Subject: 2026 PWS Monitoring Schedules Now Available

Dear Public Water System (PWS) Owner:

The 2026 Contaminant Monitoring Schedules have been created and are now available online at: https://epa.ohio.gov/divisions-and-offices/drinking-and-ground-waters/public-water-systems/monitoring-and-reporting. The schedules are separated by principal county served and listed in PWS ID order. By using the "Ctrl" + "F" search tool, you can search for your schedule(s) by PWS ID or by your business/system name.

Please find and view your schedule(s). Review both the Entry Point and Distribution Schedules (if applicable). Ohio EPA recommends that you print the schedules and keep them in a visible location as a reminder of when to sample. **Be sure to check all pages for sampling requirements; some contaminants may span multiple pages.**

Your schedule(s) may be revised during the year based on your sample results. A targeted monthly email will be sent to any PWS that has a schedule revision. If you would like to be notified when Ohio EPA posts revised schedules, please see the "Subscribe to Updates" section below.

IMPORTANT REMINDERS ABOUT DRINKING WATER SAMPLING

We recommend collecting samples **early in the scheduled monitoring period** to ensure prompt reporting of results and to allow time if a resample is required. Samples collected before or after the scheduled monitoring period(s) will not meet your compliance requirements. Failure to properly sample for total coliform or nitrate could cost you $150 or more in penalties for each monitoring violation. Save a Dime. Sample on Time!

When you submit your samples to the laboratory, identify the tap location/address where each sample was collected, your PWS ID, the sample monitoring point (SMP) for this location, and the Facility ID.

- For the chemicals listed on the Entry Point Schedule, the samples should be collected at the first available tap after all treatment and marked with the EP00# listed at the top of the schedule.
- For the Distribution Schedule, sampling location information is listed for each individual contaminant.
- Additionally, for all routine samples, please include a description of the tap from which the sample was collected, such as "women's restroom sink" or "kitchen hand sink", in the "Street Address and Tap Location" field on the laboratory sample submittal form.

A list of certified laboratories can be found online at: https://epa.ohio.gov/static/Portals/28/documents/labcert/Combined-Lab-List.pdf. Should you wish to hire someone to collect samples for you, a list of drinking water sampling services that can assist

you with collecting water samples is located online at: https://dam.assets.ohio.gov/image/upload/epa.ohio.gov/Portals/28/documents/pws/DWSample.pdf.

The distribution requirements only need to be met by your overall system, not for individual treatment plants. For water systems with more than one Entry Point Schedule, the individual entry point schedules will be listed first, followed by the single distribution system schedule.

- **Lead and Copper Monitoring:** PWSs whose application for reduced triennial monitoring was denied, or that did not apply, will find the annual monitoring requirement for lead and copper on the 2026 monitoring schedule.

- **Disinfection Byproducts (DBP) Monitoring:** Pay special attention to the number of locations and date ranges listed; there may be multiple pages with monitoring requirements for these contaminants. Each locational requirement is listed separately with a unique SMP ID (DS20# or MM00#). The MM00# location will only be listed if your PWS has been notified by Ohio EPA of the requirement to conduct sampling at your designated master meter location per requirements set forth in OAC 3745-81-24. The DBP sampling requirements also state that a "dual sample set" must be collected**. A dual sample set means that both HAA5 *and* TTHM should be collected at the same location, and at the same time, for each required DBP sample.**

- **Total Coliform Monitoring:**
  - All PWSs must follow their written sample siting plan which identifies the required sampling site taps. Please contact your Ohio EPA District Office if you have any questions regarding sampling for this contaminant and/or updates to your sample siting plan(s). Additional information can be found at: https://epa.ohio.gov/divisions-and-offices/drinking-and-ground-waters/public-water-systems/revised-total-coliform-rule.
  - Routine and seasonal startup total coliform monitoring requirements are listed on the schedule. If you operate a seasonal system, please note that the seasonal startup sample is required to be collected before you open for the season; this sample is in addition to the routine samples listed on the distribution system schedule.
  - If your schedule denotes your system as a *Ground Water Rule Substantial System,* you will be required to conduct additional triggered source monitoring along with collecting the required repeat samples should any routine sample be determined to have total coliform bacteria present.

- **Harmful Algal Bloom (HAB) Monitoring – Surface Water PWSs Only:** Please visit the following website for monitoring information and schedules (both routine and/or increased) specific to your PWS: https://epa.ohio.gov/divisions-and-offices/drinking-and-ground-waters/public-water-systems/harmful-algal-blooms.

- **Asbestos Monitoring**: Community and NTNC PWSs are required to report any discovery of previously unidentified asbestos-cement (A/C) pipe to Ohio EPA. Systems that do not contain

A/C pipes may qualify for a waiver. The next round of asbestos monitoring will begin in 2029. Please contact Ohio EPA for more information about historical A/C pipe certifications or waivers.

For Transient Non-Community (TNC) PWSs Only
Ohio EPA has issued a TNC guide that provides information about how to meet Ohio EPA's requirements. Using this guide may help you avoid many of the common mistakes that lead to violations, including missed monitoring. You can request a hard copy, or view this document online at: https://epa.ohio.gov/static/Portals/28/documents/transientPWS-guide.pdf.

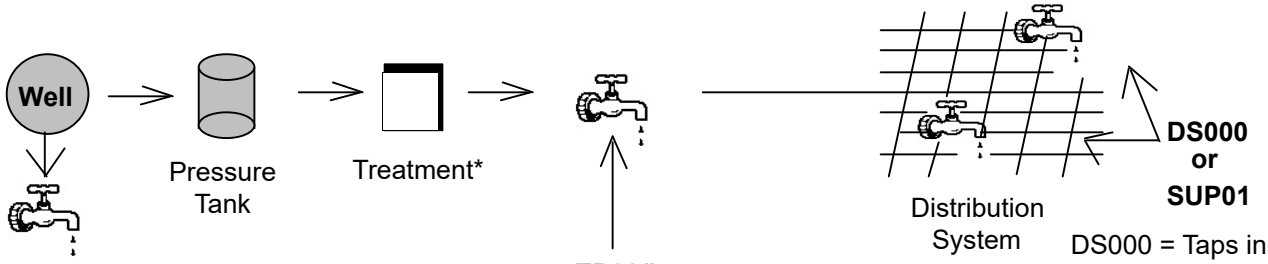
NITRATE - 1040	1 Sample(s) Required between 6/1/2026 and 10/31/2026

Where to Collect Samples For a Small Public Water System



EP00# = First available tap after treatment*. Use for NITRATE and NITRITE samples

* If system does not have treatment, EP00# is the first tap after the well.

DS000 = Taps in Distribution System. Use for TOTAL COLIFORM (TCR) samples

SUP01 = Seasonal Startup Sample. Collected before serving water to the public.

Failing to sample for total coliform or nitrate will cost you $150 or more in penalties for each monitoring violation. A list of drinking water sample collection services that can assist you with collecting water samples is located at:
