Public Comments on Nominations #: 23-DNR-0001,0002, 0003, 0004, 0005, 0006, 0007, 0008

Dear Commissioners,

I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007, Wolf Run State Park, nomination #23-DNR-0008, Valley Run Wildlife Area, Nomination #: 23-DNR-0001, 0002, 0003, and Zepernick Wildlife Area, Nomination # 23-DNR-0004

Please carefully consider all the consequences, including the negative impacts to the environment, public health, and the enjoyment and use of our public lands, in your deliberations on leasing this treasured park. Leasing our public lands to the oil and gas industry threatens all Ohioans' ability to peacefully experience the natural gifts provided in our state parks. The disturbance to the surface on the perimeter of the park will be heard and felt. There is no way for fracking to not impact the enjoyment of any public lands being nominated by the oil and gas industry.

Our state parks are a refuge for wildlife & recreation for people to hike, camp, fish, hunt, boat, birdwatch, skywatch and gather with their loved ones. Therefore, please DENY the nominations submitted for these beloved state parks and wildlife areas.

Thank you for your sincere consideration.

Signed,

Karen Hummel

Signed,

PROTECT OUR STATE PARKS!

Please take action to protect Ohio's public lands from the oil & gas industry, which has been pursuing fracking in our state parks for over a decade. Early June marked the start of a leasing "nomination" process for Ohio's state parks and public lands before the Oil & Gas Land Management Commission.

The oil and gas industry has nominated Salt Fork State Park, Ohio's largest state park, for fracking. The industry plans to encircle Salt Fork with at least 8 proposed fracking well pads. Please allow your voice of opposition to be heard by submitting a public comment on the lease nomination for our parks. Wolf Run State Park in Noble County, and two wildlife areas, Valley Run in Carroll County and Zepernick in Columbiana County, which have also been nominated and are under threat.

Due to the invasiveness of shale gas development, southeastern Ohio has been described by many as living in an occupied territory. Those living in once peaceful hills are not only dealing with negative health impacts from the oil and gas industry. They are also experiencing unsafe roadways due to heavy industry traffic, air and noise pollution, water contamination, pipeline explosions, and well pad fires, including one that contaminated a stream that feeds our mighty Ohio River, resulting in the death of 70,000 fish. Water supplies are being depleted by industry withdrawals from reservoirs, ponds and streams. In 2018, a fracking well blowout in Belmont County caused one of the largest methane leaks in US history, forcing area residents to evacuate from their homes. And in another horrifying instance, a brine truck accident contaminated Barnesville's reservoir with radioactive materials. At the time of the brine truck spill, the Ohio Environmental Protection Agency water test results showed a spike in radium, a naturally occurring radioactive element that is brought to the surface during the fracking process. We must protect our public lands from this same fate.

TAKE ACTION:

Make your voice heard by submitting a public comment on the lease nomination for Ohio's state parks and wildlife areas. Submit the attached comment by mail or send an email to the Oil & Gas Land Management Commission by July 20th.

Public Comments on Nominations #: 23-DNR-0001, 0002, 0003, 0004, 0005, 0006, 0007, 0008

Dear Commissioners,

I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007, Wolf Run State Park nomination #23-DNR-0008, Valley Run Wildlife Area, Nomination #: 23-DNR-0001, 0002, 0003, and Zepernick Wildlife Area, Nomination # 23-DNR-0004.

Please carefully consider all the consequences, including the negative impacts to the environment, public health, and the enjoyment and use of our public lands, in your deliberations on leasing this treasured park. Leasing our public lands to the oil and gas industry threatens all Ohioans' ability to peacefully experience the natural gifts provided in our state parks. The disturbance to the surface on the perimeter of the park will be heard and felt. There is no way for fracking to not impact the enjoyment of any public lands being nominated by the oil and gas industry.

Our state parks are a refuge for wildlife and recreation for people to hike, camp, fish, hunt, boat, birdwatch, skywatch and to gather with their loved ones. Therefore, please DENY the nominations submitted for this beloved state park.

Thank you for your sincere consideration.

Signed, Anna M. Stevenson

PROTECT OUR STATE PARKS!

Please take action to protect Ohio's public lands from the oil & gas industry, which has been pursuing fracking in our state parks for over a decade. Early June marked the start of a leasing "nomination" process for Ohio's state parks and public lands before the Oil & Gas Land Management Commission.

The oil and gas industry has nominated Salt Fork State Park, Ohio's largest state park, for fracking. The industry plans to encircle Salt Fork with at least 8 proposed fracking well pads. Please allow your voice of opposition to be heard by submitting a public comment on the lease nomination for our parks. Wolf Run State Park in Noble County, and two wildlife areas, Valley Run in Carroll County and Zepernick in Columbiana County, which have also been nominated and are under threat.

Due to the invasiveness of shale gas development, southeastern Ohio has been described by many as living in an occupied territory. Those living in once peaceful hills are not only dealing with negative health impacts from the oil and gas industry. They are also experiencing unsafe roadways due to heavy industry traffic, air and noise pollution, water contamination, pipeline explosions, and well pad fires, including one that contaminated a stream that feeds our mighty Ohio River, resulting in the death of 70,000 fish. Water supplies are being depleted by industry withdrawals from reservoirs, ponds, and streams. In 2018, a fracking well blowout in Belmont County caused one of the largest methane leaks in US history, forcing area residents to evacuate from their homes. And in another horrifying instance, a brine truck accident contaminated Barnesville's reservoir with radioactive materials. At the time of the brine truck spill, the Ohio Environmental Protection Agency water test results showed a spike in radium, a naturally occurring radioactive element that is brought to the surface during the fracking process. We must protect our public lands from this same fate.

TAKE ACTION:

Make your voice heard by submitting a public comment on the lease nomination for Ohio's state parks and wildlife areas. Submit the attached comment by mail or send an email to the Oil & Gas Land Management Commission by July 20th.

July 11, 2023

Attention: Commission Clerk
Oil & Gas Land Management Commission
Ohio Department of Natural Resources
2045 Morse Road
Columbus, OH 43229-6693

Greetings:

The Columbus Dispatch this morning reported the Wayne National Forest will receive federal funds to clean up 29 of more than 200 abandoned oil and gas wells identified in that national forest, "a tiny fraction of a problem that has plagued the state for decades." Meanwhile, your department has identified at least 19,000 abandoned wells throughout the state. These are serious sources of pollution.

How timely that I write this letter asking the Oil & Gas Land Management Commission to disapprove oil and gas leasing nominations for Salt Fork State Park and Wildlife Area. These nominations are numbers 23-DNR-0005, 0006, and 007. I also ask the commission to disapprove Wolf Run State Park nomination number 23-DNR-0008; Valley Run Wildlife Area nomination numbers 23-DNR-0001, 0002, and 0003; and Zepernick Wildlife Area nomination number 23-DNR-0004.

My family and I have stayed in the cabins at Salt Fork State Park, and we've enjoyed our many visits there and at other natural areas preserved by your department. Given the problems cited by the *Dispatch*, I have no faith that oil and gas companies will properly respect the environment in their intrusive drilling operations. I ask the commission to consider the negative impacts on the environment and on the ability of Ohioans to enjoy their public parks and wildlife areas from the drilling and fracking. Our parks, wildlife and recreation areas, and nature preserves have been set aside for the peaceful enjoyment of current and future generations of Ohioans – not for the profits today of the oil and gas industry.

Sincerely yours,

Steve Sterrett

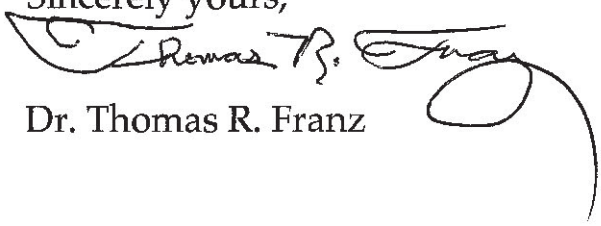
Commission Clerk
Oil & Gas Management Commission
Ohio Department of Natural Resources
2045 Morse Road
Columbus, OH 43229-6693



Dear Commissioners:

The Ohio Oil and Gas Industry has kept after the State to authorize drilling in Ohio state parks for many years, and the Legislature has exhibited consistent signs of promoting such exploitation. The *Ohio Capital Journal* recently published the following statement by an industry representative: "The Oil and Gas industry is thrilled to see lands opened for business." While "open for business" is a popular adage (former governor John Kasich used it after his election), opening state parks to petroleum and gas drilling does not seem to be a good measure for Ohio citizens.

I spend a lot of time in state parks, fishing, hiking, swimming, and just getting away from life's pressures. Compared to the parks of many other states, those in Ohio are small, lacking in natural lakes, and exposed to considerable vehicular traffic. This makes the little we have all the more precious and deserving of every protection we can muster. The addition of oil and gas drilling risks compromising our ability to preserve the purity of these enclaves, which is important to our recreational and psychological well-being. Drilling additionally offers potential threats to the wildlife that we need to maintain the ecological balance so important to human life. Where I live in Athens County, there have been far too many reports of fracking violations that risk polluting our natural resources and, because of these, I do not believe that the Oil and Gas Industry can be trusted to keep our state parks inviolate, whether drilling in the parks themselves or at their perimeter.

I therefore urge the Ohio Oil & Gas Management Commission and the Ohio Department of Natural Resources to disallow the recent proposals to drill for oil and gas in certain state parks. This kind of potential despoliation of our environmental heritage should be avoided at any cost.

Sincerely yours,

Dr. Thomas R. Franz

The disturbance to the surface on the perimeter of the park will be heard and felt. There is no way for fracking to not impact the enjoyment of any public lands being nominated by the oil and gas industry.

Our state parks are a refuge for wildlife and recreation for people to hike, camp, fish, hunt, boat, birdwatch, skywatch and to gather with their loved ones. Therefore, please DENY the nominations submitted for this beloved state park.

Thank you for your sincere consideration.

Signed Valerie Mitrione landscape Architect

PLEASE DO NOT FRACK OUR PARKS!!

Public Comments on Nominations #: 23-DNR-0001,0002, 0003, 0004, 0005, 0006, 0007, 0008

Dear Commissioners,

I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007, Wolf Run State Park, nomination #23-DNR-0008, Valley Run Wildlife Area, Nomination #: 23-DNR-0001, 0002, 0003, and Zepernick Wildlife Area, Nomination # 23-DNR-0004

Please carefully consider all the consequences, including the negative impacts to the environment, public health, and the enjoyment and use of our public lands, in your deliberations on leasing this treasured park. Leasing our public lands to the oil and gas industry threatens all Ohioans' ability to peacefully experience the natural gifts provided in our state parks. The disturbance to the surface on the perimeter of the park will be heard and felt. There is no way for fracking to not impact the enjoyment of any public lands being nominated by the oil and gas industry.

Our state parks are a refuge for wildlife & recreation for people to hike, camp, fish, hunt, boat, birdwatch, skywatch and gather with their loved ones. Therefore, please DENY the nominations submitted for these beloved state parks and wildlife areas.

Thank you for your sincere consideration.

First name	Last name	Letter Subject	Letter Body
JENNIFER	HALM	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water. Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for

			the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Tawhiri	Matea	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Carol	G	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. Not only would it be unconscionable to allow this destruction of one of the very places where my family and so many millions of others go for a respite in nature - it makes no sense economically. I will no longer camp or kayak where there is fracking and neither will anyone I know. We will spend our tourist dollars elsewhere. What kind of legacy do you wish to leave for your children and theirs? THANK YOU for being the ones to stand up and speak for the voice of reason - the voice of economic prosperity in our beautiful state and the voice of all beings who visit and live in our wildernesses.

Amanda	Carroll	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

RICHARD	COIN	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Mike	Souza	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Drake	Chamberlin	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water. Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could.

			- Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Gwen	Lambert	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Judy	Smucker	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. It is clear that we are in a climate emergency NOW! We cannot sit idly by and watch the continued destruction of our earth. The future of our loved ones are at stake. We know that the gas and oil companies are lying to us about the safety of Fracking. It is not safe! People are dying because of the forever deadly chemicals that are emitted from frack sites. We need to save ourselves and the ones we love. Do not allow this madness to happen. The eyes of all future generations are upon you. FOLLOW THE SCIENCE - LOOK AT THE FACTS - PLEASE! Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws.

			Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water. Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Mary	Tuominen	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Charles	Lynd	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. Please see this scientific article that shows fracking has harmed environmental flow in the region. The frackers must be stopped from destroying our precious public lands for private profit! https://pubmed.ncbi.nlm.nih.gov/36179823/

Timothy	Currier	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Cynthia	Springer	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Kimberly	Kavanaugh	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

maureen	bondra	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws.

			Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water. Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in

			fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€□ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Michelle	Phillips	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Ashley	Lambacher	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Mark	Perlmutter	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Sandi	Dunphy	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Loretta	Ryland	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are PAID FOR and OWNED by WE, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and ALL our state parks, forests, wildlife areas, and other public lands.

Karolyn	Schalk	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: Visiting Ohio's green spaces, and wildlife areas is one of my favorite things to do. Our native habitats - forests, wetlands, meadows and more cannot be replaced, and are expensive to rehabilitate once damaged. I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Anthony	Mehle	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Laura	Schmidt	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Aryeh	Alex	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

F. Mark	Laskovics	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Diane	Fails	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am a county park commissioner, and I am writing to ask that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. I know personally and through friends and community members that open green spaces full of natural life are very beneficial to mental health, peace, and happiness. The mess and chemicals of fracking is the complete opposite of beneficial, especially damage to the groundwater system. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground itself! Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Laurel	Gress	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. I have enjoyed many happy hours at this beautiful location. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. 			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We want PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we expect you to DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. We need them to remain natural for our enjoyment and for the health of the planet!

Joanne	Blum	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am extremely disheartened to learn that there are plans underway to use state-protected, public lands for fracking by oil and gas companies. This is unconscionable at a time when we need our clean wild areas more than ever and should be eliminating toxic chemicals and pollutants wherever we can. There is no question whatever about the damaging, toxic impact of fracking, on the environment and on the health of all nearby living beings. I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Lawrence	Mick	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jennifer	Moix	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Laura Grace	Weldon	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: Oh please, for God's sake, do not frack these beautiful wildlife areas. Haven't we learned from current and abandoned fracking sites that they emit dangerous air and water pollution; disrupt with heavy traffic, 24 hour lights, and loud noises; destroy native plants, birds, amphibians, mammals, and other life forms; and devastate the land. Please DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. I know the GOP legislature has sold their souls to the oil and gas industry, but fracking public land is not what the people of Ohio want.

Dennis	Thompson	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Berry	Dilley	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Julie	Grote	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Janice	Terradotter	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Robert	McDermott	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Dennis	Hoops	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. Sincerely, Christine and James Klinger

Jodi	Gradolph	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: â€œThe increasing heating of our planet caused by fossil fuel use is not unexpected, but it is dangerous for us humans and for the ecosystems we depend on. We need to stop it, fast,â€ said Stefan Rahmstorf of the Potsdam Institute for Climate Impact Research. I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws.

			Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water. Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in

Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Katie	Oetzel	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

James	Cooper	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. I love my Ohio Parks.

Morgan	Hager	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Below is a massive amount of evidence why fracking in our state owned lands is terrible for all of us public land owners. I will emphasize this point. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. We live here in these impacted areas. We work here. We play here. We own the public land up for lease. We DO NOT benefit economically from these frack wells being in our areas despite what the oil and gas industry would say. Just look at the history of coal in Appalachia, its a different fossil fuel but its the same pattern. These mining operations come in, funnel billions of dollars of mineral wealth out of the area to make wealthy people even richer, they violate labor and environmental protections, get away with not paying income taxes that fund our infrastructure like roads (which they use), public schools, libraries etc, and then file for bankruptcy before they have to pay fines for the above violations and their employee's pension plans (but do pay their lawyers and debts for equipment purchases) and then they dissolve and form a new corporation and do it all over again. Sincerely, Morgan Hager P.S. The first three days of this week were the hottest ever in Earth's recorded history. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground.

			Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water. Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area.

			Ohio Statutory Requirements According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact

			- NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Kenneth	Coulter	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

thomas	lewis	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Jennifer	Scull	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jennifer	Scull	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. Thanks for caring about our common land. There are wiser ways to use energy resources.

Marlene	Harmon	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. 			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Chris	Krieg	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Anne	Schoelwer	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. Extracting resources from public lands is common for the energy companies: just look at KY and W V. AND look how those areas continue to decline economically, well after the companies have pulled out. You look at these extractions like it's a do or die situation. Yes, some areas need more jobs. So do that in a way that has lasting positive impact.

Anthony	Calvelage	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Judy	Smucker	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. The legislation passed by those who put the almighty dollar above ALL ELSE makes me want to vomit. I only wish I could do it in person on the politicians responsible. Sincerely,

			Michelle Mulanax

Nathan	Revello	OGLMC - DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. Thanks, Nate

Ann	Worden	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

WILLIAM	Foreman	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Ruth	Sewell	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Janina	Blonski	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio's public lands belong to the people of Ohio, not to a few narrow interests that want to monetize them for short-term profits. The State Parks play a vital role in giving hard-working people a place to unwind, enjoy the beauty of nature, breathe clean air and drink clean water, and find peace and serenity for at least a few days. These things are many times more valuable than any gas that is found underneath these lands. We have visited parks here in Ohio where gas wells sit side-by-side with hiking trails and children's playgrounds. The rank smell of gas frequently drifts across these playgrounds as the children are playing. There are trails that we have avoided hiking due to the frequent reek of gas in certain areas. We were told by the park management that the gas company "needs to vent the gas" and there was absolutely nothing they could do about it. That is the future of Ohio's State Parks, if these leases are accepted. Assurances that there will be NO impact on visitors are completely false, and we would be fools to accept them. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Margaret	Hale	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Victoria	Copley	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Krystal	Gallagher	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: You must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Take 5 minutes and read about the effects of fracking on people, their health, their land, their water, and their animals. Fracking is NOT WORTH any money received. The damage is irreparable, and it would take much, much more money to clean up what is caused by fracking than fracking can generate. You have a very special responsibility to protect this land. You have the chance to make history, set an example, and to protect our BEAUTIFUL OHIO from deadly chemicals. Let's actually protect our state parks. We can change this dangerous precedent - YOU can make the difference our state needs. Please deny these leases!!!!! **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jill	Fleisher	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: To protect water quality and human health on public lands, I implore you to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Accidents happen. It's just a matter of time and magnitude that determine the dangerous effects of drilling. Please protect human health and our natural resources by disallowing natural gas fracturing on Ohio's public lands. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Mary	Aguilera	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to implore that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. The legislation that passed to allow these projects put profits ahead of both the environment and the people of Ohio. This trend is dangerous. Development without consideration of those factors has to stop. In addition, the people living in these areas are most likely supporters of the conservative super majorities in the State House, so you will be alienating your own supporters. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Linda Griffin

Ronald	Kasper	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Silverio	Caggiano	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Deborah	Hillard	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jenny	Morgan	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Hello Mr. Warnock, Mr. Wise, Mr. Buehrer, Mr. McGreggor, Ms. Ryan and Director Mertz, I wonder if you have heard the latest news today (July 11th, 2023) about the oil spill near Wolf Run River: https://www.beaconjournal.com/story/news/local/2023/07/10/oil-spill-tuscarawas-river-in-barberton-cleanup-underway/70399143007/ There is news today (July 11th, 2023) of ANOTHER accident! https://www.wkbn.com/news/local-news/columbiana-news/gas-leak-near-crestview-school-district/ This is, of course, just two gas/oil accidents on the record of MANY. As you know, there are countless litigation cases on the books that tell the story of citizens leasing their land to make some money, only to end up DEEPLY regretting it, AND suing companies for contaminations of various sorts. Many cases have been won by citizens, many settled out of court. After studying for years, as a layperson, the negative impacts of gas and oil drilling, I can't, for the life of me, understand how anyone would consider fracking our beloved parks. I also can't understand how a question was asked recently by one of you about reusing or recycling the drilling waste. I thought you all knew that the waste is VERY radioactive and can't be treated. ODNR test results prove the very high radioactive levels of gas and oil waste (from horizontal AND vertical wells). It must be stored in injection wells. That question during the expert testimony concerned me greatly. As you may remember, from my testimony, I am a preschool teacher and also a founder of The Leave No Child Inside Central Ohio Collaborative. I keep asking myself over and over, why....how could you even ponder putting our parks at such risk? What are you going to do when there are gas an oil accidents? What and where is your Emergency Action Plan? Are you going to evacuate hikers, campers, hunters, etc. How? I pray that you say no to these nominations and ALL nominations. Our children need our parks to be safe and clean. In conclusion, thanks to the very hard work of many concerned citizens, the public is becoming more and more aware of this issue. Less than 100 legislators made this law, but MILLIONS love our parks and NEED our parks. Park lovers will not stand for this. We will work until every park lover is standing up and saying NO! I pray that you listen and respond by saying NO to all nominations. Sincerely and with enduring hope, Jenny Morgan

Jessica	Grim	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Kyle	Butler	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. 			toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at

			Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Joe	Blanda	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to beg that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Ann	Reichsman	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: As a Family Physician I understand the importance of natural environments for the health and well being of Ohioans. Research demonstrates over and over the beneficial effects of spending time in natural settings. It is clear that fracking in protected areas will interfere with the availabilty of these benefits to our citizens, therefore I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Judy	Smucker	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. When we know better, we must do better. If we care about the future of our children, we must follow the science. Global Scientist agree that we must stop digging up more fossil fuels if care about a livable future for our children. By agreeing to this Fracking Under Public Lands policy, it means you are taking money from the fossil fuel industry. Therefore, you are making the statement that - "money is more important to you than the life of our children". We cannot have it both ways. We must choose - either "we care about a livable future for our children" or "we don't care about a livable future for our children". Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Carol	Gibbons	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving places for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. And as we've seen, frack-related truck accidents have and do occur - the increased risk to these areas' lands and water bodies of leaked toxic and radioactive fluids should not be considered, much less allowed. It's entirely inappropriate. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the economic benefits, compatibility with current land uses, environmental impacts, adverse geological impacts and impacts on visitors in deciding whether to approve or deny a lease to frack our public land. Each is examined below for how fracking at Valley Run and Zepernick wildlife areas will negatively impact life for its natural residents and experience for its visitors. - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. On its own, this fact should require great pause and a very close study regarding the real costs and liabilities involved in fracking at these public park spaces. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep and damaging the ability for natural nocturnal species to flourish. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off in large part because of the landscape fragmentation which will undercut the carrying capacity of the

			impacted habitats. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€□ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape - an industrialized zone? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Gail	Reynolds	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: As an Audubon member of a chapter who spends many volunteer hours and money protecting wildlife and recreation areas in Ohio, I strongly urge you to deny leases in or adjacent to natural areas!!! This goes against everything I value in life. Surely, preserving whit is left of our natural areas is more important than the bottom line. I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

j	ammon	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: Any oil and gas extraction at this point of the climate crisis is human genocide. We can get all the needed energy through renewable sources such as wind and solar. I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

David	Celebrezze	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Chris	Jaquier	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Linda	Racher	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Michael	Nickras	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jessica	Papajcik	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Joanne	Blum	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Our public lands should not be available for profit making by the oil and gas industry. Especially in this era of climate change, habitat loss, and environmental degradation, we need our public lands and nature preserves more than ever. Please stand up for us and our planet. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Marilyn	Taylor Gerken	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.
