

# SOCIAL DETERMINANTS OF HEALTH: INFANT MORTALITY IN OHIO

## WHAT ARE THE SOCIAL DETERMINANTS OF HEALTH?

The social determinants of health (SDOH) are defined as the conditions in which people are born, grow, work, live, and age, and the wider set of forces and systems that shape these conditions of daily life (1). The SDOH calls us to look beyond the individual and assess the environments that surround them to better understand and improve their health.

## DO THE SOCIAL DETERMINANTS OF HEALTH IMPACT MATERNAL AND INFANT HEALTH?

Infant mortality is the rate at which babies die within their first year of life. Black infants are 2.8 times more likely to die in Ohio during their first year of life compared to White infants (2).

Disparities in social determinants of health account for much of the racial and ethnic disparities in infant mortality (3-7). Researchers have linked infant mortality and poor birth outcomes to maternal education, maternal experiences of stress and discrimination, living in poverty, lack of access to healthy foods, lack of stable housing, and lack of access to prenatal/medical care.

Two-thirds of mothers who experienced an infant death in 2019 lived in one of nine Ohio counties; a disproportionate number of these mothers were Black. These nine counties, and two others, are the focus for this Eliminating Disparities Task Force. The counties include Allen, Butler, Cuyahoga, Franklin, Hamilton, Loraine, Lucas, Mahoning, Montgomery, Stark, and Summit counties.

This document contains a profile of the social determinants of health for each of the counties.

## HEALTHY PEOPLE 2030 GROUPS SDOH ACROSS 5 DOMAINS:

### ECONOMIC STABILITY

This domain includes issues of poverty, employment status, access to employment opportunities, and housing stability (e.g. homelessness, evictions, foreclosure).

### EDUCATION ACCESS & QUALITY

This domain includes issues such as high school graduation rates, school policies that support health promotion, school environments that are safe, and conducive to learning and enrollment in higher education.

### SOCIAL & COMMUNITY CONTEXT

This domain includes family structure, social cohesion, perceptions of discrimination and equity, civic participation, and incarceration/institutionalization rates.

### HEALTHCARE ACCESS & QUALITY

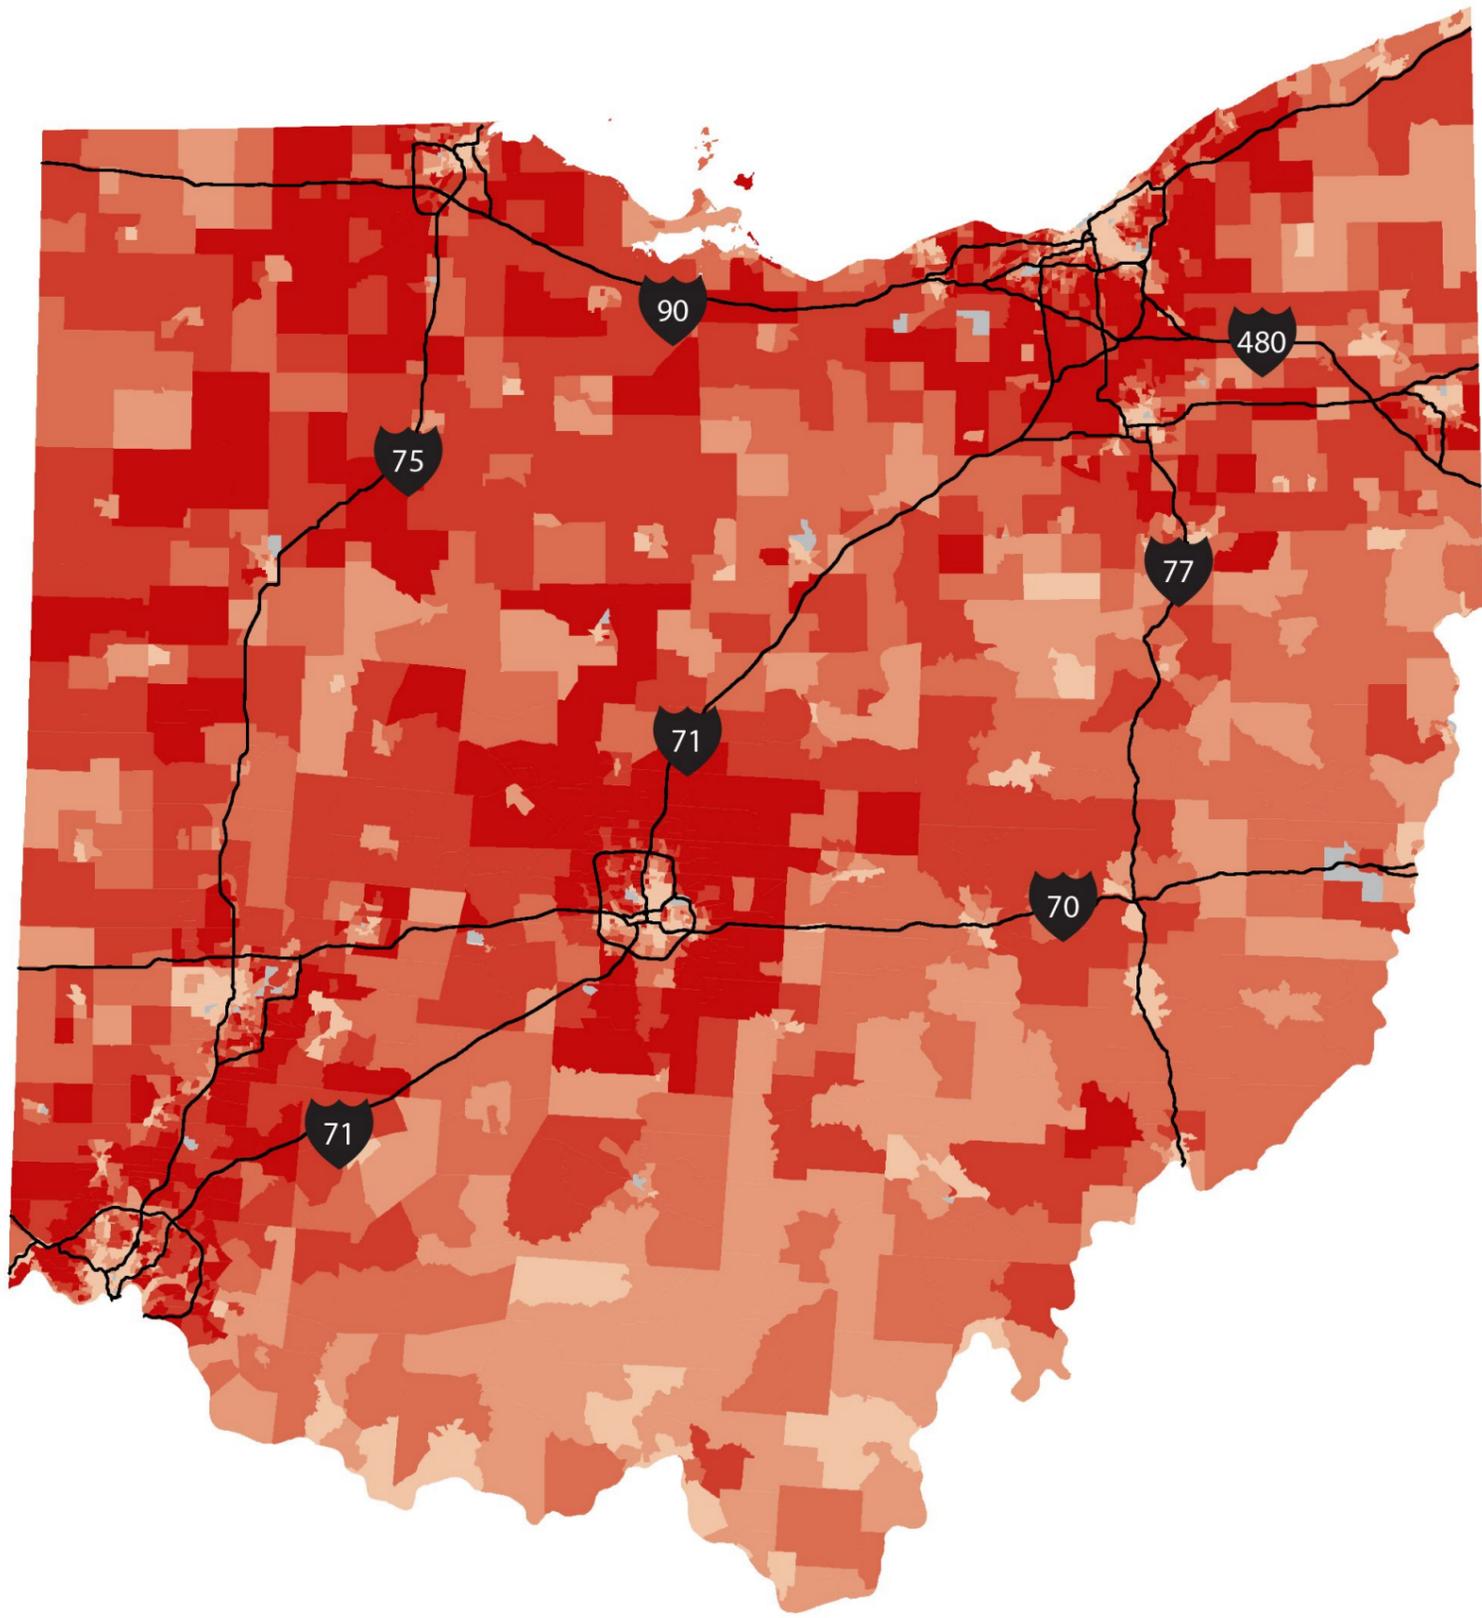

This domain includes access to health services and primary care, access to the health technology that is available, and health insurance.

### NEIGHBORHOOD & BUILT ENVIRONMENT

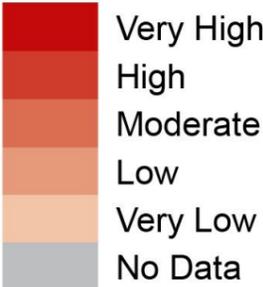

This domain includes quality of housing, access to transportation, availability of healthy foods, air and water quality and neighborhood crime and violence.

# HEALTH OPPORTUNITY INDEX FOR THE STATE OF OHIO

### Health Opportunity Index

# SOCIAL DETERMINANTS IN

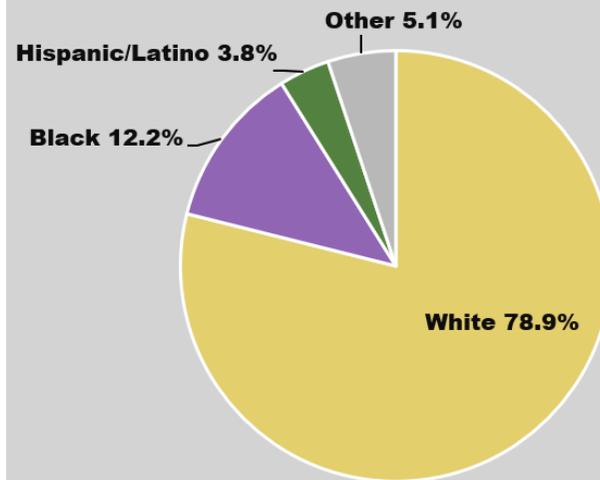

OHIO

## HEALTH OPPORTUNITY INDEX

Health Opportunity Index (HOI) is a tool to understand the impact of social determinants of health on health outcomes (8). HOI scores are calculated for each census tract using 13 indices: affordability, income inequality, Townsend Deprivation, job participation, employment access, education, population churning, population-weighted density, segregation, food accessibility, walkability, access to care, and environmental quality index.

(More information about the HOI indices can be found in the Appendix.)

HOI provides public health practitioners, policy makers, and local organizations with a tool to assess the social determinants of health at the census tract level. The map above depicts the HOI for the county. Census tracts with darker colors indicate areas with higher health opportunity level.

### ECONOMIC STABILITY

AVERAGE COMMUTE TIME TO WORK	23 MINUTES

### SOCIAL & CONTEXT

VIOLENT CRIME RATE PER 100,000 POPULATION	328.71
BLACK/WHITE RESIDENTIAL SEGREGATION INDEX*	58

\* INDEX OF DISSIMILARITY WHERE HIGHER VALUES INDICATE GREATER RESIDENTIAL SEGREGATION BETWEEN BLACK AND WHITE COUNTY RESIDENTS

# COUNTY COMPARISONS

# APPENDIX: EXPLANATION OF HEALTH OPPORTUNITY INDEX (HOI)

A brief explanation of the indices used to developed the Health Opportunity Index are provided in the table below.

HOI Indices	Description
Affordability	Measures the proportion of a neighborhood's income that is spent on housing and transportation costs.
Access to Care	Measures an area's access to healthcare using provider-to-population ratios and the percent of the population who is uninsured.
Walkability	Measures the walkability of an area based on the built environment that promotes or discourages walking as a mode of transportation.
Employment Access	Measures the accessibility of jobs in a particular area and includes factors such as distance between jobs and where residents live and transportation availability.
Population-Weighted Density	Measures the concentration of people per square mile.
Environmental Quality Index	Assesses the level of air pollution by census tract.
Education	Measures the average education level attained by the adult population in an area.
Food Accessibility	Measures low access to grocery stores, supermarket, and other suppliers of healthy foods.
Townsend Deprivation	Measures the material deprivation in a neighborhood by assessing unemployment, car ownership, home ownership and overcrowding.
Job Participation	Measure of the percentage of working adults ages 16 – 64 years in the active labor force.
Segregation	Measures how the racial composition of a population in a census tract compares to that of the rest of the state
Income Inequality	Measures economic inequality by assessing the diversity of actual earned income of a neighborhood.
Population Churning	Measures the migration of individuals into a neighborhood.

More detailed information about the HOI methodology see:
