any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Pauline	Urbahns	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Jenna	Neuman	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am a Boomer and a veteran of the US Navy, Viet Nam time period. Younger people are BLAMING me for global warming and they will be my caretakers when I am frail and elderly. How can I expect them to be kind and caring to me?</p> <p>This may be a canned letter, but I want to be counted among the people who object to the subject lease nominations to frack Salt Fork State Park. The workers will blame their bosses and say "We're just following orders," but they are not obligated to commit crimes against humanity. New fossil fuel extraction is obscene. "That which does not fit."</p> <p>We demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Comments and objections from residents of the state and other users:</p> <p>We demand PROOF that there will be:</p> <ul style="list-style-type: none"> - NO environmental impact to the park - NO adverse geological impact - NO impact to visitors to the park - NO impact to wildlife or plant species - NO surface use, such as well pads, roads, pipelines, water lines, and compressors. - NO use of any water from any nearby lakes or streams <p>The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio "and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>

Jane	Hobbs	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Laura	Kleiner	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Dean	Van Farowe	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing from my campsite at Mohican State Park to request that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Please, more than anything, remember that Salt Fork is public land that you are duty bound to protect it. This includes the 281 parcels below it, and adjacent work that will affect it, in these fracking plans.</p> <p>Surely you are not always in Columbus. Surely you and your families, like mine here for our 9th time at Mohican, have enjoyed our amazing state parks. As ODNR says, "With thousands and thousands of acres of land and water, [Salt Fork] has something for every outdoor enthusiast."</p> <p>But all of that will be impacted and likely destroyed if you approve these lease nominations under the park and the fracking pads that will surround it.</p> <p>I assume you know the information that will follow; and your duty; so now protect these public lands for all the following reasons:</p> <p>*Frack rigs will use 4 million to 6 million gallons of fresh water per frack well " and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the "Halliburton loophole" " the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>*Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>*Truck traffic " 2,300 to 4,000 truck trips per well " will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>*How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>*According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p>
------	------------	---	---

*Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud " chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground " including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night " destroying any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.

*Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

*Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

*Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

*Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

And so the only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€” and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Dean Van Farowe

Writing from campsite 79 @ Mohican

Cleveland,OH

Carrie	Gibbons	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Ohio's beloved Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.” What a wonderful asset this park is for Ohio.</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells - that calculates to a frightfully immense amount of area water that would be used and then removed as waste because this water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day. This image is nothing short of scary.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands in good environmental health will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home.</p>
--------	---------	---	---

Fracking injects millions of gallons of toxic chemicals into the ground including PFAS and the wastewater that comes back up is radioactive. Frack pads are fully lit at night destroying any ability to stargaze and impacting natural nocturnal life in areas of the park impacted. Also, frack wells flare methane polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. How can putting our Ohio public lands into such diminished states of dis-health be considered economically beneficial over the course of time? Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites. Also, I must ask, how will the hydrologic profile of the area be altered given the immense amount of area water that would be used and removed. That could have great impacts to the park's habitats.

Impact on visitors

Will Ohioans and tourists want to fight truck traffic enroute to the park, hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests,

			and wildlife areas.

Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Kelly	Morton	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park for all the reasons below, but also this: lobbyists, gas executives & lawyers, and supportive politicians are all motivated by huge financial gain to push fracking as quickly and secretly as possible. This is why so much of the technology behind fracking is "proprietary information" - not because it is actually propriety information, but because they can't risk the public or environmental agencies knowing how much damage fracking does to the land, wildlife, and water supply.</p> <p>These companies and executives are motivated by greed and power. Ohioans want a park. A park free of chemical-laced water and soil emptied of life. A park with healthy animals and birds singing in the trees. Please don't let the bad guys win.</p> <p>Sincerely,</p> <p>Kelly</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans " who own and pay for our public lands " visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast."</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well " and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the "Halliburton loophole" " the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic " 2,300 to 4,000 truck trips per well " will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p>
-------	--------	---	---

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS "and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park

- NO impact to wildlife or plant species

- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.

- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€” and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Eric	Morris	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Terry	Grange	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

David	Pedersen	Please deny lease nomination numbers 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to protect Salt Fork State Park from fracking	<p>Dear Clerk Moffitt, Chair Richardson, and Director Mertz:</p> <p>I am writing to respectfully urge you to deny lease nomination numbers 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 for fracking in Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all of Ohio's state parks. Thousands of Ohioans " who own and pay for our public lands " visit Salt Fork each year to hike, camp, boat, swim, birdwatch, golf, and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast." □</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination numbers 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Fracking rigs will use between four and six million gallons (between 15.1 and 22.7 million litres) of fresh water per frack well, and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the "Halliburton loophole" □ " the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic " 2,300 to 4,000 truck trips per well " will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground. Furthermore, these trucks will undoubtedly be fueled by diesel, whose exhaust is a known carcinogen - plus the emissions controls these trucks use are themselves harmful and less effective than claimed (to the point where some have even been scrapped for being a waste of resources) and don't remove all of the harmful exhaust, of which there is no safe level.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day. This would be a disaster for road safety, which is already a dubious phrase in itself.</p> <p>According to Ohio Revised Code 155.33, the commission must consider the following in deciding whether to approve or deny a lease to frack on Ohio state land:</p> <p>⌘ Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources, especially since fracking would yield a short-term gain with long-term consequences (many of which would be irreversible).</p> <p>⌘ Compatibility with current land uses</p>
-------	----------	--	---

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS (per- and polyfluoroalkyl substances) " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze and harming/"taking" species who are dependent on darkness for survival. Frack wells flare methane, which is 80 times more potent at warming the climate than carbon dioxide as well as being a precursor to ozone/smog.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Timber will be cut and plant, animal and insect habitats will be destroyed, leading to those populations diminishing or even dying off entirely. Surface water in rivers, lakes, streams, and other water bodies will be poisoned by unregulated toxic chemicals used in fracking fluid. The Physicians for Social Responsibility have also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, also known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent four- and five-level earthquakes in Ohio and Oklahoma that have caused damage. The Mahoning Valley in eastern Ohio has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird, and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70+ decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic, or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users

We demand peer-reviewed scientific proof that there will be

NO environmental impact to the park

NO adverse geological impact

NO impact to visitors to the park

NO impact to wildlife or plant species

NO surface use, such as well pads, roads, pipelines, water lines, and compressors.

NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to deny lease nomination numbers 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 for fracking in Salt Fork State Park.

			<p>Per the Public Trust Doctrine, Ohio state parks and all Ohio public lands are paid for and owned by the people of Ohio, and we respectfully urge you to deny the lease nominations in Salt Fork and all of Ohio's state parks, forests, and wildlife areas.</p>
--	--	--	--

			<p>Thank you for your time and consideration.</p>
--	--	--	---

Renee	Bogue	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Susan	Carr	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Ohio is blessed with 75 State Parks, open every day and at no charge. They are a refuge for me and my family; we are avid hikers who love spending time in our state's wild places.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans who own and pay for our public lands visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast."</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			<p>ONCE YOU FRACK, YOU CAN'T GO BACK! THE NEGATIVE ENVIRONMENTAL IMPACTS ARE FOREVER! METHANE, FAR MORE LETHAL THAN CO2, WILL BE RELEASED INTO THE ATMOSPHERE AND WILL SPREAD OVER NOT ONLY THE WHOLE STATE, BUT THE ENTIRE COUNTRY. OHIO IS GOING IN THE WRONG DIRECTION. INSTEAD OF INVESTING IN ENERGY SOURCES THAN HAVE FAR FEWER NEGATIVE EFFECTS ON THE ENVIRONMENT, OHIO IS GOING WITH THE ENERGY DEVELOPMENT THAT YIELDS THE MOST PROFIT FOR THE GAS & OIL COMPANIES. OHIO CITIZENS, ESPECIALLY THOSE WHO LIVE NEAR THE FRACKING SITES, WILL SUFFER THE CONSEQUENCES OF METHANE & RADON RELEASED NEAR THEIR HOMES, AND POSSIBLE WATER CONTAMINATION. THEIR HOMES WILL BE DEVALUED AS A RESULT. THIS IS WRONG! STOP THE FRACKING LEASES! INVEST IN SAFER GREEN ENERGY NOW AND FOR THE FUTURE.</p>

As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
----------	-----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Mary	Krupa	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Regina	White	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. Candy	Canzoneri	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>In the great pantheon of bad ideas (and I've had a few myself...), any lease or legislation to allow fracking in our state parks really takes the biscuit. Really? Why would any sane or sober person think that enjoyment of the outdoors (e.g. birding, hiking, camping, fishing, hunting, dark skies/stargazing)--will not be adversely affected by the provable, toxic extraction techniques, and attendant pollution associated with fracking? Enjoyment of the natural world is why our state parks are so popular, and why the citizens of Ohio are incensed by this venal move to allow corporate industrial interests to enrich themselves at the expense of our environmental health. We know that children who are exposed to outdoor activities, and who have access to nature do better in school, and are more creative. Children and adults who are exposed to fracking face extraordinary harm from toxic chemicals, polluted water and air, as well as spiritual, visual, and auditory pollution of what had been a beautiful, serene landscape. How can you consider trashing PUBLIC land to enrich corporate interests? These parks and lands are our heritage, and the legacy we will leave to future generations. Let them be. Thoreau wrote, in Walden, that: "A man is rich in proportion to the number of things which he can afford to let alone." Our parks are treasures. Protecting them, preserving them, makes us all the richer. In truth, even economically they bring more to our state than destructive fracking ever could. Tell the corporate interests to Frack Off! No fracking in our state parks!</p> <p>Candy Canzoneri</p>

Francis	Lea	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	-----	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

My family and I stayed at Salt Fork State Park in the summer of 2020 while Covid was decimating Ohio's population. It was an island of peace and rest, and now under threat from the fracking

industry. The citizens of Ohio will not benefit from the industrialized transformation around Salt Fork, nor will the park itself. Fracking and parkland are incompatible. I urge you to deny the fracking permits at Dalt Fork State Park and all other public lands belonging to the citizens of Ohio.

Sincerely,

Francis Carey Lea III

In Columbus over the past week, the air was so polluted from the Canadian wildfires that it hovered in the "very unhealthy/unhealthy" range for 3 days. You couldn't see the sky. I am very worried about the health of our planet. I shouldn't have to type this out, but an unhealthy planet (poisoned air and water, decreased biodiversity, decreased pollinators, etc.) leads to unhealthy humans, not to mention all other life. In my mind, parks seem like one of the only areas that are safe from human consumption/construction. Parks give me, and I imagine other people, hope that some areas of nature are doing okay. Hearing that the areas right near Salt Fork are open for fracking is horrifying to me. You can read below what fracking does to the environment, but I just want to express my shock that this is something that's even being considered. Is there a positive to this to Ohio other than money? Isn't there some other way to bring money to the state that doesn't harm the environment and create yet more pollution? Have you ever been in one of Ohio's state parks? I know not everyone loves trees or animals as much as I do, but when I'm in nature it feels like, for that moment, there is hope. Please leave the parks alone - we have to find a better way to power humanity that doesn't involve digging under the earth. The metroparks here in Columbus are amazing, but they already suffer from human involvement - the streams are covered in oil slicks and native birds are pushed out by invasive species. We need to do whatever we can to leave these natural spaces alone to help them recover from our impact. Fracking is the exact opposite. For me, this isn't political. It's about the long-term survival of our planet.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. 			<p>- NO use of any water from any nearby lakes or streams</p> <p>The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>
--	--	--	--

Mario	Pollard	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			<p>Hello, my name is Juniper Ballew. I'm going to be a sophomore at Federal Hocking High school in Athens Ohio. My whole life I have seen, heard, and learned about fracking. As a child I remember going to marches and yelling my heart out. My parents have taught me to stand up for my future and speak my truth. So here it is, I am terrified of my future. I'm scared to grow up without clean air, water, and energy. The earth is degrading and so are we. I am so scared of the people in power not protecting me and future generations. They have opportunities to make young people feel safe and excited for the future yet they keep putting us in danger. I'm scared for my future and no one should have to worry about those things as a child. I need your help.</p>

Claudia	Lyon	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

I’m a regular visitor to my local state parks. I visited Salt Fork as a young adult. I can’t imagine not having access to our state parks. Fracking can’t have a good affect on our parks.

Fracking will poison our parks. These parks belong to the citizens of our state. I encourage the members of the committee to visit the parks in Ohio Appalachia. Appalachia Ohio is impacted the most by this fracking. Iâ€™m a child of Appalachia Ohio.

Claudia M Lyon

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€” and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Mimi Morrison

Elijah	Rhein-Murray	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	--------------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Nora	Eichenberger	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	--------------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Lauren	Armstrong	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	-----------	---	---

any ability to stargaze. Frack wells flare methane â€“ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€“ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

FUCK YALL

This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
----------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Grace	Schooley	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Gabrielle	Gosciewski	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I have been camping at Salt Fork State Park since I was a child. I have countless memories with my family there and it is one of the places that is very special to me. Salt Fork, and all the state parks here in Ohio has been the one place I can safely go to get away from the stresses and anxiety's that I have to deal with every day. It is a safe space to enjoy something that I love, and I know that if you allow the lease nomination to go through, you will destroy that. I want you to think of the damage that you will cause to the area surrounding it if this goes through. Please, do not allow fracking at Salt Fork State Park.</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans " who own and pay for our public lands " visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast." □</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well " and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the "Halliburton loophole" " the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic " 2,300 to 4,000 truck trips per well " will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p>
-----------	------------	---	---

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud " chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground " including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night " destroying any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

			<p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>

As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Lastly, please look around and see our precious resource of water! You must protect this resource! Without clean water, we will die. Just look at the daily news to see the very real negative impacts of climate change happening very profoundly, now, during our current lifetime! Did you not find it difficult to breathe from the smoke of the Canada wildfires over the past weeks? I live in Ohio, and have had to watch my cat pant and gasp from this poor air quality (Air Quality Index 200) over the past couple weeks.

Please protect Ohio's water and precious resources. No fracking!!!

Parker	Mcginty	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

-------	--------	---	---

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud " chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground " including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night " destroying any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Catherine	Freay	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? I personally have camped and hiked for the last 35 years at this park. I have always enjoyed and appreciated the solitude of this place.

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas. These parks are here for us to enjoy and escape the rat race of our lives. Please don't take it from us!

-----	-------	---	--

Without worth!

Who knew it would be so?

A conscience with walls-but no doors

Islands with tears to be!

Let there be a wealth that endures!

Minds of wisdom

Wise thoughts thus shared

Islands without tears!

Consciences yet softened

Wise words, hearts should heed-

Resist the powers that be!

Say no to fleeting wealth-

That children might know

The Islands Without Tears!

Please Protect Our Precious Parks!!

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Laurel	Gress	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy, rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits?</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses?</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts!

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, but those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, birdwatch and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

Good luck proving all the above! The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			<p>I have always loved Ohio, this place is my home. And my home is beautiful. Even when others don't think so, even when we become the butt of the joke, or fall victim to the destruction of our nature, I know that my home is beautiful. Please I'm begging you with all my heart don't do this. I love my home. I love Ohio. Please to not poison my home, please do not rip apart what I cherish so deeply. Please love Ohio the way I do. This land is beautiful, do not taint it with this project. Please protect my home.</p>

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Sam	Horne	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I write to you to insist that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>The negative impacts of hydraulic fracturing are numerous and severe. It would be seriously irresponsible to allow fracking at or near the park.</p> <p>I lived in West Virginia for a time, and the community I was staying in there was dealing with the devastating impact of fracking waste exposure - fighting the wells in court while they and their family members contracted rare and deadly cancers and other illnesses at tremendously high rates. This is not unusual, and a number of studies find similar conclusions.</p> <p>Given that Salt Fork is a locus of the water system in the area, it's simply too much of a risk to approve these permits. Once water is contaminated with the byproducts of fracking, it is impossible to clean again. Do we want that to happen in Salt Fork? Or maybe we'll miss it, only to realize years later when all the health numbers start to come in?</p> <p>I recognize that we have different views on this issue, on its impact on the environment and its economic value (in my view, it's a dead-end industry that doesn't really provide long-term sustainable jobs + money). But you have to realize that these lease applications are a bridge too far.</p> <p>We, the people of Ohio are asking that you DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park and ALL of our state parks, forests, and wildlife areas.</p> <p>Thank you.</p>
-----	-------	---	--

Zach	Gibbons-Ballew	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>*Please really think about this. Isn't this the opposite of a shared, community resource.</p> <p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the</p>
------	----------------	---	--

end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.â€ Fracking is extremely loud â€œ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground â€œ including PFAS â€œ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night â€œ destroying any ability to stargaze. Frack wells flare methane â€œ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as â€œforever chemicals.â€

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€œ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

James	Sayre	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Joanie	Critchlow	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	-----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

I help organize monthly "BIGFOOT " walks with the help of other volunteers at Saltfork. We work with the Park's ODNR Naturalist to complete public education about nature. The atmosphere

			<p>around the park is captivating. Outside interests to capture a natural resource under the park does not guarantee the protection of the beauty on top. I am against the use of PUBLIC LAND being used by private companies to make a profit. Please support Nature being Nature and prevent fracking in our state parks.</p>

- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Lori	Russell	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Nancy	Snodgrass	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	-----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

I personally have enjoyed camping and visiting Salt fork State park in the past with my family and just recently purchased a large family camper and look forward to many new memories to be made there in the future. I have always loved all the numerous trails to hike, areas to camp and fishing and swimming in the lake. I dont want to see the wildlife ran off or even killed due to fracking in and near the park. Take your fracking elsewhere!!! This is a state park, its to be PROTECTED and thats what we intend to do!

Nicole Orahood

7/7/2023

Hurston	Spencer	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Richard	Sabo	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I have been enjoying the natural beauty of Salt Fork State Park for 50 years and have lived right next to it for 40. Please think about what is at stake and DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the gem of Ohio parks, the largest and one of the most iconic. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year. Yes it is OUR LAND and we should have input. Isn't there some protection for the wildlife areas surrounding the park? What about the huge eyesore with well pads right across from the entrance to the park? Is that the image you want? This land must be preserved. Its why it was created.</p> <p>I have enjoyed boating and camping with family and friends. I have hiked all the trails including horse trails and kayaked everywhere including up Salt Creek. Don't tell me I won't be impacted. Wildlife and water quality will also be impacted and maybe destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>OK so this is the one that really blows my mind.....the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws. How can you truly believe this nasty stuff won't end up in Salt Fork either accidentally or intentionally?</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park. How will proper water level be maintained? Proper level is needed for boating and wildlife.</p> <p>How will truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day. This creates risk for motorists and environmental accidents.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits:</p> <p>Do they outweigh preservation of our parks for our grandkids and their families?</p> <p>Compatibility with current land uses:</p> <p>Is this using our natural resources, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio is encouraged? Fracking is extremely loud “ chasing away the wildlife who call the park home. Frack pads are fully lit at night “ destroying any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.</p> <p>We see lights and flares from well pads 20 miles away. Imagine these all around the park.</p>
---------	------	---	---

Environmental impacts:

Maybe you'd like to believe there's no impact, but there is even if properly executed. Now consider what could happen given accidents and indifference.

Adverse geological impacts:

Rock layers shifting, low level earthquakes, cracking infrastructure and buildings

Impact on visitors:

Will Ohioans and tourists still be able to enjoy the splendid natural beauty of our park as it was intended or will it be an industrial complex?

Please think about all aspects. It's not just about money. The future of our parks are in your hands.

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Amy	Wolfe	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Sara	Frease	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			<p>I have enjoyed the various beautiful parks and forest areas all my life!</p> <p>Leasing these natural beauties to outside parties is a dangerous action on your part. Please deny permission to use fracking on these state and national treasures!</p>

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Lisa	Long	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>I personally visit Salt Fork State Park many times a year to get away from the urban life. It is peaceful and beautiful. You are going to destroy this park if you allow fracking. Please DO NOT ALLOW THESE LEASES.</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. Nichole	Wilson	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	-------	---	--

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

--------	-----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Dan	Horvath	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is a wonderful state park and is enjoyed by Ohio residents. Please do not allow fracking in this or any other park.</p> <p>Do not approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the Halliburton loophole the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Julie	Weatherington-Rice	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>While others will write about how special Salt Fork State Park is and how destructive horizontal shale gas and oil extraction is, I want to discuss a different impact that I am uniquely qualified to discuss. I have worked for the firm of Bennett and Williams Environmental Consultants Inc. since 1986 as their senior scientist. We do public water supplies, have worked all over the world but are based here in Ohio and work closely with a number of public water suppliers throughout the state. I have presented to the public water supply staffs at a number of continuing education conferences over the years.</p> <p>Since 2011, my talks have centered on the topics of actual and potential impacts from oil and gas drilling on surface and ground water public water supplies. Has it happened in Ohio? It sure has starting back about 1960 when drilling in Morrow County took out surface water sources as far away as Westerville, two counties down stream, and the ground water supplies under a significant portion of the area. The County is on a rural water association, and the ground water is still contaminated 60+ years later. That was the first documented case, there have been a number since then.</p> <p>Why is that important? Because Salt Fork is a surface water public water supply and is managed under Federal Law, the Safe Drinking Water Act. The supplier must follow Federal requirements to be able to maintain their services. Oil and gas extraction is a potentially contaminating land use when conducted in a Federally designated source water protection management zone. In fact, mineral extraction is the only potentially contaminating land use that is not precluded by Federal or State of Ohio regulations. Over the years, some headway has been made to protect ground water sources but surface water sources are woefully under protected in spite of extensive comments about the situation made as the OAC has been updated.</p> <p>Salt Fork has a designated surface recharge area to the lake which is the water supply. That watershed is Federally designated. The water treatment staff are required, annually, to inventory all potentially contaminating land uses within the designated area. They have to report annually the status of each site if they exceed certain thresholds. All known historic oil and gas wells are on that inventory. If a new facility was installed within the source water protection management zone, it will place an undue burden and expense on the public water system to monitor the well pads and all their supporting infrastructure. By approving the leasing of oil and gas extraction leases within the source water protection area, the Commission will not only permit a land use that could contaminate a much needed public water supply but will also add an unwarranted expense to the annual budge for Salt Fork State Park. That annual expense plus the potential expense of having to find and develop an alternative water source , assuming one can be found, should be factored into the decision. Replacing a public water supply is not a cheap undertaking, typically costing from tens to hundreds of million dollars.</p> <p>Please take into consideration this serious situation. An accidental contamination of the public water supply could significantly reduce any potential gains found through leasing the land. If the water supply is damaged, that would shut down many of the attractions of the State Park, including the lake, the lodge and any other facility within the park that provides safe drinking water or recreational water contact. The park would become a facility where visitors would have to pack in their water. It would be a whole different experience. I have attended conferences at the Lodge. It is a lovely place and I would hate to see it closed because of an accidental release of contaminates from an oil and gas drilling and production effort.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p>

- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Marion	Black	OGLMC, please DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I was raised in Cuyahoga Falls, and left Ohio the year the Cuyahoga caught fire. I well remember the old Ohio, when not many people hiked, kayaked, or pursued outdoor recreation. Now Iâ€™ve returned to Akron, and see with delight the incredible progress our state has made to recognize and preserve our parks and natural spaces. People my age are walking and kayaking in numbers I can hardly believe. My nieces and our whole extended family go to state parks regularly.</p> <p>Iâ€™m really distressed that anyone in our state leadership would risk this progress we have made. You are servants of the public, and the public lands are our irreplaceable treasure.</p> <p>Therefore, I am writing to request that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans â€“ who own and pay for our public lands â€“ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, â€œWith thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.â€</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well â€“ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the â€œHalliburton loopholeâ€ â€“ the fracking industryâ€™s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Forkâ€™s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic â€“ 2,300 to 4,000 truck trips per well â€“ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p>
--------	-------	--	--

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.

			<p>- NO use of any water from any nearby lakes or streams</p> <p>The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€” and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>
--	--	--	--

Linda	Griffin	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Please, take a trip to WV, PA, eastern OH, or as close as Carrollton, OH to see the destructive, irreversible damage done to the environment, the people, the livestock, and the wildlife from fracking. Any and all state parks, forests, and other supposedly protected land in Ohio needs to be STRONGLY protected. We go to these special places for rest, play, and most of all, wonder. Fracking and the resulting damage does not belong in a state park, period. I'm weary from the state of Ohio continually bowing down to the wishes of businesses rather than for the good and benefit of its citizens. The planet is in crisis - how can allowing fracking even be considered?

Do the right thing - protect Ohio's park lands, people, flora and fauna. Thank you.

Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Jim	Klimo	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----	-------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			<p>Living in North East OHIO we have state parks that already have had adverse consequences from the wonderful use of injection of fracking materials from our neighbor state of Pennsylvania. I love our state with all the great parks let's not ruin them for a few dollars . The health of the park and people living near and all of us that utilize them are at risk if this fracking is allowed.</p>

- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Ann	Hedington	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----	-----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

We took our honeymoon in Salt Fork State Park and have fond memories of that and also 3 conventions there were exceptional! Please protect this park!

Rolf Wicks

Molly	Savage	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by the people of Ohio “ and as someone who has loved ones in the state, I demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Jeff	Orlando	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Please hear me,</p> <p>It's very important to locals across America that all their major parks are preserved and their health and natural beauty is protected for the enjoyment of all citizens and the animals that need the space to continue living and giving back to the ecosystem. It's incredibly shortsighted to threaten all of this with a practice that, although may be needed somehow for energy, it's impacts will be more than what we anticipate and all of us will have to bare those consequences. The financial burden will fall onto the citizens and we can find other more appropriate places with less risk to approach with these energy technologies. Let us use great caution in declaring our major and historic parks places for drilling and chemical fracking.</p> <p>And always reach out to federal subsidies for renewable energy generation. As well as engineering firms to help meet your cities and states demands for energy. Thank you.</p> <p>The following is more information well researched into what impacts this may have.</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans " who own and pay for our public lands " visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, "With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast."□</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well " and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the "Halliburton loophole" " the fracking industry's exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork's beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic " 2,300 to 4,000 truck trips per well " will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p>
------	---------	---	--

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud " chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground " including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night " destroying any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.

- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€” and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Brette	Luck	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	------	---	---

any ability to stargaze. Frack wells flare methane " polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio " and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Katherine	Kinstler	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-----------	----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Chrissy	Frank	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>I grew up in Guernsey county a few miles from Salt Fork State Park. I have countless memories of boating, hiking, camping and more with family and friends. I remember watching the sunrise with friends the morning after our senior prom. In a small town with nothing to do, the park was our playground and I am grateful that we had the opportunity to hike and make memories. I worked at the lodge as a lifeguard through college and continue to bring my children to visit now that I have moved to Stark County. There are few places left in this State that are truly untouched by developers and it is a shame that these State Parks have become a target for oil and gas companies. As a former employee of one such company, I know first hand the irreversible damage that can be caused by fracking. Leave the state parks alone!</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. Rita	Wright	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	--------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Mikey	Horvath	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>As a frequent visitor to Salt Fork for camping, retreating in the cabins, as well as hiking and running ultramarathon races throughout the park, I am very concerned about the disruption to the beautiful park and habitats that will be caused by fracking. My family and I frequent the park both on long weekends as well as day trips to the park for hiking and fishing. My children swim in the lake and hike in the woods and cross the streams that meander through the park. The park and surrounding areas are beautiful natural habitats filled with hiking trails, cabins (both publicly owned and private), wildlife, equestrian trails and boating and swimming access. Any chance of disruption to the public stakeholders, aka all visitors to this park and the surrounding community, need to be addressed as an impact to the wellbeing of the community as a whole. Any chance of ruining the environment is a reason to forego corporate profits in lieu of keeping our public parks open and safe for all visitors.</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. campers from the thousands of Ohioans who visit the park each day.

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS" and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

-------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Carol	Gibbons	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day. These roads were not built for this level of use. The tremendous growth of traffic will hamper the ability of park-goers to access the park in an easy/timely manner.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the economic benefits, compatibility with current land uses, environmental impacts, adverse geological impacts and impacts on visitors in deciding whether to approve or deny a lease to frack our public land. Each is examined below for how fracking at Salt Fork State Park will negatively impact the park experience for it's natural residents and it's visitors.</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources. On it's own, this fact should require great pause and a very close study on the costs and liabilities involved in fracking at these public park spaces.</p> <p>Compatibility with current land uses</p>
-------	---------	---	--

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze and damaging the ability for natural nocturnal species to flourish. Frack wells flare methane "polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off in part because of the landscape fragmentation which will reduce habitat sizes. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Where diminished biodiversity reduces the experience for visitors of going to a "natural environment". Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape - an industrialized zone.

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

-------	--------	---	--

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Deborah	Fleming	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to request that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
---------	---------	---	--

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

			<p>I am also a Veteran, and i should not have to feel I need to protect our land from an enemy within. I want to be able to have clean air and water, and not worry about all the water used and trees cut down that fracking will cause. Not our public land!</p>
--	--	--	--

David	Celebrezze	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
-------	------------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Sophia	Mackall	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

It seems to me that 53 billion dollars of income from tourism in '22 in Ohio (more than 8 billion from parks) will be a better legacy for your commission than the sickness and pollution of fracking our parks. I'm including a link to my article. I hope you'll find time to read it.</p> <p>The people of Appalachia are very special to me. Their biggest asset is this land. Their future, and ours, is its preservation. The pollution in the Parks does more than kill the body - it can render people angry and prone to violence. For many people, their only connection to Nature is their periodic visits to our State Parks. A soulless society does not survive.</p> <p>https://saveohioparks.org/2023/06/24/fracking-in-ohio-state-parks-and-on-public-lands-endangers-us-all/</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p>
------	------	---	---

According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:

Economic benefits

A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS "and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact

Diane	DeCenso	<p>OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park</p>	<p>Dear Oil and Gas Land Management Commission:</p> <p>I have grave concerns regarding the environmental impact of fracking in and around our state parks. We go to the parks to see the beauty and stillness of nature. Fracking will damage both. Please notice the recent incidents of an oil spill and methane gas released from fracking in Ohio. These are warnings!!</p> <p>I am writing to implore you to DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p>
-------	---------	--	--

Compatibility with current land uses

Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the "the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged." Fracking is extremely loud "chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground "including PFAS " and the wastewater that comes back up is radioactive. Frack pads are fully lit at night "destroying any ability to stargaze. Frack wells flare methane "polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as "forever chemicals."

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

			<p>Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio â€œ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.</p>

Janice	Terradotter	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	-------------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

Jill	Hunkler	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
------	---------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.

MARCIE	GROESBECK	OGLMC must DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park	<p>Dear Oil and Gas Land Management Commission:</p> <p>I am writing to demand that you DENY lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.</p> <p>Salt Fork is the largest and one of the most iconic of all our Ohio state parks. Thousands of Ohioans “ who own and pay for our public lands “ visit Salt Fork each year to hike, camp, boat, swim, birdwatch, even golf and ride horses. As the Ohio Department of Natural Resources says, “With thousands and thousands of acres of land and water, the park has something for every outdoor enthusiast.”</p> <p>But all of that will be impacted and likely destroyed if you approve lease nomination #s 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007, allowing the oil and gas industry to surround Salt Fork with 16 well pads to frack an incredible 281 parcels of park land.</p> <p>Frack rigs will use 4 million to 6 million gallons of fresh water per frack well “ and each pad will hold multiple frack wells. This water will be mixed with sand and a variety of toxic chemicals that we are not allowed to know about thanks to the “Halliburton loophole” “ the fracking industry’s exemption from the Safe Drinking Water Act and other environmental safety laws.</p> <p>Where will all this water come from? The likely answer is Salt Fork’s beautiful Salt Fork Lake, or the streams that feed the lake, which provides almost 3,000 acres of swimming, boating, fishing, and a refuge for both wildlife and the people of Ohio who pay for and use this park.</p> <p>Truck traffic “ 2,300 to 4,000 truck trips per well “ will bring in construction machinery, sand, toxic chemicals, and other equipment, as well as cart away the millions of gallons of toxic frack wastewater that can never enter the water cycle again and must be injected deep underground.</p> <p>How will all this truck traffic get to and from these frack well pads? The main roadway to Salt Fork is U.S. Hwy 22, a curvy rural two-lane road that these trucks will have to share with cars and campers from the thousands of Ohioans who visit the park each day.</p> <p>According to Ohio Revised Code 155.33, the commission MUST consider the following in deciding whether to approve or deny a lease to frack our public land:</p> <p>Economic benefits</p> <p>A study by Ohio River Valley Institute shows that seven fracking counties in eastern Ohio lost jobs, people, and income, while an Ohio State University study shows that preserving our parks and public spaces adds \$8.1 billion to our state economy each year. Clearly preserving our state parks and public lands will generate much more income for the state as a whole than fracking our state's most treasured natural resources.</p> <p>Compatibility with current land uses</p> <p>Fracking is diametrically opposed to the mission of the Ohio Department of Natural Resources, which was founded in 1949 to develop and wisely use the “the natural resources of the state, to the end that the health, happiness and wholesome enjoyment of life of the people of Ohio may be encouraged.” Fracking is extremely loud “ chasing away the wildlife who call the park home. Fracking injects millions of gallons of toxic chemicals into the ground “ including PFAS “ and the wastewater that comes back up is radioactive. Frack pads are fully lit at night “ destroying</p>
--------	-----------	---	---

any ability to stargaze. Frack wells flare methane “ polluting air all around including in the park.

Environmental impacts

If fracking leases are approved, immense negative environmental impacts will occur on and under Ohio state parks and public lands. Not only will timber be cut, and plant, animal and insect habitats destroyed, those populations will diminish or die off. Surface water in rivers, lakes and streams will be poisoned by unregulated toxic chemicals used in fracking fluid. Physicians for Social Responsibility has also documented that chemicals used by the oil and gas industry in Ohio since 2013 include PFAS, known as “forever chemicals.”

Adverse geological impacts

Low-level earthquakes in the Appalachian Basin, which includes eastern Ohio, are caused by fracking, according to new research by Michael Brudzinski at Miami University in Oxford, Ohio. While fracking wastewater is injected deep underground, water pressure can leak into faults in deeper, older rocks. This water can create more space between two sides of a fault, allowing the fault to slip. The more fracking water is injected, the larger the earthquakes could become, including recent 4 and 5 level earthquakes in Ohio and Oklahoma that have caused damage. Eastern Ohio in the Mahoning Valley has a history of low-level earthquakes related to fracking and its wastewater sites.

Impact on visitors

Will Ohioans and tourists want to hike, bike, camp, fish, bird and swim in areas where the thump-thump of fracking rigs inundate the landscape at 70 decibels, 24 hours a day and drown out birdsong as well as conversation? Where a fracking rig accident means oil slicks on Ohio lakes and streams and fish and animal die-offs? Where hundreds of millions of tons of methane gas is released into the air, accelerating rising temperatures and global warming? Fracking will chase away Ohio visitors, not attract them. After all, who could relax, camp, picnic or swim with family and friends in the equivalent of an environmental hellscape?

Comments and objections from residents of the state and other users:

We demand PROOF that there will be:

- NO environmental impact to the park
- NO adverse geological impact
- NO impact to visitors to the park
- NO impact to wildlife or plant species
- NO surface use, such as well pads, roads, pipelines, water lines, and compressors.
- NO use of any water from any nearby lakes or streams

The only way you can prove that these impacts will not happen is to DENY lease nominations 23-DNR-0005, 23-DNR-0006, and 23-DNR-0007 to frack Salt Fork State Park.

Ohio state parks and all Ohio public lands are paid for and owned by we, the people of Ohio “ and we demand that you DENY the lease nominations in Salt Fork and all our state parks, forests, and wildlife areas.
