Always check for interference when first operating the machine with a quick coupler and a new work tool.

COUPLERS

The use of a quick coupler on a excavator with certain combinations of linkages (boom & stick) and work tool attachments has the potential for interference with the cab and or the front of the machine during operation. Always check for interference when first operating the machine with a quick coupler and a new work tool.
For more information on Cat Pin Grabber Couplers and hydraulics refer to media number GEJQ1298 or contact CWTS at 800-255-2372.

COLD PLANERS

CAT Cold Planers are designed for small to medium size paving jobs in residential and commercial applications. Cold planers are used to economically restore asphalt and concrete paved surfaces to a specified grade or level. They are ideal for milling bumps or imperfections in expanded pavements, removing cracked or deteriorated pavement, removing traffic lane stripes and working on jobs where weight restrictions limit the use of dedicated planers.

Please see dealer.cat.com for the latest cold planer mktg bulletins

CONVERSION KITS

Conversion kits are available to convert work tools to function on the new B3 High Flow and D Series machines (not for C2 machines).

The secondary auxiliary circuits are moving from the machine to the work tool. The following kits provide the Bill of Material for the change. Please consult the list below for the required work tool conversion kit.

The work tool interface for B3 High Flow and D Series machines consists of two 1/2" Quick Disconnects (QD), case drain line and 14 pin electrical connector. These hydraulic lines provide flow for standard flow, high flow (HF) and High Flow XPS (HF XPS), based on the machine configuration.

The SSL/CTL D XHP work tool interface consists of two 3/4" Quick disconnects, case drain line and 14 pin electrical connector. These hydraulic lines provide standard flow, high flow XPS and XHP flow, based on the machine configuration. Please review the marketing bulletin explaining the conversion process. It is located at dealer.cat.com under the SSL/CTL machines section.

MULCHERS

Mulchers are designed for high performance cutting and mulching vegetation, saplings and undergrowth from overgrown agricultural and forested terrain. The hydraulic mulcher reduces saplings, shrubs and trees into mulched material, making it ideal for environmental maintenance, such as brush clearing and creating fire lanes. Other applications include reclaiming untilled land, removing foliage from building construction sites, and shredding pruned material and waste for biomass production.

NOTE: Engine Debris Kit and Turbo Debris Guard Kit are recommended for use in applications which create airborne debris, such as mulching, brush cutting, paper recycling and certain agriculture practices. Please refer to the machine price pages for part numbers under: Field Installed Attachments Kit, Debris Barrier, Engine and Kit, Turbo Debris Guard.
