Coordinated Specialty Care for First Episode Psychosis

Ohio Coordinated Specialty Care for First Episode Psychosis Treatment Programs

With the right treatment and support, people affected by a first episode of psychosis *can* and *do* get better. The opportunities for living a quality life are much greater if they receive Coordinated Specialty Care for First Episode Psychosis (CSC for FEP) as soon as possible after symptoms begin. CSC for FEP is appropriate for individuals between the ages of 15-35 with recent onset of psychotic symptoms.

CSC for FEP treatment is available at community mental health agencies in the Ohio counties highlighted below. If you live in a county without a CSC program, telehealth services are available from The Ohio State University EPICENTER program (614-685-5052, EPICENTER@osumc.edu)

- Please refer to the list that follows to find the phone number for the CSC for FEP program in the county where the individual resides. This list is updated periodically; the most current information may be found at mha.ohio.gov/GetHelpEarly.

- You may leave a voicemail on the confidential phone line. A CSC for FEP team member will follow up.
