			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

gayle	richardson	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jo	Resciniti	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to implore you to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area I live in Allegheny County, Pennsylvania, very close to Deer Lakes Park. In 2014, Allegheny County leased the subsurface drilling rights to the park. A single well pad, Gulick, was constructed outside of the park property and gas was accessed from underground laterals. Officials and Range Resources assured the public that there would be no surface disturbance and no impacts to the park or its visitors. Years later, a Duquesne University graduate student conducted a water quality survey and found that the surface waters of Deer Lakes Park have been contaminated by frack fluid and surfactants consistent with what was used at the Gulick well pad. See the report here: https://dsc.duq.edu/etd/1776/ I walk around the lakes and on the wooded trails at Deer Lakes Park several times each week. I've seen oily discharges, and a dead beaver floating belly up in the water. These have been more memorable experiences at the park than the wooden sculptures and upgraded restrooms purchased with gas lease royalties. In January of 2023, I was hiking in the park with my family and our little dog when we became overwhelmed with chemical smells that burned our throats and noses. An acrid taste filled my mouth. As we rounded a bend in the trail, we could vaguely make out the Gulick well pad where Range Resources was drilling additional wells, this time drilling laterals that extend the opposite direction from the park. The site was noisy and we could see a large ground flare. We were 1/2 mile away from the well pad. I had a headache for the rest of the day. This is the impact of one well pad on a county park. Ohio is proposing to surround state parks with multiple well pads. This proposal is going to adversely impact tourism revenue because people will not camp and hike at places that gives their kids a headache and risks their health. Consider the mistakes made in Pennsylvania when you make this decision. Please deny this nomination. Thank you, Jo Resciniti

Shelley	Chernin	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. I am a third generation Ohioan who chose to raise my children here. My family loves the natural beauty of of this great state, the glorious variety of trees, birds, insects, wildlife, and plants. Ohio's wildlife areas are special places that must be protected so that my grandchildren, and their children, and their children, will be able to enjoy the wonders that my grandparents, my parents, my now grown children, and I have enjoyed. This legacy must be preserved! Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Susan	Fisher	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Stefanie	Hauck	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jenna	Neuman	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Most new jobs will be filled from Oklahoma and Texas. These employees will live in specially build apartments and attract drug dealers and prostitutes who know they are away from home and bored. Southeastern Ohio is a very poor area and it is immoral for you to take advantage of poor people who will jump at the chance to lease their land. They will be set for life and will not say no to leasing. Neighbors on adjacent land will pressure each other. I know that people have to make a living and support themselves. Even if their grandchildren will not live to see 70 or 80 -- even if those children sicken and die -- the lease money will be irresistible. Tell me why New York banned fracking. Why is it okay in Ohio? Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area.

			Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water. Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the

			wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€□ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Carol	M Fisher	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Lisa	Long	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has been fracked enough. Destructive pipelines and other health hazards that accompany these fracking sites should not be something that we Ohioans should have to deal with in OUR public areas. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. Mallory	Seibold	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. Keep nature natural by denying these leases by big oil and gas. Thank you, Mallory

David	Walker	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: My name is David Walker and I vote. Remember State lands are publicly owned and if shit gets bad elsewhere we need to be able to rely on clean public lands above ground and below ground for living. Think of your children's children, future generations. Please. I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Brian	Campbell	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: Please DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. My major concern about fracking near a wildlife area is the contamination. Fracking often has above surface leaks and spills and accompanying contamination that is easily visible on the surrounding soil. Contaminated soil around the perimeter of a wildlife area will destroy the area and one can expect that the soil will be contaminated for longer than the fracking company will use their pad so that animals will eventually be contaminated by fracking spills. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Save the Parks ; Save the planet !!!!!

Kyle	Smith	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am only 17 years old. In my brief amount of time on our Earth, I was never really exposed to parks. Instead, my childhood was more so focused on video games, the Disney channel, and other indoor activities. It wasn't until high school when I grew a true appreciation for our state parks. Following some family troubles and grueling academic stress, I needed a mode of escape that would connect me with true, more serene priorities. Hiking in nature provided this to me. Unlike the echo-chambering, frantic zone of digital entertainment and social media, parks don't have anything to remind me of my familial or school-derived woes. I can focus instead on the calm waters, beautiful trees, and chirping of the birds. But, alas, it seems as if this good thing may be coming to an end. Fracking, both on and near state parks, threatens both the ecosystem and the mental health of all Ohioans finding refuge in parks as I did. The oil would pollute the waters, the trees would grow weaker and less biodiverse, and the chirping of the birds would grow mute in comparison to the heavy metal gears that would screech into parkgoers' ears. Please, I beg of you, do not let such a travesty occur. Economic interests seek to indirectly improve quality of life by bolstering finances (although really, only companies prosper under fracking). I propose the more direct solution of defending the quality of life benefits offered by fracking, which are enjoyed by all Ohioans. I know that I am not alone in this issue. While activist groups certainly use their voices the most to express their stance on issues like fracking, I firmly believe that the same sentiments are held in the hearts of all Ohioans. In my own life, I see a love for our parks in every member of the environmental club that I lead at school. I see a love for our parks in teenagers looking to limit screentime. I see a love for our parks in my grandmother, who enjoyed nature when she couldn't afford many other past times when she moved to Ohio. I see a love for the parks in each and every Ohioan. Don't let this love die at the hands of fracking. I appreciate your time in reading my message, Kyle Smith

Amy	Brown	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: Ohio public lands are meant to support all Ohioans for generations to come. Protect our land. There are safer energy alternatives than fracking and Ohio needs to step up and embrace the reality of the times we're living in, or risk being left behind economically while risking the health of our land and our people. I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Thomas	Tuckerman	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. Repeal the poorly thought-out bill that allows drilling on State owned lands. Parks and wildlife areas should be protected. Who were bribed to pass this law?

Anna	Kozlenko	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Thomas	Herderick	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. 			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Andrew	Poling	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. I want to know: how long will the oil and gas last? Right now we have our public land which can be used indefinitely by the people far into the future. It is something we can leave to the next generation. Why would we take the risk of despoiling these natural areas for a few years worth of oil? Whatever benefits we might possibly gain from fracking over the next few years will not last. But the consequences of our drilling will remain. There is no way that drillers can guarantee that the land will be unaffected. It is easy to say, and they have a huge (financial) incentive to say it. But the drillers will not be held responsible if the Wildlife areas are significantly harmed. Only the wildlife and the public will pay the price. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Diane	Davis	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Noreen	Warnock	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. While I no longer live in Ohio, I grew up there and visit frequently and want to see the parks, forests and wildlife thrive for generations to come. Sincerely, Megan Williams

Kelcey	Jacobs	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Why on earth this action is even being considered is beyond me. The parks belong to Ohio citizens. They are not government assets to be used to benefit mining companies. Worse, fracking destroys what we have while doing nothing to move us toward a more sustainable way of life.

Michael	Babcock	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Janet	Einfalt	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Susan	Calhoun	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to request that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. I honestly cannot see how any responsible person/group could think fracking would be a good thing to allow when these lands have been specifically set aside to be protected! There is a well-developed extractive oil and gas business already occurring on private land and if the excuse is that money needs to be raised for the state; then start charging access fees for those that use the areas recreationally or raise our taxes! Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Susan	Lee-Meeder	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. We must do everything we can right immediately to reverse the severe climate impacts caused by gas and oil use in this country and throughout the entire world. We must be brave to tackle this problem from every angle. This is my plea to you and the entire world. Every natural eco system is essential to protect and save. Water protection is especially important. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Joyce	Geib	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I spent many of may younger years in the Ohio State parks. My family and I tent camped all over the state. I would like the State Parks to be maintained pristine for future generations. These parks belong to the people of the State of Ohio, with our tax dollars. Do not frack on our public lands. I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we ask that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. PLEASE!!!!!

Kathy	Smachlo	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Public parks of OHIO belong to the residents of OHIO. They provide essential functions and must be protected. They absorb CO2, cleanse the air and water of toxins, provide precious habitats and ecosystems that all living things, including humans, rely on. The inhabitants of the natural world are already struggling to survive due to habitat destruction by land loss, degradation and pollution. It is essential to protect natural areas and to increase them so that they are not fragmented as they are now. A "Home Grown Natural Park", which is to include not only all parks but areas on private properties that are naturalized, is endorsed by Douglas Tallamy and many environmentalists. (Read Nature's Best Hope). Every inch of public parks is precious. In public parks, by being in and connecting with nature, people gain significant positive impacts on their physical and mental health. They experience peace, quiet, beauty, and cleaner air and reduced temperatures. Fracking in/around public parks will have devastating impacts on the ecology of the entire fracking area and beyond: Millions of gallons from local waters will be collected and used, resulting in toxic-containing contaminated liquids that will remain so forever. Transporting and injecting this liquid into wells will allow toxins to enter the environment--releasing chemicals, heavy metals, PFAS, etc that can result in cancer, endocrine disruption, and many other adverse health effects. The remaining natural waters will have deleterious results of lower volume, resulting in increased temperature, lower pH, and lower oxygen, adversely affecting waterlife. Gas venting and flaring will release harmful chemicals such as Nitric oxide, benzene, toluene, and other volatile hydrocarbons into the air, resulting in increased cases of cancer, lung disease, liver disease, low weight births. Greenhouse gases CO2, methane, NO2 will be released--with significant effects on our climate. This is not something we can afford. The greenhouse gas situation is dire and must be ameliorated now. Fracking pads create nonstop noise and light pollution. This will have severe effects on all living things around them. Noise and light pollution prevent birds, insects, animals, bats, from carrying out their normal life-sustaining activities such as communicating, eating, breeding. Humans will also be severely stressed, increasing health harms from cardiovascular diseases to cancers. All the clearing of land for the fracking pads, the pipelines, the roads that will be part of the whole fracking infrastructure will destroy valuable essential environments. Transporting of gases and liquids from fracking have resulted in leaks and dumping of toxic waters and materials, as well as spills, fires and explosions at well sites. WE, AS A STATE, A NATION, A WORLD CANNOT AFFORD TO CREATE NEW FRACKING SITES. THIS IS A MORAL IMPERATIVE. THE HEALTH OF HUMANS AND THE ENVIRONMENT ON WHICH WE DEPEND MUST BE PROTECTED.

			PLEASE DENY THE VALLEY RUN AND ZEPERNICK WILDLIFE AREAS LEASING NOMINATIONS. Respectfully, Kathy Smachlo,MD

Janet	Biddlecombe	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Claire	Weldon	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jane	Hobbs	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Valerie	Moore	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground, a community that deserves to be free of industry that's hazardous to human health. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Such activity will also harm water sources for the communities nearby. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed, pipelines shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. They get see and live with the desolation left behind. They deserve jobs of the future, not pollution of the past. Fossil fuels are, or soon will be, of the past, and our public lands need not be their causality.also. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of unknown toxic chemicals thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Government's gift to fossil fuels and demise to the rest of us. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water, hurt human sources of water.

			Truck traffic, 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again, making a once reliable renewable, essential resource less depenable, and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more long-term income for the state economy than short-term, destructive fracking of our stateâ€™s most treasured natural lands ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. Nothing to do with fracking encourages health, happiness or enjoyment. - Environmental impacts:

			If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicalsâ€□, which have been shown to have detrimental affects on human health. - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Or is that the plan: chase away users of our many natural public lands so the Legislature can sell them to the highest bidder to abuse and destroy for short-term gain under the guise no one cares or wants them? We, the citizens of Ohio and owners of these wildlife areas, demand PROOF that there will be: - NO environmental impact to the wildlife area; - NO adverse geological impact; - NO impact to visitors to the wildlife area; - NO impact to wildlife or plant species; - NO surface use, such as well pads, roads, pipelines, water lines, and compressors; - NO use of any water from any nearby lakes or streams. The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. They add to a good quality of life for us, visitors, and potential new businesses looking for new locations to settle.

Joel	Moore	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. We want wildcards unhindered by industry of any kind. Fossil fuels are in their death throes, don't take our publics lands with them.

Robin	Bussey	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Please let me tell you why I like the State Parks. I am from New Jersey, but have lived in Ohio for 42 years. From the moment I entered the State of Ohio on Route 70, I fell in love with the landscape. It is such a beautiful state. I didn't actually get to visit any of the State Parks for a few years - I was a single mother raising two children. I pretty much stayed close to home. Almost 25 years ago, I remarried - after losing 2 husbands to cancer. My current husband and I have visited many of the State Parks, but we frequent Salt Fork, Deer Creek, and Mohican most often. My children grew up, went to college, and got married. Then, my husband and I then found ourselves raising 3 of our grandchildren. We would spend long weekends at the State Parks, having a great time. It was a time for our family to bond. Now, my older grandchildren are grown and married, or about to be. Now that my husband and I are empty-nesters, we spend our weekends and free time hiking, bird watching, and enjoying the beauty of the State Parks. Many years we spend our anniversary weekend at one of the State Parks. Our passion has now become nature photography, and what better place to engage in this than the State Parks. The State Parks are beautiful just as they are. Putting in wells for fracking will ruin the serene atmosphere, and that's not even taking into consideration the environmental and health risks. I know that I, for one, will not travel to Salt Fork, Mohican, or Deer Creek - or any other State Park whether there are wells there or not. You see, it's the principle that money is more important than protecting our natural environment for our future generations, which includes my children and grandchildren. I want them to be able to enjoy the beauty of our natural environment - just as I have been able to do. I know that I am only one person, but I have had many discussions with family, friends and co-workers, and they share the same opinion. They may not take the time to write a letter, but they are still out there, and they still care. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. Thank you for your time! Sincerely,

			Robin Bussey

Natasha	Campbell	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Sarah	C	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jan	Douglass	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Oil and gas exploration and development is an industrial land use inimical to recreational uses, such as the passive enjoyment of wildlife, as well as more active ones like birding, hiking, camping and overall enjoyment of the outdoors. Oil and gas development/exploration, if it is to be pursued at all during a worldwide climate emergency, must be limited to areas already zoned for, or otherwise suitable for heavy industrial uses and the attendant noise, pollution, traffic and generally disruptive activities associated with said uses. Do NOT permit the leasing of Valley Run and Zepernick Wildlife areas for oil and gas development! Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. At a time of unprecedented climate change globally, it defies all reason and common sense to even contemplate the use of publicly owned recreation properties, public trusts, for the development of atmospheric warming hydrocarbon development. The future and welfare of planet demands that these lease nominations be denied by the Ohio Oil and Gas Land Management Commission forthwith! Thank you for considering these heartfelt comments.

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Terri	Sabo	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Katherine	Michel	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. I grow alarmed each day at reports of major disasters (floods, wildfires, etc.) occuring throughout the world, many caused by human carelessness, mistakes, climate change. Ohio has experienced major ones this year alone. Why would you even consider adding to our risk affecting our water, wildlife, and human life?! Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Aliza	Weidenbaum	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I recommend ~enjoying~ your power to deny the nominations. If you just go along with industry's short-sighted interests, there's no joy in that. In contrast, by saying 'no,' simply & repeatedly, you will play a heroic & satisfying role in guarding our most protected areas. You will be celebrated! By us, the public, in whose name & service you work. I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws.

			Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water. Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in

			fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€□ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by us, the people of Ohio â€“ and we ask & expect that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Nathan	Burke	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Mimi	Plevin-Foust	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Our family has enjoyed staying in Ohio state parks, and I'm outraged that our politicians think they can profiteer by selling off rights to drill around and under lands that belong to all Ohioans, despoiling their beauty and safety forever. And for what? The gas that they frack will be sent to Europe, harming the many environments it passes through to get there and damning our children and grandchildren to a hellish climate emergency beyond repair. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. Take a drive to look at the fracked wastelands in Pennsylvania if you want to see the irreparable devastation that will happen to and around this pristine park and residential campgrounds nearby if you approve these nominations. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas.

			- Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€□ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? The answer is NO. Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape, worrying if their children will get cancer from the poisoned air, land or water? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area.

			Ohio public lands are paid for and owned by we, the people of Ohio, not the corrupt politicians who sold our pristine parks out from under us for whatever 'campaign donations' they received from the gas industry. We demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Eunice	Abel	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Emily	Kullman	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Sephrah	Walsworth	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Matt	Thomson	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. KATHLEEN	CARROLL	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission, I am writing to urgently and adamantly oppose the approval of lease nominations #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 for fracking on the entire 302-acre Valley Run Wildlife Area, as well as lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. I implore you to carefully consider the devastating consequences such actions would have on Ohio's natural treasures and the communities that cherish them. Our state has dedicated 269 wildlife areas, including Valley Run and Zepernick, to safeguard wildlife habitats and provide spaces for various recreational activities, such as hiking, camping, birdwatching, boating, fishing, and hunting. Approving fracking leases in these areas would run counter to the core principles of preserving our environment for both present and future generations. Valley Run Wildlife Area, named after the Valley Run stream running through it, is in close proximity to the Harrison Hills Association Campground, where hundreds of residents reside throughout the year. One of the proposed fracking well pads is located barely 1/10th of a mile from the wildlife area, and some parcels earmarked for fracking are even situated within the campground itself. Similarly, Zepernick Wildlife Area, which includes Zepernick Lake and Ruff Pond, is a beloved spot for boating and fishing. The water bodies are fed by Conser Run, all of which would be seriously jeopardized by water extraction for fracking and potential contamination from leaks or runoff. We cannot afford to repeat the mistakes of the past, where eastern Ohio became a sacrifice zone for the fossil fuel industry. These communities bear the brunt of environmental degradation while reaping little economic benefit, as profits primarily benefit wealthy corporate owners. It is high time we focus on building a sustainable future with clean and forward-looking job opportunities, rather than perpetuating the pollution of our past. Fracking operations are well-documented to cause severe air and water pollution, intense artificial lighting, noise disturbances, and heavy truck traffic. The process requires an alarming 4 to 6 million gallons of fresh water per well, mixed with undisclosed toxic chemicals under the "Halliburton loophole." Such reckless practices put the integrity of our water sources at risk, including Valley Run and Zepernick's water bodies, threatening their delicate ecosystems. Furthermore, the extensive truck traffic associated with fracking will place significant strain on the infrastructure and accessibility of these wildlife areas. Narrow, hilly roads designed for recreational use and wildlife protection cannot withstand the demands of heavy industrial operations. Fracking is fundamentally incompatible with the mission of the Ohio Department of Natural Resources, which aims to wisely use and protect the state's natural resources for the benefit of its citizens. The intense noise, toxic chemical injections, bright lighting, and methane flaring that come with fracking directly contradict this mission and disturb the peaceful coexistence of wildlife and visitors in these areas. According to Ohio Revised Code 155.33, it is your responsibility to consider the economic benefits, compatibility with current land uses, environmental impacts, adverse geological

			effects, and impact on visitors when making decisions regarding leasing public land for fracking. Numerous studies demonstrate that preserving our outdoor recreational spaces generates substantial income for the state economy, far surpassing any potential gains from fracking. I urge you to heed the voices of Ohioans and visitors who cherish these natural areas. I demand irrefutable evidence that fracking will not cause any harm to the wildlife, environment, or the experiences of those who seek solace and joy in these spaces. To fulfill this requirement, the only appropriate course of action is to DENY lease nominations #s 23-DNR-0001, 23-DNR-0002, 23-DNR-0003 for Valley Run Wildlife Area, and 23-DNR-0004 for Zepernick Wildlife Area. The lands of Ohio belong to its people, and I implore you to act responsibly and protect our state parks, forests, wildlife areas, and other public lands from the irreversible damage that fracking would cause. Please prioritize the well-being of our environment and the generations to come. Sincerely, Kathleen M. Carroll

Kathryn	LaClair	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

O'neil	Van Horn	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Peter	Gaspari	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Madeline	Bowsher	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Meredith	Stone	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Isaac	Kneuss	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Nick	Zenz	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

David	Sheppard	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. Please do the right thing so future Buckeyes can enjoy this precious land! Sincerely, Patrick Dooner

Dan	Sedlacek	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

erin	Kubat	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Matthew	Allen	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Brian	Frizzell	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Michael	Burke	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Marie	Bachmann	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Corey	Mendgik	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Dylan	Dykes	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Kevin	Coffman	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? David	Kelsey	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jamie	Carracher	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Elizabeth	Seyala	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Aaron	Brian	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Rob	Faulhaber	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

christian	brenden	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Erin	Hayes	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. I am a mother. A mother to future generations. A generation that I am working hard to repair internally, through the inside of our family structure. How can I work so hard on these internal systems to have external systems going to hell around us. I want this next generation and our future generations to be proud of the way we use our natural resources. This is not the way to do this. My children and future children will not be proud of this. They will not seek out the natural beauty because it will be destroyed. Stop this, stop killing Mother Earth and the respect our indivisible family systems work so hard to repair. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Duncan	Mayer	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I love the park. I love seeing the animals thrive. I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in

			Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water. Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever

			chemicals.â€□ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

John	Jacobs	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Keller	Wessel	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever

			chemicals.â€□ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Florence	Rothenberg	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Ian	Oâ€™Neill	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Felicia	Lee	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Stephen	Lam	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Kara	Baumhardt	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Michael	Suter	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Keith	Barker	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Matt	Hanrahan	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Ashley	White	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Danielle	Hart	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Michael	Kowalski	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. I routinely visit many of the state parks and wildlife areas in our state, and leasing these areas away to any private corporations, especially those that will cause ecological damage to the park and nearby areas, is a travesty. Our state parks are one of our greatest treasures and we should fight to keep them as natural and untouched as possible. Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Mary	Grein	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jeanine	Smith	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Wyatt	Taylor	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Iâ€™m sure you will receive plenty of large letters full of good reasons to deny fracking at Valley Run and Zepernick Wildlife areas, so I will keep it short. - State parks and wildlife areas are one of the only things keeping young people, families, and college students in the state. - Without natural public areas in the state, the state WILL see citizens moving to other states. You WILL see teens and young adults getting involved in more crime and reckless behavior. You WILL see an increase in drug addiction and alcohol use. You WILL see a major decrease in tourism and new business. Finally, you are CERTAIN to see a major decrease in public health and well being. Please, please do what is right for the people of Ohio and leave corporate interests behind.

Rachael	Kowalski	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. One of the most wonderful things about living in Ohio are our state parks. As a regular state park visitor, I am absolutely heartbroken that the beauty and wildlife in our state will be put at risk should these lease nominations proceed. And as a taxpayer, I want these parks to be accessible and healthy for generations to come. This kind of longevity will not be possible unless you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area. Unless there is: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams ... then you should DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area. What state parks are worth having--or life worth living--if all the wildlife is polluted, rotting, and dead? I ask you this question.

Phillip	Krotine	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Maya	Fein	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Meagan	O'Meara	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. Please don't put our lands at risk! They exist for the enjoyment of the people of Ohio, and they should remain untouched by outside forces.

Stevi	Morrison	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Laura	Davis	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Christopher	Turrin	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Caitlin	Chicoine	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands. I live in the area of Zepernick Wildlife Area and Ruff Pond. Both are just up the road from my home. Conser Run is the water source for the body of water that runs through my horse pasture. There are other farms with livestock that reside along Conser Run. This water source will be negatively impacted by any fracking that is being considered. Zepernick and Ruff Pond are enjoyed by many residents. I see families fishing, boating and enjoying a quiet and beautiful setting. People in my area have wells for their family's water supply. There is concern about the effect of fracking on these water sources also. Why on earth would anyone consider fracking on areas like Zepernick and Valley Run? I demand that you DENY the lease nominations in Valley Run, Zepernick and all our state parks, forests, wildlife areas and other public lands. Olivia Ann Gaytko Columbiana County Resident and Registered Voter

While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Casey	Selzer	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Mary	Theobald	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. James	Rasmussen	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Megan	Foreman	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Lexi	Hemker	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Zander	Barnard	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jennifer	Stockdale	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Jaclyn	Swhear	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water.

			Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land: - Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

			- Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Aaron	Axelrod	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Dominic	Mensurati	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. I have deleted the remaining copy-pasted text because I want you to know that I am a real person taking time to write real words in an effort to reach you. I am not going to waste time waxing poetic or citing statistics. I am simply going to tell you that I am an Ohio resident who deeply values our park lands and recognizes the dangers they face from greedy energy companies whose only interests in the land are extracting and selling its gifts for profit. Frankly, I am disgusted to hear of these plans, which will most certainly disrupt and taint the ecosystems in which they're set. As a human being who grew up in these parks and wouldn't be the human I am without them, I demand, I plead, I implore you to scrap these plans. Don't go through with this. Listen to the people. Listen to your heart. This does not need to happen. Save Zepernick.

Elizabeth	Noble	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Zepernick Wildlife Area, one of the few places left in Ohio where you are guaranteed to see a Luna Moth. Zepernick Wildlife Area is named after a real person, alive in my lifetime, that inherently new how to rehabilitate lands, preserve, and conserve. He would tell you No. Respect a legacy that earned it.

Evan	Hartman	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Comments and objections from residents of the state and other users: We demand PROOF that there will be: - NO environmental impact to the wildlife area - NO adverse geological impact - NO impact to visitors to the wildlife area - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams The only way you can prove that these impacts will not happen is to DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack the entire 302-acre Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Valley Run, Zepernick, and all our state parks, forests, wildlife areas, and other public lands.

Mark	Sneed	OGLMC must DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and #23-DNR-0004 to frack Zepernick Wildlife Area	Dear Oil and Gas Land Management Commission: I am writing to demand that you DENY lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack all 302 acres of Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack 66 acres of Zepernick Wildlife Area. Ohio has protected 269 wildlife areas for the purpose of preserving a place for wildlife to live, as well as for hiking, camping, birdwatching, boating, fishing, hunting, and other recreation. Valley Run Wildlife Area, named for the Valley Run stream that goes through it, is immediately adjacent to the large Harrison Hills Association Campground, where hundreds of people live for most or all of the year. One of the proposed well pads is barely 1/10th of a mile from the wildlife area, and some of the parcels proposed to be fracked are in the campground. Zepernick Wildlife Area is home to Zepernick Lake and Ruff Pond that make it a popular boating and fishing destination. These bodies of water are fed by Conser Run. All of them would be destroyed by removing large quantities of water for fracking and by any fracking leaks or runoff. Eastern Ohio has long been a sacrifice zone to the fossil fuel industry. Coal, oil, and gas have been removed and pipelines have been shoved through. These poor communities donâ€™t see the income from fossil fuel extraction, which goes to the already wealthy corporate owners. But they do see the desolation left behind. They deserve jobs of the future, not pollution of the past. **Effects of fracking** Studies show air and water pollution caused by fracking, along with intense artificial lighting, noise, truck traffic and fracking infrastructure will negatively impact these two wildlife areas, if you approve lease nomination #s 23-DNR-0001, 23-DNR-0002, and 23-DNR-0003 to frack Valley Run Wildlife Area, and lease nomination 23-DNR-0004 to frack Zepernick Wildlife Area. Each frack well uses 4 million to 6 million gallons of fresh water â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws. Where will all this water come from? The likely answer is Valley Run, which flows through Valley Run Wildlife Area, and Zepernick Lake and Ruff Pond, fed by Conser Run in Zepernick Wildlife Area. This amount of water withdrawal will ruin these beautiful streams and bodies of water. Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? Valley Run is accessible only through a few narrow, hilly county roads such as Bacon Road. These roads may not even be passable in wintertime. Zepernick is accessible from State Route 172, another two-lane hilly road. These areas are not designed for heavy industry. Fracking is incompatible with visitor experience at Valley Run, Zepernick, or any wildlife area: - Fracking is extremely loud â€“ chasing away the wildlife who call the area home. - Fracking injects millions of gallons of toxic chemicals into the ground â€“ including PFAS â€“ and the wastewater that comes back up is radioactive. - Frack pads are fully lit at night â€“ disturbing any campers trying to sleep. - Frack wells flare methane â€“ polluting air all around and in the wildlife area. **Ohio Statutory Requirements** According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

			- Economic benefits: A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our outdoor recreational spaces adds $8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state economy than fracking our stateâ€™s most treasured natural resources ever could. - Compatibility with current land uses: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€“ chasing away the wildlife who call the area home. Fracking injects millions of gallons of toxic chemicals that the public is not allowed to know about into the ground, and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€“ disturbing campers trying to sleep. Frack wells flare methane â€“ polluting air all around and in the wildlife areas. - Environmental impacts: If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€ - Adverse geological impacts: Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip.The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. - Impact on visitors: Will Ohioans and tourists want to hike, camp, fish, hunt, bird, or swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation?
