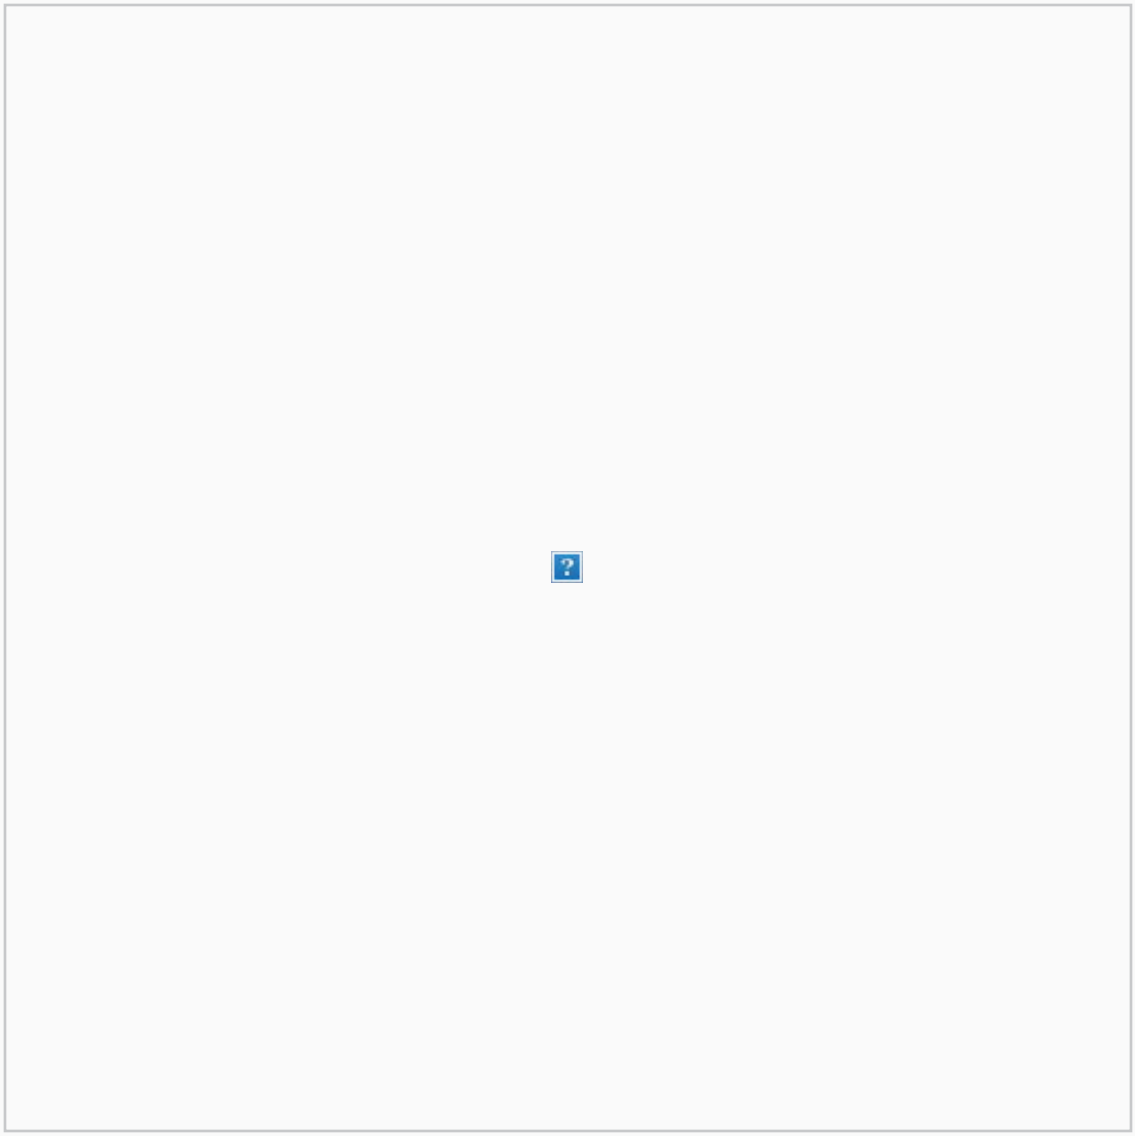
Subject:	Article from Climate and Capital
Date:	Monday, July 17, 2023 9:40:44 AM

Greetings OGLMC, I wanted to share with you this article from Climate and Capital. We do not need to frack our parks and wildlife areas to make a profit. In fact, NOT fracking our parks results in a greater return for the Ohio economy. Areas that preserve their natural resources prosper. Areas that do not fail. The people of Ohio will never see the money from our public land fracked. This week of all weeks, understand that fracking is deadly. -- Cathy Cowan Becker

Fossil fuel companies have wasted years and billions ducking the transition to clean energy



There was only one story this week…extreme heat. Tuesday was the hottest day in the world on record, breaking the record of the day before.

The reality of our climate change crisis cannot be ignored, except by the willfully blind. Land temperatures were up to 60C (140F) in Spain, and atmospheric temperatures were 48C (118F) across Sicily, Sardinia and parts of Israel. The U.S. and Canada suffered heat wave temperatures of up to **130F** (54C). Heat records are being broken around the world including France, Switzerland, Germany and Italy with weeks at or above 40C (104F).

Everything climate scientists have been telling us to expect, and more

At least 170 people died in India's state of Utter Pradesh following a heatwave in June. Morocco's meteorological service is issuing extreme heat red alerts for southern parts of the country. Regions of China, including Beijing, are experiencing soaring temperatures, with one Chinese power company hitting a single-day power generation high as the country tries to combat the heat. Parts of Japan hit temperatures of 39C (102F). It's everything climate scientists have been telling us to expect, and more.

The insanity of fossil fuel companies

Meanwhile, in a largely unnoticed story this week, the organization **F Minus** launched a new **database** exposing the duplicity of 1,500 fossil fuel lobbyists who have been working for both climate focused NGOs, university groups, technology companies and local governments and the fossil fuel companies working to stop them.

A story about the exposé by the Guardian's Oliver Milman, "'Double agents': fossil-fuel lobbyists work for U.S. groups trying to fight climate crisis," is an important look into the insanity of what we are up against – a fossil fuel sector that will, quite literally, see the world burn as long as it continues to profit.

As Milman reports, "Lobbyists for oil, gas and coal interests are also employed by a vast sweep of institutions – the city governments of Los Angeles, Chicago and Philadelphia; tech giants such as Apple and Google; more than 150 universities; some of the country's leading environmental groups – and even ski

resorts seeing their snow melted by global heating."

Utterly refusing to transition

Consider the unfathomable amount of money, time and effort that the fossil fuel industry has put into delaying tactics like this to block climate action. That money could have been put toward solving our existential climate challenge by investing in their transition to renewable energy, battery storage, efficiency and no carbon innovation.

"They [fossil fuel companies] have produced no solutions that are scalable or remotely feasible. And they've actively fought against the solutions that others are trying to bring," former Vice President Al Gore told a TedX audience in Detroit last week.

This is not just a failure to adapt, but a willful decision by the likes of Shell, ExxonMobile, Saudi Arabian Oil Co., Rio Tinto, Glencore, TotalEnergies, Equior and Conterra Energy to utterly refuse to transition. And they do so as climate scientists, the UN, NASA, the International Energy Agency tell us to reduce emissions or create an unlivable planet.

Perfectly timed then is former UN climate negotiator and author **Christiana Figueres**' **op-ed** in Al Jazeera, "I thought fossil fuel firms could change. I was wrong." She writes that the sector's "unprecedented profits over the past year" now show a complete unwillingness to adapt." The fossil fuel industry," she says "will have powered human development in the 20th century and then destroyed it in the 21st century." Strong words.

Meanwhile, business-as-usual for fossil fuels

Figueres says that what coal, oil and gas companies should have been doing with recent unprecedented profits in the trillions is transforming. That's not happening. In fact a skim of this week's news shows a **new gas pipeline** approved for the Michigan Gas Utilities Corporation, $5.9 billion secured to expand an LNG **export shipping terminal** in Texas, approval for **12 new gas wells** in Colorado, the state of Western Australia moving a **step closer** to extending the life of Woodside's gas processing facility for 50 years and India's Vedanta resource company announcing the investment of billions

into the oil and gas sector.

Our **story** this week about Africa's oil vs renewables dilemma by **Barclay Palmer**, with the help of Nigerian writer **Olaniyan Joseph Ayomide** shows the sheer scale of our climate challenge. In countries where economic security depends on selling more coal, oil and gas for survival, how do we tell them to turn off the emissions-emitting profits and pivot to clean energy, especially when the global west isn't willing to go there?

Jaw-dropping progress on renewable energy

What will it take to move the world in time as temperatures soar? Biden's Inflation Reduction Act (IRA) is a great start. Analyst and climate finance expert Tim Buckley, founder of **Clean Energy Finance**, told me this week that he is encouraged – excited even – about reports that the IRA has driven **$500 billion in private sector investments** on top of $400 billion in federal funding and $12 billion in loans into manufacturing and clean energy. Forbes **called** the IRA "the most important climate action in U.S. history."

Meanwhile, **China** is delivering on its wind and solar targets five years ahead of schedule. Solar panel installations alone are growing at a pace that is likely to increase global capacity by 85% by 2025. This puts China's renewable energy capacity far beyond that of the rest of the world combined.

As Dorothy Mei, a project manager at **Global Energy Monitor**, says, "[China's] new data provides unrivaled granularity about [the country's] jaw-dropping surge in solar and wind capacity."

If you need more to cling to while you cope with the heat, this from a recent **Rocky Mountain Institute** **report** should help: "The energy transition is a shift from a concentrated, expensive, polluting, commodity-based system with no learning curve, to an efficient, manufactured, technology-driven system that offers continuously falling costs and is available everywhere. It is moving from heavy, fiery molecules to light, obedient electrons; from hunting fossil fuels to farming the sun."

What's not to love, unless you're a dangerously obstinate fossil fuel company?

D-day for ending fossil fuels

The global renewable energy race is on and with words like “jaw-dropping” and “most important in history” applied to the transition underway, there may be some hope for us yet. But only if we really hear what leaders like Figueres are saying… It must be D-day for ending fossil fuels. That means no new coal, oil and gas project approvals, curtailing investment in polluters, and no more excuses at COP and leadership at all levels.

There is nothing like a 130F degree week to hammer the message home to all of us: It’s now or never for climate change action. But we will have to stop the fossil fuel industry to succeed.

Subject: Article from Ohio River Valley Institute
Date: Thursday, July 20, 2023 11:35:46 AM

Dear members of the Oil and Gas Land Management Commission:

I hope you will take a look at this article by the Ohio River Valley Institute. They have some public opinion polls showing that Ohioans are ambivalent at best about fracking.

Keep in mind these are previous polls that do not ask specifically about fracking in our state parks, wildlife areas, and other public lands. I think a vast majority of Ohioans oppose that, even people who support fracking on private land. Public land is supposed to be protected.

I hope you will consider this seriously. Most Ohioans don't know this is happening, and won't know until frack pads start surrounding their favorite state parks and hiking and camping areas. By then it will be too late for both them and the damage to our treasured public lands.

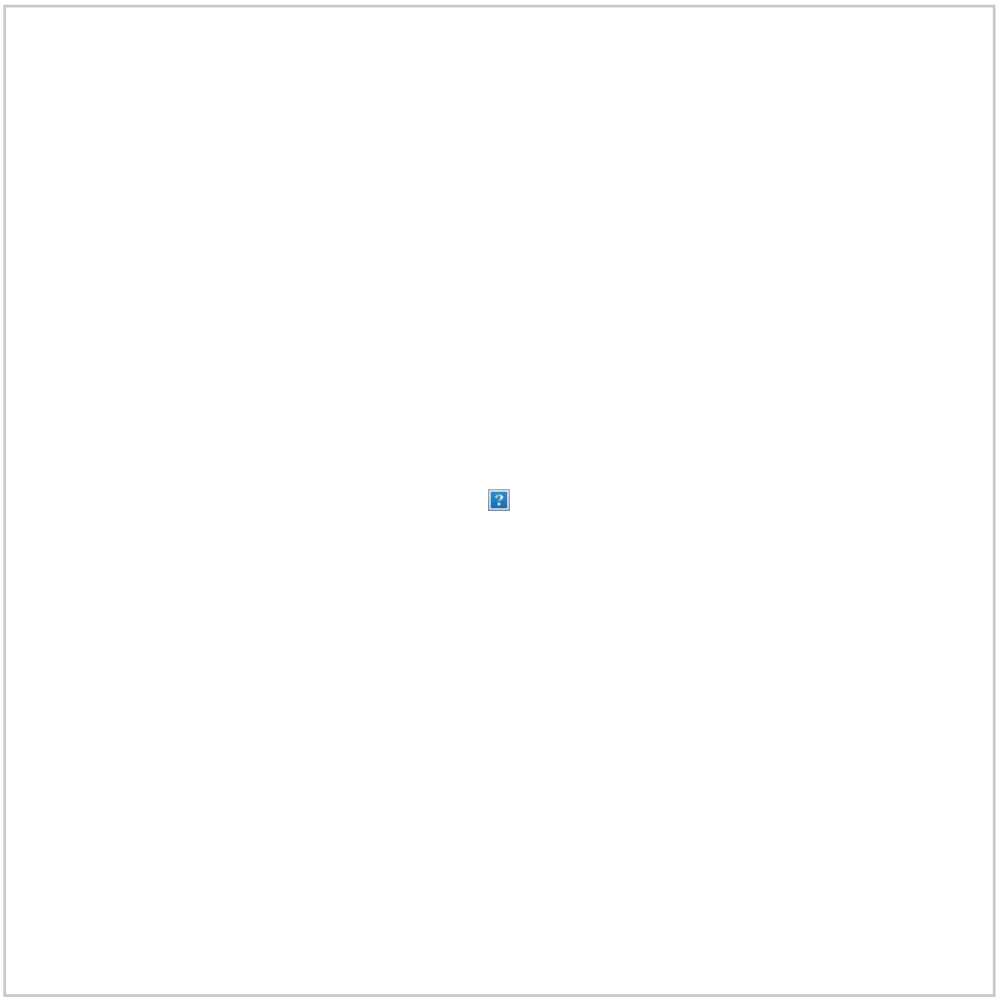
Ohioans are on the fence about fracking. Why is the state pushing for more drilling on public lands?



Salt Fork State Park. Photo: Bret Arnett, Flickr.

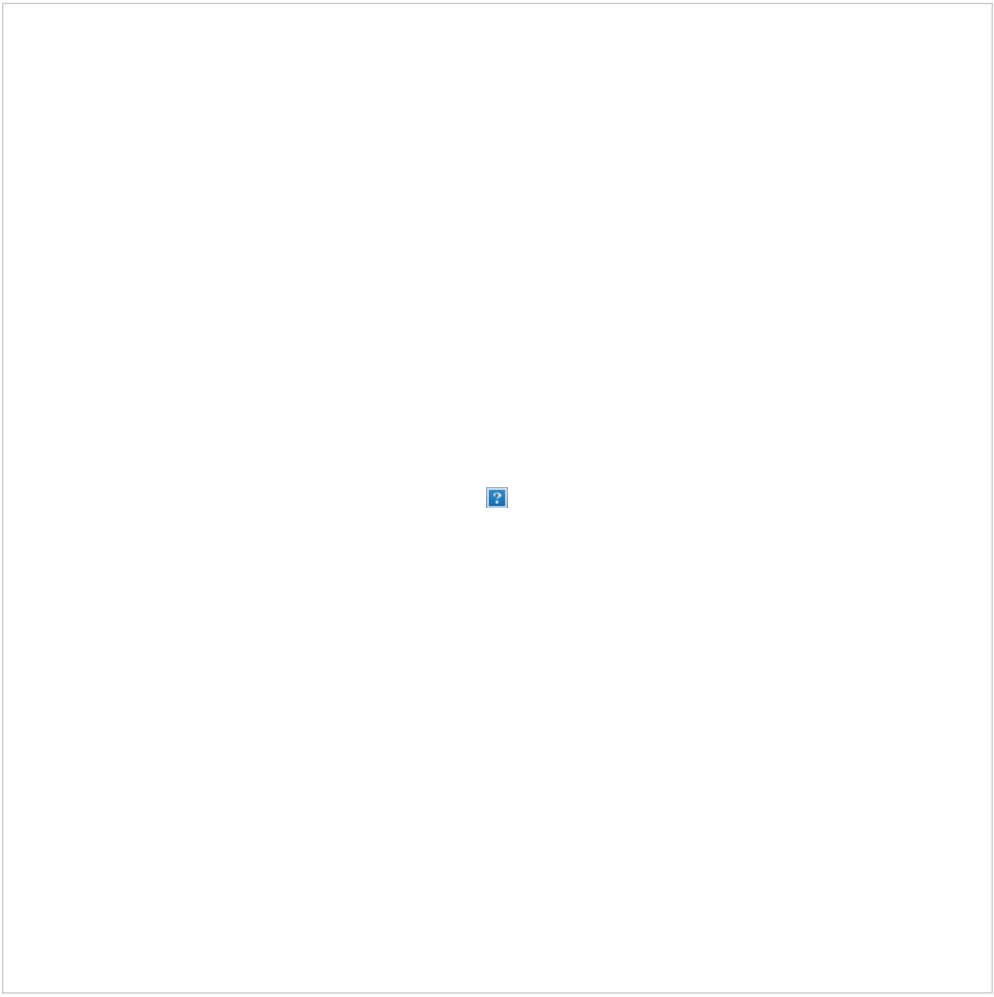
by Ben Hunkler

Jul 20, 2023 | Blog Posts

Ohio's state parks, forests, and wildlife areas are being queued for fracking development thanks to an opaque new law infamously dubbed the "poultry bill." House Bill 507 started as an agricultural bill before it was amended behind closed doors—under the influence of the oil and gas industry—to *require* oil and gas leasing on state-owned land.

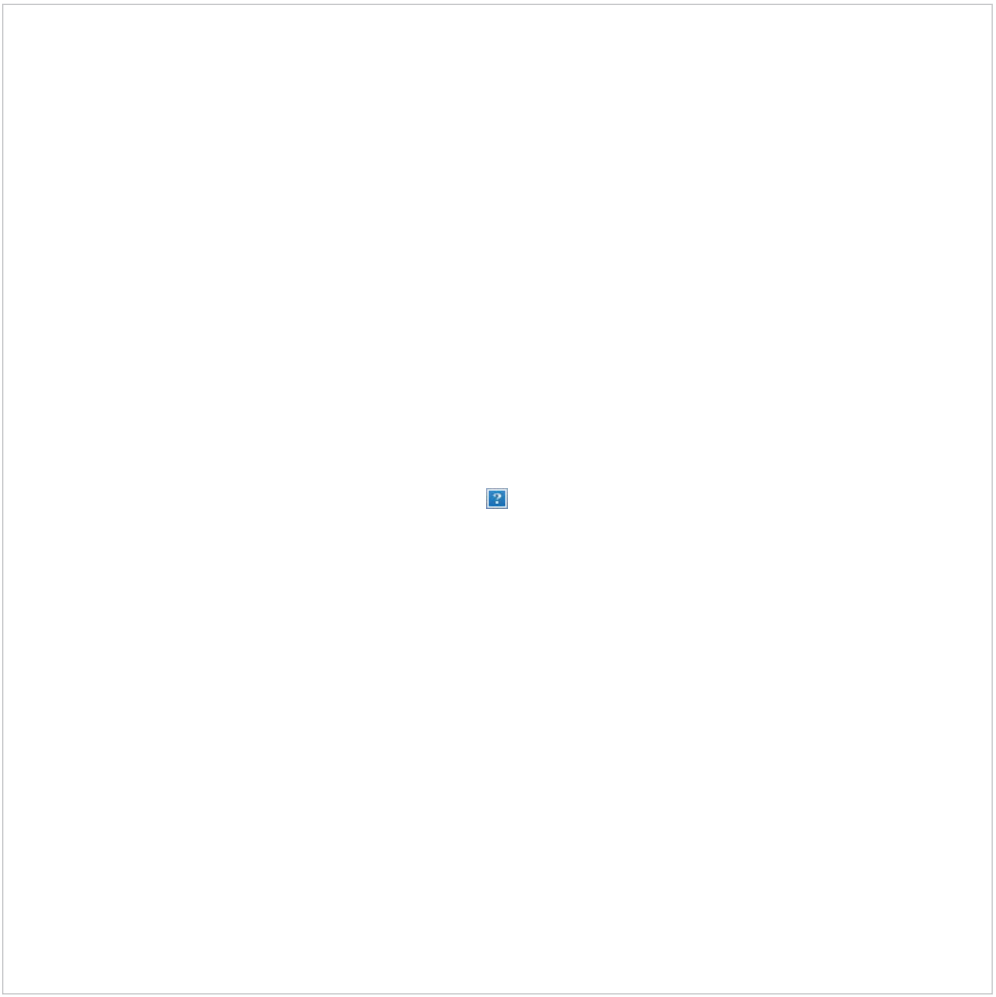
Concerned residents and community groups have raised alarms about the law's public health and environmental consequences, its blatant handouts to oil and gas corporations and wealthy households, and its lack of public transparency. And recent polling data suggests these concerns are far from uncommon—though elected officials and the oil and gas industry may be bullish on new gas leases, the public itself is skeptical.

Most Ohioans are either opposed to or unsure about fracking, according to a pair of public opinion surveys. Baldwin Wallace University's 2022 Ohio Pulse Poll and a 2019 poll from George Mason University and Climate Nexus show majorities (53.7% and 64%, respectively) of Ohio voters say they are either strongly opposed, somewhat opposed, or unsure about hydraulic fracturing as a means of increasing the production of natural gas in Ohio. And, when asked about their best guess on *other* voters' perspectives, George Mason University/Climate Nexus respondents said more Ohioans generally *oppose* (38%) than support (33%) fracking in the state.



There's clear dissonance between the state's political agenda and the concerns of its residents.

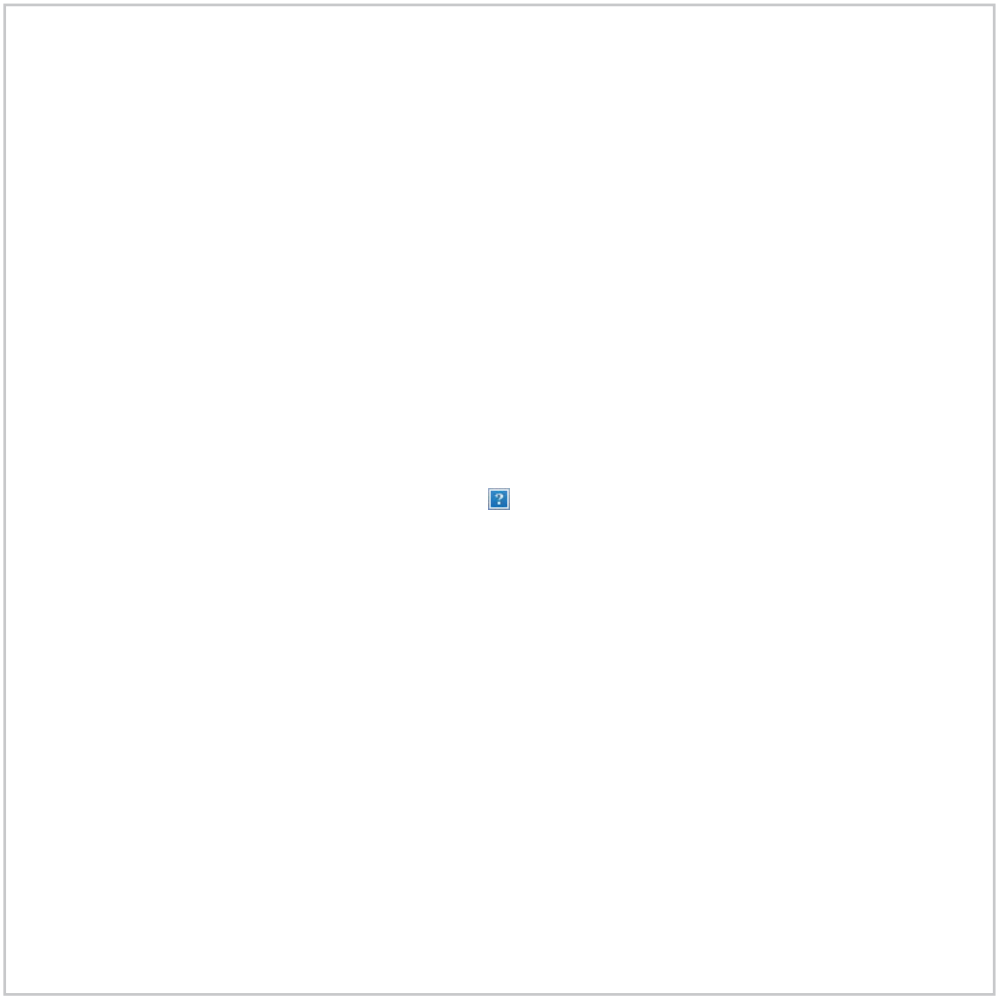
While proponents of state park leasing point to prospective revenue, Ohioans share broad and resolute concern about the documented threats of fracking, like air and water pollution and rampant carbon emissions that worsen climate change. Overwhelming majorities of Ohio voters say air pollution (66%) and the pollution of the state's rivers, lakes, and streams (77%) are "very serious" or "somewhat serious" problems. Nearly two-thirds (64%) say they are worried about climate change and its effects.



As advocates have pointed out, these environmental and health risks take on particular resonance when the state's public lands—parks, forests, and wildlife areas shared and enjoyed by millions—are in the crosshairs. These areas provide a refuge for recreation, sport, leisure, and community, and an economically important one, at that. Ohio's outdoor recreation sector added a value of over $8.1 billion to the state income and employed nearly 133,000 workers in 2017, according to an Ohio State University study. In large part, this sector relies on clean air, fresh water, and the sanctity of the natural environment—precious, fragile commodities that can't be guaranteed once fracking is underfoot.

Still, politicians and industry boosters claim the economic benefits of leasing state lands will outweigh the costs. History suggests otherwise. In Ohio, nearly a decade and a half of fracking has failed to generate local economic growth in the state's largest natural gas counties, data show. From 2008 to 2019, the seven counties that account for about 95% of the state's natural gas output did generate enormous GDP growth—88.7%, more than quadruple the GDP

change of the state and the nation. But that booming output failed to translate into prosperity for Ohio's fracking counties—in fact, it corresponded with a hollowing out of local economies. In the same period, those counties lost 8.4% of their jobs and 5.4% of their populations, a decline of 13,795 residents. Personal income growth (8.8%) lagged far behind state (13.9%) and national (21.9%) averages. For Ohioans, the story of the fracking boom has been one of depopulation and economic decline.



Precedent suggests fracking state lands won't create job growth, it won't boost incomes, and it almost certainly won't grow the nearby population. Will it generate revenue? That's another argument legislators and industry representatives have leaned on to justify new leasing. But, as Guillermo Bervejillo of Policy Matters Ohio pointed out to the Ohio Capital Journal, Ohio's severance tax rate is one of the lowest in the nation, meaning new drilling won't yield much for the state's coffers:

> *Ohio's severance taxes are pitiful, and they have meant a severe missed opportunity for Appalachia and for Ohio as a whole. Ohio drilling operators pay a dime per barrel of crude oil and half a nickel per thousand cubic feet of natural gas. This is one of the lowest severance taxes in the country and it means that years of gas and oil production have enriched corporations and drillers but not the communities that host them nor the state that*

supports them.

Low severance taxes have cost Ohio enormous amounts of revenue, Berjillo's research suggests. Since 2010, more than $40 billion worth of natural gas has been fracked from Ohio's shale deposits. Berjillo explains that, from 2016 to 2021, Ohio could have garnered more than $1.5 billion in revenue with a flat 5% severance tax rate on crude oil and natural gas extraction, a figure proposed by Policy Matters Ohio over a decade ago. That's $1.24 billion more than the state actually collected in that period, according to Ohio Department of Natural Resources data.

If the question is how to generate genuine economic growth and meaningful state revenue, more fracking is not the answer. Research shows that investing in clean energy and energy efficiency upgrades is much more effective than fossil fuel expansion at creating lasting job growth and local economic prosperity, even in areas—like Ohio's natural gas region—that have endured long-term economic decline.

And in Ohio, support for these types of investments is abundant. When asked about the most important priority for addressing Ohio's energy needs, nearly two-thirds (63%) pointed to developing more renewable energy resources, such as wind and solar, according to the George Mason University/Climate Nexus poll. Voters agree that transitioning to renewable energy would have a positive impact on public health (69%), the environment (76%), the economy (60%), and electricity costs (55%). And a majority (53%) of Ohioans say increasing domestic production of renewable energy is more likely to produce a greater number of good jobs in the state than increasing domestic production of fossil fuels, like natural gas.

The voice of the people is clear. Ohioans are skeptical of the fracking industry and the need for more drilling, even as industry-led decisionmakers push to expand leasing to beloved—and economically fruitful—state parks, forests, and wildlife areas. Time will tell if Ohio's leadership decides to heed public will.

I wish to express my opposition to fracking in any of Ohio ‘s public held lands and state parks. Our climate is suffering from the effects of fracking with methane gases, traffic accidents, millions of gallons of fresh water used, creating millions of gallons of toxic water. Ohio’s politicians ignore the findings of scientific studies and ignore the human illnesses created by this process . These areas are set aside for the public to enjoy fresh air, recreation, to learn about wildlife and the forests. They belong to us, not just a select few to pad their pockets with undeserved profits.

Dear Commission,

I am writing to let you know that we are very opposed to opening up Ohio State's Parks to fracking.

We oppose fracking for the following reasons:

- Public health impacts: It is well established that fracking poses considerable risks to public health
- Damage to quality outdoor recreation: We use the State Park's for family vacations, daily hikes, using the lakes and streams for kayaking, fishing and sailing. We cannot afford to pollute these beautiful properties for greed.
- Fracking is also a cause of toxic air pollution, light pollution, noise pollution. Climate change is real. It is more apparent then ever given this summer severe heat wave, severity of storms, and the melting of the ice caps.

WE MUST PROTECT OUR PUBLIC LANDS. OHIO STATE PARKS ARE TOO VITAL TO OUR ECONOMY JUST AS THEY ARE.

Thank you,

James W. Pry II and Janet P. Pry

Dear OGLMC,

I usually stay at our state park twice a year. I hike them more often. It is unimaginable to think that the State of Ohio is willing to sacrifice one of its greatest assets for short term gains. Having seen fracking first hand in Ohio and WV, it will impair the appearance of the parks, not to mention the environmental and safety of us all.

This process should not even be a reality. We can do better.

Gratitude,

mary ann

Subject:	Please do not permit fracking in our state parks and natural areas!
Date:	Tuesday, July 18, 2023 1:13:40 PM

To the Ohio Oil and Gas Land Management Commission,

I have lived in Ohio all my life, and am deeply attached to our beautiful parks and preserves.

I am very upset to contemplate the prospect of fracking in these natural areas. It goes totally against the purpose of these lands, which are supported by our tax dollars, and have been set aside for recreation and habitat, not corporate profit. Fracking in these public lands will destroy these areas!

I am totally opposed to this idea. Fracking will require removal of trees and add methane (a greenhouse gas) to the atmosphere when we should be reducing carbon pollution, not adding to it.

Fracking requires millions of gallons of fresh water, and will remove water from the natural lands and fill it will toxins and radioactivity so that it can never be reused. These huge amounts of water will no longer be available for human, animal, or plant life. It's also associated with many other hazards such as earthquakes, increased rates of breast cancer nearby, noise, and dust and pollution from heavy road traffic.

So much of Ohio's natural areas have been lost to development. Ohio wants to increase tourism...who wants to visit a park marred by destructive fracking?

Sincerely,

Ellie Nowels

RE: Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

Ohio's state parks are a treasure. They provide enjoyment, refreshment, solace, fascination, relaxation, and beauty for citizens who commune with nature, picnic with friends, celebrate with family members, or just get away from it all for a respite of precious peace and quiet.

I have very fond memories of my visits to Salt Fork, in the lodge, and in a recreational vehicle. I enjoyed the hikes, the birds, the lake, the rain on the roof, the much-needed time to spend with my husband in a relaxing and refreshing setting.

The primary purpose of all public parks, state, federal, or municipal is to give space for nature to have a chance to breathe while visitors can enjoy the sights and sounds of our natural world. To meet that purpose, the parks must remain natural, quiet, clean, and healthy. Industrial waste, noise, hubbub, and equipment spoil that peace. Just one odor spoils the scents of nature, or one noisy machine shatters the peace, one view of fracking operations ruins the experience the parks were created for.

Furthermore, our experience has shown, over and over again, that accidents do occur, and some of those accidents can have devastating consequences for natural areas and the people who visit them.

Please deny the leases sought to extract oil and gas from our Salt Fork State Park and Wildlife Area: Nomination Nos. 23-DNR-0005, 0006, and 0007.

Date: Thursday, July 13, 2023 9:55:51 PM

Dear Ohio Oil and Gas Land Management Commission,

As an avid hiker, boater, camper, and outdoor enthusiast of all Ohio parks, whether it be local, county, state, or national, I find it deeply disturbing that we, as a state, are at a point of potentially allowing oil and gas corporations to frack from our public lands in Ohio. Having had a fracking well less than 600 feet from my house on a neighboring property, I can tell you firsthand the negative ramifications that such fracking operations can have on a community and the environment. As you are aware, these oil and gas companies (many based states away) create very lucrative proposals, giving the decision maker(s) all of the positive information and statistics that they want to hear. Unfortunately, as I can bear witness to, these so called "promises" quickly fall short. Suddenly guarantees of being "good neighbors" and "caring about the community" turn into an endless parade of life-altering impacts. Since fracking is a 24/7/365 operation, the negative impacts that I am about to list are constant - never paused or stopped.

While I will not note all of the ramifications that drilling operations can have on a community, I will focus on the more notable impacts that I have observed.

- Flaring – the flame associated with this procedure not only emits light and noise both day and night, but also carries with it a pungent odor, smelling like both chemicals and burning materials – definitely something that would be noticed by park goers.

- Constant noise pollution – practically every stage of drilling a well involves heavy industrial machinery which not only emits pollution, but also noise. From drilling to stimulation to production, the volume of noise is constant and occurs at all hours. Even if well pads are located quite a distance from the park(s), the volume of noise will definitely disrupt not only park visitors, but also the ecosystem and wildlife.

- Increased lighting – since fracking wells are a 24/7 operation, portable and permanent lights are brought into every well site. These add much increased light pollution to areas that otherwise would have dark skies and star gazing opportunities.

- Truck traffic – while oil and gas organizations setup approved routes for traffic, signs indicating "No Well Traffic" are simply ignored by semi-truck operators on a frequent basis. This leads to large and overweight trucks traversing roadways not designed for the size and weight of such loads which contributes to a wide array of safety and infrastructure problems. Even with measures taken, well traffic could still find itself traversing ODNR roads. I have repeatedly spoken with the County Engineer's Office and Sheriff who have advised that despite issuing citations on a frequent basis, oil well traffic continually disregards rules, permit requirements, and regulations that are in place.

- Disregard for neighbors – As previously mentioned, despite "promises" and "guarantees," these companies show no regard for neighbors or the communities that they operate in. Contacting these organizations about concerns or issues will land you to a 1-800 number with no resolution or action taken. Additionally, if these companies do not care about the state of Ohio now, they definitely will not care postproduction of a well, thereby leaving tanks, compressors, well heads (Christmas trees), and many more structures rusting away on the hillsides of Ohio.

Again, as a firsthand witness to a fracking well operation on a neighboring property, I want to reiterate the nightmare that this has created for our family, neighbors, and community. Until having experienced such activities, one does not have a true understanding of the negative impacts of these wells. No amount of money reverses permanent damage once it is done. Even though the state stands to receive large sums of money, as the saying goes, you do not get something for nothing. I am asking you to please reject fracking in and under Ohio State Parks, so that we are not the generation that focuses on financial gain at the tragic expense of destroying the Ohio State Parks for future generations.

Respectfully,

Stephen Kamph

Dear Oil and Gas Land Management Commission,

I am writing to you in opposition of all petitions to extract fossil fuels from our public lands and state parks. The cost benefit analysis shows that the risk is too high and the benefits are too low, and they jeopardize a large revenue stream that already exists in our tourism economy. I have attached my public comment for the record. I hope you read it among all the others that are being sent to you. Today is the first deadline for the first week of nominations. You will have a lot of reading to do from here on out. I hope you start rejecting these nominations.

Sincerely,

Katie O'Neill

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Jaime Hatton

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Laura Wells

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Carol Huddleston

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Reena Neff

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
John Roberts

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Nicholas Markowski

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
ida ferguson

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Andrea Smith

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
denise johnson

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Wendy Kiaski

The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Karen Parker

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Evette Mcmiller

The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Ned Braun

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Michael Beckstedt

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Marie Salo

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Larry shepherd

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Joe Smith

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Neva Miller

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Rosetta Bowersock

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Jeffery Hodge

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Sandra-L Hicks

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Gerald stevens

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Angela Stone

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio's natural resources.

For over a decade, Ohio's neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state's conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Laurie Cunningham

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Motis Wright

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Duane-l Lilly

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
patricia townsend

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Julie Hicks

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Alonzo Flowers

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Season Goodright

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Theodore Thompson

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Jill Hall

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Deja Foster

The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
merinda branham

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Amy Calhoun

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state's conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Mike Swayne

Secure Ohio's Energy Future

Dear Commission Clerk,

I am writing to urge you to support state land leasing and responsibly develop Ohio’s natural resources.

For over a decade, Ohio’s neighboring states have responsibly leased their land for energy development. The proceeds from their leases have allowed for hundreds of millions of dollars to be invested in conservation efforts, deferred maintenance, and improving recreation areas for state residents and tourists.

It is encouraging that the Department of Natural Resources is finally considering the same opportunities to be made available in our state. This not only allows more investment in our state parks, but it provides opportunities for economic development and the creation of family-sustaining jobs.

As you review the nominations for leasing state lands, like Salt Fork, I encourage you to remember the benefits responsibly leasing state land will provide. From increasing our state’s conservation efforts to the ability to maintain and enhance the facilities at our state parks, this generational opportunity is one which we need.

Sincerely,
Marie Marcus

Subject: state parks
Date: Wednesday, July 5, 2023 9:48:01 AM

Fracking within or near state parks concerns me. My sister lives in Tuscarawas county and has had her well water affected by a nearby conventional oil well. Fracking has the potential to do far more damage. People with expertise in hazmat containment and environmental science have expressed their concerns, backed by facts, that this fracking is not innocuous. The state parks belong to all of us and should be preserved as the precious areas that they are for all citizens of our great state and visitors alike. They should not be exploited for profit with the potential of destroying that resource. Green spaces are resources to be protected, not exploited.
Thank you,
Barbara Truitt

Date:	Saturday, June 17, 2023 4:07:17 PM

To the Ohio Oil and Gas Land Management Commission,

Disappointed and concerned. That's me, when I learned you are allowing oil and gas corporations to frack and extract from our public state parks, forests, and wildlife areas. These spaces are very important to my family.
Our state parks are important sanctuaries. We pay to protect them so they can be used for our benefit, not a polluting and extractive industry.

What I am particularly worried about is the recklessness and abandon that the oil and gas corporations have demonstrated with their excavating practices - while reaping massive profits. These industries need to be required to comply by much stronger preventative and mitigative regulations.

I know that we need to continually seek alternative fuel sources. We just need to do that in the right way, in the right places.

Contrary to the claims of the oil and gas industry, fracking will irrevocably harm our state parks and other public lands. Ohioans use our state parks for hiking, camping, birdwatching, fishing, and hunting. There is no way that injecting millions of gallons of toxic chemicals into the ground and flaring methane into the sky near or in our state parks and public lands will not harm them.

Fracking requires millions of gallons of fresh water that is laced with toxic chemicals, including PFAS forever chemicals. The waste water that comes back up is radioactive and can never be used again. Where will that water come from? The water in our parks and public lands should be protected.

Fracking requires large pads of noisy and polluting machinery. It requires pipelines, which in turn requires removal of trees. This should not be allowed in or near our public lands.

Fracking rigs regularly flare methane into the sky, a greenhouse gas 86 times more potent than carbon dioxide. At a time when the world’s climate scientists say we have less than a decade to cut carbon pollution in half, the last thing we should do is put more methane into the atmosphere.

I adamantly oppose fracking in Ohio state parks and public lands. Please just say NO to fracking.

Thank you for your close attention to this important matter.

Scott Mabey

Haven't you noticed the smoke from the Canadian forest fires? Instead of drilling for more oil, gas, and digging for more coal to create more pollution use the power of the sun and wind. Is it worth the chance for the state to make revenue from unneeded gas? The planet is going down a bad path. Summers are getting hotter and have you paid any attention how in the winter snowfall is much less than in the past? Forget the natural gas go for solar and wind to create power!
