Appendix 2: Progress Toward SHIP Indicators: State and Target Populations

The SHIP identified 37 measurable objectives to track over time to assess Ohio's progress on improving health and well-being. The SHIP targets were set by the SHA Steering Committee in 2017. Priority populations are groups of Ohioans with outcomes that were at least 10% worse at baseline than outcomes for Ohio overall.

Following the convention from the last SHA, the status is indicated by reviewing baseline data, the most recently available data, and the 2022 target. Indicators receive a checkmark if there has been at least a 10% change in the desired direction between the baseline year and the most recent year, while indicators for which there has been a change away from the desired direction by 10% or more of the baseline value are considered to be "still working". Priorities for which there was not 10% or more of the baseline value in either direction are noted as having "little or no change." In addition, if a target has been met or exceeded the target set for 2022, this is noted with a "gold ribbon".

2022 SHIP Target Met or Exceeded
Gold ribbons indicate that the indicator for this priority area has met or exceeded the target set for 2022.

Note that a priority area may meet the 2022 target without being categorized as improving if the 2022 target was less than a 10% change from the baseline value.

Improving
The indicator for this priority area moved in the desired direction by at least 10% of the baseline value.

Little to No Change
The magnitude of change for this indicator was not 10% or more of the baseline value in either direction.

Still Working
The indicator for this priority area moved away from the desired direction by 10% or more of the baseline value.

Desired Outcome: Improve Overall Health Status

Indicator: Adult Health Status

Desired Direction of Change: ↑

Table 1: Percent of Adults 18 and Over With Excellent, Very Good, or Good Health

Population	Baseline 2017	2018	2019	2020	2021	Status	2022 Target	2025 Target	2028 Target
Ohio	**81.1%**	**81.1%**	**80.5%**	**84.4%**	83%	⟷🏅	**82.0%**	**82.5%**	**83.0%**

2022 SHIP Target Met or Exceeded
Gold ribbons indicate that the indicator for this priority area has met or exceeded the target set for 2022.

Note that a priority area may meet the 2022 target without being categorized as improving if the 2022 target was less than a 10% change from the baseline value.

Improving
The indicator for this priority area moved in the desired direction by at least 10% of the baseline value.

Little to No Change
The magnitude of change for this indicator was not 10% or more of the baseline value in either direction.

Still Working
The indicator for this priority area moved away from the desired direction by 10% or more of the baseline value.

Desired Outcome: Reduce Premature Death

Indicator: Years of Potential Life Lost Before age 75

Desired Direction of Change: ↓

Table 2: Years of Potential Life Lost Before age 75, per 100,000 Population (age Adjusted)*

Population	Baseline 2018	2019	2020	2021	2022	Status	2022 Target	2025 Target	2028 Target

2022 SHIP Target Met or Exceeded
Gold ribbons indicate that the indicator for this priority area has met or exceeded the target set for 2022.

Note that a priority area may meet the 2022 target without being categorized as improving if the 2022 target was less than a 10% change from the baseline value.

Improving
The indicator for this priority area moved in the desired direction by at least 10% of the baseline value.

Little to No Change
The magnitude of change for this indicator was not 10% or more of the baseline value in either direction.

Still Working
The indicator for this priority area moved away from the desired direction by 10% or more of the baseline value.

Desired Outcome: Reduce Adverse Childhood Experiences

Indicator: Child Abuse and Neglect

Desired Direction of Change: ↓

Table 9: Rate of Screened in Child Abuse and Neglect Reports per 1,000 Children in Population

Population	Baseline 2018	2019	2020	2021	2022	2023	Status	2022 Target
Ohio	43.5	44.1	39.4	41.3	38.3	36.0	✓	N/A

Source: ODJFS

Notes: Data represents the count of Distinct Alleged Child Victim (ACV) and Child Subject of Report (CSR) for Child Abuse Neglect Reports Received in calendar year 2018. Ohio uses a Differential Response model which allows reports of potential child abuse or neglect to be processed through the Traditional Pathway or an Alternative Response Pathway. This data includes reports that are "screened-in" to either pathway, indicating a potential case of child abuse or neglect. Monitor only, no targets.

2022 SHIP Target Met or Exceeded
Gold ribbons indicate that the indicator for this priority area has met or exceeded the target set for 2022.
Note that a priority area may meet the 2022 target without being categorized as improving if the 2022 target was less than a 10% change from the baseline value.

✓ **Improving**
The indicator for this priority area moved in the desired direction by at least 10% of the baseline value.

↔ **Little to No Change**
The magnitude of change for this indicator was not 10% or more of the baseline value in either direction.

🔧 **Still Working**
The indicator for this priority area moved away from the desired direction by 10% or more of the baseline value.

Desired Outcome: Decrease Tobacco/Nicotine use

2022 SHIP Target Met or Exceeded
Gold ribbons indicate that the indicator for this priority area has met or exceeded the target set for 2022.

Note that a priority area may meet the 2022 target without being categorized as improving if the 2022 target was less than a 10% change from the baseline value.

Improving
The indicator for this priority area moved in the desired direction by at least 10% of the baseline value.

Little to No Change
The magnitude of change for this indicator was not 10% or more of the baseline value in either direction.

Still Working
The indicator for this priority area moved away from the desired direction by 10% or more of the baseline value.

Desired Outcome: Increase Local Access to Healthcare Services

Indicator: Primary Care Health Professional Shortage Areas

2022 SHIP Target Met or Exceeded
Gold ribbons indicate that the indicator for this priority area has met or exceeded the target set for 2022.

Note that a priority area may meet the 2022 target without being categorized as improving if the 2022 target was less than a 10% change from the baseline value.

Improving
The indicator for this priority area moved in the desired direction by at least 10% of the baseline value.

Little to No Change
The magnitude of change for this indicator was not 10% or more of the baseline value in either direction.

Still Working
The indicator for this priority area moved away from the desired direction by 10% or more of the baseline value.

Desired Outcome: Reduce Maternal Morbidity/
Indicator: Severe Maternal Morbidity
Desired Direction of Change: ↓

Table 37: Number of Delivery Hospitalizations with One or More of 20 Conditions (Maternal Morbidities) as Defined by the CDC, per 10,000 Delivery Hospitalizations

Population	Baseline 2016	2019	2020	2021	2022	Status	2025 Target
Ohio	**75.7**	**78.6**	**83.6**	**96.3**	95.0	🔧	n/a
Priority Populations							
Black, non-Hispanic	113.8	118.4	132.2	155.3	151.0	🔧	n/a
Hispanic	70.4	66.6	90.0	81.2	103.3	🔧	n/a
Youth, ages 15-19	70.3	76.2	86.5	79.7	81.9	🔧	n/a
Women, ages 35-39	93.1	113.0	107.5	119.2	139.0	🔧	n/a
Women, ages 40-55	176.6	181.0	215.4	230.8	201.9	🔧	n/a
Women with Medicaid coverage and other public assistance	88.1	95.7	99.6	108.9	113.8	🔧	n/a
Residents of Appalachian counties*	68.4	75.9	77.8	81.2	78.8	🔧	n/a

Source: Ohio Hospital Association

Severe maternal morbidity (SMM) is an aggregate metric that is comprised of 20 outcome indicators during delivery hospitalizations that result in significant short- or long-term consequences to a woman's health. Ohio has joined the national Alliance for Innovation on Maternal Health (AIM) to promote best practices and reduce our statewide SMM rate.

Studies have shown that SMM is not fully preventable and can vary by indicator. Nonetheless, hospitals are collaborating and sharing best practices to limit variation and reliably improve the quality-of-care women receive in hopes of mitigating the maternal risks posed when SMM is encountered. We are still witness to the impact of the COVID-19 pandemic and the lasting negative impact upon Ohio's SMM rate. While not an indicator in the SMM metric at this time, we do know that those with COVID-19 at delivery are at an increased risk for SMM.

*Note: *County typology from the Ohio Medicaid Assessment Survey*

Due to the change in indicators, new targets will be developed in the upcoming SHIP.

2022 SHIP Target Met or Exceeded
Gold ribbons indicate that the indicator for this priority area has met or exceeded the target set for 2022.
Note that a priority area may meet the 2022 target without being categorized as improving if the 2022 target was less than a 10% change from the baseline value.

Improving
The indicator for this priority area moved in the desired direction by at least 10% of the baseline value.

Little to No Change
The magnitude of change for this indicator was not 10% or more of the baseline value in either direction.

Still Working
The indicator for this priority area moved away from the desired direction by 10% or more of the baseline value.
