<p>gayle</p>	<p>richardson</p>	<p>OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park</p>	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------------	-------------------	--	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Jo	Resciniti	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>I live in Allegheny County, Pennsylvania, very close to Deer Lakes Park. In 2014, Allegheny County leased the subsurface drilling rights to the park. A single well pad, Gulick, was constructed outside of the park property and gas was accessed from underground laterals. Officials and Range Resources assured the public that there would be no surface disturbance and no impacts to the park or its visitors.</p> <p>Years later, a Duquesne University graduate student conducted a water quality survey and found that the surface waters of Deer Lakes Park have been contaminated by frack fluid and surfactants consistent with what was used at the Gulick well pad. See the report here: https://dsc.duq.edu/etd/1776/</p> <p>I walk around the lakes and on the wooded trails at Deer Lakes Park several times each week. I've seen oily discharges, and a dead beaver floating belly up in the water. These have been more memorable experiences at the park than the wooden sculptures and upgraded restrooms purchased with gas lease royalties.</p> <p>In January of 2023, I was hiking in the park with my family and our little dog when we became overwhelmed with chemical smells that burned our throats and noses. An acrid taste filled my mouth. As we rounded a bend in the trail, we could vaguely make out the Gulick well pad where Range Resources was drilling additional wells, this time drilling laterals that extend the opposite direction from the park. The site was noisy and we could see a large ground flare. We were 1/2 mile away from the well pad. I had a headache for the rest of the day.</p> <p>This is the impact of one well pad on a county park. Ohio is proposing to surround state parks with multiple well pads. This proposal is going to adversely impact tourism revenue because people will not camp and hike at places that gives their kids a headache and risks their health.</p> <p>Consider the mistakes made in Pennsylvania when you make this decision. Please deny the nomination to lease Salt Fork State Park.</p> <p>Thank you,</p> <p>Jo Resciniti</p>
----	-----------	---	---

Shelley	Chernin	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>I am a third generation Ohioan who chose to raise my children in this great state. Like so many Ohioans, I love Salt Fork. The Lodge there was a favorite destination for my family when my children were growing up. At Salt Form, my "city kids" learned to appreciate the natural beauty of our state -- to swim in a pristine lake, to recognize the birds and wildlife during out hikes in the woods, to love the majesty of the trees and the variety of plant life. We rented boats, and my kids learned to fish. Salt Fork is truly the perfect park for families. There is something there for everyone.</p> <p>I am devastated that the perfection of Salt Fork will be impacted in any way, probably destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well " and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the "Halliburton loophole" " the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic " 2,300 to 4,000 truck trips per well " will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud " chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground " including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night " destroying</p>
---------	---------	---	--

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Lonna	Blasi	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			<p>I have visited and camped at Salt Fork over many years. It is a haven to get away from it all. While it is close to Columbus, it is an oasis. We don't need to have oil and gas rigs spoil the view, and pollute the air, soil and water.</p>
--	--	--	--

Anne	Rubin	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to urge you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park. You have authority to do more than rubber stamp or approve these nominations -- please please use it!</p> <p>The program I formerly worked for was a law firm serving Ohio's Appalachian counties and frequently held semi-annual retreats at Salt Fork, bringing a large staff to the facilities for several days. The facilities were accommodating for this large meeting. Some take-aways: the road to the park is narrow, curves and winds up and down steep hills. When an attorney suffered a heart attack one year, the local medical facilities were not equipped to care for him and he had to be flown to Columbus. Moreover, it was apparent that the local economy is centered on the park and its flow of visitors. While one might assume that the risks of operating a gas company in this rural region would fall on the private companies who lease the right to operate where the roads are not built for industrial use, where the medical facilities are thin, the community also bears the risks, which can become starkly real when something goes wrong. The Commission's decision-making is required to consider public comments because the community is affected, for good and ill, by the choices you are tasked to make.</p> <p>Most of the park's visitors have not been truly informed about these nominations. Having a limited amount of information on an obscure website, rather than posting at obvious places in the park or on the park's website, has resulted in this. What does the administration have to hide? That the visitors will return in years to come to the traffic of tank trucks, the noise of flaring, the light pollution of industrial well pads, the diminishment in every way of the natural world which they formerly enjoyed. Once again, it will be the Appalachian communities that will give up the riches, the safety, and the heart of their places so that others in other parts of the state will be enriched. Those of us who love and live in this region must protest!</p> <p>There is no way to protect the park from "surface impacts" considering the methane leaks accompanying U.S. oil and gas production, surveyed to be between .65% and 66.2% presently. https://iopscience.iop.org/article/10.1088/1748-9326/ace3db/pdf. This publication this week provides data that gas is as bad as coal when it comes to contributing to the climate crisis which is impacting us all.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans "who own and pay for our public lands" visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast."</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well "and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the "Halliburton loophole" the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic "2,300 to 4,000 truck trips per well" will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p>
------	-------	---	--

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS" and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

			<ul style="list-style-type: none">- NO environmental impact to the park- NO adverse geological impact- NO impact to visitors to the park- NO impact to wildlife or plant species- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.- NO use of any water from any nearby lakes or streams <p>The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€œ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Susan	Fisher	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Patricia A	Serio	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to request that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------------	-------	---	--

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Denise	Ryan	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

--	--	--	---------------------

Nicholas	Kronz	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork hold tremendous value as Ohio's largest state park. Thousands of visitors, including a plurality of Ohioans, visit on an annual basis to. These Ohioans are the rightful owners whose taxes fund these public lands. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast."</p> <p>But all of that will be spewed with pollution if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the fossil fuel industry to flood Salt Fork with 16 well pads to frack over 280 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well " and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the "Halliburton loophole" " the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic " 2,300 to 4,000 truck trips per well " will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud " chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground " including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night " destroying any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.</p>
----------	-------	---	---

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio "and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Kyle	Smith	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am only 17 years old. In my brief amount of time on our Earth, I was never really exposed to parks. Instead, my childhood was more so focused on video games, the Disney channel, and other indoor activities.</p> <p>It wasn't until high school when I grew a true appreciation for our state parks. Following some family troubles and grueling academic stress, I needed a mode of escape that would connect me with true, more serene priorities. Hiking in nature provided this to me. Unlike the echo-chambering, frantic zone of digital entertainment and social media, parks don't have anything to remind me of my familial or school-derived woes. I can focus instead on the calm waters, beautiful trees, and chirping of the birds.</p> <p>But, alas, it seems as if this good thing may be coming to an end. Fracking, both on and near state parks, threatens both the ecosystem and the mental health of all Ohioans finding refuge in parks as I did. The oil would pollute the waters, the trees would grow weaker and less biodiverse, and the chirping of the birds would grow mute in comparison to the heavy metal gears that would screech into parkgoers' ears. Please, I beg of you, do not let such a travesty occur. Economic interests seek to indirectly improve quality of life by bolstering finances (although really, only companies prosper under fracking). I propose the more direct solution of defending the quality of life benefits offered by fracking, which are enjoyed by all Ohioans.</p> <p>I know that I am not alone in this issue. While activist groups certainly use their voices the most to express their stance on issues like fracking, I firmly believe that the same sentiments are held in the hearts of all Ohioans. In my own life, I see a love for our parks in every member of the environmental club that I lead at school. I see a love for our parks in teenagers looking to limit screentime. I see a love for our parks in my grandmother, who enjoyed nature when she couldn't afford many other past times when she moved to Ohio. I see a love for the parks in each and every Ohioan.</p> <p>Don't let this love die at the hands of fracking.</p> <p>I appreciate your time in reading my message,</p> <p>Kyle Smith</p>
------	-------	---	--

Annemarie	Helm	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----------	------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Brian	Campbell	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>Please DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park. What I liked about staying at Salt Fork was the quiet in and around the lodge. I found peace around the lodge and at many other places in the state park. I don't think I would find such peace and quiet when surrounded by industrial operations.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans who own and pay for our public lands visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast."</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well and each pad will hold multiple frack wells. 			<p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>
--	--	--	---

Donald	Parker	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>Salt Fork State Park was a favorite place for our family as the children grew up. More recently, it was a meeting place for my cousin's reunion. It's a pristine natural gem of Ohio State Parks, with an interesting history as well as a place for many people to enjoy the best of what Ohio has to offer. Please, please DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans " who own and pay for our public lands " visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast." □</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well " and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the "Halliburton loophole" □ " the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic " 2,300 to 4,000 truck trips per well " will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the</p>
--------	--------	---	--

end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€œ Fracking is extremely loud â€œ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground â€œ including PFAS â€œ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€œ destroying any ability to stargaze. Frack wells flare methane â€œ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€œ

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€œ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Sincerely,

Donald Parker

Anna	Kozlenko	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Really think about the fallout of this leasing public lands to fracking companies...the damage that has been proven on land in Pennsylvania and that states wise decision to not allow fracking any more. Gas as a source of energy will be replaced in the coming years and the land that has been torn up with pipes extending miles in getting the gas to its buyers will become useless.

Thank you for thinking of our children and grandchildren.

Anne	Wardwell	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park. My tax dollars go to help maintain our state parks, and I want them to remain as pristine as possible. This means NO FRACKING!</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home.</p>
------	----------	---	--

Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “œforever chemicals.” □

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Joyce	Parker	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>It seems just shameful to me that such an frack-attack could be considered for our State Park! Has the fossil industry no respect at all for the safe and open lands for humanity and the wildlife that lives there? Fracking is destructive and earns money for industry. They should not rule! Fracking is harmful for our planet's changing climate and immediate environment for those who appreciate clean air and water. We love and need our State Parks and Salt Fork is a jewel in our land.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------------	---	--

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Shawna	Burkham	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>The dangers related to fracking are many, but the biggest one may be the fact that we really can't control the negative impact it has on ALL facets of our environment.</p> <p>Every time I read details of how fracking actually works, I think to myself "How can the brightest minds ever THINK that injecting millions of gallons of water into the earth at a high pressure is a good idea?" I may not be a scientist, it common sense would tell you that it's a ridiculously dangerous practice and should not occur anywhere, much less in our treasured state parks.</p> <p>PLEASE DENY THESE REQUESTS TO FRACK!</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans "who own and pay for our public lands" visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast."</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources.</p> <p>Comments and objections from residents of the state and other users:</p> <p>We demand PROOF that there will be:</p> <ul style="list-style-type: none"> - NO environmental impact to the park - NO adverse geological impact - NO impact to visitors to the park - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams <p>The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p>

- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Megan	Williams	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

While I no longer live in Ohio, I grew up there and visit frequently and want to see the parks, forests and wildlife thrive for generations to come.

Sincerely,

Megan Williams

Kelcey	Jacobs	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to ask that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest of our Ohio state parks. Our state parks are a vital natural resource created with the intention of preserving wild space for nature, plants and animals, while offering a place for education, recreation, and rejuvenation for the people who visit.</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals. Where will all this water come from? Much of it from Salt Fork Lake, or the streams that feed the lake.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the economic benefits, land use compatibility, environmental impacts, and geological impacts when determining whether to approve or deny a lease to frack our public land:</p> <p>Studies have show that fracking does NOT increase jobs or improve the economy, particularly long term. Our parks and public lands DO contribute to our economy by creating jobs and promoting tourism, adding over \$8 billion to our economy each year. The fracking process itself, along with the activity on and surrounding the well pads for years to come will cause irreparable damage to Salt Fork State Park for the plants and animals who inhabit the park. These damages will also result in changes that will greatly decrease the numbers of visitors to the park .</p> <p>Fracking itself, as well as the truck traffic required, is extremely loud. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.</p> <p>If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of a

hell scape?

Comments and objections from residents of the state and other users:

When we took our grandson to Salt Fork last year, we did not go so we could see oil and gas extraction rigs. We did not go to listen to the sound of machinery. We went to enjoy the hills and the valleys, the birds and the quiet. We went to enjoy nature and a feeling of getting away from it all. We went to show our grandson a different, beautiful part of Ohio. Why would we want to return to Salt Fork with both the peace and the land grossly disturbed? The memories of green landscape and a lovely lake, quiet places and enjoying it all with family do make me want to return, but that will be lost with fracking. You must preserve Salt Fork as it is for us and future generations.

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.

As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Susan	Calhoun	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to request that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>I am totally opposed to allowing oil and gas extraction on lands set aside for the near 12 million Ohioans to enjoy, not to mention the plants and animal species that exist in our natural areas. I was born and raised in Ohio and have spent all my life as a resident and taxpayer; therefore I am asking that our natural public spaces not be polluted and despoiled for short term monetary gain.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p>
-------	---------	---	--

			<p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud " chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground " including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night " destroying any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.</p> <p>Environmental impacts</p> <p>If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."</p> <p>Adverse geological impacts</p> <p>Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.</p> <p>Impact on visitors</p> <p>Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?</p> <p>Comments and objections from residents of the state and other users:</p> <p>We demand PROOF that there will be:</p> <ul style="list-style-type: none"> - NO environmental impact to the park - NO adverse geological impact - NO impact to visitors to the park - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams <p>The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p>

-------	------------	---	---

end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€œ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground â€œ including PFAS â€œ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€œ destroying any ability to stargaze. Frack wells flare methane â€œ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€œ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Janet	Biddlecombe	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			Please do not allow this danger to our environment.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

On a personal note, this is where my family and I live. Some of our first jobs were working in this beautiful state park. On a day off together we can be found hiking the numerous trails, boating on our pontoon and wave runner, swimming with our dogs, or camping at the campground. These are just a few of the wonderful activities that Salt Fork State Park provides to not only us locals, but people who travel from all over the United States to our area.

Salt Fork State Park is home to many types of wildlife, including bald eagles, and vegetation. My father is a quadriplegic, being on the pontoon boat is about as close as he can get to a personal encounter with these beautiful creatures and sights. Please do not deny this luxury to a man who has already had his life altered so much.

I ask you, please think about the personal impact this decision will make on those of us that will be living with the everyday consequences of fracking Salt Fork State Park. It will change how we spend our free time, travel, our economy, and LIVE. This is only a fraction of changes that we will have to face. This is why I am pleading with you to DENY the lease nominations in Salt Fork State Park.

Jane	Hobbs	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Catie	Stoltzfus	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Laura	Schmidt	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Elizabeth	Noble	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>The Planning Stage</p> <p>-----</p> <p>The sole purpose of a state park is to be a refuge, a preserve, a relaxing place for people and the biodiversity that supports us to exist. Salt Fork performs well as is, and increasingly better with the wildlife conservation efforts of the last decade. It is a well-tended, high functioning nature/recreation area. Both biodiversity and protected wildlife species have increased in the park with the true investment in conservation over the last decade. I, personally, have attended three different educational conferences with a focus on conservation action and the actual completion of habitat and biodiversity assurance projects in the park.</p> <p>If you choose to discount the known effects of fracking on air, water, and the land-you are still left with explaining why you would destroy a beloved, functional, and profitable public space. Salt Fork is quite close to being a poster child for proper care and fostering of public lands. A National Heartland Poster Child for long-term care and tending of a public space in a way that benefits humans on all levels. Benefits humans, wildlife, and biodiversity. You will be, without a doubt, destroying the very sort of functional, renewable, resources ODNR is tasked to protect for the long-term benefit of Ohio. Having been awarded the Top Place to Visit in Ohio moniker more often than not, Salt Fork stands as the grounding business and a low impact keystone attraction for several countin Ohio. Fracking around the park will defeat its ability to attract visitors. Those are losses that cannot be recouped by planting farm rows of genetically altered trees a decade from now, they cannot be recovered in our lifetime.</p> <p>The overwhelming 24 hour impact of fracking is not compatible with relaxation, or productivity, for that matter. It is not something the human body is able to accommodate and eventually block out like nearby train tracks. Quite the opposite, in fact. Fracking creates an excess of environmental changes that assault the senses. The noise, the smells, the subtle ground movement, the dust that covers everything, the quality of the air, are all ever-changing, and impossible to ignore. The constant effort of the human body to both process this and filter it out creates both irritation and exhaustion on a physiological level. It will create that feeling in your park employees, park neighbors, and guests seeking to be grounded in nature. Quite the opposite of its first and foremost function.</p> <p>Have you been presented with a plan to control this overwhelming barrage? In exactly whose budget is the cost of mitigation going to come from after the complaints roll in and attendance drops? Are echo barriers part of the contract? I hope not, because while they may block out your noisy neighbor in the city- the valleys and lakes of Guernsey County will render them a costly and pointless failure. Plus they don't still the ground, muffle traffic, block the light, or change the chemical air quality. They are just an equally unattractive addition to the chaos. There is NO way to decrease the impact to an acceptable level. And let me be very clear about this, as someone who is at the point of fleeing my home community after attempting to tolerate fracking for a decade-IT MATTERS ABSOLUTELY ZERO THAT THE DRILLING IS NOT IN THE PARK. It doesn't matter if they are all a half mile away or a mile.</p> <p>The Baseline Facts</p> <p>-----</p> <p>A decade into fracking, we have only just begun to experience the long-term negative effects. However, we know the short term ones. THEY ARE OUT THERE AND NOT IN DISPUTE. There is no longer news that tells us fracking is positive for humans, wildlife, the community, the local job market/economy, or the environment. We KNOW the same people responsible for lies about cigarettes and the oil industry's impact on climate are now leading the disinformation/spin campaign on fracking, oil extraction, plastics, and their link. We've learned that with the exception of a very lucky few, locals do not become rich from fracking. As a whole people in Ohio feel they have been lied to and shorted on the financial benefits of fracking. What they do get more of is disgust, disdain, and challenge from fellow community members. Within a decade the costs to keep the communities functional outweigh the benefits- if you do any sort of long term accounting. Somewhere along the way the ability to factor actual cost became a forgotten practice. The "emissions" stick around, disperse upward into the air and water and downward into the soil and water. This is not good in a community that also relies on soil for its livelihood. An elementary school age child can tell you it is not possible to pollute the water,blast it into the ground, leave it open to evaporation and keep the bad stuff out of the water cycle. It's absolutely foolish to think otherwise-which is why companies have just switched to claiming the new, improved chemicals are not toxic. Not that anyone has studied them, in any capacity. Natural Gas is not a "bridge" fuel and no one under the age of 45 and educated believes it's any sort of improvement. We'll not be retrofitting our homes to add a gas dryer. Despite millions of dollars in advertising claiming people will not want to give up their gas stoves, I've never met a single person in my lifetime that felt that way. Though I have met hundreds of younger people who are fearful of them. We've already stopped single use plastics whenever possible, and we want neither more plastic NOR a disaster of a cracker plant. The closest Shell plants have demonstrated their problematic contributions to the community clearly at this point. We also know that a decade of results point to fracking actually being on par, if not dirtier than coal as far as overall impact. Seems a whole lot of factors were left out when calculating that one. Ohio actually designated it GREEN before the results are even tallied. Do any of you know how many drilling hours are required to complete a single well? Do you know what powers those drills? Additionally, rideshares, public transportation, bikes, scooters, etc. are all reasonable things we are willing to live with for the sake of our children, your children, OUR GREAT GRANDCHILDREN. In reality in July 2023 in Ohio, we're just shooting for consistently breathable AIR. Blame Canada? I think not, when Ohio is about to willingly engage in the precursor to such fires on an epic scale.</p>
-----------	-------	---	--

Oil and Gas Land Management Commission Due Diligence:

Regardless of which imaginary statewide benefit you may choose to bet YOUR REPUTATION on, from jobs to bridging to money for operations; the science (Non-industry funded, reviewed, published, or hijacked) says it is a bad bet. The economics are not sound on the most basic levels. Unfortunately, you have the responsibility AND permission to make this bet with our lives.

The group of you have for some reason offered to freely, without compensation, make decisions that will affect our world for the remainder of our lifespans and beyond. I think it's clear your decision is not limited to its impact on Ohio. As representatives of the public, you have opened the finances of yourselves, your families and your businesses up to what I am sure will be intensive public scrutiny. With the recent coal energy scandal in Ohio indicating corruption is commonplace, masses of online sleuths are at present putting together Ohio's corruption/energy/people/payoff links. I only learned of Husted's degree of involvement two weeks ago. Government agencies are sacrificing peripheral players to the FBI and a few scapegoats are sitting in prison resenting those who escaped the consequences for doing far worse. There are bad actors involved in forcing this HB 507 legislation that go back as far as 2011. Remember 2011 when the citizens of Ohio first made it clear we have no wish for fracking on a large scale in our state? The passing of HB 507 in December of 2022 was nothing short of purposeful deception. Your commission is both the stimulus and response born of that deception. A sneaky move perpetrated by Senator Mark Romanchuk, a man representing a district that is wealthy, developed, and has incredibly low feasibility for fracking. Your names will be rightfully attached to and held in account for the decisions that will likely hold the greatest weight of your life, and many lifetimes. The culpability you all have been willing to take on is heavy. The required reading alone will take days, perhaps weeks of your time.

Just in order to responsibly calculate the destruction and impact on the immediate environment the clearing of trees alone will have one must factor in the importance of old growth, carbon conversion load of fungal tree networks, fragmentation effects on protected species and game species for at least a decade and the poor chance those lands will be properly rehabilitated. The insect, animal, and biodiversity loss will be monumental, perhaps permanent. Will it be compliant with updated Best Forestry Management practices in two years? What amount of soil erosion will happen and will that soil end up in highly recreated or sensitive streams and lakes? Does the Ohio Division of Forestry have that all figured out? Of course not, we've only just been made aware of the areas. Who is your contact on that? What about fortifying the roads for logging? Who will pay for, complete, approve and then fix that work? Since there is fairly new statistical data for Ohio regarding ticks, please don't forget to factor in the impact clearing land and displaced wildlife mixed with rehabilitation in the form of orchard grass over pipeline corridors and construction land will have on the population of Ohio ticks and the spread of Lyme Disease. * However, this is the duty you have accepted as representatives of Ohioans.

Since your individual career choices do not qualify you to make these very complex decisions in any way, in fact, are undeniably uniform and overlapping in baseline knowledge, I will be counting on the five of you to do your due diligence researching and educating yourselves on the true impact of your choices.***

Legal precedent on the younger generation's Constitutional right to hold the government responsible for the state of their future, advertising agencies being held accountable for deaths their misleading copy facilitated, and scientists being publicly denounced and stripped of letters for their intentionally skewed or irresponsible research findings reports made while hiding their more accurate findings are all changing and trending toward decision makers being held liable. Conservation practices are being fine-tuned at least twice yearly due to the young scientists that are interested in the future and have readily available funding. The intensity is increasing in direct correlation to better understood systems and the costly horrors we perpetrated only to disrupt naturally balanced systems already in place and requiring no new industry. Just to maintain competency in the conservation world I have to dedicate a few evenings a week to continuing education.

The Human Factor

I joined this battle in January with the intention to fight for the environment, biodiversity and a livable future for my family. I was only able to join after nearly a decade of adjusting to living down the road from an uninvited well pad. The remainder of my life is affected by the constant, ever changing stress of living near a well pad. Two months in I realized that not only had you all not addressed environmental concerns, you hadn't even considered basic human needs. In fact, the only active signs of anything you have done at all, definitively exclude impact on humans. Mr. Buehrer sought out Nate Wilson from the MWCD to share the secret formula for maximizing earnings. The commission was not prepared enough to inquire about the ratio of drilling to actual gas production over the first contracted period. No queries were made regarding how MWCD took pains to hide the rigs at first but are no longer able. The incredibly significant fact that the MWCD has readily available water and the rights to sell it cannot be factored into the ODNR's equation was not discussed. That the MWCD has dropped the price of said water to fracking companies as initial contracts expired and new ones were signed was not explored. How the campers and patrons of the park feel about the changes were not a consideration. How many cons were even discussed? The entire meeting looked like a cult initiation with planted questions to fake skepticism. On the other hand, we had to publicly push for you even to be exposed to the non-monetary implications of fracking. I understand the purpose of your commission, the actual one, but under no circumstances is making a decision that will affect access to water, air quality or public health to be made without considering such factors. Not only would such actions be contrary to human nature, they are a clear message that we, the citizens of Ohio you are committed to represent, are expendable. And this action cannot be defended, not for an illegally passed law that contradicts basic human rights, rights which also happen to be fundamental, implied Constitutional Rights. It cannot be defended for the good of the many, and certainly not by claiming ignorance. For the number of lawyers contained within this commission, I will be surprised if this was never a consideration. I will be disgusted if legal gymnastics ensue for the sake of someone's monetary gain over basic rights. This result is sacrificing the life of many (indeed your decision will echo

across our planet) for the already privileged few. A few who are not you, and will never be you. A few that will treat you as expendable.

Mr. McGregor, as the choice to represent the Conservation Community, you should not even briefly consider approving any of this. If you intend to falsely represent those of us who fight for conservation, be prepared for scrutiny. It's been made clear by four decades of climate summits and accords that compromise will not work and energy resource companies cannot be trusted to regulate themselves. Even at its most basic levels conservation and plastic production are mutually exclusive. Your voice has the potential for the most resonating damage as your vote will be doubly critiqued as the sole environmental expert of the group. Maybe you are a strawman, or maybe you are exactly the eco-warrior to take this on. Count on support if that is YOU.

Final Considerations

=====

If you all know Ohio, you realize there is very little confidence in our government agencies and their talking heads left to be had. We have reached a new era when your average citizen can no longer afford to go about their life and count on their representatives to decide their best interests. That attitude has led to an administration that can't be bothered to think about air or water. It's an administration that is doing zero for our children other than arguing to limit their education. One that feels free to shamelessly present them with a gigantic sink of a planet and no means to improve it in their lifetime. I am going to love listening to anyone try to justify that. Moreover, a law currently being challenged in court for the legality of its passing certainly cannot be your keystone.

With the news about gas wells and fracking coming out the second two week of July 2023 in Reuters, The Wall Street Journal, PHYS.org, Visual Capitalist, The New York Times, Forbes, etc. confidence in financial investment is more irresponsible than when I started this endeavor. What's left to necessitate this? Jobs? With DeWine and Husted patting themselves so heartily on their backs for our record low unemployment rate there goes that excuse of needing jobs. Without financial benefit or jobs it's not even worth discussing. Not unless someone fanagles a new law to ensure we all have the freedom to choose our own energy source as long as it's gas. So do you double down and force resource extraction or do you step out of culpability?

Good Luck navigating your chosen path.

You have an open invitation to contact me and I will set up a 24 hour experience 500 ft. from a fracking pad so you can experience the reality of what you will be subjecting others to. It's not just the forgotten rural folk anymore, it's the people who have beloved generational family gathering spots, retirement paradises built with money saved over a lifetime and meant for grandkids and fun, exclusive lakeside communities that were bought to be show homes, vacation cabins that provide income, you will have the representatives of every valued section of Ohio's income tax brackets asking you for answers. I'm not entirely sure this wasn't the reason for the creation of the committee.

E. A. Noble

Tanya	Woodrum	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Monica	Brueggemeier	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	--------------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

--	--	--	---

Live up to your mission: To ensure a balance between the wise use and protection of our natural resources for the benefit of all.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€” and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Aliza	Weidenbaum	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I recommend ~enjoying~ your power to deny the nominations. If you just go along with industry's short-sighted interests, there's no joy in that. In contrast, by saying 'no,' simply & repeatedly, you will play a heroic & satisfying role in guarding our most protected areas. You will be celebrated! By us, the public, in whose name & service you work.</p> <p>I am writing to ask that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p>
-------	------------	---	---

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud " chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground " including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night " destroying any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

			<p>Ohio state parks and all Ohio public lands are paid for and owned by us, the people of Ohio “ and we want & expect you to DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>
--	--	--	--

Russell	Long	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>I LOVE Salt Fork State Park! As a former resident of Pittsburgh, we have been there with family for picnics and walks. Now that we live in Ohio, I feel it is my duty to join with those who are trying to save SALT FORK from severe damage to this precious environment in my new state who appears to be hurtling down the same road that has led to ruined land that Pennsylvania industrialists doggedly fought for the right to abuse, promising that it would lead to economic benefit to the citizens there. Well, it did lead to economic benefits - to a very few (rich) people, but then they left and stuck the residents of Pennsylvania with the costs - financial, medical and ruined land. I don't want that to happen here in OHIO too!</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans " who own and pay for our public lands " visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Karissa	Botdorf	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Matt	Thomson	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio.</p> <p>So I'll make this one shorter than most.</p> <p>Fracking sucks. You know it does, and if you don't, all you have to do is visit a community that has allowed it.</p> <p>It creates winners and losers, arbitrarily, based on who owns the most land and who gets lucky enough to sign a good contract. This creates chaos in the local community and upturns socioeconomic structures that never recover. Drugs, crime, and \$100,000 pickups driven by out-of-town gas workers.</p> <p>You can deny the climate impacts of fracking but you can't deny the groundwater issues. Even if you're comfortable burning today to doom your great grandchildren in years to come, you should wonder if it's worth ruining a great state park just to get some natural gas out now.</p> <p>Isn't there a really nice state resort on this land? You guys are bold with this one. We'll be the proud owners of a state fracking exhibit - that'll look good on the brochure.</p> <p>Like seriously, have you even thought about it? Have you even stayed at this state park? It's really nice, but if you've never been, then you don't know what it'll be like to have pads all over the place and to have trucks beeping at all hours of the night.</p> <p>Oh did you not know that fracking teams usually operate about 24/7 until the wells are dry? You probably didn't think about how much water they need, or that there are huge heavy trucks that carry that water, and if you don't stop them, these companies will just drive right up to the lake and pull the water out for free. Might be the reason they're so excited to do this in the first place. They figure you don't know. Maybe you don't, maybe you're just greedy and never read any of the fine print.</p> <p>Not to mention, you should publicly post which stocks you're going to buy, or likely already have bought, so that at least the rest of the state can make some money too.</p> <p>You still have a chance to say NO to this, and do the right thing in so doing. One more chance to say NO.</p>

- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Nicholas	Wells	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
----------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

KATHLEEN	CARROLL	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Subject: Urgent Request to Deny Fracking Lease Nominations for Salt Fork State Park</p> <p>Dear Oil and Gas Land Management Commission,</p> <p>I am writing to urgently address and strongly oppose the approval of lease nominations #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park. As a concerned citizen of Ohio, I implore you to reconsider and ultimately deny these nominations for the following critical reasons.</p> <p>First and foremost, Ohio state parks and all public lands within our state are valuable assets owned collectively by the people of Ohio. Granting fracking leases on such cherished public lands would undermine the very principles on which our parks were established and jeopardize the natural beauty that belongs to all of us.</p> <p>Fracking, as we know, has severe consequences for both the environment and local communities. It leads to an unequal distribution of benefits, favoring landowners and corporations while disregarding the broader impact on the communities. The ensuing upheaval in socioeconomic structures disrupts the harmony of local life and often leaves scars that are hard to heal, affecting the well-being of residents and inviting numerous issues, such as increased drug use and crime.</p> <p>Beyond the social implications, there are significant environmental concerns associated with fracking. Denying the climate impact of this practice would be shortsighted, but the undeniable issues concerning groundwater pollution raise further alarm. Even if we choose to disregard the potential consequences for future generations, the risks to our immediate environment and water resources are too great to ignore.</p> <p>Additionally, Salt Fork State Park is a beautiful and cherished location for many Ohioans, serving as a recreational oasis for countless families and individuals. Allowing fracking in this area would dramatically alter the landscape and disturb the peaceful enjoyment of the park, replacing the tranquility with industrial activity and incessant noise from trucks and equipment.</p> <p>Moreover, it is essential to consider the uncontrolled water usage by fracking operations, as they consume vast amounts of water, leading to potential shortages and undue strain on local water sources. The disregard for environmental well-being, coupled with a potential lack of oversight, poses a real threat to Ohio's natural resources.</p> <p>In light of these critical concerns, I strongly urge the Oil and Gas Land Management Commission to reevaluate the gravity of this decision. The long-term impact on our state, environment, and citizens should outweigh any short-term gains. I beseech you to stand on the right side of history and unequivocally reject the lease nominations for the sake of Ohio's future.</p> <p>Thank you for your time and attention to this urgent matter. Please remember that we still have a chance to protect our state park and make a positive difference for generations to come. Let this be the moment where we choose to prioritize our environment and the well-being of our people over profit.</p> <p>Sincerely,</p> <p>Kathleen M. Carroll</p>

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Katherine	Westerheide	OGLMC must DENY lease nomination to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----------	-------------	--	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. - NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Brian	Davis	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to ask that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Ohio state parks and its public lands are paid for and owned by we, the people of Ohio. I ask that you please DENY the lease nominations in Salt Fork.</p>
-------	-------	---	---

John	Flaherty	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Tom	Zsembik	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

James	Glenn	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Scott	Adler	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Patrick	Dooner	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Matthew	Allen	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Levi	Oesterman	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			<p>Please don't be assholes to the people who love our state, it's people, wildlife and beautiful land.</p>

Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Sammy	Passell	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Karen	Howgate	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Joshua	Selby	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----------	-----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

David	Kelsey	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Nathan	Clevenger	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Charles	Turnbow	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>You've likely already gotten a lot of letters about the benefits of NOT drilling in this park.</p> <p>I'm just adding to the pile. I have many friends in Ohio who love visiting this state park and I don't want to see them heartbroken because of corporate greed that will do nothing to improve their lives. This makes me sad just thinking about it.</p> <p>Sincerely,</p> <p>Charles Turnbow</p>
---------	---------	---	--

Sean	Locey	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Aaron	Rose	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park

Rob	Faulhaber	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----	-----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Erin	Hayes	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>I am a mother. A mother to future generations. A generation that I am working hard to repair internally, through the inside of our family structure. How can I work so hard on these internal systems to have external systems going to hell around us. I want this next generation and our future generations to be proud of the way we use our natural resources. This is not the way to do this. My children and future children will not be proud of this. They will not seek out the natural beauty because it will be destroyed. Stop this, stop killing Mother Earth and the respect our indivisible family systems work so hard to repair.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. ------	-------	---	--

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS "and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

christian	brenden	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Mexico	Lucero	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	--------	---	---

any ability to stargaze. Frack wells flare methane â€“ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

megan	scherer	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Sahin	Lokman	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

-------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Cindy	Ball	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>Invest in renewable energy, not fracking. ------	---------	---	--

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS "and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Michelle	Kuczmariski	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
----------	-------------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
----------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Benjamin	Warner	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	------------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Linzie	Diaz	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. -----------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Victor	Elam	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>If these wells were to harvest a critically needed substance that can found no where else or could be done without likely damage to natural resources I would feel differently about it. The fact of the matter is that it seems for a price the state of Ohio is willing to sacrifice its environment for future generations and contribute to the global demise with providing more fossil fuel that will contribute to global warming. So, lets see, we have addition of CO2 to the atmosphere, removal of freshwater and making it unusable, disposal of the brine waste somehow that has its own set of problems, release of air pollution, I could go on but I hope you are getting the message.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
----------	-------------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Keshown	Hudson	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Keith	Barker	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			Shame on all of you for this
--	--	--	------------------------------

Matt	Hanrahan	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Carissa	Badgley	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

I personally enjoy many of our state parks and wild areas. I want them to be preserved for future generations. Fracking brings its own set of unique environmental problems and challenges even

			<p>when it is "ideally located". Setting up a fracking site right next to publicly enjoyed lands and fresh water sources is an irresponsible action as a public figure, bound to protect the best interests of Ohioans. Do not allow fracking on or near any Ohio State Parks or Fresh water lakes / rivers.</p>

Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Autumn	Kaufman	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Allowing big corporations to frack in our state parks would be catastrophic. Our beautiful country is being destroyed by corporate fat cats who care only for money, and you cannot let them continue. You must NOT let companies exploit our public land. You must do the right thing and STOP this ecological destruction. Please consider the severe consequences to the people of Ohio, the land, and the animals inhabiting it if fracking is allowed.</p> <p>Do not side with the wealthy elites of the country and let them profit from the exploitation of our amazing public lands.</p>

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Barynia	Backeljauw	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio " and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Ariel	Travis	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species

Nick	Edwards	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Wyatt	Taylor	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>I believe allowing fracking at Salt Fork State Park will have disastrous environmental and societal consequences. By turning Salt Fork State Park into a fracking zone, you are damaging one of the last public areas for citizens to enjoy peacefully. This will take away a space for teens and young adults to congregate and stay out of trouble, resulting in more crime in areas that cannot be monitored as easily. There are so few public areas in Ohio as is, please do not deprive the state of one of its natural treasures.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. Phillip	Krotine	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Jordan	Stryker	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Christopher	Turrin	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Aileen	Hull	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission,</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>It is important that we think about the consequences of what fracking Salt Fork State Park will do. Remember, as public servants, it is your JOB to think about the long term wellbeing of the people you serve. We, as humans, rely on the earth for our literal survival. Food, water, but also every other resource we use is in some way derived from the Earth. So when we pollute or pull excessive resources from the ground, like in fracking, we are literally killing ourselves. Even though oil is how we currently run our world, it does not have to be. In fact, it can no longer be if we want to continue to survive. We will pollute our water sources, expose people to the pollution of fracking, and harm more people as well as the Earth when the oil is burned.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Fracking is not even a solid economic choice. While the sticker price of gas may look cheaper, it does not tell the whole picture. Fossil fuels always have short term benefits, long term disasters. A true economist should always look at ALL of the involved costs that an investment project entails. Currently, the cost of gas is determined by extraction, transportation, cleaning, etc. However, it excludes the cost of drinking water contamination, health care costs from residents living near fracking sites, habitat and natural resource destruction, etc. Ecological restoration is incredibly long and expensive process.</p> <p>Additionally, a frack well only produces gas the first few times it is fracked. If these expenses are not included in your economic reasoning for investing in gas, then you are missing a huge piece of the financial outlook. On the contrary, a new report by C40 Cities found that compared to fossil fuels, renewable energies are cheaper, less volatile, and support more jobs. Renewable energy is also a critical piece of stopping climate change. Investment into renewables is the real economic winner.</p> <p>There are no wins here.</p> <p>Do not approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, which will allow the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>We demand PROOF that there will be:</p> <ul style="list-style-type: none"> - NO environmental impact to the park - NO adverse geological impact - NO impact to visitors to the park - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams

- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Caitlin	Chicoine	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Jeremy	Hoepf	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
----------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Claire	Schroeder	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. The Lodge and its surrounding areas are one of the most peaceful places I've visited in Ohio, and one of my favorite reasons for being there was the rolling hills that make you feel like you have truly escaped city life. I am personally not an outdoorswoman, but I truly enjoy seeing the natural beauty that our state holds.</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
----------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Megan	Foreman	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Justin	Jantzen	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an egregious 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			Please stop destroying our future.
--	--	--	------------------------------------

Tara	Harbert	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. --------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Anna	Pace	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Melissa	Fugiel	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>

- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Laverne	Dale	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ryan	Rasmason	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Kelly	Link	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Tanner	Bowling	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks.
