Fracking brings with it major disturbance of the land , pollution of the ground and its water, and loss of home to wildlife, the beginning of our food chain and many other negative consequences. We are robbing our own future if this is allowed to move forward.

Please carefully consider all the consequences including the negative and unintended ones in your deliberations.

Sincerely,

Hope Taft

I have been involved with the World Heritage Site nomination for the Hopewell Ceremonial sites in Ohio and one of the main criteria that the world commission is concerned about is the views to and from these mounds. Vistas and viewscapes are very important. Since that program was modeled after the US park service and our parks modeled after the US park system,we should follow their researched advice and protect our views too.

Hope Taft, 2933 Lower Bellbrook Rd., Spring Valley, OH 45370, 937-848-2993.

As a resident of the state of Ohio I strongly oppose the leasing of any public lands in or around state parks or forests to fracking. Public lands belong to all Ohio citizens and serve as a place where we can relax and connect with the natural world. As the world faces a climate crisis we should NOT be committing our state to continued gas and oil extraction. Park land should not be leased for the profits of the gas and oil industries at the detriment of the public.

Having spent time at Salt Fork I know it is a rare treasure and deserves full protection. The diversity of plant species and the abundance of wildlife continues to impress me every time I visit. It is one of few places in the state where one feels they can get away from the noise and pressures created by our industrial society. The next generations deserve a tranquil place to relax. Please protect our parks from industrial intrusion.

Patricia Heithaus

Good morning.

I am writing today in opposition to allowing fracking at Salt Fork State Park.

We are homeowners along Seneca Lake in Ohio and have experienced, firsthand, the reality of fracking. The noise, the truck traffic and destruction of surrounding roads, the clearing of the tree canopy for well pads and other related structures. And, most importantly, the dangers that are now ever-present from fracking itself.

There is the danger of leakage. The danger of earthquakes (see Oklahoma). The danger to first responders who are not given information about the chemical makeup of what the frackers are injecting into the earth. The danger of groundwater pollution. The danger of air pollution. And the list goes on and on.

Obviously I am NOT a fan of fracking. But this proposal, to frack our beautiful natural areas -- which have been specifically set aside as refuges, recreation sites, conservation areas, preservation oases — is counter-intuitive to the goals of our state park system.

Please continue responsible stewardship of Ohio's treasured green spaces. Protect them, and the citizens who enjoy them, from the risks and dangers of fracking. Do not allow financial gains to override the sanctity of protecting our essential ecosystems.

Thank you.

I oppose the proposed fracking near Salt Fork state park. The state needs to work towards a reduction in carbon emissions not sacrifice public resources for the petrochemical caused disaster we face. The recent smoke events are directly related to the fracking efforts. Destruction of ground water is another problem with this process.

Concern for time, money and resources spent and destroyed by fracking runs deep. Devoting that same time, money and resources to alternative energies would begin to ween us off a destructive and limited resource--oil.

A simple Google search of "Why is it important to have state parks" returns this answer. "Parks and protected public lands are proven to improve water quality, protect groundwater, prevent flooding, improve the quality of the air we breathe, provide vegetative buffers to development, produce habitat for wildlife, and provide a place for children and families to connect with nature and recreate outdoors." Fracking is not in line with the mission of state parks.

Best,
Catherine

To Whom It May Concern,
Do NOT allow fracking in Salt Fork State Park.
I'm writing to express my dismay at the consideration of allowing fracking near/in a state park. The state has done little historically to protect the minimal natural spaces remaining in Ohio. That fracking would be considered in this small area of Ohio that is a place of peace, relaxation, and safe family recreation is mind-boggling, disgraceful, and greedy. I find it increasingly difficult to call myself a Buckeye when our government makes choices like these.
Please DO NOT allow fracking in Salt Fork State Park and give me a reason to stay in Ohio.

Hi,

I am providing public comment as an Ohio citizen that I oppose leasing for fracking in or in the periphery of Ohio State public lands. Fracking has already had a negative environmental impact in eastern Ohio, and it is short-sighted to use public lands for private gain in such a destructive way.

State Parks, like Salt Fork State Park, were set aside for the nation, all of us, not to be exploited for commercial gain. Please save these pristine areas for our children, grandchildren, and descendants to watch and enjoy! This is irreplaceable habitat. Our country needs to invest in and pursue sustainable energy like solar, wind, geothermal, biofuel, etc. rather than devastate our public lands by fracking, drilling, and mining. Fracking contaminates our ground water. All Americans deserve clean water, air, soil, and safe food. Let's get rid of fossil fuels. Sustainable energy is the future for this fragile spaceship we're all on.

Please do NOT permit fracking near Salt Fork State Park!!!

Greetings,

Salt Fork is Ohio's largest state park and one of our most important public lands. Public lands must be preserved for the health and peace of all Ohioans. I implore you to NOT allow fracking to take place at Salt Fork, or any state park. They are dangerous, poisonous, and retrogressive.

I thank you for your time.

Best.

I am very concerned about the environmental impact of fracking in Ohio's public parks. This is a horrendous idea, and very shortsighted! Fracking is a destructive process that forever alters natural systems of water and wildlife, which in turn affects the future of all Ohio residents. **WHAT ARE YOU THINKING???** **Or have you stopped thinking about the generations to come?**

Please protect what's left of our Ohio natural resources and invest in environmentally safe clean energy for future generations. Once we've altered the land we can never restore its original function. I live near a park, and have watched in the last ten years the disappearance of bats, hawks, songbirds, cardinals, spring peepers, frogs, and other wildlife, and the tremendous invasion of invasive plants such as Asian honeysuckle, burning bush, privet, and poison hemlock, to name a few. I know people who lost water due to fracking in rural eastern Ohio and West Virginia, which, in turn, destroyed the value of their homes, making them uninhabitable.

Powerful industrial money grabbers will take their profits and leave. What is lost cannot be replaced. Think ahead!

**Kathy Orr

I am writing you today in opposition to any fracking at Salt Fork State Park. In Ohio we have great state parks that allow visitors to escape to the quiet and peaceful settings. Fracking will endanger all of the peace. Over my years I have worked for many nature oriented agencies, including Ohio Department of Natural Resources. As a naturalist and campground attendant I heard repeatedly how being in the quiet of nature reenergized people. People need walks in nature more than ever. Yes I know some say they can still do that with fracking nearby, but it's not the same. And of course there is the concern of the underground water being contaminated and the unstable ground after fracking.

Do not allow fracking at Salt Fork!

Mary Wentz

Oil & Gas Land Management Commission
Ohio Department of Natural Resources
2045 Morse Road
Commission.Clerk@oglmc.ohio.gov

Public Comment RE: Please DENY the Leasing Nominations for Salt Fork State Park and Wildlife Area, Nomination #s: 23-DNR-0005, 0006, 0007

Dear Commissioners,

The Ohio Environmental Council (OEC) respectfully requests that you deny the leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007.

The OEC is Ohio’s leading state-wide public interest environmental organization. We have a 54-year history and thousands of members located throughout the state and beyond. Our mission is to secure healthy air, land, and water for all who call Ohio home.

Salt Fork State Park is Ohio’s largest state park and one of the most beloved and important outdoor recreation destinations in the state. A 2009 ODNR publication stated that “Salt Fork State Park is a priceless gem to be cherished by the people of Ohio.”¹ Please deny the Salt Fork oil and gas leasing nominations in order to protect public health and safety, respect outdoor recreation, and confront climate change.

Nomination No. 23-DNR-0005 shows eight proposed shale fracking (“unconventional oil and gas production” or “UOG”) well pads surrounding Salt Fork. The construction and operation of well pads near Salt Fork’s boundaries seriously threatens the quality and character of this priceless Ohio gem. UOG leasing and development of the nominated Salt Fork parcels threatens public health and safety, current recreational uses, and Ohio’s outdoor recreation economy. By contrast, denying the Salt Fork nominations would protect the Park’s air quality; its tranquility; and its unique status as an Ohio outdoor health, wellness, and recreation destination. Denying the

¹ Wolfe, Mark E. "Geology of a Rare Gem: Salt Fork State Park." *Ohio Department of Natural Resources Division of Geological Survey*. [Ohio Geology 2 \(2009\)](#).

Salt Fork nominations would also serve the interests of present and future generations by helping to prevent the worst impacts of climate change.

Ohio Revised Code, Section 155.33(B)(1)(b), (c), (e), and (h) provides that:

In making its decision to approve or disapprove the nomination, the commission shall consider all of the following: [...]

- (b) Whether the proposed oil or gas operation is compatible with the current uses of the parcel of land that is the subject of the nomination;
- (c) The environmental impact that would result if the lease of a formation that is the subject of the nomination were approved; [...]
- (e) Any potential impact to visitors or users of a parcel of land that is the subject of the nomination; [and]
- (h) Any comments or objections to the nomination submitted to the commission by residents of this state or other users of the parcel of land that is the subject of the nomination;

UOG development of Salt Fork State Park would generate significant air, noise, and light pollution that would negatively impact visitors and users of the Park. R.C. 155.33(B)(1)(b), (c), (e), and (h). UOG development would conflict with current uses of the Park, including the recreational and health-based escape from industrialization, pollution, and nature fragmentation. R.C. 155.33(B)(1)(b), (c), (e), and (h). UOG development of Salt Fork State Park would also push the world closer to climate catastrophe at a time when virtually all nations of the globe recognize the need to rapidly decarbonize the energy sector. R.C. 155.33(B)(1)(c), and (h).

A. DENYING THE NOMINATIONS WILL PROTECT PUBLIC HEALTH AND SAFETY – R.C. 155.33(B)(1)(b), (c), (e), and (h).

Unconventional oil and gas production (UOG) is associated with: dangerous levels of hazardous air pollutants, including carcinogenic and endocrine disrupting chemicals; childhood leukemia; increased mortality in elderly populations; more heart attacks; low birth weight and extreme premature births; asthma attacks; and headaches and fatigue.

Dangerous Levels of Hazardous Air Pollution

A 2019 meta-analysis on the links between hazardous air pollutants (HAPs) and oil and gas development showed that HAPs linked to numerous cancerous and non-cancerous health conditions are found in the vicinity of production sites at concentrations exceeding health safety thresholds (Garcia-Gonzales 2019).²

A 2018 meta-analysis of endocrine-disrupting air pollutants revealed that there are more than 200 airborne chemicals associated with unconventional oil and gas development,

² Garcia-Gonzales, Diane A., et al. “Hazardous air pollutants associated with upstream oil and natural gas development: a critical synthesis of current peer-reviewed literature.” *Annual Review of Public Health* 40 (2019): 283-304.

including 26 known endocrine-disrupting chemicals and 8 suspected endocrine-disrupting chemicals (Bolden 2018).³

A 2014 study identified eight highly toxic chemicals in air samples collected near fracking and associated infrastructure sites across five states, including Ohio. The most common airborne chemicals detected included two proven human carcinogens (benzene and formaldehyde) and two potent neurotoxins (hexane and hydrogen sulfide). In 29 out of 76 samples, concentrations far exceeded federal health and safety standards, sometimes by several orders of magnitude (Macey 2014).⁴

Childhood Leukemia

A research study conducted over several years and published in 2022 revealed that children living within a 2-kilometer radius of at least one unconventional oil and gas well at the time of their birth were almost twice as likely to be diagnosed with acute lymphoblastic leukemia (Clark 2022).⁵

Increased Mortality in Elderly Populations

A study conducted in 2022 indicated that air contaminants stemming from unconventional oil and gas operations could be linked to negative health impacts in elderly individuals. The investigation discovered that older people residing close to or in the direction of the wind from these unconventional oil and gas extraction sites faced an increased likelihood of early death compared to their counterparts dwelling upwind (Li 2022).⁶

More Heart Attacks

A 2021 research study established a connection between unconventional natural gas production and heart-related health risks. The study uncovered higher rates of hospitalization due to acute myocardial infarction, commonly known as a heart attack, in middle-aged and elderly men, as well as older women, residing in Pennsylvania counties located above the Marcellus Shale (Denham 2021).⁷

Increased Risks to Babies

A 2020 study found that expectant mothers residing close to active oil and gas wells faced a higher risk of giving birth to babies with low birth weight (Tran 2020).⁸ A 2018

study of women living near fracking sites in Texas found a risk of extreme preterm birth (Whitworth 2018).⁹

Asthma Attacks, Headaches, and Fatigue

A 2017 research study involving approximately 24,000 primary care patients from central and northeast Pennsylvania found that living near unconventional natural gas development sites was associated with symptoms like nasal and sinus issues, migraines, and increased fatigue (Tustin 2017).¹⁰

A 2016 study examined the medical records of over 35,000 patients with asthma who resided in proximity to unconventional natural gas production sites in Pennsylvania. The study concluded that UOG operations close to the patients' homes were correlated with a higher likelihood of experiencing mild, moderate, and severe intensification of asthma symptoms. Those living near active gas wells are 1.5 to 4 times more likely to suffer from asthma attacks than those living farther away, with the closest group having the highest risk (Rasmussen 2016).¹¹

B. DENYING THE NOMINATIONS WILL PROTECT CURRENT USES AND PREVENT NEGATIVE IMPACTS TO USERS/VISITORS AND THE ENVIRONMENT – R.C. 155.33(B)(1)(b), (c), (e), and (h).

Salt Fork offers Ohioans and visitors a uniquely special recreational and health and wellness experience. On a per capita basis, public land is a relatively rare resource in Ohio; nature in Ohio is fragmented. The air pollution, stress, traffic safety, and wildlife impacts associated with UOG are incompatible with the current health benefits and recreational uses of Salt Fork State Park. Approving Salt Fork State Park for UOG leasing and development would strike a symbolic and literal blow to Ohio's strong and growing outdoor recreation economy.

Salt Fork Is Exceptionally Rare: a Large and Contiguous Ohio Public Greenspace.

Salt Fork is Ohio's largest and one of its most popular state parks.¹² A 2009 ODNR publication stated that "Salt Fork State Park is a priceless gem to be cherished by the people of Ohio."¹³

Only 15% of Ohio's forested acres are publicly owned (combined total of state, federal, and local public ownership).¹⁴ Ohio's forests are fragmented, and

⁹ Whitworth, Kristina Walker, et al. "Drilling and production activity related to unconventional gas development and severity of preterm birth." *Environmental Health Perspectives* 126.3 (2018): 037006.

¹⁰ Tustin, Aaron W., et al. "Associations between unconventional natural gas development and nasal and sinus, migraine headache, and fatigue symptoms in Pennsylvania." *Environmental Health Perspectives* 125.2 (2017): 189-197.

¹¹ Rasmussen, Sara G., et al. "Asthma Exacerbations and Unconventional Natural Gas Development in the Marcellus Shale." *JAMA Intern Med.* 176.9 (2016):1334-1343.

¹² Wolfe, Mark E. "Geology of a Rare Gem: Salt Fork State Park." *Ohio Department of Natural Resources Division of Geological Survey.* *Ohio Geology* 2 (2009).

¹³ Wolfe, Mark E. "Geology of a Rare Gem: Salt Fork State Park." *Ohio Department of Natural Resources Division of Geological Survey.* *Ohio Geology* 2 (2009).

¹⁴ "[Overview of Ohio's Forest Action Plan](#)" (2020).

additional fragmentation is occurring. The rate of conversion of forest land to wildland urban interface (WUI) is greater in Ohio than any other state in the USDA Forest Service's Region 9 (20 Northeastern and Midwestern states), with an average of 7.5% of forest land becoming WUI each decade.¹⁵ As of 2000, 77 percent of Ohio's forest land was within 1,310 feet of a road, and 44 percent was within 650 feet.¹⁶

The Public Needs Quality Public Greenspace for Physical and Mental Wellbeing.

Meta-analysis results showed that greenspace exposure is associated with wide-ranging health benefits, including statistically significant associations with reduced diastolic blood pressure, heart rate, salivary cortisol, incidence of type II diabetes and stroke, all-cause and cardiovascular mortality, as well as health-denoting associations with pregnancy outcomes, HRV, and HDL cholesterol, and self-reported health.¹⁷

Forest-based interventions (also known as "forest-bathing") have a positive impact on the cardiovascular system; some immunological and/or inflammatory parameters; and mental health in the areas of stress, depression, anxiety, and negative emotions. Positive effects were seen in healthy children and adults, as well as in adults with various preexisting conditions.¹⁸

UOG-Generated Air Pollution Is Incompatible with Current Uses and Threatens Significant Negative Visitor and Environmental Impacts.

Refer to Section A., above.

UOG Causes Stress and Reduces Quality of Life and Public Safety.

In a 2018 study of residents of Ohio's Guernsey and Noble Counties, every participant reported experiencing negative impacts on their quality of life from unconventional natural gas development. Types of psychological stress reported included stress from noise or light pollution; feeling frustrated and manipulated after interactions with the oil and gas industry; general stress and uncertainty about the future. Researchers found that experiences of social stress extended to include divisions among family or community; fears of, or direct experiences of, environmental health harms; observing dying, unhealthy trees; and traffic-related effects. Nearly all residents interviewed had experienced dangerous encounters with oil and gas truck drivers and observed that damaged roads had become increasingly common.¹⁹

¹⁹ Fisher, Michael P., et al. "Psychosocial implications of unconventional natural gas development: Quality of life in Ohio's Guernsey and Noble Counties." [Journal of Environmental Psychology 55 \(2018\)](#): 90-98.

A 2015 study in Pennsylvania found vehicle crash rates to be substantially higher in counties with notable oil and gas drilling; while heavy truck crash rates were 61 to 65% higher.²⁰

UOG Surrounding Salt Fork Would Harm Ohio's Outdoor Recreation Economy.

The State of Ohio reported 42,831,130 visits to Ohio State Parks for the year 2018.²¹ The reality and perception of fracking and UOG production under and surrounding Salt Fork would negatively impact park attendance and Salt Fork's reputational value.

The Outdoor Industry Association estimates that outdoor recreation in Ohio annually generates \$24.3 billion in consumer spending, supports 215,000 direct jobs, \$7 billion in wages, and \$1.5 billion in state and local tax revenue.²²

UOG Light and Noise Pollution Harms Wildlife.

Light and noise pollution from oil and gas production disrupt wildlife behavior, including in protected areas and critical habitats of endangered species, and have been linked to mass die-offs of waterfowl and declines in songbird populations in Alberta, Canada, Pennsylvania, West Virginia, eastern Ohio, and New Mexico.²³ Chronic noise from drilling and fracking operations interferes with the ability of birds to respond to acoustic cues.²⁴ Wildlife biologists in West Virginia found genetic changes in the Louisiana waterthrush that were linked to shale gas development.²⁵

C. DENYING THE SALT FORK NOMINATIONS WILL POSITION OHIO'S PUBLIC LANDS TO CONFRONT CATASTROPHIC CLIMATE CHANGE – R.C. 155.33(B)(1)(c), and (h).

Deciding to keep Salt Fork's publicly-owned oil and gas reserves in reserve rather than putting them in production would be an important act of restraint, foresight, and conservation. The 2023 IPCC Synthesis Report states that "Limiting human-caused global warming requires net-zero CO₂ emissions [and] a strong reduction in other greenhouse gas emissions."²⁶ UOG fracking and production stands in opposition to both of these goals. It is a process that not only releases large amounts of methane, but creates an end product that will be burned and release further CO₂ into the atmosphere. Swift and steep reductions in GHG emissions are needed to conserve a habitable climate and a livable world.

²⁶ IPCC, "[Climate Change 2023 Synthesis Report Summary for Policymakers](#)." A Report of the Intergovernmental Committee on Climate Change. Contribution of the Working Groups I, II, and III to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change. 25 May 2023, at p. 19.

According to the International Energy Agency (IEA), there can be no new oil and gas development if the global energy sector is to reach net zero emissions by 2050 and help avoid catastrophic climate change.²⁷

According to the International Institute for Sustainable Development (IISD), the world must decrease global oil and gas production and consumption by 30% by 2030 in order to satisfy Paris Agreement climate goals.²⁸

According to the Intergovernmental Committee on Climate Change (IPCC), limiting warming to 1.5°C and 2°C involves rapid, deep, and in most cases immediate greenhouse gas emission reductions.²⁹

The stated aim of the 2015 Paris Agreement, which virtually every nation on Earth has ratified, is to keep global temperature rise “well below” 2 degrees Celsius and to “pursue efforts” to limit it to 1.5 degrees Celsius.³⁰

In 2018, the IPCC determined that the 0.5-degree increase from 1.5 to 2.0 degrees Celsius would make the impacts of catastrophic heat waves, flooding, drought, crop failures, coral reef loss, and species extinctions significantly harder for humanity to handle.³¹ Limiting global warming to 1.5 degrees Celsius, rather than 2 degrees Celsius, “could reduce the number of people exposed to climate-related risks and susceptible to poverty by up to several hundred million by 2050,” the 2018 IPCC report states.³² At 1.5 degrees Celsius, the number of people across the globe at risk of inadequate water supplies could be 50 percent lower than at 2 degrees.³³

Methane, the main component of natural gas, is 34 times more potent as a greenhouse gas in the atmosphere than CO₂ over a 100-year timeframe, and 86 times more potent over a 20-year timeframe.³⁴

Climate change is a threat to human well-being and planetary health. There is a rapidly closing window of opportunity to secure a liveable and sustainable future for all.³⁵

³⁰ <https://unfccc.int/process-and-meetings/the-paris-agreement>

³¹ Masson-Delmotte, Valérie, et al. "[Global warming of 1.5 C.](#)" *An IPCC Special Report on the impacts of global warming of 1.5 (2018)*: 43-50.

³² Masson-Delmotte, Valérie, et al. "[Global warming of 1.5 C.](#)" *An IPCC Special Report on the impacts of global warming of 1.5 (2018)*: 43-50.

³³ Masson-Delmotte, Valérie, et al. "[Global warming of 1.5 C.](#)" *An IPCC Special Report on the impacts of global warming of 1.5 (2018)*: 43-50.

³⁴ Stocker, Thomas, ed. *Climate change 2013: the physical science basis: Working Group I contribution to the Fifth assessment report of the Intergovernmental Panel on Climate Change*. Cambridge university press, 2014.

The IPCC states: “Continued emissions will further affect all major climate system components, and many changes will be irreversible on centennial to millennial time scales and become larger with increasing global warming. Without urgent, effective, and equitable mitigation and adaptation actions, climate change increasingly threatens ecosystems, biodiversity, and the livelihoods, health, and wellbeing of current and future generations.”³⁶

Here in America, many vulnerable populations such as children, older adults, pregnant women, low-income communities, some communities of color, indigenous populations, people with disabilities, and people with pre-existing or chronic health conditions are considered disproportionately vulnerable to the effects of climate change.³⁷

Climate change will cause extreme heat and extreme weather events to become more common. Outdoor air quality will drop and flooding will become more frequent. Vector-borne diseases, water-borne diseases, and food-related infections will thrive in the warmer climate. And, the mental health of the people will suffer from both the fear of the future and the negative impacts of all the other effects harming their lives.³⁸

Air quality will decrease significantly due to climate change. Meteorological conditions will shift and allow for ozone concentrations to increase in the air, further increasing the rate of “premature deaths, hospital visits, lost school days, and acute respiratory symptoms.”³⁹ Wildfires, which will become more common as temperatures rise, also harm air quality by increasing particulate matter and ozone precursors in the air.⁴⁰

We are already seeing increased climate-related air quality impacts in Ohio. In 2015, wildfires and the ozone precursors they emit caused ozone levels to rise to 60-80 ppb for over 8 hours, putting people’s health at risk.⁴¹ Wildfires in eastern Canada are filling Ohio’s June and July, 2023 skies with smoke and resulting in central Ohio’s first

Date: Thursday, July 20, 2023 2:43:51 PM

I am writing on behalf of the Ohio Chamber of Commerce. The Ohio Chamber of Commerce announced in its Blueprint For Ohio's Economic Future (published October 2022) support for the use of state-owned minerals on land controlled or owned by the state of Ohio. Therefore, the Ohio Chamber of Commerce supports the nomination of land contained in Notice of Nominations 23-DNR-0005; 23-DNR-0006; and 23-DNR-0007. These nominations will add additional economic opportunities and produce additional revenue for the state of Ohio. Impact on Ohio's economy and revenue for governmental services should be taken into consideration for all tiers of land nominated and future bidding.

Re: Public Comments on Nomination #: 23-DNR-0007

Dear Ohio Oil and Gas Land Management Commission,

I'm writing to voice my support for nomination number 23-DNR-0007. Rising energy costs have caused the price of nearly everything to go up. It's become a huge burden for Ohio families, and I know I am not the only one who would be relieved if we were able to use our natural resources to solve this problem. It's essential that we begin producing more of our own oil and natural gas. I urge you to do what's best for Ohio and approve nomination 23-DNR-0007.

Sincerely,
Mrs. Doris McHenry
d.j.mchenry@sbcglobal.net

This is in response to the nominated parcels for leasing for exploration and development and production of oil or natural gas fracking Salt Fork State Park # 23-DNR-0005, #23-DNR-0006, and #23- DNR- 0007.

I appreciate your time reviewing my comments.

Please plan a road trip to Salt Fork and Guernsey County Ohio. If so, your understanding of our concerns of the impact of fracking this area will be clearer.

As a premier tourism destination for Ohioans and out of state visitors, hydraulic fracking will disrupt the area in major ways. The promise by Governor Dewine to not approve surface disruption inside the park during his administration really will not make a difference, and he won't be in office forever. Just venture east into Jefferson or Carroll County for evidence of fracking disruption to the community and landscape.

US Route 22 is the route into the main entrance of Salt Fork and is included in the nominated parcels with proposed well pads access off US 22 to the south. Two are right across from the park entrance. Already busy with hundreds of thousands of people traveling this narrow winding two-laned road to visit the park annually, the additional truck and heavy machinery traffic to construct well sites and then carry water for injection, brine and residual waste is a hazard. The road crosses arms of the lake twice, right by three of the proposed well sites. The potential spill situation and corresponding environmental disaster cannot be ignored.

Along with the health hazards, this optic is not one that will make this area of Ohio a proud tourist destination. The proposed well sites will not only be unsightly, but contribute to noise, water, and light pollution. I know this is true, we can already see well pads fourteen miles east of the park from our home west of the park. The proposed acreage is close to the campground, the Salt Fork Marina, and the newly proposed nature center. Visitors seek dark night skies, peace and quiet, abundant wildlife and an unspoiled natural experience. This level of industrial development cannot be "hidden" by requiring the well pads to be located outside park boundaries.

I understand that the potential revenue from fracking our public lands is tempting and you are under pressure to approve, however, once this area of Ohio is

depleted of its fossil fuel, the area will be forever scarred from the process. Is this the legacy you wish to leave your children, grandchildren and the youth of Ohio?

What will happen is that this area of Appalachia will be abandoned by out of state businesses and forgotten. ODNR is certainly aware of the current lengthy list of abandoned wells and ongoing cleanups that is part of ODNRs responsibility.

Feel free to contact me. I will take you on a backwater kayak tour of the nominated area. We will see herons, egrets, cormorants, turtles, and maybe a bald eagle. If you decide to approve, I guess you, as well as your children, will never get to experience this wonderment in the state of Ohio.

I urge you to deny these nominations.

Thank you,

Terri Sabo

Taken May 10, 2023 in area of proposed well sites, just east of park entrance.

I am writing with my concern about allowing fracking anywhere near Salt Fork or any of our State or Local Parks. They are too important and valuable as Parks for the enjoyment of all citizens and homes for the myriad of our fellow creatures who rely on the them for habitat, food and water. Don't sell off these assets for such a short term and dangerous reason - profit for oil companies and lobbyists.

Commission.Clerk@oglmc.ohio.gov
Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

I am fortunate to have had the opportunity to visit and explore many local parks as a child growing up in Northeast Ohio. Salt Fork is a special place that should not be exploited and ruined with fracking.

I am so thankful Ohio took the appropriate steps to protect this land from extractive industry and development so that all Ohioans could enjoy the park's stunning landscape and natural features. That could all change if oil and gas operations are permitted to frack our public lands.

Fracking operations create hazardous air pollution and can pollute groundwater resources. I know many visitors — including my own family — would avoid visiting Salt Fork State Park knowing these risks. Fracking operations will disturb the scenic beauty of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Date: Friday, July 21, 2023 12:05:22 AM

To whom it may concern,

PLEASE keep fracking OUT of our state parks! Now, more than ever, it's vital to the health of our communities to maintain and improve the quality of our air, water, and public lands. As the largest state park in Ohio, Salt Fork is a vital property for boating, camping, and hiking, and the pollution caused by fracking would be detrimental to both the environment and ecotourism.

I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007.

Commission.Clerk@oglmc.ohio.gov

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

We are concerned by the leasing of State Parks to the fracking industry in order to extract deep deposits of oil and gas. The dangers of fracking are well known and pose threats to not only the pristine beauty of Ohio's parks but also to the health and well being of the surrounding community.

We are blessed in Richland county to have Mohican State Park/Forest and Malabar Farm. We cannot imagine having its beauty and tranquility shattered by numerous fracking platforms pumping thousands of gallons of water and hazardous chemicals beneath them and creating air pollution that has been linked to health problems in both children and adults.

Accidents have happened and it would be more than unfortunate to have a spill that would contaminate drinking water and destroy fishing habitat. The continued extraction of fossil fuels also threatens the future of our children. The extreme heat, extreme storms and giant wildfires we are currently witnessing are testament that we must move away from the burning of fossil fuels.

All of this is why we ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

Please deny the leasing nomination submitted for Salt Fork State Park and Wildlife Area: Nomination Nos. 23-DNR-005,006 and 007. I am a very concerned citizen and a retired conservation professional. The natural area that is protected in Salt Fork State Park is very literally invaluable and irreplaceable. The construction and operation of well pads near Salt Fork's boundaries will destroy the beauty and peacefulness of the park. The air, water and light pollution generated by oil and gas development is harmful to both human health and our native species. The serious consequences of climate change are headline news almost daily. Increasing development of oil and gas resources, rather than alternative energy sources, takes us further down a very dangerous path. Furthermore, allowing corporations to profit from an invaluable and irreplaceable resource that is owned and enjoyed by the citizens of Ohio is wrong. Please consider the well-being of the citizens of Ohio and deny the leasing nominations.

Sincerely,

Marilyn Baumer

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

Ohio's state parks are special places for residents of Ohio to enjoy nature away from the noise and pollution of the cities. They're also special places where plants and animals can thrive given that we manage them correctly. Permitting fracking in Salt Fork State Park would devastate this balance and cause terrible consequences in both the short-term and long-term future. First, this is Ohio's largest and grandest state park and permitting any oil and gas exploration within its boundary, or even near it, would put it at great risk of air and groundwater pollution from spills and leaks in fracking infrastructure. Second, this would only further Ohio's regrettable reliance on oil and gas in a world filled with increasing natural disasters due to climate change. In a year filled with air quality alerts from wildfires in Canada, we should be doing everything we can to reduce and end our reliance on this energy source. Finally, visiting Salt Fork, and any state park with fracking permitted, would be forever changed with fracking activities creating noise and destroying forested/natural areas that are the exact reasons why I, and so many other Ohioans, enjoy visiting the state parks.

I am so thankful Ohio took the appropriate steps in the past to protect this land from extractive industry and development so that all Ohioans could enjoy the park's stunning landscape and natural features. That could all change if oil and gas operations are permitted to frack our public lands.

Therefore, I respectfully request that you **deny** the leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. No oil and gas exploration can be permitted within or inside of Ohio's precious public lands.

Sincerely,

Tyler Bender

Date: Thursday, July 20, 2023 4:28:38 PM

I'm writing to ask the commission not to approve oil and gas leasing in Salt Fork State Park. I have personally enjoyed hiking at Salt Fork on numerous occasions, and appreciate the access to forest land that it and its sister state parks give to all Ohioans and Ohio's wildlife. Fracking and other oil and gas exploitation would harm the scenic beauty of the park, endanger the ecosystems it contains, and risks polluting groundwater and adding other industrial contamination to the lives of nearby residents.

Public lands are meant to be for the good of the public and the world—not the profit of a few climate-altering companies who stand to make a buck off of them.

Thank you for your consideration.

-Valerie V. Hendrickson

Subject: Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007.
Date: Thursday, July 20, 2023 3:25:36 PM

Dear Commissioners,

I am fortunate to have had the opportunity to visit and explore many local parks. I am also a regular donor to the Ohio State Parks Foundation.

I have visited Salt Fork State Park many times and have relished the beauty of Salt Fork's hiking trails, waterways, and campgrounds.

I am so thankful Ohio took the appropriate steps to protect this land from extractive industry and development so that all Ohioans could enjoy the park's stunning landscape and natural features. That could all change if oil and gas operations are permitted to frack our public lands.

Fracking operations create hazardous air pollution and can pollute groundwater resources. I know many visitors — including my own family — would avoid visiting Salt Fork State Park knowing these risks. Fracking operations will disturb the scenic beauty of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Thank you for continuing to preserve the land Salt Fork State Park occupies instead of polluting it with fracking operations.

Ohio is one of the last states in the country where our state parks continue to remain free of charge to the public. I am proud any visitor can enjoy these preserved lands free from fracking pollution and hope you continue to honor this legacy by DENYING the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007.

Sincerely,
Michelle Maitland

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

As someone who is raising a child in Ohio, one of the greatest things that the state has to offer is its wonderful park systems. Being able to enjoy these parks during the pandemic was a lifeline and they remain one of Ohio's greatest resources for families. But that could all change if oil and gas operations are permitted to frack our public lands.

Fracking operations create hazardous air pollution and can pollute groundwater resources. I know many visitors — including my own family — would avoid visiting Salt Fork State Park knowing these risks. Fracking operations will disturb the scenic beauty of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Benjamin McKean

Dear Commissioners,

As a citizen of Ohio, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007.

Fracking operations create hazardous air pollution and can pollute groundwater resources. We need to protect our publicly owned natural areas in Ohio. We should be doing everything possible to prevent the destruction of the scenic beauty of state parks.

Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Thanks,

Marc

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

Since moving to Central Ohio, I have had the opportunity to visit and explore many state local parks. This was particularly important and sustaining with a young child during the COVID years. We explored all of the natural beauty that Ohio has to offer with our now 6-year-old. It was in this time that we stumbled upon Salt Fork State Park! With daycare closed, it was incredible to have the chance to visit Salt Fork State Park and enjoy the fresh air as we explore nature together.

We have been to Salt Fork State Park a number of times since 2020 — we have loved exploring the hiking trails and waterways, and are hoping to camp there in the near future.

I always tell others who live outside of Ohio how incredible and accessible the natural splendor and public lands are in the state. I am grateful that Ohio has been a responsible steward of these lands and has taken the appropriate steps to protect our public gems from extractive industry and development. These parks are a selling point for moving to and remaining in Ohio. All Ohioans deserve to continue enjoying the park's stunning landscape and natural features. That could all change if oil and gas operations are permitted to frack our public lands.

Fracking operations create hazardous air pollution and can pollute groundwater resources. I know many visitors — including my own family — would avoid visiting Salt Fork State Park knowing these risks. Fracking operations will disturb the scenic beauty of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Thank you for taking this comment into consideration. I trust that you will make the right long term decision for our future.

Dana Howard

Dear commissioners,

I respectfully request that you deny the leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Salt Fork State Park is Ohio’s largest state park and one of the most beloved and important outdoor recreation destinations in the state. A 2009 ODNR publication stated that “Salt Fork State Park is a priceless gem to be cherished by the people of Ohio.”¹ Please deny the Salt Fork oil and gas leasing nominations in order to protect public health and safety, respect outdoor recreation, and confront climate change.

Nomination No. 23-DNR-0005 shows eight proposed shale fracking (“unconventional oil and gas production” or “UOG”) well pads surrounding Salt Fork. The construction and operation of well pads near Salt Fork’s boundaries seriously threatens the quality and character of this priceless Ohio gem. UOG leasing and development of the nominated Salt Fork parcels threatens public health and safety, current recreational uses, and Ohio’s outdoor recreation economy. By contrast, denying the Salt Fork nominations would protect the Park’s air quality; its tranquility; and its unique status as an Ohio outdoor health, wellness, and recreation destination. Denying the Salt Fork nominations would also serve the interests of present and future generations by helping to prevent the worst impacts of climate change.

I am so thankful Ohio took the appropriate steps to protect this land from extractive industry and development so that all Ohioans could enjoy the park’s stunning landscape and natural features. That could all change if oil and gas operations are permitted to frack our public lands.

Fracking operations create hazardous air pollution and can pollute groundwater resources. I know many visitors — including my own family — would avoid visiting Salt Fork State Park knowing these risks. Fracking operations will disturb the scenic beauty of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Thank you,
Nathan Cohen

I am fortunate to have had the opportunity to visit and explore many local parks as a child growing up in Eastern Ohio. It was always special to visit Salt Fork State Park initially with my parents and then with my children and family over decades; those occasions continue to fuel my lifelong appreciation of Ohio's state parks.

As a concerned citizen and passionate advocate for environmental preservation, I am writing to express my strong opposition to the industry's nominations for leasing Salt Fork State Park for fracking and other extractive exploration. Salt Fork State Park is an invaluable natural treasure that provides recreational opportunities, preserves biodiversity, and supports the local communities. Approving such nominations would not only endanger the delicate ecosystem within the park but also compromise the health and well-being of nearby residents and visitors.

Fracking and extractive exploration involve significant environmental risks, including water contamination, air and noise pollution, and habitat destruction. Allowing these activities in a place as ecologically significant as Salt Fork State Park would be a grave mistake, as the potential long-term damage could irreversibly alter the landscape and diminish the park's recreational and educational value.

Instead, I urge the Ohio Land Management Commission to prioritize the preservation of this cherished natural resource and focus on sustainable initiatives that foster harmony between conservation and development.

I emphatically request the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007

Let us stand united as citizens of the great State of Ohio in protecting Salt Fork State Park for future generations, ensuring that its beauty and ecological richness remain untouched by detrimental industrial practices.

Sincerely,

Armand A DiPaolo Jr.

Public Comment: Please DENY Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007.

Dear Commissioners,

Energy policy is of critical importance to wildlife conservation; it is a key driver of our effectiveness in addressing the impacts of climate change and shapes the footprint of industry disturbance across the landscape. It is imperative that we shift to cleaner energy resources and support appropriately sited renewable energy; it is also imperative that we minimize cumulative adverse impacts to wildlife and habitats as we do so.

Hydraulic fracturing is rapidly reshaping Ohio's and the nation's energy profile. As the fracking industry grows, so grows concern over adverse impacts in the form of habitat loss and fragmentation, water contamination and aquifer depletion, as well as methane leakage and emissions. We must ensure that this development does not affect our already fragmented habitats, and is carried out with safeguards and accountability for the protection of our birds, other wildlife, and ecosystems.

Here in Ohio, our public lands are precious ecosystems that have been historically managed in a way that supports Ohioans' needs for a range of uses from preserving biodiversity, to public recreation like hunting, fishing and hiking, and even timber harvesting. Just this spring, we lost that historical balance of protection and resource use as Ohio's public lands were opened to leasing requests by the oil & gas industry.

While we understand that energy development is critical to Ohio's growth, we believe that our public lands should be protected for Ohioans in perpetuity. Our State Parks are places we can go knowing we will find relaxation, recreation, healthy ecosystems, and abundant wildlife. The adverse health effects, air and water pollution, and general quality of life reduction

associated with fracking are antithetical to what we rely on these beautiful green spaces to provide for us. These same effects are detrimental to surrounding wildlife, everything from trees to songbirds, that are also harmed by noise and light pollution where fracking operations are installed.

Columbus Audubon and its membership requests that the Commission deny the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts to both Ohioans and Ohio's wildlife, of leasing our public lands to these industries, in your deliberations.

Sincerely,

Kori Sedmak
Columbus Audubon President

Hello,

I strongly oppose fracking in any of our Ohio state parks, and this comment is regarding Salt Fork. Fracking pollutes groundwater, and this can have long lasting implications to health of people and wildlife. Fracking will destroy any peace in the state parks, and will interfere with habitat for the many wildlife species which call the state parks home. It will be unsightly. Natural gas is NOT a clean fuel, and marketing it as such is disingenuous. Is there nothing in this state that is not for sale under Republican rule? It is very disappointing that the governor has included this in his plans.

Debra Brinker, M.D.

Ohio resident

Date: Wednesday, July 19, 2023 10:26:44 PM

Dear Commissioners,

I respectfully request that you DENY the leasing nominations submitted for Salt Fork State Park and Wildlife Area - Nomination No. 23-DNR-0005-0006, and 0007. Unconventional oil and gas production (UOG) threatens Ohio's outdoor recreation economy, air, and water quality. Through my job, I have been able to experience what it is like to be near oil or gas extraction sites. I cannot say these were pleasant experiences. The smell of rotten eggs, which was most likely the hydrogen sulfide and other gases being released, along with the headaches, was extremely overwhelming. I cannot imagine what it would be to try to enjoy the natural landscape and scenic views of the Salt Fork State Park and have to deal with harmful gases, noise, air and light pollution from UOG operations. Several meta-analyses conducted near UOG sites have shown that hazardous air pollutants (HAPs), several airborne chemicals including endocrine-disrupting chemicals, and other highly toxic chemicals are associated with UOG development. In addition, HAPs near UOG developments have been found at concentrations exceeding health safety thresholds¹. Depletion of water quality and water resources is very concerning as well. The high volumes of water that would be used for the multiple frack wells proposed to frack an incredible 281 parcels of park land, is mixed with sand and a variety of toxic chemicals that are exempt from the Safe Drinking Water Act, chemical reporting requirements, regulation as hazardous wastes under Subtitle C of the Resource Conservation and Recovery Act (RCRA), and many other environmental safety laws. With all these exemptions, and the known impacts to the environment, animal and public health, it is hard to imagine how safe and beneficial it would be for Ohioans to allow extractive industry in the Salt Fork State Park.

Decarbonization of the energy sector is imperative to mitigate extreme weather events and the consequences of climate change. Ohioans deserve to be able to escape from urbanization, pollution and industrialization, and breath clean air while doing so. I ask you today to please consider all the negative impacts of leasing our public lands and deny the leasing nominations submitted for Salt Fork State Park and Wildlife Area - Nomination No. 23-DNR-0005-0006, and 0007.

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

I am fortunate to have had the opportunity to visit many state parks as a child growing up in Ohio (Westerville, Bryan, and Lebanon). In college at Miami University, I loved meeting my family at Hueston Woods. As an adult, who returned to Ohio after living out of state for many years, I love taking my kids to Strouds Run, Lake Hope, and Hocking Hills. Two weeks ago, we had our first overnight camping trip at Strouds Run State Park. Last week, my daughter's fifth birthday party was there. She loved swimming in Dow Lake with her friends. It is amazing to have such a safe and beautiful place only 8 minutes away.

Ohio's state parks are truly special and having local state parks is a beautiful gift. It is important to our state that we all have access to clean, safe parks. That is why I am writing to request that you protect Salt Fork State Park.

Fracking operations create hazardous air pollution and can pollute groundwater resources. Fracking operations will disturb the scenic beauty of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

We are not a Western State blessed with vast tracts of wild land. The settlement of Ohio was extensive and our few wild green spaces are invaluable. What do you think your grandchildren would rather have in fifty years? A swimmable lake and healthy forests or the solace of knowing our fine state was able to extract every bit of hydrocarbon wealth for the interests of a few?

In this respect your decision is easy. Salt Fork should be protected from destructive industrialization and maintained for the public interest of Ohioans.

That this is even question speaks to your dedication not to your citizenry but to the financial interests you grovel to for your campaign donations semiannually. We're watching and you will be accountable for your actions.

Sincerely,

Public Comments on Salt Fork,
nomination #: 23-DNR-0005,
23-DNR-0006, 0007

- Dear commissioners,
Please do not frack
salt fork. It's such a
beautiful, pristine
ecosystem, but as soon
as they send in their
trucks, that ecosystem
is destroyed. Think
about all the innocent
plants and animals
that are being killed!
We want our parks to
thrive. Another reason
I'm a child and the
future of the parks is
mine to. And as a
child, I am part of our
society's future. did

you know that the trucks destroy the roads? Plus, how are you supposed to sleep with a bunch of noisier trucks outside your windows? as you can see, there are many reasons to protect the parks, and even more that I didn't list so please, PLEASE, leave our parks alone.

Sincerely,
Nora Butler,
age nine

Date: Monday, July 17, 2023 3:19:54 PM

Dear Commissioners,

I respectfully request that you deny the leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Salt Fork State Park is Ohio’s largest state park and one of the most beloved and important outdoor recreation destinations in the state. A 2009 ODNR publication stated that “Salt Fork State Park is a priceless gem to be cherished by the people of Ohio.”

Please deny the Salt Fork oil and gas leasing nominations in order to protect public health and safety, respect outdoor recreation, and confront climate change.

Nomination No. 23-DNR-0005 shows eight proposed shale fracking (“unconventional oil and gas production” or “UOG”) well pads surrounding Salt Fork. The construction and operation of well pads near Salt Fork’s boundaries seriously threatens the quality and character of this priceless Ohio gem. UOG leasing and development of the nominated Salt Fork parcels threatens public health and safety, current recreational uses, and Ohio’s outdoor recreation economy. By contrast, denying the Salt Fork nominations would protect the Park’s air quality; its tranquility; and its unique status as an Ohio outdoor health, wellness, and recreation destination. Denying the Salt Fork nominations would also serve the interests of present and future generations by helping to prevent the worst impacts of climate change.

Respectfully,
Kristin Abney
A lifelong Ohio citizen

Hi. I am sick of having to write comments to protect our public lands in Ohio. Why isn't this a priority in our state? Why isn't beauty valued? Why isn't nature valued? Why isn't health valued? Why are humans Queen and King of all? Let's move forward in a better way. Let's use our brains. Let's use science. Let's use our hearts.

Jennifer Kleinrichert

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

Part of my childhood took place in Cambridge, Ohio, so my family frequently visited Salt Fork to go hiking through the beautiful forests around the stunning lake. In addition, my mother participated in the annual craft festival held at Salt Fork, which helped provided much needed income for our family.

Salt Fork and the other state parks in our beautiful state are treasures that should be protected for future generations. We are so fortunate to have these gems and should prevent them from being damaged. As the climate changes due to human activity, the science has clearly indicated that fracking, methane leaks, and other activities associated with the extractive industry are harming the planet, which in turn will affect all of us, especially our youth.

Please deny the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007.

Please carefully consider all the consequences. Please help protect all of us ... the damage is not worth it for a few more dollars.

Sincerely,
Nathaniel Stitzlein

Dear Commissioners,

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007.

As one of the largest State Park in Ohio, Salt Fork State Park is an important natural outdoor recreation location for residents and visitors of Ohio. To propose shale fracking in such a beautiful and important natural resource is both disturbing and concerning. In a world where there are fewer and fewer protected spaces due to government bending over backwards for corporations, to even consider opening this critical park up to destruction is inconceivable.

Considering the recent disasters in Ohio, including the East Palestine rail derailment and the Columbiana County Gas leak, this industry has proven that they do not prioritize safety and accountability in protecting the environment and more importantly Ohioans. Please do not give in to them and sacrifice our land and our people. Please deny the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007.

Respectfully,

Tori Print

Dear Commissions:

I am fortunate to have had the opportunity to visit and explore many local, state and national parks. These wonderful locations are a gift that we have borrowed from our grandchildren that we should pass on in a pristine conditions was it was received.

I am so thankful Ohio took the appropriate steps to protect this land from extractive industry and development so that all Ohioans could enjoy the park's stunning landscape and natural features. That could all change if oil and gas operations are permitted to frack our public lands.

Fracking operations create hazardous air pollution and can pollute groundwater resources. Fracking operations will disturb the scenic beauty of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

There is no need to produce this fracked natural gas since there is sufficient quantities produced already. There is no need to remove this fossilized remains of dinosaurs that were on the earth millions of years ago to further contaminate the environment with methane gas and carbon dioxide. Renewable energy will be able to provide sufficient energy and not increase the climate crisis caused by increasing levels of carbon in the environment.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Sincerely,

Ted Bergh

Dear Oil and Gas Land Management Commissioners

I respectfully request that you deny the leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Salt Fork State Park is Ohio’s largest state park and an important outdoor recreation destination in the state. A 2009 ODNR publication stated that “Salt Fork State Park is a priceless gem to be cherished by the people of Ohio.” Please deny the Salt Fork oil and gas leasing nominations in order to protect public health and safety, respect outdoor recreation, and confront climate change.

Fracking operations create hazardous air pollution and can pollute groundwater resources. Polluted air and water also risk further pollution to our precious soil and farmlands. Air and water pollution impact all, but especially those nearest to the park, and marginalized communities that dont have the resources to combat these pollutions.

Fracking operations will disturb the scenic beauty and natural wildlife habitats of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too. How many fewer people would visit a state park with such operations?

Finally, it is imperative we do not contribute more greenhouse gas pollution to the atmosphere if we are to prevent further warming of the Earth and catastrophic climate change. Increased fracking would not allow us to reach the net-zero greenhouse gas emissions goal by 2050.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Thank you.

CAUTION: This is an external email and may not be safe. If the email looks suspicious, please do not click links or open attachments and forward the email to csc@ohio.gov or click the Phish Alert Button if available.

Dear OGLMC

Decisions on fracking on public lands/state parks in Ohio is not healthy for plants, animals and other living things including humans.

Fracking operations will disrupt the park's quiet, solitude and habitat that supports wildlife, fish, birds and a landscape that contributes to a healthier environment.

The effects of fracking go well beyond the fracking site itself as the linked documents below demonstrate.

A reasonable review of the documents below outlines how any short-term benefit to fracking will be offset by much greater and costly detriments to Ohio's landscape, parks, natural areas and the tax-paying public that will be forced to shoulder the costs of the degradation to the environment and all Buckeyes quality of life.

Thank you for the opportunity to comment.

Dear Commissioners,

Ohio's State Parks are jewels deserving of preservation and celebration. The protection and conservation of land for the use by citizens of Ohio is the purpose and role that must be protected.

Please do not build fracking operations on the outskirts of Salt Fork or any of the parks in the system. The noise, lights and risks will impact the beauty and use of the parks.

Please consider the important uses of the park that will be impacted by industrial development.

Dear Commissioners,

I've long been a big fan of Ohio's many State Parks and Wilderness areas.

As my children were growing up, I have found memories of taking them for a lovely getaway in the Salt Fork State Park. We all enjoyed the natural beauty of this area with its hiking trails and waterways.

I won't mince words here: I find it appalling that the children of today might be deprived of what those before them enjoyed because of the poor decisions made by our elected officials today. We all know fracking can and does pollute ground water. As for methane, it is an extremely potent greenhouse gas!

Keeping what remains of our natural environment in Ohio intact and healthy should be the concern here, not short term profits from the sale of toxic fuels.

Thank You,

Marilyn Holtz

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

I am severely disappointed to hear about the state's plans to expand hydraulic fracturing in our green spaces and communities. It first disappoints me that we are not divesting from fossil fuels all together. I fear for a future without clean air and water. We do not need to continue to make ourselves the villains of the ecological chapter of this earth. My friends and family just got back from experiencing Salt Fork. My friend, Lilly, said that being there is healing and peaceful. Don't take away this outlet for outdoor recreation, stress relief, crime reduction, and so much more. Don't desecrate something we will not be able to restore in full balance. Climate grief and anxiety are bad enough, don't worry your citizens further.

Thank you,
Haven Horton-Kunce

To whom it may concern,

I oppose leasing land for fracking at Salt Lake State Park. I have wonderful memories of visiting Salt Fork as a child. Memories I want for future Ohioans. Everything in our world seems polluted these days, we deserve a peaceful place to retreat to. The public pays for these parks, they should not be leased for private gain. That is in direct contradiction of what the parks stand for.

In addition, fracking will have a huge impact on local residents public health. It will diminish the quality of outdoor recreation that the park currently offers. Fracking is rarely done correctly so it will cause toxic air pollution, light pollution, noise pollution and climate pollution. Which is in complete contrast of the purpose of a park.

NO ON LEASING OUR PARKS TO SPECIAL INTERESTS.

Thank you for your time.

Sincerely,

Nan Brunskill

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

I am fortunate to have had the opportunity to visit and explore many local parks as a child growing up in Ohio. It is a profound sense of peace found in nature, alongside a fascination and love of all creation, which has led to a lifetime of visiting our public parks alone, as well as with my family and friends.

The benefits of all our remaining natural areas, left as close as possible to how God (or whatever power you believe in) made them, are profound, and beyond my poor power to convey.

I am so thankful Ohio took the appropriate steps to protect this land from extractive industry and development so that all Ohioans could enjoy the park's stunning landscape and natural features.

This could all change if oil and gas operations are permitted to frack our public lands.

Fracking operations create hazardous air pollution and can pollute groundwater resources. I know many visitors — including my own family — would avoid visiting Salt Fork State Park knowing these risks. Fracking operations will disturb the scenic beauty of Salt Fork State Park.

No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007.

Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Attn:

Ohio Oil and Gas Land Management Commission

Ohio's public lands deserve good protections from industrial processes.

Years ago, an Ohio county probate judge attempted to change a public city park into an industrial or business zoned area by saying the public land or park offered industry "recreational use". Later the law was upheld by citizens who firmly stated that industry is not considered a "recreational use."

It is one of our US Constitutional Rights to say that public lands be protected. Legal standpoints and environmentally oriented government departments have been a foundation of the US government framework as far long ago in those historical perspectives provide.

One of those US government foundations is President Teddy Roosevelt's work to establish a National Park Service and the work of the Dept. of Interior and President Nixon's founding of the EPA due to a fire on the Cuyahoga River.

That is to say public lands belong to the animals, ecosystems, nature in a general sense, and moreover public lands belong to the people, the citizens the residents and not at all should public lands be of ownership to corporations, entities, agencies, persons of those legal descriptions or departments of government per se.

Public lands like the Wayne National Forest and Salt Fork State Park, Wolf Run State Park, Zepernick and Valley Run Wildlife Areas all belong in part to Ohio and the people here. The State of Ohio should respect public lands in Ohio much the same as the Federal government does.

A Federal judge upheld this ruling several years ago when horizontal hydrofracturing proposals by the Ohio Oil and Gas Association planned to expand natural gas exploration proposed for the Wayne National Forest near Nelsonville and Athens Ohio.

This recent ruling plainly demonstrates the Federal government's commitment to protecting public lands in Ohio State owned property. The State of Ohio owes a similar act of protection to the public lands of Ohio, nature, ecosystems and people.

States like Ohio find their public lands offer many special benefits to health through offering places for their residents to play, swim, hike, bicycle, canoe, kayak and camp. These recreational activities improve physical health and connect citizens of Ohio and many US states with their natural environments for relaxation, recreation and to improve their physical, spiritual and mental health.

So often today we find mental health diagnoses and physical health diagnoses from post COVID-19 pandemic stresses are playing significant roles in public health concerns.

It then stands to reason that protecting public lands is instrumental in ensuring the public health, the steady flow of tourism revenue, the overall economy and for our general welfare afforded in the US Constitution.

Similarly, today the Ohio Department of Natural Resources works to provide public lands as places to enjoy the inherent beauty of parks like Salt Fork State Park, Houston Woods, Mohican State Park, Maumee Bay and other public lands that obviously earn the destination of State Parks to be set aside for tourists to visit, Ohio residents to hike and camp in with respect to important landmarks like the Devil's Bathtub at Hocking Hills, and the Upper Falls Trail at Mohican State Park and Acton Lake at Houston Woods for example.

These landmarks in Ohio parks and public lands are protected for reason and purpose. They are to be spared from the poisons, buildout, expansion and construction of industrial process that otherwise mar or alter the physical dimension of beauty and benefit forests, lakes, and land there offers.

Ohio public forest lands provide oxygen to the environment through photosynthesis, a process that removes carbon from the atmosphere and with water processes nitrogen and other elements into oxygen released from trees and green plants.

Rivers and lakes often help in this process by providing water resources to plants, trees and grasses.

Sparing natural resources like water in rivers, aquifers, reservoirs, ponds, lagoons, lakes, streams, creeks and the like on public lands from construction of industrial proposals ensures the survival of people everywhere.

Trees, forests, grasses, marshes, brownfields all add to the safe homes to plant and animal species that comprise the natural ecosystem and often Endangered Species Act protections to the species of animal and plant kingdoms found on public lands.

The Endangered Species Act is perhaps the best, most loved and most revered of all Government regulations ever enacted.

These ecosystems on Ohio public lands are playing a critical role today to ensure soil nutrition for agriculture and farming and in preventing desertification and dust lands from where once is safe, healthy good soil.

With global temperatures rising from climate change and this change due from mainly industrial work on Earth all protections to farmland, public parks, natural resources, oceans and lakes will undoubtedly improve natural forest ecosystems in Ohio that in time return many natural elements like nitrogen, oxygen, phosphorus, hydrogen and carbon safely to the Earth to restore soil nutrition and restore animal life and plant life to a balance that promotes healthy environments, better crops and better health for people.

These public lands protections such as those established and upheld by the USDA and US Fish and Wildlife Service are very important today and are protections that have been long recognized by government in the United States and around the world for many generations.

Look always to work for those protections on public lands.

Thank you, Governor DeWine, Ohio Department of Natural Resources and also the PUCO and the Ohio Oil and Gas Land Management Commission for understanding and upholding the long term commitment we Ohioans make to enjoy our parks and wildlife areas.

Regards,
Scott Bushbaum

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners:

I am fortunate to have had the opportunity to visit and explore many Ohio's public lands during the 10 years I have called the Buckeye State home – state parks, metro parks, state wildlife areas, and nature preserves, each is wonderful and unique in its own manner. As a wildlife ecologist by vocation and avid outdoor recreator – hunting, fishing, canoeing, foraging, camping, hiking – my family and I have had the opportunity to spend time in many of the public lands in eastern Ohio, including Salt Fork, for both work and enjoyment in the past decade.

Admittedly, my position on this issue is complicated. On the one hand, as an ecologist – I know that most every action simultaneously benefits and harms different species by a complex array of factors and variables. For instance, salamanders occur in lower abundance on and adjacent to pipeline rights-of-ways but snakes are more common on that same element of energy infrastructure. I am literally the author of the paper stating this reality – (**Karns, G.** Response of amphibian and reptile populations to vegetation management and edge habitat enhancement along Utica-Marcellus pipelines in eastern Ohio. *12th International Rights-of-Way Symposium Proceedings*). Separated from the scientific nature of my research, my personal experience tells me that an energy corridor bordering mature forest is a wonderful place to hunt wild turkey, but that same place is not my first choice to forage for spring ramps or listen for sensitive mature forest songbirds. It is complicated.

Thus far, I have focused exclusively on the aboveground impacts relegated to wildlife communities – I suppose this is not surprising given my background. These factors are however only a narrow sliver of the overall variables that must be considered. I will not provide an exhaustive literature review on the many effects and impacts of horizontal fracturing that lace scientific journals, but the overall picture is not a rosy one. I am sure many of other comments will focus on risks of spills, subsurface and surface water pollution, noise and light damages, habitat fragmentation, and the boom-bust effects on rural economies. Not to mention human health risks; oh, and that little thing called climate change.

In reviewing the lease nominations 23-DNR-0005, 0006, and 0007 for Salt Fork, I am deeply concerned by some of the well pad locations and parcel nominations that I see – a well pad location barely more than a football field's length from the lake and straight uphill from the water's surface, the Commission may as well have granted surface activity rights. To be frank, some of the proposed development is less worrisome based on the limited information I have been provided – a well pad nearly a mile distant and topographically disjunct from the lake's watershed, I am more okay with that. But to be perfectly honest, there is not enough information contained in the lease nominations to make a responsible decision on whether these nominations should be granted or not.

I have far more questions than answers. Exactly where are the well pads proposed? Exactly how many and where would brine ponds be constructed? Where will the massive amounts of water required for

Thus far, I have focused exclusively on the aboveground impacts relegated to wildlife communities – I suppose this is not surprising given my background. These factors are however only a narrow sliver of the overall variables that must be considered. I will not provide an exhaustive literature review on the many effects and impacts of horizontal fracturing that lace scientific journals, but the overall picture is not a rosy one. I am sure many of other comments will focus on risks of spills, subsurface and surface water pollution, noise and light damages, habitat fragmentation, and the boom-bust effects on rural economies. Not to mention human health risks; oh, and that little thing called climate change.

In reviewing the lease nominations 23-DNR-0005, 0006, and 0007 for Salt Fork, I am deeply concerned by some of the well pad locations and parcel nominations that I see – a well pad location barely more than a football field's length from the lake and straight uphill from the water's surface, the Commission may as well have granted surface activity rights. To be frank, some of the proposed development is less worrisome based on the limited information I have been provided – a well pad nearly a mile distant and topographically disjunct from the lake's watershed, I am more okay with that. But to be perfectly

honest, there is not enough information contained in the lease nominations to make a responsible decision on whether these nominations should be granted or not.

I have far more questions than answers. Exactly where are the well pads proposed? Exactly how many and where would brine ponds be constructed? Where will the massive amounts of water required for drilling be resourced? Will considerations of viewshed be imposed to protect scenic and aesthetic values of state park/wildlife area visitors? Why would consideration of the parcel nominations be lumped together in a way that a single decision results in a blanket decision of YES or NO for all associated well pad, compressor, rights-of-way and additional infrastructure? And what about the royalties if a lease were to be approved – do those funds stay with the Ohio Department of Natural Resources to monetize wildlife and habitat stewardship work or would those funds disappear into the general coffers, or worse yet subsidize a tax cut to the wealthy?

I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. The Commission must admit that based on the scant information provided in the lease nominations and lumped nature of the nominations, you all have more questions than answers. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations. The public must have more information to faithfully consider whether a lease nomination is appropriate for these lands. The Commission must have more information to faithfully consider whether a lease nomination is appropriate for these lands. And the public must have some assurances in writing for how the finances and regulatory assurances will be handled if we open this can of worms of subsurface leasing our public lands. This decision is not something Ohio can afford to get wrong.

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

The Ohio Friends for the Preservation of Ohio State Parks Board of Trustees is adamantly opposed to Fracking in Salt Fork State Park and in all other State Parks in the State of Ohio. As the representative group of state park friends' groups, we speak for many citizens across Ohio who frequently utilize, support and preserve Ohio's state parks. All of us as individuals are actively involved in promoting, improving and protecting our parks.

Fracking operations create hazardous air pollution and can pollute groundwater resources. Salt Fork State Park encompasses thousands of acres of land and water where thousands of visitors utilize the lake, trails, campgrounds and lodge every year; enjoying the natural beauty of the area. These natural and protected areas very likely will be impacted by fracking operations that will disturb the scenic beauty and serenity of the state park and the wildlife within and around the park. No one wants to camp surrounded by noise and light pollution. In addition, fracking operations will cause an increase in heavy truck traffic which pose safety concerns.

Today, we request the Commission **DENY** the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Respectfully,

Bill Martin, President

Dear friends.

It has been ages since I visited Salt Fork, but the fact that a lottery system was in place when I was there decades ago is a sign that the people of the Great State of Ohio cherish the land there. I am appalled that Salt Fork Park is being considered as a fracking site.

I am opposed to fracking: the horrific waste of water, the release of toxins into the atmosphere, and the loss of blight-free land for recreation. I am opposed to single use plastic — they are everywhere, including in our own bodies.

When my grandchildren come, I want to be able to show them pristine water and densely forested parks. They are our most precious legacy. Why would we risk such precious gifts?

There is no justification for the surrender of state park land for this exercise.

Please protect public lands and public parks from fracking. Oil and gas companies can do their business on virtually other land NOT our state parks!

Salt Fork is a place where our family has gathered for meaningful family reunions — places where we could hike, canoe and swim.

As a cancer survivor, I go to state parks to find peace and explore nature, not to be exposed to toxins and to view oil and gas fracking operations!

Thank you in advance for protecting our state parks.

To the Commissioners:

I'm writing to urge you to say no to the plans to frack Salt Fork State Park. I watched the excellent presentations by the experts to your commission last Thursday. Fracking requires toxic chemicals, extreme water extraction that is removed from the water cycle, continuous lines of trucks, lights all hours of the day and night, noise from the drilling. It's incompatible with a park's purpose. Fracking will leave the park contaminated with radioactive brine because spills of it are common. Please do your job as a gatekeeper for the public interest and say NO to this nomination.

Anne Caruso

Dear Sirs and Madam,

I cannot imagine opening Salt Fork to leasing and fracking.
This state park is truly one of Ohio's jewels and must be kept as it is.

As a physician, I know the incredible value of outdoor experience for the physical and mental health of Ohio citizens.

This apparently simple intervention—preferable in my mind to more costly operations and medications to maintain health, should not be squandered or thrown away.

My daughter, a young professional in her early 30s, recently returned to Ohio after many years traveling the US and the globe.

She was astonished to realize how many natural resources our state has for hiking, biking, camping, swimming and the like.

It was a major factor in her decision to return to the state and consider a career in nursing, which she is pursuing.

Please, do not squander such a wonderful natural resource.
It is ours to value, to nurture, and to maintain.

Eleanor W Davidson MD

Dear Commissioners,

I am writing to express my request that the Commission deny the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area —Nomination Nos. 23-DNR-0005, 0006, and 0007.

Fracking operations create hazardous air pollution and groundwater pollution. The use of groundwater for the operation is particularly egregious. Fracking operations will definitely disturb the natural beauty and attractiveness of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. The addition of heavy truck traffic will pose significant safety concerns. Additionally, there are serious health concerns associated with fracking for people who live nearby.

My family will definitely avoid Salt Fork State Park if fracking is allowed nearby. It would be a shame to destroy the park for the people of Ohio just to satisfy the self-interested desire of private companies.

Sincerely,

David Kaplan, MD, PhD
Emeritus Professor of Pathology
Case Western Reserve University

Hello Ohio Department of Natural Resources,

Part of ODNR's mission statement for public parks is the protection and conservation of Ohio's parks and water ways. Ohio recently nominated Salt Fork State Park for oil and gas extraction which is the opposite of ODNR's mission statement. Fracking tends to release pollutants in multiple ways. Fracking can contaminate underground water sources when high pressure fracturing fluid and gas seeps into surrounding aquifers. Surface contamination can originate from waste pools, incomplete flaring, leaks, and transportation failures. There are plenty of stories and evidence of the harm oil and gas pollution has on the people who already live close to fracking sites. ODNR will have betrayed its own mission statement of safe recreation and conservation if oil and gas extraction is allowed to occur on Ohio's public lands including Salt Fork State Park. Please deny industry leases for oil and gas extraction in state parks to protect the well being of Ohioans and the environment.

From,
Kiersten Carew

Date: Tuesday, July 4, 2023 3:03:11 PM

Dear Commisioner,

I am a concerned Ohio citizen who is opposed to the decision to open up state parks to fracking for oil. I respectfully request that you deny the leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Salt Fork State Park is Ohio’s largest state park and one of the most beloved and important outdoor recreation destinations in the state. A 2009 ODNR publication stated that “Salt Fork State Park is a priceless gem to be cherished by the people of Ohio.” Please deny the Salt Fork oil and gas leasing nominations in order to protect public health and safety, respect outdoor recreation, and confront climate change. Nomination No. 23-DNR-0005 shows eight proposed shale fracking (“unconventional oil and gas production” or “UOG”) well pads surrounding Salt Fork. The construction and operation of well pads near Salt Fork’s boundaries seriously threatens the quality and character of this priceless Ohio gem. UOG leasing and development of the nominated Salt Fork parcels threatens public health and safety, current recreational uses, and Ohio’s outdoor recreation economy. By contrast, denying the Salt Fork nominations would protect the Park’s air quality; its tranquility; and its unique status as an Ohio outdoor health, wellness, and recreation destination. Denying the Salt Fork nominations would also serve the interests of present and future generations by helping to prevent the worst impacts of climate change.

Thank you, Moshe Koval

Ohio Department of Natural Resources
2045 Morse Road
Commission.Clerk@oglmc.ohio.gov
Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

Public parks of OHIO belong to the residents of OHIO. They provide essential functions and must be protected. They absorb CO₂, cleanse the air and water of toxins, provide precious habitats and ecosystems that all living things, including humans, rely on. The inhabitants of the natural world are already struggling to survive due to habitat destruction by land loss, degradation and pollution. It is essential to protect natural areas and to increase them so that they are not fragmented as they are now. A "Home Grown Natural Park", which is to include not only all parks but areas on private properties that are naturalized, is endorsed by Douglas Tallamy and many environmentalists. (Read Nature's Best Hope). Every inch of public parks is precious.

In public parks, by being in and connecting with nature, people gain significant positive impacts on their physical and mental health. They experience peace, quiet, beauty, and cleaner air and reduced temperatures.

Fracking in/around public parks will have devastating impacts on the ecology of the entire fracking area and beyond:

Millions of gallons from local waters will be collected and used, resulting in toxic-containing contaminated liquids that will remain so forever. Transporting and injecting this liquid into wells will allow toxins to enter the environment--releasing chemicals, heavy metals, PFAS, etc that can result in cancer, endocrine disruption, and many other adverse health effects. The remaining natural waters will have deleterious results of lower volume, resulting in increased temperature, lower pH, and lower oxygen, adversely affecting waterlife.

Gas venting and flaring will release harmful chemicals such as Nitric oxide, benzene, toluene, and other volatile hydrocarbons into the air, resulting in increased cases of cancer, lung disease, liver disease, low weight births.

Greenhouse gases CO₂, methane, NO₂ will be released--with significant effects on our climate. This is not something we can afford. The greenhouse gas situation is dire and must be ameliorated now.

Fracking pads create nonstop noise and light pollution. This will have severe effects on all living things around them. Noise and light pollution prevent birds, insects, animals, bats, from carrying out their normal life-sustaining activities such as communicating, eating, breeding. Humans will also be severely stressed, increasing health harms from cardiovascular diseases to cancers.

All the clearing of land for the fracking pads, the pipelines, the roads that will be part of the

whole fracking infrastructure will destroy valuable essential environments.

Transporting of gases and liquids from fracking have resulted in leaks and dumping of toxic waters and materials, as well as spills, fires and explosions at wellsites.

WE, AS A STATE, A NATION, A WORLD CANNOT AFFORD TO CREATE NEW FRACKING SITES. THIS IS A MORAL IMPERATIVE. THE HEALTH OF HUMANS AND THE ENVIRONMENT ON WHICH WE DEPEND MUST BE PROTECTED.

PLEASE DENY THE SALT FORK STATE PARK AND WILDLIFE AREA LEASING NOMINATIONS.

Respectfully,
Kathy Smachlo,MD

Date: Thursday, July 20, 2023 9:20:49 PM

Dear Commissioners,

I am lucky to have had the opportunity to visit and explore many great public lands in Ohio and elsewhere in the US. My background as a geologist has taken me to many of these places, some of which are special to me, and all of which are special to someone. Salt Fork State Park is no different. Although I have yet to visit, I hope to one day appreciate its beauty and enjoy learning about its geology. This is less likely to happen if fracking is permitted in the Salt Fork area.

While I am pleased that Ohio took the appropriate steps to protect Salt Fork State Park from extractive industry and development so that all Ohioans could enjoy the park, I am deeply concerned by the current plans to permit oil and gas operations.

Fracking operations create hazardous air pollution and can pollute groundwater resources. I know many visitors — including my own family — would avoid visiting Salt Fork State Park knowing these risks. Fracking operations will disturb the scenic beauty of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

Further, this is no time to be putting more resources into oil and gas, which, although cleaner than coal, are still greenhouse gas emitting energy sources. This plan would only kick the can further down the road on climate action, and we simply cannot afford any more detours in the wrong direction. My background studying geology, in particular paleoclimatology, has made this need for urgent action abundantly clear.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Thank you for considering my comment.

Please deny the nomination for Salt Fork State Park to be leased for fracking and drilling. This land belongs to the people of the state of Ohio. It would be short-sighted to allow special interest groups to make money on land set aside for recreational use.

I use our state parks extensively, especially those near to where I live, Strouds Run and Burr Oak. Salt Fork is of great value to those in the Columbus area. We all deserve to have places of natural beauty to retreat to, appreciating the wildlife, birds, plants, trees and terrain.

Please think of those of us who count on our state parks for places of peace.

Thank you,

Marilyn Zwayer

I oppose the nomination of this parcel because

1. If clean water is turned into toxic water, that's a resource that cannot be replaced.
2. If habitat is destroyed, the plants and animals that are thriving there will be destroyed.
3. The people who enjoy the property will no longer be able to do so due to smells, sounds and light. I'm not talking about the smell of manure, I'm talking about the smell of gases that have not been identified. We must have air quality monitoring, so we will know what gases are being released and the data must be public. After all, it is the public who is breathing the air.
4. Water quality testing must also be done. We don't want to turn Ohio into cancer alley. We've all seen Erin Brokovich. We've seen Dark Waters. Does the State of Ohio want to be sued? Who will pay for that? The people of Ohio.

Date: Wednesday, July 12, 2023 2:27:46 PM

In the early 1980's, as I was beginning my career as a city planner in Portage County in northeast Ohio, I recall attending a two day conference at Salt Fork State Park on natural resource protection and conservation. I had not previously been to Salt Fork, and upon my arrival, was quite literally smitten with the overall beauty and grandeur-I was unaware that such incredible natural beauty, such diversity in landscape, wildlife and naturally occurring amenities existed in Ohio! It was indeed gratifying to see that Ohio's Department of Natural Resources clearly placed a high priority on safeguarding and stewardship of this very special area of my state. I had viewed such areas outside of Ohio, but was unaware that Ohio contained such a treasure! Forty odd years later, I struggle with the fact that my state government is intent upon desecrating this public trust which is Salt Fork State Park, all in the name of profiting off climate destroying oil and gas development at a time of a severe climate emergency, and at a place it doesn't even remotely belong! As a land use, oil and gas exploration and development is an industrial one, and belongs in an area zoned for such uses, not an environmentally sensitive area dedicated to public recreation! The State of Ohio benefits immensely from the recreation revenue generated by such places as Salt Fork-but this will not continue, not once the myriad users of Ohio's parks see for themselves the horror to be visited upon them by their elected officials. It is a disgrace and betrayal of the worst kind, by public officials who have taken an oath to promote the public health, safety and welfare of the citizens of Ohio.

I am asking the Oil and Gas land Management Commission to DENY industry nominations to lease Ohio's Salt Fork State Park: there is no other decision that can be rationally, or morally made in this regard. Obviously, those who passed this outrageous legislation could care less how they will be remembered, but they WILL be remembered, you count upon it! Therefore, you as members of the Land Management Commission must do the right thing and DENY the nomination to lease Salt Fork State Park! You too will be remembered!

When I attended that conference many years ago at Salt Fork, I was extremely impressed that my state officials placed such a high priority on protecting nature, and assuring that Ohio's residents would have such precious places to recreate-both physically, mentally and spiritually, for many, many years to come.They taught me well back then, and their example of stewardship was a major guide and example throughout my entire career as a public sector land planner. Their example clearly has gone by the way. Please deny the industry nominations to lease Salt Fork State Park; to do otherwise is a violation of a public trust.

Thank you for considering these sincere and heartfelt comments.

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

I am fortunate to have had the opportunity to visit and explore many local parks as a child growing up in Ohio. It is a profound sense of peace found in nature, alongside a fascination and love of all creation, which has led to a lifetime of visiting our public parks alone, as well as with my family and friends.

The benefits of all our remaining natural areas, left as close as possible to how God (or whatever power you believe in) made them, are profound, and beyond my poor power to convey.

I am so thankful Ohio took the appropriate steps to protect this land from extractive industry and development so that all Ohioans could enjoy the park's stunning landscape and natural features.

This could all change if oil and gas operations are permitted to frack our public lands.

Fracking operations create hazardous air pollution and can pollute groundwater resources. I know many visitors — including my own family — would avoid visiting Salt Fork State Park knowing these risks. Fracking operations will disturb the scenic beauty of Salt Fork State Park.

No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

RE: Pubic Comments on Salt Fork, Nomination #: 23-DNR-005, 006, 007

I ask that you **DENY** industry requests, proposals, applications and/or nominations to lease, to frack, or other was extract oil or gas, or tree logs from Salt Fork State Park and from ALL other State Parks, Wildlife Areas, and other Ohio Public Lands.

In case you have not noticed....we have planetary climate change going on, the unprecedented total warming on our entire planet happening, **and** it is going to get worse (you have not seen anything yet), that is unless we stop and or slow the use of all fossil fuels in all it forms period....like NOW.

It is insane to keep extracting carbon from the ground and spewing its particulates and gasses into the atmosphere, and the very air we breath, and destroying the fragile planetary temperature balance; what all living systems on Earth, count on and need to survive--insane, to keep extracting carbon fuels especially when there are alternatives.

Do some research, why don't you, on the catastrophic Anthropocene Epoch, that is without question, unfolding before our eyes.

Please DENY, STOP, QUIT, CURTAIL, say NO MORE!!!!

Date: Saturday, June 10, 2023 9:13:08 AM

Dear Commissioners,

As an Ohio native and lifelong visitor to our beautiful state parks, I am greatly dismayed by the news that Salt Fork Lake has been selected to be opened up for gas and oil drilling (i.e., hydraulic fracking). Allowing this activity will disturb the natural beauty that draws visitors to the park, making the site less attractive to tourists from outside our state, as well as Ohioans who have enjoyed its recreational offerings over the years. Drilling is incompatible with the purpose the parks were created to fulfill: the noise, equipment, truck traffic, machinery, removal of trees, and other intrusions are harmful to the natural environment and reduce the appeal of the park. Such development will have both long term and short term costs that may not be immediately apparent, but eventually will take their toll on Ohio's tourism as well as the rapidly warming climate.

I respectfully request that you reconsider this decision and withdraw approval for drilling in the state parks and specifically, Salt Fork, where I used to enjoy happy vacations with my family. I would like other families in Ohio to have the same opportunity.

Sincerely,

Laura Rushton

Public Comment RE: Please DENY the Leasing Nominations for Salt Fork State Park and Wildlife Area, Nomination #s: 23-DNR-0005, 0006, 0007

Dear Commissioners,

The Center for Biological Diversity, on behalf of its 1.7 members and supporters, respectfully requests that you deny the leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Salt Fork State Park is Ohio’s largest state park and one of the most beloved and important outdoor recreation destinations in the state. A 2009 ODNR publication stated that “Salt Fork State Park is a priceless gem to be cherished by the people of Ohio.”¹ Please deny the Salt Fork oil and gas leasing nominations in order to protect public health and safety, respect outdoor recreation, and confront climate change.

Nomination No. 23-DNR-0005 shows eight proposed shale fracking (“unconventional oil and gas production” or “UOG”) well pads surrounding Salt Fork. The construction and operation of well pads near Salt Fork’s boundaries seriously threatens the quality and character of this priceless Ohio gem. UOG leasing and development of the nominated Salt Fork parcels threatens public health and safety, current recreational uses, and Ohio’s outdoor recreation economy. By contrast, denying the Salt Fork nominations would protect the Park’s air quality; its tranquility; and its unique status as an Ohio outdoor health, wellness, and recreation destination. Denying the Salt Fork nominations would also serve the interests of present and future generations by helping to prevent the worst impacts of climate change.

Ohio Revised Code, Section 155.33(B)(1)(b), (c), (e), and (h) provides that:

In making its decision to approve or disapprove the nomination, the commission shall consider all of the following: [...]:

- (b) Whether the proposed oil or gas operation is compatible with the current uses of the parcel of land that is the subject of the nomination;
- (c) The environmental impact that would result if the lease of a formation that is the subject of the nomination were approved; [...]
- (e) Any potential impact to visitors or users of a parcel of land that is the subject of the nomination; [and]
- (h) Any comments or objections to the nomination submitted to the commission by residents of this state or other users of the parcel of land that is the subject of the nomination.

UOG development of Salt Fork State Park would generate significant air, noise, and light pollution that would negatively impact visitors and users of the Park. R.C. 155.33(B)(1)(b), (c), (e), and (h). UOG development would conflict with current uses of the Park, including the recreational and health-based escape from industrialization, pollution, and nature fragmentation. R.C. 155.33(B)(1)(b), (c), (e), and (h). UOG development of Salt Fork State Park would also push the world closer to climate catastrophe at a time when virtually all nations of the globe recognize the need to rapidly decarbonize the energy sector. R.C. 155.33(B)(1)(c), and (h).

A. DENYING THE NOMINATIONS WILL PROTECT PUBLIC HEALTH AND SAFETY – R.C. 155.33(B)(1)(b), (c), (e), and (h).

Unconventional oil and gas production (UOG) is associated with: dangerous levels of hazardous air pollutants, including carcinogenic and endocrine disrupting chemicals; childhood leukemia; increased mortality in elderly populations; more heart attacks; low birth weight and extreme premature births; asthma attacks; and headaches and fatigue.

Dangerous Levels of Hazardous Air Pollution

A 2019 meta-analysis on the links between hazardous air pollutants (HAPs) and oil and gas development showed that HAPs linked to numerous cancerous and non-cancerous health conditions are found in the vicinity of production sites at concentrations exceeding health safety thresholds (Garcia-Gonzales 2019).²

A 2018 meta-analysis of endocrine-disrupting air pollutants revealed that there are more than 200 airborne chemicals associated with unconventional oil and gas development, including 26 known endocrine-disrupting chemicals and 8 suspected endocrine-disrupting chemicals (Bolden 2018).³

A 2014 study identified eight highly toxic chemicals in air samples collected near fracking and associated infrastructure sites across five states, including Ohio. The most common airborne chemicals detected included two proven human carcinogens (benzene and formaldehyde) and two potent neurotoxicants (hexane and hydrogen sulfide). In 29 out of 76 samples, concentrations far exceeded federal health and safety standards, sometimes by several orders of magnitude (Macey 2014).⁴

B. DENYING THE NOMINATIONS WILL PROTECT CURRENT USES AND PREVENT NEGATIVE IMPACTS TO USERS/VISITORS AND THE ENVIRONMENT – R.C. 155.33(B)(1)(b), (c), (e), and (h).

Salt Fork offers Ohioans and visitors a uniquely special recreational and health and wellness experience. On a per capita basis, public land is a relatively rare resource in Ohio; nature in Ohio is fragmented. The air pollution, stress, traffic safety, and wildlife impacts associated with UOG are incompatible with the current health benefits and recreational uses of Salt Fork State Park. Approving Salt Fork State Park for UOG leasing and development would strike a symbolic and literal blow to Ohio's strong and growing outdoor recreation economy.

Salt Fork Is Exceptionally Rare: a Large and Contiguous Ohio Public Greenspace. Salt Fork is Ohio's largest and one of its most popular state parks.¹² A 2009 ODNR publication stated that "Salt Fork State Park is a priceless gem to be cherished by the people of Ohio."¹³

Only 15% of Ohio's forested acres are publicly owned (combined total of state, federal, and local public ownership).¹⁴ Ohio's forests are fragmented, and additional fragmentation is occurring. The rate of conversion of forest land to wildland urban interface (WUI) is greater in Ohio than any other state in the USDA Forest Service's Region 9 (20 Northeastern and Midwestern states), with an average of 7.5% of forest land becoming WUI each decade.¹⁵ As of 2000, 77 percent of Ohio's forest land was within 1,310 feet of a road, and 44 percent was within 650 feet.¹⁶

The Public Needs Quality Public Greenspace for Physical and Mental Wellbeing. Meta-analysis results showed that greenspace exposure is associated with wide-ranging health benefits, including statistically significant associations with reduced diastolic blood pressure, heart rate, salivary cortisol, incidence of type II diabetes and stroke, all-cause and cardiovascular mortality, as well as health-denoting associations with pregnancy outcomes, HRV, and HDL cholesterol, and self-reported health.¹⁷

Forest-based interventions (also known as "forest-bathing") have a positive impact on the cardiovascular system; some immunological and/or inflammatory parameters; and mental health in the areas of stress, depression, anxiety, and negative emotions. Positive effects were seen in healthy children and adults, as well as in adults with various preexisting conditions.¹⁸

UOG Causes Stress and Reduces Quality of Life and Public Safety.

In a 2018 study of residents of Ohio's Guernsey and Noble Counties, every participant reported experiencing negative impacts on their quality of life from unconventional natural gas development. Types of psychological stress reported included stress from noise or light pollution; feeling frustrated and manipulated after interactions with the oil and gas industry; general stress and uncertainty about the future. Researchers found that experiences of social stress extended to include divisions among family or community; fears of, or direct experiences of, environmental health harms; observing dying, unhealthy trees; and traffic-related effects. Nearly all residents interviewed had experienced dangerous encounters with oil and gas truck drivers and observed that damaged roads had become increasingly common.¹⁹

A 2015 study in Pennsylvania found vehicle crash rates to be substantially higher in counties with notable oil and gas drilling; while heavy truck crash rates were 61 to 65% higher.²⁰

UOG Surrounding Salt Fork Would Harm Ohio's Outdoor Recreation Economy.

The State of Ohio reported 42,831,130 visits to Ohio State Parks for the year 2018.²¹ The reality and perception of fracking and UOG production under and surrounding Salt Fork would negatively impact park attendance and Salt Fork's reputational value.

The Outdoor Industry Association estimates that outdoor recreation in Ohio annually generates \$24.3 billion in consumer spending, supports 215,000 direct jobs, \$7 billion in wages, and \$1.5 billion in state and local tax revenue.²²

UOG Light and Noise Pollution Harms Wildlife.

Light and noise pollution from oil and gas production disrupt wildlife behavior, including in protected areas and critical habitats of endangered species, and have been linked to mass die-offs of waterfowl and declines in songbird populations in Alberta, Canada, Pennsylvania, West Virginia, eastern Ohio, and New Mexico.²³ Chronic noise from drilling and fracking operations interferes with the ability of birds to respond to acoustic cues.²⁴ Wildlife biologists in West Virginia found genetic changes in the Louisiana waterthrush that were linked to shale gas development.²⁵

C. DENYING THE SALT FORK NOMINATIONS WILL POSITION OHIO'S PUBLIC LANDS TO CONFRONT CATASTROPHIC CLIMATE CHANGE – R.C. 155.33(B)(1)(c), and (h).

Deciding to keep Salt Fork's publicly-owned oil and gas reserves in reserve rather than putting them in production would be an important act of restraint, foresight, and conservation. The 2023 IPCC Synthesis Report states that "Limiting human-caused global warming requires net-zero CO2 emissions [and] a strong reduction in other greenhouse gas emissions."²⁶ UOG fracking and production stands in opposition to both of these goals. It is a process that not only releases large amounts of methane, but creates an end product that will be burned and release further CO2 into the atmosphere. Swift and steep reductions in GHG emissions are needed to conserve a habitable climate and a livable world.

According to the International Energy Agency (IEA), there can be no new oil and gas development if the global energy sector is to reach net zero emissions by 2050 and help avoid catastrophic climate change.²⁷

According to the International Institute for Sustainable Development (IISD), the world must decrease global oil and gas production and consumption by 30% by 2030 in order to satisfy Paris Agreement climate goals.²⁸

According to the Intergovernmental Committee on Climate Change (IPCC), limiting warming to 1.5°C and 2°C involves rapid, deep, and in most cases immediate greenhouse gas emission

reductions.²⁹

Methane, the main component of natural gas, is 34 times more potent as a greenhouse gas in the atmosphere than CO₂ over a 100-year timeframe, and 86 times more potent over a 20-year timeframe.³⁴

Climate change is a threat to human well-being and planetary health. There is a rapidly closing window of opportunity to secure a liveable and sustainable future for all.³⁵

The IPCC states: “Continued emissions will further affect all major climate system components, and many changes will be irreversible on centennial to millennial time scales and become larger with increasing global warming. Without urgent, effective, and equitable mitigation and adaptation actions, climate change increasingly threatens ecosystems, biodiversity, and the livelihoods, health, and wellbeing of current and future generations.”³⁶

Here in America, many vulnerable populations such as children, older adults, pregnant women, low-income communities, some communities of color, indigenous populations, people with disabilities, and people with pre-existing or chronic health conditions are considered disproportionately vulnerable to the effects of climate change.³⁷

Climate change will cause extreme heat and extreme weather events to become more common. Outdoor air quality will drop and flooding will become more frequent. Vector-borne diseases, water-borne diseases, and food-related infections will thrive in the warmer climate. And, the mental health of the people will suffer from both the fear of the future and the negative impacts of all the other effects harming their lives.³⁸

Air quality will decrease significantly due to climate change. Meteorological conditions will shift and allow for ozone concentrations to increase in the air, further increasing the rate of “premature deaths, hospital visits, lost school days, and acute respiratory symptoms.”³⁹ Wildfires, which will become more common as temperatures rise, also harm air quality by increasing particulate matter and ozone precursors in the air.⁴⁰

We are already seeing increased climate-related air quality impacts in Ohio. In 2015, wildfires and the ozone precursors they emit caused ozone levels to rise to 60-80 ppb for over 8 hours, putting people’s health at risk.⁴¹ Wildfires in eastern Canada are filling Ohio’s June, 2023 skies with smoke and resulting in central Ohio’s first “unhealthy” air quality alert since 2003.⁴² These numbers are above recommended safety levels and put some of the most vulnerable populations at risk, such as the many children with asthma in Ohio who make up part of the 6.8 million American children with asthma that will suffer from these drops in air quality.⁴³ Fossil fuel-driven climate change is the main cause of increasing fire weather.⁴⁴ These air quality impacts will worsen as the planet’s temperature rises.

For all of the foregoing reasons, both individually and collectively, we respectfully request that you DENY the Salt Fork State Park and Wildlife Area leasing nominations.

Sincerely,

Will Harlan

Attn: Commission Clerk
Oil & Gas Land Management Commission
Ohio Department of Natural Resources
2045 Morse Road
Commission.Clerk@oglmc.ohio.gov

Dear Commissioners,

I am opposed to oil and gas leasing in Salt Fork State Park and Wildlife Area, and respectfully request that you deny the leasing nominations that have been submitted for it.

There are many public policy reasons for refusing to allow fracking in Salt Fork: wildlife concerns, pollution concerns, public health and safety concerns, air quality concerns, park user enjoyability concerns, tranquility concerns, recreation economy concerns, and probably many more. You, being responsible commissioners, have no doubt considered all of them.

In the end, though, I believe that there should just be no oil and gas drilling in State Parks. State Parks have been almost-sacred sanctuaries for me and my family since I was a boy. In my 71 years, State Parks have been the people's land for wholesome, family enjoyment. I am dismayed that Ohio would consider selling them out to the highest bidder. If fracking is allowed at Salt Fork, what is to stop the industry from coming after all of the parks? What has happened to the world we once knew, where oil and gas profits were subservient to the will of the people ... at least on land owned by the people?

I would implore you to put political wars and culture wars aside and vote with common sense. There should be no oil and gas drilling on precious State Park land!

Thanks for listening,
~Steve McKee

Subject: Salt Fork Park
Date: Saturday, June 24, 2023 7:42:28 PM

Dear commissioners,

Salt Fork Park is a treasure to Ohio residents and should remain the peoples park. The potential damage that fracking operations could pose are numerous and the future of the park for recreation and wildlife is in danger. Also the impact to the environment will add to the already dreadful effects of climate change.

I am very much in opposition to the nominations for the above-referenced parcels in the vicinity of Salt Fork State Park. My family has spent many days at Salt Fork camping, hiking, fishing, and swimming there over the years and have always felt that it was a very special park. It is not only Ohio's largest State Park, but many will agree it is the most beautiful one. I oppose the nominations submitted for hydraulic fracturing for the following reasons:

- 1 The building of access roads and their environmental impact in the vicinity of the park.
- 2 Water withdrawal (each fracking well will have to take about a 1 million gallons of water/year). These will be drawn from the Muskingum Watershed, which cannot tolerate this loss.
- 3 Flaring of natural gas and methane emissions which will contribute to climate change.
- 4 Water pollution and the huge amounts of brine waste which will probably be injected into the ground in some nearby area or county.
- 5 A large increase in the level of noise and light pollution along with the enormous amount of truck traffic that will ensue in the area once drilling begins.

I would therefore urge the Commission to seek the advice of environmental experts before approving these nominations (I don't see any such expertise in the current Commission membership)

I beg you to not let our park become a haven for fracking and distruction.

Sincerely,
Debra Miller

Date: Thursday, July 20, 2023 5:03:49 PM

Dear sir or madam,

The ODNR-Oil and Gas Land Management Commission (OGLMC) is required to consider, among other things, for lease nominations: 1) compatibility with current uses; 2) environmental impacts; and 3) potential impacts to the public.

Regarding the OGLMC's consideration of these three points for Salt Fork State Park and Wildlife Area, it should first be noted that negative effects on the environment and public health have been shown to occur in areas of oil and gas extraction because of the chemicals used, traffic, noise, flaring, and lighting. Secondly, well pads and associated activities adjacent to, and/or in proximity to, the park and wildlife area could also negatively affect the quality of recreational uses at these places for the same reasons.

For reasons mentioned above, I urge the OGLMC to deny the above lease nominations, and any future lease nominations in the vicinity of Salt Fork State Park and Wildlife Area.

Dear Commissioners,

Ohio has many wonderful parks for Ohioans & tourists to visit & Salt Fork State Park is one of the best. It is Nature's dream park. Ohio has taken appropriate steps to protect this land from extractive industry & development. But all this could change if oil & gas operations are permitted to frack our public lands. Fracking creates hazardous air pollution & ruins the land & groundwater resources. It will disturb the scenic beauty & the wildlife as well. Please deny the oil & gas leasing nominations submitted for Salt Fork State Park & Wildlife Area....Nomination Nos: 23-DNR-0005, 0006, & 0007. Please consider all the negative & dangerous consequences when you deliberate. Ohioans want vibrant parks & greenspaces. They love the country & wilderness. Besides, once this environment is ruined by fracking, there is no bringing it back. It's finished. Thank you.

I urge you not to allow fracking in Salt Fork State Park or in other state parks and wildlife areas.

Fracking would negatively affect outdoor recreation in the park: It is not pleasant to boat, hike or even stay in the lodge with the unsightly fracking equipment. There is also noise, light and air pollution that affects public health.

State parks are for the people to use, not industry.

I am planning to attend a conference next April at the park but will not likely do so if there is fracking occurring - it is likely the conference will be moved as well.

Hello,

Fracking near our wonderful Salt Fork will cause untold damage. Ohio need every cubic inch of natural area to combat climate change. It does NOT need more fossil fuel to poison our air.

Salt Fork is Ohio's largest state park and one of our most important public lands. Now is the time to stand up for our protection of our public lands and the peace that they bring to all Ohioans.

Subject: Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007, Valley Run and Zepernick Areas
Date: Sunday, July 9, 2023 11:15:44 PM

Dear members of the Oil and Gas Land Management Commission,

As a regular user of Ohio State Parks, I am very disturbed by plans to open state parks and lands such as Salt Fork State Park, and Valley Run & Zepernick Wildlife Areas to fracking. We go to state parks and natural areas for recreational opportunities such as camping, hiking, kayaking and wildlife observation. As a psychologist, I know that such breaks to connect with nature help people not just to have fun, but improve their mental health and economic productivity. Fracking is antithetical to these ends. Fracking removes water from lakes and streams and releases polluted substances. Fracking brings in air, noise, and light pollution which is dangerous to wildlife and disruptive to the peaceful enjoyment which are so important to human well-being. State lands were set aside to PRESERVE, not to destroy, the natural resources of our beautiful state.

Sincerely,
Cecilia Shore

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

I am fortunate to have had the opportunity to visit and explore many local parks as a child growing up in Central Ohio. It was a special visit to Salt Fork State Park campground that sparked my lifelong interest in Ohio's state parks. Swimming in the beautiful lake in the peaceful solitude of nature is a wonderful life experience.

I have visited Salt Fork State Park many times since that first visit— including several trips where I've introduced others to the beauty of Salt Fork's hiking trails, waterways, and campgrounds. I am so thankful Ohio took the appropriate steps to protect this land from extractive industry and development so that all Ohioans could enjoy the park's stunning landscape and natural features. That could all change if oil and gas operations are permitted to frack our public lands.

Fracking operations create hazardous air pollution and can pollute groundwater resources. I know many visitors — including my own family — would avoid visiting Salt Fork State Park knowing these risks. Fracking operations will disturb the scenic beauty of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Sincerely,

Matthew Adair

Subject: Save Salt Fork State Park
Date: Wednesday, July 19, 2023 9:25:32 AM

To the Powers that Be

I implore to reconsider fracking at our beloved state park. I am a life long Ohioan and it sickens me to think that our valuable Salt Fork is being considered a fracking site.

We need to save our park for our future citizens and family members. Our water, air, climate depends on treating our natural resources with respect.

Am urging the Land Management Commission to deny industry nominations to lease Salt Fork.

Sincerely,
Anne Roberts

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

I am fortunate to have had the opportunity to visit and explore many local parks as a child and now as an adult. I have even visited Salt Fork State Park to enjoy the hiking trails, scenic waterways, and beautiful nature.

I am thankful Ohio took the appropriate steps to protect this land from extractive industry and development in the past. This conscious decision means people and wildlife can enjoy the park's habitat safety and stunning landscape and natural features for years to come. That could all change if oil and gas operations are permitted to frack our public lands. Do you want to be responsible for such a loss?

Evidence shows fracking operations create hazardous air pollution, and can pollute groundwater resources. I know many visitors — including my own family — would feel inclined to avoid visiting any such place knowing these risks. From experience with other locations, we know fracking operations disturb the scenic beauty and disrupt the environment. Salt Fork State Park does not deserve such treatment. Who wants to camp surrounded by noise and light pollution? Not me! Not to mention fracking operations will cause an increase in heavy truck traffic which pose safety concerns too. The accidents involving trucks speak for themselves.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. I ask you to please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations. Thank you.

Subject: Vote No on Salt Fork nominations: Nomination #23 - DNR-0005; #23 - DNR-0006; #23 - DNR -0007
Date: Monday, July 17, 2023 6:13:28 PM

To the Ohio Oil and Gas Land Management Commission,

My name is Mary Beth Naim and I live in Kirtland, located in Lake County Ohio. I'm an avid outdoors enthusiast hiking about 50 miles a month with the Cleveland Hiking Club. I am also the grandmother of two young boys who also enjoy outdoor adventures, playing and discovering everything our great Ohio natural resources have to offer.

I'm very concerned that your commission would even consider approving fracking in parks, forests and wildlife areas that my tax dollars and my fellow Ohio citizens have set aside for recreation and protection of our natural resources.

In addition to the direct impact of our public lands, the commission should also be seriously considering the amount of GHG emissions these new fracking projects will produce. The state of Ohio is already one of the highest GHG emitters in the United States and the extra release of methane from the fracking process along with all the other fossil fuel being burned to support this extraction, is directly contributing to climate change. Ohioans are already feeling the impacts of climate change with more severe weather events, periods of no rain, record high temperatures, algae blooms and air quality alerts.

Please continue to preserve these incredible state assets for us and future generations by declining these nominations to frack in our state parks.

RE: Please deny the Leasing Nominations for Salt Fork State Park and Wildlife Area, Nomination #: 23-DNR-0005 and 23-DNR-0006 and 23-DNR-0007

Dear Commissioners,

I am a private citizen of Ohio who has enjoyed hiking, camping, and canoeing on and around Salt Fork since I was a child. I respectfully request that you DENY the leasing nominations submitted for State Park and Wildlife Area – Nomination Numbers 23-DNR-0005, 23-DNR-0006 and 23-DNR-0007. Salt Fork State Park and the surrounding wildlife areas are truly a “priceless gem” that must be cherished and protected by the people of Ohio. Salt Fork is one of our paramount areas for outdoor recreation, enjoyed by Ohioans like my family, and a draw for tourism from outside Ohio. We must not squander such a resource.

The impacts of unconventional oil and gas production have been well documented. The noise, traffic, light pollution, and impacts to water would dramatically impact the character and quality of the entire area. This alone would make a visit to Salt Fork State Park far less desirable. Add to that the dangerous levels of air pollution linked to oil and gas development, and it seems to me to be an unacceptable risk to allow this leasing and development in such a beautiful park. It is also important to note that opening more places for oil and gas production just further ties Ohio to the creation of even more greenhouse gas in a world trying to decarbonize to prevent a global catastrophe from fossil fuels.

Please protect our strong and growing recreation economy from this threat. Please protect our increasingly rare public wild land for the future of all Ohioans. Please consider the impact of creating even more methane and Co2 in a world already suffering the impacts of global climate change.

Please DENY the leasing nominations for Salt Fork State Park and Wildlife Area # 23-DNR-0005, 23-DNR-0006 and 23-DNR-0007.

Respectfully submitted,

Kathryn Hanratty

First name	Last name	Letter Subject	Letter Body
Catherine	Cowan	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.</p> <p>Environmental impacts If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”</p> <p>Adverse geological impacts Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.</p> <p>Impact on visitors Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?</p> <p>Comments and objections from residents of the state and other users: \We demand PROOF that there will be:</p>

			<ul style="list-style-type: none">- NO environmental impact to the park- NO adverse geological impact- NO impact to visitors to the park- NO impact to wildlife or plant species- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.- NO use of any water from any nearby lakes or streams <p>The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

nancy	schaffer	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Bob	Kloos	<p>OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park</p>	<p>Dear Oil and Gas Land Management Commission:</p> <p>I live an all electric home. I no longer have a gas meter in my basement. All the electricity I use comes from the solar panels on my roof or from wind turbines. We have used too much fossil fuel in too short a time. We are sucking carbon destroying the only planet we will ever have.</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Austin	Warehime	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>I grew up less than 2 miles from the Salt Fork State Park line. I spent countless hours, fishing, hiking, and golfing in and around the park. When I tell people where I am from, I use Salt Fork as my reference point. All of my family still live in the area. This is my home and allowing these fracking project to move forward will destroy it.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p>
--------	----------	---	---

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

			<p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€œ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>

Ellen	Straub	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	-----------------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Margaret	Hutchinson	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals." □</p> <p>These impacts are significant</p> <p>Adverse geological impacts:</p>
--	--	--

		<p>Low-level earthquakes in the Appalachian Basin, including eastern Ohio, are caused by fracking.</p> <p>Some scientific evidence of this is available online and some say Miami University Ohio has provided new technical data on the effects to geology and the processes of horizontal hydrofracturing</p> <p>While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.</p> <p>Impact on visitors:</p> <p>Will Ohioans and tourists want to hike, bike, camp, fish, bird and in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation?</p> <p>The answer is no.</p> <p>Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs.</p> <p>Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming.</p> <p>Fracking will chase away Ohio visitors, not attract them.</p> <p>After all, who could relax, camp, picnic or bike with family and friends in the equivalent of an environmental hellscape?</p> <p>No one will, no one wishes to and no one asks for their public parks to be destroyed to support a dying, outdated, and non profitable natural gas industry.</p> <p>Ohio can be said to have pride in a strong ODNR and OEPA with regulations that support and protect Ohio natural resources.</p> <p>Having trees, grasses and vegetation is critical to supplying oxygen to all animals including humans through photosynthesis.</p> <p>Destroying hundreds or thousands of protected State Park lands in Ohio disturbs a fragile ecosystem and kills many animals and vegetation.</p> <p>Before any proposal to open leasing for NG process moves forward and before any permitting is approved, a carefully, well funded EIS is necessary and will be required by public comments to look for Endangered Species Act animal and vegetable varieties that are directly threatened by NG hydrofracturing proposals in Salt Fork State Park including that habitat should Salt Fork State Park be that of the Indiana bat, Allegheny Woodgate, shrimp, spring fed mussel populations and a host of other protected species.</p>
--	--	--

Speciation studies are critical to identifying and upholding the Endangered Species Act in Salt Fork State Park Ohio, knowing the ESA is perhaps one of the most beloved and treasured of all US Federal regulations and protecting them is critical to all life on Earth.

Some studies indicate that nearly forty percent of all land based animal species face extinction in the next forty years due to climate change from many fossil fuel and human processes.

Work to protect valuable natural resources and uphold protections for Salt Fork State Park and all Ohio public lands will help maintain a healthy ecosystem for animals, vegetation and people in the short term and the long term.

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€” and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Mike	Souza	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

any ability to stargaze. Frack wells flare methane â€“ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Karen	Karen	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Sandra	Cobb	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is an Ohio gem that my family enjoys visiting. Ohio needs every cubic inch of natural area possible. Don't destroy it for polluting fossil fuel.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans " who own and pay for our public lands " visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast." □</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well " and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the "Halliburton loophole" " the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic " 2,300 to 4,000 truck trips per well " will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.</p>
----------	------------	--	---

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by the people of Ohio, and we expect you to DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

David	Celebrezze	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Molly	Nichols	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Joe	Lattanzio	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with Current Land Uses:</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	-----------	---	--

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental Impacts:

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse Geological Impacts:

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact to Visitors:

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the noise generated by fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way to prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack at Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Respectfully,

A concerned citizen that regularly uses the park

Eileen	Pezzutti	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

My family has enjoyed all the Ohio State Parks since I was a child. Every year my father would rent a cabin for a week to stay at these parks. I have many fond memories of Salt Fork and would like other Ohio families to be able to make their own memories for years to come.

I am absolutely against leasing land for purposes of fracking in our state!

And I am tired of hearing that the greed of gas and oil companies continues to control our governing bodies.

When do the tax paying people get to be heard?

Please don't approve these Fracking leases!

Thank you,

Eileen Pezzutti

The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Jean	Hanson	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground" including PFAS "and the wastewater that comes back up is radioactive. Frack pads are fully lit at night" destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.</p> <p>Environmental impacts</p> <p>If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."</p>
-------	-------	---	--

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Mary	Ogden	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

RICHARD	COIN	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Susan	Ekk	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-----	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Brian	Campbell	Please DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007	<p>Dear Oil and Gas Land Management Commission:</p> <p>I demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land. Surrounding a beautiful park in a huge industrialized zone will certainly degrade the beauty of the park and reduce the ease and pleasure of park users. In some ways this sort of industrialization turns away visitors who we need to relocate to Ohio for the new jobs in high tech development being done by many including Honda and Intel. Polluting development that retards high tech development doesn’t seem like a wise investment to me.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Fred	Pierre	<p>OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park</p>	<p>Dear OGLMC,</p> <p>Please DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>A visit to Salt Fork is a journey into the wild. This is the largest and one of the most popular state parks. Salt Fork generates huge amounts of revenue for the state park system because of its iconic lodge.</p> <p>That is all at risk if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with well pads and frack on park land.</p> <p>Fracking uses huge amounts of water that are forever lost to human use. Fracking adds toxic chemicals to the water such that it can't be used fo human consumption and must be injected in other disposal wells. Will the water come from the lake? It's sad to think that our precious water resources are being traded away.</p> <p>Salt Forkâ€™s beautiful Salt Fork Lake provides 2,952 acres of swimming, boating, fishing, and refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic will increase on the small highway to Salt Fork, creating traffic problems and danger.</p> <p>Economics: Our state parks and public spaces add \$8.1 billion to our state economy each year. Fracking is a one-time benefit that could cost us our long term revenue from Salt Fork.</p> <p>Compatibility: Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the â€œthe natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€</p> <p>Impact: You must consider the potential Environmental impacts which include the potential contamination of the lake, which lies at the lowest point in the park. Any fracking fluids that leak will end up in the lake. Do you want that to be your legacy? Adverse geological impacts such as increased risk of earthquakes have been documented in regional injection wells.</p> <p>Impact on visitors: The noise and potential contamination from these oil and gas wells will impact tourists and wildlife, making the park less attractive to visitors.</p> <p>There must be no environmental impact to the park, no adverse geological impacts, no impact to visitors to the park, no impact to wildlife or plant species, no surface use, such as well pads, roads, pipelines, water lines, and compressors and no use of any water from any nearby lakes or streams to preserve your mission to protect Salt Fork State Park.</p> <p>Please DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park. Ohio state parks and public lands must be preserved for the people of Ohio.</p>
------	--------	--	---

			Sincerely, Fred Pierre

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Cynthia	Dunlevy	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Jim	Dutter	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Susan	Fisher	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Valerie	Moore	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, enjoy quiet, golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land. For profit for out-of-state energy companies with little to no benefit for Ohioans.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws. Fracking water can never again be used for anything living, it is no longer potable. Water is the basis of life and if we continue to make it incompatible with life, we humans will be hurting.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park. Do not allow any water from the park or areas around the park, surface or ground, to be used and destroyed by fracking.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground, potentially causing regular earthquakes up to 3 on the Richter scale, with damage resulting to nearby structures/infrastructure.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>1. Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking, which enriches out of state companies, our state’s most treasured natural resources.</p>
---------	-------	---	---

2. Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS "and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.

3. Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid that cannot be remediated for use. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals", found in the majority of people in the U.S.

4. Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

5. Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape? Or is that the point: to make state parks unwelcome so oil/gas companies can pressure the state to sell them off since not being used by citizens?

6. Comments and objections from residents of the state and other users

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park

- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€œ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas. We all own the parks, not the oil/gas commission members (actually you are our "employees"), not the oil/gas lobbyists, not the self-serving General Assembly members who illegally passed this law to curry favor for contributions for themselves. You work for us and as your employers we demand NO fraking on state land.

peter	tyjewski	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€” and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas. Employees are expected to listen to their employers, not their employee buddies, ie oil/gas lobby.

Allison	Davis	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Keating	Janet	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>This proposal to frack around Salt Fork State Park is beyond common sense.</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the</p>
---------	-------	---	---

end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€œ Fracking is extremely loud â€œ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground â€œ including PFAS â€œ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€œ destroying any ability to stargaze. Frack wells flare methane â€œ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€œ

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€œ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Heather	Cantino	<p>OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park</p>	<p>Dear Oil and Gas Land Management Commission:</p> <p>As a state body entrusted with the economic well-being of the people of the state of Ohio, you have an ethical and legal obligation to deny lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack under Salt Fork State Park.</p> <p>It is unconscionable that a private outmoded and anachronistic private industry be allowed to profit from and destroy Ohio's precious natural resources, its clean air and water, recreational resources, and natural areas. Salt Fork is the largest and one of the most iconic of Ohio's state parks. Many thousands of Ohioans " who own and pay for our public lands " visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast."</p> <p>All of that and more will be irreparably and critically impacted if you approve lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, which will allow the oil and gas industry to surround Salt Fork with 16 well pads to frack 281 parcels of park land.</p> <p>Frack rigs use 4-6 million gallons of fresh water per frack well. This water will be mixed with sand and a variety of undisclosed toxic chemicals, per the "Halliburton loophole," the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is the publicly owned Salt Fork Lake and/or streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio.</p> <p>Truck traffic " 2,300 to 4,000 truck trips per well " will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away millions of gallons of liquid toxic frack waste that can never enter the water cycle again and will be injected underground, where it is known to cause water contamination and earthquakes in eastern Ohio and elsewhere.</p> <p>The main roadway to Salt Fork on which the thousands of trucks will travel is U.S. Hwy 22, a curvy rural two-lane road filled with cars and campers from the thousands of Ohioans who visit the park each year.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>The economic costs of leasing must be considered. These must include lost revenue from parks, health and environmental costs of associated air and water pollution, traffic accidents, and climate impacts of the extraction, production, use, and waste produced as a result of this governmental decision.</p>
---------	---------	--	--

			<p>Compatibility with current land uses</p> <p>Fracking is incompatible with the mission of the Ohio Department of Natural Resources, founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Noise, air and light pollution, and destruction of water resources will destroy wildlife habitat and Ohio's wildlife populations as well as threatening the health of park visitors and nearby residents. Radioactive frackwaste has already contaminated numerous Ohio water sources and caused earthquakes both north and south of Salt Fork, likely destinations for the millions of barrels of waste that will be produced by these new frackwells.</p> <p>Environmental impacts</p> <p>If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."</p> <p>Adverse geological impacts</p> <p>Earthquakes in the Appalachian Basin, including eastern Ohio, have been caused by fracking, as confirmed most recently by Michael Brudzinski's research. The more fracking waste injected, the larger the earthquakes can become, including recent damaging 4 and 5 magnitude earthquakes in Ohio and Oklahoma. The Mahoning Valley and Washington County both have a history of low-level earthquakes related to fracking and its waste.</p> <p>The only way to prevent these impacts is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Ohio state parks and all Ohio public lands are paid for and owned by the people of Ohio " and we demand that you DENY the lease nominations in Salt Fork and all our state parks, state forests, wildlife areas, and other state-owned land.</p>

As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p>
--------	---------	---	---

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

			<p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>

This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----	--------	---	--

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

-------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Kenneth	Coulter	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Keith	Warren	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am a registered Ohio voter living in Franklin County.</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is a stunning park, one of the few in Ohio that can compare with those in Pennsylvania and West Virginia. I have hiked there one more than one occasion. There are beautiful views, beautiful hollows and it is easily accessible from Columbus, which is rapidly becoming the largest metropolitan area in the state. It's also one of the few Ohio state parks that is large enough so that it can stand substantial use without becoming almost impossibly crowded. (The Hocking Hills are, sadly, much smaller.) The idea that you would approve fracking in this park is appalling.</p> <p>Not only does fracking destroy landscapes and add to greenhouse gas emissions, it has not even brought the economic prosperity that was promised. Ohio fracking counties often lose population. Moreover, renewables are increasingly cheaper than natural gas. If fracking does begin in Salt Fork it will become unprofitable and unsustainable in a few years, but the damage will last for decades.</p> <p>I am absolutely opposed to fracking leases in Salt Fork State Park.</p> <p>Sincerely,</p> <p>Keith Warren</p>

Fran	Panek	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Barry	Randall	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Kimberly	Johnson	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>I, personally use Salt Fork trails as a walking area, mostly around the beach, miniature golf and dog park areas. I have taken my dogs (boxer mixes) out to run at the dog park as often as 3 times a week in spring, summer and fall. Though we have 4 dog parks in this area of Cambridge the only one with water access is Salt Fork. Are you aware that people from Marietta, Zanesville and Canton drive down to let their dogs play in that water? Did you know that there have been people who practice for the Wheeling WV dock dog challenge by jumping them from a point in the dog park toward the bouys? Are you aware that in the fall a couple bring their sled dogs with rolling carts to run the parking lots then allow their dogs to cool off in the water before reloading them? I met a couple passing through from Canada on their way south stopping off to let their dogs energy out. They pass through twice a year and stop each time at Salt Fork. How many of those people will want to walk their dogs around the polluted waters if you let these fracking pads in? How many would chance them drinking it or getting chemical burns from that secret formula they pump down those pipes? I won't take my dogs there if you allow this, won't recommend the site to others, won't walk the trails there. This park brings thousands of people to our area. Please protect it, and it's animals, trees, and water by barring fracking anywhere near the park and it's waters.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans " who own and pay for our public lands " visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast." □</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well " and each pad will hold multiple frack wells. Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€œ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Carrie	Killingsworth	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	---------------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			<p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€œ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>
--	--	--	---

Ryan	McEwan	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

---------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----	--------	---	---

any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio " and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Jacquelynn	Savoca	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Aviva	Neff	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			PLEASE LEAVE SALT FORK ALONE!!
--	--	--	--------------------------------

D	Ogden	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p>
------	-------	---	---

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud " chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground " including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night " destroying any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

			<p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>

------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Eddie	Mills	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Sarah	Lawrence	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Melissa	Leach	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Aaron	Rinier	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. -----	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Robert	Benedict	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Geoff	Grove	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Brandon	Bashak	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Michael	Zavala	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Andrew	Dmytryk	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>I am a registered and active voter, who considers our park system a vital part of Ohio. I buy a yearly fishing license, despite the fact that I do not have time to fish. To me, it's worth it, to pay that voluntary tax, to help preserve the beauty of our state, for all to continue to enjoy. I take my kids to these parks, and we enjoy the natural wonders available to us. I water my garden with water that could be impacted by these decisions, and feed my family with it. Understand, that people like us are watching these decisions closely, and will not tolerate legislative acts that put our health in danger, and will vote accordingly, to protect the state in which we call home, and our families' future. Proposed agreements such as these drilling operations are an insult and slap in the face to all Ohioans. This shameful cash grab, trading the future of the state and residents for profit is disgusting, and on par with the first energy scandal, that is ironically cannot be lost on the audience currently entertaining this letter. Reflect a little bit, and let the shame sink in for a moment, before you vote to allow the state to bent over a barrel, to fill more barrels.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans who own and pay for our public lands visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. - NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Katherine	Hancock	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Kevin	Peterca	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>I have personally enjoyed hiking at Salt Fork many times. I enjoy going “off trail” and exploring many of the pristine creek beds scattered through the park. Allowing fracking anywhere within the park would be detrimental to hikers like myself. But more important is the harmful, toxic impact it would have on this pristine area.</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p>
-------	---------	---	---

			<p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud " chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground " including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night " destroying any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.</p> <p>Environmental impacts</p> <p>If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."</p> <p>Adverse geological impacts</p> <p>Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Chad	Lockey	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>I agree and fully support the following statements, and am vehemently opposed to allowing fracking in this area. My family grew up close to this state park, we utilized it for hiking and weekend trips as we didnâ€™t grow up with a lot of money. It is a part of our family history - I want my kids to be able to explore and play in the area, and their kids too. Families in similar situations deserve the same. I will fight tooth and nail against this. As stewards of the land we have a responsibility to future generations.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans â€™ who own and pay for our public lands â€™ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

			<p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€” and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>
--	--	--	---

Elise	Cole	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>For me as a Tennessee transplant in Ohio, the one thing going for Ohio, for me, has been the beautiful parks and deep caring about our natural world. This has clearly not been the case as of late, with companies (knowingly) spilling massive amounts of pollutants in small towns throughout Ohio, the rollback on the requirement for "environmentally preferable offerors" in infrastructure projects specifically around Central Ohio (looking at you, City of Columbus), and whatever the fresh hell this fracking plan is. Because of continuous crimes against our environment and women in this state, I will be leaving for greener, saner pastures. But not before I say this: if you drill in this state park, you will have blood on your hands and the most mind boggling part to me is --- YOU KNOW THIS. You'll add so many pollutants to the environment and area that future generations will not be able to enjoy our natural world. Why would anyone stay here and have a family if the state parks are being FRACKED ((ARE YOU FUCKING SERIOUS??????))</p> <p>Because the natural world is ours.</p> <p>It is not supposed to belong to one person or one company. It's not just here for corporate greed and soulless men who wish for nothing but money. And you know this. I understand too that at the end of the day, our voices may not make the change we wish to see, as corporate greed knows no bounds; in that case, good luck finding peace within your sold-out souls. If you be religious, why is this even a conversation when God writes in his good book that we be "stewards of the earth" and look after it and care for it? In what actual fucking realm is fracking in a state park being "good stewards of the earth?" Get your shit together, Ohio, before you ruin the good that you have. Now on to the boilerplate text full of facts to also support my emotional plea:</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans " who own and pay for our public lands " visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast."</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well " and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the "Halliburton loophole" " the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic " 2,300 to 4,000 truck trips per well " will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p>
-------	------	---	--

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud " chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground " including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night " destroying any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Lori	Weekly	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Liam	Waselko	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	---------	---	---

any ability to stargaze. Frack wells flare methane â€“ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane â€“ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Lindsey	Cencula	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Kelcey	Jacobs	23-DNR-0005,0006,0007	<p>Dear Commision Clerk:</p> <p>I wish to express my opposition to the nominations for the above-referenced parcels in the vicinity of Salt Fork State Park. I have been hiking, picnicking, boating and participating in other activities at this State Park. I oppose the nominations submitted for hydraulic fracturing for the following reasons:</p> <ul style="list-style-type: none"> -methane emissions which will contribute to climate change -building of access roads and their environmental impact in the vicinity of the park -water pollution - water withdrawal that will be taken from the Watershed -noise pollution and road damage created by the increase in truck traffic in the area -flaring of natural gas -huge amounts of brine waste that cannot be reintroduced into our water cycle, thus becoming a part of the ever increasing number of injection wells <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged."</p> <p>If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Sarah	Wirthlin	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Bill	Davis	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Mena	Murfield	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

------	-----------	---	--

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud " chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground " including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night " destroying any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. L	Osgood	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.
