Re: Notice of Nominations 23-DNR-0005; 23-DNR-0006; and 23-DNR-0007
Salt Fork State Park and Salt Fork Wildlife Area
Comments of the Ohio Department of Natural Resources

Dear Commissioners:

I am writing on behalf of the Ohio Department of Natural Resources (ODNR) regarding Nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, involving a total of 263 parcels of land and located within the boundaries of Salt Fork State Park and including portions of Salt Fork Wildlife Area. ODNR has undertaken a thorough review of these nominations and has gathered input from multiple divisions. In accordance with R.C. 155.33, ODNR offers the following comments, with recommended special terms and conditions that are necessary due to the specific conditions related to these parcels.

Introduction and Background

Salt Fork State Park

Salt Fork State Park, located in Guernsey County, is the largest of Ohio's seventy-five parks. Salt Fork State Park encompasses roughly 20,000 acres and features a stunning landscape that offers a wide variety of recreational amenities including two marinas, eight boater launch ramps, a complex trail system, an eighteen-hole golf course, picnic areas, and historical sites. Overnight accommodation options include a full-service lodge with 148 guest rooms, 53 vacation cabins, and a large campground. Within Salt Fork State Park is a 2,952-acre lake with 469 rental docks, and one of the largest inland beaches in Ohio at 2,500 square feet. During the 2022 summer season, Salt Fork recorded over 27,000 overnights at the campgrounds, with tens of thousands more overnights recorded in the state park lodge and vacation cabin accommodations. Numerous acres in the park are also available for hunting and hiking, with over 55 miles of trails for hikers and horseback exploration. The Park features many areas and points of interest, including a portion of the Buckeye Trail.

Salt Fork Wildlife Area

The Salt Fork Wildlife Area lies within Salt Fork State Park, and provides many opportunities for wildlife viewing, as well as hunting, fishing, and trapping. The area is inhabited by gray and fox squirrels, ruffed grouse, cottontail rabbit, wild turkey, and white-tailed deer. Beavers can be found in the area as well, and many species of duck and other waterfowl are abundant at Salt Fork Lake and the nearby marshy areas. The area is popular for hunting, bass and walleye fishing, and trapping of muskrat and mink.

State Lands Leasing

In 2011, the Ohio Legislature passed H.B. 133, which created a nomination process for the leasing of state-owned lands for oil and gas development. These provisions were amended in 2021 (H.B. 110) and the process today exists in Revised Code Sections 155.30 through 155.37. Revised Code 155.33(A)(2) authorizes any person or state agency to nominate a formation in a parcel of land owned or controlled by a state agency for exploration and development of oil or natural gas. This Commission then considers the nomination based on the factors set forth in R.C. 155.33(B)(1). Included in these considerations are any comments made by the state agency that owns the parcel of land (155.33(B)(1)(g)) and any special terms and conditions that the state agency includes in the comments or objections that the agency believes are appropriate for the lease of the parcel of land because of specific conditions related to the parcel (155.33(B)(1)(i)).

May 30, 2023 Salt Fork Nominations

On May 30, 2023, the Commission received three separate nominations for parcels within Salt Fork State Park. Details of each nomination are listed below. The nominations include a total of eight proposed well pads ranging in distance to park boundaries from 400 feet to 7,600 feet.

- ***Nomination 23-DNR-0005:*** Nomination #23-DNR-0005 includes a total of 176 parcels all within the boundaries of Salt Fork State Park. This nomination also includes two parcels designated as Wildlife Areas.
- ***Nomination 23-DNR-0006:*** Nomination #23-DNR-0006 includes a total of 65 parcels all within the boundaries of Salt Fork State Park. This nomination also includes one 115-acre parcel designated as Wildlife Area and encumbered by U.S. Fish and Wildlife grant funding.
- ***Nomination 23-DNR-0007:*** Nomination #23-DNR-0007 includes a total of 22 parcels all within the boundaries of Salt Fork State Park.

ODNR Comments

ODNR respectfully submits the following comments as the state agency that owns and controls all parcels within Nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007. Included with these comments are proposed terms and conditions (attached as “Addendum to Standard Lease”) that ODNR believes are appropriate for the lease of the parcel because of the specific conditions at Salt Fork State Park and Salt Fork Wildlife Area.

In addition to the comments below, ODNR requests that any awarded bids be subject to the attached “Addendum to Standard Lease.”

Due to the potential effect on visitors, ODNR is requesting limitations on road usage within the Park. (See proposed “Addendum to Standard Lease”)

Access to the multitude of land and associated facilities at Salt Fork State Park is along a primary through road, referred to as Road 1. Road 1 provides Salt Fork State Park visitors immediate access to the park office, picnic areas, hunting areas, horse trails and the horse campground; and to access roads leading to hiking trails, campgrounds, marinas, the lodge, cabins, the golf course, the nature center, additional picnic areas, beaches, launch ramps and fishing areas.

Due to potential effects on water quality and quantity, ODNR is requesting additional terms and conditions to protect water resources within the Park. (See proposed “Addendum to Standard Lease”)

ODNR is committed to maintaining obligations for high-quality water resources to our local communities for fire suppression. Several of the local townships rely on a supply of water from Salt Fork Lake to maintain hydrants to aid in combating fires in the Salt Fork State Park region.

Additionally keeping water quality and water (quantity) elevation levels at a constant for our recreational users (boaters, swimmers, and fisherman) and the safety of the Salt Fork region community is principal.

To limit the light pollution at the Park, ODNR is requesting additional terms and conditions related to lighting plans. (See proposed “Addendum to Standard Lease”)

One of the many reasons that visitors flock to state parks is the beauty and solitude of the dark night sky. Natural lightscapes, including dark night skies, are a scenic resource integral to any park experience. Many visitors seek state parks to experience this increasingly rare resource. Hunting, fishing, star viewing, and other nighttime events, often in conjunction with popular events hosted at the park, rely on dark skies for optimal recreation. In addition to the importance of the night sky to humans, wildlife is impacted

by light pollution as well. Animals often depend on the darkness to hunt, conceal their location, navigate, or reproduce. For nocturnal animals, light pollution also means habitat destruction.

Due to the noise generated during the construction, drilling, and fracking process, ODNR is requesting additional terms and conditions. (See proposed “Addendum to Standard Lease”)

Ohio State Parks, including Salt Fork State Park, are mostly rural in nature and changes in the level and type of noise will be particularly noticeable, especially when visitors are accustomed to quiet or only a few familiar and intermittent sources of noise. Overnight guests, birders, horse riders and those seeking a quiet hike on a trail by foot may be affected by the extended day and night operation of well sites if not carefully controlled.

Hunters especially rely on the quiet stillness of state park forest, grassland, and wetland. Over 12,000 acres of Salt Fork State Park are managed through a memorandum of agreement with the Division of Wildlife, allowing more hunting opportunity in areas across the state park. Over 3,000 hunters were issued licenses in Guernsey County alone during 2022 and over 51,000 licenses were issued to out of state hunters. A variety of wild game including rabbit, squirrels, deer, grouse, quail, woodchuck, raccoon, mink, muskrat, beaver, wild turkey, and waterfowl are abundant at Salt Fork State Park and Wildlife areas. Increases in noise may cause temporary or permanent displacement from certain areas of the park; if nests and dens are abandoned, populations could decline.

To limit the effects of proposed well sites on the viewshed of Salt Fork State Park, ODNR is requesting additional terms and conditions. (See proposed “Addendum to Standard Lease”)

A majority of the land now encompassed within the Salt Fork State Park was once privately owned and, as a result, many historical sites documenting the lives of historical settlements exist today. Most of the well-known and visited sites are centrally located, but several historical cemeteries are found on the boundaries of the park. For this nomination, five Ohio Genealogical Cemeteries (OGS) are recorded within close proximity to the proposed well sites: Luzaddler #4367, Zane Trace #4370, Warne #4369, Wirick #4387 and one unnamed cemetery #4416.

Due to ODNR's obligations to comply with the terms of the federal grant used to purchase the Wildlife Area, ODNR is requesting the additional terms and conditions. (See proposed "Addendum to Standard Lease")

The parcel nominated in 23-DNR-0006 was acquired using a federal grant under the Wildlife and Sport Fish Restoration Program (16 U.S.C. §§ 669;777). In order to maintain compliance with federal regulations (50 C.F.R. § 80) and the terms of the grant, any change in the use and/or disposition of this parcel requires approval of the U.S. Fish and Wildlife Service. ODNR requests that the Commission require the bidder to comply with the terms of this program as a condition of entering into the lease.

To ensure that ODNR receives a fair offer for the mineral rights within the nominated parcels, ODNR is requesting additional terms and conditions. (See Proposed "Addendum to Standard Lease")

In December of 2022, ODNR received an offer to lease the parcels included in Nominations 23-DMR-0005, 23-DNR-0006, and 23-DNR-0007. The lease offered a bonus of \$5,500 per net acre, and a royalty payment at 20% gross proceeds. The recent timing of this offer in relation to the nomination of these parcels should represent the fair market value of both the bonus and royalty payments and should be considered by the Commission as the minimum acceptable offer for these terms.

To ensure that the eventual lessor is an operator in good standing, and because the identity of the nominating party and any bidders remains confidential pursuant to R.C. 155.33 until the bid is awarded, ODNR is requesting that the Commission perform the following compliance reviews:

1. Review of ODNR, Division of Oil and Gas Resources Management records for any violations of Ohio Revised Code Chapter 1509 and Ohio Adm. Code 1501:9;
2. Review of Ohio EPA records for any violations of the Ohio Revised Code and Ohio Administrative Code that Fall within the Ohio EPA's regulatory authority;
3. Review of the U.S. EPA records for any violations of the United States Code or the Code of Federal Regulations that fall within the U.S. EPA's regulatory authority;
4. Review of Ohio's consumer complaint database for any violations of Ohio's consumer protection laws.

Thank you for your consideration of ODNR's comments and proposed terms and conditions. ODNR looks forward to working with the Commission to comply with the requirements of Ohio law while staying faithful to our mission to ensure a balance between the wise use and protection of our natural resources for the benefit of all.

A handwritten signature in dark ink, reading "Mary Mertz". The signature is written in a cursive style with a long horizontal flourish extending to the right.

Mary Mertz
Director, Ohio Department of Natural Resources

ADDENDUM TO STANDARD LEASE

Due to the specific conditions related to Salt Fork State Park and the Salt Fork Wildlife Area, ODNR respectfully recommends that the Commission adopt the following Terms and Conditions as an Addendum to the Standard Lease, which was adopted by the Commission on April 17, 2023, as set forth in Ohio Adm.Code 155-1-01, with the terms of the Addendum overriding any conflicting terms in the Standard Lease:

A. General Notification Provisions

1. Any reference to “ODNR” or “Department” in the lease addendum refers to the Ohio Department of Natural Resources.
2. All required notices and contact related to operations regulated under R.C. Chapter 1509 and Ohio Adm.Code 1501:9 and referred to in this lease shall be made to the Division of Oil and Gas Management, Ohio Department of natural Resources, unless otherwise specified.

B. Compliance with Ohio’s Contracting Requirements

ODNR’s contracting authority is governed by the requirements in Revised Code Chapter 125, which includes specific limitations on state contracts. ODNR requests that the Commission include the following condition:

1. The lease shall be subject to the State of Ohio’s contracting authority as set forth in R.C. 125.

C. Compliance with Provisions of the Wildlife and Sport Fish Restoration Program

1. In the event that any parcel subject to the lease agreement is encumbered by the Wildlife and Sport Fish Restoration Program, Lessee is required to comply with the requirements of the program as set forth in 50 C.F.R. § 80, *et seq.*, and all requirements of the grant agreement or grant documents, at Lessee’s cost.
2. Lessee shall coordinate with the appropriate staff at ODNR at each step of the process, including staff at the Division of Wildlife, until all requirements have been satisfied.

D. Well Pad Location

The proposal attached to Nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 includes several well pads. In order to ensure the safety of all visitors to Salt Fork State Park, ODNR requests the following conditions as they relate to the location and appearance of well pads:

1. No well site boundary may be located within 1,000 feet from any boundary line of the Salt Fork State Park and/or Salt Fork Wildlife Area.
2. Prior to commencement of well pad construction, Lessee shall submit to ODNR, Office of Real Estate and Land Management, a plan to address the aesthetic impacts of the well site on any portion of the well site that can be seen from the boundaries of Salt Fork State Park or Salt Fork Wildlife Area.

E. Protection of Water Resources

In order to protect the natural resources for the use and enjoyment of all visitors to this parcel, ODNR requests that the Commission include the following terms and conditions:

1. **Water Testing:**
 - a. Lessee will sample and test all wells and sources of water, including Salt Fork Lake, within a distance of 3,000 feet of the surface location of any well drilled on land owned by the State under the following occurrences:
 - i. Prior to the drilling of any well in the unit governed by this lease; and
 - ii. Between sixty (60) and ninety (90) days of the completion of each well or group of wells drilled under this lease.
 - b. Prior to engaging a contractor for these services, Lessee and ODNR, Office of Real Estate and Land Management, shall agree on the contractor chosen to perform water sampling and testing.
2. **Damage to Surface Water and Ground Water:** Lessee shall be solely responsible for damage, disturbance, contamination, or injury to any groundwater on the Leasehold, and shall correct any damage at its own costs.
3. **Freshwater Impoundments and Liners:** The lease shall include provisions for freshwater impoundments and liners, which provisions ensure the highest level of environmental protection. These provisions shall include, but not be limited to, the following:

- a. Lessee shall have no right to dig any pits on the Leasehold;
- b. Any impoundment created after the date of this Lease and within 1,000 feet of Salt Fork Lake shall: (i) conform to all applicable regulatory requirements (state, local, and federal); and (ii) promptly after completion of operations any backfill and the liners shall be removed and the impoundments shall be drained, prepared for burial, back filled, grated, and planted within ninety (90) days (weather permitting). Lessee shall promptly notify ODNR and all applicable regulatory authorities if any impoundment lining is torn, punctured, or otherwise breached, allowing any fluid contained in an impoundment or designated to be contained in an impoundment to seep, leak, or overflow through or around the liner.

F. Surface Operations

1. Site Access. Lessee shall provide site access to ODNR for the purpose of enforcing any terms of the lease. This access is not limited to only Division of Oil and Gas Resources Management and includes any other division of the ODNR that may have an interest in the leasehold.
2. Use of Existing Pad Sites. Use or re-use of any existing pad sites or surface locations for new drilling and completion operations for any lands pooled within this Lease shall be certified by an engineer qualified and skilled in the appropriate area to ensure safety, environmental, and operational integrity of the pad site or surface location. Lessee shall obtain the appropriate review, comments, and approvals from the ODNR. Lessee agrees to provide ODNR Division of Oil and Gas Resources Management and Office of Real Estate and Land Management with all plans and the ability to review and comment before any work commences for new drilling and completion operations on any existing sites.
3. Well Cellars. Any wells drilled shall have a completely sealed unit cellar system with the proper grates and safety features installed and in use at all times. The cellar shall be approved by the ODNR.
4. Brine, Saltwater, and Frac Fluid Disposal. Lessee shall dispose of salt water, brine, frac water, or liquid waste oil, and other waste, in accordance with the rules and regulations of ODNR and all other applicable governmental authorities.
5. Soil and Groundwater Repair. Lessee shall clean up, remove, remedy, and repair any soil or ground water contamination and damage caused by its operations and activities in Units containing any portion of the Leasehold or release of any contaminant in, on, under, or about units containing any portion of the Leasehold, whether or not caused by the negligence of Lessee.
6. Drill cuttings and Waste Disposal. Lessee shall not use this Lease, or any lands pooled therewith for the temporary or permanent disposal of any drill cuttings, or the long-term storage or disposal of residual wastes. No disposal wells or any other devices or means of disposal of wastes or drilling liquids are permitted on the Leasehold.

7. Closed Loop System. The Lessee shall perform all well drilling using closed-loop systems that employ a suite of solids control equipment to minimize drilling fluid dilution and provide for the economic handling of the drilling wastes. The closed-loop system should include a series of linear-motion shakers, mud cleaners, and a centrifuge dewatering system, or any equipment or methods with the same result or effect of resulting in a “dry” location where the use of a reserve pit is not required and used fluids are recycled and solid wastes can be stored in tanks and transported offsite to a state approved landfill or other lawfully permitted disposal site.
8. Monitoring Wells. In the event of a fluid discharge that is not contained within Lessee's containment system at a well site within a Unit containing any portion of the Leasehold, the Lessee may be required to install groundwater monitoring wells which will be used to sample groundwater at the perimeter of the well site. Proper monitoring well design and construction should include consideration of site specific hydrogeologic conditions and shall be in accordance with ODNR requirements. Lessee shall provide a record of any reportable release to ODNR as soon as practicable.
9. Use of Subsurface Water. Lessee shall not drill or operate any water well, take water, or inject any substance, except fluid for hydrofracturing, into the subsurface or otherwise use or affect water in subsurface water formations.
10. Revegetation. As part of the plugging and abandonment process for any well located on the Leasehold, surface of the land of any Unit containing any portion of the Leasehold shall be restored as nearly as practicable to its condition at the commencement of drilling operations. Restoration and reclamation revegetation shall be accomplished in accordance with seed mixes approved by ODNR. The “A” horizon soils will be separated as part of pad construction as much as practicable and stockpiled separately. The topsoil pile will be used to facilitate subsequent reclamation and revegetation work.
11. Reclamation Goals. Lessee will reasonably support, where practicable, reclamation goals designed by ODNR to eliminate cool season grasses, such as fescue, in favor of legumes, and native shrub plantings adjacent to the vertical edge of the existing hardwood will be undertaken as practicable to provide visual buffering. The ultimate final reclamation will favor an early successional habitat where practicable and as approved by ODNR on the outer edge of the well pads and road systems. ODNR, Division of Oil and Gas Resources Management and ODNR, Office of Real Estate and Land Management, shall have the right to provide the revegetation plan.
12. Hazardous Materials. Lessee shall not use, dispose of, or release on the Leasehold or permit to exist or to be used, disposed of or released on the Leasehold or any Unit containing any portion of the Leasehold as a result of its operations and activities any substances (other than those Lessee has been licensed or permitted by applicable public authorities to use on the Leasehold) that are defined as “hazardous materials,” “toxic substances,” or “solid wastes” in applicable federal,

state or local laws, statutes, or ordinances. Should any pollutant, hazardous material, toxic substances, contaminated waste, or solid waste be accidentally released on the Leasehold, Lessee shall notify ODNR as promptly as practicable after notifying the applicable governmental body of such event. Lessee shall be responsible for, and timely pay, all costs of clean-up, remediation, and other costs related to and arising from the event, including but not limited to penalties.

13. Maintenance of Production Equipment. Lessee shall maintain all production equipment and production pad features, both in physical integrity and appearance, including preventing and removing rust from any equipment and maintaining any fencing or other items constructed on the production pad.
14. Flaring. Lessee shall use its best efforts to minimize the frequency of any flaring, including but not limited to using high efficiency flares. As soon as gathering lines and other infrastructure are in place, Lessee shall use its best efforts to minimize, and eliminate, if possible, all flaring. Lessee shall use redundant separators or both a high- and low-pressure separator to reduce potential emissions.
15. Notice of Materials to be Used. Lessee, and any service provider engaged by Lessee, shall utilize nonhazardous or benign chemicals in conducting hydraulic fracturing operations. Any chemical, solution, or fluid shall not contain diesel fuel. Lessee shall provide ODNR with a list of chemicals and materials to be used during the hydraulic fracturing process prior to the commencement of completion operations for each well drilled under this Lease.
16. Casing and Cementing Casing. The Lessee shall case and cement a well to accomplish the following:
 - a. Allow effective control of the well at all times.
 - b. Prevent the migration of gas or other fluids into sources of fresh groundwater.
 - c. Prevent pollution or diminution of fresh groundwater.
 - d. Prevent the vertical migration of gas or other fluids behind the casing.
 - e. There shall be run and permanently cemented a string or strings of casing in each well drilled through the fresh water bearing strata to a depth and in a manner prescribed by regulation by ODNR. The Lessee shall equip the well with one or more strings of casing of sufficient length and strength to prevent blowouts, explosions, fires, and casing failures during installation, completion, and operation in accordance with the rules and regulations of ODNR. Casing shall be new steel casing and meet manufacturing standards, including American Petroleum Institute or equivalent specifications for pipe used in wells drilled to anticipated depths.
 - f. All casing shall have been hydrostatically pressure tested with an applied pressure at least equal to or greater than the maximum pressure to which the pipe will be subjected in the well.
 - g. The amount and type of casing to be run shall be in accordance with current prudent industry and engineering practices and in accordance with the rules and regulations of the ODNR.

- h. In making these determinations, the Lessee should consider the following: the maximum anticipated surface and down hole pressure; collapse resistance; tensile strength; chemical environment; and potential mechanical damage.
17. Wellhead Assemblies. Wellhead assemblies shall be used on wells to maintain surface control of the well. Each component of the wellhead shall have a pressure rating equal to or greater than the anticipated pressure to which that particular component might be exposed during the course of drilling, testing, or producing the well.
18. Surface Casing and Cement Casing Displacement. Where potential oil or gas zones are anticipated to be found at depths below the deepest fresh groundwater, the Lessee shall set and permanently cement surface casing prior to drilling into a stratum known to contain, or likely containing, oil or gas. The Lessee shall permanently cement by the displacement method the surface casing by placing the cement in the casing and displacing it into the annular space between the wall of the hole and the outside of the casing. Sufficient cement must be used to cement the casing back to surface.
19. Cement Basket. If it is anticipated that cement used to permanently cement the surface casing cannot be circulated to the surface, a cement basket may be installed immediately above the depth of the lost circulation zone. Additional cement may be added above the cement basket, if necessary, by pumping through a pour string from the surface to fill the annular space.
20. Cement Requirements. The Lessee shall use cement that will resist degradation by chemical and physical conditions in the well and meet tests conducted using the equipment and procedures adopted by the American Petroleum Institute. The Lessee shall permit the cement to set to a minimum compressive strength in accordance with these specifications or a minimum period of 8 hours prior to the resumption of actual drilling. Where special cement or additives are used, the Lessee must request approval from the ODNR.
21. Casing and Cementing Records. The Lessee shall provide ODNR with a copy of all casing and cement records for each well drilled pursuant to this Lease.
22. Blowout Prevention. The Lessee shall use blow-out prevention equipment when well head pressures or natural open flows are anticipated at the well site that may result in a blow-out or when the Lessee is drilling in an area where there is no prior knowledge of the pressures or natural open flows to be encountered. Blow-out prevention equipment used shall be in good working condition at all times. The blow-out preventer and all pipe fittings, valves, and unions placed on or connected to the blow-out prevention systems shall have a working pressure capability that exceeds the anticipated pressures.
- a. All blowout prevention equipment should be tested after its installation and before its use.
 - b. A minimum of two (2) remotely controlled hydraulic ram-type blowout preventers (one equipped with blind rams and one with pipe rams), valves,

and manifolds for circulating drilling fluid shall be installed for the purpose of controlling the well at all times. The ram-type blowout preventers, valves, and manifolds shall be tested to 100% of rated working pressure, and the annular-type blowout preventer shall be tested at the time of installation.

- c. The Lessee shall conduct a complete test of the ram type blow-out preventer and related equipment for both pressure and ram operation before placing it in service on a well. The Lessee shall test the annular type of blow-out preventer in accordance with the manufacturer's published instructions, or the instructions of a professional engineer, prior to the device being placed in service.
 - d. When the equipment is in service, the Lessee shall visually inspect the blow-out prevention equipment during each tour of drilling operation and during actual drilling operations test the pipe rams for closure daily and the blind rams for closure on each round trip. Testing shall be conducted in accordance with American Petroleum Institute publication API RP53, "API Recommended Practice for Blowout Prevention Equipment Systems for Drilling Wells." The Lessee shall record the results of the inspection and closure tests in the drillers log after each occurrence.
 - e. During drilling when conditions are such that the use of a blowout preventer can be anticipated, there shall be present on the rig floor a certified individual responsible to the Lessee who has satisfactorily completed an approved well control course or equivalent and shall be in contact with the manufacturer of the specific blowout preventer to ensure that additional maintenance, preparation, parts, or technical support is not needed.
 - f. Lessee shall provide ODNR with a copy of all blow-out prevention testing records referenced in this section.
23. Completion Well Control. Upon completion of the drilling operations at a well, the Lessee shall install and utilize equipment, such as a shut-off valve of sufficient rating to contain anticipated pressure, lubricator, or similar device, as may be necessary to enable the well to be effectively shut-in while logging and servicing the well both during and after completion of the well.
24. Post Frac Operations. Equipment capable of controlling appropriate pressure shall be used to clean out the composite frac plugs and sand during post-fracturing operations. Operations shall be, at a minimum, consistent with the below requirements or any equipment or methods with the same result or effect. A minimum of two pressure barriers should be in place during all post-fracturing operations. A remote controlled, independently powered blowout preventer unit, which allows workers to control the unit at a safe distance from the well consistent with industry best practice, shall be operational during all post-frac cleanout operations. A minimum of one well site supervisor who has a current well control

- certification should be on the site during post-frac cleanout operations. Operations shall be conducted in accordance with all applicable state and federal regulations.
25. ODNR Signage. A sign with ODNR's 24-hour emergency telephone number and local emergency shall be displayed at each well pad.
26. Hydrogen Sulfide Areas.
- a. In the event Lessee proposes to drill a well in an area through the same formation where hydrogen sulfide has been found while drilling, Lessee shall install monitoring equipment during drilling at the well site to detect the presence of hydrogen sulfide in accordance with American Petroleum Institute publication RP49, "Recommended Practices for Safe Drilling of Wells Containing Hydrogen Sulfide," or most recent version of that publication. When hydrogen sulfide is detected in concentrations of 20 ppm or greater, the well shall be drilled in accordance with American Petroleum Institute publication API RP49, "Recommended Practices for Safe Drilling of Wells Containing Hydrogen Sulfide," or most recent version of that publication.
 - b. In the event Lessee drills and/or operates a well in which hydrogen sulfide is discovered in concentrations of 20 ppm or greater, Lessee shall operate the well in a way that presents no danger to human health or to the environment. The Lessee shall notify ODNR of the location of the well and the concentration of hydrogen sulfide detected.
27. Simultaneous Operations. Lessee will not conduct any simultaneous operations under this Lease, or any lands pooled with, unless such operations are consistent with the simultaneous operations rules promulgated by the ODNR. Lessee shall notify ODNR, Office of Real Estate and Land Management, within 30 days of any simultaneous operations approved by the ODNR, Division of Oil and Gas Resources Management.
28. Well Site Berms. Lessee shall construct three (3) foot berms around the well site to prevent any accidental fluid releases from being discharged onto adjacent lands and water bodies. All fluids collected from the drill site must be disposed of in a proper manner in accordance with Federal and State rules and regulations. The Lessee shall not allow wastes to be disposed, buried, dumped, or discharged on the grounds of ODNR.

G. Secondary Containment

1. For purposes of this addendum, "Secondary Containment" shall have the same meaning as defined in Ohio Adm.Code 1501:9-4(BBB).
2. Secondary Containment shall be used on each well site during all phases of operation, including drilling, well construction, hydraulic fracturing, flowback, and production. Lessee shall provide Secondary Containment for all substances, including solid wastes, fluids, and other regulated substances that could be harmful to the environment, including the transferring of these substances. Stormwater shall be removed as soon as possible and prior to reducing the

secondary containment volume by ten (10%) percent. Secondary Containment shall be constructed with manufactured products that must be sufficiently impervious, able to contain spilled materials, and be chemically compatible with the material stored within the containment to prevent contained materials from coming in contact with the ground.

3. Lessee must comply with Ohio Adm.Code 1501:9-4-06(C)(4) for volume of secondary containment.
4. The Secondary Containment shall be maintained during its lifetime to ensure functionality.
5. Lessee shall provide ODNR with the plan for Secondary Containment prior to commencement of pad construction.

H. Traffic and Road Use

The oil and gas drilling and production activities as proposed in this nomination are located in close proximity to areas that are visited by hundreds of thousands of people seasonally. In order to reduce the impact to the area surrounding the parcel, ODNR requests that the Commission include the following terms and conditions:

1. Lessee and their contractors, heirs, assigns, etc. are prohibited from using any roadways within the limits of the Salt Fork State Park as specifically designated by ODNR, Office of Real Estate and Land Management.

I. Noise and Light

ODNR requests the following conditions in order to protect visitors to the Salt Fork State Park from disruptions due to noise and light:

1. Lessee shall construct perimeter sound walls during the drilling and completion phase around the well pad or other specific pieces of equipment.
2. Lessee shall use best practices available to limit sound pollution during all phases drilling for any wells on this parcel, including but not limited to: limiting use of jake brakes on trucks; use of low-noise exhaust mufflers on equipment utilizing disk brakes on drilling rigs instead of drum brakes where practical; and orientation of equipment on the well pad to direct exhaust noise form generators and pumps away from all recreational areas.
3. Once a well is in operation, Lessee shall limit noise-intensive activities such as flaring and blowdowns to mid-day.
4. Lessee shall use best practices available to limit light pollution during all phases of all wells drilled on this parcel, including but not limited to: deflectors; low density sodium lighting, or fully shielded lighting consistent with Occupational Safety & Health Administration (OSHA) regulations.

5. ODNR, Office of Real Estate and Land Management, shall have the right to review and approve Lessee's plans for permanent lighting at the production pad.

J. Viewshed Restrictions

In order to protect the natural resources for the use and enjoyment of all visitors to this parcel, ODNR requests that the Commission include the following terms and conditions:

1. Lessee shall consult with ODNR, Office of Real Estate and Land Management, and the State Historic Preservation Office (SHPO) to mitigate impacts on cemeteries when they are within the viewshed of any proposed well site.
2. Lessee shall use all best efforts and practices to minimize the impact on the viewshed of the areas in and around Salt Fork State Park.

K. Restrictions on Construction, Drilling, and Completion Schedules

ODNR requests the following terms and conditions in order to ensure that it maintains its responsibility to all visitors to the Salt Fork State Park and Salt Fork Wildlife Area:

1. Lessee shall not conduct any construction, drilling, and completion during the following periods of time: April 20-May 1 and November 15 – December 1.
2. Lessee shall provide ODNR, Office of Real Estate and Land Management with a monthly construction and/or operation schedule during the construction, drilling, and completion phases.

L. Safety and Emergency Notifications

ODNR requests the following terms and conditions in order to provide protection for all visitors to the Salt Fork State Park:

1. Lessee shall provide a written emergency response plan for each unit on the leasehold.
2. Lessee shall provide ODNR, Office of Real Estate and Land Management with specific plans for notification in the event of an emergency during any phase of the well operations.
3. Lessee shall install safeguards to prevent unwanted blowouts and shall use flame arrestors as standard practice.
4. Lessee shall use practices that exceed industry standards to store fracking liquids and wastewater from drilling. New steel shall be used in well casings to isolate fracking zones from aquifers at shallower depths.

COMMITTEE ON ENERGY AND COMMERCE

CHAIRMAN
SUBCOMMITTEE ON
ENVIRONMENT,
MANUFACTURING,
AND CRITICAL MINERALS

SUBCOMMITTEE ON ENERGY,
CLIMATE
AND GRID SECURITY

SUBCOMMITTEE ON HEALTH

CONGRESS OF THE UNITED STATES
HOUSE OF REPRESENTATIVES

July 20, 2023

Ohio Department of Natural Resources
2045 Morse Road
Columbus, OH 43229

RE: Support Nomination # 23-DNR-0005; 23-DNR-0006; and 23-DNR-0007

To Whom It May Concern,

As a member of the House Energy & Commerce Committee and Chairman of the Subcommittee on Environment, Manufacturing and Critical Materials, I have the responsibility to understand and find solutions to help solve America's energy crisis. Increasing our domestic energy production is necessary to fuel the next era of American industry and achievement. When energy is produced on American soil, we are able to ensure the highest levels of energy independence and environmental responsibility. Our Ohio lands offer abundant natural resources, and these resources belong to the American people. It is time to unleash these resources.

The hardworking Americans in my district are suffering from the increased costs of gasoline, food, and other products as a result of the Biden Administration's failed energy policies. We can no longer consider energy independence, energy security, and energy sustainability as isolated topics. I am proposing a new term – Energy Dominance – to motivate the next great frontier for American energy production to ensure abundant, affordable, and clean energy. It is time to roll up our sleeves and get to work on finding real solutions.

I am writing in strong support for the responsible leasing of state-owned minerals through the proposals put forth in Nomination # 23-DNR-0005; 23-DNR-0006; and 23-DNR-0007. Energy security is national security. Developing state-owned minerals like those at Salt Fork will contribute to American energy security by increasing our energy supply and improving our resilience from global events. To encourage the productive development of state lands, the Oil and Gas Leasing Commission was established by the Ohio legislature and governor in 2011, and these proposals ensure that such productive development comes to fruition.

Congress of the United States
Washington, DC 20515

For a strong example of the positive impact of state land leasing on energy production, look no further than Tappan Lake Park in the heart of my Congressional district. In 2022, the Muskingum Watershed Conservancy District, which oversees the park, successfully partnered with Encino Acquisition Partners to develop Tappan Lake without disrupting the beautiful recreation destination it has always been.

As the resources of American lands belong to the American people, the proceeds from the leasing were used to directly support Ohio conservation efforts. In 2021 alone, the Conservancy District received over \$11.8 million in revenue from the leases, and these proceeds were reinvested to permanently preserve more acres of forest land, enhance the public trail system, and provide improved recreation areas for more than four million visitors.

Since 2012, over 46,000 acres of federal land have been leased in Ohio. While this is significant, more natural resources in Ohio are waiting to be unleashed.

Supporting the proposals put forth in Nomination # 23-DNR-0005; 23-DNR-0006; and 23-DNR-0007 are a necessary step in ensuring America's energy dominance and reversing the harmful impacts of failed energy policies. I ask that you please keep in mind the economic benefits that state land leasing and natural resource development will bear for all Ohioans for decades to come.

Sincerely,

A handwritten signature in blue ink that reads "Bill Johnson". The signature is written in a cursive style with a prominent "B" and "J".

Commission Clerk:

I wish to express my opposition to the nominations for the above-referenced parcels in the vicinity of Salt Fork State Park. I have been hiking and picnicking at this State Park, which I regard as the "gem" of our state park system. I oppose the nominations submitted for hydraulic fracturing for the following reasons:

- water pollution
- water withdrawal (each fracking well will have to take about a 1 million gallons of water/year). These will be drawn from the Muskingum Watershed, which cannot tolerate this loss.
- flaring of natural gas
- huge amounts of brine waste which will probably come to Washington County (my home county), which already leads the state in volume of brine waste injected.
- methane emissions which will contribute to climate change
- building of access roads and their environmental impact in the vicinity of the park

Please urge the Commission to seek the advice of scientific experts before approving these nominations (No science experts are in the current Commission membership)

Margaret Meyer

Subject: : Public Comments on Nomination #: 23-DNR-0005
Date: Thursday, July 20, 2023 9:22:29 PM

To the Commissioners,

Please do not approve hydraulic fracturing under Salt Fork State Park. That lake is the source for drinking water for nearby communities, and should not be used for gas production. Furthermore, brine from fracking waste is likely to end up under my residence, in Washington County, which receives way, way, way more than its share of brine waste—and to what benefit to its citizens?

Parks should be unspoiled areas—an increasingly rare land use these days—and that means free from noise, lights, air pollution, water contamination, temporary roadways... Do you understand the detrimental effects of bright lights on migrating birds? Will the frack pads turn off their lights during spring and fall, I hope?

How will the citizens of Ohio benefit from fracking adjacent to and under our public lands? They won't. There are so many risks and unknowns—and known environmental consequences of fracking. Please decline nomination #34-DNR-0005, and all other permit requests under Ohio's precious public lands.

Thank you!

It's totally insane that the citizens of Ohio have to beg to keep Oil and Gas from destroying our precious State Parks. Or that ODNR hasn't tried to stop them.

Unless you live in a box, you know that the world is burning up right now. Globally it's in the news every day. The hottest record breaking temperatures everywhere.

Ohio actually seems about the most sane weather wise of all the States right now. Is that why we have become so lax on any sort of progressive power development? We are being left in the dust economically because of a backward political structure that keeps us tied to this antiquated fuel source that is exasperating heat trapping events.

Please don't allow drilling and fracking and water taking in Salt Fork. Or any other lake or State Park or Forest.

I am sending this email to ask that the Commission DENY the referenced leasing nominations.

Fracking anywhere poses environmental hazards that are well known. There is no reason to approve these leases but for the greed of those who will reap financial benefit without care or concern for preserving the remaining nature and beauty of this park, our state, country and world.

Thank you for your consideration,
Barb Ballard

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

I am fortunate to have had the opportunity to visit and explore many local parks as a 35 year resident of Central Ohio. I was raised on the East coast amid mountains and on the shoreline so the beauty of the many state parks and the access to all the outdoor activities made my love for this state grow and missing "home" diminish.

I have visited Salt Fork State Park many times — including several trips where I've introduced others to the beauty of Salt Fork's hiking trails, waterways, and campgrounds. I raised three daughters who are active hikers, kayakers and occasional campers and also love, enjoy and work to protect the natural resources around us.

I am so thankful Ohio took the appropriate steps to protect this land from extractive industry and development so that all Ohioans could enjoy the park's stunning landscape and natural features. That could all change if oil and gas operations are permitted to frack our public lands.

Fracking operations create hazardous air pollution and can pollute groundwater resources. I know many visitors — including my own family — would avoid visiting Salt Fork State Park knowing these risks. Fracking operations will disturb the scenic beauty of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Dear Nathan Moffitt:

Our ecosystem is already unbalanced and the world is trying to let us know that we need to stop and think about how we are presently treating it in so many ways. And one way is by the methods of fracking.

We have lived in this area and enjoyed the parks all of our lives. Some of the parks were begun to control flooding but now all of them are there for recreation along with residential and camp living but the parks are not there for the Ohio government and the oil and gas companies to use for "one" more way to disturb the natural order of things.

Fracking framework includes light and noise pollution, the use of chemicals that can enter the water, land and air, and the destruction of the forests in the fracking sections. These actions can confuse wildlife on land, in the air and in the lakes and even can cause death or elimination of certain species. Furthermore these same factors are bothersome for the people who visit the parks and who want to enjoy a relaxing getaway from their busy lives.

In addition, locally we know of examples where fracking has potentially harmed the environment:

In Carrolton, Ohio, because of so much fracking over the years, the drinking water is substandard. A family living on Ridge Road in Goshen Township had their well water become tarnished and unusable.

The Tuscarawas River near Barberton, Ohio, recently had an oil leak appear that affected the fish and fowl life. At last notice, where the leak initiated had not been found.

Lastly, we own 12 acres on County Road 24, Old Town Valley Road, York Township and recently have been bombarded with texts, calls and letters regarding installing wells on our property or buying the acreage for future fracking. The surrounding property owners have sold out to them. We are holding out and hoping that our property remains untouched.

Save the parks. No fracking.

Subject: 23-DNR-0005,0006 0007 Public Comments on fracking at Salt Fork State Park
Date: Monday, June 19, 2023 9:40:42 PM

We would like to comment on the possibility of fracking at Salt Fork State Park.

Salt Fork is a beautiful park and a special and bright spot in our state - with beautiful trees, flora, animals and birds. It is a great place for people of our state to get out and enjoy nature. Our family has gone there for camping, hiking, staying in cabins or in the lodge for well over 40 years.

Fracking is NOT good for the earth. It contributes to air and water pollution, loss of plant life and animal habitats, disruption of migration patterns and contributes to toxic chemicals in the environment. These are more than enough reasons to us for not allowing fracking in the state of Ohio. The question is why do you believe we should compromise nature and the land in Ohio for future generations by allowing fracking at Salt Fork State Park?

Sincerely,

Debra and Steve Britton

Dear commissioners,

I wish to convey my opposition to the nominations for the above-referenced parcels in the vicinity of Salt Fork State Park. As a life-long Ohio resident, I with my family have spent many days at Salt Fork camping, hiking, fishing, and swimming there over the years and have always felt that it was a very special park. It is not only Ohio's largest State Park, but many will agree it is the most beautiful one. I oppose the nominations submitted for hydraulic fracturing for the following reasons:

- 1 The building of access roads and their environmental impact in the vicinity of the park.
- 2 Water withdrawal (each fracking well will have to take about a 1 million gallons of water/year). These will be drawn from the Muskingum Watershed, which cannot tolerate this loss.
- 3 Flaring of natural gas and methane emissions which will contribute to climate change.
- 4 Water pollution and the huge amounts of brine waste which will probably be injected into the ground in some nearby area or county.
- 5 A large increase in the level of noise and light pollution along with the enormous amount of truck traffic that will ensue in the area once drilling begins.

I would therefore urge the Commission to seek the advice of environmental experts before approving these nominations (I don't see any such expertise in the current Commission membership).
Sincerely, James Grecni (740) 525-4558

Dear Mike,

I just found out about the opportunity to comment regarding the proposed fracking beneath Salt Fork (and others) State Park.

As I think you know, our Board is pro-oil and gas, but I feel certain that, with what I'm sure will be somewhat of a gold rush to drill into such a large, untapped source, the impact on our county road system will be substantial.

While we will certainly have Road Use Maintenance Agreements in force, they're not necessarily a cure-all. It would be my hope that consideration will be given to the limited highway budgets of small counties like Guernsey. Perhaps consideration could be given to sharing a portion of the state's injection well fees with the impacted counties.

While I realize this would likely be a legislative issue, I hope the commission will consider the issue and would advocate for counties like ours.

Thank you!

Dave Wilson

Public Comment RE: Please DENY the Leasing Nominations for Salt Fork State Park and Wildlife Area, Nomination #s: 23-DNR-0005, 0006, 0007

Dear Commissioners,

We respectfully request that you deny the leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Salt Fork State Park is Ohio’s largest state park and one of the most beloved and important outdoor recreation destinations in the state. A 2009 ODNR publication stated that “Salt Fork State Park is a priceless gem to be cherished by the people of Ohio.” Please deny the Salt Fork oil and gas leasing nominations in order to protect public health and safety, respect outdoor recreation, and confront climate change.

Nomination No. 23-DNR-0005 shows eight proposed shale fracking (“unconventional oil and gas production” or “UOG”) well pads surrounding Salt Fork. The construction and operation of well pads near Salt Fork’s boundaries seriously threatens the quality and character of this priceless Ohio gem. UOG leasing and development of the nominated Salt Fork parcels threatens public health and safety, current recreational uses, and Ohio’s outdoor recreation economy. By contrast, denying the Salt Fork nominations would protect the Park’s air quality; its tranquility; and its unique status as an Ohio outdoor health, wellness, and recreation destination. Denying the Salt Fork nominations would also serve the interests of present and future generations by helping to prevent the worst impacts of climate change.

Ohio Revised Code, Section 155.33(B)(1)(b), (c), (e), and (h) provides that:

In making its decision to approve or disapprove the nomination, the commission shall consider all of the following: [...]

(b) Whether the proposed oil or gas operation is compatible with the

current uses of the parcel of land that is the subject of the nomination;
(c) The environmental impact that would result if the lease of a formation that is the subject of the nomination were approved; [...]
(e) Any potential impact to visitors or users of a parcel of land that is the subject of the nomination; [and]
(h) Any comments or objections to the nomination submitted to the commission by residents of this state or other users of the parcel of land that is the subject of the nomination;

UOG development of Salt Fork State Park would generate significant air, noise, and light

pollution that would negatively impact visitors and users of the Park. R.C. 155.33(B)(1)(b), (c), (e), and (h). UOG development would conflict with current uses of the Park, including the recreational and health-based escape from industrialization, pollution, and natural fragmentation. R.C. 155.33(B)(1)(b), (c), (e), and (h). UOG development of Salt Fork State Park would also push the world closer to climate catastrophe at a time when virtually all nations of the globe recognize the need to rapidly decarbonize the energy sector. R.C. 155.33(B)(1)(c), and (h).

A. DENYING THE NOMINATIONS WILL PROTECT PUBLIC HEALTH AND SAFETY – R.C. 155.33(B)(1)(b), (c), (e), and (h).

Unconventional oil and gas production (UOG) is associated with: dangerous levels of hazardous air pollutants, including carcinogenic and endocrine disrupting chemicals; childhood leukemia; increased mortality in elderly populations; more heart attacks; low birth weight and extreme premature births; asthma attacks; and headaches and fatigue.

Dangerous Levels of Hazardous Air Pollution

A 2019 meta-analysis on the links between hazardous air pollutants (HAPs) and oil and gas development showed that HAPs linked to numerous cancerous and non-cancerous health conditions are found in the vicinity of production sites at concentrations exceeding health safety thresholds (Garcia-Gonzales 2019).

A 2018 meta-analysis of endocrine-disrupting air pollutants revealed that there are more than 200 airborne chemicals associated with unconventional oil and gas development, including 26 known endocrine-disrupting chemicals and 8 suspected endocrine-disrupting chemicals (Bolden 2018).

Sent from my iPad

Salt Fork and Wolf Run State Parks

These are my comments on the following nominations:

23-DNR-0005, 23-DNR-0006, 23-DNR-0007, 23-DNR-0008

I think that we're all truly aware that allowing Hydraulic Frac Pads to set up on the perimeter of our State Parks would involve areas that are not ready for all that such operations and their infrastructure would mean to the daily influx of park visitors. Does the wording of ORC 155.33(4)(B)(1)(e)- "Any potential impact to visitors or users of a parcel of land that is the subject of the nomination;" carry the weight that it should in your deliberations?

If a company got a bid accepted, it seems possible that operations could possibly be starting in the Spring tourist season. The nominations for Salt Fork could result in at least 8, maybe as many as 14 well pads (knowing that the company who gets the bid has 281 parcels and the options to add more pads and well sites .) Each well pad could have 10 , or even more wells in operation.

I think that we all understand that the fracking industry continues to improve its methods which lead to less time involved and increased profits. Zipper Fracking, MZF, Simulfrac, E-Frac , etc.; these and many more modern , time saving technologies are increasingly being developed by the large O & G Companies. But I'm afraid that even as the industry continues to improve it's techniques , the basic nature of what they do and how they do it is not compatible to the boundary zone around our State Parks. What you folks are considering is not an isolated area which is away from well travelled roads.

The roads around Salt Fork; Rts 22, 50, 55, 57 and 851, are two lane, winding roads that see all the Park traffic as well as the local traffic.

Besides all the greatly increased truck traffic, the very loud noises , the lights that change the very perceived nature of the night sky , the many millions of gallons of water usage (probably from the Lake or its streams) not to mention the resulting air pollution from the gas and diesel engines; all these , plus more, will combine to change, in a negative way, the very nature of our largest State Park as well as Wolf Run. Thanks to Gov. DeWine, at least ,they will not be allowed to include "surface land usage" in their bids .

To begin with the initial well pad construction may take several months of clearing the land and constructing the pad. 8-14 pads ,of 5-10 Ac each, would involve maybe 16-28 mos of on-going construction time. Construction equipment at some point would necessarily be mingling with all the other truck traffic and tourist traffic that would be on the narrow roads once the fracking starts on the first well pad in the sequence. But before the fracking process could start the individual wells on each pad have to be drilled (which can take one wk/lateral or longer depending on length of the lateral). A well pad with 8-10 wells may take 2 to 2 1/2 mo of drilling before the fracking begins. If the company has only one of the very expensive drilling rigs , they move it to the next pad in sequence. (So you get the idea how long it would take to drill 8-14 well pads with maybe 8-10 wells/pad , even if the company might have 2 drilling rigs) Again more heavy equipment intermittently on Salt Fork's narrow roads for years to come.

Now comes the influx of frac infrastructure : I think sometimes a picture can be worth a thousand words- The roads would be choked intermittently as each well pad is populated with all of this equipment which has to be brought in by , for the most part, semi-trucks.

As already mentioned the modern fracking techniques save time with the multiple wells on one pad being fracked at once.

Twenty of the very large diesel fueled pumps which operate at 8k psi (maybe as much as 15-20k psi) on the longer 3 mi (maybe 4-5mi) laterals which would be drilled under Salt Fork are tremendously loud and pollute the air, as only diesels can, and would be operated 24/7 for 2-3 months/pad. Five well pads are proposed to be located within a mile or two of the Park Office , the beach and the lower boating marina. The sound and light from some 40-50 individual wells with their diesel fleet of very high pressure pumps on the southern end of the Park will most definitely have an effect on the experience of those areas . The northern end of the Park with it's hiking trails, Kennedy Stonehouse Museum, not to mention the Golf course will only have to endure 24/7 sound from 2 well pads (16-20 wells) unless the company adds 6 more well pads on the west side of the Park as they have the right to do!

Some form of the zipper fracking technique, which is now the industry standard, would ensure that there would be 24/7 operation on each pad as the fracking begins in earnest. Semi-trucks hauling as much as 8000 gal of water (where would that water be coming from?) would be entering and leaving around the clock , on the average one every 15 min. Semis of similar size would travel from the railheads in a steady stream onto the small roads around Salt Fork hauling the enormous amount of Wisconsin sand needed as

the proppant in the operations (upwards of a ton of sand may be injected into each foot of the shale, which is hard to imagine but that's what keeps the fractures open!) So now we have tourists having to deal with all this large truck traffic. But wait , we don't want to forget the trucks which will be hauling the numerous chemicals , acid and such, which are needed for each well. Some of these chemicals are proprietary , or at least the proportions used by each company are. Nevertheless, they are chemicals, and in many cases dangerous if spilled which could happen if one of the trucks turned over on one of the narrow , winding roads around Salt Fork, or any of the other State Parks roads for that matter.

While we're thinking about truck traffic , we shouldn't forget the brine haulers who will be on the roads at some point traveling to and from these well pads to injection wells in the southern part of Guernsey County. Any of these big rigs could tangle with one of our tourist families on the way to the park. These trucks are on a schedule and are known to drive fast. Not a good thought! Speaking of driving fast, we need to consider the shift workers coming and going to and from these sites. `They have a right to these narrow roads as well. Just think about the traffic on those narrow roads which our Park visitors will have to endure for several years. I think the probability is pretty high that there will be at least one , maybe more, accidents ; with hopefully no loss of life. (But I feel sure the haulers have insurance for such contingencies) . Or maybe the tourist traffic and the income to the affected Parks will just decrease!

Ohio Revised Code 155.33 (B)(1) speaks in part, of the criteria by which you are to judge these nominations. There seems to be a priority with (a) The economic benefits, including the potential income from an oil or natural gas operation, that would result if the lease of a formation that is the subject of the nomination were approved.

Since hopefully, at least at this time, you don't have to deal with the problem of "surface land use" , (c) The environmental impact that would result if the lease of a formation that is the subject of the nomination were approved; is different. This criteria might have to do with any access to the Lake or Streams within the Park for the needed huge amounts of water (piping , pumps, etc) that will be needed in the next few years. But I guess that you're not going to be able to ask that question.

(d) "Any potential adverse geological impact that would result if the lease of a formation that is the subject of the nomination were approved;" I'm sure that their geologist will have all the answers in that category. The Cambridge Cross Strike Structural Discontinuity that runs under both Salt Fork and Wolf Run seems to be very desirable for gas fracking .

(e) "Any potential impact to visitors or users of a parcel of land that is the subject of the nomination;" This one I spent a good bit of time on above. The visitors to Salt Fork and Wolf Run are, for the most part , tax paying citizens of Ohio. (h)" Any comments or objections to the nomination submitted to the commission by residents of this state or other users of the parcel of land that is the subject of the nomination; "(e) & (h) would seem to fit together in a way that would make the combination more powerful than if they were considered separately. We're all State taxpayer-stakeholders which should make us an important part of the conversation when it comes to such important decisions as what faces us presently with these nominations. These nominations , if accepted, could lead to many complications both in and around our beautiful State Parks going forward. The legislature's scheme to "rob Peter to pay Paul " might seem like a good way to finance a tax cut. But is it? Some of the industries own bar graphs show a sharp drop in returns around 2030-31 with a continuing decline from there on. Dr Auch, Fractracker, predicts that the income from the wells will drop even more quickly and to a lower level than the industries promises.

The companies may want to come back and re-frack a well/wells to try to squeeze a few more dollars out after essentially the wells are no longer producing with the enticement of providing a few more dollars to State coffers . Taxpayer-stakeholders, in reality owners of the Parks , again would have to deal with fracking problems on the roads around the Parks, sound and air pollution and the need to protect our valuable water.

I think you folks are realists enough to understand the possibility that hydrocarbons like oil and gas may be on the way out. Thanks to HB 507 , natural gas likes to think of itself as "green" energy and thus a part of the future of renewable energy. To the extent that there is any truth to that statement, the future of natural gas as "Green" energy looks like it won't be what comes out of the ground . So what happens if the O&G market tanks in the foreseeable future, how valuable will the State's investment be then? Maybe the rusting pump jacks can be recycled to bring in some money to the treasury! Maybe the 155.33(4)(B)(1)(a) in your considerations of the O&G bids may not be as economically attractive in the long run as it seemed to be in the short run. But maybe that doesn't matter so much in short term thinking.

What we're demanding as millions of taxpaying, stakeholders who love our State Parks without all that

the O&G Fracking industry would most certainly bring to them, is that our voices would be balanced in the considerations against the fleeting economics that big O&G is dangling before our legislature and the local area immediately around Salt Fork and Wolf Run . Does the present legislative body truly represent the will of the majority of the people regarding this important issue?

Attn: Commission Clerk

Oil and Gas Commission

Ohio Department of Natural Resources

2045 Morse Road

Building E-1st Floor Assembly Center West

Columbus, OH 43229

Public Comment on Leasing for Exploration of Oil and Gas for Salt Fork State Park and Wildlife Areas (23-DNR-0005, 23-DNR-0006, 23-DNR-0007) and Wolf Run State Park (23-DNR-0008)

Dear Commissioners,

We respectfully request that you deny the leasing nomination numbers: 23-DNR-0005, 0006, 0007, and 0008. Located in southeast Ohio's Guernsey and Noble Counties. These areas are located in an area that is rich mineral resources, that serves the public need for pristine and unique natural areas with quality recreational opportunities:

Salt Fork State Park, located in eastern Ohio (Guernsey County) encompasses a stunning landscape featuring forested hills, open meadows, and misty valleys decorated with winding streams. With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast. Boaters will appreciate the park's two marinas and eight launch ramps; hikers will be challenged by a trail system that offers a variety of lengths and levels of difficulty; history buffs can visit the historic Kennedy Stone House; and golfers will enjoy the top-rated 18-hole golf course. Overnight accommodation

includes a full-service resort lodge, deluxe vacation cabins, and a large campground. With 17,229 acres of land and 2,952 acres of water provides tremendous opportunities for quality outdoor natural resource-based recreation. Salt Fork Lands being pursued put at risk 15,618 acres and Wolf Run 2081 acres of high value recreational outdoor lands.

Ohio Wolf Run State Park offers more than 1,000 acres of scenic, peaceful woodlands and cool, clear waters for a quiet retreat. Nestled in the heart of Appalachia of southeastern Ohio, the region's second growth forest now provides high-quality outdoor recreation such as camping, hiking, fishing, boating, hunting, and winter recreation.

Ohio is one of the poorest states for "Public Lands" and is especially lacking in high quality natural areas. With 95% of its lands being privately owned, quality access for hunting and fishing is extremely limited. Ohio Department of Natural Resources - Division of Wildlife is facing declining numbers in license sales for hunting and fishing licenses other than 2021 where there was a temporary increase in fishing license sales. We cannot afford to allow any degradation of the quality of recreational experiences on public lands that are held in trust for present and future generations of the State of Ohio. Outdoor recreation in Ohio annually generates more than \$24.3 billion in consumer spending and supports 215,000 direct jobs, \$7 billion in wages, and \$1.5 billion in state and local tax revenue. The reality is that there is an economic multiplier with this type of economic activity that makes it vital to the viability of the local economy of the area without adverse health and natural resource impacts involved with oil and gas exploration and development.

I remember as a child witnessing the condition because of mineral exploration and development in Guernsey and Noble Counties as my grandparents were visiting relatives, who still resided in these areas where my grandfather and mother were born and raised. I do not want to see a return to the past of unbridled mineral resource development for short term needs and profits.

The IWLA Members Pledge To strive for the purity of water, the clarity of the air, and the wise stewardship of the land and its resources; to know the beauty and understanding of nature, and the value of wildlife, woodlands, and open spaces; to the preservation of this heritage and to man's sharing in it. We have partnered with ODNR many times over the 100 years of conservation leadership that we have participated in within the State of Ohio, including the creation of the Ohio Department of Natural Resources. We clearly are defenders of a long tradition of successfully defending public lands in our state and country. To this end we request that you deny the nomination of Salt Fork State Park and Wildlife Areas (23-DNR-0005, 23-DNR-0006, 23-DNR-0007) and Wolf Run State Park (23-DNR-0008) for leasing for exploration of these public lands for oil and gas.

Respectfully submitted,

Richard Graham

Salt Fork and Wolf Run State Parks

These are my comments on the following nominations:

23-DNR-0005, 23-DNR-0006, 23-DNR-0007, 23-DNR-0008

I think that we're all truly aware that allowing Hydraulic Frac Pads to set up on the perimeter of our State Parks would involve areas that are not ready for all that such operations and their infrastructure would mean to the daily influx of park visitors. Does the wording of ORC 155.33(4)(B)(1)(e)- "Any potential impact to visitors or users of a parcel of land that is the subject of the nomination;" carry the weight that it should in your deliberations?

If a company got a bid accepted, it seems possible that operations could possibly be starting in the Spring tourist season. The nominations for Salt Fork could result in at least 8, maybe as many as 14 well pads (knowing that the company who gets the bid has 281 parcels and the options to add more pads and well sites.) Each well pad could have 10, or even more wells in operation.

I think that we all understand that the fracking industry continues to improve its methods which lead to less time involved and increased profits. Zipper Fracking, MZF, Simulfrac, E-Frac, etc.; these and many more modern, time saving technologies are increasingly being developed by the large O & G Companies. But I'm afraid that even as the industry continues to improve its techniques, the basic nature of what they do and how they do it is not compatible to the boundary zone around our State Parks. What you folks are considering is not an isolated area which is away from well travelled roads.

The roads around Salt Fork; Rts 22, 50, 55, 57 and 851, are two lane, winding roads that see all the Park traffic as well as the local traffic.

Besides all the greatly increased truck traffic, the very loud noises, the lights that change the very perceived nature of the night sky, the many millions of gallons of water usage (probably from the Lake or its streams) not to mention the resulting air pollution from the gas and diesel engines; all these, plus more, will combine to change,

in a negative way, the very nature of our largest State Park as well as Wolf Run. Thanks to Gov. DeWine, at least ,they will not be allowed to include “surface land usage” in their bids .

To begin with the initial well pad construction may take several months of clearing the land and constructing the pad. 8-14 pads ,of 5-10 Ac each, would involve maybe 16-28 mos of on-going construction time. Construction equipment at some point would necessarily be mingling with all the other truck traffic and tourist traffic that would be on the narrow roads once the fracking starts on the first well pad in the sequence. But before the fracking process could start the individual wells on each pad have to be drilled (which can take one wk/lateral or longer depending on length of the lateral). A well pad with 8-10 wells may take 2 to 2 1/2 mo of drilling before the fracking begins. If the company has only one of the very expensive drilling rigs , they move it to the next pad in sequence. (So you get the idea how long it would take to drill 8-14 well pads with maybe 8-10 wells/pad , even if the company might have 2 drilling rigs) Again more heavy equipment intermittently on Salt Fork’s narrow roads for years to come.

Now comes the influx of frac infrastructure : I think sometimes a picture can be worth a thousand words-

The roads would be choked intermittently as each well pad is populated with all of this equipment which has to be brought in by , for the most part, semi-trucks.

As already mentioned the modern fracking techniques save time with the multiple wells on one pad being fracked at once.

Twenty of the very large diesel fueled pumps which operate at 8k psi (maybe as much as 15-20k psi) on the longer 3 mi (maybe 4-5mi) laterals which would be drilled under Salt Fork are tremendously loud and pollute the air, as only diesels can, and would be operated 24/7 for 2-3 months/pad. Five well pads are proposed to be located within a mile or two of the Park Office , the beach and the lower boating marina. The sound and light from some 40-50 individual wells with their diesel fleet of very high pressure pumps on the southern end of the Park will most definitely have an effect on the experience of those areas . The northern end of the Park with it's hiking trails, Kennedy Stonehouse Museum, not to mention the Golf course will only have to endure 24/7 sound from 2 well pads (16-20 wells) unless the company adds 6 more well pads on the west side of the Park as they have the right to do!

Some form of the zipper fracking technique, which is now the industry standard, would ensure that there would be 24/7 operation on each pad as the fracking begins in earnest. Semi-trucks hauling as much as 8000 gal of water (where would that water be coming from?) would be entering and leaving around the clock , on the average one every 15 min. Semis of similar size would travel from the railheads in a steady stream onto the small roads around Salt Fork hauling the enormous amount of Wisconsin sand needed as the proppant in the operations (upwards of a ton of sand may be injected into each foot of the shale, which is hard to imagine but that's what keeps the fractures open!) So now we have tourists having to deal with all this large truck traffic. But wait , we don't want to forget the trucks which will be hauling the numerous chemicals , acid and such, which are needed for each well. Some of these chemicals are proprietary , or at least the proportions used by each company are. Nevertheless, they are chemicals, and in many cases dangerous if spilled which could happen if one of the trucks turned over on one of the narrow , winding roads around Salt Fork, or any of the other State Parks roads for that matter.

While we're thinking about truck traffic , we shouldn't forget the brine haulers who will be on the roads at some point traveling to and from these well pads to injection wells in the southern part of Guernsey County. Any of these big rigs could tangle with one of our tourist families on the way to the park. These trucks are on a schedule and are known to drive fast. Not a good thought! Speaking of driving fast, we need to consider the shift workers coming and going to and from these sites. "They have a right to these narrow roads as well. Just think about the traffic on those narrow roads which our Park visitors will have to endure for several years. I think the probability is pretty high that there will be at least one , maybe more, accidents ; with hopefully no loss of life. (But I feel sure the haulers have insurance for such contingencies) . Or maybe the tourist traffic and the income to the affected Parks will just decrease!

Ohio Revised Code 155.33 (B)(1) speaks in part, of the criteria by which you are to judge these nominations. There seems to be a priority with (a) The economic benefits, including the potential income from an oil or natural gas operation, that would result if the lease of a formation that is the subject of the nomination were approved.

Since hopefully, at least at this time, you don't have to deal with the problem of "surface land use" , (c) The environmental impact that would result if the lease of a formation that is the subject of the nomination were approved; is different. This criteria might have to do with any access to the Lake or Streams within the Park for the needed huge amounts of water (piping , pumps, etc) that will be needed in the next few years. But I guess that you're not going to be able to ask that question.

(d) "Any potential adverse geological impact that would result if the lease of a formation that is the subject of the nomination were approved;" I'm sure that their geologist will have all the answers in that category. The Cambridge Cross Strike Structural Discontinuity that runs under both Salt Fork and Wolf Run seems to be very desirable for gas fracking .

(e) "Any potential impact to visitors or users of a parcel of land that is the subject of the nomination;" This one I spent a good bit of time on above. The visitors to Salt Fork and Wolf Run are, for the most

part , tax paying citizens of Ohio. (h)” Any comments or objections to the nomination submitted to the commission by residents of this state or other users of the parcel of land that is the subject of the nomination; “(e) & (h) would seem to fit together in a way that would make the combination more powerful than if they were considered separately. We’re all State taxpayer-stakeholders which should make us an important part of the conversation when it comes to such important decisions as what faces us presently with these nominations. These nominations , if accepted, could lead to many complications both in and around our beautiful State Parks going forward. The legislature’s scheme to “rob Peter to pay Paul “ might seem like a good way to finance a tax cut. But is it? Some of the industries own bar graphs show a sharp drop in returns around 2030-31 with a continuing decline from there on. Dr Auch, Fracktracker, predicts that the income from the wells will drop even more quickly and to a lower level than the industries promises.

The companies may want to come back and re-frack a well/ wells to try to squeeze a few more dollars out after essentially the wells are no longer producing with the enticement of providing a few more dollars to State coffers . Taxpayer-stakeholders, in reality owners of the Parks , again would have to deal with fracking problems on the roads around the Parks, sound and air pollution and the need to protect our valuable water.

I think you folks are realists enough to understand the possibility that hydrocarbons like oil and gas may be on the way out. Thanks to HB 507 , natural gas likes to think of itself as “green” energy and thus a part of the future of renewable energy. Comments on #23-DNR-0005, 0006,0007,0009 Guernsey County and a part of Salt Fork State Park

Many recent studies have revealed that toxic components in both fracking fluids and emissions from natural gas & oil extraction & production present severe health risks to humans, wildlife and natural ecosystems alike. Production components like benzene, PFAS compounds, radium and VOC's are documented to have entered our waterways, air and soil and to have poisoned wildlife and sickened citizens. A park or wildlife boundary line does not stop the movement of these toxic chemicals through air and water; therefore, even if all actual drilling is restricted to outside the park or state land perimeters, park visitors and employees will be put at risk of serious health effects, and the critical ecosystems which are ostensibly being preserved by the public lands in question will be degraded over time. In addition to these health risks, the ecological capital being conserved in these parklands for the benefit of all Ohio citizens will be degraded. For example, undisturbed forests and soils serve as carbon sinks, removing carbon from the air and sequestering it inside trees and deep within the soil. This role is irreplaceable and saves the state vast amounts of money as it lowers the costs of remediating destructive climate change events.

At the same time, oil and gas extraction will lead to significant elevation of greenhouse gases in the atmosphere at a time when failing to change our energy systems over to renewables will guarantee exponentially escalating climate calamities, at overwhelming costs to our economies both locally and globally. For these reasons, we must deny private companies permits for oil & gas drilling which will harm the long-term interests of the state of Ohio, while benefiting short-term private interests.

Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

Ohians know and love the natural beauty that has survived around us. They appreciate the beauty and accessibility of such places as Salt Fork State Park with its hiking trails, waterways, and campgrounds. We want to see such places cherished, protected, and passed intact to our children that they might be spiritually nourished.

That could all change if oil and gas operations are permitted to frack our public lands.

Instead of natural beauty and necessary food for their souls, fracking would deliver hazardous air pollution to us and our descendants and might pollute the groundwater that is essential for survival and prosperity.

Fracking operations will *certainly* disturb the scenic beauty of Salt Fork State Park and the loss of visitors will reduce the state's resources, dampen the local economy, discourage the hearts of those who revere the natural world, and ruin lives regionally.

Advantages of Single Operator within Salt Fork State Park

1. Coordinated Drilling and Completions Operations

Centrally coordinate service companies and other on-site activities for more efficient execution, including reduced truck traffic and noise and light management.

2. Centralized Facilities Reduce Surface Footprint

Fewer production facilities, less surface disturbance, less pipeline, less truck traffic, and fewer potential emissions.

3. Maximized Reservoir Development Potential

- a. Minimize unit boundaries and related unit setbacks to optimize resource recovery.
- b. Design and execute offset completions operations to avoid depletion and degradation of producing wells.
- c. Optimize existing production by efficiently planning for shut ins during offset completion operations.

Disadvantages of Multiple Operators within Salt Fork State Park

1. Increased Surface Disturbance

Duplication of tank batteries and well pads (and in some instances compressor stations and gathering pipelines).

2. Increased Unitization

Multiple development plans increase the amount of unitization required, which could delay operations and lead to suboptimal development.

3. Potential Stranded Acreage and Inefficient Development

Multiple and uncoordinated development plans could lead to stranded acreage and inefficient development.

Commission.Clerk@oglmc.ohio.gov

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

I am so thankful Ohio took the appropriate steps to protect this land from extractive industry and development so that all Ohioans could enjoy the park's stunning landscape and natural features. That could all change if oil and gas operations are permitted to frack our public lands.

Fracking operations create hazardous air pollution and can pollute groundwater resources. I know many visitors — including my own family — would avoid visiting Salt Fork State Park knowing these risks. Fracking operations will disturb the scenic beauty of Salt Fork State Park. No one wants to camp surrounded by noise and light pollution. And fracking operations will cause an increase in heavy truck traffic which pose safety concerns too.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Emily Hess

Subject: Fracking at Salt Fork
Date: Wednesday, July 19, 2023 9:48:11 AM

Dear Ohio Oil and Gas Land Management Commission Members,

Thank you for the opportunity to voice my concerns about fracking and extracting from Salt Fork State Park with five well pads surrounding the park.

These horizontal drillings, contrary to oil and gas industry claims, will irrevocably harm this park's ecosystem and its flora and fauna. This includes thousands of gallons of fresh water with toxic chemicals. It is incredible that the oil and gas industry legally does not have to disclose which chemicals it uses.

Waste water from fracking is radioactive and can never be used again. It is unconscionable to use water that results in poisoning. The methane by product is 86 times more potent than carbon dioxide.

I live in northeast Ohio and enjoy several state parks in our area, including Salt Fork and Maumee Bay. Rare birds have been spotted among the variety of birds there. Many birds are only seen during migration. I am thankful for these areas where native flora can not only survive but thrive.

I strongly urge you to not allow fracking at Salt Fork State Park for the sake of what wilderness we have left in Ohio. Thank you.

Sincerely,
Mary Westmeyer

Subject: Fracking in Ohio State Parks
Date: Monday, July 3, 2023 10:21:11 AM

Fine Summer Greetings,

As a life-long backpacker and hiker I was discouraged to hear of Ohio's public servants steps to revive attempts to frack underneath our pristine state parks. I have visited and hiked Salt Fork State Park numerous times and thoroughly appreciate it's beauty, including the surrounding privately owned land.

As you know, fracking operations create hazardous air pollution and can pollute groundwater resources. Fracking operations will definitely disturb the scenic beauty of Salt Fork State Park. Hopefully you are familiar with the Yale paper on the pros and cons of fracking. It was very clear to me that the negative effects of fracking near and under Salt Fork (and all of our state parks) outweigh the benefits and is both a reckless and unnecessary choice - drilling leases on privately owned Ohio land have worked fine for many decades.

I respectfully ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007.

Thank you for your service to our great state. I'm hopeful you will do the right thing (as Gov. Kasich did in 2011) and prevent this toxic idea to move forward.

Please feel free to contact me with any questions or if I can provide any additional input to stop fracking efforts in Ohio's beautiful state parks.

I would appreciate a reply/response to this email.

Best regards,
Kevin Peterca

As a resident of Ohio who enjoys the state's many beautiful state parks, I am dismayed to learn that applications to frack parcels of land within our state parks are being considered. Please preserve the integrity of our state parks, and reject nominations # 23-DNR-0005, 0006, and 0007 for Salt Fork State Park, as well as any further applications for any of our precious park lands. Thank you for your time.

Best regards,
Pat Kniesner

Sent from my iPhonePlease don't allow more of our natural land to be hacked up and destroyed. This is land that provides for our best health in a world that is an increasingly toxic soup of chemicals. More fracking is irrational. It means millions/billions more gallons of water poisoned and air filled with more choking, poisoning toxins.

Oil and Gas Land Management Commission,

I am writing to oppose in the strongest terms the applications to frack an incredible 281 parcels in Salt Fork State Park [Nomination #23-DNR-0005,0006,0007]. As a resident of Ohio, I have hiked and camped in this beautiful park. I am shocked and outraged that the fracking industry is now attacking our beautiful refuges. I am further shocked that the Commission would even consider such a destructive proposal to frack an incredible 281 parcels! Please, please, please, for the sake of Ohio's residents and the safety of our environment, deny these applications.
Resident of Ohio Margaret Meyer

To whom it may concern,

I strongly urge you to deny the above referenced requests. The one and only reason for doing this is money. There are better safer ways to create energy and people can still earn money without destroying the only place we all have to live on.

You can see the destruction of land and contamination of water throughout rural areas where people in low income areas were promised the moon and got wells that ran dry, contaminated water and land and nowhere near the money they were promised. Communities devastated.

As the world is burning and people are dying from extreme heat or losing everything due to extreme weather, the last thing we need is more destruction of the earth so some people can have more money.

Again I urge you to deny these requests.

Thank you for your time and attention.

Comments	<p>For the board members, and particularly Mr. Phillips who represents the public...I am sorely disappointed, to say the least, to learn about intended fracking in Salt Fork state park. For the well established and obvious environmental damages fracking imposes on all living things, this practice is obsolete. Ohio is precious territory. Its location protects us from the natural catastrophes hitting all the edges of our country. We are graced this way, and need to be grateful by preserving this lush, livable land. Climate change is undeniable. We cannot continue in our old ways. There is no time for dragging us backwards. Destroying so much of Salt Fork park might bring a certain amount of dollars and economic stimulus, but longer term repercussions far outweigh whatever positives the board members are presenting. I know I am not alone when I voice my complete opposition to any fracking in any of our state parks. I beg the members to be forward thinking, considering everything relevant today, and to act wisely. Thank you.</p>

Public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007

Dear Commissioners,

The Ohio Friends for the Preservation of Ohio State Parks Board of Trustees is adamantly opposed to Fracking in Salt Fork State Park and in all other State Parks in the State of Ohio. As the representative group of state park friends' groups, we speak for many citizens across Ohio who frequently utilize, support and preserve Ohio's state parks. All of us as individuals are actively

involved in promoting, improving and protecting our parks.

Fracking operations create hazardous air pollution and can pollute groundwater resources. Salt Fork State Park encompasses thousands of acres of land and water where thousands of visitors utilize the lake, trails, campgrounds and lodge every year; enjoying the natural beauty of the area. These natural and protected areas very likely will be impacted by fracking operations that will disturb the scenic beauty and serenity of the state park and the wildlife within and around the park. No one wants to camp surrounded by noise and light pollution. In addition, fracking operations will cause an increase in heavy truck traffic which pose safety concerns.

Today, we request the Commission **DENY** the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Respectfully,

Bill Martin, President
Alan LaDuke, Vice President
Hobie Woods, Treasurer
Cindy Hartman, Secretary
Dave McDiffitt, Trustee

Comments	<p>Re: Please Stop Fracking Proposal Salt Fork State Park and All Public LandsI am asking you to save Salt Fork State Park and any state lands from the devastating effects of fracking. I am writing on behalf of all the local vulnerable people, wildlife, land and water resources, climate, emergency responders, scientists, physicists, ecologists, environmentalists and all who would be impacted and are not represented on your commission. I am writing on behalf of all those who seek refuge, relaxation from their hectic lives in the pristine paradise of our public lands.Please put a STOP to Fracking in Ohio.I highly doubt that after hearing the expert presentations of Silverio Caggiano, Dr. Randi Pokladnik, and Dr. Ted Auch given to your commission on June 28th regarding the harmful effects of fracking that you would allow fracking in yours and affluent owners' backyards. So why would you even consider it in someone else's. Your decision weighs heavily with countless ramifications on climate, environment, health as well as legal, economic and political implications. Live up to your mission: "To ensure a balance between the wise use and protection of our natural resources for the benefit of all."Protect OUR STATE PUBLIC Lands from fracking!Sincerely,Katherine Michel4958 Sears Dr. NWNorth Canton, OH 44720860-685-1305</p>

Your Message to the Oil and Gas Land Management Commission:

To the Ohio Oil and Gas Land Management Commission:

As young parents, my husband and I couldn't afford fancy vacations. But, because wise leaders created the state park system in Ohio, we could enjoy taking our children camping and enjoyed both Shawnee State Park and Barkcamp State Park. We have spent many enjoyable hours hiking in many of our State Parks. Our lives were improved through connecting with nature. We have always been proud of our state park system. Upset when I read that the

legislature was opening our beautiful parks to fracking, I now feel betrayed as these misguided plans are becoming reality.

Since state parks are supported by our tax revenue, they should be reserved for use by the people not by oil and gas companies who will make profits while polluting and extracting. The harm will be irrevocable as they inject millions of gallons of toxic and secret ingredients into the ground and burn off the methane. Water that should be used by humans and animals will be turned toxic and the waste will be forever removed from the earth's water sources. Our states forests will be harmed by the large equipment, drilling pads, and noise.

I am adamantly opposed to fracking in Ohio's state parks. Please deny all requests and support the public's interest rather than ruining our parks so that oil companies can profit from our assets. Say NO to fracking.

Your Message to the Oil and Gas Land Management Commission:

Fracking only hurts our precious land. Massive amounts of water is needed to "frack" and pipelines mangle tree roots. There's disruptive noise from the trucks and machinery. Methane flares foul our air. And then there is the unusable waste water that needs to be disposed of.

Aside from the money the gas and oil companies make there is no benefit to our planet by fracking.

Say NO to fracking in Ohio state parks and public lands.

Your Message to the Oil and Gas Land Management Commission:

Ohio public lands are treasures for wildlife and people. They are paid for and owned by the people of Ohio. We demand that you DENY the lease nominations for all our state parks and forests!!!

Think of the future of our offspring and deny the leasing.

Your Message to the Oil and Gas Land Management Commission:

To the Ohio Oil and Gas Land Management Commission,

I am very concerned to learn that you are allowing oil and gas corporations to frack and extract from our public lands in Ohio, especially our state parks, forests, and wildlife areas.

Our state parks are our most treasured spaces in Ohio. We, the people of Ohio, pay to protect them so they can be used for our benefit, not the profits of a polluting and extractive industry.

Contrary to the claims of the oil and gas industry, fracking will irrevocably harm our state parks and other public lands. Ohioans use our state parks for hiking, camping, birdwatching, fishing, and hunting. There is no way that injecting millions of gallons of toxic chemicals into the ground and flaring methane into the sky near or in our state parks and public lands will not harm them.

Fracking requires millions of gallons of fresh water that is laced with toxic chemicals, including PFAS forever chemicals. The waste water that comes back up is radioactive and can never be used again. Where will that water come from? The water in our parks and public lands should be protected.

Fracking requires large pads of noisy and polluting machinery. It requires pipelines, which in turn requires removal of trees. This should not be allowed in or near our public lands.

Fracking rigs regularly flare methane into the sky, a greenhouse gas 86 times more potent than carbon dioxide. At a time when the world's climate scientists say we have less than a decade to cut carbon pollution in half, the last thing we should do is put more methane into the atmosphere.

I adamantly oppose fracking in Ohio state parks and public lands. Please just say NO to fracking.

Your Message to the Oil and Gas Land Management Commission:

Dear Sir/Madam:

I visit our parks on almost a daily basis. Please don't destroy what we love. How does your plan impact climate control? Even I, though I am no expert on the subject, can envision massive problems with a plan that injects toxic chemicals into the ground and spews methane into the air. Where will the water come from that is required in massive amounts to initiate

fracking? What will you do with the radioactive wastewater? Doing something today that will negatively affect all of our tomorrows is wrong. There are plenty of verses in the Bible that warn of the perils of ill-gotten gain. This is not a good idea! As smart as you appear to be, to have come up with this nefarious plan, please take the time to consider alternative paths. Thank you.

Your Message to the Oil and Gas Land Management Commission:

To the Ohio Oil and Gas Land Management Commission,
As the effects of climate change are becoming incredibly obvious, I cannot understand why we would want to permit fracking anywhere much less in our state parks. Visitors to our state parks contribute to the local economies and fracking contributes to the already wealthy. We are rapidly losing vital wildlife species, diminishing our air quality and adding toxic chemicals to our water. We know this and we also no that fracking and any increase in fossil fuel consumption is ruining our future. We need to stop focusing on the short term and think of the

long term. I would like Ohio's beautiful state parks to be around for people to enjoy for years to come. Please don't make them into industrial zones by fracking them.

Sincerely, Linda Parsons

Your Message to the Oil and Gas Land Management Commission:

Fracking is so dangerous it's the only activity exempted by parts of our 7 major environmental laws, including the Clean Air Act and the Clean Water Act. It requires long lines of trucks to bring in and take out fracking fluid and fracking waste brine. Spills happen with these trucks. Fracking requires crisscrossing pipelines to move the natural gas. Fracking requires bright lights and loud noises day and night. Fracking requires millions of gallons of water be permanently taken from the water cycle. In contrast, golf courses require a lot of water but that

water returns to the water cycle, it's very different! All these activities are inconsistent with what a public park was created for. The idea of allowing fracking in our parks gives a wealthy industry use of a valuable public asset for their profit. The public assets will not be returned in the same condition but in a worse condition. This goes against the public good. Do not allow our parks to be exploited in this way.

Your Message to the Oil and Gas Land Management Commission:

To the Ohio Oil and Gas Land Management Commission,

I am very concerned to learn that you are allowing oil and gas corporations to frack and extract from our public lands in Ohio, especially our state parks, forests, and wildlife areas.

I can't express enough how much of an impact the parks have on my daily life. The large amount of parks in Ohio is one of the biggest reasons I live in this state.

Our state parks are our most treasured spaces in Ohio. We, the people of Ohio, pay to protect them so they can be used for our benefit, not the profits of a polluting and extractive industry.

Your Message to the Oil and Gas Land Management Commission:

To the Ohio Oil and Gas Land Management Commission,

I am very concerned to learn that you are allowing oil and gas corporations to frack and extract from our public lands in Ohio, especially our state parks, forests, and wildlife areas.

Our state parks are our most treasured spaces in Ohio. We, the people of Ohio, pay to protect

them so they can be used for our benefit, not the profits of a polluting and extractive industry.

A love of Ohio Parks and the Outdoors spurred my interest to become a science teacher, helping students see the beauty and importance in the nature around us!

Contrary to the claims of the oil and gas industry, fracking will irrevocably harm our state parks and other public lands. Ohioans use our state parks for hiking, camping, birdwatching, fishing, and hunting. There is no way that injecting millions of gallons of toxic chemicals into the ground and flaring methane into the sky near or in our state parks and public lands will not harm them.

Fracking requires millions of gallons of fresh water that is laced with toxic chemicals, including PFAS forever chemicals. The waste water that comes back up is radioactive and can never be used again. Where will that water come from? The water in our parks and public lands should be protected.

Fracking requires large pads of noisy and polluting machinery. It requires pipelines, which in turn requires removal of trees. This should not be allowed in or near our public lands.

Fracking rigs regularly flare methane into the sky, a greenhouse gas 86 times more potent than carbon dioxide. At a time when the world's climate scientists say we have less than a decade to cut carbon pollution in half, the last thing we should do is put more methane into the atmosphere.

I adamantly oppose fracking in Ohio state parks and public lands. Please just say NO to fracking.

Your Message to the Oil and Gas Land Management Commission:

I am a county park commissioner in Richland County.

I was shocked when I learned of the danger posed to Salt Fork, the largest state park in OH, and even to our nearby Mohican State Park. These lands are set apart and protected for a reason. No amount of money could convince me to endanger these parks for our children and grandchildren.

When the Ohio lawmakers who support this and fossil fuel executives are willing to live near these wells with their families, maybe I would believe that they're safe. I remember the

earthquakes from these wells in NE Ohio that compromise our homes and buildings. The new research about other health risks is frightening.

Our earth is a closed system. Permanent pollution of vast amounts of fresh water is foolish in the extreme.

Please don't allow Ohioans to be robbed of our health and environmental integrity for quick money.

Subject: I oppose fracking in Ohio's State Parks!
Date: Thursday, July 13, 2023 10:03:23 PM

To The Oil and Gas Land Management Commission: I oppose fracking in Ohio's State Parks. Gas and oil are obsolete forms of energy. Solar, wind, water are environmentally friendly. Fracking kills the environment. Climate Change – which we are just beginning to see now in the more severe weather patterns (e.g., recent flooding in Vermont and the northeast) – are caused by disruptions, such as fracking, to our Earth. And it's only going to get worse unless you STOP Now!

Subject: Leasing nominations for Salt Fork State Park and Wildlife Area, Nomination#'s : 23-DNR-0005,0006,0007
Date: Monday, July 3, 2023 2:43:21 PM

Dear Commissioners,

I attended your recent meeting on 6-28-2023. You heard from an impressive panel of experts who explained in detail the hazards of fracking in our state parks. I hope that you listened with an open mind.

After that meeting I went to Salt Fork State Park on Saturday July 1, 2023 for a rally to support stop the fracking of this magnificent park & wildlife area. After listening to many speakers from different organizations, I went to speak to people recreating in the park for the long holiday weekend. No one that I spoke to, and I emphasize no one, knew of the plans to frack this beautiful area. It is shameful that oil & gas industry has come in the dark of night, behind closed doors to destroy our state parks without any public information. The tax payers of Ohio deserve input into this decision. The tax payers deserve to know in detail the plans to frack the state parks & in particular Salt Fork State Park, the priceless gem to be cherished by the people of Ohio.

I have been a state park user for many years. I grew up in Appalachia Ohio. This area has been a sacrifice zone for the oil & gas industry for centuries. Now that same industry is coming for our state parks & public lands.

You commissioners have probably never been to Appalachia Ohio. There are still a few beautiful areas left, including Salt Fork State Park and Wildlife Area. Please DENY the leasing nominations for Salt Fork State Park & Wildlife Area, Nomination#'s:23-DNR-0005,0006,0007.

Ohio Revised Code, Section 155.33(B)(1)(b)(c)(e) and (h) provides that:

In making its decision to approve the nomination, the commission shall consider all of the following:

You know the considerations, I don't need to remind you, I hope. I have read the considerations too, and I see no good reason for the commission to approve the nominations #'s 23-DNR-0005,0006,0007.

I implore the Commissioners to DENY the nominations for Salt Fork State Park and Wildlife Area, Nomination#'s: 23-DNR-0005,0006,0007.

Subject: My public Comments on Salt Fork, Nomination #: 23-DNR-0005, 0006, 0007.
Date: Tuesday, July 18, 2023 3:26:59 PM

Hello,

I am fortunate to have had the opportunity to visit and explore many parks both locally and nationally as a child. And I now have children that I take to parks around the state, and do not want to see any destroyed by fracking.

I am thankful Ohio has historically protected this land from extractive industry and development. However I am concerned that is about to change if oil and gas operations are permitted to frack our public lands.

Fracking operations create hazardous air pollution and can pollute groundwater resources. I know many visitors — including my own family — would avoid visiting any park that has these risks. Fracking operations will disturb the scenic beauty of Salt Fork State Park, and no one wants to camp surrounded by noise and light pollution.

Today, I ask the Commission to DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Please carefully consider all the consequences, including the negative and unintended impacts of leasing our public lands, in your deliberations.

Thanks,
Isaac Ressler

I am asking that fracking not be allowed in Salt Fork

- Public health impacts- seen spills and wildlife disruption in eastern Ohio numerous times
- Damage to quality outdoor recreation- this land was set aside for non commercial use. Against original intent and my family and I have enjoyed this park many times
- Toxic air pollution, light pollution, noise pollution, and climate pollution from fracking as well as other impacts not yet proven should all be considered and no fracking allowed

From: [Alexa Reck](#)
To: [Commission Clerk](#)
Subject: No to oil and gas leasing in our parks
Date: Sunday, July 9, 2023 10:16:24 AM

Dear Commissioners,

I write to encourage you to say "no" to oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area- nomination numbers 23- DNR-0005, 0006, and 0007; Wolf Run State Park nomination number 23-DNR-0008; Valley Run Wildlife Area nomination number 23-DNR-0001, 0002, and 0003; and Zepernick Wildlife Area nomination number 23-DNR-0004.

Leasing our public lands to the oil and gas industry threatens all Ohioans'abilities to peacefully experience these beautiful lands that were set aside purposefully for their engagement and enjoyment.

There is no way for fracking to not impact enjoyment of our public lands. There is simply no way. As a regular visitor to our parks and a lifelong Ohioan, I ask you to do the right thing for all Ohioans, not the right thing for oil and gas lobbyists and companies.

Please deny these nominations.

Thank you,

Alexa Reck

I wish to object to the nomination to frack the Salt Fork State Park. The Ohio Department of Natural Resources (ODNR) and the Ohio oil and gas association, say "Trust us. You can have fracking and preserve the state public lands at the same time. Trust us. We know what we are doing." The record of the industry in Ohio is one catastrophe and accident after another. Now in the past week we have had an oil spill on the Tuscarawas River and a methane leak near Zapernick Wildlife Area that resulted in the evacuation of 450 residents. "Trust us." is a lie. We should not be entrusting the future of our public parks and wildlife areas to a lie. Deny this nomination. Randy Cunningham, Cleveland, OH.

Subject: Nomination #23-DNR-0005,0006,0007
Date: Sunday, June 11, 2023 2:57:40 PM

Dear Commission,

I have heard there is a petition to open up Salt Fork State Park to fracking. Every acre of state parks has been entrusted to us by previous generations to preserve unspoiled for future generations. It is well documented that fracking uses toxic substances along with precious supplies of water under extremely high pressure such that these toxins are at risk for all kinds of contamination of soil, water tables, etc. We are all 'downstream' in many senses incl. the fact that the agriculture that surrounds many parks is raising the food we eat in soil contaminated by fracking, if we were to allow this to occur. The infrastructure of setting up fracking, just like digging oil wells, etc. is extremely damaging to ecosystems that contain plants and animals that will be endangered if they aren't already. Wilderness is essential to preserve clean air/water and there is no substitute for this, let alone the mental health benefits of being in undisturbed nature at a time when mental health has been in steady decline and part of this associated with climate change, also affected by fracking ,releasing greenhouse gases, that have caused record floods, droughts, wildfires, etc., etc.

There is no justification for fracking on public lands so please look closely for signs of bribes and other forms of corruption in this arena.

Please respond,

Many thanks,
maxine gilgoff

Subject: Nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007
Date: Wednesday, June 21, 2023 1:17:27 PM

To whom it may concern:

Please relay to the Oil & Gas Land Management Commissioners my objection to the approval of the nominations for fracking sites near Salt Fork State Park. This park is a gem, and even though Governor DeWine promised there would be no surface impacts of such oil and gas development under the park, what about air pollution? Light pollution? Water pollution? Impacts to streams? And methane pollution--a more potent greenhouse gas than carbon dioxide!! What about the road building necessary to access fracking pads near the park?

As a resident of Washington County, Ohio, I am concerned about the volume of brine waste delivered here for permanent storage. We already receive more than our share, and I am concerned about our aquifers. We have had brine leaking into production wells, presumably because of the pressure of those wells. We've had brine spills, too, that were inadequately reported, and remediation unreported. So, I worry about surface water impacts from brine transport, too. What is the plan for brine disposal from these nominations? I hope you will require that information while you are considering these nominations.

I hope you will also require a qualified environmental scientist to evaluate each nomination for big-picture, unintended side-effects of oil and gas development adjacent to these proposed fracking pads (and all other nominations for such development adjacent to and beneath public lands): water pollution; road-building; air pollution (especially methane); water usage; and brine waste disposal and its risks.

Ohio's public lands belong to all of Ohio's citizens. Please represent me--and the majority of us who want Salt Fork and other state properties to be treated with the utmost care and respect, so that they can remain in their unspoiled conditions.

Thank you for your willingness to serve on this important committee. We are counting on you to protect our parks!

Sincerely,

Dawn Hewitt

Subject: Notice of Nomination 23-DNR-0005
Date: Thursday, July 20, 2023 10:13:24 AM

To the Ohio Oil and Gas Land Management Commission,

In Ohio, we are so very lucky to have so many state parks, forests and wildlife areas we can enjoy. It wasn't that long ago, during Covid, when people re-realized what they knew from their childhood – that being out in the beauty of nature was some of the best medicine. To that end, I was so disturbed to hear about a large portion of Salt Fork State Park being considered for oil and gas drilling and fracking. I just spent six days on my bicycle riding from Cincinnati to Cleveland on so many of Ohio's beautiful trails – breathing in and viewing all that is beautiful about our state. I can only imagine the horrible consequences our state's population of plants and animals would succumb to due to fracking and all of the effects it has on our ecosystem.

Salt Fork has been a recreational destination for our family for most of my life. From camping, to boating, to hiking - it's a great place to take your family where you know you will enjoy yourselves and be safe. I am very much against allowing this to happen at Salt Fork, and any of our other beloved natural resource areas. I'm concerned for not only those who enjoy Salt Fork, but the people, plants and animals in surrounding areas as well. Emergency responders have shared that drillers are not required to disclose the fracking chemicals they use. How is that even possible? Why is there no transparency and why does it feel like all of this was decided with money in mind and not the people of Ohio? We are the taxpayers and deserve to have a voice in these kinds of decisions.

For all of these reasons, I am writing to ask you to deny all three project nominations for Salt Fork State Park: 23-DNR-0005, 23-DNR-0006 and 23-DNR-0007.

Respectfully,

Jennifer Hamilton
President

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Saturday, July 22, 2023 9:23:43 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Friday, July 21, 2023 5:02:46 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Date: Friday, July 21, 2023 9:30:19 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Friday, July 21, 2023 7:40:44 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Date: Friday, July 21, 2023 2:31:47 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

I grew up playing on the beach at salt fork and swimming in the lodge pools. It is the only public swimming location in miles around Guernsey county. Allowing a private company to exploit the small amount of land in the area would irreversibly damage the peoples access to recreation. It would also destroy many's childhood memories for nothing but a insignificant percent of money spent in the state of ohio. Please I beg you do not go through with this.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

To the Ohio Oil and Gas Land Management Commission,

The Sierra Club submits the following 409 digital signatures on the behalf of our members and supporters with the following petition language and personalized messages:

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park. Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans - who own and pay for our public lands - visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. Allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land would cause destruction of the environment and pollute our groundwater and air, impacting animal and public health.

Each frack pad uses 4 to 6 million gallons of water per frack well - and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the "Halliburton loophole" - the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which is almost 3,000 acres.

These projects would also cause a high amount of truck traffic - an increase of upwards to 4,000 truck trips per well. These trucks will bring in construction machinery, sand, toxic chemicals, and other equipment to move millions of gallons of toxic radioactive wastewater that will be injected deep underground.

The only way you can ensure these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio - and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Thank you for considering my comment.

Parks are our havens of peace and beauty and recreation. They belong to the people of Ohio not to fracking companies. Allowing this proposal to move forward will irrevocably damage Salt Fork State Park with noise, pollution, unsightly infrastructure. It will not create jobs for local residents. Historically, fracking operations in Ohio have used experienced workers from Texas, Oklahoma and other states. Gas fracked in Ohio has nothing to do with US energy security. It has everything to do with the manufacture of plastics, with the export of the gas and with lining the pockets of fossil fuel companies. Please stop this horrible proposal.
3. **Allison Bush,**
Kettering, OH
45419
4. **Amanda Bell,**
Brook Park, OH
44142
We are experiencing the hottest days in the last 125,000 years because rich humans refuse to stop abusing the planet. Please stop giving them more land to destroy. More opportunities like this mean more damage to our health and wellbeing. I'd write more but I'm tired of spending countless hours of energy begging people to do the right thing to protect individuals over corporate interest. You're going to do what you're going to do, but anything less than denying them access to this State Park is short sighted and 100% wrong.
5. **Amour Dresbach,**
Cincinnati, OH
45206
6. **Amy Hunt,**
Grafton, OH
44044
Greed can't always prevail!
7. **Amy Dias,**
Saint Clairsville, OH
43950
I love and appreciate our state parks. Please don't ruin them for profit!
8. **Amy Ward,**
Pleasant Hill, OH
45359
We need to preserve Ohio's natural habitat.
9. **Andrea Fox,**
, OH
45159
I live in this are and it is beautiful. Dont trash it for corporate profit. And how about getting off the petroleum products instead of trying to drain every last drop from every square foot of the planet?

10. **Angela Gephart,**
West Chester, OH
45069
This park means a lot to everyone who utilize it. I can only see this doing destruction. So please, no Thank You!
11. **Ann Tanner,**
Cincinnati, OH
45237
It breaks my heart to know there is such precious, few lands that haven't been spoiled by careless greed and mismanagement. At the rate we are killing this earth there will be nothing left for our children and grandchildren to enjoy. Please just leave it alone!
12. **Anne Goss,**
Brookville, OH
45309
No fracking in my Ohio parks.
13. **Anne Gill,**
Cleveland, OH
44113
Stop utilizing State Parks for private enterprise and endangering protected environments for short term profits. We need these for the our future.
14. **Anthony Calvelage,**
Columbus, OH
43206
Fracking under a park can be just as destructive as if you dig within it.
15. **Anthony Manna,**
, OH
44514
Why harm this pristine environment held sacred by many visitors?
16. **April Somerville,**

24. **Barcy Ford,**
Columbus, OH
43205
25. **Becky Evans,**
Newcarlisle, OH
45344

I cant believe I would even have to explain why any park would survive it

26. **Ben Sprauer,**

Dayton, OH
45403

27. **Beth Lewin,**

Lyndhurst, OH
44124

I don?t understand why you need to destroy our national parks we have gotten oil from various other places without creating havoc to nature in the parks

28. **Beth van Haaren,**

Tipp City, OH
45371

This is a beautiful state park! I love hiking in it. There are plenty of other areas in Ohio you can wreck with the fracking. Please leave all our state parks alone!

29. **Beverly Lund,**

Shaker Heights, OH
44120

Over the years, my husband and I have enjoyed the beauty of Salt Fork. We oppose endangering the landscape and the wildlife with the potential dangers fracking will bring.

30. **Bill Cahalan,**

Cincinnati, OH
45205

House Bill 507 is the clearest evidence yet that our state legislature favors the gas fracking industry over the welfare of nature and everyday people, by not only allowing but REQUIRING that state to contract for fracking on taxpayer-owned lands, including parks and

college campuses! Now fracking is ready to roll in Salt Fork State Park, our biggest state park. Fracking sends pipes of toxic water right through and under the water table, leaks in which have often poisoned well water. It permanently sequesters waste water from being cycled in the water cycle. And it's overall operation releases as much climate change gases (CO2 plus escaped methane) as coal mining, according to a full accounting of all emissions, not just counting the burning of the methane. Please STOP this travesty in Salt Fork and in all state, taxpayer-owned lands!

31. **Bob Cestaro,**

Oberlin, OH
44074

This is ludicrous. Climate change is wreaking havoc on us right now, and yet we are still extracting fossil fuels (in a state park no less). Politics and greed are killing us!

32. **Bob Wagner,**

Mentor, OH
44060

33. **Bonnie Sams,**

Litchfield, OH
44253

Keep fracking out of these beautiful state parks! It is destabilizing to the environment and the wildlife!

34. **Bonnie Macpherson,**

New Lebanon, OH
45345

35. **Branden Carwyn Floyd,**

Cable, OH
43009

- our state parks. Thank you for reading my comment.
36. **Brian Loeffler,**
Canal Winchester, OH
43110
As a life time Ohio resident and frequent visitor to many state parks throughout the state, Salt Fork State Park is the pinnacle of the institution. Staying at the lodge on family trips, fishing from the miles of shoreline and star gazing in the quiet hours of the late night/early morning are all activities I deeply cherish. It is irresponsible and down right negligence to even consider these fracking proposals in this area. I highly encourage the board to make the right decision, that is best for all Ohioans, and deny these proposals/bids. Categoricaly and without exception.
37. **Brian Somerville,**
Avon Lake, OH
44012
Fracking destroyed my land in Pennsylvania where my family has camped for my whole life. Now we got trees dying left and right and the spring water that we once could drink just makes you sick. I understand fracking is a cheap way to get a valuable resource that we need as a society but there must be a better way that protects our forests.
38. **Brian McKnight,**
Hilliard, OH
43026
You remember the congressman from TX who voted in favor of fracking in TX, but then voted against having it near his ranch? Yeah. Fracking has bad consequences. PLEASE don't allow it in
39. **Brianna Fisher,**
Hopewell, OH
43746
40. **Britta Campton,**
Dublin, OH
43017
Consequences are too great to allow fracking on Ohio state parks and land. This must not he allowed to happen!
41. **Brucken Wilkens,**
Dayton, OH
45429
42. **Callie Pillow,**
Fredericktown, OH
43019
This planet deserves so much more than this.
43. **Candy Ridler,**
Parma, OH
44134
Please don?t ruin our earth.
44. **Cara Finnegan,**
Elyria, OH
44035
45. **Carol Carman,**
Alliance, OH
44601
I am strongly against granting a lease to frack in Salt Fork State Park. Some of my ancestors have lived in Ohio over 200 years ago in Athens. My grandfather was about 9 when Lincoln became President. This means I care about Ohio and I want to preserve clean drinking water in the ground. I am also

concerned brine will be dumped into nearby streams because I have seen suspicious behavior of trucks with hoses by streams.

46. **Carol Brazee,**
Elyria, OH
44035
NO FRACKING IN STATE PARKS

KEEP THE POISONED SOLUTION OUT OF
OUR GROUNDWATER

47. **Carol Thompson,**
Lorain, OH
44053

48. **Carol Burke,**
Oxford, OH
45056

, OH
44515

50. **Carol UNVERFERTH,**
Dublin, OH
43017

51. **Carolyn Meyers-Hughes,**
Cincinnati, OH
45248
I love our Ohio State Parks. No fracking in parks.

52. **Carrie Gordon,**
Wooster, OH
44691
I am a mother and teacher. I want my children and other children in this world to have an environment where they can thrive in the future. We owe it to our future generations to protect them and make decisions that will make their

lives better, not worse. They deserve clean air, water, and land.

53. **Carrie Resnick,**
Montgomery, OH
45249
We only have a few precious untouched areas left in our country, less than 1%. We need to protect these areas as though our lives depend on them, because they do.

54. **Catherine Miller,**
Toledo, OH
43611
I have seen the land while it was being ravaged. Not pretty. It was in southern Ohio.

55. **Cecilia Johnson,**
Columbus, OH
43224
Allowing fracking in our park puts our water, our land, and our people at risk. Do not allow this to happen! The people of Ohio deserve better. Please do not allow special interests to put Ohioans at risk. Protect our land and our water. Thank you.

56. **Cecilia Johnson,**
Toledo, OH
43606
The quality of life in Ohio depends on preserving its natural beauty and a clean, safe environment. Fracking and factory farm are destroying what once made Ohio such a liveable state.

57. **Chelsea Kennedy,**
, OH
44236

58. **Chris Hale,**

Canfield, OH
44406

Our state and national parks are set aside for the public to enjoy the UNSPOILED beauty of nature. This is not to be disturbed. I am vehemently opposed to any fracking drilling or other such activities on public lands set aside as a perk or recreational area in our state.

59. **Christine Bledsoe,**
Dayton, OH
45410

60. **Christopher Martin,**
Saint Marys, OH
45885

DO NOT FRACK ON OR IN PUBLIC LAND ESPECIALLY NEAR RESIDENCY!! We can acquire the same type of resources but better through other means. There is literally zero reason to frack in Ohio of all states! What idiot thinks this is a even remotely okay idea? They need either their brain checked out, therapy and/or some sort of diet or procedure they don't observe or use in their life like they should. Some kind of chemical imbalance or sugar absorption problem or something! No Fracking in Ohio! It's just plain a bad idea, no matter how you slice it or what you think or what side you're on!

61. **Christopher Fisher,**
Cuyahoga Falls, OH
44223

62. **Christy Mundy,**
Logan, OH
43138

Salt Fork is a beautiful state park. Please do not ruin the lake

63. **Cinda Cummings,**
Cincinnati, OH
45245

64. **Cindy Cupps,**
Richwood, OH
43344

Tax payers help fund and take pride in our state parks. Hands off! Leaks and spills can cause harm to surrounding communities, and to our wildlife and their habitat. Don't say it won't happen, because it has and it will.

65. **cj r,**
dayton, OH
45458

66. **Colleen McDermott,**

44256

It MATTERS because we LOVE NATURE?-Stupid politicians making choices for the rest of us!!

67. **Colleen McLean,**
Warren, OH
44484

68. **Constance Clark,**
New Philadelphia, OH
44663

Why is the almighty dollar more important than a healthy ecosystem? Why would you want to subject Ohio citizens to huge trucks, extremely bright lights creating light pollution, disrupting not only the beauty of the park for animals, birds, pollinators and invertebrates but humans? People trying to enjoy the pristine beauty of the park's vast, unspoiled ecosystem. It's very short sighted. The negative

after effects will be left for children, grandchildren and future generations. It's just selfish and wrong to treat God's creation this way.

69. **Cornelia Relyea,**
Cincinnati, OH
45224
70. **Courtney Hudson,**
Akron, OH
44303
Please protect this important park! This land is sacred.
71. **Courtney Legleu,**
Milford, OH
45150
72. **Craig Ogan,**
Westlake, OH
44145
You should stop fracking anywhere in Ohio, especially any state or national parks!! Fracking has a high probability to poison any ground water in the area!
73. **Cydney Heimovitz,**
Chesterland, OH
44026
74. **Cynthia Brickner,**
Toledo, OH
43615
As a resident of Ohio, stopping fracking in our state parks is a priority for me.
75. **Cynthia Gaydos,**
Mechanicsburg, OH
43044
The state parks belong to we, the people of Ohio. We do not want them torn apart for the sake of some oil.

Rocky River, OH
44116

87. **David Blackwell,**
Akron, OH
44301
Every single day in this country, a man
made chemical disaster occurs TWICE in
an American waterway, tributary or
lake.

There's enough man made problems
beset on this country and it needs no
more. Fracking destroys lands. No
different than does a chemical or oil
spill. Let our great parks be free of your
corporate greed for oil and gas, and
build windmills and solar panels
instead.

88. **David Kieffer,**
Hilliard, OH
43026

89. **Deanna Weaver,**
Mentor, OH
44060

90. **Deb Moeller,**
Massillon, OH
44646
I was just visiting the past 3 days at Salt
Fork State Park. It was beautiful.
Please don't destroy our nature sites.

91. **Debby Chandler,**
Akron, OH
44302
This is a public park maintained by the
public's tax dollars. We do not want
this!

92. **Deborah Creter,**
Avon Lake, OH
44012

Fracking contaminates the land, water
and air. Salt Fork is a jewel in our
wonderful state. Please preserve it and
protect it by prohibiting fracking.

93. **Deborah Fafrak,**
Granville, OH
43023

I frequently go to state parks, including
Salt Fork, to enjoy nature, hike and
birdwatch. The last thing I want to see
is a fracking complex. It would totally
destroy the experience. State parks,
preserves and natural areas were set
aside for the public, not for oil and gas
exploration.

94. **Deborah Jordan,**
Cincinnati, OH
45205

I want to preserve the state parks, our
public heritage, for the future. Fracking
is incredibly destructive and a drastic
violation of the natural water cycle. Big
trucks are regularly in use adding to the
air and noise pollution. Proprietary and
toxic chemicals are used. Much of the
fracked gas is shipped out of the
country. I'm not sure who thinks this is
a good idea.

95. **Deborah Smith,**
Canton, OH
44710

It's a park not a govt property. It
belongs to the USA citizens and we say
NO to fracking.

96. **Deborah Hall,**
, OH
43207

Salt Fork State Perk is beautiful and a
true asset to the people of Ohio.

Protect it from fracking and all forms of development!

97. **Deborah Humbert,**

Gates Mills, OH
44040

98. **Debra White,**

Thornville, OH
43076

Get out of our parks!!!!!!!!!!!!

Mike DeWine is a obviously
a sellout! Shame on you and your
friends!!!!!!!!!!!!!!!!!!!!

TOTALLY DISGUSTED WITH

THIS HORRIBLE

ADMINISTRATION!!!!!!!!!!!!

THE PARKS BELONG TO THE PEOPLE OF
OHIO?..THIS IS NOT RUSSIA!!!!!!!!!!!!!!

99. **Debra Anderson,**

Pataskala, OH
43062

Please deny the Fracking at Salt Fork
and all other Public lands! The animals
are dependent on you and I protecting
them and their homes. As a person and
native of our beautiful state Ohio, I ask
you to please say NO to FRACKING!

100. **Debra Zinnecker,**

Milford, OH
45150

Why does oil always trump nature?
With the storms and the floods in the
130° temps it's time to wake up and
see what's really important.

101. **Deepak Lachhwani,**

Beachwood, OH
44122

There is overwhelming evidence of
unintended, negative consequences of
these fracking actions.

102. **Dennis Hoops,**

Minerva, OH
44657

I've been camping for years with family
and now grandkids. You are putting
are putting this tradition at risk
implementing fracking environmental
destructive action.

103. **Dennis Meaney,**

Euclid, OH
44123

104. **Derek Horton,**

Columbus, OH
43223

Nature shouldn't be destroyed

105. **Diane Britt,**

Wakeman, OH
44889

Our state parks are precious and should
be protected for the use and health of
Ohio citizens! Fracking in the state,
parks, or anywhere in Ohio will have a
negative impact on our lives, our
health, our environment. Please don't
do this!

106. **Dorothy Stills,**

Columbus, OH

144. **James Dover,**
Worthington, OH
43085
To stop pollution.
145. **James Baad,**
Canton, OH
44706
We need to protect areas for people to
enjoy. Fracking is very disruptive. Let us
keep our Salt Fork State Park.
146. **James Goldsberry,**
Gahanna, OH
43230
147. **Jan Rader,**
Kent, OH
44240
Fracking shouldn't happen so freely, but
it should never happen on public lands.
148. **Jan Kent,**
Cincinnati, OH
45238
149. **Jane Garcia,**
Powell, OH
43065
Please don't destroy this land. We have
already ruined a lot of land that animals
call their home. And we all need a clean
water supply.
150. **Jane Jacobson,**
Bowling Green, OH
- 43402
151. **Janet Thomas,**
Cambridge, OH
43725
Salt Fork has always been special place
for me. It is where we went for a day at
the beach or a weekend in the lodge.
My nephew was the head of catering at
the lodge. It is such beautiful country
and so important to the tourism
economy of the area.
We can't afford to ruin this precious by
allowing fracking. Fracking pollutes
everything. Even things miles away
because of its nature. Please don't
allow this to happen to our beloved
park!
152. **Jean Hose,**
Wadsworth, OH
44281
I have enjoyed Salt Fork many times
and have many fond memories. Please
do not allow fracking. It will break my
heart.
153. **Jean Diamond,**
Kettering, OH
45419
154. **Jean Brinich,**
Lakewood, OH
44107
155. **Jeannine Kennedy,**
Oregon, OH
43616
156. **Jeffrey Wessel,**
Barberton, OH
44203
I think fracking on state park lands is
simply terrible because it destroy

natural habitats, reduces native plants and animals, and irretrievably alters the face of Ohio's taxpayer-supported and protected natural places.

157. **Jeffrey Curling,**
Trotwood, OH
45426

158. **Jenelle Vincent,**
, OH
44122

159. **Jennifer Hinkle,**
Waynesville, OH
45068

160. **Jenny Morgan,**
Westerville, OH
43081
I am a founder of the Leave No Child Inside Central Ohio Collaborative. Our children need safe and clean nature experiences. I KNOW what the horrors are that gas and oil drilling can and HAVE brought to those who have leased their land for drilling. I have read many cases of litigation of people leasing and dreaming of lots of money ONLY to be devastated when their land, water, children, etc. are contaminated from the drilling.

Gas and oil waste is radioactive and full of hazardous chemicals and heavy metals. This has NO PLACE near our parks! What if there is an explosion near the park, a methane leak, a fire, a radioactive wastewater spill? What would the park leaders do?!

Fracking our parks is a nightmare scenario. I strongly oppose the fracking

of State Fork State Park and ALL our parks and wildlife areas.

161. **Jenny Geib,**
Dover, OH
44622

I very much care about the environment. At a time when the temperatures are soaring and people, animals and all creation are suffering and dying from the effects of greed and mindless oil extraction and pollution how can we possibly destroy our parks?

162. **Jenny Bolitho,**
Powell, OH
43065

State parks cover only 0.6% of Ohio. The state has set aside less than 1% of its land for Ohioans to enjoy. Currently many of the lakes in Ohio are considered unsafe for recreation due to ecoli. We need to be protecting the state parks in the Buckeye State not allowing them to be further compromised.

163. **Jessica Lawson,**
Dayton, OH
45459

Well I am officially shocked. Disappointed and shocked. I seriously expect more from Ohio. We are all so educated, yet our government isn't acting like it. Do better!!

164. **Jil Musser,**
Lebanon, OH
45036

165. **Jill Pafford,**
Avon Lake, OH
44012

166. **Jim Medling,**
Strongsville, OH
44149
STOP PUTTING MONEY AND GREED
OVER THE ENVIRONMENT?! Can you
Republicans bastards ever think beyond
yourselves. Try doing something right
for a change

167. **Joanne Morgan,**
Ravenna, OH
44266

168. **Joanne Morgan,**
Morrow, OH
45152

169. **Jodi Miller,**
Gahanna, OH
43230
I have spent many an hour in the wilds
of Salt Fork. Its woods host bald eagles,
turkeys, whitetail deer, red tailed
hawks, as well as downy and pileated
woodpeckers, delicate ruby-throated
hummingbirds, Louisiana waterthrush
and kildeer. Salt Fork is the home to
fragile molluscs, fish and amphibians,
making it not only essential to the
creatures themselves but to the bottom
rungs of the food chain. These animals
could be extinguished in our lifetimes
because of the harm caused by fracking.

Many families will have no
opportunities to see these animals in
the wild if you proceed with fracking;
their ability to have safe lives,
education and recreation, forever
compromised. The air, soil, and water
of Carrollton, not far away, is already
ruined due to fracking. It didn't bring
promised jobs. It brought short-term,
single generation mineral rights. It

brought undrinkable water. Heart
attacks. And early cancers.

Please don't do it here.

170. **John Burson,**
Olmsted Twp., OH
44138
Parks are for family enjoyment not
fracking!

171. **John Golish,**
Kensington, OH
44427
Salt Fork is a wonderful State park that
we take our grandchildren to. There is a
lot of private land in the surrounding
area that can be leased to
homeowners. The oil and gas industry is
trying to utilize cheaper public land that
will destroy thus pristine park.

172. **Jonathan Slaughter,**
Bexley, OH
43209

173. **Jordan Schuman,**
Toledo, OH
43614
As a resident of Ohio and one who has
spent time in many of Ohio's state
parks, I am deeply committed to
protecting their integrity for future
generations. I hope you are too, and
don't allow any harm to come to our
state parks.

174. **Joshua Toth,**
, OH
43605

175. **Judith Dennis,**
Piedmont, OH
43983

The importance of Salt fork state park helps to keep wildlife a place for refuge and from extinction. Which includes, birds, water fowl,,fish, all living life and organizems, plants, trees, also for education, preserving protection, balance in nature. To ruin our State Park would eventually destroy humans.please do not let this happen, deny lease nomination

Columbus, OH
43230

This is a beautiful park and allowing fracking will definitely destroy it. The land, wildlife, water. I've seen runoff that looks like vomit to put it bluntly. It is disgusting and I'm sure harmful to everything it touches. Our state parks are sacred and should never be touched by anything. Stop destroying our land.

176. **Judith Burns,**

Chillicothe, OH
45601

The land at Salt Fork was set aside long ago for the good of ALL the children, grandchildren, etc... It was never intended to be sold off or used/abused to make individuals money!!! Fracking for oil/gas on state or federal park land is absolutely wrong. Fracking in general is absolutely wrong for our planet! Get ready for the future and stop being so greedy and selfish!!!

180. **Judy DiMascio,**

Cuyahoga Falls, OH
44223

This is a state park. The park is meant for nature, animals, insects, birds to live in peace. This park is meant for Ohio citizens to visit and rest! Enough! We need to reduce our consumption and quit distroying our EARTH! PLEASE DENY THE LEASE NOMINATION FOR#s24-DNR-0005. Thank you!

177. **Judith Bishop,**

Uniontown, OH
44685

181. **Judy Wallace,**

Fairview Park, OH
44126

We take pride in our parks. We pay the taxes for them. No one has the right to destroy our water sheds and our parks.

178. **Judy Hanna,**

Akron, OH
44333

Please do not allow our pristine public lands be ruined by the interests of a few. It is not worth the cost to destroy our natural ecosystems. We do not know enough of the after effect of fracking. This land is the public's land, do not exploit it for profit for a few. Think of how the next generations are able to live on the planet. No more destruction. Please.

182. **Julia Backoff,**

Columbus, OH
43206

As a child, my family vacationed frequently in Salt Fork and I hate to see it used for fracking.

183. **Julie Clayman,**

Chagrin Falls, OH
44023

184. **Julie Maples,**

Worthington, OH
43085

179. **Judy Siak,**

185. **Kara Stevens,**
Columbus, OH
43228
We have taken our dogs swimming in this beautiful area. We want and need scenic spaces to stay scenic and guarded in this state
186. **Karen Durbin,**
Cuyahoga Falls, OH
44223
187. **Karen J Hayes,**
Cincinnati, OH
45208
It's unthinkable you would allow these dirty destructive projects. This process also fractures the Earth's crust leading to cracks. Don't sell out to Big Oil!!
188. **Karla DeMali,**
, OH
44645
Fracking has many consequences to the environment! The first and most important is that fracking destroys a state parks wildlife habitat! Which SHOULD BE PROTECTED! Second, the destruction to the area exceeds past the fracking site including the above ground where the fracking occurs. Lastly, the Oil and Gas Land Management Commission SHOULD UPHOLD ODNR's mission to PROTECT Ohioans' AIR, WATER AND PUBLIC PARKS From POLLUTION! The oil and gas companies are ALREADY FILLED WITH GREEDY PEOPLE AND INVESTORS!! Ohioans DO NOT WANT OUR PARKS AND LAND DESTROYED FOR THEIR PROFIT!
189. **Karla North,**
Springfield, OH
45505
190. **Kate Lofgren,**
Canton, OH
44714
191. **Katherine Gaskins,**
Columbus, OH
43207
Fracking is the opposite of how we should be treating Earth.

Ohio should be in the forefront of outlawing fracking as a source of energy. We should pursue state-of-the-art sources that are less or not as corrosive, while teaching our children to love and respect the planet that provides for them.
192. **Katherine Furler,**
Athens, OH
45701
I visit this park regularly! Fracking in it would ruin a big part of my recreational time, especially because as a poor person, parks are one of the few ways to recreate in the first place. Please don't destroy this beautiful piece of land with chemicals. In tears.
193. **kathleen bauer,**
celina, OH
45822
Fracking is harmful!
194. **Kathleen Yohn,**
Germantown, OH
45327
Ohio State Parks are PUBLIC parks created for our enjoyment and for conservation purposes. These lands should not be leased out for fracking by

mineral development companies. This would be a violation of public trust and a ecological travesty for this beautiful, iconic park.

195. **Kathleen Querner,**
Springboro, OH
45066

Parks are not for fracking- they are a protected place for plants & wildlife to thrive & people to enjoy recreation.

196. **Kathleen Mitman,**
Beavercreek, OH
45431

Please protect Oho and Ohio State Parks so that we can live enjoying our lives in nature.

197. **Kathryn Sloboda,**
, OH
44141

The earth is precious and beautiful.It has been entrusted to our care and cannot be destroyed.

198. **Kathy Zollars,**
Canton, OH
44708

My children and grandchildren will be here long after I?m gone??.they deserve the same environment I enjoyed growing up!

199. **kathy curran,**
Lakewood, OH
44107

200. **Katie Arbogast,**
, OH
44221
30% by 2030! We need this to remain natural and unspoiled to help the environment.

201. **Katie Spencer,**
Beavercreek, OH
45431

202. **Katy Bacon,**
, OH
44107

203. **Kayla Heffner,**
Chesapeake, OH
45619
Our public lands matter to much to me not just for recreation and for the environment but for their unspoiled beauty and the peace they bring. Protecting our climate has never been more crucial and I urge you to consider the implications of you allow it to be fracked. Thank you for your time.

204. **Kaylene Grayson,**
Wooster, OH
44691

205. **Keith Crain,**
Hillsboro, OH
45133
?In wildness is the preservation of the world? Planet over profits Please preserve parks

206. **Kelly Kerpsack,**
Dublin, OH
43017
Polluting groundwater, earthquakes anf fouling natural parks is wrong! Please do not frack in our public parks.

207. **Kenneth Laube,**
CINCINNATI, OH
45220
This is unnecessary and the state and our country should be investing in

renewable energy vs fracking under one of our state's beautiful parks. What lobby is paying for this? Is it the same lobby that bribes our representatives?

208. **Kim Morrison,**

Stow, OH
44224

I grew up camping, boating and water skiing at so many of our state parks. Leave them alone!

209. **Kimberly Maxwell,**

Columbus, OH
43224

We need to protect our environment for our children's children. ?

210. **Kitty Emerald,**

Cincinnati, OH
45214

I urge The Oil & Gas Commission to please consider the negative consequences that fracking has in our health and environment. Our health and environment is important.

211. **Kris LoFrumento,**

Mt Orab, OH
45154

212. **Krista Rousch,**

Hamilton, OH
45013

As a resident of Ohio and active voter, I don't want more fracking in our state. Invest in clean and sustainable energy options.

We need to be better stewards of our public parks and land in Ohio. Fracking causes permanent damage to the land. As a state we need to be focusing on green energy initiatives and protecting our state parks.

If we need money to support our state parks, start charging admission.

213. **Kurt Stuckey,**

Wauseon, OH
43567

We need to move away from, eliminate the extraction and use of environmentally destructive and fossil fuels.

214. **Lance Corbin,**

Grove City, OH
43123

I enjoy Ohio's state parks and want to make sure they stay safe to use and enjoy.

215. **Laura Pappas,**

Hilliard, OH
43026

Leave the park alone!

216. **Laura Horning,**

Westlake, OH
44145

Ohio's State Parks are vital green spaces. They must be protected!

217. **Laura Winters-Duke,**

Waverly, OH
45690

Once compromised, these formations can never be recovered. Short term profits for a few cannot be allowed to outweigh the public interest for generations. I strenuously object to ANY fracking on public and sensitive public lands.

218. **Laura Dailey,**

Maineville, OH
45039

Pls prohibit fracking and preserve the natural environs at our state parks. My family and I value the beauty of nature and appreciate conservation. Thank you so much and bless you?

Lakewood, OH
44107

219. **Laura Siebert,**
Cleveland, OH
44139

226. **Leslie Evelo,**
Cincinnati, OH
45211

220. **Laura Weber,**
Sullivan, OH
44880

227. **Linda Parkes,**
Twinsburg, OH
44087

This is a state park for Heavens sakes meant for all of us to ENJOY! Go frack elsewhere better yet nowhere!

221. **Lauren Browning,**
Hamilton, OH
45011
State parks are important for many reasons but destroying them is not only bad for the health of humans. It's bad for animals that we desperately need to balance our planet. Our animals need a place to live and we are taking away their habitat so they have nowhere to go and we are killing them. It's unacceptable. This is their home to and they have a right to be there. This kind of thing needs to stop.

228. **Linda Mitchell,**
Mentor, OH
44060
We have beautiful parks here in Ohio, and man has been entrusted with protecting and caring for all this beauty. Fracking is neither caring nor protecting.

222. **Lauren Hargis,**
Burbank, OH
44214

229. **Lisa Jackson,**
Powell, OH
43065
The wildlife and plants and people who care about and visit them in our Ohio parks will be at risk of grave harm. Do not approve these fracking leases!

223. **Lauren Enneking,**
Bellbrook, OH
45305

230. **Lisa Wisniewski,**
North Ridgeville, OH
44039

224. **Leah Briggs,**
Canton, OH
44708
I grew up going to Salt Fork and making memories there.

231. **Lisa Maresh,**
Streetsboro, OH
44241

225. **Leann Orlando,**

232. **Lorraine Mccosker,**
Athens, OH
45701
I visit Salt Fork with family and friends. We must protect our state lands and

the public trust in which they were created. We cannot allow these treasures to be impacted and potentially destroyed. We need these lands for future generations. Deny Rutgers nominations.

233. **Lori Roll,**

Clarksburg, OH
43115

I am disgusted that this is even in consideration. Seriously. It's not all about the money. We NEED better alternatives. Spend money on that. Wildlife is so limited now. Don't endanger them even more.

234. **Lori Collins,**

Wakeman, OH
44889

235. **Lorin Swinehart,**

Sandusky, OH
44870

236. **Lorraine Williams,**

Massillon, OH
44646

237. **Lorraine Robinson,**

Worthington, OH
43085

238. **louise demirjian,**

Fairview Park, OH
44126

Please leave these lands to nature as intended. I grew up with Salt Fork as a beautiful pristine and peaceful place. Future generations should experience it, the same way, hands off!

239. **Loyola O'Brien,**

Perry, OH

44081

We are already hurting our environment. There is no reason to destroy it further by harming areas designed and set aside to be protected! Our climate change is doing enough damage. We should never deliberately do more!!

240. **Luca Scarmack,**

Lakewood, OH
44107

241. **Lynn Pooley,**

Lakewood, OH
44107

242. **Lynne Baird,**

Steubenville, OH
43952

It is bewildering to me that we are still having to stand against this onslaught of fracking on our public lands. We must acknowledge and preserve the precious resources we have. Fracking is a sure way to destroy water resources, roadways, air and access to a beautiful public land. Deny this permit.

243. **Maha Hatoum,**

Lyndhurst, OH
44124

244. **Marc Rayburn,**

Sunbury, OH
43074

245. **Marcia Morgan,**

Grove City, OH
43123

246. **margaret Martin,**

Niles, OH

- 44446
247. **Margaret Malone,**
Bexley, OH
43209
248. **Marguerite Felice,**
Youngstown, OH
44512
249. **Marian Csabina,**
Avon, OH
44011
I have very fond memories of Salt Fork State Park having taken our sons there when they were young. It's a lovely vacation area for those of us who can't afford extravagant vacations. Please don't compromise the natural beauty of the area with the pollution and toxic byproducts of fracking in OUR state park. Thank you for your time.
250. **Marie Pfierman,**
Cincinnati, OH
45217
Public lands belong to the public. Fracking or drilling would be detrimental to the land.
251. **Marissa Stopski,**
Canal Winchester, OH
43110
I camp here with my family! It needs to be safe and stay safe. Fracking will destroy this beautiful park and taint the water system. That's already evident in eastern Ohio where my family lives and now has to drink bottled water which is causing further destruction to the planet.
252. **Mark Ryland,**
Stiw, OH
- 44224
This park needs to remain untouched. Destroying it attempting to get fossil fuels would be tragic. Fossil fuels are dead (or should be). We need to focus on clean, reusable energy and stop destroying natural habitat and our planet. No fracking!
253. **Mark Sutton,**
Athens, OH
45701
254. **Marlea Soluna,**
Albany, OH
45710
Disrupting the quiet atmosphere and fresh scent of our state parks with the noise and odor of industrial work is absolutely contrary to the purpose of parks and undermines their public value. Please prevent fracking in Salt Fork State Park; please prevent all industrial activity in every park.
255. **Marlene Borton,**
Vandalia, OH
45377
Salt Fork is a large park, with many different areas of biodiversity. Fracking in this State Park would endanger the environment. Think before you go down this road. Fracking can't be undone.
256. **Martha Dahlgren,**
Middletown, OH
45042
I am a resident of Ohio. I do not our state parks contaminated with the by products of fracking. I also question the underlying geomorphology of the area and probability of earthquakes.

257. **Mary Dalton,**
Cuyahoga Falls, OH
44223
I live in Ohio & personally do not want fracking in my state! The residual water & effects of it causes cancer & other illnesses! I have heard from residents of W. Virginia where fracking has been going on for years! It is not worth doing!
258. **Mary Farley,**
Thornville, OH
43076
Please deny fracking at Salt Fork. Please respect and love nature. Do what you can to save the planet instead of destroying it.
259. **Mary Uhlenbrock,**
Cincinnati, OH
45231
260. **Mary Johnson,**
Loveland, OH
45140
261. **Mary Caldwell,**
Pataskala, OH
43062
262. **Mary Jo Berry,**
Cincinnati, OH
45233
263. **Mason Print,**
Norwood, OH
45212
Clean water and healthy flora and fauna mean more to me than money.
264. **MATAN MAZURSKY,**
Yellow Springs, OH
45387
- So little land is protected in Ohio and instead of expanding protection this move makes bad worse.
265. **Matthew McMullin,**
Cincinnati, OH
45211
Fracking will not only poison the local water tables for all flora and fauna and destroy countless habitats. It will also destroy the beauty and wonders of this state park, where many people like me come to escape the city life and unwind and relax in the peace of Mother earth.
266. **Matthew Grismer,**
Dayton, OH
45440
We need to preserve our natural places if we hope to survive as a species on this planet. We need to protect these places so your children and grand children and mine can enjoy these spaces! As the extreme heat, flooding and other natural disasters ALL SUMMER LONG, the direct result of warming of the planet due to climate change, is demonstrating, the last thing we need is more investment in fossil fuels! Deny this lease, protect our beautiful wild places, and invest our precious resources in renewable energy!
267. **Maube Mor,**
Columbus, OH
43235
Stop fracking and destroying our parks.
268. **Meghan Mason,**
Columbus, OH
43202

After living on the east coast where state parks charge admission, I'm proud that Ohio's parks are for the citizens first. Please keep it that way by prioritizing the people over gas companies.

269. **Melanie Schultz,**

Olmsted Falls, OH
44138

I have personally enjoyed Salt Fork. Ohio already has so little public land. Please, please, please stop fracking in our beloved State. For the sake of ourselves, our children, and all future Ohioans, make a choice that future generations will be proud and grateful for. Thank you and well-wishes. -
Melanie

270. **Melanie Saltzman,**

Athens, OH
45701

My family and I have been going to Salt Fork for years and truly enjoy it. Stop fracking our land! We do not get a Re-do!!!

271. **Melanie Sullivan,**

Bratenahl, OH
44110

This is a lovely spot / my brother would go there often when he was in jr high and high school. It is for regular folk who don't have resources to go on holidays

272. **Melissa Gordon,**

Columbus, OH
43220

One of the most beautiful parks in Ohio and a huge natural asset to Ohio should not be sacrificed for the greedy energy

mongers and their obsession to fracking!!

273. **Melissa Geracitano,**

Springboro, OH
45066

Retrieving natural gas out of the ground is messy and takes space to accomplish. Too much land would be cleared and or in danger from potential leaks in a state park.

274. **Melissa Hensley,**

Batavia, OH
45103

Stop polluting! Stay out of our parks! This is pathetic that it's even up for debate. I work as an operator in a water plant. You guys are going to keep on until you end up polluting our aquifers. Our drinking water is becoming more and more polluted and harder and harder to treat. Just like the greater cincinnati waterworks dumping their alum sludge into the Ohio River by the hundreds of thousands of gallons a day with the approval of the oepa. It's all about money and always will be. We need new people in there who actually care about what really matters.

275. **MELISSA BEYERSDORFER,**

Broadview Heights, OH
44147

The salt fork park is a treasure here in Ohio!!! Please leave it alone. We need some natural places to enjoy. Ohio is one of the best places for fresh clean water and woods!!

276. **Melissa Wales,**

Athens, OH
45701

277. **Melody Brewer,**
Toledo, OH
43610
Deny drilling right in Ohio public parks.
The land once spoiled cannot ever go
back to its pristine quality.
278. **Micha Shaver,**
Elyria, OH
44035
279. **michael moritz,**
cleveland, OH
44110
No fracking in state parks!
280. **Michael Miller,**
Germantown, OH
45327
Our parks are a last resume for humans
and animals alike. Fracking these lands
will change the ecosystems that they
were established to protect. I
vehemently object to allowing this
terrible action at the borders of our
State and Federally protected lands.
Mankind has already destroyed so
much of our planet simply for profit. Let
start drawing the line somewhere. I
suggest drawing it right here, right now.
281. **MICHAEL FRENCH,**
Westerville, OH
43081
This is the only state park.... No state
park B
282. **Michael Moorman,**
Cleveland, OH
44128
283. **Michele Ditchman,**
Madison, OH
44057
284. **Michelle Smith,**
Chagrin Falls, OH
44023
As a resident of southern Geauga
County, I have fracking sites all around
me: the noise, the road traffic, the
flaring, the threat to our well water all
give me grave concern. To allow this
activity in or near our State Parks is
anathema to their mission and purpose.
As a citizen of this state, a person who
camps at our State Parks, and a tax
payer who supports our natural areas
please do not allow fracking on or near
our State Parks.
- Michelle A. Smith
285. **Michelle Gordon,**
Ashland, OH
44805
Harms the environment.
286. **Mike Pope,**
Toledo, OH
43609
Fracking in state parks is a bad practice.
It should not be allowed.
287. **Mike Troxell,**
Toledo, OH
43566
We should want the state parks to be
natural and as beautiful as they are now
for our Grand children.
288. **Milene Johnson,**
Warren, OH
44484
289. **Molly Burson,**
, OH
44107

I have visited the park since childhood.
It should be protected for generations
to come to enjoy.

290. **Monica Brueggemeier,**
Pemberville, OH
43450

291. **Monica Stayner,**
Cincinnati, OH
45230

292. **Monique Lowther,**
Elyria, OH
44035
I love hiking, camping and fishing at Salt
Fork (and several other parks around
Ohio). Please do not allow this beautiful
area to be destroyed! The tourism it
brings is worth far more monetarily
than any drilling or mining operations
might someday bring, as well as NOT
destroying habitat that other creatures
need to survive.

293. **Nancy Danburg,**
Avon, OH
44011
Fracking negatively impacts the land
and wildlife around it! We don't need
that in Ohio's beautiful Salt Fork state
park!

294. **Nancy Heisel,**
Cincinnati, OH
45238
Please deny lease nomination to Frack
East Lake State Park. The park is a
beautiful refuge for Ohioans & many
variety's of Wildlife. Ever parcel of park
land needs to be protected for drilling. .
Ohio state parks are a legacy I want to
passed on to my Grandchildren &

GreatsGrands. Thank you for preserving
our Beautiful Ohio Land.

295. **Nanette Yannuzzi,**
Lakewood, OH
44107
Our state parks should be SACRED. They
are for for our children and
grandchildren!!!! STOP THE GREED and
stupidity. Get lobbyists out of our
democracy!!!

296. **Nelson Mostow,**
Moreland Hills, OH
44022

297. **Nicole Preuer,**
Mentor, OH
44060

298. **Nikki Hoch,**
Columbus, OH
43209
Nothing is more important than clean
air and water.

299. **Nikki Bango,**
Columbus, OH
43207

300. **Nina Rossi,**
Cleveland, OH
44102

301. **Olwyn Conway,**
Columbus, OH
43214

302. **Pam Goode,**
Akron, OH
44303

303. **Pamala Klundt,**
Tallmadge, OH

44278

Salt Fork State Park is a gem of nature!
It's pristine, beautiful and should
remain this way for the people of the
state of Ohio to use without the
impingement of fracking!

304. **Pamela Bennett,**

Litchfield, OH
44253

These are park lands! People want
them protected, and it is your job to
protect them for us. For our children,
for your children.

305. **Pamela Reid,**

NEW CARLISLE, OH
45344

This is our state land. My taxes pay for
it. It must be preserved. Fracking is
dangerous. Releases, toxic gasses that
should remain sealed. Pollutes the
water we use.

306. **Pamela Paine,**

Sullivan, OH
44880

307. **Pat Coffland,**

Kent, OH
44240

308. **Patricia Hanavan,**

Cleveland Heights, OH
44118

Fracking is harmful to groundwater, and
is a very destructive way to introduce
even more of the ill effects of fossil
fuels into our beleaguered
environment.

309. **Patricia Collier,**

Chagrin Falls, OH
44023

Our parks are meant to protect our
natural areas. Leasing them for fracking
does not protect them

310. **Patricia Gallup,**

Kirtland, OH
44094

We're already undeniably trying to
cope with a warmer climate/climate
shifting. We all need to be getting away
from fossil fuels, and fracking is just
plain BAD! What an enormous waste of
water which becomes toxic when spent
this way, and Ohio needs what
greenspace it has. Our wetlands are
now a sliver of what we once had. Plus
the noise pollution is harmful. I'm so
tired of lawn mowers, weedwhips,
chain saws and street noise I hear every
day. LEAVE FRACKING OUT OF OUR
PARKS The largest « hill » between
Columbus and Cleveland is a landfill!

311. **Patricia Wiley,**

Kent, OH
44240

312. **Patricia Miller,**

Kent, OH
44240

313. **Patricia Kremer,**

Dayton, OH
45414

314. **Patrick Bendure,**

Concord twp, OH
44077

315. **Patti Staats,**

Plain City, OH
43064

Just so sick of all this. JUST STOP for
God's sake.

316. **Patti Wanat,**
Poland, OH
44514
Start putting your efforts into
alternatives to oil and gas. Be a leader!.
Your grandchildren will hate your
inaction climate change. And for the
love of god, leave our parks alone! They
are our state jewels. You'll bedestroying
them with this nonsense.

317. **Patty Crabtree,**
LISBON, OH
44432
I have grandchildren. I would like for
them to enjoy it without all that stuff
going on

318. **Penny Gregorich,**
Westerville, OH
43081

319. **Phil Hord,**
Columbud, OH
43214

320. **Rachael Grech-Scott,**
Medina, OH
44256

321. **Rachel Burson,**
Avon Lake, OH
44012
I have love going to Salt Fork since I was
a kid. I frequently use their
campground, use the hiking trails, &
swim at the beach. I'll even just take
day road trips to go enjoy nature and
the quiet. Please do not authorize
fracking. It is loud, machines are big and
ugly, it's bad for the ground water, and
bad for the wildlife/ecosystems. Salt

Fork is beautiful and a treasure in Ohio,
please do not ruin it

Olmsted Falls, OH
44138

403. **Victoria Eckhart,**
Centerburg, OH
43011
Salt Fork and all of Ohio's State Parks were created as a nature and the preservation of nature for all people. Please consider the numbers of people that benefit when the park is not destroyed for fracking, versus the few who benefit when it is! Please consider what the majority of your constituents would want you to do! I, as your constituent want you to VOTE NO on fracking in Salt Fork Sate Park. The environmental safety and the public's opportunity for a safe and natural experience should be the top priority!

404. **Virginia Hunt,**
Chagrin Falls, OH
44023
The unforeseeable, but well documented, consequences of fracking operations on the purity of our water supply effect all of us. I know people who have lost their ability to care for their livestock due to their well water becoming contaminated with methane. I could light her water faucet with my BIC lighter. Flames into the sink. The wellhead was 60 miles from her property.

405. **Viviana Yost,**
Centerburg, OH
43011
Leave a State Park a place to get away. No reason to allow fracking in such a place! STOP the \$\$\$\$ from winning.

406. **Wayne Trier,**
Cincinnati, OH
45213

407. **Wende Schott,**
Caldwell, OH
43724
I live near a well. Fracking destroys so much acreage and fresh water. Then they pump it back into the ground and tell you it's fine. Then, it surfaces, and they have to move people out of the area, and send in a team to clean it up. Wonder where that water ends up? Wonder where everything it touched ends up? Please stop the needless destruction and poisoning. Let's get our energy from cleaner "clean energy" than gas. I live near Wolf Run and Salt Fork. Both are vital and important wildlife and recreational parks. Ohio loves its protected parks!

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Friday, July 21, 2023 12:20:47 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, July 20, 2023 11:12:12 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, July 20, 2023 9:56:10 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Date: Thursday, July 20, 2023 9:53:35 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

Below is the same text that hundreds of others are sending. Prior to that I would just like to say that this is so fucking stupid. The simple idea of destroying a public good (a park) to get oil which further destroys public goods (clean air and water) instead of investing in renewable energy is just incomprehensibly dumb.

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, July 20, 2023 9:53:10 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, July 20, 2023 9:37:56 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, July 20, 2023 8:35:05 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

In addition to everything written below, I just want to say that allowing something as destructive to the environment as fracking is proven to be, in our state parks, is disturbing. Shame on all of those involved with pushing to allow this.

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, July 20, 2023 8:24:30 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Date: Thursday, July 20, 2023 5:43:18 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, July 20, 2023 4:55:46 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park. I'm outraged that our politicians think they can profiteer by selling off rights to drill around and under lands that belong to all Ohioans, despoiling their beauty and safety forever. And for what? The gas that they frack will be sent to Europe, harming the many environments it passes through to get there and damning our children and grandchildren to a hellish climate emergency beyond repair.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. My family stayed there several years ago and loved it. We couldn't believe what a large and beautiful park it was with so many acres of forest and waters all around us. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be harmed and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land. Take a drive to look at the fracked areas in Pennsylvania if you want to see the devastation that will happen if you approve these nominations.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, July 20, 2023 4:43:49 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, July 20, 2023 4:43:23 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Wednesday, July 19, 2023 3:12:49 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Date: Tuesday, July 18, 2023 9:15:13 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

It seems just shameful to me that such an frack-attack could be considered for our State Park! Has the fossil industry no respect at all for the safe and open lands for humanity and the wildlife that lives there? Fracking is destructive and earns money for industry. They should not rule! Fracking is harmful for our planet's changing climate and immediate environment for those who appreciate clean air and water. We love and need our State Parks and Salt Fork is a jewel in our land.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, July 18, 2023 6:49:05 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Date: Tuesday, July 18, 2023 2:38:18 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

Salt Fork State Park was a favorite place for our family as the children grew up. More recently, it was a meeting place for my cousin's reunion. It's a pristine natural gem of Ohio State Parks, with an interesting history as well as a place for many people to enjoy the best of what Ohio has to offer. Please, please DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Date: Tuesday, July 18, 2023 2:16:00 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, July 18, 2023 1:57:46 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, July 18, 2023 10:04:23 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Saturday, July 15, 2023 3:14:30 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to request that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Date: Friday, July 14, 2023 1:13:06 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

My family and I have visited Salt Fork State Park and enjoyed the lodge, park trails, and the lake. Its natural beauty should be protected at all costs.

If Ohio state parks and public lands are fracked, the park experience will be ruined for millions of visitors. Who wants to listen to the low thrum of a fracking operation in a campground at night?

Who will be able to star gaze surrounded by lighted fracking towers that reach up to 140 feet high?

And given the oil and gas industry's reputation for accidents, methane flares and leaks, and the possibility that fracking wastewater will spill onto the ground or back up into waterways, who will want to drink water from a park water fountain, or swim in the lodge pool or lake?

Fracking is a very bad idea if you want to attract families to Ohio state parks.

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Friday, July 14, 2023 10:37:01 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, July 13, 2023 8:33:40 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

As a lifelong hiker and lover of nature, I am strongly opposed to this rape of our state parks for the profit of a few.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, July 11, 2023 10:05:36 PM

OGLMC Commission Clerk,

Please hear me,

It's very important to locals across America that all their major parks are preserved and their health and natural beauty is protected for the enjoyment of all citizens and the animals that need the space to continue living and giving back to the ecosystem. It's incredibly shortsighted to threaten all of this with a practice that, although may be needed somehow for energy, its impacts will be more than what we anticipate and all of us will have to bare those consequences. The financial burden will fall onto the citizens and we can find other more appropriate places with less risk to approach with these energy technologies. Let us use great caution in declaring our major and historic parks places for drilling and chemical fracking. And always reach out to federal subsidies for renewable energy generation. As well as engineering firms to help meet your cities and states demands for energy. Thank you.

The following is more information well researched into what impacts this may have.

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, July 11, 2023 6:16:31 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Monday, July 10, 2023 11:15:56 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Please, take a trip to WV, PA, eastern OH, or as close as Carrollton, OH to see the destructive, irreversible damage done to the environment, the people, the livestock, and the wildlife from fracking. Any and all state parks, forests, and other supposedly protected land in Ohio needs to be STRONGLY protected. We go to these special places for rest, play, and most of all, wonder. Fracking and the resulting damage does not belong in a state park, period. I'm weary from the state of Ohio continually bowing down to the wishes of businesses rather than for the good and benefit of its citizens. The planet is in crisis - how can allowing fracking even be considered?

Do the right thing - protect Ohio's park lands, people, flora and fauna. Thank you.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Monday, July 10, 2023 11:58:13 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Sunday, July 9, 2023 6:31:13 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, July 6, 2023 6:39:44 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Date: Monday, July 3, 2023 1:00:59 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

Please be leaders who look to the future of our planet and not the short term profits of the few. You have the power to make the decision not to frack in the Salt Fork Park. I think it's quite evident that climate change is here. You can no longer deny it. Environmentalists have been sounding the alarm for well over 50 years, but as always the profits of the few win out because they are in the pockets of the powerful corporations. Do the right thing for the planet, your children and grandchildren. We can no longer turn a blind eye to what's happening to the environment. Are you a leader or a follower of the corrupt? Good and wise leaders don't make decisions based on short term profits, but on how their decisions will impact future generations and the health of our planet! I concur with the letter below as well!

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and

drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Monday, July 3, 2023 12:51:41 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Lastly, please look around and see our precious resource of water! You must protect this resource! Without clean water, we will die. Just look at the daily news to see the very real negative impacts of climate change happening very profoundly, now, during our current lifetime! Did you not find it difficult to breathe from the smoke of the Canada wildfires over the past weeks? I live in Ohio, and have had to watch my cat pant and gasp from this poor air quality (Air Quality Index 200) over the past couple weeks.

Please protect Ohio's water and precious resources. No fracking!!!

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Please, we have so few parks in this state. The ones that we have are precious and cannot be tampered with. There are better ways to make money than fracking. Ways that are not destructive. We have the brain power in this state to figure out these ways. After all, Ohio produced Edison, Firestone, the Wright Brothers and so many more.

Date: Sunday, June 25, 2023 10:12:48 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams
- A LARGE clean-up bond prior to any development

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas. I can't believe that any rational person thinks fracking near state parks is acceptable!

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Sunday, June 25, 2023 7:11:07 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. Date: Friday, June 23, 2023 6:45:46 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Friday, June 23, 2023 9:48:52 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Ohio's beloved Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.” What a wonderful asset this park is for Ohio.

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells - that calculates to a frightfully immense amount of area water that would be used and then removed as waste because this water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day. This image is nothing short of scary.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands in good environmental health will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze and impacting natural nocturnal life in areas of the park impacted. Also, frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. How can putting our Ohio public lands into such diminished states of dis-health be considered economically beneficial over the course of time? Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. Also, I must ask, how will the hydrologic profile of the area be altered given the immense amount of area water that would be used and removed. That could have great impacts to the park's habitats.

Impact on visitors

Will Ohioans and tourists want to fight truck traffic enroute to the park, hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising

temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, June 22, 2023 1:16:17 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Thursday, June 22, 2023 12:42:50 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

OGLMC Commission Clerk,

Dear Mary Mertz,

As a lifelong resident of Ohio and avid user of our state parks, and nature preserves, I humbly ask that you deny any leases of parkland owned by the citizens of Ohio for the purposes of fracking or other forms of oil, gas or mineral extraction. Given the state of our environment due to climate change, any action that ultimately contributes to more carbon in the atmosphere is less than conscionable.

Thanks for your service to Ohio.

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Wednesday, June 21, 2023 10:33:28 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Wednesday, June 21, 2023 7:07:19 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Date: Wednesday, June 21, 2023 12:12:35 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Imagine going home and finding that your backyard was being fracked. Breathe in the dust from big equipment driving back and forth, the chemicals from the fracking process, drink the water, see the animals you are used to seeing in your backyard displaced or harmed. Allow your children to play in and around the gas and oil mining toxins. The noise. Go home tonight and imagine that's in your backyard.

This is a beautiful place where I grew up and raised my family. We were at Salt Fork State Park every chance we got. So many families and people live here. How would you feel if this was in your backyard?

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, June 20, 2023 11:03:12 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, June 20, 2023 10:00:15 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, June 20, 2023 9:40:56 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks.

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

I think approving these leases would be taking a big gamble. For a temporary period of getting some oil, we may permanently ruin one of Ohio's beautiful natural areas for generations. Our grandchildren and their grandchildren will not see the benefits, but they will face any adverse consequences. Meanwhile, the fracking companies can take their profits and go somewhere else

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, June 20, 2023 7:33:12 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am a registered Ohio voter living in Franklin County.

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is a stunning park, one of the few in Ohio that can compare with those in Pennsylvania and West Virginia. I have hiked there one more than one occasion. There are beautiful views, beautiful hollows and it is easily accessible from Columbus, which is rapidly becoming the largest metropolitan area in the state. It's also one of the few Ohio state parks that is large enough so that it can stand substantial use without becoming almost impossibly crowded. (The Hocking Hills are, sadly, much smaller.) The idea that you would approve fracking in this park is appalling.

Not only does fracking destroy landscapes and add to greenhouse gas emissions, it has not even brought the economic prosperity that was promised. Ohio fracking counties often lose population. Moreover, renewables are increasingly cheaper than natural gas. If fracking does begin in Salt Fork it will become unprofitable and unsustainable in a few years, but the damage will last for decades.

I am absolutely opposed to fracking leases in Salt Fork State Park.

Sincerely,

Keith Warren

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, June 20, 2023 6:48:02 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I write to urge you to DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Parks are critical public spaces and must not be degraded for private profit. Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost

jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, June 20, 2023 4:47:18 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

In addition to all below, let me say and restate again- I use our state parks, forests and the Wayne National forest for myself as respite from my job through backpacking, fishing, hunting, family camping, hikes, trips, etc. We love and enjoy our outdoor experiences in Ohio. Who want to take their family to a logging operation, who wants to worry about drinking water. Why should I have to travel outside the state where I live and spend my money to enjoy this?

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp,

picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, June 20, 2023 3:28:10 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, June 20, 2023 12:29:24 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

Date: Tuesday, June 20, 2023 10:58:29 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Date: Tuesday, June 20, 2023 10:54:12 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is an Ohio gem that my family enjoys visiting. Ohio needs every cubic inch of natural area possible. Don't destroy it for polluting fossil fuel.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Date: Tuesday, June 20, 2023 10:41:29 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely noisy – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – upsetting the natural behaviors of wildlife and destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, birdwatch and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

Of course, all the above environmental destructive effects will occur if industrialization in the park is allowed. The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by us, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas. Parks are no place for industrial activity and should not be impacted by human activity.

Date: Tuesday, June 20, 2023 10:39:25 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Date: Tuesday, June 20, 2023 10:19:14 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

I grew up less than 2 miles from the Salt Fork State Park line. I spent countless hours, fishing, hiking, and golfing in and around the park. When I tell people where I am from, I use Salt Fork as my reference point. All of my family still live in the area. This is my home and allowing these fracking project to move forward will destroy it.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Date: Tuesday, June 20, 2023 10:17:16 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Tuesday, June 20, 2023 10:15:39 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to request that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio – and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Date: Tuesday, June 20, 2023 10:12:21 AM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I live an all electric home. I no longer have a gas meter in my basement. All the electricity I use comes from the solar panels on my roof or from wind turbines. We have used too much fossil fuel in too short a time. We are sucking carbon destroying the only planet we will ever have.

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Subject: OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park
Date: Saturday, July 22, 2023 1:25:33 PM

OGLMC Commission Clerk,

Dear Oil and Gas Land Management Commission:

I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans – who own and pay for our public lands – visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”

But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.

Frack rigs will use 4 million to 6 million gallons of fresh water per frack well – and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” – the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.

Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.

Truck traffic – 2,300 to 4,000 truck trips per well – will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.

How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our

parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud – chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground – including PFAS – and the wastewater that comes back up is radioactive. Frack pads are fully lit at night – destroying any ability to stargaze. Frack wells flare methane – polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Subject: Please DENY Salt Fork Nominations #: 23-DNR-0005, 0006, 0007
Date: Monday, July 17, 2023 8:00:31 AM

Dear Commissioners,

We respectfully request that you deny the leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Salt Fork is one of our most beloved and important state parks, surrounding it with a ring of shale fracking will destroy this space for human enjoyment and ecological value. Denying these applications will maintain air quality and prevent creation of new health hazards. Fracking noise and lights will negatively impact wildlife. Visitors will not return to the park for recreation with the noise, lights, and threat to the water supply caused by fracking.

Please deny these applications for fracking, to preserve this space for future generations.

Thank you,
Miranda Wilson
Ohio resident and avid park enthusiast

Subject: Please do not Frack Salt Fork State Park
Date: Friday, July 21, 2023 10:56:51 AM

Please do not proceed with tracking at Salt Fork State Park.

My family has often enjoyed recreating at Salt Fork State Park. As residents of Cambridge, my parents also appreciated the economic benefits of the park to this rural, and too often neglected, part of our state.

As a conservationist, I also am concerned that fracking risks the quality of our water, our number one resource in Ohio. As the earth grows hotter, our underground aquifers are a huge resource for American food security, a great concern as well as economic driver.

One final concern is the effect fracking has in increasing the chance of earthquakes, with impacts on every level!

Thanks for your careful consideration.

Krista Magaw

Subject: Please say no to drilling nominations for Salt Fork State Park
Date: Wednesday, June 28, 2023 11:42:21 AM

Dear Oil and Gas Land Management Commission members:

I have been listening to the hearing you are currently holding; the testimony is leaving me increasingly alarmed. The state lands that are the inheritance of all our state's residents need to be protected, not exploited.

People go to our state parks to enjoy Ohio's beautiful natural areas. Oil and gas development adjacent to a park, especially one as heavily used as Salt Fork, will decrease the ability of residents and visitors to enjoy these beautiful places that belong to all of us.

More importantly, oil and gas development carries inevitable risks. Wells and pipelines leak and occasionally suffer blowouts, leading to stream and soil contamination and loss of biodiversity. Habitat fragmentation has already caused songbird and amphibian species to decline. In addition to the loss of plant and animal life, as Dr. Auch and Chief Caggiano have pointed out, drilling requires massive amounts of water, which has to come from somewhere. This water comes back from underground contaminated with industrial toxins, naturally occurring chemicals, and radiation, and must then be taken from the drilling site to the areas where it can be disposed of. Brine waste disposal endangers humans as well as all other forms of life.

I live in Marietta, less than a block from the bridge that carries brine trucks through our historic downtown neighborhood to the spot where the cargo is unloaded to be sent to the injection wells behind the Washington County Career Center. This brine contains all manner of hazardous materials, including such known carcinogens as benzene. Unfortunately, the Halliburton exemption enacted by Congress means that companies are not required to disclose the contents of their fracking fluids. First responders have complained for years that this lack of information makes their jobs more difficult because they cannot prepare effectively without information, leaving both first responders and residents at increased risk. Additional wells will definitely increase the amount of waste being trucked through Ohio towns, almost certainly increase the number of truck accidents, and quite likely increase the incidence of cancer and other environmentally-influenced illnesses in an area already known for high rates of illness.

Pollution is not the only risk. The current rate of waste injection has already increased seismic activity and earthquake risk in Washington County, as the US Geological Survey has noted. Because Appalachia has not historically been a center of earthquake activity, buildings here are not constructed to earthquake standards. Oklahoma banned injection wells because of

earthquake activity, but Ohio has not seen fit to follow this example.

For all these reasons, I urge you to reject the parcels nominated for drilling near Salt Fork State Park, as well as our state's other limited natural areas.

Subject: Public comment for nomination #:23-DNR-0005
Date: Wednesday, July 19, 2023 4:01:49 PM

I am the owner of the Albertson #1 well (34059238380000) owned and operated by Diversified Energy located in Guernsey County on land adjacent to Salt Fork State Park. Having done a lot of research to find out why the production reported on a royalty check for 2020 was only 25% of that reported to ODNR for the same time period I discovered that 75% of the gas from my well probably escaped into the air we breath in our area around Salt Fork.

Because the Enforcement Division at ODNR reported to me that Diversified reported the production for 2020 accurately and that documentation showed that Diversified received only the 25% amount from OWS and therefore the case was closed according to Jennifer Barrett at ODNR, I explored further.

I learned that the natural gas sales line from my well to the connection with Dominion Energy is owned by OWS and was told by the OWS local supervisor that the line has 2 leaks, one more serious than the other and that at least one may have existed as far back as 2020. OWS has shut their wells in but Diversified has refused to shut my well in. When I asked Adam Schroeder at ODNR if there was any written documentation about the leak, his report was that the matter is outside of the regulatory authority of ODNR. Devan Roof of the Ohio EPA told me that she thinks the issue is under the authority of the PUCO but would talk to others and get back to me. All of this speaks very poorly of those who are supposed to be regulating the industry. How could a gas sales line be allowed to leak for at least 3 years with no attention from those in charge?!

In addition, Compliance Notices to fix or plug for the casing on my well that the Diversified superintendent described as having "integrity issues" were allowed to go unresolved for a 7 month period. A prolonged excuse was that Diversified was not able to get a rig from West Virginia to our site. In the meantime the well kept producing at least once and often twice a day. (I have photos of the chart.) Then with a new ODNR inspector and Diversified supervisor/foreman, it was determined that there were no issues with the casing. (3 different petroleum engineers have told me that perhaps the reason Diversified refused to shut my well in when advised to do so might have been to keep the casing pressure low to hide problems with the casing.)

It is apparent to me that the gas and oil industry is poorly regulated. Unless dramatic changes are made, we don't need any more drilling and pollution of our air. I am opposed to this and the other nominations. I will do all that I can to deny access to my land in future nominations.

To: Oil & Gas Land Management Commissioners

From: Mary Clare Beck, 64 Kendal Dr., Oberlin, OH 44074

I urge you to deny the leasing nomination for fracking in Salt Creek State Park, 23 DNR 0005, 0006, 0007.

The damage such fracking would do in our largest state park is unacceptable by any rational understanding of the purpose of state parks. There would be pollution the air in and around the park and danger of leaks and blowouts. Noise pollution from drilling would drive Ohioans away from their beloved park. Heavy trucks in and around the park would threaten safety and add to the air and noise pollution. The harm to already threatened wildlife will be tragic. At a time of worsening signs of climate crisis, Ohio would be adding more methane to a situation now at the tipping point to catastrophe.

The responsible and ethical position is denial of the leasing request for Salt Fork and also for Wolf Run State Park and Zepernick and Valley Run Wildlife Areas.

Thank you for your consideration of my public comments.

I am writing to please implore you to deny oil and gas nominations to lease state Salt Fork land. This is a terrible idea which will ruin the purpose of the land and the reason it was established. I love hiking the spending time in the forest wilderness.

Fracking will negatively impact the ground water and the natural beauty in many other ways. Please don't allow profiting of this land. It is short sighted with long term irreversible effects on our land.

Date: Wednesday, July 19, 2023 10:36:46 PM

Dear Commissioners,

I respectfully request that you DENY the leasing nominations submitted for Salt Fork State Park and Wildlife Area - Nomination No. 23-DNR-0005-0006, and 0007. Unconventional oil and gas production (UOG) threatens Ohio's outdoor recreation economy, air, and water quality. I cannot imagine what it would be to try to enjoy the natural landscape and scenic views of the Salt Fork State Park and have to deal with harmful gases, noise, air and light pollution from UOG operations. Several meta-analyses conducted near UOG sites have shown that hazardous air pollutants (HAPs), several airborne chemicals including endocrine-disrupting chemicals, and other highly toxic chemicals are associated with UOG development. In addition, HAPs near UOG developments have been found at concentrations exceeding health safety thresholds¹. Depletion of water quality and water resources is very concerning as well. The high volumes of water that would be used for the multiple frack wells proposed to frack an incredible 281 parcels of park land, is mixed with sand and a variety of toxic chemicals that are exempt from the Safe Drinking Water Act, chemical reporting requirements, regulation as hazardous wastes under Subtitle C of the Resource Conservation and Recovery Act (RCRA), and many other environmental safety laws. With all these exemptions, and the known impacts to the environment, animal and public health, it is hard to imagine how safe and beneficial it would be for Ohioans to allow extractive industry in the Salt Fork State Park.

Decarbonization of the energy sector is imperative to mitigate extreme weather events and the consequences of climate change. Ohioans deserve to be able to escape from urbanization, pollution and industrialization, and breath clean air while doing so. I ask you today to please consider all the negative impacts of leasing our public lands and deny the leasing nominations submitted for Salt Fork State Park and Wildlife Area - Nomination No. 23-DNR-0005-0006, and 0007.

Public Comment RE: Please DENY the Leasing Nominations for Salt Fork State Park and Wildlife Area, Nomination #s: 23-DNR-0005, 0006, 0007

Dear Commissioners,

We respectfully request that you deny the leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007. Salt Fork State Park is Ohio’s largest state park and one of the most beloved and important outdoor recreation destinations in the state. A 2009 ODNR publication stated that “Salt Fork State Park is a priceless gem to be cherished by the people of Ohio.” We agree with this assessment. Please deny the Salt Fork oil and gas leasing nominations in order to protect public health and safety, respect outdoor recreation, and confront climate change.

Nomination No. 23-DRN-0005 shows eight proposed shale fracking (“unconventional oil and gas production” or “UOG”) well pads surrounding Salt Fork. The construction and operation of well pads near Salt Fork’s boundaries seriously threatens the quality of life for those living near Salt Fork, the quality of outdoor recreation to those who visit the park, and would invite more rapid climate change, rather than preserving this land as a location to resist climate change. We at NCOLC urge you to deny Nomination Nos. 23-DRN-0005, 0006 and 0007. We at NCOLC focus on protecting the natural heritage of North Central Ohio, but no one who loves the State of Ohio can overlook the importance of Salt Fork State Park.

Sincerely,

Eric S. Miller, Trustee

Date: Thursday, July 20, 2023 3:51:45 PM

To whom it may concern-

I wish to express my extreme shock and disappointment the Ohio would set aside public lands, recreational lands for the people of Ohio to benefit the corporate interests. John Muir worked tirelessly to defend and protect Yosemite National Park from companies that were interested in making profit, not protecting the lands.

I have witnessed first hand the destruction of property for the oil and gas industry, I have seen the contaminated pools that are left, with no fencing, no protection and no means to keep out the public. The smells were toxic, the film on the liquid was tainted and there was toxic waste spilled on the roadway, Look up the Ginsberg Well in Athens County for a complete horror story,

We cannot control private landowners that wish to lease their land, it is their choice. But we should be protecting the lands set aside for recreation and pleasure for Ohioans, The various spills from truck accidents, well explosions, leaks and system failures have resulted in the release of toxic chemicals and toxic fumes. Contamination of streams have lead to the death of many hundreds of fish and amphibians in streams and lakes. The. recent train derailment in East Palestine that resulted in the death of 43,000 fish according to figures from the Ohio Department of Natural Resources in February 2023.

This land is set aside for adults, children and families. Why put this land at risk?? Why put the wildlife and fish at risk? Salt Fork is a destination for those camping, boating and fishing, why put that land at risk? Environmentally this is unsafe and unwise to make such a selfish decision for the interest of a few.

I strongly say no to the approval of Salt Fork SP for fracking.

Subject: Public Comments on Nomination #: 23-DNR-0001, 0002, 0003, 0004, 0005, 0006, 0007, 0008
Date: Sunday, July 9, 2023 11:22:02 AM

Hi Commissioners,

I am writing to ask that you DENY the oil and gas leasing nominations submitted for Salt Fork State Park and Wildlife Area - Nomination Nos. 23-DNR-0005, 0006, and 0007, Wolf Run State Park, nomination #: 23-DNR-0008, Valley Run Wildlife Area, Nomination #: 23-DNR-0001, 0002, 0003, and Zepernick Wildlife Area, Nomination # 23-DNR-0004.

There is a lot of evidence showcasing the dangers of fracking to local wildlife and human populations. I ask that you remember the people who could light their water on FIRE because of nearby fracking. Further, it would disrupt the natural beauty of our state. The only case for the wells is pure and simple: greed.

Don't ruin our water, forests, and parks for a couple of bucks.

Regards,

Jonathon Coombs

8840 Oak Village BLDV, Lewis Center.

Subject: Public Comments on Nomination #: 23-DNR-0005
Date: Wednesday, July 19, 2023 9:52:18 PM

To the Ohio Oil and Gas Land Management Commission,

I was disheartened to learn that much of Salt Fork State Park is being considered for oil and gas drilling and fracking. As an Ohioan, I am adamantly against allowing any of our state parks, forests, and wildlife areas to be polluted by the oil and gas industry, but Salt Fork holds a special place in my heart. I have been visiting Salt Fork for as long as I can remember. Camping and boating with my family, learning to fish, hiking to the Stone House, sitting on the docks, swimming in the lake—I cherish these memories, and I know I'm not the only one. Salt Fork is beloved by many in Ohio.

Not only is Salt Fork a popular destination, but the surrounding area is also home to tens of thousands of people, including some I know and love. As such, I am deeply concerned for those living in Guernsey County and nearby. Hydraulic fracturing poses serious health risks. A Yale School of Public Health study found that children in Pennsylvania who lived in proximity to unconventional oil and gas (UOG) developments were 2-3 times more likely to develop leukemia. Another review identified 55 chemicals used in hydraulic fracturing that may cause cancer, including 20 that are known to increase the risk of leukemia and lymphoma. Would you live there?

Salt Fork is home to a diverse population of plant and animal life including white-tailed deer, wild turkey, ruffed grouse, fox, gray squirrels, and barred owls. Wild geranium, large-flowered trillium, violets, asters, and goldenrod fill the meadows while songbirds like the cardinal, goldfinch, and Kentucky warbler fly overhead. Oil and gas drilling and fracking threatens to harm or even destroy parts of this thriving ecosystem. A study conducted at the Fernow Experimental Forest in West Virginia found that the forest ecosystem was affected by forest clearing, erosion, road building, and vegetation death from direct exposure to fluid spills. An EPA study found scientific evidence that hydraulic fracturing can impact drinking water sources. There is no shortage of evidence that fracking is harmful to our ecosystems.

I am writing to ask you to deny all three project nominations for Salt Fork State Park: 23-DNR-0005, 23-DNR-0006 and 23-DNR-0007.

*But ask the animals, and they will instruct you;
ask the birds of the air, and they will tell you.
Or speak to the earth, and it will teach you;
let the fish of the sea inform you.
Which of all these does not know
that the hand of the LORD has done this?
The life of every living thing is in His hand,
as well as the breath of all mankind.*

(Job 12:7-10)

Respectfully,

Taylor

Subject: Public Comments on Nomination #: 23-DNR-0005
Date: Wednesday, July 19, 2023 8:59:38 PM

To the Ohio Oil and Gas Land Management Commission

I am writing about the three nominations / applications to drill under Salt Fork State Park, presumably to access the Utica shale for natural gas and gas liquids, and am writing largely because of the widely publicized offer of nearly \$2 billion from Encino Energy for the rights to exploit that resource. I have two points to make: first, **\$2 billion is not enough**, even at this time; secondly, because prices for natural gas and gas liquids are currently near their historic lows, and because it's reasonable to expect they'll eventually return to recent highs, **the value of that resource to the state at some point in the not too distant future should be at least quadruple what it's now valued at...** I intend to make the case that the state should wait for a better price environment, something that private companies would not do on their own volition...

as I write this, the widely quoted price of natural gas, based on the NYMEX contract for August delivery, is \$2.53 per mmBTU*; it has drifted between \$2.48 and \$2.58 per mmBTU over the past couple of days...at the same time, the Chicago Mercantile Exchange is quoting August ethane at 26 cents per gallon....hence, both have been trading at a price that is among the lowest prices in 20 years: for natural gas, lower priced exceptions would be during the lockdowns at the onset of the pandemic in 2020, during a brief price crash in April of 2012, and during a slump in energy prices in early 2016 that was exacerbated by [OPEC's attempt to put US shale out of business by flooding the world with oil](#)....on the other hand, natural gas prices topped \$10 per mmBTU, almost four times today's price, as recently as last August, and consistently traded over \$6 from April thru December of last year, with most of the quotes during that period above \$8; or **three times today's price**....here is an interactive graph that can be reset to show the entire history of natural gas prices, based on the nearest contract price to the dates shown: <https://www.barchart.com/futures/quotes/NGQ23/interactive-chart> (ethane prices tend to move in tandem with natural gas, as per this indexed graph of producer price changes through June: <https://fred.stlouisfed.org/series/PCU21111221111214>)

*(Note: natural gas is priced per million British thermal units; that's roughly the equivalent of a thousand cubic feet)

as you see from that graph, natural gas prices have a long history of being extremely volatile; after topping \$10 per mmBTU for the first time during the winter of 2000-01, natural gas price contracts consistently traded above \$5 from the Fall of 2002 through the Spring of 2009, with price run-ups during the Fall of 2005 and the Fall of 2008 to as high as \$15.78 and \$13.88 per mmBTU respectively, in both cases on fears of insufficient gas in storage before winter...on the other hand, natural gas was largely priced below \$4 per mmBTU for the 6 years following OPEC's Thanksgiving 2014 massacre, even though [US drilling of new gas wells fell by 75% and never recovered](#),

with the exception of a month long price spike to over \$5 following a arctic air outbreak in early November 2018...

there were essentially two reasons that natural gas prices were higher last year; first, domestic supplies in underground storage were drawn down below normal during an extended period of colder than normal US temperatures in the early Spring of 2022, then fell further below their long term trend on demand for air conditioning during heat waves in July and August of last summer; secondly, the areas of central Europe historically most dependent on disrupted Russian gas pipeline supplies were experiencing their worst heat wave on record; in the face of that, benchmark [natural gas prices topped \\$100 per mmBTU in Europe](#) (the equivalent of ~\$500 a barrel oil) and \$60 in Asia...moreover, even though US LNG was being shipped to Europe, most US companies didn't benefit; [the Chinese were selling US LNG that they owned under contract to Europe right from the US Gulf Coast terminals](#), at a hefty profit...of course, US prices stayed below \$10 through most of that period because most US natural gas could not be exported to Europe **at that time..**

subsequently, the threat of a cold winter in the US did not materialize, less natural gas than normal was withdrawn from storage for heating, and US gas supplies ended this February above normal, and with our warm spring, held steady to end April 22.2% higher than the end-April average of the prior 5 years...over the same period, [Europe experienced its second warmest winter on record](#) and also ended April with their natural gas supplies well above normal...subsequently, European natural gas prices fell to a pre-war 2 year low amid talk that their storage capacity would soon be filled, and, in light of warnings that they might have to turn away LNG shipments, US prices followed suit...

European prices are now lower than those in Asia, and LNG shipments are being diverted from Europe to Asia instead...as of Tuesday, natural gas was trading around \$9 per mmBtu at the Dutch Title Transfer Facility (TTF) benchmark in Europe and \$11 at the Japan Korea Marker (JKM) in Asia.

looking at maps of the Utica shale and Point Pleasant formations and their expected characteristics in the area of Salt Fork, i find [the thickness of Utica shale](#) ranges from 60 feet in the far southwest corner of Guernsey country to 140 feet along the eastern edge; at the same time, [the thickness of the Point Pleasant formation](#) below it ranges from 70 feet in western Guernsey to 110 in eastern Guernsey, with the Point Pleasant generally around 90 feet thick under most of most of the county...from those EIA maps, i'd estimate that the combined thickness of the Utica and Point Pleasant shales under Salt Fork State Park is around 200 to 210 feet...the Utica shale in that part of the state sits between the relatively immature shale to the west, with its hydrocarbon profile including kerogens and incompletely formed oil in addition to oil and natural gas liquids, and the more heavily drilled areas to the east, closer to the Ohio River; where a greater proportion of dry natural gas is available...hence, we could expect that the shale under Salt Fork State Park will produce both natural gas and natural gas liquids, including ethane, butane and propane, in some quantity...hence, it's possible that **Salt Fork State Park represents the richest large unexploited hydrocarbon resource remaining in Ohio...**

as you know, production from a shale well is highest in the months right after it is fracked, and can fall off by as much as 80% in two years after that initial spurt...with our best shale plays already in production, and absent new technology to extract a higher percentage of hydrocarbons from shale, it appears that Utica (and Marcellus) shale output will soon begin a long decline, as exploitation shifts to less rich or thinner layers of shale...at the same time, demand from both new electric generation and exports will increase...lower supply and greater demand is a textbook case for higher future prices than what we're seeing today...**if i owned Salt Fork, and as a citizen of Ohio i do, i would not be selling that rich resource into the global marketplace at a time of historically low prices, but rather wait until such time as i could get a better return..**

the September 2022 bombing of the Nord Stream Baltic Sea pipelines from Russia to Germany and the curtailment of other Russia gas supplies to Europe has brought a flurry of announcements and expedited plans for new US LNG export facilities, which have continued into this year, and have been capped off by the announcement, just 6 days ago, of a new LNG liquefaction plant on the Rio Grande in Brownsville, Texas, which they expect will be among the largest gas export terminals in the world... these LNG plants won't come online immediately or even soon; construction time for new LNG facilities is typically around 6 years, and some of the projects announced haven't even reached the FID (final investment decision) stage, much less broke ground....but it is reasonable to expect that in light of all the new US LNG plants announced, planned and/or under construction, our LNG export capacity will double from the current 13.8 bcf/d (billion cubic feet per day) of natural gas to over 27 bcf/d by the end of the decade....even if we assume our production also increases, that would mean about 25% of our natural gas output could be heading overseas 8 years hence...

when the buildout of those LNG terminals on the Gulf Coast is complete, US natural gas prices will no longer be insulated from the global markets, and will move higher to meet the global prices, just as US oil prices rose after [US oil exports were first allowed in 2016](#), and now tend to trade a few dollars below the global benchmark...based on the historical differences between US prices and those in Europe and Asia, **US natural gas prices should see a fourfold to as much as a tenfold increase from what they would otherwise be if insulated from global prices**...this could easily mean \$20 natural gas in the US, just at the time that Ohio's Utica and Pennsylvania's Marcellus production will have begun their terminal decline...if we're lucky, New York might open up their resources to production; absent that, the Northeast US might even end up importing LNG from Qatar or Iran...

My broader point is that since we don't know what the future will bring, it behooves the state of Ohio to save this last prime natural gas and liquids resource for such a time as it is really needed, rather than sell it today at fire sale prices...

As word has spread of the potential for fracking to be permitted around and under Ohio State Parks, I can't help but recall a recent visit to a neighboring State Park in Pennsylvania. Ryerson Station State Park is located near Wind Ridge, PA in the state's Southwest corner. The park itself used to be so remote and removed from development, that it would fall on anyone's list for the most relaxing and quiet places. However, as the fracking boom evolved, the state permitted fracking under state property, and the environment radically changed. Presently, you can find a large compressor and transmission station on the western park border generating noise and air pollution. Additionally, well pads line the outskirts of the park, semi-trucks traverse the roads, and massive networks of pipelines have been constructed, destroying areas where trees used to stand. The difference in noise volumes and traffic is considerably noticeable. Campers now sit at the bonfire to hear the noise of industrialized machines running all hours of the night. Hikers see and smell the compressors and flaring from nearby well sites. The lake, which is now a wetland, appears to be contaminated with runoff containing pollutants from nearby well sites. In essence, Ryerson Station State Park is not the same park it used to be and never will be again. It is for these reasons that I am writing to you today. Let's use this as a case study and example for what happens when fracking is permitted near State Parks and the ramifications it has for park users, wildlife, and the environment. Please prevent such destruction from occurring at Salt Fork State Park and deny the proposed nomination to frack under and near this public land!

I would like to take the opportunity to comment on these nominated parcels that are part of Salt Fork State Park. For decades, Ohioans and tourists from out of the state have come to Salt Fork to make memories and enjoy the peace and tranquility this park and the surrounding area have to offer. Unfortunately, with the interest of oil and gas exploration companies intending to frack under this property and subsequently setup large quantities of wells on adjacent land, the attributes long associated with this park could come to an end. The peaceful sounds of waves hitting the beach and birds chirping in the trees will be replaced by noisy industrial noises coming from drilling rigs, flaring, compressors, and dozens of other pieces of equipment. Tourists and locals alike come to State Parks to embrace nature and spend time outdoors, not to breathe in pollutants in the air and listen to 24/7 industrial equipment. As you are familiar with, Salt Fork offers a wide array of state-of-the-art accommodations, golf, boating, and miles of trails all leading to the high volume of visitors that have been coming to this park for years. Will these same guests have an interest in visiting once surrounding parcels of land are dotted with well pads, pipelines, and other exploration equipment? Would visitors want to sit at their campsite and smell the emissions? Would stargazers come only to see light pollution from the well sites? Would fishermen come if they suspect there are potential contaminants in the water? I know I personally would definitely be making my travel arrangements elsewhere. Nature itself cannot relocate, but visitors definitely can. It would be a tragedy to see all of the time and resources invested in Ohio's largest State Park go to waste with an absence of park goers. Decisions and ramifications are irreversible, and it is for these reasons that I am asking you to deny this nomination associated with Salt Fork State Park. Salt Fork is a treasure to Ohio, let's not jeopardize this exceptional resource in the interest of financial incentives!

Concerned citizen,

Stephen Kamph

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,
Mrs. Dereda Cunningham

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Christine Rapp

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,

Ms. Venesa Winegardner

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Mrs. Cherril Fenner

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Ms. Jami Johnson

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,
Mr. Wendell Blackburn

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Miss Diana Ross

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Ms. Ellen Patton

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Mr. Scott Priest

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Mr. Justin chafin

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Ms. Tracy Phelps

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,
Mr. Michael Thomas

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Glenn Williamson

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

As word has spread of the potential for fracking to be permitted around and under Ohio State Parks, I can't help but recall a recent visit to a neighboring State Park in Pennsylvania. Ryerson Station State Park is located near Wind Ridge, PA in the state's Southwest corner. The park itself used to be so remote and removed from development, that it would fall on anyone's list for the most relaxing and quiet places. However, as the fracking boom evolved, the state permitted fracking under state property, and the environment radically changed. Presently, you can find a large compressor and transmission station on the western park border generating noise and air pollution. Additionally, well pads line the outskirts of the park, semi-trucks traverse the roads, and massive networks of pipelines have been constructed, destroying areas where trees used to stand. The difference in noise volumes and traffic is considerably noticeable. Campers now sit at the bonfire to hear the noise of industrialized machines running all hours of the night. Hikers see and smell the compressors and flaring from nearby well sites. The lake, which is now a wetland, appears to be contaminated with runoff containing pollutants from nearby well sites. In essence, Ryerson Station State Park is not the same park it used to be and never will be again. It is for these reasons that I am writing to you today. Let's use this as a case study and example for what happens when fracking is permitted near State Parks and the ramifications it has for park users, wildlife, and the environment. Please prevent such destruction from occurring at Salt Fork State Park and deny the proposed nomination to frack under and near this public land!

Darrell Kamph

I would like to take the opportunity to comment on these nominated parcels that are part of Salt Fork State Park. For decades, Ohioans and tourists from out of the state have come to Salt Fork to make memories and enjoy the peace and tranquility this park and the surrounding area have to offer. Unfortunately, with the interest of oil and gas exploration companies intending to frack under this property and subsequently setup large quantities of wells on adjacent land, the attributes long associated with this park could come to an end. The peaceful sounds of waves hitting the beach and birds chirping in the trees will be replaced by noisy industrial noises coming from drilling rigs, flaring, compressors, and dozens of other pieces of equipment. Tourists and locals alike come to State Parks to embrace nature and spend time outdoors, not to breathe in pollutants in the air and listen to 24/7 industrial equipment. As you are familiar with, Salt Fork offers a wide array of state-of-the-art accommodations, golf, boating, and miles of trails all leading to the high volume of visitors that have been coming to this park for years. Will these same guests have an interest in visiting once surrounding parcels of land are dotted with well pads, pipelines, and other exploration equipment? Would visitors want to sit at their campsite and smell the emissions? Would stargazers come only to see light pollution from the well sites? Would fishermen come if they suspect there are potential contaminants in the water? I know I personally would definitely be making my travel arrangements elsewhere. Nature itself cannot relocate, but visitors definitely can. It would be a tragedy to see all of the time and resources invested in Ohio's largest State Park go to waste with an absence of park goers. Decisions and ramifications are irreversible, and it is for these reasons that I am asking you to deny this nomination associated with Salt Fork State Park. Salt Fork is a treasure to Ohio, let's not jeopardize this exceptional resource in the interest of financial incentives!

Concerned citizen,

Stephen Kamph

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,
Mrs. Dereda Cunningham

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Mrs. Cherril Fenner
cherril22@hotmail.com

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,
Ruth Wyatt

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Mr. Lawrence L. Popp

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,
Barbara Knight

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Miss Diana Ross

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Mrs. Leslie Zunn

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,

Mrs. KIM SUE MILLER

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Mr. Jerry stroup

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Mrs. Betty widrig

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,
Gene Piscitello

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Mr. Rick Roudebush

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Ms. Patricia Mickey

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Mrs. Dorothy Newberry

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,
Erin Nucci

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Mr. James Gillman

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Mr. Joseph Erb

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Mrs. Nancy cyrus

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Mr. Lawrence Miller

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,

Ms. Jenifer Margison

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Brenda Garletts

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Mrs. Jean Grove

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Ms. Tammy Edwards

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Mr. James Davis

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,

Mr. Louis Hemshrodt

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,

Mrs. Donna Sturdivant

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Jennifer Sweinsberger

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Mr. John Miano
jmiano1@hotmail.com
1735 Russellville Road Winchester, OH 45697 Constituent

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,
Mrs. Roberta Welter

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Mr. Frederick Sanders

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Mr. JAMES RILEY
jriley1509@sbcglobal.net

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,

Mr. David Robinette

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Sincerely,
Mrs. Patricia Smith

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,

Mrs. Karen Collins

Dear Ohio Oil and Gas Land Management Commission,

I am writing today to voice my support for the approval of nomination number 23-DNR-0005 for leasing for the exploration of and the development and production of oil or natural gas. Ohioans, like me, have been burdened by rising energy costs. It is critical that we utilize the abundant natural resources available to us right here in Ohio, not only to bring costs down, but to support our local economy. I urge you to approve nomination number 23-DNR-0005.

Sincerely,
Oiler Paul

Re: Public Comments on Nomination #: 23-DNR-0005

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to make my support for nomination number 23-DNR-0005 known. As energy costs rise, forcing families to spend more and more for basic necessities, we have a critical and easy decision to make. Ohio has an abundance of natural resources, and it's time we tap into more of them. I want to urge you to approve nomination 23-DNR-0005.

Sincerely,
Dr. Patrick Rheaume

Dear Ohio Oil and Gas Land Management Commission,

I am writing to you today to express my support for nomination number 23-DNR-0005 to allow us to tap in to more of Ohio's natural resources. Like many other Ohioans, I've felt the pinch of rising energy costs. It's making it more and more difficult to do simple, necessary tasks like fill up the gas tank or keep the lights on. If we can fix this issue for the people of Ohio while also boosting our economy, then we should. I urge you to approve nomination 23-DNR-0005 and give Ohioans the support we need.

Ohio Oil and Gas Land Management Commission

Public Comments on Nomination #: 23-DNR-0005, 0006, 0007 and General Public Comment to June Commission Meeting

My name is Rhonda Reda, Founding Executive Director, Ohio Oil and Gas Energy Education Program (OOGEEP), and I am writing these written comments after being very disheartened once again to hear comments made by a former Battalion Chief regarding the lack of natural gas and oil training available to emergency responders in Ohio.

In 1999, I was personally tasked with developing and executing a comprehensive oilfield emergency response training program. As expected, a unique task force was created that included oil and gas safety experts, ODNR, EMA, Fire Chiefs and other qualified emergency responders to help develop this training program. This program took almost 2 years to complete and the outcome produced an comprehensive curriculum, training tools and, through a partnership with the Wayne County Regional Fire School, a permanent and secure outdoor fire behavior lab where we conducted live burns to simulate a variety of potential oil and gas emergencies. We also utilized more than 16 state certified fire instructors to assist with the hands-on training exercises.

In 2001, the first training took place. Since that time, more than 1,600 Ohio first responders and ODNR officials have participated in the unique training program. That number includes emergency response representatives from all 49 natural gas and oil producing counties throughout Ohio. Since this training program was the first of its kind in the nation, several fire departments from other states sent firefighters and safety personnel to OOGEEP's training to assist in establishing similar training programs in their respective states. As always, Ohio's oil and gas industry once again took the lead in the state and the country to develop this program, and have collectively spent millions of dollars conducting the training, updating curriculum as well as equipment donations at the permanent training site. It is extremely important to note that the industry was not mandated to do this, but took the initiative since oil and gas emergencies were so rare that, still today, it is not part of a firefighter's traditional training protocol.

This award-winning training teaches common practices, references and standards used by the fire service and the natural gas and oil industry. It is designed to provide insight into how natural gas and oil is explored, drilled, produced and transported, as well as the importance of establishing a unified command in the event of a rare emergency. The training curriculum also meets state and federal safety standards.

The industry has always been good community stewards and continues to put safety as a top priority. The retired Battalion Chief's comments regarding lack of training opportunities is both unfounded and untruthful, and so is the statement made by one of the doctor's stating that the industry is "an increasingly sloppy industry." This is extremely offensive to our industry. I have personally attended, executed and participated in these emergency response trainings for over 2 decades. Furthermore, I had reached out to this Battalion Chief to encourage him to participate after reading his comments years ago in newspapers and in other testimony stating that there is no training. Additionally, on multiple occasions, other Fire Chiefs also personally met with him for the same reason. He has refused to participate for decades, and I am astonished and bewildered that he continues to make false statements claiming that no such training exists. I have no explanation as to his refusal especially since

the training was provided at no cost, meals were included, overnighted accommodations were provided, and every department received an emergency response kit among other things.

Thank you for allowing me to submit these comments and I hope this will not only demonstrate some of the industry's overall safety initiatives, but will also help clarify some negligent misstatements and characteristics. On a closing personal note, my grandfather, who was also a Fire Chief, would have been delighted to see this training program and without a doubt would have been honored to co-sign this letter with me. Growing up in a firefighter family, I know first-hand the priority that was placed on training. Finally, my husband, of 38 years, proposed to me in one of Ohio's many parks. This particular and beautiful park, Millcreek Park in Youngstown, had more than 2 dozen directionally drilled wells. I have also attended weddings and community events in their elegant Pavilion located within that park, which ironically has been funded with natural gas and oil royalties. Nature, human interaction and energy development co-exists when all parties work together in a responsible and truthful manner.

Subject: Public Comments on Nomination #: 23-DNR-0005, 0006, 0007.
Date: Saturday, July 8, 2023 4:41:13 PM

I write to urge you to deny the leasing nominations submitted for Salt Fork State Park and Wildlife Area – Nomination Nos. 23-DNR-0005, 0006, and 0007.

As you know, Salt Fork State Park is Ohio's largest state park and one of its most popular. Oil and/or gas extraction is simply incompatible with recreation in its many forms, and will discourage public use of the park, despite the fact that the installations technically be outside the park boundary. Moreover, the history of oil and gas extraction in Ohio and surrounding states shows that oil and gas extraction permanently alters surrounding landscapes, again in ways incompatible with recreational usage. Expected traffic for construction and maintenance of extraction facilities creates both traffic hazards and disturbance. Finally, the boom and bust nature of recent oil and gas markets shows a high probability that sites may not be economically viable in the long run, and well could leave the taxpayers of Ohio on the hook for cleanup and remediation long after initial investments.

For the benefit of current and future Ohio residents, please deny the Salt Fork oil and gas leasing nominations in order to protect public health and safety and to respect outdoor recreation.

Sincerely

William C Heck
Columbus, OH

Hello,

I am writing to express my deep dissatisfaction with the nomination of Salt Fork State Park being nominated for leasing and fracking. The aim of preserving State Parks is to preserve them for recreation and restoration of human welfare, not to use them for human extraction, the way we use so much of the rest of the planet.

We all know people who have turned their lives around because they were able to fish, boat, walk, picnic in a green space and thus recover balance and peace. And we saw during Covid how very important such spaces are.

Please don't destroy one of Ohio's greatest treasures. Our citizens need such spaces.

I write to urge you to DENY lease nominations 23-DNR-0005, 0006, and 0007 to extract petrochemicals from Salt Fork State Park.

This park provides rare and beautiful wildlife habitat for sensitive species and wonderful recreational opportunities for many people. The air, water, land, and noise pollution of these extraction operations will spoil the ecological services that this park provides.

ANY new activity in this or any other Ohio State Park should ONLY be approved if it can be unequivocally shown to have NO environmental impact to the park, NO adverse geological impact, NO impact to visitors to the park, NO impact to wildlife or plant species, NO surface use, such as well pads, roads, pipelines, water lines, and compressors, and NO use of any water from any nearby lakes or streams.

To Whom It May Concern:

After the pandemic lockdown, a group of friends, all seniors, began spending a couple of week days each month during the winter at each of our state parks. Our last visit was to Salt Fork.

We are impressed with the quality of our state parks ... so much better than neighboring Indiana, for instance. Our parks are among the best in the nation and we are proud of them. We also support Ohio's commitment to preserving nature through our park system. And so, we are horrified at the prospect of degrading even one of our treasures through fracking.

As one of the group, I implore our decision-makers to preserve our parks by denying the industries who are requesting permission to frack at Salt Fork. Please make keeping our parks in pristine condition for our citizens and for nature a top priority.

With concern,

Linda

Please do not allow the oil and gas industry to start fracking in Salt Fork State Park. We need to keep our state parks free from corporate interference. State and National parks were created for people to enjoy the serenity of walking through undisturbed areas. It is not serene to be walking through a park and see an oil/gas structure in the middle of a relaxing walk.

Let's stop bowing to the demands of these industries and start taking peoples health and well being into consideration. Our mental health depends on it.

I am a lifelong citizen of Ohio of almost 50 years. I oppose all fracking in all of Ohio's State Parks which includes Salt Fork. This is public land that is designated for the citizens of Ohio and beyond, and in turn, the wildlife and habitats that become protected as a result and that are crucial to our environmental health. Our public lands are also too valuable to our economy already to risk their endangerment for everyone's use from an industrial activity that has been tied to dangerous risks that include earthquakes.

As a citizen of Ohio and a frequent park visitor, I oppose the nomination of Salt Fork as a fracking location. Our state parks are a place to immerse in nature and refresh. This is best accomplished away from the traffic, noise, smells and visual changes that would accompany fracking. And the chemicals used in the process are not conducive to wildlife or human health. Please halt this plan to frack at state parks and forests. Thank you. Sharon Rebmann

Dear Commission,

One of my earliest memories of moving to Ohio was a trip to Salt Fork State Park.. We have visited it many times since that first visit in the 1970's.

Part of its charm was the arrival into this natural area and I remember being thankful that Ohio had the foresight to protect this land and the views to and from it. I hope you will not allow that view to be ruined by fracking and oil equipment.

Little did I know that one day I would be first lady of the state and could be proud of Ohio's parks that all could enjoy without the incursion of non natural build environments to impede the views.

Little did I know at the time that I would come to understand the value of the free eco- services nature provides us and the importance of keeping the land open and undisturbed to absorb the water and replenish the aquifer so we will have water to drink and provide life to our crops and as all.

These fracking and oil wells will disturb the superb balance nature has developed and make us all poorer for it. The financial gain of a few should not override the pleasure of the majority and the system of renewal that has been provided us by nature.
