reported in Table 15 and Table 16 may not match due to rounding.
[25] The total fiscal impact reported in Table 15 and Table 16 may not match due to rounding.

Table 17: Total Direct Economic Impact of the Development at the Development Site

Year of Operation	Jobs[26]	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	25	$1,521,954	$28.64	$5,096,870
Year 2 (2026)	25	$1,555,437	$29.27	$5,209,001
Year 3 (2027)	25	$1,591,212	$29.94	$5,328,808
Year 4 (2028)	25	$1,629,401	$30.66	$5,456,699
Year 5 (2029)	25	$1,668,507	$31.39	$5,587,659
Total	**125**	**$7,966,511**	**$29.98**	**$26,679,037**

Fiscal Impact

Table 18 details the fiscal related Development impacts of phase III of the Van Wert Forward Development by type. The State of Ohio and the City of Van Wert will benefit from a total of $325,442 in earnings tax revenues as a result of the operations and tenant businesses of phase III of the Van Wert Forward Development during the completion period. During the completion period, the spending of the retail shoppers of phase III of the Van Wert Forward Development will generate $388,678 in sales tax revenues for the State of Ohio and Van Wert County. In total, the operations and tenant businesses of phase III of the Van Wert Forward Development will directly create $714,120 in fiscal benefits to state and local jurisdictions during the completion period.

Table 18: Total Direct Fiscal Impact of the Development

Year of Operation	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
Year 1 (2025)	$61,637	$74,254	**$135,891**
Year 2 (2026)	$63,257	$75,888	**$139,145**
Year 3 (2027)	$64,987	$77,634	**$142,621**
Year 4 (2028)	$66,835	$79,497	**$146,332**
Year 5 (2029)	$68,726	$81,405	**$150,131**
Total[27]	**$325,442**	**$388,678**	**$714,120**

Source: Economics Center calculations.

Table 19 details the fiscal impacts accruing to state and local jurisdictions by type resulting from the operations and tenant businesses of phase III of the Van Wert Forward Development during the completion period. The operations and tenant businesses of phase III of the Van Wert Forward Development will directly generate earnings tax revenues of $188,419 for the State of Ohio as well as $137,024 for the City of Van Wert. Van Wert County will benefit from $80,416 in sales tax revenue, while the State of Ohio will benefit from $308,261 in sales tax revenue.

[26] The operations of phase III of the Van Wert Forward Development will support less than one job annually during the completion period. Therefore, the jobs reported in Table 17 do not match the sum of the jobs reported in Table 12 and Table 14.

[27] The totals reported in Table 18 and Table 19 may not match due to rounding.

Table 19: Total Direct Fiscal Impact of the Development by Government Entity, Years 1-5

Government Entity	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
State of Ohio	$188,419	$308,261	**$496,680**
Van Wert County	N/A	$80,416	**$80,416**
City of Van Wert	$137,024	N/A	**$137,024**

Surrounding Area Impacts

The direct economic activity generated by the operations and tenant businesses of the Van Wert Forward II Project and phase III of the Van Wert Forward Development will generate additional indirect impacts within the Surrounding Area as a result of the inter-industry linkages. The direct expenditures associated with the operations and tenant businesses of the Van Wert Forward II Project and phase III of the Van Wert Forward Development affect other industries by increasing demand for products and services, creating jobs associated with the provision of these products and services, and generating incomes.

Project Impacts

Operations Impacts

Economic Impact

The operations of the Van Wert Forward II Project will result in additional indirect impacts within the Surrounding Area. As shown in Table 20, the operations of the Van Wert Forward II Project will indirectly support less than one job per year in the Surrounding Area's economy. The indirect job supported will have total earnings that average $9,897 per year. The average hourly wage of the indirect jobs supports is $18.44, assuming 40 working hours per week for 52 weeks per year. During the first five years of operation, one job with earnings of $49,485 will be indirectly supported in the Surrounding Area by the operations of the Van Wert Forward II Project.

Table 20: Indirect Jobs and Earnings Impact of Project Operations on the Surrounding Area

Year of Operation	Jobs	Earnings	Average Hourly Wage
Year 1 (2025)	<1	$9,454	$17.62
Year 2 (2026)	<1	$9,662	$18.00
Year 3 (2027)	<1	$9,884	$18.42
Year 4 (2028)	<1	$10,121	$18.86
Year 5 (2029)	<1	$10,364	$19.31
Total	**1**	**$49,485**	**$18.44**

Source: Economics Center calculations.

Fiscal Impact

The indirect jobs and earnings supported by the operations of the Van Wert Forward II Project will generate a total of $1,774 in earnings tax revenue for the State of Ohio and the City of Van Wert during the first five years of operation, as shown in Table 21. Of the earnings tax revenue generated during

[28] The totals reported in Table 18 and Table 19 may not match due to rounding.

the first five years of operation, the State of Ohio will receive $923, while the City of Van Wert will receive $851.

Table 21: Indirect Fiscal Impact of Project Operations

Year of Operation	State of Ohio	City of Van Wert	Total Earnings Tax Revenue
Year 1 (2025)	$172	$163	$335
Year 2 (2026)	$178	$166	$344
Year 3 (2027)	$184	$170	$354
Year 4 (2028)	$191	$174	$365
Year 5 (2029)	$198	$178	$376
Total	**$923**	**$851**	**$1,774**

Source: Economics Center calculations.

Tenant Impacts

Economic Impact

The tenants of the Van Wert Forward II Project will source portions of the goods and services required for ongoing operations from other businesses in the Surrounding Area, thus generating additional spending and supporting more jobs locally. The businesses that benefit from the direct expenditures of the Van Wert Forward II Project tenants will, in turn, continue to spend in the local economy some of the dollars originally spent by the tenant businesses of the Van Wert Forward II Project. This process will repeat itself until all the original dollars leak out of the economy of the Surrounding Area.

During the first five years of operation, the direct economic activity generated by the tenants of the Van Wert Forward II Project will result in additional indirect economic activity of $5.5 million within the Surrounding Area, or an average of $1.1 million per year. The business-to-business purchases of the tenenat businesses will indirectly support an average of seven additional jobs in the Surrounding Area each year. As detailed in Table 22, a total of 35 jobs will be indirectly supported during the first five years of operation. The indirect jobs supported by the tenant businesses of the Van Wert Forward II Project will have earnings of $1.9 million during the first five years of operation, or approximately $372,604 per year. The indirect jobs supported will have average annual earnings of $56,980. This equates to an average hourly wage of $27.39, assuming 40 working hours per week for 52 weeks per year.

Table 22: Indirect Economic Impact of Project Tenants on the Surrounding Area

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	7	$355,919	$26.17	$1,042,744
Year 2 (2026)	7	$363,749	$26.74	$1,065,684
Year 3 (2027)	7	$372,115	$27.36	$1,090,195
Year 4 (2028)	7	$381,046	$28.01	$1,116,359
Year 5 (2029)	7	$390,191	$28.69	$1,143,152
Total	**35**	**$1,863,020**	**$27.39**	**$5,458,134**

Source: Economics Center calculations.

The indirect economic impacts of tenant businesses are disaggregated by use-type in Appendix A.

Fiscal Impact

The tenant businesses of the Van Wert Forward II Project will indirectly generate a total of $74,193 in earnings tax revenue for the State of Ohio and the City of Van Wert during the first five years of operation, as shown in Table 23. Of the earnings tax revenue generated during the first five years of operation, the State of Ohio will receive $42,150, while the City of Van Wert will receive $32,043. On average, a total of $14,839 in earnings tax revenue will be indirectly generated annually due to the operations of the Van Wert Forward II Project.

Table 23: Indirect Fiscal Impact of Project Operations

Year of Operation	State of Ohio	City of Van Wert	Total Earnings Tax Revenue
Year 1 (2025)	$7,893	$6,122	**$14,015**
Year 2 (2026)	$8,144	$6,256	**$14,400**
Year 3 (2027)	$8,414	$6,400	**$14,814**
Year 4 (2028)	$8,702	$6,554	**$15,256**
Year 5 (2029)	$8,997	$6,711	**$15,708**
Total	**$42,150**	**$32,043**	**$74,193**

Development Impacts

Operations Impacts

Economic Impact

The operations of phase III of the Van Wert Forward Development will result in additional indirect impacts within the Surrounding Area. As shown in Table 24, the operations of phase III of the Van Wert Forward Development will indirectly support less than one job per year in the Surrounding Area's economy. The average hourly wage of the indirect job supported is $18.43, assuming 40 working hours per week for 52 weeks per year. During the completion period, a total of one job with earnings of $25,946 will be indirectly supported in the Surrounding Area by the operations of phase III of the Van Wert Forward Development.

Table 24: Indirect Jobs and Earnings Impact of Development Operations on the Surrounding Area

Year of Operation	Jobs	Earnings	Average Hourly Wage
Year 1 (2025)	<1	$4,957	$17.61
Year 2 (2026)	<1	$5,066	$18.00
Year 3 (2027)	<1	$5,182	$18.41
Year 4 (2028)	<1	$5,307	$18.85
Year 5 (2029)	<1	$5,434	$19.30
Total	**1**	**$25,946**	**$18.43**

Source: Economics Center calculations.

Fiscal Impact

The indirect job and earnings supported by the operations of phase III of the Van Wert Forward Development will generate a total of $929 in earnings tax revenue for the State of Ohio and the City of

Van Wert during the completion period, as shown in Table 25. Of the earnings tax revenue generated during the completion period, the State of Ohio will receive $484, while the City of Van Wert will receive $445.

Table 25: Indirect Fiscal Impact of Development Operations

Year of Operation	State of Ohio	City of Van Wert	Total Earnings Tax Revenue
Year 1 (2025)	$90	$85	**$175**
Year 2 (2026)	$93	$87	**$180**
Year 3 (2027)	$97	$89	**$186**
Year 4 (2028)	$100	$91	**$191**

Tenant Impacts

Economic Impact

The tenants of phase III of the Van Wert Forward Development will source portions of the goods and services required for ongoing operations from other businesses in the Surrounding Area, thus generating additional spending and supporting more jobs locally. The businesses that benefit from the direct expenditures of tenant businesses of phase III of the Van Wert Forward Development will, in turn, continue to spend in the local economy some of the dollars originally spent by the tenant businesses of phase III of the Van Wert Forward Development. This process will repeat itself until all the original dollars leak out of the economy of the Surrounding Area.

During the completion period, the direct economic activity generated by the tenants of phase III of the Van Wert Forward Development will result in additional indirect economic activity of $6.9 million within the Surrounding Area. The business-to-business purchases of the tenenat businesses will indirectly support an average of eight additional jobs in the Surrounding Area each year. As detailed in Table 26, a total of 40 jobs will be indirectly supported during the completion period. The indirect jobs supported by the tenant businesses of phase III of the Van Wert Forward Development will have earnings of $2.4 million during the completion period. The indirect jobs supported will have average annual earnings of $57,885. This equates to an average hourly wage of $27.83, assuming 40 working hours per week for 52 weeks per year.

Table 26: Indirect Economic Impact of Project Tenants on the Surrounding Area

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	8	$451,722	$26.58	$1,316,025
Year 2 (2026)	8	$461,659	$27.17	$1,344,978
Year 3 (2027)	8	$472,278	$27.79	$1,375,912
Year 4 (2028)	8	$483,612	$28.46	$1,408,934
Year 5 (2029)	8	$495,219	$29.14	$1,442,748
Total	**40**	**$2,364,490**	**$27.83**	**$6,888,597**

Source: Economics Center calculations.

Fiscal Impact

The tenant businesses of phase III of the Van Wert Forward Development will indirectly generate a total of $94,522 in earnings tax revenue for the State of Ohio and the City of Van Wert during the completion period, as shown in Table 27. Of the earnings tax revenue generated during the completion period, the State of Ohio will receive $53,852, while the City of Van Wert will receive $40,670.

Table 27: Indirect Fiscal Impact of Project Operations

Year of Operation	State of Ohio	City of Van Wert	Total Earnings Tax Revenue
Year 1 (2025)	$10,089	$7,770	**$17,859**
Year 2 (2026)	$10,407	$7,941	**$18,348**
Year 3 (2027)	$10,750	$8,123	**$18,873**
Year 4 (2028)	$11,116	$8,318	**$19,434**
Year 5 (2029)	$11,490	$8,518	**$20,008**
Total	**$53,852**	**$40,670**	**$94,522**

Source: Economics Center calculations.

Other Impacts

Upon its completion, the Van Wert Forward II Project will increase residential property values in the Surrounding Area. In a 2015 study, it was concluded that residential property values were positively impacted upon delivery of a new commercial development within a 0.75-mile radius of construction.[29] The study found residential properties inside of the radius increased by 1.15 percent more each year when compared to the residential properties just outside of the radius. For purposes of the TMUD Program, the Economics Center limited the residential property value impacts to a 0.5-mile radius surrounding the proposed Project.

Upon the completion of the Van Wert Forward II Project, it is estimated that the increased residential property values inside the Surrounding Area will result in an additional $21,749 of property tax revenue during the first year of operation. By the fifth year of operation, the increased property values are estimated to generate $121,992 in additional property tax revenue, as shown in Table 28. During the first five years of operation, the increased residential property values inside the Surrounding Area will result in an additional $352,215 of property tax revenue. Of the increase in property tax revenue during the first five years of operation, Van Wert County will receive $36,551, the City of Van Wert[30] will receive $26,327, Van Wert City Schools will receive $266,333, and the Joint Vocational School District will receive the remaining $23,004.

[29] (Wiley 2015)
[30] The City of Van Wert also includes the portions of property tax revenue distributed to the township and other entities.

Table 28: Fiscal Impact of Increased Residential Property Values

Year of Operation	Van Wert County	City of Van Wert	Van Wert City Schools	Joint Vocational School District	Total Property Tax Revenue
Year 1 (2025)	$2,257	$1,626	$16,446	$1,420	**$21,749**
Year 2 (2026)	$4,640	$3,342	$33,809	$2,920	**$44,711**
Year 3 (2027)	$7,161	$5,158	$52,179	$4,507	**$69,005**
Year 4 (2028)	$9,833	$7,083	$71,653	$6,189	**$94,758**
Year 5 (2029)	$12,660	$9,118	$92,246	$7,968	**$121,992**
Total	**$36,551**	**$26,327**	**$266,333**	**$23,004**	**$352,215**

Source: Economics Center calculations.

Total Impacts

Economic Impact

The operations and tenant businesses of the Van Wert Forward II Project and phase III of the Van Wert Forward Development will result in additional indirect impacts within the Surrounding Area due to the inter-industry linkages and household economic relationships. As detailed in Table 29, a total of 75 jobs with earnings of $4.3 million will be indirectly supported in the Surrounding Area during the completion period. The business-to-business purchases of the tenenat businesses will result in additional spending of $12.3 million in the Surounding Area during the completion period.

Table 29: Total Indirect Economic Impact on the Surrounding Area

Year of Operation	Jobs[31]	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	15	$822,052	$26.35	$2,358,769
Year 2 (2026)	15	$840,136	$26.93	$2,410,662
Year 3 (2027)	15	$859,459	$27.55	$2,466,107
Year 4 (2028)	15	$880,086	$28.21	$2,525,293
Year 5 (2029)	15	$901,208	$28.88	$2,585,900
Total	**75**	**$4,302,941**	**$27.58**	**$12,346,731**

Source: Economics Center calculations.

Fiscal Impact

The indirect jobs and earnings supported by the operations and tenant businesses of the Van Wert Forward II Project and phase III of the Van Wert Forward Development will generate a total of $171,418 in earnings tax revenue for the State of Ohio and the City of Van Wert during the completion period, as shown in Table 30. Additionally, the increase in residential property values in the Surrounding Area will result in an additional $352,215 in property tax revenue during the completion period. In total, $523,633 in fiscal benefits will be indirectly generated by the operations and tenant businesses of the Van Wert Forward II Project and phase III of the Van Wert Forward Development during the completion period.

[31] The operations of the Van Wert Forward II Project and phase III of the Van Wert Forward Development will each support less than one job annually during the first five years of operation. Therefore, the jobs reported in Table 29 do not match the sum of the jobs reported in Table 20, Table 22, Table 24, and Table 26.

Table 30: Total Indirect Fiscal Impact

Year of Operation	Earnings Tax Revenue	Property Tax Revenue	Total Tax Revenue
Year 1 (2025)	$32,384	$21,749	**$54,133**
Year 2 (2026)	$33,272	$44,711	**$77,983**
Year 3 (2027)	$34,227	$69,005	**$103,232**
Year 4 (2028)	$35,246	$94,758	**$130,004**
Year 5 (2029)	$36,289	$121,992	**$158,281**
Total	**$171,418**	**$352,215**	**$523,633**

Source: Economics Center calculations.

Table 31 details the indirect fiscal impacts accruing to state and local jurisdictions by type during the completion period. The State of Ohio will benefit from $97,409 in earnings tax revenue. Van Wert County will benefit from $36,551 in property tax revenue. The City of Van Wert will benefit from $74,009 in earnings tax revenue and $26,327 in property tax revenue.[32] Additionally, Van Wert City Schools and the Joint Vocational School District will benefit from $266,333 and $23,004 in property tax revenue, respectively.

Table 31: Total Indirect Fiscal Impact by Government Entity, Years 1-5

Government Entity	Earnings Tax Revenue	Property Tax Revenue	Total Tax Revenue
State of Ohio	$97,409	N/A	**$97,409**
Van Wert County	N/A	$36,551	**$36,551**
City of Van Wert	$74,009	$26,327	**$100,336**
Van Wert City Schools	N/A	$266,333	**$266,333**
Joint Vocational School District	N/A	$23,004	**$23,004**
Total	**$171,418**	**$352,215**	**$523,633**

Source: Economics Center calculations.

Catalyzed Project Impacts

The Van Wert Forward II Project will directly cause or accelerate three additional projects in the Surrounding Area during the completion period. The direct and indirect economic impact as well as the total fiscal impact of each catalyzed project will be detailed in this section. The economic impact refers to the jobs, earnings, and economic activity directly generated by the catalyzed projects and the additional indirect impacts within the Surrounding Area as a result of the inter-industry linkages. The fiscal impact refers to the earnings and sales tax revenues generated by the catalyzed projects for state and local jurisdictions. The economic and fiscal impacts discussed in this section reflect full occupancy and target-level sales.

223 E. Main Street Project

The redevelopment of the vacant, historical building at 223 E. Main Street in downtown Van Wert is a project that has been accelerated by the Van Wert Forward II Project. The 223 E. Main Street Project will comprise 17,500 square feet of restaurant space. This Project is anticipated to start construction in

[32] The City of Van Wert also includes the portions of property tax revenue distributed to the township and other entities.

early 2023 and take approximately 18 to 24 months to complete. The total development costs associated with the redevelopment of the historical building at 223 E. Main Street are approximately $3.5 million.[33]

Economic Impact

The direct economic impact of the 223 E. Main Street Project includes the jobs, earnings, and economic activity directly supported during the completion period of the Van Wert Forward II Project. As detailed in Table 32, the 223 E. Main Street Project will generate $34.3 million in direct economic activity during the completion period through the purchases made by patrons of the restaurant space. During the completion period, a total of 595 jobs with earnings of $10.5 million will be directly supported by the 223 E. Main Street Project. These direct jobs will have annual earnings that average $17,691. This equates to an average hourly wage of $8.51, assuming 40 working hours per week for 52 weeks per year.

Table 32: Direct Economic Impact of 223 E. Main Street Project

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	119	$2,013,191	$8.12	$6,550,985
Year 2 (2026)	119	$2,057,482	$8.30	$6,695,107
Year 3 (2027)	119	$2,104,804	$8.49	$6,849,094
Year 4 (2028)	119	$2,155,319	$8.70	$7,013,472
Year 5 (2029)	119	$2,207,047	$8.91	$7,181,796
Total	**595**	**$10,537,843**	**$8.51**	**$34,290,454**

The indirect economic impact of the 223 E. Main Street Project includes the subsequent jobs, earnings, and economic activity generated in the Surrounding Area during the completion period as a result of the inter-industry linkages. As detailed in Table 33, the 223 E. Main Street Project will indirectly generate an additional $3.4 million in economic activity in the Surrounding Area during the completion period. A total of 25 jobs with earnings of $1.1 million will be indirectly supported by the restaurant space of the 223 E. Main Street Project. These indirect jobs will have annual earnings that average $47,552. This equates to an average hourly wage of $22.86, assuming 40 working hours per week for 52 weeks per year.

Table 33: Indirect Economic Impact of 223 E. Main Street Project on the Surrounding Area

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	5	$213,929	$21.84	$650,770
Year 2 (2026)	5	$218,636	$22.32	$665,087
Year 3 (2027)	5	$223,665	$22.83	$680,384
Year 4 (2028)	5	$229,032	$23.38	$696,714
Year 5 (2029)	5	$234,529	$23.94	$713,435
Total	**25**	**$1,119,791**	**$22.86**	**$3,406,390**

Fiscal Impact

Fiscal impacts will accrue for the State of Ohio, Van Wert County and the City of Van Wert once the 223 E. Main Street Project is operational. The 223 E. Main Street Project will generate earnings tax revenues of $23,194 for the State of Ohio as well as $200,511 for the City of Van Wert. The direct employees of the restaurant space will directly generate $181,251 is earnings tax revenue, while the indirect jobs supported in the Surrounding Area indirectly generate $42,455 is earnings tax revenue. A total of $223,705 in earnings tax revenues will directly and indirectly generated during the completion period as a result of restaurant space at the 223 E. Main Street Project. During the completion period, the spending of the restaurant patrons of the 223 E. Main Street Project will directly generate $2.5 million in sales tax revenues, of which the State of Ohio will receive $2.0 million and Van Wert County will receive $514,357. As detailed in Table 34, the 223 E. Main Street Project will create a total of $2.7 million in fiscal benefits to state and local jurisdictions during the completion period.

Table 34: Total Fiscal Impact of 223 E. Main Street Project

Year of Operation	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
Year 1 (2025)	$42,622	$474,946	**$517,568**
Year 2 (2026)	$43,617	$485,395	**$529,012**
Year 3 (2027)	$44,679	$496,559	**$541,238**
Year 4 (2028)	$45,813	$508,477	**$554,290**

147 E. Main Street Project

The redevelopment of the former theater building at 147 E. Main Street in downtown Van Wert is a project that has been accelerated by the Van Wert Forward II Project. The 147 E. Main Street Project will comprise 7,900 square feet of entertainment space. This Project is anticipated to start construction in early 2023 and take approximately 18 to 24 months to complete. The total development costs associated with the redevelopment of the historical building at 147 E. Main Street are approximately $1.5 million.[34]

Economic Impact

The direct economic impact of the 147 E. Main Street Project includes the jobs, earnings, and economic activity directly supported during the completion period of the Van Wert Forward II Project. As detailed in Table 35, the 147 E. Main Street Project will generate $1.2 million in direct economic activity during the completion period through the purchases made by patrons of the entertainment space. During the completion period, a total of 15 jobs with earnings of $491,270 will be directly supported by the 147 E. Main Street Project. These direct jobs will have annual earnings that average $29,762. This equates to an average hourly wage of $14.31, assuming 40 working hours per week for 52 weeks per year.

[34] Reported in 2022 dollars.

Table 35: Direct Economic Impact of 147 E. Main Street Project

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	3	$93,854	$13.67	$223,714
Year 2 (2026)	3	$95,919	$13.97	$228,636
Year 3 (2027)	3	$98,125	$14.29	$233,894
Year 4 (2028)	3	$100,480	$14.63	$239,508

The indirect economic impact of the 147 E. Main Street Project includes the subsequent jobs, earnings, and economic activity generated in the Surrounding Area during the completion period as a result of the inter-industry linkages. As detailed in Table 36, the 147 E. Main Street Project will indirectly generate an additional $128,494 in economic activity in the Surrounding Area during the completion period. Approximately one job with earnings of $51,020 will be indirectly supported by the entertainment space of the 147 E. Main Street Project. The average hourly wage of the indirect job supported is $20.09, assuming 40 working hours per week for 52 weeks per year.

Table 36: Indirect Economic Impact of 147 E. Main Street Project on the Surrounding Area

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	<1	$9,747	$19.19	$24,548
Year 2 (2026)	<1	$9,961	$19.61	$25,088
Year 3 (2027)	<1	$10,191	$20.06	$25,665
Year 4 (2028)	<1	$10,435	$20.55	$26,281
Year 5 (2029)	<1	$10,686	$21.04	$26,912

Fiscal Impact

Fiscal impacts will accrue for the State of Ohio and the City of Van Wert once the 147 E. Main Street Project is operational. The State of Ohio and the City of Van Wert will directly and indirectly benefit from a total of $18,204 in earnings tax revenues during the completion period as a result of entertainment space at the 147 E. Main Street Project, as detailed in Table 37. The direct employees of the entertainment space will directly generate $16,338 is earnings tax revenue, while the indirect jobs supported in the Surrounding Area indirectly generate $1,866 is earnings tax revenue. Of the total earnings tax revenue generated during the completion period, the State of Ohio will receive $8,877, while the City of Van Wert will receive $9,327.

Table 37: Total Fiscal Impact of 223 E. Main Street Project

Year of Operation	State of Ohio	City of Van Wert	Total Earnings Tax Revenue
Year 1 (2025)	$1,641	$1,782	**$3,423**
Year 2 (2026)	$1,704	$1,821	**$3,525**
Year 3 (2027)	$1,772	$1,863	**$3,635**
Year 4 (2028)	$1,843	$1,907	**$3,750**
Year 5 (2029)	$1,917	$1,954	**$3,871**
Total	**$8,877**	**$9,327**	**$18,204**

Van Wert Forward IV Project

The Van Wert Forward IV Project encompasses the redevelopment of four historic properties in downtown Van Wert. This Project is outside the scope of the Van Wert Forward Development and is therefore included as a catalyzed project. The Van Wert Forward IV Project is anticipated to start construction in late 2023 and take approximately 18 to 24 months to complete. The Van Wert Forward IV Project will include 60 apartments and 20,000 square feet of commercial space for retail and/or restaurant tenants. The total development costs associated with construction of the Van Wert Forward IV Project are approximately $23.8 million.[35]

Economic Impact

The direct economic impact of the Van Wert Forward IV Project includes the jobs, earnings, and economic activity directly supported during the completion period of the Van Wert Forward II Project. As detailed in Table 38, the Van Wert Forward IV Project will generate $31.7 million in direct economic activity during the completion period through the purchases made by patrons of the commercial space. During the completion period, a total of 344 jobs with earnings of $10.8 million will be directly supported by the Van Wert Forward IV Project. These direct jobs will have annual earnings that average $31,619. This equates to an average hourly wage of $15.20, assuming 40 working hours per week for 52 weeks per year.

Table 38: Direct Economic Impact of Van Wert Forward IV Project

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	N/A	N/A	N/A	N/A
Year 2 (2026)	86	$2,618,264	$14.68	$7,651,550
Year 3 (2027)	86	$2,678,484	$15.01	$7,827,536
Year 4 (2028)	86	$2,742,767	$15.37	$8,015,397
Year 5 (2029)	86	$2,808,594	$15.74	$8,207,766

Fiscal Impact

Fiscal impacts will accrue for the State of Ohio, Van Wert County and the City of Van Wert once the Van Wert Forward IV Project is operational. The Van Wert Forward IV Project will generate earnings tax revenues of $203,122 for the State of Ohio as well as $206,039 for the City of Van Wert. The direct employees of the commercial space will directly generate $368,141 is earnings tax revenue, while the indirect jobs supported in the Surrounding Area indirectly generate $41,020 is earnings tax revenue. A total of $409,161 in earnings tax revenues will be directly and indirectly generated during the completion period as a result of commercial space at the Van Wert Forward IV Project. During the completion period, the spending of the patrons of the commercial space of the Van Wert Forward IV Project will directly generate $2.3 million in sales tax revenues, of which the State of Ohio will receive $1.8 million and Van Wert County will receive $475,534. As detailed in Table 40, the Van Wert Forward IV Project will create a total of $2.7 million in fiscal benefits to state and local jurisdictions during the completion period.

Table 40: Total Fiscal Impact of Van Wert Forward IV Project

Year of Operation	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
Year 1 (2025)	N/A	N/A	**N/A**
Year 2 (2026)	$97,647	$554,737	**$652,384**

Total Impacts

Economic Impact

The total economic impact of the catalyzed projects of the Van Wert Forward II Project include the jobs, earnings, and economic activity resulting from the restaurant space of the 223 E. Main Street Project, the entertainment space of the 147 E. Main Street Project, and the commercial space of the Van Wert Forward IV Project. As shown in Table 41, catalyzed projects will directly and indirectly support a total of 1,008 jobs with earnings of $24.2 million in the Surrounding Area's economy during the completion period. During the completion period, a total of $73.7 million in economic activity will occur within the Surrounding Area. Of the total economic activity generated, $67.2 million represents the direct economic activity and $6.5 million represents the indirect economic activity. The direct economic activity comprises $34.3 million in restaurant sales from the 223 E. Main Street Project, $1.2 million in entertainment sales from the 147 E. Main Street Project, and $31.7 million in commercial sales from the Van Wert Forward IV Project.

Table 41: Total Economic Impact of Catalyzed Projects

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	128	$2,330,721	$8.80	$7,450,017
Year 2 (2026)	220	$5,273,211	$11.51	$15,987,481
Year 3 (2027)	220	$5,394,496	$11.78	$16,355,192
Year 4 (2028)	220	$5,523,962	$12.06	$16,747,718
Year 5 (2029)	220	$5,656,539	$12.35	$17,149,664
Total	**1,008**	**$24,178,929**	**$11.53**	**$73,690,072**

Source: Economics Center calculations.

Fiscal Impact

Fiscal impacts will accrue for the State of Ohio, Van Wert County, and the City of Van Wert once the catalyzed projects are operational. The catalyzed projects of the Van Wert Forward II Project will generate earnings tax revenues of $235,193 for the State of Ohio as well as $415,877 the City of Van Wert. A total of $651,070 in earnings tax revenues will be directly and indirectly generated during the completion period as a result of the catalyzed projects. During the completion period, the spending of the patrons of the restaurant and commercial spaces of the catalyzed projects will directly generate $4.8 million in sales tax revenues, of which $3.8 million will accrue to the State of Ohio and $989,891 will accrue to Van Wert County. As detailed in Table 42, the catalyzed projects of the Van Wert Forward II Project will create more than $5.4 million in total fiscal benefits to state and local jurisdictions during the completion period.

Table 42: Total Fiscal Impact of Catalyzed Projects

Year of Operation	Earnings Tax Revenue	Sales Tax Revenue	Total Tax Revenue
Year 1 (2025)	$46,045	$474,946	**$520,991**
Year 2 (2026)	$144,789	$1,040,132	**$1,184,921**
Year 3 (2027)	$148,943	$1,064,055	**$1,212,998**
Year 4 (2028)	$153,376	$1,089,593	**$1,242,969**

Total Impacts

Economic Impact

The total economic impact of the Van Wert Forward II Project include the jobs, earnings, and economic activity resulting from Project, Development, Surrounding Area, and catalyzed project impacts. As shown in Table 43, the Van Wert Forward II Project will directly and indirectly support a total of 1,388 jobs with earnings of $43.7 million in the Surrounding Area's economy during the completion period. During the completion period, a total of $136.6 million in economic activity will occur within the Surrounding Area. Of the total economic activity generated, $117.7 million represents the direct economic activity and $18.9 million represents the indirect economic activity. Appendix B details the total direct sales by use type generated by the Van Wert Forward II Project, phase III of the Van Wert Forward Development, and the catalyzed projects.

Table 43: Total Economic Impact

Year of Operation	Jobs	Earnings	Average Hourly Wage	Economic Activity
Year 1 (2025)	204	$6,057,534	$14.28	$19,463,989
Year 2 (2026)	296	$9,082,013	$14.75	$28,265,760
Year 3 (2027)	296	$9,290,900	$15.09	$28,915,871
Year 4 (2028)	296	$9,513,879	$15.45	$29,609,853
Year 5 (2029)	296	$9,742,215	$15.82	$30,320,489
Total	**1,388**	**$43,686,541**	**$15.13**	**$136,575,962**

Fiscal Impact

As detailed in Table 44, the total fiscal impacts include the earnings, property, and sales tax revenue generated by the Project, Development, Surrounding Area, and catalyzed project impacts. The State of Ohio and the City of Van Wert will benefit from a total of $1.4 million in earnings tax revenues during the completion period. The increase in residential property values in the Surrounding Area will result in an additional $352,215 of property tax revenue. The spending of the restaurant and retail shoppers will generate $5.8 million in sales tax revenues for the State of Ohio and Van Wert County. In total, approximately $7.5 million in fiscal benefits will be created for state and local jurisdictions the completion period of the Van Wert Forward II Project.

Table 44: Total Fiscal Impact

Year of Operation	Earnings Tax Revenue	Property Tax Revenue	Sales Tax Revenue	Total Tax Revenue
Year 1 (2025)	$189,246	$21,749	$664,816	**$875,811**
Year 2 (2026)	$291,765	$44,711	$1,234,179	**$1,570,655**
Year 3 (2027)	$299,960	$69,005	$1,262,566	**$1,631,531**
Year 4 (2028)	$308,706	$94,758	$1,292,868	**$1,696,332**
Year 5 (2029)	$317,662	$121,992	$1,323,896	**$1,763,550**
Total	**$1,407,339**	**$352,215**	**$5,778,325**	**$7,537,879**

Source: Economics Center calculations.

Table 45 details the total fiscal impacts accruing to state and local jurisdictions by type during the completion period. The State of Ohio will benefit from $655,933 in earnings tax revenue as well as $4.6 million in sales tax revenue. Van Wert County will benefit from $36,551 in property tax revenue and $1.2 million in sales tax revenue. The City of Van Wert will benefit from $751,406 in earnings tax revenue and $26,327 in property tax revenue.[36] Van Wert City Schools will benefit from $266,333 in property tax revenue, while the Joint Vocational School District will benefit from $23,004 in property tax revenue. During the completion period, the Van Wert Forward II Project will generate total fiscal benefits of $5.2 million for the State of Ohio, $1.2 million for Van Wert County, $777,733 for the City of Van Wert, $266,333 for Van Wert City Schools, and $23,004 for the Joint Vocational School District.

Table 45: Total Fiscal Impact by Government Entity, Years 1-5

Government Entity	Earnings Tax Revenue	Property Tax Revenue	Sales Tax Revenue	Total Tax Revenue
State of Ohio	$655,933	N/A	$4,582,809	**$5,238,742**
Van Wert County	N/A	$36,551	$1,195,516	**$1,232,067**
City of Van Wert	$751,406	$26,327	N/A	**$777,733**

Conclusion

The Van Wert Forward II Project is a proposed mixed-use development located in the City of Van Wert. This proposed mixed-use development will include 15 apartments, 3,180 square feet of office space, 2,635 square feet of restaurant space, and 1,625 square feet of retail space. With an estimated $11.2 million capital investment, the Van Wert Forward II Project will generate considerable economic activity in the Surrounding Area after construction is complete and operations commence.[37]

Economic impact figures represent the effects that a given mixed-use development and its associated economic activities have upon a surrounding community. The economic impacts are reported in terms of jobs, earnings, and economic activity. Economic activity refers to the direct sales of tenant businesses

[36] The City of Van Wert also includes the portions of property tax revenue distributed to the township and other entities.
[37] Reported in 2022 dollars.

and catalyzed projects as well as the subsequent spending on goods and services occuring in the local economy. Fiscal impacts represent the impact on state and local jurisdictions. Fiscal impacts include earnings, property, and sales tax revenue. The total economic and fiscal impacts represent the sum of the Project, Development, Surrounding Area, and catalyzed project impacts.

The Van Wert Forward II Project will generate a total of $136.6 million in economic activity during the completion period. The direct economic activity generated represents the sales of tenant businesses of the Van Wert Forward II Project, phase III of the Van Wert Forward Development, and the catalyzed projects. The direct economic activity during the completion period comprise $36.8 million in office sales, $39.5 million in restaurant sales, $8.5 million in retail sales, $31.7 million in commercial sales related to restaurant and/or retail tenants, and $1.2 million in entertainment sales. The $117.7 million in direct economic activity will lead to further indirect spending of $18.9 million in the Surrounding Area.

The Van Wert Forward II Project will directly and indirectly support jobs and earnings in the Surrounding Area through its Project, Development, Surrounding Area, and catalyzed project impacts. In total, the Van Wert Forward II Project will directly support 1,259 jobs with earnings of $37.1 million. Indirectly, the Van Wert Forward II Project will support a total of 129 jobs with earnings of $6.6 million. During the completion period, a total of 1,388jobs with earnings of $43.7 million will be supported in the Surrounding Area by the Van Wert Forward II Project.

During the completion period, the Van Wert Forward II Project will generate fiscal benefits totaling $7.5 million for state and local jurisdictions. The State of Ohio and the City of Van Wert will benefit from a total of $1.4 million in earnings tax revenues. The increase in residential property values in the Surrounding Area will result in an additional $352,215 of property tax revenue. The spending of the restaurant and retail shoppers will generate $5.8 million in sales tax revenues for the State of Ohio and Van Wert County.

ECONOMICS CENTER
RESEARCH AND CONSULTING

About the Economics Center

The Alpaugh Family Economics Center began as a teacher training initiative of the Cincinnati Chamber of Commerce in 1976. In 1977, the Center was incorporated and established a permanent existence as part of the University of Cincinnati. While teacher training has remained as a core service, the Center has added student programs and competitions, an award-winning online financial program called $martPath, partnerships for the financial education of the larger community, and a research team to serve businesses and governmental partners in our region and across the State. The Alpaugh Family Economics Center is a part of the Council for Economic Education's national network and a member of the Association of University Business and Economic Research.

The Research and Consulting division of The Alpaugh Family Economics Center provides unbiased, non-partisan economic data and analyses to help clients make better financial, policy, and economic and workforce development decisions. Our dynamic approach and critical data analyses empower business and civic leaders to respond to changing economic conditions, strengthen local economies, and improve the quality of life for their communities. Our work includes everything from economic impact studies to benefit-cost analyses, return on investment analyses, and workforce development initiatives. For decades, the Center has been the choice organization to provide critical data analyses to more than 30 business clients annually. Through this work, the Center and its partners contribute to the health and vitality of our economy.

The Research and Consulting division of The Alpaugh Family Economics Center completed 10 economic impact analyses for developers across Ohio during the fiscal year 2022 funding cycle of the Transformational Mixed-Use Development (TMUD) Program. The Ohio Department of Development funded eight "General" Projects, two of which were applications with economic impact analyses prepared by the Economics Center. The TMUD tax credits received by our development partners represented approximately half of the "General" project funding allocation for fiscal year 2022.

Project Staff

Dr. Julie Heath

Dr. Julie Health is the Chief Executive Officer and Executive Director of The Alpaugh Family Economics Center. Dr. Heath is a member of the National Association of Economic Educators. She was a member of the national Board of Directors of the Council for Economic Education and a member of the Economics Standing Committee of the National Assessment of Education Progress. Dr. Heath led the two national committees charged by President Obama's Advisory Council on Financial Capability with integrating financial literacy in the Common Core.

Prior to coming to the University of Cincinnati, Dr. Heath spent 26 years at the University of Memphis. Dr. Heath was the director of the Center for Economic Education at the University of Memphis. In that role, with the support of the State of Tennessee and First Tennessee, she founded the $mart Tennessee program in 2006, which provides financial education to children in elementary, middle, and high schools.

At the University of Memphis, Dr. Heath taught undergraduate and graduate classes and served as head of the Economics Department. She is the recipient of a number of honors and awards. Dr. Heath has received the two highest teaching awards at the University of Memphis: the Thomas W. Briggs Foundation's Excellence in Teaching Award in 2000, and the Distinguished Teaching Award in 2010. The Carnegie Foundation recognized Dr. Heath with the 2010 Tennessee Professor of the Year Award.

In 2008, she earned the Kenneth G. Elzinga Distinguished Teaching Award, the economics discipline's highest award, and was the recipient of the Educator of the Year Award from the National Association for Financial Literacy. She received the Harold Love Award for Community Involvement in 2007, and in 2006, was named the Financial Educator of the Year by the Tennessee Bankers Association.

She was named a Money Magazine "Money Hero" for August of 2013. Dr. Heath received the Alumni Professional Achievement Award from Bluffton University in 2012. She was named a "Woman of Influence" by Venue and LEAD magazines, Cincinnati, in 2014, and a "Woman of Achievement" by the Girl Scouts in 2016. Dr. Heath received a Pillar Award for Executive Director of the Year from Medical Mutual in 2019. Additionally, Dr. Heath served as a Visiting Scholar for the Consumer Financial Protection Bureau for 2019.

Dr. Heath received her Ph.D. in Economics at the University of South Carolina, specializing in labor economics and quantitative methods. She received a Visiting Research Fellowship to Princeton University to conduct research in economics education and has published extensively in the area. She is the author or co-author of over 40 academic articles. She also received a Rockefeller Foundation grant to study women and poverty. Her research focuses on the labor market, particularly women's labor force issues, economic and financial education, curriculum development, assessment, and quantitative analyses.

Brad Evans

Brad Evans is Director of Research and serves as an economic development specialist at The Alpaugh Family Economics Center. A graduate of Miami University, Brad maintains professional memberships in the International Development Council and the Ohio Economic Development Association, and he is currently serving on the Board of Directors for the Butler County Port Authority.

In addition to overseeing processes and timelines for project milestones and deliverables, Brad possesses expertise in state and local financing mechanisms including the Ohio Enterprise Zone Program, Tax Increment Financing, Joint Economic Development Districts, Community Reinvestment Areas, and Job Creation Tax Credits.

Megan Heare

Megan Heare is a Senior Research Associate at The Alpaugh Family Economics Center. Megan earned her Bachelor's Degree in Mathematics from the University of Southern Indiana and holds a Master's Degree in Economics from the University of Cincinnati. Megan also possesses a credential as a Certified Business Economist from the National Association of Business Economists.

Megan's research focuses on investments in human capital, education, economic and workforce development, and health care.

Introduction & Findings

Silverlode Consulting ("Silverlode") was engaged by The Wren Building LLC, ("Wren" or the "Developer") to estimate the economic impact and increase in state and local tax collections associated with Wren's proposed TMUD Project scope change ("Scope Change") for the mixed-use redevelopment of the Edward Wren Co building in downtown Springfield ("Wren Lofts" or "Project"). This amendment presents the revised Project and Surrounding Area impacts due to the Scope Change, as well as the new total impacts for the Project, including the Catalyzed Project impacts from the July 2022 original EIS. This Amendment to the TMUD Economic Impact Statement (Amended EIS) was prepared to support the Developer's request for a Scope Change to the Ohio Department of Development ("ODOD") for consideration for the previously awarded Ohio Transformational Mixed-Use Development ("TMUD") tax credits.

Project Overview

Wren Lofts is a transformational mixed-use development that will combine historic renovation and new construction in downtown Springfield, across the street from Springfield's City Hall.

The Edward Wren Co. was Springfield, Ohio's largest and most prominent department store for over a century. The Project includes the renovation of this 53,138 square-foot historic building and the addition of a 42,713 square-foot building into a five-story, residential and commercial mixed-use development with a parking garage. Upon completion, the 95,851 square-foot Project is expected to include 74 market-rate apartments, structured and surface parking spaces, basement level amenities for residents, and 2,550 square feet of first-floor retail space, and 9,170 square feet of office space. The changes from the original scope, include an increase in construction cost, a reduction in the total square footage of the project, a reduction from 89 to 74 residential units, and the substitution of office space for a portion of the retail space and all restaurant space.

There is currently almost no housing in downtown Springfield and the Project will be the first market rate multi-family investment in downtown Springfield in several years. The Project is poised to be a catalytic spark for the redevelopment in the downtown core. New residents will spur restaurant and retail activity and the influx of commercial and residential investment will be attractive to expanding or relocating office users.

The TMUD eligible development costs per the original TMUD application were approximately $28.2 million and the Developer was awarded approximately $2.8 million of TMUD tax credits to enable the development to proceed. Construction commenced in late 2023 and is expected to be completed in August of 2026.

Project Overview	
Project SF	95,851
TMUD Eligible Development costs	$28,207,360
TMUD tax credit award	$2,820,736
Current estimated Development costs	$31,751,377
Construction commencement	2023
Construction completion	2026
Operations stabilized	2027

Revised Economic Impact Section of the TMUD Application

The below table summarizes the changes to the Impacts section of the TMUD application

Project DIRECT ONLY Employment (Construction of the Project and 5th Year of Completion Period)			
Job Type	Total FTEs	Average hourly Wage	Total Payroll
Project Construction	249	$ 24.49	$ 12,683,231
Operations	3	$ 22.81	$ 142,317
Tenant	41	$ 27.65	$ 2,357,688
Total	293	$ 24.91	$ 15,183,236

Total			

Total Tax Projections			
Completion Year	Total Construction Period Taxes	Total Completion Period Taxes	Total Anticipated Taxes
1	$ 442,000	$ 2,042,000	$ 2,484,000
2	$ 2,543,000	$ 4,522,000	$ 7,065,000
3	$ 2,804,000	$ 7,465,000	$ 10,269,000
4	$ 5,565,000	$ 11,409,000	$ 16,974,000
5	$ 4,650,000	$ 14,685,000	$ 19,335,000
Total	$ 16,004,000	$ 40,123,000	$ 56,127,000

EIS Sections

Amended economic impacts associated with the Project are presented in the following sections of this report:

- **Amended Total Impacts** – The sum of all impacts described below during the construction of the Project and in the five years after completion of construction of the Project.
- **Amended Project Impacts** – The direct economic impacts of the construction of the Project and the first 5 operating years of the Project.
- **Development Impacts** – The Project will be undertaken in a single phase, so no Development impacts are presented with this EIS.
- **Amended Surrounding Area Impacts** – The direct and indirect economic impacts caused by the Project in the surrounding area during the Project Construction Period and in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified.
- **Catalyzed Projects Impacts** – Refer to the original EIS dated July 2022 for details of the direct and indirect economic impacts of other projects ("Catalyzed Projects") within a two mile (10,560 foot) radius of the Project (the "Radius") that the Developer feels would be directly caused or accelerated by the Project in the five years after completion of construction of the Project.

Amended Total Impacts

The sum of the impacts of the Amended Project, Amended Surrounding Area, and Catalyzed Projects during the Project Construction Period and in the five years after completion of construction of the Project are estimated below.

TOTAL

Operations Jobs

Year	Full-Time Equivalents	Average Hourly Wage	Payroll

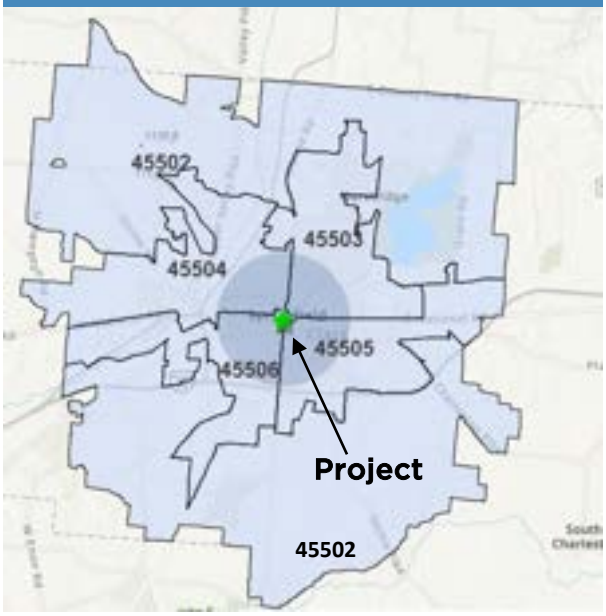
Amended Surrounding Area Impacts

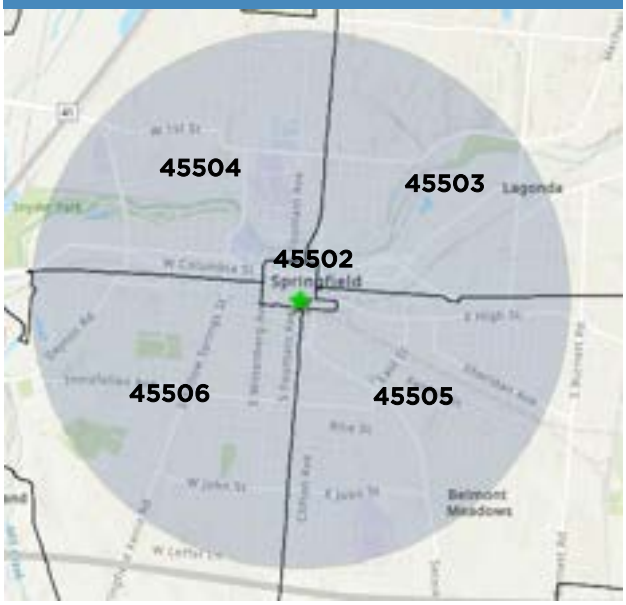
Surrounding Area & Radius

This study estimates the economic impacts associated with the Project on the region comprised of Springfield zip codes 45502, 45503, 45504, 45505, and 45506 (the "Surrounding Area"), portions of which are within a two-mile (10,560 foot) radius of the Development (the "Radius"). The maps below depict the zip codes in the Surrounding Area and the area within the Radius.

Surrounding Area



Radius



Construction Period Surrounding Area Methodology

The Construction Period Surrounding Area Impacts include the indirect construction impacts in the Surrounding Area that occur as a result of construction employees or items/supplies used in the construction process ONLY. The Construction Period Surrounding Area Impacts also include estimated lodging and dining spending by Project construction workers. IRS Notice 2022-44 "low" rates for daily spending were used. It was assumed that 5% of Project construction workers would require overnight stays and that, of the remaining 95% of workers that commute to work daily, half of the workers would purchase one meal per day in the surrounding area.

Construction Worker Per Diem Assumptions	
% of construction workers receiving overnight per diem	5%
# of work days per year (excludes weekends & holidays)	250
Per diem lodging allowance	$150
Per diem meal allowance	$64
% of construction workers assumed to be commuting daily and purchasing one meal	48%
Daily per diem meal spending by 50% of commuting workers	$21

Surrounding Area: Construction Impacts

The indirect (direct excluded) economic impacts of the construction of the Project are estimated below.

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage	Payroll
Project Construction Y1	11	$ 17.03	$ 389,542
Project Construction Y2	11	$ 17.71	$ 405,123
Project Construction Y3	11	$ 18.41	$ 421,328
Project Operating Y1			
Project Operating Y2			
Project Operating Y3

	$ 294,000	$ 58,000	$ 35,000	$ 132,000	$519,000

Indirect Impacts From Project Operations

The Surrounding Area Operating Impacts include the indirect impacts in the Surrounding Area that occur as a result of direct Project operations and tenant activity in the five years after completion of construction of the Project.

Residential Spending

The Project's new residential units are expected to bring new permanent residents to the Surrounding Area, which would result in additional household spending and tax generation within the Surrounding Area. The economic impacts of this increased activity during the Completion Period are estimated in the Completion Period Surrounding Area impacts.

Increased household spending estimates were based on the Bureau of Labor Statistics, Consumer Expenditure Survey (CES) for 2022 for the average household in the Midwest. Silverlode utilized the CES household spending estimates for the retail, entertainment, and dining categories and estimated the percentage of total spending that would occur in the Surrounding Area.

Residential Household Spending Assumptions	
New residential units	74
Household income per unit	$77,160
Occupancy	95%
% of households new to Surrounding Area	100%
Y1 Retail spending/household in the Surrounding Area	$23,270
Y1 Entertainment spending/household in the Surrounding Area	$4,230
Y1 Dining spending/household in the Surrounding Area	$4,350

Surrounding Area Operating Impacts

The resulting direct and indirect economic impacts in the Surrounding Area in the five years after completion of construction of the Project are estimated below.

5	$ 233,000	$ 35,000	$ -	$ 28,000	$ 296,000
	$ 1,078,000	$ 165,000	$ -	$ 130,000	$ 1,373,000

Catalyzed Project Impacts

Catalyzed Project details, methodologies and impacts remain unchanged from the original TMUD EIS.

Methodology

Reasonableness of Key Inputs

The Developer's pro-forma financial models and sources/uses analyses, which we understand are being provided to other third parties such as banks and other financial institutions, and thus are assumed to be reliable, were the source of most Project information. The IMPLAN model, which is described in detail below, was also a key source of not only outputs, but key inputs. Finally, where necessary, we relied on established real estate industry rules of thumb, independent third-party data, and estimates from the Developer, who has a long history of success in Ohio. Throughout the modeling, Silverlode also employed an appropriate amount of professional conservatism to ensure that the inputs and assumptions were reasonable.

IMPLAN

Much of this analysis was completed using the IMPLAN (IMpact Analysis for PLANning) economic impact modeling system. IMPLAN is an input-output model that was originally developed by the U.S. Forest Service in the 1970's and is one of the most respected and widely used approaches to regional economic impact analysis. IMPLAN is used by more than 1,000 universities, government agencies, and consultants to estimate the economic and fiscal impacts of investments and/or changes in one or more industries.

2019 IMPLAN data was used for this study. The Developer provided the capital investment and other operational data necessary to prepare this analysis. The IMPLAN software applies industry specific inflators to convert results to year the impacts will occur.

Data underlying the IMPLAN model is updated annually using thousands of data points from over 90 sources. The main sources for this data include:

- U.S. Bureau of Labor Statistics (BLS) Quarterly Census of Employment and Wages (QCEW)
- U.S. Bureau of Economic Analysis (BEA) Regional Economic Accounts (REA)
- U.S. Census Bureau County Business Patterns (CBP)
- U.S. Bureau of Economic Analysis National Income and Product Accounts (NIPA)

Assumptions Provided by IMPLAN
All indirect impacts
Project retail FTEs and wages
Project office wages
Catalyzed project FTEs and payroll by use
Direct property tax as a result of construction
Direct property tax as a result of catalyzed project operations

Direct and Indirect Impacts

Economic and fiscal impacts can be divided into three component parts, which are referred to as direct, indirect, and induced. *At the direction of ODOD, this EIS does not include induced impacts.*

A direct effect describes an initial, or first-round change in the economy and is the starting point for economic impact analysis. Changes in an economy create "ripples" of economic activity throughout the region being analyzed. These ripples are described as indirect effects (induced effects are not included in this EIS). A positive direct effect causes increased purchases within the economy being modeled, as well as "leakage" of economic activity out of the economy being studied in the form of imports into the economy from other areas outside the economy. Generally speaking, direct describes activity attributable to the economic activity being modeled. In this EIS, direct impacts include the economic activity of the Project and Surrounding Area (employees, associated payroll, construction investments, etc.). Direct jobs comprise full, part-time, and temporary employees and jobs supported by the Project and future redevelopment and development projects within the Surrounding Area.

Indirect effects represent changes in the industries that provide goods and services to the economic activity being modeled (e.g., suppliers, service providers, etc.). Indirect effects occur in a repeating cycle but diminish in each round as economic activity "leaks" from the region being modeled. Indirect effects cease when the last dollar of economic activity leaks from the economy being studied. Indirect effects are estimated using IMPLAN. In this EIS, indirect impacts include the economic activity of the entities that provide goods and services to the Developer, the Project's tenants, and the Surrounding Area.

Total impact refers only to the cumulative result of all rounds of direct and indirect economic activity.

Silverlode Consulting Qualifications

Company Overview

Silverlode Consulting was founded in 2002 by two leaders of EY's and PwC's consulting practices. As a national leader in the field of economic impact analysis, we have helped hundreds of organizations, ranging from non-profit arts groups to multi-national corporations, to measure their impacts on their communities and communicate those impacts to their stakeholders. For over twenty years, Silverlode has meticulously estimated and effectively communicated the impacts of projects, the presence of organizations, and investments in communities. Our work has helped clients to gain approvals, secure funding, and positively shift public opinion. More information about our firm and our work in economic impact analysis can be found on our website www.silverlodeconsulting.com.

Dennis McAndrew | Founder and President

Dennis has over 25 years of experience estimating economic impacts. He has completed hundreds of projects measuring the impacts associated with development projects, complex health systems, major transportation projects, industry associations, economic development groups, arts, entertainment, and sports organizations, and other entities. Dennis also provides strategic guidance to businesses, developers, economic development organizations, and governmental entities involved in large-scale economic development projects. Dennis is an IMPLAN Certified Economist. Prior to founding Silverlode Consulting in 2002, Dennis worked in the consulting practices of EY and PwC. Dennis earned a Master of Business Administration degree from Georgetown University and a Bachelor of Arts degree in Economics from John Carroll University. Dennis is a certified public accountant (inactive) and is a member of the American Institute of Certified Public Accountants (AICPA).

Michelle Moll | Senior Consultant

Michelle Moll has been an integral part of Silverlode for over a decade. Michelle is an IMPLAN Certified Economist and spearheads Silverlode's modeling for economic impact and other analyses for corporate and public sector clients. Michelle also works with corporate clients to negotiate, procure, and manage compliance for economic incentives. Prior to joining Silverlode, Michelle was a financial analyst with Netrex and a Senior Auditor for PwC. Michelle earned a Bachelor of Science in Accounting from Miami University and is a Certified Public Accountant (inactive).

Introduction & Findings

Silverlode Consulting ("Silverlode") was engaged by Wren Building Partners, LLC, ("Wren" or the "Developer") to estimate the economic impact and increase in state and local tax collections associated with Wren's proposed mixed-use redevelopment of the Edward Wren Co building in downtown Springfield ("Project"). This Economic Impact Statement (EIS) and the supporting addenda were prepared to support the Developer's application to the Ohio Department of Development ("ODOD") for consideration for an award of Ohio Transformational Mixed-Use Development ("TMUD") tax credits.

This EIS and the supporting Addenda demonstrate the Project's eligibility for both the TMUD program generally, and the alternative method of valuing the TMUD tax credits ("AMV") as described in Section 122.09(F) of the Ohio Revised Code ("ORC"), specifically.

This EIS and the supporting Addenda provide the economic impact data and supporting information requested by ODOD for considering TMUD and AMV eligibility, based upon ODOD's guidance as of the date of this report.

Project Overview

The Project is a transformational mixed-use development that will combine historic renovation and new construction in downtown Springfield, across the street from Springfield's City Hall.

The Edward Wren Co. was Springfield, Ohio's largest and most prominent department store for over a century. The Project includes the renovation of this 47,662 square-foot historic building and the addition of a 52,704 square-foot building into a five-story, residential and commercial mixed-use development and a 28,674 square-foot parking garage. Upon completion, the 129,040 square-foot Project is expected to include 89 market-rate apartments, 87 structured and surface parking spaces, basement level amenities for residents, and 16,000 square feet of first-floor restaurant and retail space.

There is currently almost no housing in downtown Springfield and the Project will be the first market rate multi-family investment in downtown Springfield in several years. The Project is poised to be a catalytic spark for the redevelopment in the downtown core. New residents will spur restaurant and retail activity and the influx of commercial and residential investment will be attractive to expanding or relocating office users.

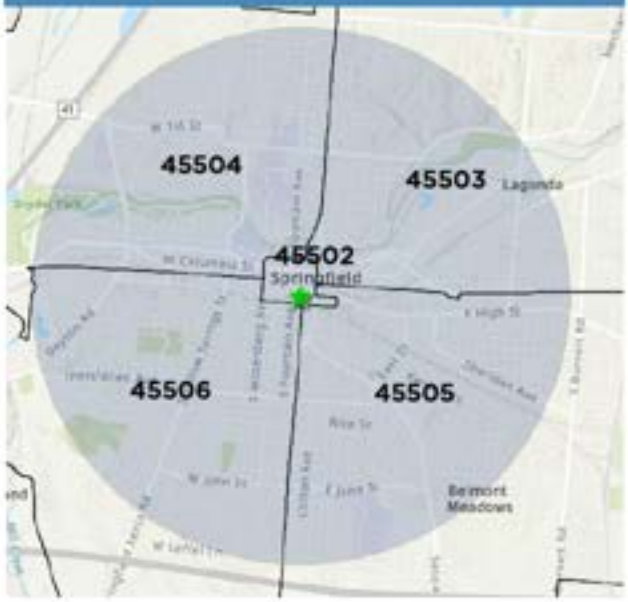
The estimated development costs of the Project are approximately $28.2 million and the Developer is applying for approximately $2.8 million of TMUD tax credits to enable the development to proceed. With an award of the requested TMUD tax credits, construction is expected to commence in 2022 and be completed in 2023.

Surrounding Area & Radius

This study estimates the economic impacts associated with the Project on the region comprised of Springfield zip codes 45502, 45503, 45504, 45505, and 45506 (the "Surrounding Area"), portions of which are within a two mile (10,560 foot) radius of the Development (the "Radius"). The maps below depict the zip codes in the Surrounding Area and the area within the Radius.

Surrounding Area

Radius



EIS Sections

Economic impacts associated with the Project are presented in the following sections of this report:

- **Project Impacts** – The direct and indirect economic impacts of the current phase of the Wren Building Project (the "Project"), which is the subject of the TMUD application, in the five years after completion of construction of the Project.
- **Development Impacts** – The Project will be undertaken in a single phase, so no Development impacts are presented with this EIS.
- **Surrounding Area Impacts** – The direct and indirect economic impacts caused by the Project in the surrounding area in the five years after completion of construction of the Project, excluding any catalyzed projects specifically identified below.
- **Catalyzed Projects Impacts** – The direct and indirect economic impacts of other proposed, defined projects ("Catalyzed Projects") within a two mile (10,560 foot) radius of the Project (the "Radius") that the Developer feels would be directly caused or accelerated by the Project in the five years after completion of construction of the Project.
- **Total Impacts** – The sum of all impacts described above in the five years after completion of construction of the Project.

Additionally, the construction impacts from the Project, Surrounding Area, and Catalyzed Projects are presented individually and in aggregate in Addendum #1: Construction Impacts.

The combined operational and construction impacts are presented in Addendum #2: Total Impacts (operational and construction). Addendum #2 also provides the estimated increase in state and local taxes resulting during the one and five-year periods following the completion of Project construction and demonstrates the Project's eligibility for both the TMUD program generally, and the alternative method of valuing the TMUD tax credits ("AMV") as described in Section 122.09(F) of the Ohio Revised Code ("ORC"), specifically.

Project Impacts

The direct and indirect economic impacts of the current phase of the Wren Building Project (the "Project") in the five years after completion of construction of the Project are estimated below.

Operations Jobs

Year	Full-Time Equivalents	Average Hourly Wage
1	4	$ 19.21
2	4	$ 19.57
3	4	$ 19.98
4	4	$ 20.39
5	4	$ 20.80

Tenant Jobs

Year	Full-Time Equivalents	Average Hourly Wage
1	79	$ 19.46
2	70	$ 22.43
3	70	$ 22.69
4	71	$ 22.94
5	72	$ 23.20

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales

1	$ 235,000	$ 116,000	$ -	$ 28,000
2	$ 240,000	$ 118,000	$ -	$ 28,000
3	$ 246,000	$ 121,000	$ -	$ 29,000
4	$ 253,000	$ 124,000	$ -	$ 29,000
5	$ 259,000	$ 126,000	$ -	$ 29,000

Development Impacts

The Project will be undertaken in a single phase, so no Development impacts are presented with this EIS.

Surrounding Area Impacts

The other sections of this EIS measure the direct and indirect impacts of the operations of the Project and Catalyzed projects on the Surrounding Area. However, the Project is expected to positively impact the Surrounding Area in other ways, as well.

The development of 89 new residential units by the Project is expected to bring 115 new permanent residents to the Surrounding Area, which would result in additional household spending and tax generation within the Surrounding Area. The resulting direct and indirect economic impacts in the Surrounding Area in the five years after completion of construction of the Project are estimated on the following page.

2	$ 81,000	$ 25,000	$ -	$ 54,000
3	$ 81,000	$ 25,000	$ -	$ 54,000
4	$ 81,000	$ 25,000	$ -	$ 54,000
5	$ 81,000	$ 25,000	$ -	$ 54,000

Catalyzed Projects Impacts

The current Project is expected to directly cause or accelerate additional redevelopment and development projects ("Catalyzed Projects"), within the Radius, during construction of the Project and in the five years after completion of construction of the Project. The map and tables which follow identify the additional developments that the Developer expects will be directly caused or accelerated by the Project.

Any parcels that are wholly or partially within two miles of the boundaries of the Project were included, but development projects in the Radius that are imminent or committed to at the time of this report were excluded, as were any projects that applied for tax credits under the Transformational Mixed-Use Development program in 2021. Information about projects in the Radius that may be applying for TMUD this round was not available.

The Developer provided the information necessary to model the economic impact of the Catalyzed Projects individually and in total. The table below details the assumptions that were provided by the Developer to enable this modeling.

In total, the Catalyzed Projects represent an estimated $329.0 million of private sector investments and almost one million square feet of new and/or renovated space.

It is critical to note that the Developer owns or controls a significant amount of property surrounding the Development and that many of the Catalyzed Projects would be undertaken directly by the Developer and its affiliates, versus others. Therefore, the Developer's confidence in the estimates used for these projects is uniquely high.

These Developer-driven Catalyzed Projects within the Radius represent an additional $84.4 million of development and nearly 246,000 additional square feet of retail, restaurant, office, apartment, and other space including 317 additional residential units.

EIS Appendix A: Individual Catalyzed Impacts presents the Catalyzed Projects individually and describes how each of the Catalyzed Projects would be directly caused or accelerated by the Project.

Methodology

Reasonableness of Key Inputs

The key inputs and assumptions used to prepare each section of the EIS and the supporting addenda are provided in EIS appendix B: Key Inputs & Assumptions. The Developer's pro-forma financial models and sources/uses analyses, which we understand are being provided to other third parties such as banks and other financial institutions, and thus are assumed to be reliable, were the source of most project information. The IMPLAN model, which is described in detail below, was also a key source of not only outputs, but key inputs. Finally, where necessary, we relied on established real estate industry rules of thumb, independent third-party data, and estimates from the Developer, who has a 30-year long history of success in Ohio. Throughout the modeling, Silverlode also employed an appropriate amount of professional conservatism to ensure that the inputs and assumptions were reasonable.

IMPLAN

Much of this analysis was completed using the IMPLAN (IMpact Analysis for PLANning) economic impact modeling system. IMPLAN is an input-output model that was originally developed by the U.S. Forest Service in the 1970's and is one of the most respected and widely used approaches to regional economic impact analysis. IMPLAN is used by more than 1,000 universities, government agencies, and consultants to estimate the economic and fiscal impacts of investments and/or changes in one or more industries.

2019 IMPLAN data was used for this study. The Developer provided the capital investment and other operational data necessary to prepare this analysis. The IMPLAN software applies industry specific inflators to convert results to year the impacts will occur.

Data underlying the IMPLAN model is updated annually using thousands of data points from over 90 sources. The main sources for this data include:

- U.S. Bureau of Labor Statistics (BLS) Quarterly Census of Employment and Wages (QCEW)
- U.S. Bureau of Economic Analysis (BEA) Regional Economic Accounts (REA)
- U.S. Census Bureau County Business Patterns (CBP)
- U.S. Bureau of Economic Analysis National Income and Product Accounts (NIPA)

Direct and Indirect Impacts

Economic and fiscal impacts can be divided into three component parts, which are referred to as direct, indirect, and induced. *At the direction of ODOD, this EIS does not include induced impacts.*

A direct effect describes an initial, or first-round change in the economy and is the starting point for economic impact analysis. Changes in an economy create "ripples" of economic activity throughout the region being analyzed. These ripples are described as indirect effects (induced effects are not included in this EIS). A positive direct effect causes increased purchases within the economy being modeled, as well as "leakage" of economic activity out of the economy being studied in the form of imports into the economy from other areas outside the economy. Generally speaking, direct describes activity attributable to the economic activity being modeled. In this EIS, direct impacts include the economic activity of the Project and Surrounding Area (employees, associated payroll, construction investments, etc.). Direct jobs comprise full, part-time, and temporary employees and jobs supported by the Project and future redevelopment and development projects within the Surrounding Area.

Indirect effects represent changes in the industries that provide goods and services to the economic activity being modeled (e.g., suppliers, service providers, etc.). Indirect effects occur in a repeating cycle but diminish in each round as economic activity "leaks" from the region being modeled. Indirect effects cease when the last dollar of economic activity leaks from the economy being studied. Indirect effects are estimated using IMPLAN. In this EIS, indirect impacts include the economic activity of the entities that provide goods and services to the Developer, the Project's tenants, and the Surrounding Area.

Total impact refers only to the cumulative result of all rounds of direct and indirect economic activity.

Silverlode Consulting Qualifications

Company Overview

Silverlode Consulting was founded in 2002 by two leaders of EY's and PwC's consulting practices. As a national leader in the field of economic impact analysis, we have helped hundreds of organizations, ranging from non-profit arts groups to multi-national corporations, to measure their impacts on their communities and communicate those impacts to their stakeholders. For over twenty years, Silverlode has meticulously estimated and effectively communicated the impacts of projects, the presence of organizations, and investments in communities. Our work has helped clients to gain approvals, secure funding, and positively shift public opinion. More information about our firm and our work in economic impact analysis can be found on our website www.silverlodeconsulting.com.

Representative Silverlode economic impact clients are shown below.

Dennis McAndrew | Founder and President

Dennis has over 25 years of experience estimating economic impacts. He has completed hundreds of projects measuring the impacts associated with development projects, complex health systems, major transportation projects, industry associations, economic development groups, arts, entertainment, and sports organizations, and other entities. Dennis also provides strategic guidance to businesses, developers, economic development organizations, and governmental entities involved in large-scale economic development projects. Prior to founding Silverlode Consulting in 2002, Dennis worked in the consulting practices of EY and PwC. Dennis earned a Master of Business Administration degree from Georgetown University and a Bachelor of Arts degree in Economics from John Carroll University. Dennis is a certified public accountant (inactive) and is a member of the American Institute of Certified Public Accountants (AICPA).

Michelle Moll | Senior Consultant

Michelle Moll has been an integral part of Silverlode for over a decade. Michelle spearheads the modeling for economic impact and other analyses for corporate and public sector clients. She is an experienced IMPLAN user and has created innovative ways of using the tool to estimate unique client impacts. Prior to joining Silverlode, Michelle was a financial analyst with Netrex and a Senior Auditor for PwC. Michelle earned a Bachelor of Science in Accounting from Miami University and is a Certified Public Accountant (inactive).

Kelly Moody | Senior Consultant

Kelly Moody has been a consultant with Silverlode Consulting since 2012. She manages client relationships and projects for Silverlode's economic impact consulting services and a variety of other public sector and corporate consulting projects. Before joining Silverlode, Kelly was a Manager of Consulting at Allegro Realty Advisors, Ltd. and a Manager at Team NEO. Kelly holds a Bachelor of Science in Business Administration in Marketing from the University of Richmond.

EIS Appendix A: Individual Catalyzed Impacts

The following sections estimate the direct and indirect economic impacts of projects within the Radius that would be directly caused and accelerated by the Project in the five years after completion of construction of the Project.

Catalyzed Project # 1

The Wren Lofts and Lagonda Bank properties share common ownership and development partner. The Wren Lofts project will be the first market rate multifamily investment in downtown Springfield in several years. The Developer believes the introduction of multifamily to the downtown market this will spur additional restaurant and retail leasing activity in the downtown core. As a result of new commercial and residential investment in downtown, office users will again be attracted to locate new or expand existing businesses into downtown Springfield.

Catalyzed Project #5

The Wren Lofts property sits on the corner of E High Street and S Limestone Avenue. Currently, there are future development planning efforts to renovate existing vacant building and construct new buildings in downtown, creating additional apartment and commercial capacity. As the Wren Lofts project stabilizes, it will naturally catalyze new development in the immediate surrounding block.

Catalyzed Project #6

By injecting 89 residential units into downtown Springfield and adding 15,000 square feet of new commercial storefront space, Wren Lofts will quickly attract new retail and restaurant users into downtown. The redevelopment of the Columbia Gas building is a great example of a smaller scale project that will benefit from the Wren Lofts redevelopment.

5	$ 199,000	$ 197,000	$ -	$ 199,000

Catalyzed Project #7

This anticipated development project is currently in the planning stages and is proposed to be less than a block south of the Wren Lofts project. Similar to the Regent Theater redevelopment, as the Wren Lofts project leases up and commercial activity along Limestone Ave grows, this large 'convention center and sports facility' will continue to gain momentum. Wren will redefine the downtown landscape for the City of Springfield and continue to attract additional investment in downtown.

Catalyzed Project #8

The "Key Bank Block" is bounded by Fountain Avenue, High Street, Main Street, and South Center Street. This planning area is within one to two blocks of the Wren Lofts project. Currently, several developers and groups are targeting this block for future residential and mixed use development. As the Wren Lofts project stabilizes, it will naturally catalyze new development in the immediate downtown area.

Catalyzed Project #9

A local development group of five capitalized investors have purchased the State Theater building and have redevelopment plans in the work for the space. The State Theater is a part of a larger redevelopment effort around the "Key Bank" block. There are multiple developers looking at this block for future residential and mixed-use redevelopment opportunities.

Catalyzed Project #11

The City is making public improvements to the park and City plaza directly to the north of the Wren Lofts project. The Wren Lofts project team is working directly with the City on a streetscape plan to improve the immediate environment around the project and the downtown City core block. It is anticipated this streetscape and public park improvement work will proceed concurrently with project construction or following shortly after project completion.

There are no operating impacts associated with this public improvement project.

Catalyzed Project #12

The Developer believes the introduction of multifamily product to the downtown market will spur additional restaurant and retail leasing activity in the downtown core. As a result of new commercial and residential investment in downtown, office users will again be attracted to locate new or expand existing businesses into downtown Springfield. The Barrett Brothers Building is another vacant building in downtown Springfield the Developer believes believe will be catalyzed by the Wren Lofts development.

Catalyzed Project #15

The Hull Building is located around the core city block on Main Street. The primarily vacant office building continues to deteriorate. As the Wren Lofts project stabilizes and other projects in along the downtown core are catalyzed, the Hull Building is a large scale renovation project for future office or residential redevelopment. The Wren Lofts project will be the first step in accelerating the Hull buildings restoration and reuse.

EIS Appendix B: Key Inputs and Assumptions

Inputs	Project Assumptions	Surrounding Area Assumptions	Catalyzed Projects Assumptions	Source(s)	Reasoning
Residential real estate revenue	Developer estimate from detailed project proformas for 89 units with growth each year through Y5	IMPLAN estimate	[redacted] annual lease rate fo [redacted] of residential use SF	Developer/ Costar	
Residential real estate FTEs	Developer estimate		IMPLAN estimate	Developer/ IMPLAN	IMPLAN provides jobs based on industry averages, which were then converted to FTEs using IMPLAN's industry specific conversion factor
Residential real estate payroll	Developer estimate		IMPLAN estimate	Developer/ IMPLAN	IMPLAN provides labor income for the region based on industry averages (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry specific conversion factor
Full service restaurant revenue	Develop estimate of [redacted]	IMPLAN estimate	[redacted] annually	Developer/ IMPLAN/ Industry estimate	
Limited service restaurant revenue	Develop estimate of [redacted]	IMPLAN estimate	[redacted] annually	Developer/ IMPLAN/ Industry estimate	
Full service/limited service restaurant FTEs	IMPLAN estimate		IMPLAN estimate	IMPLAN	IMPLAN provides jobs based on industry averages, which were then converted to FTEs using IMPLAN's industry specific conversion factor
Full service/limited service restaurant payroll	IMPLAN estimate		IMPLAN estimate	IMPLAN	IMPLAN provides labor income for the region based on industry averages (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry specific conversion factor
Recreation tenant revenue		IMPLAN estimate	Developer estimate of direct impact, IMPLAN estimate for indirect impact	Developer/ IMPLAN	
Recreation tenant FTEs	IMPLAN estimate		IMPLAN estimate	IMPLAN	IMPLAN provides jobs based on industry averages, which were then converted to FTEs using IMPLAN's industry specific conversion factor
Recreation tenant payroll	IMPLAN estimate		IMPLAN estimate	IMPLAN	IMPLAN provides labor income based on industry averages (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry specific conversion factor

Inputs	Project Assumptions	Surrounding Area Assumptions	Catalyzed Projects Assumptions	Source(s)	Reasoning
Parking Revenue, FTEs and payroll	Developer estimate from detailed project proformas			Developer	
Commercial real estate revenue	Developer estimate from detailed project proformas		[redacted] office annual lease rate, fo[redacted] of office use SF; [redacted] retail annual lease, [redacted] restaurant annual lease	Developer/ Costar	
Commercial real estate FTEs	Developer estimate from detailed project proformas		IMPLAN estimate	Developer/ IMPLAN	IMPLAN provides jobs based on industry averages, which were then converted to FTEs using IMPLAN's industry specific conversion factor
Commercial real estate payroll	Developer estimate from detailed project proformas		IMPLAN estimate	Developer/ IMPLAN	IMPLAN provides labor income for the region based on industry averages (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry specific conversion factor
Office tenant FTEs	[redacted] /job for office SF per Developer estimate		[redacted] /job	Developer/ Industry estimate/ IMPLAN	Developer estimate and IMPLAN jobs based on industry averages were converted to FTEs using IMPLAN's industry specific conversion factor. 50% of jobs were assumed to be in the IMPLAN legal services industry and 50% in other financial investment activities industry
Office tenant payroll	IMPLAN estimate		IMPLAN estimate	IMPLAN	IMPLAN provides labor income for the region based on industry averages (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry specific conversion factor
Office tenant's revenue	IMPLAN estimate		IMPLAN estimate	IMPLAN	

Inputs	Project Assumptions	Surrounding Area Assumptions	Catalyzed Projects Assumptions	Source(s)	Reasoning
Retail revenue	[redacted] F sales	Developer estimate of increased sales to existing NM @ [redacted] per visit/IMPLAN estimate	[redacted] SF annually	Developer/ Industry estimate	Sales/SF was applied to the North Market expansion (Project). This is based on existing sales/SF at the North Market, adjusted for inflation. In the Surrounding Area, existing spending per visitor amount was applied to new visitors, residents, employees, etc. of the project.
Retail FTEs	IMPLAN estimate	IMPLAN estimate	IMPLAN estimate	IMPLAN	IMPLAN provides jobs based on industry averages, which were then converted to FTEs using IMPLAN's industry specific conversion factor
Retail Payroll	IMPLAN estimate	IMPLAN estimate	IMPLAN estimate	IMPLAN	IMPLAN provides labor income based on industry averages (wages plus benefits) which were converted to employee compensation (without benefits) using IMPLAN's industry specific conversion factor
# of residents	[redacted] unit in 174			Developer/ Industry estimate	
Avg. income of residents	Residents spend [redacted] of income on rent	Resident's household income was modeled in IMPLAN and spending on retail/entertainment/dining in S.A. is IMPLAN estimate		Developer/ Industry estimate/ IMPLAN	
% of residents working from home	35%			Developer/ Industry estimate	Project results include FTEs, wages, and resulting income taxes in the Project impacts section. These impacts are assumed tp be new to the Surrounding Area, except for state income tax, 20% of which is assumed to be new to the Surrounding Area.
Sales tax	7.5% of taxable revenue/IMPLAN estimate	IMPLAN estimate	7.5% of taxable revenue/IMPLAN estimate	Ohio Department of Taxation	Consultant replaced IMPLAN estimate of direct sales tax with area sales tax rate times the identified sales taxable revenue. Indirect sales tax is estimated by IMPLAN.
Municipal income tax	Direct and indirect wages- 2.5%/IMPLAN estimated corporate profits taxes	Direct and indirect wages and incremental NOI - 2.5%	Direct and indirect wages - 2.5%	City of Columbus	Consultant replaced IMPLAN estimate of direct and indirect local income tax with area income tax rate times the direct and indirect labor income (after removing benefits using IMPLAN benefits factor).
State income tax	Direct and indirect wages - 2.4%/2.91%, depending on income level/IMPLAN estimated corporate profit taxes	Direct and indirect wages - 2.4%/Incremental NOI- 3 99%	Direct and indirect wages - 2.4%?IMPLAN estimated corporate profit taxes	Ohio Department of Taxation	2.4% was calculated as the average tax rate from 2021 tax rate table for an individual earning between $44 - $88K. 2.91% was calculated as the average tax rate from 2021 tax rate table for an individual earning $120K (used for residents working from home). 3.99% or the incremental tax rate on income over $110K from the 2021 table was utilized to represent the tax rate on incremental NOI from the Surrounding Area, assuming that this income flows through to highly compensated individuals earning over this threshold.
Lodging tax	10% of taxable revenue	IMPLAN estimate	10% of taxable revenue/IMPLAN estimate	Franklin County/ City of Columbus	Consultant replaced IMPLAN estimate of direct sales tax with the area tax rate times lodging revenue. Indirect sales tax is estimated by IMPLAN.
Property tax	Direct - developer estimate from detailed proforma (excludes abated taxes)/Indirect - IMPLAN estimate	Incremental increase in MV for Hotel, Office, & Multifamily properties in the surrounding area times 2.64%	IMPLAN estimate	Developer/ Franklin County Auditor/ IMPLAN	

Addendum #1: Construction Impacts

This Addendum estimates the economic impacts associated with construction of the Project, Surrounding Area, and Catalyzed Projects. Information about the methodology used to prepare these estimates, the zip code(s) included in the Surrounding Area, the key inputs, and a statement about the reasonableness of the inputs are included within the EIS.

Project: Construction Impacts

The direct (indirect excluded) economic impacts of the construction of new structures for the current phase of the Project are estimated below.

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Project Construction Y1	206	$ 22.73
Project Construction Y2	51	$ 22.95
Project Operating Y1	-	$ -
Project Operating Y2	-	$ -
Project Operating Y3	-	$ -
Project Operating Y4	-	$ -
Project Operating Y5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Project Construction Y1	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -
Project Operating Y1	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Project Construction Y1	$ -	$ 476,000	$ -	$ 57,000
Project Construction Y2	$ -	$ 119,000	$ -	$ 14,000
Project Operating Y1	$ -	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -	$ -

Development: Construction Impacts

The Project will be undertaken in a single phase, therefore no Development impacts are presented.

Surrounding Area: Construction Impacts

The indirect (direct excluded) economic impacts of the construction of new structures for the current phase of the Project are estimated below.

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Project Construction Y1	16	$ 18.08
Project Construction Y2	4	$ 18.08
Project Operating Y1	-	$ -
Project Operating Y2	-	$ -
Project Operating Y3	-	$ -
Project Operating Y4	-	$ -
Project Operating Y5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Project Construction Y1	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -
Project Operating Y1	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Project Construction Y1	$ 125,000	$ 29,000	$ -	$ 83,000
Project Construction Y2	$ 31,000	$ 7,000	$ -	$ 21,000
Project Operating Y1	$ -	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -	$ -

Catalyzed Projects: Construction Impacts

The direct and indirect economic impacts arising from the construction of other proposed, defined projects ("Catalyzed Projects") within a two mile (10,560 foot) radius of the Project (the "Radius") that would be directly caused or accelerated by the Project during the Completion Period of the Project are estimated below.

Additional information about the Catalyzed Projects can be found in the Catalyzed Projects Impacts section of the EIS. The construction economic impacts of individual Catalyzed Projects are reported separately in Addendum #1A: Individual Catalyzed Projects Construction Impacts.

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Project Construction Y1	2	$ 21.15
Project Construction Y2	556	$ 22.35
Project Operating Y1	615	$ 22.36
Project Operating Y2	1,452	$ 22.97
Project Operating Y3	882	$ 23.24
Project Operating Y4	271	$ 23.16
Project Operating Y5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Project Construction Y1	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -
Project Operating Y1	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Project Construction Y1	$ 2,000	$ 4,000	$ -	$ 1,000
Project Construction Y2	$ 518,000	$ 1,228,000	$ -	$ 344,000
Project Operating Y1	$ 586,000	$ 1,358,000	$ -	$ 389,000
Project Operating Y2	$ 1,363,000	$ 3,295,000	$ -	$ 907,000
Project Operating Y3	$ 889,000	$ 2,023,000	$ -	$ 592,000
Project Operating Y4	$ 317,000	$ 618,000	$ -	$ 211,000
Project Operating Y5	$ -	$ -	$ -	$ -

Total: Construction Impacts

The total of all estimated construction impacts are presented below.

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Project Construction Y1	224	$ 22.38
Project Construction Y2	611	$ 22.26
Project Operating Y1	615	$ 22.36
Project Operating Y2	1,452	$ 22.97
Project Operating Y3	882	$ 23.24
Project Operating Y4	271	$ 23.16
Project Operating Y5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Project Construction Y1	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -
Project Operating Y1	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Project Construction Y1	$ 127,000	$ 509,000	$ -	$ 141,000
Project Construction Y2	$ 549,000	$ 1,354,000	$ -	$ 379,000
Project Operating Y1	$ 586,000	$ 1,358,000	$ -	$ 389,000
Project Operating Y2	$ 1,363,000	$ 3,295,000	$ -	$ 907,000
Project Operating Y3	$ 889,000	$ 2,023,000	$ -	$ 592,000
Project Operating Y4	$ 317,000	$ 618,000	$ -	$ 211,000
Project Operating Y5	$ -	$ -	$ -	$ -

Addendum #1A: Individual Catalyzed Projects Construction Impacts

This section estimates the economic impacts arising from the construction of future developments that would be directly caused and accelerated by the Project and Development in the five years after completion of construction of the Project. Additional details about the catalyzed projects can be found in the EIS.

Catalyzed Project #1: Construction Impacts

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Project Construction Y1	-	$ -
Project Construction Y2	-	$ -
Project Operating Y1	59	$ 22.45
Project Operating Y2	-	$ -
Project Operating Y3	-	$ -
Project Operating Y4	-	$ -
Project Operating Y5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Project Construction Y1	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -
Project Operating Y1	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Project Construction Y1	$ -	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -	$ -
Project Operating Y1	$ 68,000	$ 130,000	$ -	$ 45,000
Project Operating Y2	$ -	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -	$ -

Catalyzed Project #2: Construction Impacts

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Project Construction Y1	-	$ -
Project Construction Y2	-	$ -
Project Operating Y1	-	$ -
Project Operating Y2	385	$ 23.43
Project Operating Y3	385	$ 23.43
Project Operating Y4	-	$ -
Project Operating Y5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Project Construction Y1	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -
Project Operating Y1	$ -	$ -	$ -
Project Operating Y2	$ -	$ -	$ -
Project Operating Y3	$ -	$ -	$ -
Project Operating Y4	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -

Sales, Income, Lodging and Property Taxes

Year	Projected Sales Tax	Projected Income Tax	Projected Lodging Tax	Projected Property Tax
Project Construction Y1	$ -	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -	$ -
Project Operating Y1	$ -	$ -	$ -	$ -
Project Operating Y2	$ 337,000	$ 892,000	$ -	$ 224,000
Project Operating Y3	$ 337,000	$ 892,000	$ -	$ 224,000
Project Operating Y4	$ -	$ -	$ -	$ -
Project Operating Y5	$ -	$ -	$ -	$ -

Catalyzed Project #3: Construction Impacts

Construction Jobs

Year	Full-Time Equivalents	Average Hourly Wage
Project Construction Y1	-	$ -
Project Construction Y2	-	$ -
Project Operating Y1	-	$ -
Project Operating Y2	77	$ 23.42
Project Operating Y3	77	$ 23.42
Project Operating Y4	-	$ -
Project Operating Y5	-	$ -

Retail, Entertainment and Dining Sales

Year	Projected Retail Sales	Projected Entertainment Sales	Projected Dining Sales
Project Construction Y1	$ -	$ -	$ -
Project Construction Y2	$ -	$ -	$ -

Total	**$ 55,052,000**	

TMUD Qualification and Alternative Method of Valuation

The Developer requests that ODOD consider this EIS and the associated addenda both for the purposes of determining TMUD eligibility and eligibility for the alternative method of valuing the TMUD tax credits ("AMV") as described in Section 122.09(F) of the Ohio Revised Code ("ORC").

Having reviewed the provisions of ORC Section 122.09 and ODOD's guidance to date, Silverlode can confirm, with reasonable certainty, that the increase in tax collections in the Surrounding Area would exceed ten percent (10%) of the estimated development costs within one year after the Project is completed.

As set forth in this report, TMUD eligible development costs ("Development Costs") are estimated to be approximately $28.2 million, and the estimated increase in tax collections is expected to reach $7.3 million within one year after the Project is completed, which well exceeds (2.6 times) the $2.8 million (10%) AMV eligibility threshold for the first year following Project completion. During the Project's construction and the five years that follow its completion, the estimated increase in tax collections is expected to reach approximately $55.1 million, which is approximately 19.7 times the $2.8 million of TMUD tax credits requested for the Project.

To determine the increase in state and local tax collections, only taxes collected under chapters 718, 5705, 5739, 5741, and 5747 of the Ohio Revised Code were considered. Property tax estimates included in this analysis include tax increment financing service payments, but do not include abated real estate taxes. The computation of the increase in tax collections does not include baseline taxes being collected.

Re: Economic Impact Analysis for the 21st Street & Superior Avenue in Cleveland, OH

Dear Jon Pinney:

At your request, Novogradac Consulting LLP has performed an Economic Impact Analysis of the above referenced project using the "IMPLAN" software and data produced by IMPLAN Group, LLC. We have not examined the Client-provided data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, or USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact analysis. Further, this analysis is subject to the Assumptions and Limiting Conditions found in Addendum B of this report.

This report contains, to the fullest extent possible and practical, explanations of the data, reasoning, and analyses that were used to develop the opinions contained herein. The depth of discussion contained in the report is specific to the needs of the client.

CC Superior Holding LLC is the Client in this engagement and intended user of this report. As our client, CC Superior Holding LLC owns this report and permission must be granted from them before another third party can use this document. We assume that by reading this report another third party has accepted the terms of the original engagement letter including scope of work and limitations of liability. We are prepared to modify this document to meet any specific needs of the potential uses under a separate agreement.

The Stated Purpose of this assignment is to assist with projections of job, tax, and wage information for application to the State of Ohio Transformation Mixed-Use Development Program. You agree not to use the Report other than for the Stated Purpose, and you agree to indemnify us for any claims, damages or losses that we may incur as the result of your use of the Report for other than the Stated Purpose. Without limiting the general applicability of this paragraph, under no circumstances may the Report be used in advertisements, solicitations and/or any form of securities offering.

The authors of this report certify that we are not part of the development team, nor are we affiliated with any member of the development team. Please do not hesitate to contact us if there are any questions regarding the report or if Novogradac Consulting LLP can be of further assistance. It has been our pleasure to assist you with this project.

Respectfully submitted,

Blair Kincer, MAI, CRE

Junior Analyst

BACKGROUND

CC Superior Holding LLC (hereinafter, the "Client") has represented to us that they are applying to the State of Ohio for the Transformational Mixed-Use Development Program (TMUD) tax credit financing for various phases of the 21st Street & Superior Avenue in Cleveland, OH. The project centers around the relocation of CrossCountry Mortgage Headquarters from a suburb of the Cleveland MSA to 21st Street & Superior Avenue, located in Cleveland's central business district. The project consists of the following components:

- Building 1 (2104 Superior Avenue)
  - 8,545 square feet of retail (restaurant)
  - 13,888 square feet of multifamily (8 units plus storage)
- Building 2 (2110 Superior Avenue)
  - 6,346 square feet of retail (restaurant)
  - 45,669 square feet of multifamily (38 units plus storage)
- Building 3 (2140 Superior Avenue)
  - 26,173 square feet of office ([redacted])
- Building 4 (2160 Superior Avenue)
  - 137,828 square feet of office ([redacted])
- Building 5 (2202 Superior Avenue
  - 12,969 square feet of ground-floor retail
  - 39,707 square feet of office ([redacted])
  - 12,693 square feet of multifamily (storage)
- Building 6 (2230 Superior Avenue)
  - 24,937 square fee of retail
  - 67,026 square feet of multifamily (81 units)

The following tables summarize the above-listed buildings and uses:

Address	Tenant	Use	# of units	Square Footage
2104/2110 Superior	[redacted]	Retail	N/Ap	14,891
2104/2110 Superior	[redacted]	Multifamily	46	59,557
2202/2140/2160/2230 Superior	[redacted]	Office	N/Ap	203,708
2202/2140/2160/2230 Superior	[redacted]	Retail	N/Ap	37,906
2202/2140/2160/2230 Superior	[redacted]	Multifamily	81	79,719
		Total Square Footage		**395,781**
		Total Office Square Footage		**203,708**
		Total Retail Square Footage		**52,797**
		Total Multifamily Square Footage		**139,276**

As represented by the Client, the investments made will generate both short-term and long-term impacts for the Cleveland economy, as well as the surrounding area. The Client engaged us to estimate these impacts, which include short-term and long-term direct, indirect, and induced economic impacts on the area economy.

Tremendous amounts of data are required in order to produce reliable economic impact models that accurately estimate the effects of a given event on an economy. There are numerous factors that need to be taken into account to accurately estimate direct, indirect and induced effects of an event. The expense and labor of Novogradac Consulting LLP doing this independently are prohibitive. However, there are companies that do specialize in creating data sets that can be used to estimate impacts. Novogradac Consulting LLP utilizes the software and data sets developed by IMPLAN Group, LLC. IMPLAN Group, LLC has developed an input-output model known as "IMPLAN." Input-output methodology and the IMPLAN software are discussed in

greater detail in Addendum A. IMPLAN, using data produced by IMPLAN Group LLC and updated annually, is used by us in conjunction with user provided inputs to help us determine reliable estimates of economic impact for a specific project or projects.

IMPLAN Group LLC has been developing complex localized databases since 1993, and is an industry recognized leader in input-output databases and data modeling. As a result, we believe the information provided is a reliable basis to use in developing the economic impacts for the Project. However, we have not examined the Client-provided data or the assumptions underlying such Client-provided data in accordance with the standards prescribed by the AICPA, or USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact analysis. We are qualified to utilize the IMPLAN software and have appropriate training and have completed over 100 engagements with its use. However, based upon the user license and use agreements we are not permitted to look beyond the data entry phase on the calculations. We do not represent that we have tested, verified, or audied in anyway the output of the IMPLAN model. This is typical of IMPLAN users and accepted within the industry. Once the output is generated, we conduct a brief review for general reasonability with a comparative eye towards previous analyses.

ANALYSIS ASSUMPTIONS

The inputs into the IMPLAN software were developed based on information provided by the Client, independent analysis of Client-provided information, and independent assumptions based on industry standards and independent research, as needed. The following are a list of input assumptions.

- The effective date of this report is October 29, 2021, and all figures are represented in 2021 dollars. Per Client-provided information, the study area for our report consists of zip codes 44114 and 44115. The following map outlines the border of the study area.

We utilize zip code-level data to derive outputs from IMPLAN for the requested impacts.

- Per the TMUD Guidance issued by the Ohio Department of Development, we used the following definitions when presenting impacts in the report:
    - Development – "The full scope of the transformational mixed-used development and the entirety of what will be implemented on the defined site"

- Project – "The portion of the Development that is being applied for in the application. This may be the entire Development (as described above) OR it may be a portion of the Development, i.e., a phase (or phases) of the total Development"

Within the context of these definitions, all buildings are considered to be the Development and Project:

- According to Client-provided information, the hard construction costs are estimated to be $73,163,726. It should be noted that this figure does not include acquisition costs, furniture, fixtures, and equipment (FF&E), or other costs that are not incurred within the local economy.

- At the direction of the Client, the residential portions of the development will [redacted]. According to Client-provided information, the residential impacts are calculated based on a median income of $73,260. This is derived from a rent-to-income ratio based on average rent per square foot for the multifamily units.

- The following table details the industry classification and employment total, for the Project's construction and operation phases, as provided by the Client and described previously. It should be noted that the IMPLAN impacts are based on this information, and represent the development operating at full capacity.

IMPLAN MODEL INPUTS

	Jobs	Description	IMPLAN Code	Start Date
Construction	N/A	Rehabilitation Construction	55 - Construction of new commerical structures, including farm structures/55 - Construction of new multifamily structures	2022
CrossCountry Mortgage	850	CrossCountry Mortgage HQ	445 - Insurance agencies, brokerages, and related activites	2023
Retail	37	General Retail	411 - Retail - General Merchandise Stores	2022
Retail	50	Steakhouse	509 - Full-service restaurants	2023
Multifamily	4	Residential Management	469 - Management of companies and enterprises	2023

Source: Sponsor-provided information

- At the direction of the Client, we have utilized Client-provided projected financial outputs and employment at the development, once operating at full capacity.

- We grow all revenue outputs and tax outputs outputs at 2.0 percent throughout the five-year duration of the development. To arrive at our concluded growth rate of 2.0 percent, we consulted the Federal Reserve Bank of St. Louis Federal Reserve Economic Data (FRED). FRED provides data surrounding hundreds of thousands of economic data, one of which is the Consumer Price Index (CPI). The CPI is a measure of the average monthly change in the price for goods and services paid by urban consumers between any two time periods. The following table displays the CPI for all urban consumers for the past 10 years.

The current CPI of 274.158, as of September 2021, represents a 2.1 percent annual increase over the September 2011 CPI of 226.597. Therefore, we believe a 2.0 percent increase conclusion is reasonable.

Economic Impacts

Based on our analysis of the IMPLAN modeling results, the Project will generate lasting effects for surrounding area. The direct impacts are the total financial equivalents of the number of employees in a given industry. Indirect effects are impacts caused by the iteration of industries purchasing from other industries. Induced effects are the impacts on all local industries caused by the expenditures of new household income generated by the direct and indirect effects.

Construction Phase

During the construction phase, the Project is expected to support an estimated 536 direct construction jobs, according to IMPLAN estimates, with hard construction costs totaling $73,163,726. Additionally, IMPLAN estimates the Project's construction phase will support approximately 246 induced and indirect jobs as a result of the investment, with a total indirect and induced impact of approximately $40,829,010.

Construction Development Impacts

Impact Type	Jobs	Earnings	Output
Direct	536	$33,786,187	$58,769,465
Indirect	71	$4,762,439	$13,999,944
Induced	183	$9,083,253	$28,946,646
Total	**790**	**$47,631,879**	**$101,716,055**

The following table details direct and indirect jobs at each building of the development.

Direct Construction Jobs and Earnings by Phase

Use/Building	Direct Jobs	Direct Earnings	Indirect Jobs	Indirect Earnings
Office/2202/2140/2160/2230	307	$19,209,517	46	$3,181,579
Retail/2202/2140/2160/2230	65	$4,095,682	10	$676,957
Multifamily/2202/2140/2160/2230	69	$4,440,031	6	$320,209
Retail/2202/2140/2160/2230	26	$1,600,927	4	$263,484
Multifamily/2202/2140/2160/2230	69	$4,440,030	6	$320,209
Total	**536**	**$33,786,186**	**71**	**$4,762,437**

The following tables demonstrate the IMPLAN model's tax output during the Project's construction phase. These estimates represent total tax impacts during all phases, and these impacts do not recur.

LOCAL TAXES

According to Client-provided information, the project is expected to benefit from tax increment financing (TIF). We have applied Client-projected PILOT payments to the respective phases of the project. It should be noted that we did not apply a growth factor to these payments, however we have summed the PILOT payments on a rolling basis as more phases come online. Aside from the PILOT payments, we assume a 2.0 percent growth rate to all other taxes. The following table details the tax impacts from the development over a five year period, once each phase is fully operational.

LOCAL TAXES (including PILOT's)

Sales Tax	$4,406,881	$4,495,019	$4,584,919	$4,676,617	$4,770,150	$22,933,586
PILOT	-	-	-	-	-	-

The following tables demonstrates the induced spending that the development will spur in the local economy as a result of the operation phases.

INDUCED SPENDING

Category	2024	2025	2026	2027	2028
Retail	$8,073,824	$8,235,300	$8,400,006	$8,568,006	$8,739,366
Entertainment	$1,584,557	$1,616,248	$1,648,573	$1,681,544	$1,715,175
Restaurtant	$4,918,552	$5,016,923	$5,117,262	$5,219,607	$5,323,999
Total	**$14,576,933**	**$14,868,471**	**$15,165,841**	**$15,469,157**	**$15,778,541**

As seen in the preceding table, induced spending in the local economy is most heavily concentrated in the retail industry.

ADDENDA A

IMPLAN and Input-Output Modeling

BACKGROUND

The direct impacts are the total financial equivalents of the number of employees in a given industry. Indirect effects are impacts caused by the iteration of industries purchasing from other industries. Induced effects are the impacts on all local industries caused by the expenditures of new household income generated by the direct and indirect effects.

Input-output accounting describes commodity flows from producers to intermediate and final consumers. The total industry purchases of commodities, services, employment compensation, value added, and imports are equal to the value of the commodities produced.

Purchases for final use (final demand) drive the model. Industries produce goods and services for final demand and purchase goods and services from other producers. These other producers, in turn, purchase goods and services. This buying of goods and services (indirect purchases) continues until leakages from the region (imports and value added) stop the cycle.

These indirect and induced effects (the effects of household spending) can be mathematically derived. The derivation is called the Leontief inverse. The resulting sets of multipliers describe the change of output for each and every regional industry caused by a one dollar change in final demand for any given industry. Creating regional input-output models require a tremendous amount of data. The costs of surveying industries within each region to derive a list of commodity purchases (production functions) are prohibitive. IMPLAN was developed as a cost-effective means to develop regional input-output models.

The IMPLAN accounts closely follow the accounting conventions used in the "Input-Output Study of the U.S. Economy" by the Bureau of Economic Analysis (1980) and the rectangular format recommended by the United Nations. The IMPLAN system was designed to serve three functions: 1) data retrieval, 2) data reduction and model development, and 3) impact analysis. Comprehensive and detailed data coverage of the entire U.S. by county, and the ability to incorporate user-supplied data at each stage of the model building process, provides a high degree of flexibility both in terms of geographic coverage and model formulation. The IMPLAN database consists of two major parts: a national-level technology matrix; and estimates of sectorial activity for final demand, final payments, industry output and employment for each county in the U.S. along with state and national totals.

New databases are developed annually by IMPLAN Group LLC, the developer of IMPLAN.

TECHNICAL INFORMATION

The notion of a multiplier rests upon the difference between the initial effect of a change in final demand and the total effects of that change. Total effects can be calculated either as direct and indirect effects, or as direct, indirect, and induced effects. Direct effects are production changes associated with the immediate effects or final demand changes. Indirect effects are production changes in backward-linked industries caused by the changing input needs of directly affected industries (for example, additional purchases to produce additional output). Induced effects are the changes in regional household spending patterns caused by changes in household income generated from the direct and indirect effects. Five different sets of multipliers are estimated by IMPLAN corresponding to five measures of regional economic activity: total industry output; personal income; total income; value added; and employment. For each set of multipliers, three types of multipliers are generated, Type I, Type II and Type SAM.

Type I Multiplier

A Type I multiplier is the direct effect, produced by a change in final demand, plus the indirect effect divided by the direct effect. Increased demands are assumed to lead to increased employment and population with the average income level remaining constant. The Leontief inverse (Type I multipliers matrix) is derived by inverting the direct coefficients matrix. The result is a matrix of total requirement coefficients, the amount each industry must produce in order for the purchasing industry to deliver one dollar's worth of output to final demand.

Type II Multiplier

Type II multipliers incorporate “induced” effects resulting from the household expenditures from new labor income. The linear relationship between labor income and household expenditure can be customized in the IMPLAN Professional® software:

The default relationship is PCE (personal consumption expenditures) and total household expenditures. Each dollar of work-place based income is spent based on the SAM relationship generated by IMPLAN.

The second possibility is a RIMS II style of Type II multiplier, where PCE is adjusted to represent only the spending of the disposable income portion of labor income. In this way there is a direct one-to-one relationship to labor income and PCE. Then a ratio, which the user can specify, is applied to convert total income to disposable income before the rounds of induced effects are calculated.

Type SAM

Type SAM multipliers are the direct, indirect, and induced effects where the induced effect is based on information in the social account matrix. This relationship accounts for social security and income tax leakage, institution savings, and commuting. It also accounts for inter-institutional transfers.

ADDENDA B

Assumptions and Limiting Conditions

ASSUMPTIONS AND LIMITING CONDITIONS

1. The economic impact analysis contained herein relies on databases and software developed by IMPLAN Group LLC. MIG Inc. has been developing complex localized databases since 1993, and is an industry recognized leader in input-output databases and data modeling. As a result, we believe the information provided is a reliable basis to use in developing the economic impacts for the Project (s). However, we have not examined the data or the assumptions underlying such data in accordance with the standards prescribed by the AICPA, USPAP, or other standards, and, accordingly, do not express an opinion or any other form of assurance on the data estimates obtained for use in our economic impact analysis.

2. All information contained in the report which was furnished by others was assumed to be true, correct, and reliable. A reasonable effort was made to verify such information, but the author assumes no responsibility for its accuracy.

3. The report was made assuming responsible ownership and capable management of the Project.

4. Possession of the report, or a copy thereof, does not carry with it the right of publication, nor may it be reproduced in whole or in part, in any manner, by any person, without the prior written consent of Novogradac Consulting LLP. Neither all nor any part of the report, or copy thereof shall be disseminated to the general public by the use of advertising, public relations, news, sales, or other media for public communication without the prior written consent and approval of Novogradac Consulting LLP.

5. The author of this report is not required to give testimony or attendance in legal or other proceedings relative to this report or to the Subject unless satisfactory additional arrangements are made prior to the need for such services.

6. The opinions contained in this report are those of the author and no responsibility is accepted by the author for the results of actions taken by others based on information contained herein.

7. Acceptance of and/or use of this report constitutes acceptance of all assumptions and the above conditions.

EXECUTIVE SUMMARY

The purpose of this report is to quantify the estimated direct and indirect economic and financial impact the potential Mixed Use Development project may have on Columbus, Ohio based on the proposed capital investment and job creation of the project.

Connect Real Estate ("Connect") plans to rehabilitate a vacant site in the Linden community to transform the property into a new state-of-the-art Multi-Use Development. If Connect moves forward with the project, the proposed project will result in 359 direct net-new jobs, 433 construction jobs, $69,325,154 in estimated capital investment, and the restoration of approximately 670,000 square feet of currently vacant space. The property will be comprised of 5 parcels, consisting of research and advanced manufacturing facilities as well as 3 buildings containing a total of 122 affordable housing units.

To fully-understand the significance of the proposed project, this report measures the direct, indirect, and induced economic and fiscal impacts that could take place as a result of the type and level of capital investment, revenue generating activity, and job creation by Connect and its Tenants in Columbus, OH (Franklin County).

In addition to the direct, indirect and induced economic and fiscal impacts estimated as part of this analysis, Connect estimates an additional 35% of added economic and fiscal benefit to the State, County and City through the additional expenditures required by customers in order to utilize and put into service the purchased manufactured goods.

In summary, and in order to give context to the information outlined within, please see below for some of the key insights gained from the analysis:

- Over $5.8 million in potential real property tax revenue over 6 years;
- Over $3.1 million in total use tax on the construction of the project;
- Potential sales tax revenues in excess of $16 million for anticipated taxable sales of manufactured products;
- Over $2.4 million in state withholding tax on new employee earnings and $1.6 million on construction worker earnings;

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Franklin County and City of Columbus, along with their representatives.

BDO USA, LLP, a Delaware limited liability partnership, is the U.S. member of BDO International Limited, a UK company limited by guarantee, and forms part of the international BDO network of independent member firms.

BDO is the brand name for the BDO network and for each of the BDO Member Firms.

330 N. Wabash, Suite 3200
Chicago, IL 60611

- Over $1.8 million in local withholding tax on new employee earnings and $1.5 million on construction worker earnings;
- Approximately $560 thousand in incremental Commercial Activity Tax over 6 years;
- More than $29 million in labor income (earnings) potentially generated by the proposed project through indirect spending activity; and
- The creation of over 480 jobs indirectly supported by the potential spending activity of Connect.

It's important to note that all estimates above are measured over a 6-year period. For more detail, please refer to the contents of this report.

ANALYSIS OVERVIEW

Direct, fiscal impacts were measured using:

- Estimated, future property tax paid to the City of Columbus and Franklin County;
- Estimated, future sales and use tax paid to the State of Ohio and Franklin County (based on the current Ohio sales tax rate of 5.75% and County sales tax rate of 1.75%) measured for both the direct capital investment by Connect and future sales tax resulting from revenue generating activities of the project; and
- Estimated, future withholding tax paid to the State of Ohio (based on the current Ohio withholding tax table) and the City of Columbus (based on current Columbus withholding tax rate of 2.5%) for the creation of 433 construction jobs, and 359 Connect and tenant permanent jobs at the facility.

In addition, to assess the future economic impact of the proposed Multi-Use Development, the following four metrics were used to estimate the indirect and induced fiscal impact of the project that is a direct result of the size of capital investment being made:

1. Employment: The number of jobs created or needed to support the investment.
2. Labor income: All forms of employment income, including employee compensation.

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Franklin County and City of Columbus, along with their representatives.

BDO USA, LLP, a Delaware limited liability partnership, is the U.S. member of BDO International Limited, a UK company limited by guarantee, and forms part of the international BDO network of independent member firms.

BDO is the brand name for the BDO network and for each of the BDO Member Firms.

Fax: 312-856-1379
www.bdo.com

330 N. Wabash, Suite 3200
Chicago, IL 60611

3. Output: The value of industry production by calendar year.

4. Value added: Compensation of employees, taxes on production and imports less subsidies, and gross operating surplus.

To measure the significance of each metric, IMPLAN datasets for Franklin County, Ohio were used to identify the indirect and induced values of the same. IMPLAN is the leading provider of economic impact data analysis for resource outputs on local communities. The platform utilizes an input-output model that combines a set of extensive databases, economic factors, the most up-to-date industry multipliers, and demographic statistics with a highly refined modeling system to determine how the effects of one industry will impact other sectors. The multipliers calculate total impact rather than direct "head count," to organize data, recall information, and process. Trade flow information is also considered to offer insights into the multidirectional movements of goods and services between economies. IMPLAN's data is constantly being vetted by industry-leading research analysts and is recognized as the most accurate and reliable of its kind. By inputting project specific data, IMPLAN quantifies the impact via a series of mathematical calculations spanning the software's database of interrelated input-output matrices.

ASSUMPTIONS

All data provided and accumulated within this report was provided exclusively by Connect. Results are based solely on the information provided, and changes to the data points provided would likely alter results computed by IMPLAN. The assumptions provided by Connect include number of new jobs, annual employee payroll created, total project capital investment and anticipated revenue streams. BDO has not validated any of the information provided by Connect. BDO's role is strictly limited to using the information provided by Connect to create this Economic and Fiscal Impact Study.

Based on discussions with Connect, the following assumptions were utilized to complete this report:

- The proposed project will locate in Franklin County within the City of Columbus, Ohio;
- $69,325,154 in total, direct capital expenditures by Connect unless stated otherwise,
- 359 new jobs will be created during the first 6 years and maintained for at least the next 10 years, generating a total estimated payroll equal to $75,925,500 over 6 years;
- Revenue projections will begin in Year 1 following completion of Phase 1 of the project:

Year	Revenue
1	[redacted]

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Franklin County and City of Columbus, along with their representatives.

BDO USA, LLP, a Delaware limited liability partnership, is the U.S. member of BDO International Limited, a UK company limited by guarantee, and forms part of the international BDO network of independent member firms.

2	[redacted]
3	[redacted]
4	[redacted]
5	[redacted]
6	[redacted]

Connect provided the six years of revenue projections. It is anticipated by Connect that [redacted]. At this time, it is not feasible to determine a percentage of revenue that will be generated on sales to other counties in Ohio.

Additionally, [redacted].

IMPLAN produced results on a total period basis. In order to determine the indirect and induced tax impacts broken out between Withholding Tax, Sales Tax and Property Tax by year, it was assumed that the direct and indirect results would closely resemble the ratio of direct tax each year to total tax for the period would closely resemble the breakout of these taxes for indirect and induced. Therefore, a ratio of total indirect and induced tax based on direct taxes was used to break out the tax impact for these by year.

Detailed assumptions related to the calculations and estimates outlined within can be found in the corresponding sections of the report.

It's important to note that the projections outlined within this report and supporting documents are estimates only and are based on detailed inputs created and provided by Connect. Outcomes may vary based on actual project results and factors outside of Connect's or BDO's control. Any changes in project assumptions provided by the Company will impact the calculations and results outlined within.

DIRECT IMPACT

To understand the direct impact Connect's development may have on Columbus, Franklin County and the State of Ohio, we calculated the estimated new County and State level tax increment for both property and sales/use taxes over a 6-year period based on the creation of 359 new jobs and capital investment of approximately $69,325,154 for the construction and rehabilitation of buildings and personal property. The major assumptions are outlined below:

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Franklin County and City of Columbus, along with their representatives.

BDO USA, LLP, a Delaware limited liability partnership, is the U.S. member of BDO International Limited, a UK company limited by guarantee, and forms part of the international BDO network of independent member firms.

Fax: 312-856-1379
www.bdo.com

330 N. Wabash, Suite 3200
Chicago, IL 60611

Property Tax

In Ohio, property taxes are assessed and collected at the County level. The property tax calculation estimates a total tax rate of 0.097686651 and $50,290,154 land and building improvements.

For the purpose of this calculation, we assume that True Cash Value is equal to 80% of total real property cost, and the reduction rate is .332331000 millage rates based on surrounding properties. Based on our analysis, Connect's facility may generate an estimated $5.8 million in new property taxes over the next 6 years.

For more information, please see our detailed calculations provided in the appendix.

Sales Tax

The current sales tax rate in the State of Ohio is 7.5% of the selling price of tangible personal property on sales at retail, broken out as 5.75% in State sales tax, 1.25% in County sales tax, and .5% in Special sales tax. The use tax is complementary to the sales tax and is imposed at 7.5% of the purchase price of tangible personal property purchased. Connect will be required to collect and remit 7.5% of the selling price on all its sales of tangible personal property at the facility. In addition, much of the initial purchases to construct and equip the project will also be subject to sales/use taxes, including the purchase or sale of:

- Tangible Personal Property utilized during construction;
- Furniture and Fixtures; and
- Tangible Personal Property created and sold as part of the manufacturing process

Based on our analysis, Connect's facility could generate approximately $14,730,919 in State sales/use tax revenue and $4,483,323 in Local sales/use tax over a 6-year period.

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Franklin County and City of Columbus, along with their representatives.

330 N. Wabash, Suite 3200
Chicago, IL 60611

INDIRECT IMPACT

Indirect impacts are the results of business-to-business transactions indirectly caused by the direct investment into the proposed project. Businesses initially benefiting from the direct effects will subsequently increase spending at other local businesses. The indirect effect is a measure of this increase in business-to-business activity.

Over the next six years the proposed project is expected to have an indirect impact on Franklin County resulting in the following:

- 433 construction jobs;
- 213 new jobs in the community;
  - 122 from the operations of Connect Housing Blocks;
  - 21 from other tenant operations;
  - 70 from construction;
- $13,325,591 in new labor income
  - [redacted] from the operations of Connect Housing Blocks;
  - [redacted] from other tenant operations;
  - [redacted] from construction.

Please see our Impact Result by Employment and Impact Results Overview provided in the appendix for further details.

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Franklin County and City of Columbus, along with their representatives.

BDO USA, LLP, a Delaware limited liability partnership, is the U.S. member of BDO International Limited, a UK company limited by guarantee, and forms part of the international BDO network of independent member firms.

330 N. Wabash, Suite 3200
Chicago, IL 60611

INDUCED IMPACT

Induced impacts are the results of increased personal income caused by the direct and indirect impacts. Businesses experiencing increased revenue from the direct and indirect effects will subsequently increase payroll expenditures by hiring more employees, increasing payroll hours, raising salaries, etc. Households will, in turn, increase spending at local businesses. The induced effect is a measure of this increase in household-to-business activity.

Over the next six years the proposed project is expected to have an induced impact on Franklin County resulting in the following:

- 273 new jobs;
  - 96 from the operations of Connect Housing Blocks;
  - 21 from other tenant operations;
  - 156 from construction;
- $14,258,689 new labor income;
  - $5,020,015 from the operations of Connect Housing Blocks;
  - $1,089,724 from other tenant operations;
  - $8,148,950 from construction;

Please see our Impact Result by Employment and Impact Results Overview provided in the appendix for further details.

Collectively, the indirect and induced impact as it relates to state and local tax revenue is equal to approximately $2,889,937:

  - $1,833,465 from the operations of Connect Housing Blocks;
  - $637,220 from other tenant operations;
  - $419,252 from construction;

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Franklin County and City of Columbus, along with their representatives.

APPENDIX

Definitions

Indirect impact: the results of business-to-business transactions indirectly caused by the direct investment into the Multi-Use Development. Businesses initially benefiting from the direct effects will subsequently increase spending at other local businesses. The indirect effect is a measure of this increase in business-to-business activity.

Induced impact: the results of increased personal income caused by the direct and indirect impacts. Businesses experiencing increased revenue from the direct and indirect effects will subsequently increase payroll expenditures (by hiring more employees, increasing payroll hours, raising salaries, etc.). Households will, in turn, increase spending at local businesses. The induced effect is a measure of this increase in household-to-business activity.

Labor Income: all forms of employment income, including employee compensation (wages + benefits).

Multipliers: formulas based on various direct/indirect/induced effects to create matrices to determine specific economic effects.

Output by Absolute Value: defined as value added (employee compensation, other property income and tax on production and imports) plus intermediate expenditures (materials needed on a day to day basis).

Other Property Type Income: A.K.A. Gross Operational Surplus. All money collected by an industry that isn't paid into the operations of the company. This would include profits, capital consumption allowance, payments for rent, royalties & interest income.

Other taxes: all taxes paid to governments other than payroll and income/profits, not already included on a specific line item (ex: excise taxes, fees and fines, licenses and permits, etc). The tax impact report splits the TOPI tax impacts into the various categories based on the picture of that region's economy. There are not industry-specific taxes paid (other than total TOPI, which is industry-specific) so the distribution will be an all industry average.

Property Taxes: on a state and local basis include all property taxes on all real property paid to Franklin County.

Taxes on Production and Imports: (sales tax, property tax, custom duties, and other taxes and fees) less government subsidies

Value Added: The difference between an industry's or an establishment's total output and the cost of its intermediate inputs (gross output – intermediate inputs). Value added consists of compensation of employees, taxes on production and imports less subsidies, and gross operating surplus.

This Economic Impact Report and Study are for the sole use by Connect Real Estate, State of Ohio, Franklin County and City of Columbus, along with their representatives.

BDO USA, LLP, a Delaware limited liability partnership, is the U.S. member of BDO International Limited, a UK company limited by guarantee, and forms part of the international BDO network of independent member firms.

BDO is the brand name for the BDO network and for each of the BDO Member Firms.

ECONOMIC AND REVENUE IMPACTS OF DOWNTOWN ELYRIA REDEVELOPMENT ELYRIA, OHIO

PREPARED FOR:

ELYRIA BLOCK DEVELOPMENT LLC
P.O. BOX 696
GRAFTON, OH 44036

OCTOBER 2021

11209 N. Tatum Boulevard, Suite 225 * Phoenix, AZ 85028 * 602-765-2400 tel * 602-765-2407 fax

1.0 INTRODUCTION

Applied Economics was retained by Elyria Block Development LLC to perform an economic impact analysis for a proposed transformational mixed-use redevelopment project in Elyria, Ohio. This analysis is intended support an application to the Ohio Department of Development for the Transformational Mixed Use Development Program (TMUD). The results are shown over a five-year period as tenants in the commercial development reach full employment levels. The economic and tax impacts in this report are limited to the Surrounding Area defined as zip codes 44035 and 44039.

1.1 Project Description

- The development site is located on the south side of Broad Street at Washington Avenue in downtown Elyria. It includes a new residential building and redevelopment of several existing buildings into mixed-use commercial.

- The commercial component that would be housed in the historic Dixon and Robinson buildings. The renovation of this four-story structure would result in about 67,800 gross square feet that would house an Esports arena and game hub, as well as a restaurant and café on the ground floor; commercial office space on the second floor; and a media production facility and smart classrooms on the third floor that would be used by Lorain Community College.

- The project would also include a multi-family component with 51 studio, one and two-bedroom units on the site of the Mussey Block. This 77,000 square foot, six-story building would be new construction and would also include a wine bar and several retail stores on the ground floor (Figure 1).

- The mix of uses that are envisioned for the project would ensure a well-planned, high-quality development that would transform the downtown area, and support new jobs and tax revenues at the project site and in the surrounding area.

1.2 Summary of Impacts

- The development could directly employ an estimated 141 people by year 5, based on a long-term occupancy rate of 100% for the Esports, retail, restaurant and community college tenants, and 90% occupancy for the office space. **Estimated annual payroll of $5.5 million by year 5 would significantly exceed the $4.0 million payroll required for the TMUD program.**

- **The 141 direct jobs created by tenant businesses in the development could support an additional 13 jobs and $473,000 in annual labor income at other local businesses in the Surrounding Area based on the economic impact results.**

- Total development costs for the project are estimated at $35.1 million, including site work, demolition and hard costs and soft costs. The economic impacts of construction are estimated at $30.9 million in terms of total output over the 18-month development period.

- Annual taxable sales for the retail, wine bar, restaurant and Esports are estimated at $16.8 million by year 5, or an average of about $690 per square foot. Taxable construction materials are estimated at $14.1 million. Figure 2 shows estimated annual taxable sales by type, which form the basis for the state and local sales tax estimates.

- The TMUD program requires that the increase in tax collections over five years exceeds 10% of development costs, or $3.5 million. Direct taxes generated by the project are estimated at $8.9 million over five years including property, sales and income taxes. Taxes generated by direct and indirect employees at the site and in the Surrounding Area are estimated at $2.5 million over five years, including construction workers. **This total of $11.4 million in new state and local tax revenues over five years represents 33% of Development Costs, significantly exceeding the 10% level required for the program.**

FIGURE 1
DEVELOPMENT CHARACTERISTICS

Development Type	Gross Sq Ft	Occupancy Rate	Estimated Jobs*	Annual Payroll*
Residential New Build	**76,986**			
Wine Bar	6,123	100%	8	$270,000
Retail	2,679	100%	4	$74,214
Apartments (51 units)	42,790	95%	6	$190,600
Structured Parking/Storage	25,394		na	na
Elyria Commercial Block	**67,800**			
e-Sports Arena, Restaurant, Media Production	24,500	100%	60	$1,735,000
Office-Level 2 and 3	14,722	90%	53	$2,791,298

Storage/Support Space	25,936	100%	na	na
Total	**144,786**		**141**	**$5,511,112**

*Represents Year 5 levels. Property management jobs are included with the apartments.

FIGURE 2
ESTIMATED ANNUAL TAXABLE SALES

Year	Wine Bar	Retail	Esports/ Restaurant	Construction Materials	Total
Year 0 (Construction)					$14,144,080
Year 1					$8,589,800
Year 2					$9,972,516
Year 3					$12,300,446
Year 4					$13,840,595
Year 5					$16,791,967
Total					$75,639,405

2.0 ECONOMIC IMPACT ANALYSIS

The economic benefits resulting from Downtown Elyria Redevelopment include both the one-time construction impacts and on-going operations impacts. These impacts are quantified in terms of direct and indirect jobs, labor income and output that could be generated by the project. Indirect impacts are the result of the multiplier effect and capture supported supplier and consumer businesses and employees in the Surrounding Area that could benefit from this new development.

3.1 Economic Impacts of Construction

Total construction costs for the project are estimated at $35.1 million, and of this total $29.1 million in demolition, site work and hard construction cost have the potential to generate local jobs and economic impacts. The multiplier effects of this local construction spending could result in a total increase in economic activity in the Surrounding Area of about $30.9 million (Figure 3). It is anticipated that the project would begin in Q1 2022, with completion of the commercial block in Q1 2023, and completion of the residential building in Q3 2023.

The 360 direct and indirect jobs that are anticipated to be created by this construction project could result in close to $17.2 million in additional labor income in the Surrounding Area during the construction phase.[1] Note that labor income includes both employee compensation and proprietor income. The average direct labor income per job for the construction impact is $27.86 per hour. This is generally consistent with data from the Bureau of Labor Statistics Quarterly Census of Employment and Wage for Lorain County of $26.48 per hour for the construction sector, which reflects only wage and salary income.

FIGURE 3
CONSTRUCTION IMPACTS

	Direct Impacts			Total Impacts		
	Construction Cost*	Jobs	Labor Income	Output	Jobs	Labor Income
Residential New Build	$17,025,000	175	$11,801,046	$18,067,037	180	$8,557,807
Commercial Block Renovation	$12,063,148	174	$8,361,689	$12,863,842	180	$8,614,249
Total	**$29,088,148**	**348**	**$20,162,735**	**$30,930,879**	**360**	**$17,172,056**

3.2 Annual Economic Impacts of Business Operations

The total economic activity from on-going operations is shown in Figure 4. These impacts are projected to occur on an annual basis once the development is complete. The commercial portion of the project could directly support an estimated 141 jobs at full occupancy. This translates into an estimated $5.5 million in annual direct labor income or payroll, based on the

[1] The jobs represented in Figure 3 and 4 are not FTE, but rather they are based on the methodology used by IMPLAN that includes full-time, part-time, and seasonal jobs.

projected mix of uses and information from key tenants, and $16.3 million in increased direct economic output each year by the fifth year of operations.[2]

Property Management	$1,265,823	6	$190,600	$1,300,942	6	$199,268
5 Year Total	**$74,560,920**	**141**	**$25,126,560**	**$81,639,143**	**155**	**$27,351,279**

[2] Projections of jobs and payroll were provided by the Esports operator, the community college and the wine bar. Other office and retail jobs were estimated based on standard square feet per employee by type of use and labor income estimates from IMPLAN.

The multiplier effect of this increase in economic activity will result in a total annual output impact of $17.8 million by year 5, or a total of $81.6 million over five years. The estimated 155 direct, indirect and induced jobs supported by this project could result in about $6.0 million in annual labor income in the Surrounding Area by year 5, or a total of $27.4 million in total labor income over five years.

The differences between direct and total impacts are called multiplier effects. Multiplier effects are a way of representing the larger economic effects on the local economy. The multiplier effects translate an increase in output (loosely defined as cost of labor plus cost of inputs plus profits) into a corresponding increase in jobs and labor income. In essence, the multiplier effect represents the recycling of local spending, which creates new business opportunities.

The multipliers used in this analysis are from IMPLAN, a national vendor of input/output software and data, and are specific to the economic base of the Surrounding Area in Elyria, defined as zip codes 44035 and 44039. Industry specific multipliers were used for the various types of potential tenants in the development, and for commercial and residential construction. The average output multiplier for this mixed-use development is 1.1. This means that for every $1 million of output created by the Esports, retail, restaurants, education and office users in the development, an additional $110,000 in output and 0.8 indirect and induced jobs are generated in the local economy immediately surrounding the development. Additional indirect and induced impacts would be generated elsewhere in the county and metro area that are not reflected here.

4.0 REVENUE IMPACTS

In addition to generating new jobs, payroll and output in downtown Elyria through multiplier effects, the project would also generate new state and local tax revenues. All total, Downtown Elyria Redevelopment could generate about $8.9 million in new direct revenues and $2.5 million in revenues from new jobs in the Surrounding Area over the next five years, including construction-related revenues. The combined increase in tax collections could total $11.4 million over five years, which significantly exceeds 10% of development costs at $3.5 million.

4.1 Direct Tax Collections

The increase in property tax revenues and payments in lieu of taxes (PILOT) generated by the new and redevelopment activity are estimated at $3.9 million over the first five years (Figure 5). This represents incremental new taxes over and above the approximately $17,000 in annual property taxes that are currently generated by the existing buildings on the site. This estimate is based on net assessed value of $10.5 million, and a current Class II property tax rate of 7.583% at the site.

FIGURE 5
DIRECT ANNUAL INCREASE IN TAX COLLECTIONS

	Property Tax/PILOT				Sales Tax		Income Tax	
Year	City of Elyria	Lorain County	Elyria ESD	Other Special Districts	Lorain County	State	City of Elyria	Total Revenues
Year 0 (Construction)	$0	$0	$0	$0	$106,081	$813,285	$0	**$919,365**
Year 1	$42,962	$140,957	$539,177	$52,578	$64,424	$493,914	$16,665	**$1,350,676**
Year 2	$42,962	$140,957	$539,177	$52,578	$74,794	$573,420	$16,998	**$1,440,885**
Year 3	$42,962	$140,957	$539,177	$52,578	$92,253	$707,276	$17,338	**$1,592,541**
Year 4	$44,251	$145,186	$555,352	$54,155	$103,804	$795,834	$17,685	**$1,716,268**
Year 5	$44,251	$145,186	$555,352	$54,155	$125,940	$965,538	$18,039	**$1,908,460**
Total	**$217,389**	**$713,243**	**$2,728,233**	**$266,043**	**$567,296**	**$4,349,266**	**$86,725**	**$8,928,195**

Note: A 2% annual inflation rate is applied to taxable sales and resident income estimates.

The residents of the 51 multi-family units that are anticipated to work in Elyria would pay local income taxes estimated at $87,000 over five years, based on implied household income levels of $71,000 (based on rents) and a municipal tax rate of 2.25%. [3]

There would also be county and state sales taxes. Taxable construction materials are estimated at $5.6 million (50% of hard costs), and restaurant, retail and Esports sales are estimated at $16.8 million by year 5, resulting in state and county sales taxes of $4.9 million over five years.

4.2 Employee Tax Collections

Along with the direct taxes generated by businesses and residents in Downtown Elyria Redevelopment, there would also be taxes generated by increases in employment in the

[3] This estimate assumes that 22% of the employees live and work in the city, based on Census OnTheMap data. This is likely low given the location and market orientation of this multi-family project.

Surrounding Area. Using the results from the economic impact analysis showing direct, indirect and induced jobs in zip codes 44035 and 44039 that could be supported by this development, it is possible to estimate employee tax impacts including income and sales taxes. Over five years, the increase in employee tax collections is estimated at $2.5 million (Figure 6).

FIGURE 6
ANNUAL INCREASE IN TAX COLLECTIONS FROM NEW JOBS CREATED

	Sales Tax		Income Tax		
Year	Lorain County	State	City of Elyria	State	Total Revenues
Year 0 (Construction)	$0	$0	$386,371	$381,982	**$768,353**
Year 1	$7,470	$96,086	$113,936	$100,446	**$317,938**
Year 2	$7,679	$98,785	$117,136	$103,806	**$327,406**
Year 3	$8,064	$103,728	$122,997	$109,830	**$344,619**
Year 4	$8,306	$106,848	$126,697	$113,496	**$355,346**
Year 5	$8,827	$113,545	$134,638	$121,806	**$378,815**
Total	**$40,346**	**$518,991**	**$1,001,775**	**$931,366**	**$2,492,477**

Income tax revenues of about $1.0 million to the city and $931,000 to the state includes income taxes from direct employees at businesses in the development, construction workers, and employees at other supported local businesses in the Surrounding Area.

The employees that live in Elyria also spend a portion of their earnings on taxable goods resulting in an estimated $40,000 in county sales taxes and $519,000 in state sales taxes over the next five years. Based on data from the annual Census Consumer Expenditure Survey, it is assumed that employees spend 33% of their income on retail items. This rate can be applied to total labor income from the economic impact, and adjusted to include only the share of employees that would also live in Elyria, which is estimated at 22%.

4.3 Summary

The proposed mix of uses in the Downtown Elyria Redevelopment project could create significant economic benefits, as well as increases in tax collections for the city, county, schools and state government. The development would bring a number of new office workers and Esports players into the downtown area that would create demand at new and existing restaurants and shops. It would provide new educational opportunities for local residents in media production through Lorain Community College. In addition, the development would include rental housing for young professionals to help attract and retain talent in Elyria. This project also meets the eligibility guidelines of the TMUD program and could have a transformational impact on downtown Elyria, creating a synergistic effect on economic activity in the Surrounding Area.

Economic Impact Statement

The Renkert building at 306 Market Avenue North is a 10-story brick building built in 1914 purchased by the Downtown Canton Land Bank. Across the street from Canton's Centennial Plaza, the Renkert Building will be rehabilitated into a 92-room hotel with event space, restaurant, bar, and commercial spaces. Standing 10 stories tall, the building was Canton's first skyscraper. Once home to a department store and offices above, it was completely vacant by 2017.

Total Impacts to the Surrounding Area

- $15.5 million in Annual Economic Output
- 149 Permanent Jobs
- $3.9 in Annual Labor Income
- $7.4 million in State & Local Taxes collected over 5 Years: (after tax abatements)

One-time Construction Impacts to the Surrounding Area

- $38.6 million in Economic Output
- 340 Direct Jobs
- $19.4 million in Direct Labor Income
- $28.7 million in Direct Economic Value Added
- $3.1 million in State and Local Taxes collected

The Project will incur Total Development Costs of approximately $42,084,456 million and as the table below illustrates, the projected "Tax Collections" which includes Sales Taxes, Lodging Taxes, Property Taxes, and Income Taxes will exceed 10% of Total Development Costs.

Tax Collections	Year 1	Year 2	Year 3	Year 4	Year 5	Total
Income Taxes	$163,076	$166,958	$170,931	$174,999	$179,164	**$855,129**
Lodging Taxes	$409,967	$453,490	$459,900	$487,231	$524,191	**$2,334,779**
Property Taxes	$336,588	$343,320	$350,186	$357,190	$364,333	**$1,751,616**
Sales Taxes	$449,839	$475,371	$486,878	$507,326	$532,591	**$2,452,004**
Total	$1,359,470	$1,439,138	$1,467,895	$1,526,746	$1,600,279	$7,393,528
with Construction						$10,561,645

In addition, the Project will enhance quality of life and catalyze additional spending on dining, entertainment and retail to the Surrounding Area. The table below illustrates total sales generated to the Surrounding Area during the five years immediately following construction.

Retail, Entertainment & Dining Sales	Year 1	Year 2	Year 3	Year 4	Year 5	Total
Dining Sales	[redacted]					
Entertainment Sales						
Retail Sales						
Totals	$11,037,877	$11,300,579	$11,569,533	$11,844,888	$12,126,796	$57,879,673

Introduction and Site Overview

The Renkert building at 306 Market Avenue North is a 10-story brick building built in 1914 purchased by the Downtown Canton Land Bank. Across the street from Canton's Centennial Plaza, the Renkert Building will be rehabilitated into a 92-room hotel with event space, restaurant, bar, and commercial spaces. Standing 10 stories tall, the building was Canton's first skyscraper. Once home to a department store and offices above, it was completely vacant by 2017.

The site is located at 306 Market Avenue in Canton, Ohio, on 0.93-acre collection of parcels including parcels 214195, 217420, 234880, 237837 and 221666, within the Canton City School District.

Impact Analysis Overview

An Economic Impact Analysis (EIA) analyzes the effect of an event in a defined geographic area. These geographies vary from a parcel, to a municipality, county, region, state or country. An event comes in many forms, typically engendered from industry changes in revenue, business profits, wages, jobs or capital investment, among others. In this analysis, IMPLAN software was used to map the multiplier effects of each event.

This analysis will include an examination of the economic impacts of the Project, in two major phases:

> ***Construction Phase*** - represents jobs, income and spending created as a result of the increased construction spending associated with the project, during the construction period of the project. This is a non-reoccurring, one-time impact. This phase also includes construction worker spending on goods and services during the construction period.
> ***Operational Phase*** – this phase generates an ongoing impact that creates economic activity each year of operations by the businesses at the project site. If the operators, business and organizations maintain the level of projected business operations, the Operational Phase experiences a reoccurring impact.

In modeling impacts, a series of economic activities result based on project assumptions from the various uses. An economic activity occurs when one or more events represent a related spending change within the Surrounding Area. Typically, these events include, but are not limited to, industry production (business, construction or retail), consumption of goods and services and institutional spending. These events serve as inputs and produce economic impacts into four categories:

1. ***Output*** – representing the value of industry production. For the service and retail sectors, this represents sales or the value of goods sold.
2. ***Employment*** – representing the number of jobs created directly by the project and through direct industry spending.
3. ***Labor Income*** - all forms of employment income paid to employees, including Employee Compensation (wages and benefits) and Proprietor Income (payments received by self-employed individuals and unincorporated business owners).
4. ***Value Added*** - the difference between an industry's or an establishment's total output and the cost of its intermediate inputs. It is a measure of the contribution to GDP

Within each impact category, exists three types of effects, each effect is calculated as part of this study:

> ***Direct Effects*** the set of expenditures applied to an impact analysis. It represents a series (or single) of production changes or expenditures made by producers/consumers as a result of an activity. Applying these initial changes to the multipliers in the IMPLAN model will then display how the region will respond economically to these initial changes (in output, employment, labor income and value added).
>
> ***Indirect Effects*** represent the impact of local industries buying goods and services from other local industries. The cycle of spending works its way backward through the supply chain until all money leaks

from the local economy, either through imports or by payments to value added. The impacts are calculated by applying Direct Effects to IMPLAN multipliers.

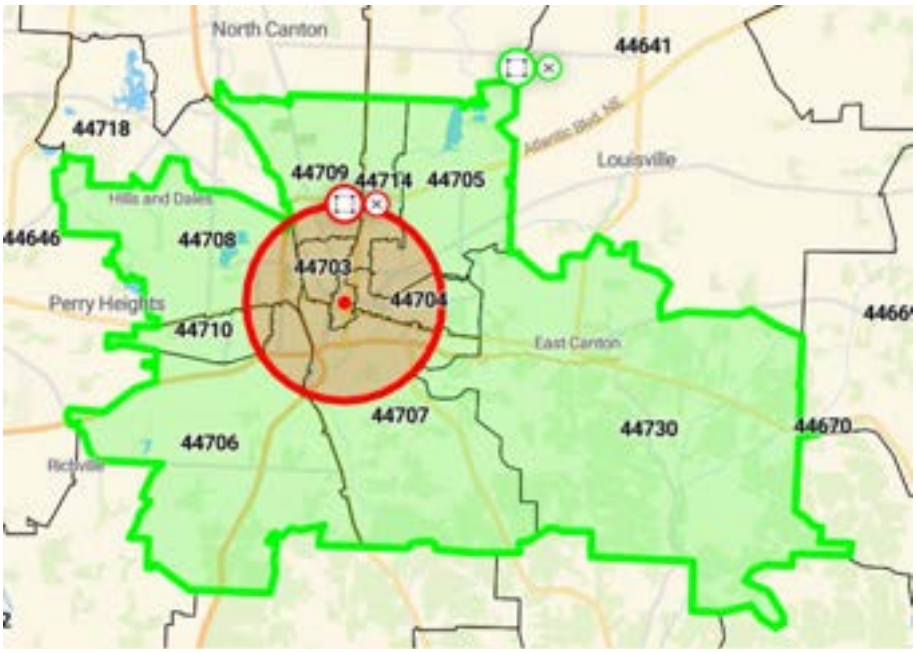
Induced Effects represents the response by an economy to an initial change (direct effect) that occurs through re-spending of income received by a component of value added, recognizing that labor income (employee compensation and proprietor income components of value added) is not a leakage to the regional economy. This money is recirculated through the household spending patterns causing further local economic activity.

In estimating taxes, tax estimates are made for State and Local taxes, including income tax, lodging tax, property tax and sales tax during a) the construction period and b) the first five (5) years of full building operations generated to the Surrounding Area. Income taxes are based on wages paid to employees. Lodging taxes are based on hotel room sales, however lodging taxes do not apply in circumstances where a guest has occupied a room for more than 30 days (a non-transient guest). Property taxes are derived from the assessed appraised value of the property resulting from new building construction, then distributed to the taxing districts illustrated below. The property includes a property tax abatement during the first 10 years and as a result, only 25% of property taxes will be collected. Sales taxes are derived from taxable sales taking place with vendors within the Surrounding Area. It is worth noting that sales taxes on purchases made by the office building are calculated by IMPLAN, as the tenant may not have made all decisions on whether to purchase specific supplies and services from within the Surrounding Area, therefore IMPLAN's tax estimates are used, which uses historical sales tax figures based on similar expenditures within the Surrounding Area from previous events in the surrounding area. This method also accounts for exemptions as it uses sales taxes collected. These estimates were cross-examined by utilizing the Ohio Department of Taxation's Tax Data Series – Sales and Use Tax Collections by Industrial Classification table, to better account for typical average tax collections by County in certain industries.

The period of time utilized in calculating impacts is known as the "Completion Period" which is the time period beginning on the day beginning with the beginning of construction and ending on the fifth anniversary of the day the project is completed. For purposes of this study, "Year 1" will refer to the first year following the completion of construction.

The Surrounding Area

Geographically, this study will address the impacts the Development's *Surrounding Area*. The Surrounding Area constitutes any zip code covered in whole or in part within a two-mile radius of the development site, which includes Zip Codes 44702, 44704, 44703, 44705, 44708, 44714, 44709, 44730, 44706, 44710, 44707 and Census Tracts 39151713000, 39019720300, 39151714901, 39151714802, 39151713201, 39151713100, 39151712400, 39151714400, 39151713300, 39151713202, 39151712300, 39151711402, 39151712202, 39151711322, 39151712500, 39151711800, 39151712201, 39151711501, 39151711600, 39151702300, 39151713402, 39151701800, 39151713501, 39151713401, 39151702500, 39151711502, 39151700700, 39151700200, 39151711700, 39151702100, 39151701500, 39151700400, 39151700800, 39151701200, 39151701000, 39151701300, 39151700500, 39151700300, 39151701100, 39151700600, 39151700100, and 39151701700. Further, the Surrounding Area is located in Stark County with a small portion overlapping with Carroll County. The graphic below depicts the project's two-mile radius (red circle) and zip code footprint (green boundary).



The Surrounding Area has 113,505 residents, representing a 10.32% decline in population since 2000. There are 48,358 households, of which 41.59% (20,111 households) are considered Low Income Households, with Median Household Income at 60% or lower of Area Median Income and 4,976 residents over the age of 16 are unemployed[1].

As of the second quarter of 2021, the Surrounding Area's Residential and Business Vacant Addresses (5.98%, 22.26%) outpaced Stark County (3.56%, 17.91%), Carroll County (1.43%, 3.83%) and State of Ohio (4.53%, 17.75%) rates[2].

Economically, the Surrounding Area's GDP is approximately $6.4 billion, however it carries an Export-Import Ratio of 1.02, illustrating that the Surrounding Area is nearly spending as many dollars outside of the Surrounding Area as it is bringing in[3]. The top 5 producing industries in the Surrounding Area, in terms of Economic Output, include: 1. Petroleum Refineries ($2.9 billion), 2. Hospitals ($835 million), 3.

[3] Source: IMPLAN Custom Regional Data

Iron and Steel Mills ($629 million), 4. Owner-Occupied Dwellings ($503 million) and 5. Ball and Roller Bearing Manufacturing ($440 million).

In evaluating the consumption of commodities in the Surrounding Area, a few notable characteristics stick out as it relates to surplus demand for commodities:

- *Hotels and Motel Services, including Casinos*, are only meeting 70% of the $52.5 million in Surrounding Area demand with Surrounding Area supply
- *Full-service Restaurants*, are only meeting 67.4% of the $111 million in Surrounding Area demand with Surrounding Area supply.
- *All Other Food and Drinking Places (bars),* are only meeting 77.5% of the $55.1 million in Surrounding Area demand with Surrounding Area supply[4].

Project Summary

The Renkert Building redevelopment project includes a renovation of 113,502 square feet of a vacant existing building with renovations of 102,984 square feet of hotel space and 10,518 square feet of restaurant space, including a new addition of 31,233 of restaurant space and 1,785 of retail space and a parking garage. After the project is complete, the building will have 151,500 total square footage, of which 100% of leasable space has been committed. The total project cost is $42.1 million, including $23.9 million in historic renovations, $3.8 million for the parking garage construction, $1.6 million for the restaurant construction and $510,000 for demolition. Below is a specific summary of economic events associated with the project.

Hotel ($23,950,000 million cost; 102,984 square feet) **–** the Hotel will include 92 keys and an occupancy of [redacted] in Year 1 of operations, increasing to [redacted] stabilized by Year 3. Average daily room rates will start at [redacted] in Year 1 of operations and increase to [redacted] by Year 3. The hotel will include Food & Beverage operations. Below is a summary of Hotel Revenues[5].

Revenues	**Year 1**	**Year 2**	**Year 3**	**Year 4**	**Year 5**
Rooms	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Food & Beverage					
Other Income					

Restaurant, Event & Retail/Incubation Space ($1,650,000 million cost; 41,751 square feet) **–** the restaurant space will include the existing Basil Asian Bistro and the Onesto Event Center. Below is an estimate of sales for both restaurant uses. Sales for both spaces are estimated using [redacted] per square foot for the 41,751 space[6]. However, specific sales estimations for the existing Basil Asian Bistro illustrate [redacted] in annual sales. As such the Onesto Event Center sales are estimated assuming [redacted] in total sales (41,751 x [redacted] /sf) with [redacted] subtracted from the total. In addition to the Restaurant and Event space, 1,785 is reserved for [redacted]

Revenues	**Year 1**	**Year 2**	**Year 3**	**Year 4**	**Year 5**
Basil Asian Bistro	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Onesto Event Center					
[redacted]					
Rental Income					

Parking Garage ($3,750,000 million cost; 161 spaces) **–** the parking garage will include 161 parking spaces to support the hotel.

Totals	$11,037,877	$11,300,579	$11,569,533	$11,844,888	$12,126,796	$57,879,673

Detailed Dining, Entertainment and Retail Impacts

Category	Sales
Dining	**$2,102,186**
509 - Full-service restaurants	$1,467,471
510 - Limited-service restaurants	$634,715
Entertainment	**$8,236,018**
106 - Breweries	$648
147 - Paperboard container manufacturing	$160
420 - Scenic and sightseeing transportation and support activities for transportation	$1,273
431 - Radio and television broadcasting	$10,800
474 - Travel arrangement and reservation services	$1,372
496 - Performing arts companies	$3,149
497 - Commercial Sports Except Racing	$852
498 - Racing and Track Operation	$62
499 - Independent artists, writers, and performers	$1,256
500 - Promoters of performing arts and sports and agents for public figures	$6,038
501 - Museums, historical sites, zoos, and parks	$1,308
502 - Amusement parks and arcades	$135
503 - Gambling industries (except casino hotels)	$1,435
504 - Other amusement and recreation industries	$1,152
506 - Bowling centers	$173
511 - All other food and drinking places	$58,706
447 - Events & other real estate	$8,147,499
Retail	**$192,450**
152 - Printing	$12,568
392 - Wholesale - Motor vehicle and motor vehicle parts and supplies	$2,287
393 - Wholesale - Professional and commercial equipment and supplies	$6,939
394 - Wholesale - Household appliances and electrical and electronic goods	$3,401
395 - Wholesale - Machinery, equipment, and supplies	$2,655
396 - Wholesale - Other durable goods merchant wholesalers	$10,053
397 - Wholesale - Drugs and druggists' sundries	$2,557
398 - Wholesale - Grocery and related product wholesalers	$7,695
399 - Wholesale - Petroleum and petroleum products	$9,995
400 - Wholesale - Other nondurable goods merchant wholesalers	$13,374
401 - Wholesale - Wholesale electronic markets and agents and brokers	$1,081
402 - Retail - Motor vehicle and parts dealers	$2,977
403 - Retail - Furniture and home furnishings stores	$1,304
404 - Retail - Electronics and appliance stores	$1,089
405 - Retail - Building material and garden equipment and supplies stores	$3,424
406 - Retail - Food and beverage stores	$5,230
407 - Retail - Health and personal care stores	$2,642
408 - Retail - Gasoline stores	$1,903
409 - Retail - Clothing and clothing accessories stores	$782
410 - Retail - Sporting goods, hobby, musical instrument and book stores	$378
411 - Retail - General merchandise stores	$6,832
412 - Retail - Miscellaneous store retailers	$2,892
413 - Retail - Nonstore retailers	$5,514
423 - Newspaper publishers	$17,707
437 - News syndicates, libraries, archives and all other information services	$121
451 - General and consumer goods rental except video tapes and discs	$3,192
452 - Video tape and disc rental	$121
466 - Photographic services	$589
467 - Veterinary services	$365
477 - Landscape and horticultural services	$20,921
493 - Individual and family services	$2,635
505 - Fitness and recreational sports centers	$629
512 - Automotive repair and maintenance, except car washes	$14,889
513 - Car washes	$6,528
514 - Electronic and precision equipment repair and maintenance	$1,456

88 - Poultry processing	$2,581
90 - Meat processed from carcasses	$660
93 - Bread and bakery product, except frozen, manufacturing	$135
97 - Roasted nuts and peanut butter manufacturing	$53
98 - Other snack food manufacturing	$116
Grand Total	**$10,530,653**

Impacts to Low-Income Residents

As mentioned above, the Surrounding Area includes some economic challenges, with high concentrations of low-income residents and unemployed people.

The project will assist in combating these issues by providing employment opportunities in professions with various skills, education and qualification requirements that can both increase incomes and area employment. Approximately 71.8% of jobs caused by project operations and 58% of jobs caused by construction require high school degrees or less than a high school degree. Further, approximately 10.2% of jobs caused by operations and 23.5% of jobs caused by construction require an associates degree or post-secondary (post-high school) certificate.

ECONOMIC IMPACT METHODOLOGY

Economic Impact Analysis (EIA) refers to any number of processes that trace how changes in spending, such as business closures, new industrial or infrastructural developments, natural disasters, and conventions, move through an economy. An impact study measures the cumulative effects of that spending on a defined geographic region. Portions of this analysis were completed using the IMPLAN EIA model. IMPLAN Data used for this study is based largely on spending interactions from calendar year 2019. Other data sources include:

1. U.S. Bureau of Labor Statistics (BLS) Covered Employment and Wages (CEW) program
2. U.S. Bureau of Labor Statistics Consumer Expenditure Survey (Urban Populations over 1 million)
3. U.S. Bureau of Economic Analysis (BEA) Regional Economic Information System (REA) program
4. U.S. Bureau of Economic Analysis Benchmark I/O Accounts of the U.S
5. JobsOhio Info USA-GIS Planning integration. September, 2021 & Applied Geographic Solutions
6. BEA Output estimates
7. BLS Consumer Expenditure Survey
8. U.S. Census Bureau County Business Patterns (CBP) program
9. U.S. Census Bureau Decennial Census and Population Surveys
10. U.S. Census Bureau Economic Censuses and Surveys
11. U.S. Department of Agriculture Census

GLOSSARY – Key Terms

Employee and Employment Multipliers. An employee is a person who enters an agreement, which may be formal or informal, with an enterprise to work for the enterprise in return for remuneration in cash or in kind (full-time and part-time). Multipliers are used to estimate the total number of jobs (both full-time and part-time) throughout the economy that are needed, directly and indirectly, to deliver $1 million of final demand for a specific commodity.

Direct effects - the set of expenditures applied to the predictive model (i.e., I/O multipliers) for impact analysis. It is a series (or single) of production changes or expenditures made by producers/consumers as a result of an activity or policy. These initial changes are determined by an analyst to be a result of this activity or policy. Applying these initial changes to the multipliers in an IMPLAN model will then display how the region will respond, economically to these initial changes.

Indirect effects - the impact of local industries buying goods and services from other local industries. The cycle of spending works its way backward through the supply chain until all money leaks from the local economy, either through imports or by payments to value added. The impacts are calculated by applying Direct Effects to the Type I Multipliers.

Labor Income - all forms of employment income, including Employee Compensation (wages and benefits) and Proprietor Income.

Output - output represents the value of industry production. In IMPLAN these are annual production estimates for the year of the data set and are in producer prices. For manufacturers this would be sales plus/minus change in inventory. For service sectors production = sales. For Retail and wholesale trade, output = gross margin and not gross sales.

Value added - the difference between an industry's or an establishment's total output and the cost of its intermediate inputs. It equals gross output (sales or receipts and other operating income, plus inventory change) minus intermediate inputs (consumption of goods and services purchased from other industries or imported). Value added consists of compensation of employees, taxes on production and imports less subsidies (formerly indirect business taxes and nontax payments), and gross operating surplus (formerly other value added). (BEA) Gross value added is the value of output less the value of intermediate consumption; it is a measure of the contribution to GDP made by an individual producer, industry or sector; gross value added is the source from which the primary incomes of the SNA are generated and is therefore carried forward into the primary distribution of income account. (SNA)

Direct Taxes – direct taxes are primarily calculated based on project information provided by the Developer and rates prescribed by taxing units. For property taxes, hard construction costs are used as the estimated market value. For sales taxes, only Ohio taxable sales such as on-premises dining, hotel room stays, resident spending on household items, certain professional services and business operational supplies purchases are subject to sales tax. An exemption list and guidance materials from the Ohio Department of Taxation was used to determine taxable sales interactions.

Indirect Taxes - the "State/Local" tax table estimates taxes paid to all state and local units of government in the study area. In IMPLAN Online, the tables for county government, sub-county general government, sub-county special government, and state government together will sum the values reported in "State/Local" table. Given IMPLAN maps all indirect interactions, tax calculations within this category are made using IMPLAN.

- County - estimates revenue collected by county governments.
- Sub County General - estimates revenue collected by city, township, and village, etc., governments.
- Sub County Special - estimates revenue collected by units of government such as public school districts and fire districts.
- State - estimates revenue collected by state governments.

This methodology was used in estimating indirect and induced taxes only, as State and Local tax rates were tied to known direct spending in order to calculate estimated direct tax revenues.

Introduction

Silverlode Consulting was engaged by HH Cleveland Huntington LP ("HH Cleveland"), to estimate the economic impact and increase in tax collections associated with HH Cleveland's proposed redevelopment entitled the Centennial, located at 909 - 925 Euclid Avenue (the "Project") and the economic activity within a one-half mile (2,640 foot) radius of the Project ("Surrounding Area").

The analysis considers the economic and fiscal impacts of the construction of the Project and future redevelopment and development projects within the Surrounding Area, as well as the impacts generated by the operations of the Project and economic activity in the Surrounding Area during the one and five-year periods following completion of the Project, on the economy of Cleveland zip codes 44113, 44114, and 44115 (the "Analyzed Area"), a portion of which are located within one-half mile of the Project.

This analysis was prepared to support HH Cleveland's application to the Ohio Department of Development ("ODOD") for consideration for an award of Ohio Transformational Mixed-Use Development ("TMUD") tax credits.

HH Cleveland has informed Silverlode Consulting that it will be requesting the alternative method of computing the value of the tax credits. This report, and the analysis contained herein, is therefore also being submitted to support an alternative method tax credit calculation as described in Section 122.09(F) of the Ohio Revised Code (the "ORC") and Section 10(b) of the ODOD guidelines for the TMUD program. As set forth on page 9 of this report, having reviewed the provisions of ORC Section 122.09, and having modeled the tax impacts of the Project and the Analyzed Area, Silverlode Consulting can confirm that it is reasonably certain the increase in tax collections will exceed ten percent (10%) of the estimated development costs within one year after the Project is completed. As set forth in this report, TMUD eligible development costs ("Development Costs") are estimated to be $465.1 million, and the estimated increase in tax collections is expected reach $109.4 million within one year after the Project is completed, far exceeding the $46.5 million/10% threshold the first year following Project completion.

Over the construction period and the five-year completion period, the Project and economic activity in the Surrounding Area are expected to generate an increase in tax collections of $326.4 million, over 7 times the $46.5 million/10% threshold.

Project Overview

The Centennial, which was formerly known as the 925 Building, the Huntington Building, and the Union Trust Building, is prominently located at the corner of 9th Street and Euclid Avenue in the center of downtown Cleveland. A significant portion of Cleveland's central business district lies within a half-mile radius of the Centennial.

Built in 1924, the building encompasses approximately 1.4 million square feet (more than 30 acres) of floor space and was once the second largest building in the world. The Centennial's Corinthian columns, vaulted ceilings, skylights, and murals were designed by artist Jules Guerin, who created murals at the Lincoln Memorial in Washington, D.C. Due to its prominent location, size, history, and ornate interior and exterior, its significance to the City of Cleveland and surrounding region is tremendous.

The building has been vacant for many years, during which time there have been several unsuccessful attempts to redevelop the building by prior owners. Today, HH Cleveland proposes to redevelop the Centennial as a mix of affordable housing, event, restaurant, museum, retail, and a luxury boutique hotel.

Following redevelopment, the Centennial will include 864 affordable apartments, a historically-oriented museum in the ornate former bank lobby on the first floor, event and meeting spaces on several floors, retail and restaurant spaces on the lower level and first floor, and 61 boutique hotel suites and amenities on the 2nd and 3rd floors.

The estimated development costs of the Project are $465.1 million and HH Cleveland is applying for $40 million of TMUD tax credits to enable the redevelopment of the building.

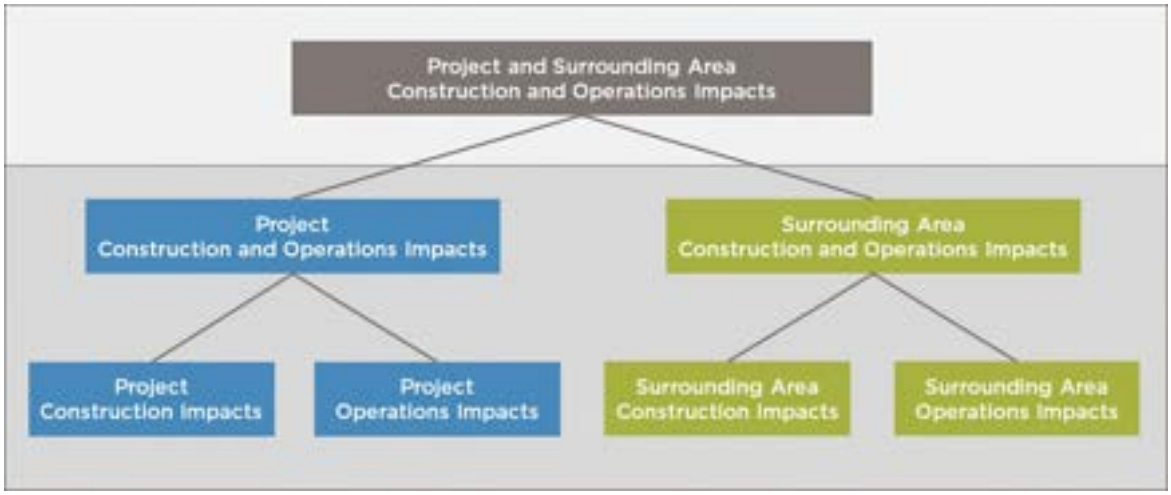
The project is shovel-ready and with an award of the requested TMUD tax credits, construction is expected to commence in early 2022 and be completed in 2025, approximately 39 months after commencement.

Areas of Analysis

The Project would catalyze additional development and redevelopment in the Surrounding Area. As such, this study models the economic activity of both the Project itself and the real estate developments of scale in the Surrounding Area.

IMPLAN, one of the most well-respected and widely used methodologies for assessing economic impacts, was used to complete this analysis. Because IMPLAN does not allow for an economic impact analysis of a radius area, the impact of the Project and increased economic activity in the Surrounding Area were modeled for the Analyzed Area, which includes zip codes 44113, 44114, and 44115. The Analyzed Area represents the closest proxy for the Surrounding Area that IMPLAN allows.

The analysis considers the one-time economic and fiscal impacts generated during the redevelopment of the Project and redevelopment and development projects within the Surrounding Area, as well as the operating impacts generated by the Project and within the Surrounding Area during the one-year and five-year periods following completion. The image below illustrates the economic activities that are included in this analysis. While this report includes the aggregated impacts at the highest level, the details of the other impact analyses have not been submitted with this application.



To determine the increase in tax collections, only taxes collected under sections 718, 5705, 5739, 5741, and 5747 of the Ohio Revised Code were considered, as required by the TMUD program. Property tax estimates included in this analysis include tax increment financing service payments but do not include abated real estate taxes. The computation of the increase in tax collections does not include baseline taxes.

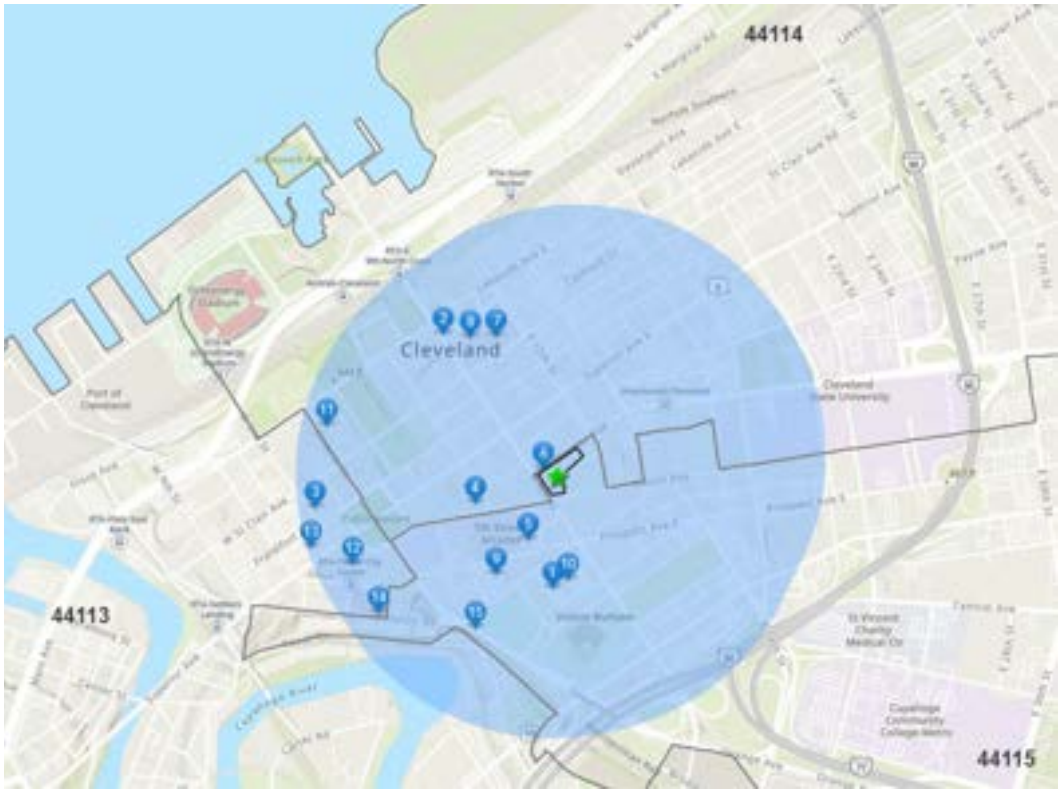
Economic Activity in the Surrounding Area

The Project is expected to spur additional redevelopment and development activity in the Surrounding Area. This analysis considers significant redevelopment and development projects within the Surrounding Area which are poised for development during the construction of the Project or the five years following completion of the Project. Development or redevelopment projects that are imminent or committed to at the time of this report were excluded from this analysis. The analysis includes any parcels which are wholly or partially within one half mile of the boundaries of the Project site.

HH Cleveland gathered data and provided proposed assumptions that Silverlode reviewed and incorporated to model the impacts of the construction and operations activity associated with these redevelopment and development projects in the Surrounding Area. These assumptions included the estimated cost of construction or renovation, types of uses, number of square feet for each use, number of hotel rooms and residential units, and other parameters.

As the development timeframes for this redevelopment and development activity in the Surrounding Area is uncertain, it was assumed that construction of these redevelopment or development projects would begin one year after the start of Project construction and occur evenly during the years that would follow.

The below map and accompanying table identify redevelopment or development activity in the Surrounding Area that was included in this analysis. The projected redevelopment or development activity in the Surrounding Area represents an estimated $1.22 billion of private and public sector investments, four million square feet of total new and/or renovated space, nearly 1,400 apartment units, and 900 hotel rooms.



Map Number	Project Name	Address	Anticipated Use

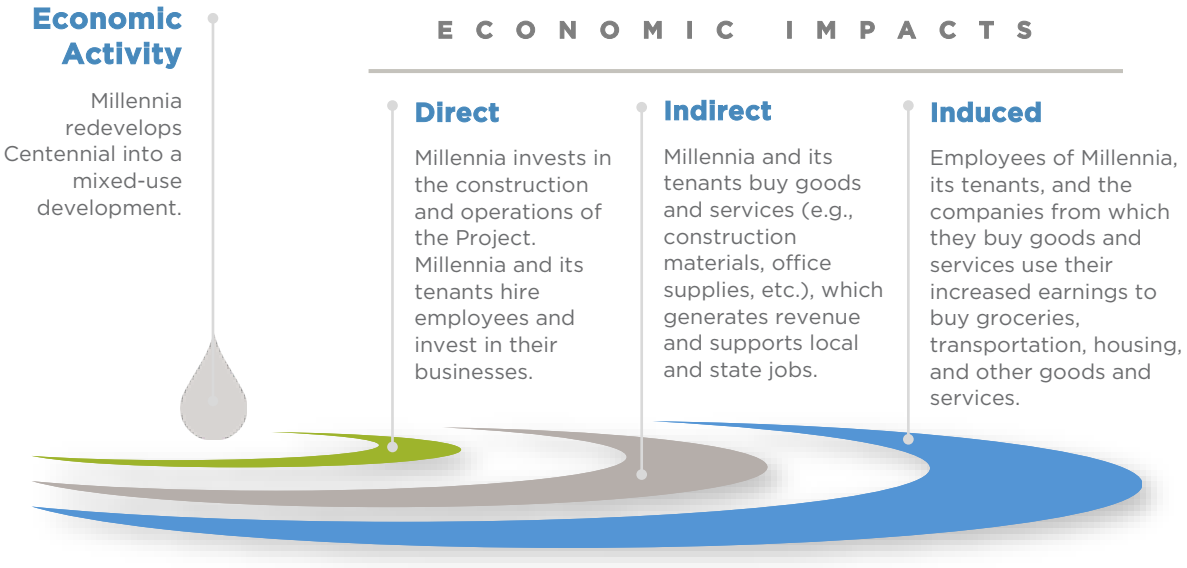
15	Rocket Mortgage offices	230 W Huron	Office

Data and Analysis

IMPLAN, one of the most widely used and accepted methodologies for estimating regional economic impacts, was used to complete the analyses. 2019 IMPLAN data, the most current data available at the time, was used for this study. HH Cleveland provided the capital investment and other operational data necessary to prepare this analysis. Economic and fiscal impacts can be divided into three component parts, which are referred to as Direct, Indirect, and Induced, and are described below.

- Direct — Activity attributable to the construction and operations of the Project and Surrounding Area (employees, associated payroll, construction investments, etc.)
- Indirect — The economic activity of the of the entities that provide goods and services to HH Cleveland, HH Cleveland's tenants, and the Surrounding Area.
- Induced — Economic activity arising from employee (both Direct and Indirect) household spending.

Another way of looking at economic impacts is to think of an economic activity as creating "ripples" of economic activity throughout the region being analyzed. The graphic below depicts this ripple activity.



Additional information about data sources, methodology, and terms used in this study appears in the *Study Methodology* section near the end of the report.

Economic Impacts and Increase in Tax Collections

Construction Period + Operations Year 1

This analysis estimates the impact of the construction and operations of the Project and the Surrounding Area on the Analyzed Area during the Project's construction and first year of operations. During this timeframe, the Project and the economic activity in the Surrounding Area are estimated to support $3.51 billion of economic activity in the Analyzed Area. The Project and economic activity in the surrounding area are also estimated to support 23,129 total jobs, $1.65 billion of annual labor income, including benefits, and result in the generation of an estimated $109.4 million of increased state and local taxes during this time period.

Analyzed Area Impacts
Project and Surrounding Area: Construction + Operations Year 1

$3.51 billion
economic output

23,129
jobs

$1.65 billion
labor income

$109.4 million
Increased state and local taxes

	Construction Period	Operations Year 1	Total (Construction + Operations Year 1)
Economic Impacts			
Economic Output	$ 2,102,970,000	$ 1,404,277,000	**$ 3,507,247,000**
Jobs	15,578	7,551	**23,129**
Labor Income	$ 1,055,720,000	$ 595,731,000	**$ 1,651,451,000**
Households Supported	10,474	5,077	**15,551**
Increased State & Local Taxes			
Property Tax	$ 10,751,000	$ 8,134,000	**$ 18,885,000**

Other State & Local Taxes	$ 398,000	$ 342,000	**$ 740,000**
Total Increased State & Local Taxes	**$ 66,305,000**	**$ 43,067,000**	**$ 109,372,000**

Construction Period + Operations Years 1-5

This analysis estimates the impact of the construction and operations of the Project and the Surrounding Area on the Analyzed Area during the construction period and first five years of operations.

The increased economic activity of the Project and the Surrounding Area is estimated to support $10.90 billion of economic activity in the Analyzed Area during the construction period and first five years of operations. The increased economic activity of the Project and the Surrounding Area is also estimated to support 57,163 total jobs, $4.56 billion of annual labor income, including benefits, and result in the generation of an estimated $326.4 million of increased state and local taxes during this time period.

The notable increase in economic activity and tax generation during this timeframe reflects the completion of construction of the Project, its full operational impact, approximately $1.22 billion of Surrounding Area construction, and nearly the full operational impact of these Surrounding Area projects.

Analyzed Area Impacts
Project and Surrounding Area: Construction + Operations Years 1-5

$10.90 billion
economic output

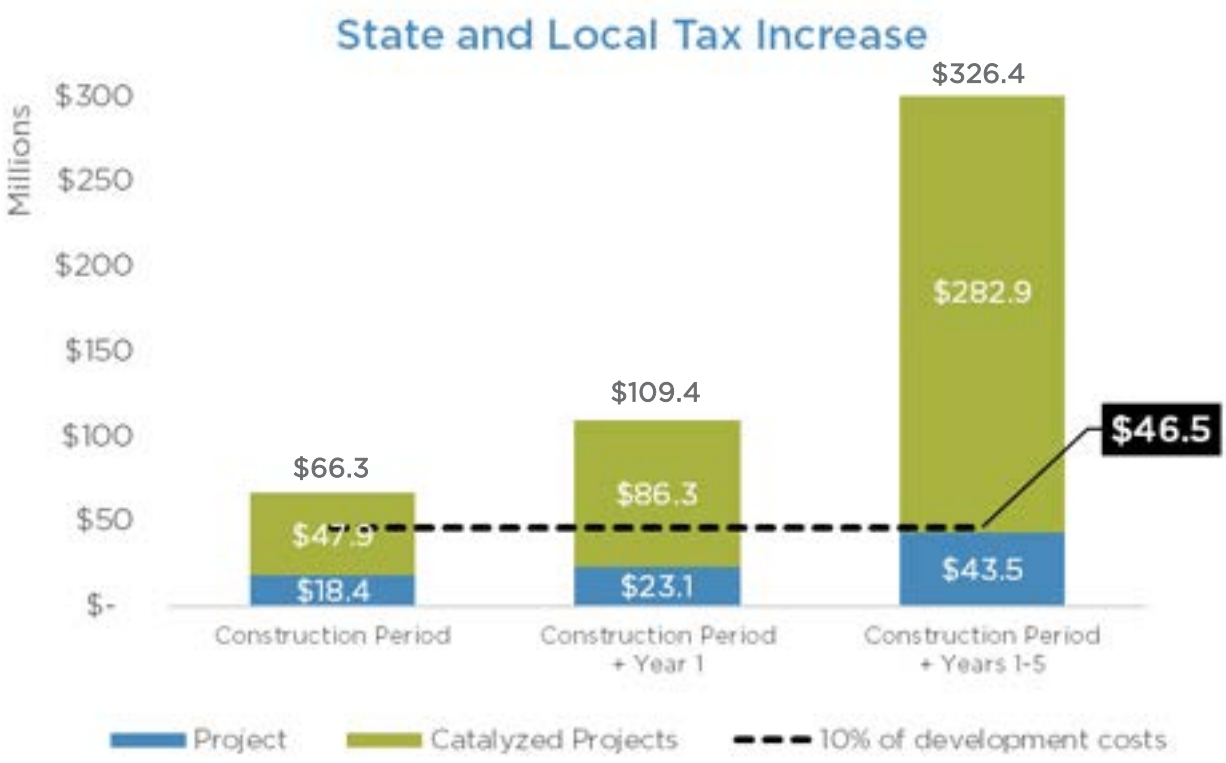
Total Increased State & Local Taxes	**$ 66,305,000**	**$ 260,105,000**	$ 326,410,000

TMUD Qualification

Qualification for TMUD tax credits requires applicants to demonstrate that state and local taxes derived from economic activity associated with a TMUD project within the development site and Surrounding Area during the construction period and the five years that follow ("Increase in Tax Collections") exceed ten percent of the TMUD project's development costs.

Applicants are eligible to have the value of TMUD tax credit certificates computed prior to completion of the Project under an "alternate method" if it is reasonably certain that the Increase in Tax Collections would exceed 10% of estimated development costs within one year after the project is completed.

As illustrated in the graph below, it is estimated that the Increase in Tax Collections would reach $109.4 million within one year after the Project has been completed, which far exceeds ten percent of the estimated development costs, or $46.5 million. Therefore, it is reasonably certain that the Increase in Tax Collections would exceed 10% of estimated development costs within one year of the Project's completion.



Study Methodology

About IMPLAN

Portions of this analysis were completed using the IMPLAN (IMpact Analysis for PLANning) economic impact modeling system. IMPLAN is an input-output model that was originally developed by the U.S. Forest Service in the 1970s and is one of the most respected and widely used approaches to regional economic impact analysis. IMPLAN is used by more than 1,000 universities, government agencies, and consultants to estimate the economic and fiscal impacts of investments and/or changes in one or more industries. Data underlying the IMPLAN model is partially derived from industry surveys conducted periodically by the U.S. Bureau of Economic Analysis (BEA), as well as other sources.

Terminology

A Direct effect describes an initial, or first-round change in the economy and is the starting point for economic impact analysis. Changes in an economy create "ripples" of economic activity throughout the region being analyzed. These ripples are described as Indirect and Induced effects. A positive Direct effect causes increased purchases within the economy being modeled, as well as "leakage" of economic activity out of the economy being studied in the form of imports into the economy from other areas outside the economy. Generally speaking, Direct describes activity attributable to the economic activity being modeled. In this report, Direct jobs comprise full, part-time, and temporary employees and jobs supported by the Project and future redevelopment and development projects within the Surrounding Area.

Indirect effects represent changes in the industries that provide goods and services to the economic activity being modeled (e.g., suppliers, service providers, etc.). Indirect effects occur in a repeating cycle but diminish in each round as economic activity "leaks" from the region being modeled. Indirect effects cease when the last dollar of economic activity leaks from the economy being studied. Indirect effects are estimated using IMPLAN.

Induced effects represent the impact of changes in household spending resulting from the Direct and Indirect effects. Like Indirect effects, Induced effects occur in repeating cycles, but diminish in each round as economic activity "leaks" from the region being modeled. Induced effects cease when the last dollar of economic activity leaks from the economy being studied. Induced effects are estimated using IMPLAN. For ease of presentation, in this report, Induced effects are combined with Indirect effects and referred to simply as Indirect.

Total Impact refers to the final cumulative result of all rounds of Direct, Indirect, and Induced economic activity.

Report Definitions

	Direct	Indirect and Induced
Economic Output	The total value of goods and services produced by the activity being modeled. Output is roughly equivalent to sales or revenue associated with the Direct activity.	IMPLAN estimate of the total value of goods and services produced by Indirect and Induced economic activity. Output is roughly equivalent to sales or revenue associated with this activity.
Jobs	Jobs directly engaged in the activity being analyzed.	IMPLAN estimate of the number of jobs supported by the purchase of goods and services by the activity being modeled (Indirect) as well as by changes in household spending (Induced).
Labor Income	Wages and benefits associated with Direct jobs.	IMPLAN estimate of the wages, benefits, and proprietor income associated with the Indirect and Induced economic activity.
Households Supported	IMPLAN estimate of the number of households supported by the economic activity being analyzed.	IMPLAN estimate of the number of households supported by Indirect and induced economic activity.
State and Local Taxes	Estimate of all TMUD-eligible taxes paid to state and local units of government as a direct result of the economic activity being analyzed.	Estimate of all TMUD-eligible taxes paid to state and local units of government due to Indirect and Induced economic activity.

About Silverlode Consulting

Silverlode Consulting was founded in 2002 by two leaders of EY's and PwC's consulting practices. As a national leader in the field of economic impact analysis, we have helped hundreds of organizations, ranging from non-profit arts groups to multi-national corporations, to measure their impacts on their communities and communicate those impacts to their stakeholders. By meticulously estimating and effectively communicating the direct, indirect, and induced jobs, earnings, taxes and other impacts of projects, the presence of an organization, or an investment in a community, our work has helped clients to gain approvals, secure funding, and positively shift public opinion. More information about our firm and our work in economic impact analysis can be found on our website www.silverlodeconsulting.com.

Appendix A: Application Tables

The table below reflects construction jobs and average hourly wages for the Project only. Non-construction Project costs such as soft cost are excluded, as are indirect and induced effects. Construction projections are derived from input-output modeling using IMPLAN.

Project Construction Jobs & Wages			
Project Construction Year	FTEs		Average Hourly Wage
Year 1	1,000	$	26.94
Year 2	1,000	$	26.94
Year 3	1,000	$	26.94
Year 4	250	$	26.94
Total Construction	3,249	$	26.94

The table below reflects operations jobs and average hourly wages for the Project and Surrounding Area. Indirect and induced effects are not included. Operations projections are derived from input-output modeling using IMPLAN. Data necessary to perform IMPLAN modeling was gathered from HH Cleveland and publicly available sources. Reasonable estimates were made when necessary.

Operations Jobs for Project and Surrounding Area			
Project Operating Year	Total Project and Surrounding Area Direct Operating FTEs		Total Project and Surrounding Area Direct Operating Jobs Average Hourly Wage
Year 1	113	$	21.14
Year 2	132	$	21.56
Year 3	146	$	21.99
Year 4	154	$	22.43
Year 5	154	$	22.88

The table below reflects tenant jobs and average hourly wages for the Project and Surrounding Area. Indirect and induced effects are not included. Tenant FTE and wage projections are derived from input-output modeling using IMPLAN. Data necessary to perform the IMPLAN modeling was gathered from HH Cleveland and publicly available sources. Reasonable estimates were made when necessary.

Tenant Jobs for Project and Surrounding Area		
Project Operating Year	Total Project and Surrounding Area Direct Operating FTEs	Total Project and Surrounding Area Direct Operating Average Hourly Wage
Year 1	4,002	$ 40.81
Year 2	5,151	$ 41.50
Year 3	5,988	$ 41.75
Year 4	6,444	$ 41.87
Year 5	6,444	$ 41.90

The table below reflects direct retail, entertainment, and dining sales for the Project and Surrounding Area. Indirect and induced effects are not included.

Annual Sales from Retail, Entertainment, and Dining Operations for Project and Surrounding Area				
Project Operating Year	Projected Annual Retail Sales	Projected Annual Entertainment Sales	Projected Annual Dining Sales	Projected Total
Year 1	$ 39,100,169	$ 11,584,272	$ 29,482,380	$ 80,166,821
Year 2	$ 49,629,297	$ 13,548,823	$ 33,149,813	$ 96,327,933
Year 3	$ 57,108,942	$ 14,807,927	$ 35,195,938	$ 107,112,807
Year 4	$ 61,188,749	$ 15,494,711	$ 36,312,007	$ 112,995,466
Year 5	$ 61,188,749	$ 15,494,711	$ 36,312,007	$ 112,995,466

The table below reflects direct, indirect, and induced tax generation for the Project and Surrounding Area.

Annual Taxes from Sales, Income, Lodging and Property Taxes for Project and Surrounding Area					
Project Operating Year	Projected Annual Sales Tax	Projected Annual Income Tax	Projected Annual Lodging Tax	Projected Annual Property Tax	Projected Total
Year 1	$ 8,248,028	$ 25,242,866	$ 1,100,506	$ 8,133,334	$ 42,724,733
Year 2	$ 9,490,224	$ 29,282,539	$ 1,269,076	$ 10,030,239	$ 50,072,077
Year 3	$ 10,304,996	$ 31,387,119	$ 1,400,732	$ 11,379,473	$ 54,472,320
Year 4	$ 10,574,613	$ 31,176,952	$ 1,478,018	$ 11,955,031	$ 55,184,615
Year 5	$ 10,630,679	$ 31,193,123	$ 1,490,060	$ 11,976,919	$ 55,290,780

Appendix B: Attachment to Accompany Application Tables

Much of this analysis was completed using the IMPLAN (IMpact Analysis for PLANning) economic impact modeling system. IMPLAN is an input-output model that was originally developed by the U.S. Forest Service in the 1970's and is one of the most respected and widely used approaches to regional economic impact analysis. IMPLAN is used by more than 1,000 universities, government agencies, and consultants to estimate the economic and fiscal impacts of investments and/or changes in one or more industries.

Data underlying the IMPLAN model is updated annually using thousands of data points from over 90 sources. The main sources for this data include:

- U.S. Bureau of Labor Statistics (BLS) Quarterly Census of Employment and Wages (QCEW)
- U.S. Bureau of Economic Analysis (BEA) Regional Economic Accounts (REA)
- U.S. Census Bureau County Business Patterns (CBP)
- U.S. Bureau of Economic Analysis National Income and Product Accounts (NIPA)

Economic Impact Assessment of the Development of Uptown Mentor

Introduction

Silverlode Consulting ("Silverlode") was engaged by Uptown Mentor LLC to estimate the economic impact and increase in state and local tax collections associated with Uptown Mentor LLC's proposed development of Uptown Mentor, located on Mentor Avenue in the heart of Mentor, Ohio (the "Project") and the economic activity located within a two-mile (10,560 foot) radius of the Project ("Surrounding Area").

The analysis considers the economic and fiscal impacts of the construction of the Project and future redevelopment and development projects within the Surrounding Area, as well as the impacts generated by the operations of the Project and economic activity in the Surrounding Area during the one and five-year periods following completion of the Project. The analysis measures these impacts on the region comprised of Mentor zip code 44060 (the "Analyzed Area"), a significant portion of which is within two miles of the Project. This analysis was prepared to support Uptown Mentor LLC's application to the Ohio Department of Development ("ODOD") for consideration for an award of Ohio Transformational Mixed-Use Development ("TMUD") tax credits.

Uptown Mentor LLC has informed Silverlode that it will be requesting the alternative method of computing the value of the tax credits. This report, and the analysis contained herein, is therefore also being submitted to support an alternative method tax credit calculation as described in Section 122.09(F) of the Ohio Revised Code (the "ORC") and Section 10(b) of the ODOD guidelines for the TMUD program. As set forth on page eight of this report, having reviewed the provisions of ORC Section 122.09, and having modeled the tax impacts of the Project and the Analyzed Area, Silverlode can confirm that it is reasonably certain the increase in tax collections will exceed ten percent (10%) of the estimated development costs within one year after the Project is completed. As set forth in this report, TMUD eligible development costs ("Development Costs") are estimated to be $11.6 million, and the estimated increase in tax collections is expected reach $3.1 million within one year after the Project is completed, far exceeding the $1.2 million/10% threshold the first year following Project completion.

Over the construction period and the five-year completion period, the Project and economic activity in the Surrounding Area are expected to generate an increase in tax collections of $53.5 million, which is approximately 45 times the $1.2 million/10% threshold.

Project Overview

Uptown Mentor is a new, transformational mixed-use development which will rejuvenate a historic stretch of Mentor Avenue to create a vibrant, walkable downtown district in the heart of the City of Mentor. The four-story, 43,414 square foot new building will include restaurant, retail, office, and recreation space as well as rooftop terraces on the second and fourth floors. The ground floor will include 11,000 square feet of prominent restaurant and retail space and an outdoor patio overlooking Mentor Avenue. There will be more than 26,000 square feet of new office space. The Project will incorporate 232 new and existing parking spaces to provide ample parking for the mixed-uses that make up the development.

The estimated development costs of the Project are $11.6 million and Uptown Mentor LLC is applying for $1.2 million of TMUD tax credits to enable the development to proceed.

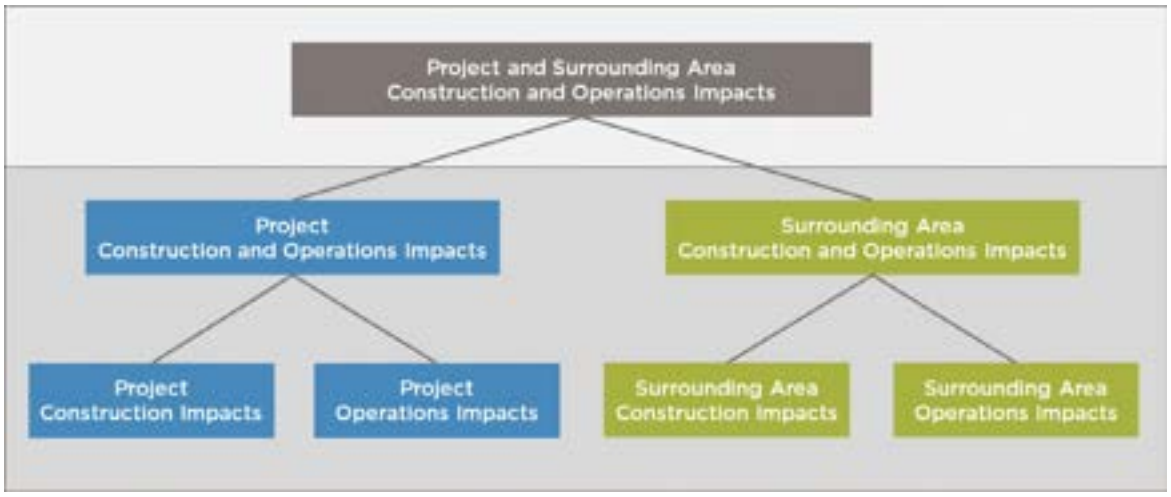
With an award of the requested TMUD tax credits, construction is expected to commence in 2022 and construction of the core and shell should be completed by late 2022, approximately 10 months after commencement, with tenant buildouts to follow and be completed in early 2023.

Areas of Analysis

The Project would catalyze additional development and redevelopment in the Surrounding Area. As such, this study models the economic activity of both the Project itself and the real estate developments of scale in the Surrounding Area.

IMPLAN, one of the most well-respected and widely used methodologies for assessing economic impacts, was used to complete this input-output economic model and analysis. In accordance with the definition of the Surrounding Area in ODOD's Guidelines, the impact of the Project and increased economic activity in the Surrounding Area were modeled for the Analyzed Area, which encompasses zip code 44060.

The analysis considers the one-time economic and fiscal impacts generated during the construction of the Project and redevelopment and development projects within the Surrounding Area, as well as the operating impacts generated by the Project and within the Surrounding Area during the one-year and five-year periods following completion. The image below illustrates the economic activities that are included in these analyses.



To determine the increase in state and local tax collections, only taxes collected under chapters 718, 5705, 5739, 5741, and 5747 of the Ohio Revised Code were considered, as required by the TMUD program. Property tax estimates included in this analysis do not include abated real estate taxes. The computation of the increase in tax collections does not include baseline taxes being collected prior to construction.

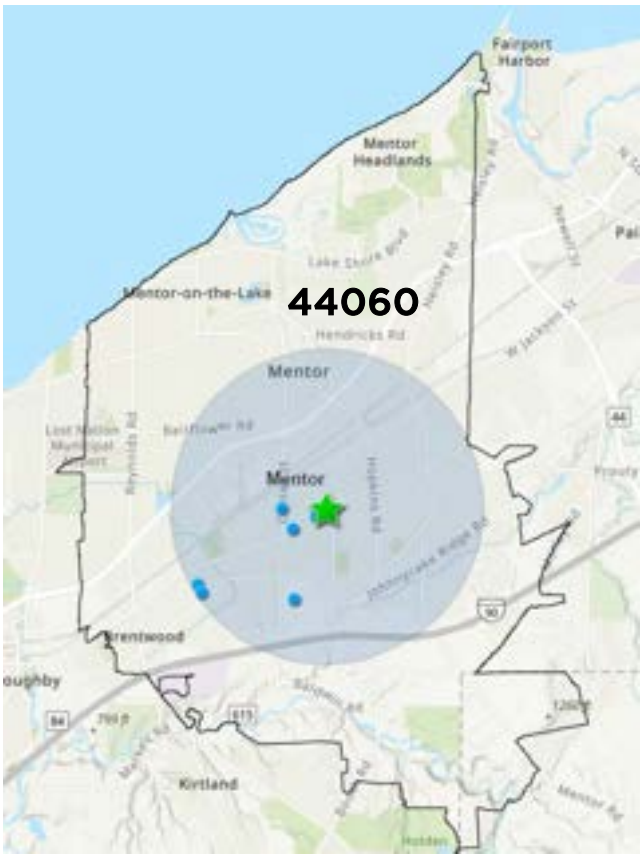
Economic Activity in the Surrounding Area

The Project is expected to spur additional redevelopment and development activity in the Surrounding Area. This analysis considers significant redevelopment and development projects within the Surrounding Area which are poised for development during the construction of the Project or the five years following completion of the Project. Development or redevelopment projects that are imminent or committed to at the time of this report were excluded from this analysis. The analysis includes any parcels which are wholly or partially within two miles of the boundaries of the Project site.

Uptown Mentor LLC gathered data and provided proposed assumptions that Silverlode reviewed and incorporated to model the impacts of the construction and operations activity associated with these redevelopment and development projects in the Surrounding Area. These assumptions included the estimated cost of construction or renovation, types of uses, number of square feet for each use, number of hotel rooms and residential units, and other parameters.

As the timeframes for this redevelopment and development activity in the Surrounding Area is uncertain, it was assumed that construction of these redevelopment or development projects would begin one year after the start of Project construction and occur evenly during the years that would follow.

The map to the right identifies redevelopment or development activity in the Surrounding Area that was included in this analysis. The projected redevelopment or development activity in the Surrounding Area represents an estimated $272 million of private and public sector investments, more than 1.3 million square feet of new and/or renovated space, including over 1,000 apartments and nearly 200 hotel rooms.



Data and Analysis

IMPLAN, one of the most widely used and accepted methodologies for estimating regional economic impacts, was used to complete the analyses. 2019 IMPLAN data, the most current data available at the time, was used for this study. Uptown Mentor LLC provided the capital investment and other operational data necessary to prepare this analysis. Economic and fiscal impacts can be divided into three component parts, which are referred to as Direct, Indirect, and Induced, and are described below.

- Direct — Activity attributable to the construction and operations of the Project and Surrounding Area (employees, associated payroll, construction investments, etc.)
- Indirect — The economic activity of the entities that provide goods and services to Uptown Mentor LLC and its tenants, and the Surrounding Area.
- Induced — Economic activity arising from employee (both Direct and Indirect) household spending.

Another way of looking at economic impacts is to think of an economic activity as creating "ripples" of economic activity throughout the region being analyzed. The graphic below depicts this ripple activity.

Additional information about data sources, methodology, and terms used in this study appears in the *Study Methodology* section near the end of the report.

Economic Impacts and Increase in Tax Collections

Construction Period + Operations Year 1

This analysis estimates the impact of the construction and operations of the Project and the Surrounding Area on the Analyzed Area during the Project's construction and first year of operations. During this timeframe, the Project and the economic activity in the Surrounding Area are estimated to support $92.5 million of economic activity in the Analyzed Area. The Project and the economic activity in the Surrounding Area are also estimated to support 908 total jobs, $49.2 million of annual labor income, including benefits, and result in increased state and local tax collections of an estimated $3.1 million during this time period.

Analyzed Area Impacts
Project and Surrounding Area: Construction + Operations Year 1

$92.5 million
economic output

908
jobs

$49.2 million
labor income

$3.1 million
Increased state and local taxes

	Construction Period	Operations Year 1	Total (Construction + Operations Year 1)
Economic Impacts			
Economic Output	$ 11,248,000	$ 81,278,000	$ 92,526,000
Jobs	102	806	908
Labor Income	$ 5,436,000	$ 43,777,000	$ 49,213,000
Households Supported	69	542	611
Increased State & Local Taxes			
Property Tax	$ 66,000	$ 381,000	$ 447,000
Municipal Personal Income Tax	$ 92,000	$ 742,000	$ 834,000
State Personal Income Tax	$ 115,000	$ 927,000	$ 1,042,000
Sales & Use Tax	$ 66,000	$ 650,000	$ 716,000
Lodging Tax	$ -	$ -	$ -
Other State & Local Taxes	$ 32,000	$ 9,000	$ 41,000
Total Increased State & Local Taxes	$ 371,000	$ 2,709,000	$ 3,080,000

Construction Period + Operations Years 1-5

This analysis estimates the impact of the construction and operations of the Project and the Surrounding Area on the Analyzed Area during the construction period and first five years of operations.

The increased economic activity of the Project and the Surrounding Area is estimated to support $860.9 million of economic activity in the Analyzed Area during the construction period and first five years of operations. The increased economic activity of the Project and the Surrounding Area is also estimated to support 8,635 total jobs, $369.7 million of annual labor income, including benefits, and result in increased state and local tax collections of an estimated $53.5 million during this time period.

Analyzed Area Impacts
Project and Surrounding Area: Construction + Operations Years 1-5

$860.9 million
economic output

8,635
jobs

$369.7 million
labor income

$53.5 million
Increased state and local taxes

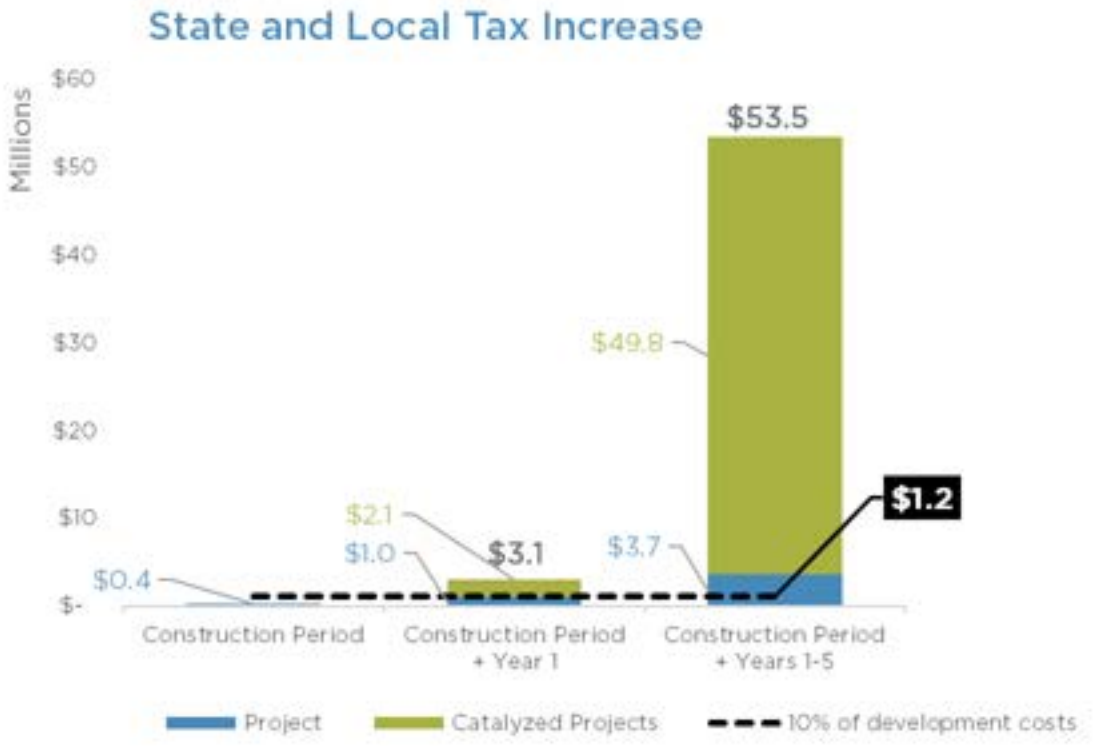
	Construction Period	Operations Years 1-5	Total (Construction + Operations Years 1-5)
Economic Impacts			
Economic Output	$ 11,248,000	$ 849,651,000	$ 860,899,000
Jobs	102	8,533	8,635
Labor Income	$ 5,436,000	$ 364,300,000	$ 369,736,000
Households Supported	69	5,737	5,806
Increased State & Local Taxes			
Property Tax	$ 66,000	$ 14,645,000	$ 14,711,000
Municipal Personal Income Tax	$ 92,000	$ 6,175,000	$ 6,267,000
State Personal Income Tax	$ 115,000	$ 7,718,000	$ 7,833,000
Sales & Use Tax	$ 66,000	$ 23,451,000	$ 23,517,000
Lodging Tax	$ -	$ 994,000	$ 994,000
Other State & Local Taxes	$ 32,000	$ 125,000	$ 157,000
Total Increased State & Local Taxes	$ 371,000	$ 53,108,000	$ 53,479,000

TMUD Qualification

Qualification for TMUD tax credits requires applicants to demonstrate that state and local taxes derived from economic activity associated with a TMUD project within the development site and Surrounding Area during the construction period and the five years that follow ("Increase in Tax Collections") exceed ten percent of the TMUD project's development costs.

Further, applicants are eligible to have the value of TMUD tax credit certificates computed prior to the completion of the project under an "alternate method" if it is reasonably certain that the Increase in Tax Collections would exceed 10% of estimated development costs within one year after the project is completed.

As illustrated in the graph below, it is estimated that the Increase in Tax Collections would reach $3.1 million within one year after the Project has been completed, which would exceed 10% of the estimated development costs, or $1.2 million, within one year of the Project's completion. Therefore, it is reasonably certain that the Increase in Tax Collections would exceed 10% of estimated development costs within one year of the Project's completion.



Study Methodology

Terminology

A Direct effect describes an initial, or first-round change in the economy and is the starting point for economic impact analysis. Changes in an economy create "ripples" of economic activity throughout the region being analyzed. These ripples are described as Indirect and Induced effects. A positive Direct effect causes increased purchases within the economy being modeled, as well as "leakage" of economic activity out of the economy being studied in the form of imports into the economy from other areas outside the economy. Generally speaking, Direct describes activity attributable to the economic activity being modeled. In this report, Direct jobs comprise full, part-time, and temporary employees and jobs supported by the Project and future redevelopment and development projects within the Surrounding Area.

Indirect effects represent changes in the industries that provide goods and services to the economic activity being modeled (e.g., suppliers, service providers, etc.). Indirect effects occur in a repeating cycle but diminish in each round as economic activity "leaks" from the region being modeled. Indirect effects cease when the last dollar of economic activity leaks from the economy being studied. Indirect effects are estimated using IMPLAN.

Induced effects represent the impact of changes in household spending resulting from the Direct and Indirect effects. Like Indirect effects, Induced effects occur in repeating cycles, but diminish in each round as economic activity "leaks" from the region being modeled. Induced effects cease when the last dollar of economic activity leaks from the economy being studied. Induced effects are estimated using IMPLAN. For ease of presentation, in this report, Induced effects are combined with Indirect effects and referred to simply as Indirect.

Total Impact refers to the final cumulative result of all rounds of Direct, Indirect, and Induced economic activity.

Report Definitions

	Direct	Indirect and Induced
Economic Output	The total value of goods and services produced by the activity being modeled. Output is roughly equivalent to sales or revenue associated with the Direct activity.	IMPLAN estimate of the total value of goods and services produced by Indirect and Induced economic activity. Output is roughly equivalent to sales or revenue associated with this activity.
Jobs	Jobs directly engaged in the activity being analyzed.	IMPLAN estimate of the number of jobs supported by the purchase of goods and services by the activity being modeled (Indirect) as well as by changes in household spending (Induced).
Labor Income	Wages and benefits associated with Direct jobs.	IMPLAN estimate of the wages, benefits, and proprietor income associated with the Indirect and Induced economic activity.
Households Supported	IMPLAN estimate of the number of households supported by the economic activity being analyzed.	IMPLAN estimate of the number of households supported by Indirect and induced economic activity.
State and Local Taxes	Estimate of all TMUD-eligible taxes paid to state and local units of government as a direct result of the economic activity being analyzed.	Estimate of all TMUD-eligible taxes paid to state and local units of government due to Indirect and Induced economic activity.

About Silverlode Consulting

Silverlode Consulting was founded in 2002 by two leaders of EY's and PwC's consulting practices. As a national leader in the field of economic impact analysis, we have helped hundreds of organizations, ranging from non-profit arts groups to multi-national corporations, to measure their impacts on their communities and communicate those impacts to their stakeholders. By meticulously estimating and effectively communicating the direct, indirect, and induced jobs, earnings, taxes and other impacts of projects, the presence of an organization, or an investment in a community, our work has helped clients to gain approvals, secure funding, and positively shift public opinion. More information about our firm and our work in economic impact analysis can be found on our website www.silverlodeconsulting.com.

Appendix A: Application Tables

The table below reflects construction jobs and average hourly wages for the Project only. Non-construction Project costs such as soft cost are excluded, as are indirect and induced effects. Construction projections are derived from input-output modeling using IMPLAN.

Project Construction Jobs & Wages			
Project Construction Year	FTEs		Average Hourly Wage
Year 1	89	$	22.75
Total	89	$	22.75

The table below reflects operations jobs and average hourly wages for the Project and Surrounding Area. Indirect and induced effects are not included. Operations projections are derived from input-output modeling using IMPLAN. Data necessary to perform IMPLAN modeling was gathered from Uptown Mentor LLC and publicly available sources. Reasonable estimates were made when necessary.

Operations Jobs for Project and Surrounding Area			
Project Operating Year	Total Project and Surrounding Area Direct Operating FTEs		Total Project and Surrounding Area Direct Operating Jobs Average Hourly Wage
Year 1	4	$	20.67
Year 2	20	$	21.09
Year 3	36	$	21.51
Year 4	52	$	21.94
Year 5	68	$	22.38

The table below reflects tenant jobs and average hourly wages for the Project and Surrounding Area. Indirect and induced effects are not included. Tenant FTE and wage projections are derived from input-output modeling using IMPLAN. Data necessary to perform the IMPLAN modeling was gathered from Uptown Mentor LLC and publicly available sources. Reasonable estimates were made when necessary.

Tenant Jobs for Project and Surrounding Area		
Project Operating Year	Total Project and Surrounding Area Direct Operating FTEs	Total Project and Surrounding Area Direct Operating Average Hourly Wage
Year 1	110	$ 25.94
Year 2	452	$ 17.36
Year 3	792	$ 16.15
Year 4	1,133	$ 15.66
Year 5	1,474	$ 15.40

The table below reflects direct retail, entertainment, and dining sales for the Project and Surrounding Area. Indirect and induced effects are not included.

Annual Sales from Retail, Entertainment, and Dining Operations for Project and Surrounding Area				
Project Operating Year	Projected Annual Retail Sales	Projected Annual Entertainment Sales	Projected Annual Dining Sales	Projected Total
Year 1	$ [redacted]	$ [redacted]	$ [redacted]	$ 3,635,000
Year 2	$	$	$	$ 30,755,000
Year 3	$	$	$	$ 57,876,000
Year 4	$	$	$	$ 84,997,000
Year 5	$	$	$	$ 112,121,000

The table below reflects direct, indirect, and induced tax generation for the Project and Surrounding Area.

Annual Taxes from Sales, Income, Lodging and Property Taxes for Project and Surrounding Area				
Project Operating Year	Projected Annual Sales Tax	Projected Annual Income Tax	Projected Annual Lodging Tax	Projected Annual Property Tax	Projected Total
Year 1	$ 650,000	$ 1,669,000	$ -	$ 381,000	$ 2,700,000
Year 2	$ 2,679,000	$ 2,226,000	$ 99,000	$ 1,655,000	$ 6,659,000
Year 3	$ 4,693,000	$ 2,779,000	$ 199,000	$ 2,929,000	$ 10,600,000
Year 4	$ 6,707,000	$ 3,332,000	$ 298,000	$ 4,203,000	$ 14,540,000
Year 5	$ 8,722,000	$ 3,886,000	$ 398,000	$ 5,477,000	$ 18,483,000
