Introduction

The State Water Quality Management Plan covers nine (9) different subject areas. The details regarding three (3) of those subject areas are addressed in Appendix 3-1:

- identification of anticipated municipal and industrial waste treatment works;

- identification of agencies necessary to carry out the plan; and

- identification of implementation measures necessary to carry out the plan.

This information is presented on the following pages for 42 counties in Ohio. All Publicly Owned Treatment Works[1] currently in operation, or in the design phase, are listed alphabetically by the community served within each of the counties (columns 1 and 4). The management agencies responsible for the planning, operation and maintenance of sewage collection and treatment facilities are identified (columns 2 and 3). There are implementation measures listed (column 8) that range from very broad legal authorities that each management agency has at its disposal (collectively termed generic prescriptions for wastewater treatment) to more specific prescriptions based upon local needs and planning. Additional explanation on the table format, content and abbreviations is found on the next page.

[1] Status as a management agency responsible for wastewater collection and treatment is assigned to all entities operating Publicly Owned Treatment Works, all PUCO regulated wastewater facilities, and a few State operated facilities that serve the general public. Treatment facilities that serve only the needs of schools, churches, nursing homes, hospitals, prisons, etc. are not included unless they also serve part of the larger community.

Table Format

Key for tables listing the management agencies responsible for centralized sewage collection and treatment, including prescriptions for sewage treatment options.

Community	Management Agency / Type of Jurisdiction	Categories of Responsibility	Treatment Facility	Permit #	Defined FPA?	Map #	Comments / Applicable Prescriptions
1	2	3	4	5	6	7	8

1 Name of the community or population center with existing or planned central wastewater services (usually a city or village, may be an unincorporated community, township, or part of a township)

2 Governmental or other entity responsible for the Publicly Owned Treatment Works: cities and villages have municipal home rule powers; county commissioners have authority to create sewer districts under ORC 6117 (6117 Sewer Districts); local community water and sewer districts may be created under ORC 6119 (6119 Sewer Districts); private investor owned utilities operate under regulations from the Public Utilities Commission of Ohio (PUCO); and •limited home rule townships created under ORC 504. .

3 Identifies what management agency is responsible for:
WC = plan, finance, operate and maintain the sanitary sewer collection system;
WT = plan, finance, operate and maintain the wastewater treatment facilities; and,
RWP = regional wastewater collection and treatment planning

4 Name of the wastewater treatment facility

5 Ohio NPDES permit number for the wastewater treatment facility

6 Indicates if recent facility planning work exists that delineated a facility planning area

7 Identifies the map # (prefixed by the county code number) for the facility planning area. Maps are found in Appendix 3-2.

8 Identifies comments (prefixed by the county code number and the letter C) and applicable prescriptions for the community and management agency. Generic prescriptions numbered 1 through 9; specific prescriptions are prefixed by the county code number and the letter P. Generic prescriptions are found on pages 3 and 4; comments and specific prescriptions are found following the table presented for each county.

Abbreviations Used in the Tables and Text

ECF	Environmental Control Facility
FPA	Facility Planning Area
HSTS	Home Sewage Treatment System
MA	Management Agency
N/A	Not Applicable
NPDES	National Pollutant Discharge Elimination System
OAC	Ohio Administrative Code
ORC	Ohio Revised Code
RWP	Regional Wastewater (Facilities)Planning
RFPA	Regional Facility Planning Area
STP	Sewage Treatment Plant
WC	Wastewater Collection
WPCP	Water Pollution Control Plant
WPCF	Water Pollution Control Facility
WRF	Water Reclamation Facility
WRP	Water Reclamation Plant
WRRF	Water Resource Recovery Facility
WT	Wastewater Treatment
WWTP	Wastewater Treatment Plant

Generic Prescriptions for Wastewater Treatment

1 All discharging systems shall meet effluent limits designed to attain the more stringent of: a) all applicable water quality standards, including antidegradation requirements; and b) where applicable, best available demonstrated control technology for new sources discharging sanitary wastewater, best available technology, or secondary treatment.

2 All municipal management agencies with home rule powers are responsible for sewage collection and treatment within their respective corporate boundaries. Such service may be provided by the management agency or through contracting for such services. Sewer service may be extended to annexed land, and to areas beyond the corporate boundaries, provided the management agency has the capacity to adequately collect and treat all wastewater under the terms of its NPDES permit. When the proposed extension is within a sewer district established under ORC 6119 or 6117, the extension of sewer service will be evaluated on a case-by-case basis. This evaluation will include, but is not limited to, the application of the continued jurisdiction of county and regional sewer districts provisions under ORC 6117.05 and 6119.061, respectively.

3 The construction of new, or the replacement of existing, sewage treatment systems or non-discharging on-lot sewage treatment systems for semi-public, private, or industrial entities shall not be permitted where a public sewer is available and accessible. Such facilities may be permitted where sewers are not available and accessible, on the condition that they will be required to tap in when public sewers become available and accessible.

4 New or replacement home sewage treatment systems (HSTS) shall not be permitted where a public sewer is available and accessible. Where sewers are not available and accessible new or replacement HSTS may be permitted if applicable sanitary codes administered by the county health department or local health department are followed, on the condition that the HSTS will be required to tap in when public sewers become available and accessible.

5 The County Commissioners (or a sewer district under ORC 6119) are responsible for sewage collection and treatment in unincorporated communities. Where sewers are not available and accessible, approval of individual HSTS is the responsibility of the county health department or local health department and shall follow applicable sanitary codes.

6 Where sewers are not available and accessible, on-lot sewage treatment systems for semi-public, private, or industrial entities may be installed if permitted by Ohio EPA or, if the board of health of a city, county, or general health district has permitting authority for small systems (less than 1,000 gallons per day), permitted by the county health department. General health district means a health district of the combined

townships and villages in each county.

7 The County Commissioners under ORC 6117 have authority for central sewers and sewage treatment in all unincorporated areas, incorporated areas served through an agreement with a municipality, and incorporated areas under the provisions detailed in ORC 6117.05. When unsanitary conditions exist within these areas, Ohio EPA may require that the County Commissioners fix the problem.

8 Where a sewer district has been organized under ORC 6119, Ohio EPA may require said sewer district to eliminate unsanitary conditions.

9 Ohio EPA will only approve the installation of new wastewater collection and treatment systems to serve a new or existing housing developments provided the applicant has submitted an acceptable plan documenting how the system will be managed, maintained and operated. An acceptable plan could include the choice to turn management, maintenance and operation over to an existing management agency listed in this 208 Plan, or the choice of contracting with a competent private professional wastewater services company. An unacceptable plan might include the choice to have an inexperienced or poorly qualified entity, individual, or homeowners' association assume sole responsibility for system management, maintenance and operation.

Determining When a Public Sewer is Available and Accessible

The agency has prepared the following to serve as appropriate operational guidelines for Ohio EPA staff to apply when making determinations on a case-by-case basis regarding when public sewers are available and accessible. These factors should be assessed in deciding whether sewers are available and accessible:

- The legislative determination that household sewage treatment systems constitute a potential hazard to public health and a potential nuisance to be prevented when possible (*Demoise v. Dowell* (1984), 10 Ohio St. 3d 92, 96.);
- whether a public health nuisance exists;
- whether sewers are required by the sanitary code;
- best available technology;
- technical feasibility;
- necessity of obtaining easements;
- cost; and
- other relevant considerations.

Allen County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Allen County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Specific Prescriptions for Wastewater Treatment

2-P1 Cairo. In September of 1997 a contract was agreed upon between the Village of Cairo and Allen County for the treatment, and operation and maintenance of the newly constructed sanitary sewer within the Village of Cairo. This agreement includes the Village of Cairo maintaining ownership of the sanitary sewer with the Allen County Sanitary Engineer treating the sewage flowing from the Village to the American/Bath Wastewater Treatment Plant. The County is responsible for both the operation and maintenance of the sanitary sewers.

2-P2 Findlay Road Wastewater Collection Sewer Subdistrict. In September of 1997 a contract was generated between the City of Lima and Allen County for the treatment of wastewater from the newly constructed sanitary sewer within Bath Township. This agreement states that the County is responsible for the ownership, construction, operation and maintenance of the proposed sanitary sewer.

Ashland County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Ashland County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Comments

3-C1 In 2017, the Lorain County Rural Wastewater District (LORCO) assumed ownership, operation, and maintenance of the Cinnamon Lake WWTP from the Cinnamon Lake Utilities Association. In 2023, LORCO completed construction of a force main to the Village of West Salem WWTP (Wayne County). The Cinnamon Lake WWTP was dismantled and converted into a pump station, and the Cinnamon Lake NDPES permit (2PR00009) was terminated in November 2023.

Ashtabula County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northeast Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Ashtabula County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Auglaize County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Auglaize County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Comments

6-C1 The County Commissioners are responsible for the maintenance of lift stations and sewer lines in the following sewer districts near Grand Lake St Marys: Sandy Beach, Grand Lake, Villa Nova, Oakwood Hills. East Lake and Lakewood Village Resort. Treatment of wastewater is provided by the City of St Marys.

Brown County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in southwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Brown County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Comments

10-C1 The Atwood Regional Water & Sewer District serves the villages of Dellroy and Sherrodsville and portions of Monroe, Orange and Warren townships in the Atwood Lake region.

10-C2 The Carroll County Commissioners formed the BTM Sewer District to serve the Village of Malvern and portions of Brown and Harrison townships. The wastewater facility's name has since been changed from the BTM Sewer District Sewage Treatment Plant (STP) to the Malvern Water Pollution Control Center.

Champaign County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is appropriate and necessary at this time in central Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Champaign County are listed below. Specific prescriptions regarding wastewater collection and treatment responsibilities are listed where recent facility planning work was available to the Agency and it met the criteria listed in Chapter 3.4. In other situations generic prescriptions regarding wastewater collection and treatment responsibilities are provided that reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). These local communities may be asked to update facility planning information as a means to create specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

See also Appendix 3-3, 208 Plan Prescriptions for Water Quality Protection within the Big Darby Creek Watershed.

Comments

11-C1 In 2002, growth and development in North Lewisburg over the previous decade caused the Village to seek and receive an expansion of the WWTP from 0.17 MGD to 0.42 MGD. The LUC Regional Planning Commission prepared *A Comprehensive Plan for North Lewisburg, Ohio* (December 2002). Continued rapid growth was anticipated, but the Village's population flatlined around 1,600 between 2000 and 2020. The Village lies within a small but unique watershed that is tributary to Big Darby Creek. The tributary, Spain Creek, originates along the Mad River Buried Valley Aquifer that supplies a higher amount of groundwater compared to other areas within the Big Darby Creek watershed. This fact, and the associated fish and macroinvertebrate communities in Spain Creek, make it a Coldwater Habitat as well as an Exceptional Warmwater Habitat. These factors put Spain Creek in an especially high risk setting for adverse impacts from land use changes and the WWTP. Water quality modeling projections show that chemical water quality criteria for design considerations (dissolved oxygen, ammonia) should be met, but other characteristics of the wastewater effluent could prove harmful to the Exceptional and Coldwater biota as the stream becomes more effluent dominated for longer periods of time. For example, higher effluent flows in combination with increased solar heating in the stream brought about by the loss of riparian vegetation could certainly eliminate coldwater species. Stormwater discharges from existing and new development in the Spain Creek watershed have the potential to result in an impairment of aquatic life uses. The regional planning described in prescription 11-P1 is an important step to protect the ecological health of Spain Creek and nearby Big Darby Creek from adverse impacts associated with poorly planned growth.

Ohio EPA completed the *Biological and Water Quality Study of the Big Darby Creek Watershed, 2014.* This technical report documents that Spain Creek's sampling stie downstream on New Lewisburg was one of the few sites in the entire Big Darby Creek study area that had a decline in aquatic life use attainment status since the last study in 2001. This was attributed primarily to sedimentation and siltation related to the riparian habitat alternation upstream in Spain Creek as well as localized riparian alterations in the vicinity of the sample site at river mile (RM) 0.01.

11-C2 The Village of Woodstock's wastewater is currently treated at the Village of North Lewisburg for wastewater treatment.

11-C3 In order for Ohio EPA to accept an application for sewer extensions or wastewater treatment facilities within the Champaign County portion of the Big Darby Creek watershed either local governments must enact the ordinances described in Appendix 3-3 or, alternatively, developments with central sewers must have individual NPDES stormwater permits for construction activity. The individual permits must contain a rigorous Environmental Site Management Plan (ESMP) as part of the Stormwater Pollution Prevention Plan that satisfies the criteria described in Appendix 3-3. Criteria listed in Appendix 3-3 describe the conditions that must be met for Ohio EPA to accept an application for sewer extensions or wastewater treatment facilities within the Champaign County portion of the Big Darby Creek watershed. The management agencies affected would include any entity that provides central sewer services in the area delineated on Figure 1 in Appendix 3-3.

Specific Prescriptions for Wastewater Treatment

11-P1 North Lewisburg should supplement its facility planning work for the WWTP using the guidelines in Chapter 3.4. This supplemented facility plan should identify areas likely to be sewered within the next 20 years. Future NPDES permit renewals should consider additional actions to reduce thermal stresses on Spain Creek. Land use planning and local zoning should strive to preserve ground water recharge zones and to acquire or manage a riparian habitat to provide stream shading. The Village, the LUC Regional Planning Commission, and other local jurisdictions should continue joint planning efforts and seek innovative ways to preserve and enhance stream corridors and the unique flow, temperature and biological characteristics of Spain Creek.

Clark County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is appropriate and necessary at this time in central Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Clark County are listed below. Specific prescriptions regarding wastewater collection and treatment responsibilities are listed where recent facility planning work was available to the agency and it met the criteria listed in Chapter 3.4. In other situations generic prescriptions regarding wastewater collection and treatment responsibilities are provided that reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). These local communities may be asked to update facility planning information as a means to create specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Comments

12-C1 The KTK Industrial Park has an approved PTI (PTI 1558486) to connect to the City of Springfield's collection system. The expected connection completion date is November 2025.

12-C2 The Southwest Regional WWTP serves these locations within Bethel and Mad River townships of Clark County: Enon, Medway, Park Layne and Center Point 70. The facility also serves several thousand residents within the City of Huber Heights located in Montgomery and Miami counties. In Miami County, the facility also serves the unincorporated areas of Brandt and Phoneton, and the Bethel Local School District in Bethel Township.

Clinton County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in southwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Clinton County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Columbiana County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northeast Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Columbiana County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Comments

15-C1 The County Commissioners are responsible for the maintenance and operation of the Elkton WWTP that serves a federal correction facility, some surrounding unincorporated areas and the City of Lisbon. The Village of Lisbon is responsible for the discharges from the combined sewer overflow (CSO) outfalls within the village's collection system to the Middle Fork Little Beaver Creek (Permit 3PA00034).

Crawford County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Crawford County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Delaware County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is appropriate and necessary at this time in central Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Delaware county are listed below. Specific prescriptions regarding wastewater collection and treatment responsibilities are listed where recent facility planning work was available to the agency and it met the criteria listed in Chapter 3.4. In other situations generic prescriptions regarding wastewater collection and treatment responsibilities are provided that reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may be asked to update facility planning information as a means to create specific prescriptions in subsequent State 208 Plan updates. See additional text below for specific findings about the need for planning actions in Delaware County. Refer to the Introduction on page 1 for more information on the Table's content.

A portion of southern Delaware County is within the Metro Columbus Regional Facility Planning Area. Delaware County communities with wastewater treatment provided by the City of Columbus include Dublin, Shawnee Hills, Westerville, and Columbus. The Metro Columbus Regional Facility Planning Area includes portions of Harlem and Orange Townships. See the Franklin County listing of the State 208 Plan for further information.

Specific Findings

Generic prescription 2 was modified in response to concerns raised in Delaware County in 2006. Comments from municipal government representatives made it clear that the generic language as proposed would not work where municipal and county officials do not engage in productive and cooperative planning of wastewater infrastructure. The following change was made to the second to last sentence of generic prescription 2:

> When the proposed extension is beyond the corporate boundaries and within a sewer district established under ORC 6119 or 6117, and the land is not annexed, the extension of sewer service ~~would require a service agreement with the other sewer district~~ will be evaluated on a case-by-case basis.

In 2001 Ohio EPA and representatives of county government and three municipal governments in Delaware County met to discuss wastewater facility planning work being done by the City of Columbus and suburban communities in Franklin, Fairfield and Licking Counties. (The Columbus area facility planning work resulted in the 208 Plan update in 2002 for Franklin and portions of surrounding counties know as the Central Scioto Plan Update or CSPU, Ohio EPA, Dec 2002). The purpose of the meeting in 2001 was to lay the groundwork for similar facility planning updates that would be applicable in Delaware County. Shortly thereafter, the County Sanitary Engineer's Office and the Delaware County Regional Planning Commission began work on a sewer master plan. Separately, the municipalities of Delaware, Sunbury and Galena also continued or undertook new facility planning.

Another meeting was held in 2004 where all county and municipal officials operating wastewater facilities in Delaware County were briefed on the CSPU and Ohio EPA's ideas on the next update to the State's 208 Plan. These ideas included the observations that the rapid population growth experienced in Delaware County and the high quality water resources of the area combine to make an update to the 208 Plan an important priority for Ohio EPA. Local officials were encouraged to review the recently completed CSPU and other updated 208 Plans from the Cleveland, Akron and Toledo areas and to develop their own community based and community endorsed sewer service agreements. Through conversations, as well as in facility planning guidelines published in 2005, Ohio EPA officials have consistently stated that agreements between county and municipal officials should be reached when sewer service to unincorporated areas is an issue.

In early 2005 Ohio EPA published preliminary draft 208 Plan materials and released the agency's intended schedule to complete the State Water Quality Management Plan update and 208 Plan. The schedule included a June 30, 2005, milestone date for the submission of facility planning work from local communities. A number of the submissions were made very late (5 months) and could not be factored into the draft State 208 Plan released in February 2006. The absence of a fully updated 208 Plan containing sound and implementable regional wastewater treatment options for the fastest growing county in the State is profoundly disappointing.

Since 2006, county, township, and municipal officials in Delaware County were strongly encouraged by Ohio EPA to self-facilitate meaningful discussions on facility planning and sewer service areas. Ohio EPA was available to address specific policy and technical questions, but did not facilitate or mediate these negotiations from 2006 to 2023. Ohio EPA also technically evaluated all the facility planning work and the records of previously approved Permits-to-Install.

In 2023, Ohio EPA started and update to the 208 Plan in Delaware County and considered the outcome of any locally negotiated sewer service agreements, preliminary delineation of facility planning area (FPA) boundaries with assistance from the Mid-Ohio Regional Planning Commission (MORPC), and threats to water quality. Since 2006, Ohio EPA found that significant progress was made towards sewer service agreements and FPA boundaries, particularly in the central and southern portions of the county.

From 2023 through 2024, Ohio EPA took a more active role in delinating FPA boundaries and facilitating sewer service discussions for the areas of the county not covered by sewer service agreements. In December 2024, Ohio EPA proposed facility planning areas for POTWs in Delaware County based on existing agreements, discussions with MAs, and review of other pertinent materials like comprehensive plans, sewer master plans, facility plan, and POTW capacities.

Comments

21-C1 Service provided to the Delaware County Home facility located in Brown Township.

21-C2 The County Commissioners operate the collection systems and a spray irrigation wastewater treatment system that serves the Tartan Fields development in Concord Township and a small part of Jerome Township (Union County) located just north of the City of Dublin and west of Shawnee Hills.

21-C3 The Delaware County Regional Sewer District FPA is a consolidated FPA that includes the service areas for all County POTWs along with areas where the county is responsible for regional wastewater planning.

21-C4 A spray irrigation wastewater treatment system that serves the Dornoch development in Liberty Township located south of the City of Delaware.

21-C5 Service provided to the Village of Powell and surrounding developments in Liberty and Orange Townships.

Specific Prescriptions for Wastewater Treatment

21-P1 The City of Delaware and Delaware County entered into sewer service agreements for areas south of the City of Delaware. The terms of these agreements are recognized by this 208 Plan. Areas not included in these agreements will continue to utilize the State 208 Plan's generic prescriptions.

21-P2 The Village of Galena and Berkshire Township are in discussions regarding sewer services for the portions of the township within the Galena FPA. Once an agreement is finalized, Ohio EPA will utilize the agreement, along with other pertinent information, when evaluating any future 208 Plan modifications and Permit-to-Install (PTI) applications within the Galena FPA.

21-P3 In 2007, the City of Delaware and Delaware County agreed that the City and the County may both serve this area designated City County Service Area. If served by the City, annexation would not be required to obtain City sanitary sewer service.

21-P4 In 2018, the City of Sunbury and Delaware County entered into an Intergovernmental Cooperative Agreement to minimize potential disputes over sanitary service area in the vicinity of Interstate 71. The terms of this agreement are recognized by the 208 Plan. Areas not included in the agreement areas will continue to utilize the State 208 Plan's generic prescriptions.

Defiance County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Defiance County are listed below.

The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Erie County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is appropriate and necessary at this time in Erie County (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Erie County are listed below along with specific prescriptions regarding wastewater collection and treatment responsibilities. This information was taken "as is" from Areawide Waste Management Plan prepared by the Toledo Metropolitan Area Council of Governments in 2002. In 2004 Erie County was dropped from the TMACOG planning area. Generic prescriptions regarding wastewater collection and treatment responsibilities have been added where appropriate to reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may be asked to update facility planning information as a means to modify specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content

Comments

22-C1 Wastewater from the Mitiwanga – Ruggles Beach area has been diverted to the Huron Basin WWTP.

22-C2 A large portion of the Vermilion Facility Planning area lies within Lorain County. See the 208 Plan prepared by NOACA for additional information and specific prescriptions that apply within Lorain County.

Specific Prescriptions for Wastewater Treatment

22-P1 through 22-P10 The FPA maps and the specific prescriptions for each community were prepared by the Toledo Metropolitan Area Council of Governments in 2002. The Erie County section of the 2002 TMACOG 208 Plan is reproduced in Appendix 3-4.

22-P11 Where public sewers are not available, private development may design and install sewers and treatment facilities for new and existing housing developments provided the applicant has submitted an acceptable plan documenting how the facility will be managed, maintained and operated. Regional planning done in 2002 by TMACOG determined that public sanitary sewers should not be extended outside of the established FPA boundaries (maps 22-1 to 22-10) except in limited circumstances listed below. A sewer extension may be approved when a developed area is outside an FPA but contiguous to it, or Ohio EPA has determined that sewers in the FPA are close enough to be considered “available” under the applicable Ohio law and regulations. If public sewers are not extended to provide service, then an acceptable plan for the long term operation and maintenance of privately owned sewage collection and treatment works must be developed through a competent private professional wastewater services company. An unacceptable plan might include the choice to have an inexperienced or poorly qualified entity, individual, or homeowners’ association assume sole responsibility for facility management, maintenance and operation.

Fairfield County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is appropriate and necessary at this time in central Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Fairfield county are listed below. Specific prescriptions regarding wastewater collection and treatment responsibilities are listed where recent facility planning work was available to the agency and it met the criteria listed in Chapter 3.4. In other situations generic prescriptions regarding wastewater collection and treatment responsibilities are provided that reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may be asked to update facility planning information as a means to create specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

A portion of northwestern Fairfield County is within the Metro Columbus Regional Facility Planning Area. See the Franklin County listing of the State 208 Plan for further information. Some areas in Walnut Township, Fairfield County near Buckeye Lake have sewer service provided through Licking County Sewer District No. 1 (see Licking County listing of the State 208 Plan for further information).

A planning document entitled *Fairfield County Development Strategy and Land Use Plan* was prepared and adopted by the Fairfield County Regional Planning Commission in 2002. The Fairfield County Commissioners later adopted the plan as county policy on April 8, 2003 (resolution no. 03-04.08g). The Utilities chapter of the *Fairfield County Development Strategy and Land Use Plan* included an analysis of current wastewater treatment capacity and future needs throughout the entire county. The set of water and sewerage policies that were adopted as part of that plan called for extending existing water and sewer systems to meet future needs, and discouraging well and septic systems within identified critical resource areas. The following areas were depicted on a county map of wastewater facilities: municipal service areas; existing service areas outside municipal limits; proposed service areas; proposed non-municipal service areas; area of potential on-site system problems; and ultimate service area boundaries.

Ohio EPA believes that the *Fairfield County Development Strategy and Land Use Plan* represents a good starting point for the development of more detailed facility planning work. This 208 Plan for Fairfield County has incorporated the ultimate service area boundaries delineated in the *Fairfield County Development Strategy and Land Use Plan* as the Facility Planning Areas (FPAs) for the management agencies listed below. It was necessary in some situations to complete the boundary lines published in the *Fairfield County Development Strategy and Land Use Plan*. This task was done using ESRI ArcMap 9.1 software and a protocol that aligned the boundaries with a best fit to roads and property parcel lines. In segments were boundary lines were missing the agency connected them as directly as possible along roads or parcel lines. This "direct line convention" was modified in a few situations where evidence in maps and areal photos suggested possible water quality threats from clusters of smaller lots with individual sewage treatment systems.

As applied in Fairfield County the term **FPA** means a sewer and wastewater treatment study area only, and does not imply a need, or responsibility on the part of the management agency, to provide such service on the basis of this 208 Plan alone. Over time additional specific prescriptions regarding central sewers and wastewater treatment services agreed upon by local community leaders should be developed and included in the State's 208 Plan for Fairfield County. Additional facility planning work intended for use in the State 208 Plan should follow the guidelines in Chapter 3.4.

Comments

23-C1 Communities in Fairfield County served by the Buckeye Lake sewer collection system include Lakeside, Liebs Island, Fairfield Beach, Shell Beach and other areas within Walnut Township.

23-C2 The Village of Carroll has contracted with Fairfield County Utilities Department for the operation and maintenance of the collection and treatment system.

23-C3 The City of Lancaster submitted the city's *Water and Wastewater Master Plan* for consideration in the State's 208 Plan in June 2005.

23-C4 Fairfield County submitted a wastewater facility plan for the proposed North Lancaster service area in June 2005. See also comment 23-C8.

23-C5 This subdivision is within the county's proposed North Lancaster service area.

23-C6 The Village of Tarlton, located approximately 2 miles southeast of Stoutsville in Pickaway County, is served by the Stoutsville WWTP.

23-C7 Several locations within Bloom and Pleasant Townships were identified as areas of potential on-site sewage treatment problem areas. See the Utilities Chapter of the *Fairfield County Development Strategy and Land Use Plan*. Alternative solutions should be evaluated as part of future facility planning work done by the County.

23-C8 The Village of Baltimore submitted *Section 208 Supplemental Information* to Ohio EPA in August 2005. The Facility Planning Area boundary depicted in map 23-2 was taken from this material in lieu of using the ultimate service area boundary in the *Fairfield County Development Strategy and Land Use Plan*. At the agency's request, the Baltimore FPA was drawn to include land located in Sections 1 and 2 of Greenfield Township where a housing development with home sewage treatment systems is under construction. As such, this area was removed from the FPA area delineated for North Lancaster / Fairfield County community. Future planning should consider the service options available in the area located farther west of the Village of Baltimore in Liberty Township.

23-C9 The Facility Planning Area shown on map 23-7 was drawn using the protocol described above under the Farifield County listing. However, the communities of Thurston and Pleasantville are served by the Walnut Creek Sewer District, an entity apparently formed through contract or charter agreement between the two villages and not pursuant to ORC 6119. Further consideration of the legally established sewer district boundary is needed. The agency is attempting to locate records relating to the formation of the sewer district.

23-C10 Map 23-4 was compiled by Ohio EPA from several sources. Based on comments received it apparently in has errors. An erratta sheet will be published when the agency can confirm the correct delienation of all sewer facility planning areas shown.

Specific Prescriptions for Wastewater Treatment

23-P1 The listed management agency is responsible for long range planning, design and construction of the major infrastructure to accommodate wastewater collection and treatment needs within the ultimate service area boundaries delineated in the Fairfield County Development Strategy and Land Use Plan, herein denoted under the "Defined FPA" and "Map #" columns. The ultimate service area boundary is a sewer and wastewater treatment study area only, and does not imply a need, or responsibility on the part of the management agency, to provide such service within the entire area. The FPA boundaries shown on the map are approximate guidelines for the maximum extent of central sewers in the community. For the purpose of Ohio EPA review of permits, the FPA boundaries will be viewed as general guidelines only, and not a bright line intended to deny extension of sewers to properties adjacent to or up to a distance of one half mile from the boundary. However, unless there are extenuating circumstances involving matters of public necessity, the extension of sewers in excess of one half mile beyond the FPA boundaries is a conflict with this 208 Plan. Additional facility planning work intended for use in the State 208 Plan should follow the

guidelines in Chapter 3.4.

23-P2 The installation of new sewers and new or expanded treatment works may be permitted only if the plans are: 1) submitted by the identified management agency; or 2) submitted by a private developer, subject to generic prescriptions 3 and 9, and there is written endorsement of the plans by the identified management agency.

Fayette County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in Fayette County (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Fayette County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Franklin County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is appropriate and necessary at this time in central Ohio counties (see Chapter 2). The existing management agencies responsible for publicly owned treatment works in Franklin and portions of surrounding counties are listed below. Specific prescriptions regarding wastewater collection and treatment responsibilities are listed based upon a variety of sources and comments received during the preparation of this Plan. A responsiveness summary is available that provides information on who commented and how Ohio EPA addressed their comments. Local communities may be asked to update facility planning information in upcoming years as a means to update prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the table's content.

In November 2000 the City of Columbus submitted a Facility Plan update that covered the Columbus Metropolitan area. This planning work involved consultation with local government officials and the wastewater facility managers responsible for the suburban sewer collection systems that are tributary to the Columbus system. It also included the results of long range planning discussions that occurred with county governments, nearby municipalities, and public utility operators regarding the capacity of the Columbus system and the future wastewater treatment needs of these individual communities. The results of this work were incorporated into the State 208 Plan update in 2002 (referred to as the Central Scioto Plan Update, CSPU). The CSPU was approved by U.S. EPA in 2003. Selected portions of the CSPU remain valid and have been included as separate appendices to this State 208 Plan, or are hereby included by reference. Sections of the CSPU included by reference are: Section 3; Section 5.03; Section 6; Appendix 2; Appendix 4; Appendix 12;and, Appendix 15.

The information in the CSPU regarding management agencies, their responsibilities, and the applicable options for handling wastewater collection and treatment within their respective service areas has been revised as appropriate and transferred to the following text and tables. This has been done to standardize the format adopted for the entire State-wide 208 Plan. Replacement text for Section 5.02 of the CSPU is contained in the following set of specific prescriptions.

The listings and discussion of management agencies, the associated prescriptions and the facility planning areas are presented in two sections representing different parts of the overall planning area. Some new terminology has been introduced and is defined as follows.

- Metro Columbus Regional Facility Planning Area (RFPA) - a large contiguous area of Columbus and the surrounding vicinity that has, or is likely to need, central sewers and presently is, or could be in the future, served by City of Columbus wastewater treatment facilities (map 25-3).

- Columbus City FPA - a land area within the Metro Columbus RFPA where the City of Columbus is the management agency for wastewater treatment.

- Community-level FPAs - a land area within the Metro Columbus RFPA where an entity other than the City of Columbus is the management agency for wastewater treatment.
- Southeast quadrant - An area of the Metro Columbus RFPA bounded by SR 16 to the north, I-270, SR 317 and Pontious Road to west and the outer Metro Columbus RFPA boundary to the south and east (map 25-2).
- Core quadrants - The Metro Columbus RFPA except for the area delineated as the southeast quadrant (map 25-1).
- Satellite community means a community that owns and operates a sanitary sewerage system, as defined in ORC §6111.01, but does not own or operate a wastewater treatment plant.

Comments

25-C1 As called for in Section 5.02.02.03 of the CSPU, the agency has considered the recommendations of the External Advisory Group and the most recent water quality information available for the watershed. In order for Ohio EPA to accept an application for sewer extensions or wastewater treatment facilities within the Franklin County portion of the Big Darby Creek watershed either local governments must enact the ordinances described in Appendix 3-3 or, alternatively, developments with central sewers must have individual NPDES stormwater permits for construction activity. The individual permits must contain a rigorous Environmental Site Management Plan (ESMP) as part of the Stormwater Pollution

Prevention Plan that satisfies the criteria described in Appendix 3-3. Criteria listed in Appendix 3-3 describe the conditions that must be met for Ohio EPA to accept an application for sewer extensions or wastewater treatment facilities within the Franklin County portion of the Big Darby Creek watershed. The management agencies affected would include any entity that provides central sewer services in the area delineated on map 25-3.

25-C2 Ohio American Water Company is an investor owned utility that provides potable water supplies and wastewater treatment services to a number of communities in Ohio under the regulation and oversight of the Public Utilities Commission of Ohio. The Company serves three housing developments in Franklin County: Huber Ridge in Blendon Township; Blacklick Estates in Madison Township; and Lake Darby Estates in Prairie Township.

25-C3 The Village of Carroll has contracted with Fairfield County Utilities Department for the operation and maintenance of the collection and treatment system. The service area of the Carroll system is entirely within the Fairfield County's Little Walnut Community-level FPA.

25-C4 The Sycamore Creek facility serves Violet Township and a portion of Liberty Township. The Little Walnut facility was designed to serve portions of Violet, Bloom and Greenfield townships.

25-C5 In the mid 1990s Violet Township formed a sewer district under ORC 6119; however, the sewer district has no infrastructure built or planned. Current and future wastewater treatment needs in Violet Township can be met by the management agencies listed.

25-C6 The Franklin County Sanitary Engineers Department is responsible for sewage systems in multiple subdivisions in Franklin County. Since 2006, the County has decommissioned small wastewater treatment plants that previously served the following subdivisions: Century Acres; Oakhurst Knolls; ; and Taylor Estates. The Oakhurst Knolls Subdivision's wastewater is now treated at Darbydale WWTP and Century Oaks and Taylor Estates sewage now flows to the Columbus sewerage system. The County continues to operate a small wastewater treatment plant (4GS00014) for the Holton Park Estates Subdivision. .

25-C7 The New California Sewer Sub-District was formed by the Union County Commissioners and encompasses all the unincorporated areas of Jerome Township. See the listing under Union County for prescriptions that are applicable in areas outside the Metro Columbus RFPA. The discharge from the New California WWTP (permit 4PG00017, revoked) has been eliminated. The facility was tied into the Industrial Parkway sewer, and the wastewater is treated by the City of Marysville.

25-C8 The overlapping Community-level FPAs established in the CSPU (Ohio EPA 2002 State WQM Plan update) for Canal Winchester, Pickerington and Violet Township/Fairfield County have been retained in this Plan update. Local officials have been discussing how to resolve differences and written agreements have been drafted and may be approved in the near future. However, legal challenges in the courts over a number of annexation and pre-annexation agreements have complicated the efforts of the parties to finalize new wastewater service agreements.

25-C9 The specific roles of Franklin County in wastewater collection and treatment are noted elsewhere in the table (Darbydale, minor facilities and major contract areas with the City of Columbus). Although other management agencies

listed in this table have WC, WT and RWP responsibilities for the unincorporated areas within Franklin County, under State law generic prescription 7 applies.

Specific Prescriptions for Wastewater Treatment

25-P1 - *Management Agency for Overall Regional Facility Planning and Prescription*

The City of Columbus is responsible for long range planning, design and construction of the major infrastructure to accommodate wastewater collection and treatment needs for the entire Metro Columbus RFPA (Map 25-1). New wastewater treatment plants are not permitted within the Metro Columbus RFPA unless the facility is part of regional facility planning prepared under prescriptions 25-P1, 25-P1a or 25-P1b, or a different management agency has an approved opt out plan under prescription 25-P2. In western Franklin County the Big Darby Accord Master Watershed Plan (July 2006) includes the concept that future residential development may occur using alternative community-based sewer systems. County government may become the responsible management agency for these systems. This approach is compatible with the State's 208 Plan and would initially be handled using the opt out mechanism (see 25-P2).

Additional prescriptions for Columbus and the other management agencies operating within the Metro Columbus RFPA are presented under 25-P1a and 25P1b, the core quadrants and the southeast quadrant of the Metro Columbus RFPA, respectively.

25-P1a - *Core Quadrants, Management Agencies and Prescriptions* (map 25-1)

This area is comprised of Columbus and Franklin County (except the southeast quadrant described in 25-P1b) plus small areas of Delaware, Licking and Pickaway Counties. Based upon a facility plan update done by the City of Columbus in 2000 the majority of this area will need central sewer service as soon as 2020. More recently the Big Darby Accord Watershed Master Plan proposed a land use plan to guide development in western Franklin County. Under the Darby Accord Plan the goal is to achieve a mix of central sewer service provided by Columbus, some alternative community-based wastewater systems for conservation style developments, and the conservation of approximately 25,000 acres of land. In the upcoming months local governments will be considering the Darby Accord Plan and deciding if and how to amend local land use regulations. See Appendix 3-3 for additional requirements that are applicable within the Big Darby Creek watershed.

In the core quadrants there are four management agencies operating wastewater collection and treatment systems, and each management agency has a Community-level FPA. Twenty additional satellite communities are responsible for the sewage collection systems. The satellite communities are identified as management agencies to acknowledge their responsibility to provide all necessary sewer system maintenance within their jurisdictional boundaries. Each satellite community negotiates a service contact with the City of Columbus, the specifics of which are between the parties and not part of the 208 Plan.

Table 25-A. List of management agencies in core quadrants of the Metro Columbus RFPA.			
Management Agency	Descriptive Name of FPA or Facility	Map Number	
City of Columbus	Columbus City FPA (corporate limits and portions of Franklin Co.)	25-7	
Franklin County	Darbydale FPA Minor Facilities ➢ Holton Park Estates subdivision	25-9	
Aqua Ohio Water Company	Huber Ridge FPA Lake Darby Estates FPA	25-5 25-6	
Union County	Jerome Township (portion) FPA	25-10	
Satellite Community Sewage Collection Systems (part of Columbus City Community-level FPA) (maps 25-7, 25-8a, 25-8b)			
Bexley	Jefferson Water & Sewer District	Groveport	Shawnee Hills
Dublin	Franklin County Areas **	Lockbourne	Upper Arlington
Gahanna	** Briarbank, Briarwood Hills, Forest Ridge, Franklin County Landfill, Franklin County Model Landfill, Hamilton Meadows, Lincoln Village / New Rome, Ridgewood Estates, Timberbrook, Village Park, Windsong, Worthington Hills, Young Estates	Marble Cliff	Urbancrest
Grandview		Minerva Park	Westerville
Grove City		New Albany	Whitehall
Hilliard		Obetz	Worthington

*Sewer Service Prescriptions in the Core Quadrant*s

The City of Columbus is responsible for wastewater collection and treatment within Columbus corporate boundaries. Sewer service (collection and treatment) may be extended to annexed land, and to areas beyond the corporate boundaries provided the area is within the Columbus City Community-level FPA and there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit. Wastewater collection outside of Columbus corporate limits and within the Columbus City Community-level FPA may be provided by other entities (satellite collection systems) through contracts with the City of Columbus. Maps 25-8a and 25-8b depict the satellite collection systems in place as of July 2005. If Columbus is granted a lock-in request pursuant to prescription 25-P2, then the extension of service into the lock-in area by another management agency must be agreed upon in writing by both management agencies.

The other three management agencies (Franklin County, Union County and Ohio American Water) are responsible for long range planning, design and construction of the infrastructure to accommodate wastewater collection and treatment needs within their respective Community-level FPAs. These management agencies may enter into contracts for wastewater services. The operation of these three

management agencies shall continue until such time that these communities decide to enter into contracts for wastewater services with the City of Columbus.

Franklin County Commissioners are responsible for long range planning, design, construction and operation of the major infrastructure to accommodate wastewater collection and treatment needs at the Darbydale facility and the three minor facilities. Sewer service (collection and treatment) may be extended to any land parcel within the Darbydale Community-level FPA provided there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit. Sewer service (collection and treatment) may be not be extended beyond the current design of the minor facilities. Collection and treatment systems, or system components, for the minor facilities may be replaced as necessary to meet NPDES permit limits or for other valid reasons. Connection to the City of Columbus system should be considered before making additional capital investment in the three minor wastewater treatment facilities.

The Ohio American Water Company is responsible for long range planning, design, construction, and operation of the major infrastructure to accommodate wastewater collection and treatment needs for Huber Ridge and Lake Darby Estates pursuant to licences granted by the Public Utilities Commission of Ohio (PUCO). Sewer service (collection and treatment) may be extended to any land parcel within the Community-level FPAs provided there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit. In limited circumstances wastewater service may be extended to parcels located beyond these Community-level FPAs if approved by the Director and PUCO, and provided there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit. However, any substantial expansion of service beyond the Community-based FPAs requires authorization for a higher discharge volume in the NPDES permit and requires approval pursuant to an opt out or FPA boundary change (see prescriptions 25-P2, 25-P3a).

Union County Commissioners are responsible for long range planning, design, construction, and operation of the major infrastructure to accommodate wastewater collection and treatment needs within the Jerome Township Community-level FPA. Sewer service (collection and treatment) may be extended to any land parcel within the Community-level FPA provided there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit. New wastewater treatment plants are not permitted unless the facility is part of facility planning prepared under this prescription, or a different management agency has an approved opt out plan under prescription 25-P2.

Columbus or its satellite communities may not extend sewer collection systems into the Community-level FPAs depicted for Franklin County, Union County or Ohio American Water unless the land is annexed or there is a written agreement between the municipality and the party obtaining service through the sewer extension. If a non-municipal management agency was granted a lock-in request pursuant to Section 5.03 of the Central Scioto Plan Update (Ohio EPA 2002), then the extension of service into the lock-in area by another management agency shall be agreed upon in writing by both management agencies.

Adjustments to Community-level FPA boundaries shall be made pursuant to prescription 25-P3a or, alternatively, an applicant may submit an opt out request under prescription 25-P2.

Except as noted in the next paragraph, all new residential development within the core quadrants shall be connected to central sewers provided by one of the management agencies

listed in prescription 25-P1a. New wastewater treatment plants are not permitted within the core quadrants unless the facility is part of regional facility planning prepared by one of the management agencies, or a different management agency has an approved opt out plan under prescription 25-P2.

New residential housing on individual lots, and commercial establishments up to 1500 gallons per day, may use on-lot sewage disposal systems if approved by the local health department or Ohio EPA. All such systems should be required to tie into central sewers when they become available. In the Big Darby Creek watershed portion of Franklin County new residential housing and limited commercial development may occur within the framework of the Big Darby Accord Master Watershed Plan subject to the approval of any necessary opt out requests and meeting all requirements found in Appendix 3-3.

Isolated pockets of existing residential and commercial development presently served by on-lot sewage disposal systems or aeration systems should be connected to central sewer systems whereever practical and feasible. Franklin County will plan, install, maintain and help secure financing for central sewers in locations with high numbers of failing on-lot treatment systems in unincorporated areas. Columbus and the municipal satellite communities will plan, install, maintain and help secure financing for central sewers in locations with high numbers of failing on-lot treatment systems within their jurisdictional boundaries.

25-P1b - *Southeast Quadrant*, *Management Agencies and Prescriptions* (map 25-2)

An area identified as the southeast quadrant of the Metro Columbus RFPA is bounded by SR 16 to the north, I-270, SR 317 and Pontious Road to west and the Metro Columbus RFPA boundary to the south and east. Based upon a facility plan update done by the City of Columbus in 2000 this entire area will need central sewer service as soon as 2020. In 2002 the boundary of the Metro Columbus RFPA was substantially expanded at the request of the City of Columbus and local governments in Southeast Franklin County and Northwest Fairfield County. In the future this entire area could be served by City of Columbus facilities. However, in the immediate and short-term future, the sewage collection and treatment needs throughout much of the southeast quadrant will be met by a number of other providers identified in this prescription. This arrangement shall continue until such time that these communities decide to enter into contracts for wastewater services with the City of Columbus.

In the southeast quadrant there are six management agencies operating wastewater collection and treatment systems, and four additional satellite communities responsible for sewage collection systems. Each satellite community negotiates a service contact with the City of Columbus or one of the other treatment providers, the specifics of which are between the parties and not part of the 208 Plan. The satellite entities are listed as management agencies to acknowledge their responsibility to provide all necessary sewer system maintenance within their jurisdictional boundaries.

There are unresolved disputes over which entity should provide wastewater treatment services in the southeast quadrant. This situation should resolved itself through Ohio EPA action on lock-in requests (see discussion of Fairfield County and Southwest Licking Community Water and Sewer District) and by the parties involved using the mechanisms provided in the State’s 208 Plan (see 25-P2 and 25-P3a).

Table 25-B. List of management agencies in southeast quadrant of the Metro Columbus RFPA.		
Management Agency	Descriptive Name, Community-level FPA or Facility	Map Number
City of Columbus	Columbus City FPA (corporate limits and portions of Franklin County)	25-12
City of Pickerington	Pickerington FPA (includes overlap with Canal Winchester)	25-18
Village of Canal Winchester	Canal Winchester FPA (includes overlap with Pickerington)	25-11
Franklin County	Century Acres subdivision (in Madison Township)	N/A
Fairfield County	Tussing - Sycamore and Little Walnut FPAs (includes overlap with Pickerington and Canal Winchester)	25-19
Southwest Licking Community Water and Sewer District	Southwest Licking FPA (part of sewer district within Metro Columbus RFPA, includes overlap with Reynoldsburg)	25-17 25-20
Ohio American Water	Blacklick Estates FPA	25-16
Satellite Community Sewage Collection Systems		
Village of Lithopolis	Lithopolis FPA (portion of Canal Winchester FPA plus additional area in Fairfield County)	25-15
City of Reynoldsburg	Columbus City FPA (Reynoldsburg contract area with Columbus)	25-13
Village of Groveport	Columbus City FPA (Groveport contract area with Columbus)	
Village of Brice	Columbus City FPA (Brice contract area with Columbus)	

Sewer Service Prescriptions in the Southeast Quadrant

The City of Columbus is responsible for wastewater collection and treatment within Columbus corporate boundaries. Sewer service (collection and treatment) may be extended to annexed land, and to areas beyond the corporate boundaries provided the area is within the Columbus City FPA and there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit. Wastewater collection outside of Columbus corporate limits and within the Columbus City FPA may be provided by other entities (satellite collection systems) through contracts with the City of Columbus. In the southeast quadrant there are three such areas (map 25-13).

Five management agencies (City of Pickerington, Village of Canal Winchester, Fairfield County, Southwest Licking Community Water and Sewer District, and Ohio American Water) are responsible for long range planning, design and construction of the infrastructure to accommodate wastewater collection and treatment needs within their respective Community-level FPAs. These management agencies may enter into contracts for wastewater services. The operation of these management agencies shall continue until such time that these communities decide to enter into contracts for

wastewater services with the City of Columbus.

Except for some minor changes described below, the Community-level FPAs for management agencies with wastewater treatment plants remain as they were first published in the the CSPU and re-published in the earlier draft of this current State 208 Plan. There are portions of the Columbus City FPA that overlap with other wastewater treatment management agencies in the southeast quadrant. See the maps referenced in Table 25-B.

The City of Pickerington is responsible for long range planning, design and construction of the major infrastructure to accommodate wastewater collection and treatment needs for the Pickerington Community-level FPA. The City of Pickerington is responsible for wastewater collection and treatment within Pickerington corporate boundaries. Sewer service (collection and treatment) may be extended to annexed land, and to areas beyond the corporate boundaries provided the area is within the Pickerington Community-level FPA and there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit. New wastewater treatment plants are not permitted within the Pickerington Community-level FPA unless the facility is part of facility planning prepared under this prescription, or a different management agency has an approved opt out plan under prescription 25-P2.

The Village of Canal Winchester is responsible for long range planning, design and construction of the major infrastructure to accommodate wastewater collection and treatment needs for the Canal Winchester Community-level FPA. The Village of Canal Winchester is responsible for wastewater collection and treatment within Canal Winchester corporate boundaries. Sewer service (collection and treatment) may be extended to annexed land, and to areas beyond the corporate boundaries provided the area is within the Canal Winchester Canal Winchester Community-level FPA and there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit. The Village of Canal Winchester presently treats wastewater from the Village of Lithopolis under the terms of a sewer service agreement. New wastewater treatment plants for existing or expanded wastewater flows are not permitted within the Canal Winchester Community-level FPA unless the facility is part of facility planning prepared under this prescription, or a different management agency has an approved opt out plan under prescription 25-P2.

Fairfield County Commissioners are responsible for long range planning, design, construction, and operation of the major infrastructure to accommodate wastewater collection and treatment needs within the Tussing-Sycamore and Little Walnut Community-level FPAs. Sewer service (collection and treatment) may be extended to any land parcel within the Tussing-Sycamore and Little Walnut Community-level FPAs provided there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit. New wastewater treatment plants are not permitted within the Tussing-Sycamore and Little Walnut Community-level FPAs unless the facility is part of the planning prepared under this prescription. The Village of Carroll is included in the Little Walnut Community-level FPA.

Pursuant to Section 5.03 of the Central Scioto Plan Update (Ohio EPA 2002) Fairfield County Commissioners executed their option to request a lock-in of service area, thereby preventing another entity from opting out of having sewer service provided by the Fairfield County Commissioners (see Section 5.03.02, Ohio EPA 2002). The petition to lock-in was made through a number of submissions to Ohio EPA. Other management agencies were notified of the petition in December 2004 and were asked to submit comments by June 30, 2005. Ohio EPA’s technical review indicates that adequate

facility planning has been completed. Further consideration is on hold pending the receipt of written endorsements from the Fairfield County Commissioners and Bloom, Liberty and Violet township officials. Contingent upon receipt of these endorsements, and pending the review of any further comments received , the lock-in request will either be rejected or incorporated into the 208 Plan. If the lock-in is approved and incorporated into the Plan, then Ohio EPA permits for centralized wastewater collection and treatment within the Tussing-Sycamore and Little Walnut Community-level FPAs may not be issued to other entities unless the permit is for infrastructure agreed upon by the Fairfield County Commissioners and the other party as part of a service agreement.

The Southwest Licking Community Water and Sewer District (hereafter the District) is responsible for long range planning, design and construction of the major infrastructure to accommodate wastewater collection and treatment needs for the District's Community-level FPA. Note that the District also operates collection and treatment facilities in an area located to the east (See the Licking County listing of the State 208 Plan).
The District's Community-level FPA is land within the Scioto River basin and drains by gravity to sewage collection systems within the Metro Columbus RFPA. However, the District pumps wastewater over the watershed divide to its treatment plant located in Licking County. From a regional wastewater management perspective it makes sense that the District and the City of Columbus would negotiate a sewer service agreement to connect District sewers to the Columbus system. While such an arrangement is generally described above, the situation is such that feasibility, cost considerations and environmental impacts of implementing the regional gravity based system should be evaluated in the near term. The City of Columbus, as the overall regional wastewater service provider, is hereby charged with initiating such discussions within 90 days of approval of this State 208 Plan, and providing an annual status update on progress by June 30 of each year.

Sewer service by the District (collection and treatment) may be extended to any land parcel within the District's Community-level FPA provided there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit. New wastewater treatment plants are not permitted within the District's Community-level FPA unless the facility is part of facility planning prepared under this prescription. Land parcels within the District's Community-level FPA that are annexed by a municipality that is also a satellite community listed in this plan (e.g., City of Reynoldsburg) may obtain sewer services from that municipality or the District unless otherwise prohibited or controlled through sewer service agreements.

The Ohio American Water Company is responsible for long range planning, design, construction, and operation of the major infrastructure to accommodate wastewater collection and treatment needs for Blacklick Estates pursuant to licences granted by the Public Utilities Commission of Ohio (PUCO). Sewer service (collection and treatment) may be extended to any land parcel within the Community-level FPA provided there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit. In limited circumstances wastewater service may be extended to parcels located beyond these Community-level FPAs if approved by the Director of Ohio EPA and PUCO, and provided there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit. However, any substantial expansion of service beyond the Community-based FPAs requires authorization for a higher discharge volume in the NPDES permit and requires approval pursuant to an opt out or FPA boundary change (see prescriptions 25-P2, 25-P3a).

The Village of Lithopolis may extend sewer service (collection

only) within their Community-level FPA provided the cumulative design build out of the Lithopolis collection system, as determined by Ohio EPA, does not exceed the volume of wastewater stipulated in the service agreement(s) for wastewater treatment in effect at the time the project is reviewed. Note that the Metro Columbus RFPA boundary has been adjusted to include approximately 700 acres in Fairfield County (sections 17 & 18 of Bloom Township).

Columbus or its satellite communities may not extend sewer collection systems into the Community-level FPAs depicted for City of Pickerington, Village of Canal Winchester, Village of Lithopolis, Franklin County, Fairfield County, Southwest Licking Community Water and Sewer District, and Ohio American Water unless the land is annexed or there is a written agreement between the municipality and the party obtaining service through the sewer extension. If a non-municipal management agency was granted a lock-in request pursuant to Section 5.03 of the Central Scioto Plan Update (Ohio EPA 2002), then the extension of service into the lock-in area by another management agency shall be agreed upon in writing by both management agencies.

Adjustments to the Columbus City FPA or Community-level FPA boundaries shall be made pursuant to prescription 25-P3a or, alternatively, an applicant may submit an opt out request under prescription 25-P2.

Except as noted in the next paragraph, all new residential development within the southeast quadrant shall be connected to central sewers provided by one of the management agencies listed in prescription 25-P1b. New wastewater treatment plants are not permitted within the southeast quadrant unless the facility is part of regional facility planning prepared by one of the management agencies, or a different management agency has an approved opt out plan under prescription 25-P2.

New residential housing on individual lots, and commercial establishments up to 1500 gallons per day, may use on-lot sewage disposal systems if approved by the local health department or Ohio EPA. All such systems should be required to tie into central sewers when they become available.

Isolated pockets of existing residential and commercial development presently served by on-lot sewage disposal systems or aeration systems should be connected to central sewer systems whereever practical and feasible. Franklin County will plan, install, maintain and help secure financing for central sewers in locations with high numbers of failing on-lot treatment systems in unincorporated areas. Columbus and the municipal satellite communities will plan, install, maintain and help secure financing for central sewers in locations with high numbers of failing on-lot treatment systems within their jurisdictional boundaries.

25-P2 Opt-out and Lock-in Procedures

Pursuant to Section 5.03 of the Central Scioto Plan Update (Ohio EPA 2002) petitions for the establishment of a sewer service provider other than those established under the State of Ohio 208 Plan for Franklin County may be filed at any time. The opt out provision is intended to allow a community with no, or limited, central wastewater service the ability to become a management agency for such service in circumstances where the assigned management agency does not provide acceptable service within a reasonable time frame. The provision is also a method of last resort to request changes in Community-level FPA boundaries between two or more entities when the parties cannot mutually agree upon redrawing sewer service areas.

This opt out provision can be pursued unless specifically

prohibited. Situations where an opt out petition would not be valid include: 1) an area where a lock-in request (explained below) has been granted; 2) an area where a private or investor owned utility has been granted certificate of public convenience and necessity for sewage disposal under the rules administered by the Public Utilities Commission of Ohio; and 3) an area where wastewater collection and treatment services are already provided to the entire area by an existing management agency. Specific areas within the Metro Columbus RFPA where an opt out is prohibited are:

- the Ohio American Water Company Community-level FPAs (Blacklick Estates, Huber Ridge, and Lake Darby Estates);
- the Franklin County Community-level FPA for Darbydale
- the Franklin County minor facilities; and,
- other situations where one of the three criteria listed in this paragraph are demonstrated.Petitions for opt out adjustments must include written endorsements of support from all political jurisdictions located within the opt out area. Furthermore, all applicable facility planning work must be completed for the opt out area (see Chapter 3.4 for guidance on preparing facility plans). Opt out adjustments, if granted, will be part of the State of Ohio 208 Plan upon review and approval by Ohio EPA. The Director of Ohio EPA shall make a determination relative to each valid petition for an opt out.

Management agencies that provide sewage collection and wastewater treatment within the Metro Columbus RFPA can prevent future opt outs by filing a service area lock-in request. When granted, a lock-in request prevents Ohio EPA from granting a totally new management agency a role in sewage collection and treatment, and prevents other management agencies or satellite communities from providing service without the agreement of the party obtaining the lock-in. Lock-in requests must be submitted with an updated facility plan for the area in question plus written letters or resolutions of support for the lock-in request from all political jurisdictions located within the lock-in area. See Chapter 3.4 for guidance on preparing facility plans.

The procedural protocols regarding opt out petitions and lock-in requests found in Section 5.03 of the CSPU are incorporated by reference as part of the State 208 Plan.

25-P3 Boundary Changes, Metro Columbus RFPA

Adjustments to the boundaries of the Metro Columbus RFPA (map 25-1) may be requested at any time. Petitions for boundary adjustments must include written endorsements of support from each affected management agency, each affected satellite suburban community, and any other political jurisdiction or private entity that has authority to provide wastewater collection and treatment for the area in question. Furthermore, all applicable facility planning work must be completed for the area added to, or deleted from, the Metro Columbus RFPA (see Chapter 3.4 for guidance on preparing facility plans). The Director of Ohio EPA shall require appropriately detailed updated facility planning documentation for major boundary adjustments (see Chapter 3.4 for guidance on preparing facility plans). Small changes require a demonstration of adequate capacity to handle the added wastewater. Boundary adjustments, if granted, will be part of the State of Ohio 208 Plan upon review and approval by Ohio EPA. The Director of Ohio EPA shall make a determination relative to each valid petition for Metro Columbus RFPA boundary adjustments. Boundary adjustments, with or without a petition, may also be proposed by the State when the 208 Plan is updated.

25-P3a Boundary Changes, Community-level FPAs

Adjustments to the boundaries of any of the Community-level

FPAs may be requested at any time. Petitions for Community-level FPA boundary adjustments must include written endorsements of support from each affected management agency, each affected satellite suburban community, and any other political jurisdiction or private entity that has authority to provide wastewater collection and treatment for the area in question. Furthermore, all applicable facility planning work must be completed for the area in question (see Chapter 3.4 for guidance on preparing facility plans). The Director of Ohio EPA shall require appropriately detailed updated facility planning documentation for major boundary adjustments (see Chapter 3.4 for guidance on preparing facility plans). Small changes require a demonstration of adequate capacity to handle the added wastewater. Boundary adjustments, if granted, will be part of the State of Ohio 208 Plan upon review and approval by Ohio EPA. The Director of Ohio EPA shall make a determination relative to each valid petition for Community-level FPA boundary adjustments. Community-level FPA boundary adjustments, with or without a petition, may also be proposed by the State when the 208 Plan is updated.

25-P4

On September 16, 2015, the Director approved a petition from the City of Columbus[2] for a minor adjustment of the Columbus Regional Facility Planning Area Boundary pursuant to wastewater prescription 25-P3 of the approved State of Ohio Clean Water Act Section 208 Plan for Franklin County. The adjusted boundary extends eastward to include 1322.2 acres in Jersey Township, Licking County. This was a final action of the Director appealable the Environmental Review Appeals Commission pursuant to Section 3745.04 of the Ohio Revised Code. No appeal was filed.

The adjusted boundary extends eastward to include 1322.2 acres in Jersey Township, Licking County. Map 25-20 reflects the boundary adjustment requested in the petition. Wastewater services shall be provided as stated in the petition and repeated here:

- Areas within the Columbus Regional Facility Planning Area that are annexed by the City of New Albany shall be provided wastewater collection and treatment service by Columbus and New Albany exclusively.

- Areas within the Columbus Regional Facility Planning Area that are annexed by the City of Columbus shall be provided wastewater collection and treatment service by the City of Columbus exclusively.

- Areas within the Columbus Regional Facility Planning Area and the Southwest Licking Community Water and Sewer District/Licking County Sewer District No. 9 Contact Facility Planning Area that are not annexed by the City of New Albany or annexed by the City of Columbus may be provided wastewater collection and treatment service by the Southwest Licking Community Water and Sewer District.

[2] The full petition and approval letter are available as a separate file.

Fulton County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Fulton County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Comments

34-C1 In 2022, the Henry County Regional Water and Sewer District merged with the Northwestern Water and Sewer District. Northwestern Water and Sewer District is now the sanitary sewer management agency for Henry County townships (except Ridgeville Township), the Village of McClure, and Providence Township in Lucas County.

34-C2 Area is now served by the Archbold WWTP in Fulton County.

Highland County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in southwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Highland County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Holmes County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northeast Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Holmes County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Huron County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Huron County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

In 2024, the Southern 5 Sewer District was established under Ohio Revised Code 6119. The Southern 5 Sewer District is the management agency for wastewater planning and providing sewer service within New Haven, Greenfield, Norwich and Richmond Townships.

Comments

39-C1 See listing under Erie County. A Facility Planning Area for the Milan area and specific prescriptions are available based upon the Areawide Waste Management Plan prepared by the Toledo Metropolitan Area Council of Governments in 2002.

Knox County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is appropriate and necessary at this time in central Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Knox County are listed below. Specific prescriptions regarding wastewater collection and treatment responsibilities are listed where recent facility planning work was available to the agency and it met the criteria listed in Chapter 3.4. In other situations generic prescriptions regarding wastewater collection and treatment responsibilities are provided that reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). These local communities may be asked to update facility planning information as a means to create specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Comments

45-C1[3] The Southwest Licking Community Water and Sewer District collects and treats sewage from Jardin Manor subdivision and Willowbrook Mobile Home Park.

45-C2 A portion of the Southwest Licking Community Water and Sewer District lies within the Scioto River watershed and is part of the Metro Columbus RFPA (see the Franklin County listing of the State 208 Plan). Prescriptions listed here apply to the portion of the sewer district within the Licking River watershed (Map 45-2).

45-C3[4] The Village of Hanover has constructed and is operating a Wastewater Treatment Plant (WWTP) (NPDES Permit #4PB00100) as of 2012. The construction of the WWTP was prompted by previously documented unsanitary conditions in local waterways.

45-C4[4] The Village of Kirkersville is located in Etna Township and is nearly surrounded by the Southwest Licking Community Water and Sewer District. The Village installed sewers and a wastewater treatment facility in 1992 to provide service within its corporate boundaries. Present capacity of the system does not appear

3 Update approved by U.S. EPA on June 16, 2016.

4 Update approved by U.S. EPA on June 16, 2016.

adequate to accommodate future residential and commercial growth. The Village of Kirkersville and the Southwest Licking Community Water and Sewer District wastewater treatment plants are located approximately one mile apart and discharge to the South Fork Licking River. There is a sewer trunk line for the District's system located within the corporate limits of Kirkersville. The State's Water Quality Standard antidegradation rule (OAC 3745-1-05) requires that permit applicants seeking to discharge additional pollutants provide, among other materials, a....."description and analyses, including availability, cost effectiveness and technical feasibility, of the utilization of central or regional treatment facilities rather than creating a new point source discharge. This analysis shall include an evaluation of long-range plans outlined in state or local water quality management planning documents and applicable facility planning documents". In making a decision whether or not to allow a lowering of water quality the Director must consider, among other things, ... "the availability, cost effectiveness, and technical feasibility of central or regional sewage collection and treatment facilities, including long-range plans outlined in state or local water quality management planning documents and applicable facility planning documents". These facts have led the agency to include specific prescriptions in the State 208 Plan to foster the planning and analysis of regional wastewater treatment options in advance of acting upon permits for new or expanded wastewater treatment facilities. See prescriptions 45-P2 and 45-P5.

45-C5 Pataskala and Lima Township merged in 1995. The City of Pataskala provides sewage collection and treatment in the more densely populated areas of the old village. Others areas of residential and commercial development within Pataskala are served by the Southwest Licking Community Water and Sewer District. The City's WWTP discharges to the South Fork Licking River. The City and the Southwest Licking Community Water and Sewer District have entered into a service contract that does define their respective Facility Planning Areas. For reasons similar to those described above for Kirkersville the agency has included identical prescriptions in the State 208 Plan to foster the planning and analysis of regional wastewater treatment options in advance of acting upon permits for new or expanded wastewater treatment facilities. See prescriptions 45-P2 and 45-P6.

Specific Prescriptions for Wastewater Treatment

45-P1[4] The Village of Alexandria, located in St. Abans Township, operates a WWTP (4PA00106) that was put into operation in 2005. The Village is responsible for collection and treatment within the village boundaries.

45-P2[4] The Southwest Licking Community Water and Sewer District (hereafter the District) is the regional wastewater provider in southwestern Licking County and is responsible for long range planning, design and construction of the major infrastructure to accommodate wastewater collection and treatment needs for the Southwest Licking Facility Planning Area (map 45-2). Two municipalities (Kirkersville and Pataskala) also operate separate collection and treatment facilities within or adjacent to the Southwest Licking FPA. Wastewater facility planning by the District should consider cost effective options that meet current and long range capacity needs of the entire area, including service of municipal areas. The District and municipal governments should discuss wastewater service needs and negotiate a mutually acceptable plan that meets the long range needs for all of southwestern Licking County.

Sewer service by the District (collection and treatment) may be extended to any land parcel within the Southwest Licking FPA provided there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit (4PD00101 effective date of 11/1/12) and the service is compliant with contract between SWLCWSD and municipality (Kirkersville and Pataskala). New or expanded wastewater treatment plants are not to be permitted within the Southwest Licking FPA unless the facility is part of the regional facility planning prepared under this prescription.

45-P3[5] The Licking County Commissioners are responsible for regional long-range planning, design and construction of the major infrastructure to accommodate wastewater collection and treatment needs for a large portion of three townships in western Licking County (map 45-3). The county created Sewer District No. 9 comprised of Jersey, Monroe and St. Albans townships in 2002. The

[5] Update approved by U.S. EPA on June 16, 2016.

western portions of Monroe and Jersey townships drain in a westerly direction to the Scioto River and are part of the Metro Columbus Regional Facility Planning Area (map 25-3). The City of Columbus is the management agency within this portion of western Licking County (see the Franklin County listing for additional information). Licking County has done preliminary facility planning work for Sewer District No. 9.

In 2010, the Licking County Board of Commissioners contracted with the Southwest Licking Community Water and Sewer District (SWLCWSD) to be the primary water and sewer service provider in portions of Jersey and St. Albans Townships along the SR 161 corridor (161 Service Area, see map 45-7). SWLCWSD developed a wastewater master plan for Jersey and St. Albans Townships with a defined facility planning area. This plan was developed because of the anticipated growth along SR 161. This document was submitted to the Ohio EPA in 2013 for consideration in updating the State Water Quality Management Plan. Discussions among interested parties (New Albany, Columbus, Pataskala, Johnstown, Granville, Alexandria, SWLCWSD and Licking County officials) took place in 2014 and 2015. It was agreed that:

- Wastewater collection and treatment within Sewer District No. 9 will be the responsibility of SWLCWSD;
- Except as noted below, the area that will receive wastewater collection service within Sewer District No. 9 shall be limited to the land area depicted on map 45-7;
- The 161 Service Area may expanded at a future date pursuant to Article 10 of the Licking County/SWLCWSD contract;
- PTIs for sewer service must be approved by Ohio EPA for land parcels that entirely or partially within the area depicted on map 45-7 and any authorized expansion of the 161 Service Area;
- Pursuant to Rx 25-P3 the City of Columbus has petitioned and the parties have agreed to a minor revision in the boundary of the Metro Columbus Regional Facility Planning Area. Maps 25-3 and 45-3 have been revised to reflect this change in the RFPA boundary affecting portions of Jersey Township.

45-P4[5] The Village of Johnstown is located in Monroe Township and is surrounded by the Licking County Sewer District No. 9. The Village provides sewage collection and treatment within its corporate boundaries and some limited areas beyond.

45-P5[5] Sewer service by the Village of Kirkersville (collection and treatment) may be extended to any land parcel within or annexed to Kirkersville provided there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit (4PB00104 effective date of 10/01/2013). New or expanded wastewater treatment plants will not be permitted within the Southwest Licking FPA, or the adjoining Kirkersville FPA, unless the facility is part of regional facility planning work prepared under prescription 45-P2. See comment 45-C4 and prescription 45-P2 regarding cooperative regional wastewater facility planning.

45-P6[5] Sewer service by the City of Pataskala (collection and treatment) may be extended to any land parcel within or annexed to Pataskala provided there is capacity to adequately collect and treat all wastewater under the terms of the NPDES permit (4PB00009 effective date of 08/1/2014) and the service is compliant with contracts between the City and SWLCWSD. New or expanded wastewater treatment plants will not be permitted within the Southwest Licking FPA, including Pataskala, unless the facility is part of the regional facility planning work prepared under prescription 45-P2. See prescription 45-P2 regarding cooperative regional wastewater facility planning.

Logan County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is appropriate and necessary at this time in central Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Logan County are listed below. Specific prescriptions regarding wastewater collection and treatment responsibilities are listed where recent facility planning work was available to the agency and it met the criteria listed in Chapter 3.4. In other situations generic prescriptions regarding wastewater collection and treatment responsibilities are provided that reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). These local communities may be asked to update facility planning information as a means to create specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Comments

46-C1 In order for Ohio EPA to accept an application for sewer extensions or wastewater treatment facilities within the Logan County portion of the Big Darby Creek watershed either local governments must enact the ordinances described in Appendix 3-3 or, alternatively, developments with central sewers must have individual NPDES stormwater permits for construction activity. The individual permits must contain a rigorous Environmental Site Management Plan (ESMP) as part of the Stormwater Pollution Prevention Plan that satisfies the criteria described in Appendix 3-3. Criteria listed in Appendix 3-3 describe the conditions that must be met for Ohio EPA to accept an application for sewer extensions or wastewater treatment facilities within the Logan County portion of the Big Darby Creek watershed. The management agencies affected would include any entity that provides central sewer services in the area delineated on Figure 1 in Appendix 3-3.

Madison County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is appropriate and necessary at this time in central Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Madison County are listed below. Specific prescriptions regarding wastewater collection and treatment responsibilities are listed where recent facility planning work was available to the agency and it met the criteria listed in Chapter 3.4. In other situations generic prescriptions regarding wastewater collection and treatment responsibilities are provided that reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may be asked to update facility planning information as a means to create specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

County government officials in Madison County have prepared master sewer plans for their County. It covers all communities within the county, including municipalities. A steering committee composed of utility personnel and other community members worked with a consultant to prepare a draft plan that all parties agreed to. This plan was made available for general public review and comment in April 2005. A final plan was prepared and accepted by the Madison County Commissioners in June 2005. Technical problems with the original submission of mapped information have been solved. The County and six municipal entities are established in this State 208 Plan as appropriate management agencies for sewer and wastewater planning and providing this service within Madison County. However, the inclusion of the specifically defined facility planning areas for the six municipal community systems will require a formal resolutions or letters of support from each municipal government.

In 2023, the Mid-Ohio Water and Sewer District (MOWSD) was established under Ohio Revised Code 6119. MOWSD entered into agreements to take over ownership, operation and planning for the London WWTP, Plain City WWTP, and County's Sanitary Sewer District No. 1, County Sewer District No. 2, and the Camp Wissalohican Sanitary Sewer District facilities. MOWSD is the wastewater management agency for these facilities.

Comments

49-C1 In order for Ohio EPA to accept an application for sewer extensions or wastewater treatment facilities within the Madison County portion of the Big Darby Creek watershed either local governments must enact the ordinances described in Appendix 3-3 or, alternatively, developments with central sewers must have individual NPDES stormwater permits for construction activity. The individual permits must contain a rigorous Environmental Site Management Plan (ESMP) as part of the Stormwater Pollution Prevention Plan that satisfies the criteria described in Appendix 3-3. Criteria listed in Appendix 3-3 describe the conditions that must be met for Ohio EPA to accept an application for sewer extensions or wastewater treatment facilities within the Madison County portion of

the Big Darby Creek watershed. The management agencies affected would include any entity that provides central sewer services in the area delineated on Figure 1 in Appendix 3-3.

49-C2 The County Commissioners have prepared and voted to accept the County-wide sewer master plan that states there will be no development on central sewers in areas outside the defined facility planning areas. Therefore, generic prescriptions number 9 is not included as a wastewater option for the unincorporated areas of the County.

Specific Prescriptions for Wastewater Treatment

49-P1 Within the Mid-Ohio Water and Sewer District's Facilities Planning Area (FPA), the Mid-Ohio Board is responsible for sewage collection and treatment. All new development within existing sewer service areas for which the District is responsible shall connect to centralized sewers immediately; or connection to centralized sewers, once centralized sewers are available and accessible, shall occur within a period of five years.

For new development that occurs within the proposed District 5-year and 20-year designated service areas (as outlined in Figure 5-2 of the Facilities Plan) that do not yet exist at the time development is completed, immediate connection to centralized sewers will not be required. For these instances, an alternative wastewater treatment plan may be temporarily implemented. The development must then make connection to Mid-Ohio Water and Sewer District centralized sewers, once centralized sewers are available and accessible.

The District will not engage in limiting, restricting or dictating where development occurs either inside or outside of the defined borders of the FPA. Neither will the District prohibit the construction of centralized sewers, by other entities, outside of the defined service areas. Further, the District acknowledges that an individual municipality with its own legal authority inside or outside of the borders of the FPA may be able to implement its own centralized sewer system.

Where centralized sewers are not available and accessible, approval of individual residential Home Sewage Treatment Systems (HSTS) is the responsibility of Madison County Public Health under direction of the Madison County Commissioners and shall follow applicable sanitary codes.

Where centralized sewers are not available and accessible, on-lot sewage treatment systems for semipublic, private (commercial), or industrial entities may be installed if permitted by Ohio EPA or, if the MCPH has permitting authority for small systems (less than 1,000 gallons per day), permitted by the MCPH. New development is defined as requiring rezoning or construction on a non-agricultural parcel with average daily flow exceeding the equivalent dwelling unit (EDU) under current zoning.

Marion County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Marion County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Comments

59-C1 It has come to the agency's attention that some problems may have arisen with regards to providing sewage collection and treatment services to new customers in the Fulton area. Local community leaders should quickly consider all available means to resolve the matter, including the option of preparing wastewater facility plans and developing specific prescriptions for the State 208 Plan.

59-C2 The Highland Local Board of Education operates a WWTP (permit 4PT00005) for school facilities located a short distance from the Village of Sparta. A sewer line was installed to connect the school to the Sparta collection system, but is presently not in use. The agency encourages the local parties to seek resolution of differences that stand in the way of a single treatment system. Monitoring of local waterways may be done as resources allow to determine if unsanitary conditions exist, or if water quality standard exceedences are evident. Such findings might result in a stronger specific prescription to address the problem when this 208 Plan is updated.

Muskingum County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is appropriate and necessary at this time in central Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Muskingum County are listed below. Specific prescriptions regarding wastewater collection and treatment responsibilities are listed where recent facility planning work was available to the agency and it met the criteria listed in Chapter 3.4. In other situations generic prescriptions regarding wastewater collection and treatment responsibilities are provided that reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). These local communities may be asked to update facility planning information as a means to create specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Comments

65-C1 In order for Ohio EPA to accept an application for sewer extensions or wastewater treatment facilities within the Pickaway County portion of the Big Darby Creek watershed either local governments must enact the ordinances described in Appendix 3-3

or, alternatively, developments with central sewers must have individual NPDES stormwater permits for construction activity. The individual permits must contain a rigorous Environmental Site Management Plan (ESMP) as part of the Stormwater Pollution Prevention Plan that satisfies the criteria described in Appendix 3-3. Criteria listed in Appendix 3-3 describe the conditions that must be met for Ohio EPA to accept an application for sewer extensions or wastewater treatment facilities within the Pickaway County portion of the Big Darby Creek watershed. The management agencies affected would include any entity that provides central sewer services in the area delineated on Figure 1 in Appendix 3-3.

65-C2 The Stoutville WWTP in Fairfield County also serves the Village of Tarlton.

Specific Prescriptions for Wastewater Treatment

65-P1 The Pickaway Correctional Institute serves as a regional wastewater treatment facility for the former Village of Orient and a portion of northwest Pickaway County.

Putnam County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Putnam County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Comments

74-C1 The Village of Green Springs wastewater is treated at the Clyde WWTP. Green Springs WWTP only discharges in the event of an emergency through bypass. See TMACOG's 208 Plan referenced in Chapter 7 for more information on the Green Springs and Clyde WWTPs.

Shelby County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in southwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Shelby County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Union County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is appropriate and necessary at this time in central Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Union County are listed below. Specific prescriptions regarding wastewater collection and treatment responsibilities are listed where recent facility planning work was available to the agency and it met the criteria listed in Chapter 3.4. In other situations generic prescriptions regarding wastewater collection and treatment responsibilities are provided that reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). These local communities may be asked to update facility planning information as a means to create specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

80-C1 In order for Ohio EPA to accept an application for sewer extensions or wastewater treatment facilities within the Union County portion of the Big Darby Creek watershed either local governments must enact the ordinances described in Appendix 3-3 or, alternatively, developments with central sewers must have individual NPDES stormwater permits for construction activity. The individual permits must contain a rigorous Environmental Site Management Plan (ESMP) as part of the Stormwater Pollution Prevention Plan that satisfies the criteria described in Appendix 3-3. Criteria listed in Appendix 3-3 describe the conditions that must be met for Ohio EPA to accept an application for sewer extensions or wastewater treatment facilities within the Union County portion of the Big Darby Creek watershed. The management agencies affected would include any entity that provides central sewer services in the area delineated on Figure 1 in Appendix 3-3.

80-C2 A new water and wastewater agreement between the City and Union County was signed in late 2005. The next 208 Plan update should consider the matter of delineating facility planning areas and developing specific prescriptions because a significant number of housing and commercial developments along the SR 33 corridor are anticipated in the near future.

Marysville and County officials should submit existing planning materials, and prepare additional plans as needed, using the guidance found in Chapter 3.4. This is especially important across the southern townships in the County because this land drains into the Big Darby Creek. As was the situation in Franklin County, rapid and poorly planned growth in the Big Darby Creek watershed poses a significant threat to water quality and the biological health of this unique stream.

80-C3 Union County owns and maintains the sewage collection system in the eastern Jerome Township portion of the New California Sewer Sub-District and contracts with Delaware County for treatment of this wastewater. In February 2006 the City of Marysville bought the sewer infrastructure along the Route 33 corridor portion of the New California Sewer Sub-District, and Marysville is responsible for operation and maintenance of the collection system. The wastewater is treated at the Marysville WWTP. The County currently does own and operate one facility within this sewer sub-district (Crottinger Estates WWTP, 4PG00003) that serves a small number of homes in Arnold. When a City of Marysville sewer becomes available County facilities, such as Crottinger Estates, will be phased out of commission.

80-C4 The Village of Plain City is located mostly within Madison County, but its corporate limits do extend into Union County. Village and Madison County officials have worked cooperatively on wastewater facility planning and 208 Plan issues over the past couple of years. See page 73 for information on the status of 208 plan content for Madison County.

Specific Prescriptions for Wastewater Treatment

80-P1 The New California Sewer Sub-District encompasses all of the unincorporated areas of Jerome Township. The Union County Commissioners have responsibility for regional long-range planning, design and construction of the major infrastructure to accommodate wastewater collection and treatment needs for the New California Sewer Sub-District. Such service may be provided by Union County or through contracting for such services. A portion of Jerome Township is included within the Metro Columbus RFPA. Additional prescriptions are listed under Franklin County.

Van Wert County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Van Wert County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Williams County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Williams County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.

Comments

86-C1 In 1984 the County Commissioners were issued Director's Findings and Orders to address wastewater planning needs in the unincorporated areas surrounding the Village of Montpelier (Bridgewater, Madison, Jefferson and Superior townships). A permit was issued in anticipated wastewater facility that has not been constructed.

Wyandot County

Management Agencies Responsible for Sewage Collection and Treatment (includes prescriptions for sewage treatment options)

The agency's review of water quality conditions and present wastewater facility needs indicates that large scale regional planning of sewer and treatment capacity is unnecessary at this time in northwest Ohio counties (see Chapter 2). The existing Management Agencies responsible for Publicly Owned Treatment Works in Wyandot County are listed below. The generic prescriptions regarding wastewater collection and treatment responsibilities reflect existing legal authorities and responsibilities under State laws and regulations (generic prescriptions found on pages 3 and 4). Local communities may elect to update facility planning information and request different specific prescriptions in subsequent State 208 Plan updates. Refer to the Introduction on page 1 for more information on the Table's content.
